June 1974

This report is issued by the Environmental Protection Agency to report technical data of interest to a limited number of readers. Copies are available free of charge to Federal employees, current contractors and grantees, and nonprofit organizations - as supplies permit - from the Air Pollution Technical Information Center, Environmental Protection Agency, Research Triangle Park, North Carolina 27711; or, for a fee, from the National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22151.

Publication No. EPA-450/2-74-012

ABSTRACT

The National Emissions Reports summarize annual cumulative estimates of source emissions of five criteria pollutants: particulates, sulfur oxides, nitrogen oxides, hydrocarbons, and carbon monoxide. Source emissions data are reported to the U. S. Environmental Protection Agency under provisions of Section 110 of The Clean Air Act, as amended 1970, and EPA Regulations, Title 40, Code of Federal Regulations, Part 51.7. Summary data are presented for the nation as a whole, for individual states, and for Air Quality Control Regions and individual interstate portions thereof.

The data compilations result from the operations of the National Emissions Data System (NEDS), which functions as a component of the comprehensive EPA air information system--the Aerometric and Emissions Reporting System (AEROS). AEROS is managed by the National Air Data Branch, Monitoring and Data Analysis Division, Office of Air Quality Planning and Standards, U. S. Environmental Protection Agency, at Research Triangle Park, North Carolina 27711.

ACKNOWLEDGMENT

The adequacy of the content and the timeliness of publication of this series of reports are the result of the generous cooperation and diligent efforts of personnel at all levels of government and in industry. In that their participation has greatly enhanced the overall effort to achieve national air standards, especial gratitude is extended to each.

1972
NATIONAL EMISSIONS REPORT

INTRODUCTION

The National Emissions Reports summarize estimates of source emissions of those air pollutants for which national standards have been promulgated. The criteria pollutants are particulates, sulfur oxides (SO_x), nitrogen oxides (NO_x), hydrocarbons (HC), and carbon monoxide (CO). The reports are compiled from source information of the National Emissions Data System (NEDS). Compilations are presented for the nation as a whole, for individual states, for Air Quality Control Regions (AQCRs), and for interstate AQCR portions. This first annual report represents the best available indicators of national emissions for the calendar year 1972. The estimates reported are based on source records in NEDS prior to receipt of the December 31, 1973, Semiannual Report. Thus, the data are generally comparable to data collected for the development of State Implementation Plans (SIPs), but include revisions and updates whenever available. These data are subject to validation as indicated below.

EMISSONS INVENTORY

A considerable amount of detailed information concerning sources and their operations is needed for the development of an emissions inventory by which the impact of source emissions on an area's air quality can be assessed, for example, at the state or local level. The NEDS, operating through EPA Office of Air Quality Planning and Standards, processes source and emissions information for the whole nation. Initiating its operations in 1971, the National Air Data Branch has been engaged actively in efforts for the collection and analysis of air pollutant emissions. A detailed description of the NEDS and its methodology for emissions inventory is available in EPA publication APTD-1135, Guide for Compiling a Comprehensive Emission Inventory. Brief discussions of the NEDS basic elements, used for the generation of the National Emissions Reports, are given below.

NEDS POINT SOURCE FILE

The NEDS point source file contains data concerning stationary facilities that are individual emitters of relatively large quantities of one or more air contaminants. A point source is often arbitrarily considered to be a facility in which the total annual emission of

any one criteria pollutant equals or exceeds 100 tons per year. In general, individual emission points are defined within such a facility as those which have annual emissions of one or more pollutants equal to or greater than 25 tons per year. In certain instances, emitters of lesser annual amounts, but also having been identified as possible significant contributors, are accorded point source designation. Data on facilities and sources as described comprise the NEDS point source file.

At the present time, NEDS contains data for approximately 75,000 emitting points in all states, the District of Columbia, and three territories. Considerable information is stored for each point source. For example, NEDS stores data on annual operating rates or activity levels of a process (i.e., amount of fuel consumed by a boiler, or quantity of product produced by an industrial process, etc.). Information identifying existing air pollution control devices and their efficiencies is also recorded. These and similar data are subsequently used in determinations of source emissions according to procedures as outlined in the following discussion of the NEDS emission factor file.

