ACCEPTABLE COMMON NAMES AND CHEMICAL NAMES FOR THE INGREDIENT STATEMENT ON PESTICIDE LABELS

SECOND EDITION

This list is an extensive revision of the compilation of June 1967, prepared as a guide for the use of reviewers, registrants and other interested persons. Common names and chemical names are given; if both are listed, then both are required on the label.

All names are listed alphabetically, and the acceptable names are numbered consecutively in the left-hand column. Some designating numbers are formed from a number and a capital letter. The numbers have been retained from the first edition except for a few changes. Other names, including trade names and chemical names of compounds for which a common name has been established, are listed with no number in the left-hand column; the number in the right hand column indexes the name to the accepted name. In this edition a large number of trade names and names used in other countries have been added. Also, at the end of the entry for the acceptable name, synonyms are listed in brackets for information only. This list includes some pesticides which are not yet registered and some that may be obsolete.

Names established by the K-62 committee of the American National Standards Institute are marked "(ANSI)," names established by the former Interdepartmental Committee on Pest Control are marked "(Official)," and those accepted by the Food and Drug Administration

are marked "(FDA)." Chemical names used by the Chemical Abstracts Service of the American Chemical Society are designated "(CA)." Some Canadian "(CAN)" and International Standards Institute "(ISO)" names are included. Several Chemical Abstracts Index Numbers "(CAS)" and Entomology Research Division, ARS, USDA "(ENT)" numbers are included.

The requirements relative to use of names in the ingredient statement are outlined in Subsection 162.7 (b) of the Regulations for the Enforcement of the Federal Insecticide, Fungicide, and Rodenticide Act:

> Names of Ingredients. The well-known common name of each of the listed ingredients must be given or, if an ingredient has no common name, the correct chemical name which conforms most closely with generally accepted rules of chemical nomenclature. If there is no common name and the chemical composition is complex, the Director may permit the use of a new or coined name which he finds to be appropriate for the information and protection of the user. If the use of a new or coined name is permitted, the Director may prescribe the terms under which it may be used. A trademark or trade name shall not be used as the name of an ingredient except when it has become a common name.

If a name has been adopted by the American National Standards Institute, or by the Interdepartmental Committee on Pest Control,

then it is used. Generally speaking, the chemical names are either those listed in Chemical Abstracts or names which have been long accepted and are the most informative. For some ingredients of indefinite composition, a descriptive name is used.

The listing of trade or proprietary names does not imply the endorsement of these products by the Environmental Protection Agency.
