The MSW Factbook is a stand alone application for IBM PC's and Compatibles running Microsoft Windows. You must be running Windows, and you must install the Factbook from Windows before you can use it.

To install: Place the diskette in your drive. From the Windows' Program Manager screen, click on the "Files" menu. Select "Run...". In the comand box, type "A:\install" and press the "Enter" key.

Windows 95 users: Start Windows 95; select "Run..." and install as above. After installing, double click on the "MSW Facts" icon. If it doesn't launch, from the top menu bar, select "View", then "Options", then "file types." Scroll down to and then click once on "tbk file". Select "Edit, select "Edit" again, then in the box labeled "Application used to perform action" type "Tbook.exe". Close all the dialog boxes and retry double clicking on the "MSW Facts" icon.

See the information in the "Introduction" Chapter on how to use the Factbook, on Network Installation and on how to obtain updates; and be sure to Register.

If you need additional help, or have comments, call: Steve Levy at (703) 308-7267.