NEDS point source data are reviewed continually through extensive and cooperative efforts involving interactions of the National Air Data Branch, the EPA Regional Offices, and, in varying degrees, the state and local air pollution control agencies. A considerable amount of the actual acquisition of data from state records, as well as the conversion of those data to the NEDS format is accomplished through EPA internal and contractual efforts. Under provisions of the Clean Air Act and SIP requirements, state agencies must submit revised source data to EPA semiannually for (1) each source achieving final compliance with an SIP emission-limitation regulation or strategy, (2) each new or modified source receiving approval to begin construction or operation, and (3) each source that terminated operations during a reporting period. Thus, the basic data of the NEDS are periodically being revised and updated and represent achievement progress of the SIPs.

On a routine basis as source data for a reporting period (i.e., semiannually) are reported to and processed by NEDS, a computer report is generated and returned to the appropriate agency for inspection and validation as a true and current status record for the source. The status of the validations of the NEDS record of emissions for the calendar year 1972 is presented in the table on the following page.

NEDS AREA SOURCE FILE

Area sources are all other emissions sources not identified as point sources. For example, the NEDS area source file contains data on all mobile sources (motor vehicles, aircraft, railroads, etc.), small stationary sources, and miscellaneous sources such as forest fires, agricultural burning, and retail gasoline marketing operations. Unlike point sources, however, individual source data are not stored in NEDS for each of these small sources. Rather, estimates of total emission levels for specific categories of area sources are stored for individual geographic areas. Generally, data relevant to area source emissions (e.g.,

[a]STATUS COMMENTS KEY

1. Data correct and complete, having been validated by State.
2. Data not validated by State, but will be validated by (date).
3. State has not responded to request for validation at time of preparation.
4. Data are correct and complete, having been validated by Regional Office.
5. There are currently no data available in NEDS, or substantial parts are missing or being revised. Efforts are under way to eliminate these information gaps.

total amount of gasoline consumed by all motor vehicles operating in the county) are grouped for each of the approximately 3100 counties or county equivalents in the United States. Area source data are developed primarily from reports published by other Federal agencies and, when possible, from valid data collected by state air pollution control agencies. Detailed procedures for the determination of area source activity levels are discussed in EPA publication APTD-1135. Under current SIP requirements, states are not required to submit area source data to EPA. Therefore, area source data are updated annually by the NADB. States are given the opportunity, however, to review the EPA-generated area source data for accuracy and completeness.

NEDS EMISSION FACTOR FILE

In normal NEDS operations, new source emissions are calculated automatically via computer program based on the data previously stored in point and area source files. The principal vehicle for these calculations is the NEDS emission factor file. An emission factor is a statistical average--a quantitative estimate--of the rate at which a pollutant is released to the atmosphere as a result of an activity such as combustion or industrial production, divided by the level of that activity. Thus, an emission factor relates the quantity of pollutants to an indicator of activity such as production capacity or quantity of fuel burned. Because factors are statistical averages, they are not necessarily precise indicators of emissions from an individual source. When they are applied to a large number of sources, however, a reasonable value of total emissions can be estimated. In general, the larger the sample, the lower the percentage of error. Therefore, for the entire nation, an emission estimate based on emission factors may be quite precise, but for smaller geographic areas the percentage of error increases. Emission factors are usually determined from results of source tests in which quantities of air pollutants are measured from specific processes. Emission factors may also be determined from process material balances and engineering appraisals of particular processes. A collection of derived emission factors is given in EPA publication AP-42, Compilation of Air Pollutant Emission Factors (revised April 1973) and its supplements.

The emission factors in AP-42 and associated data maintained by NADB are related to the activity levels for sources stored in NEDS. Area source emission factors are designated for each area source category represented in NEDS. The emissions are determined by multiplying the appropriate emission factor by the activity level recorded.

Similarly, point source emission factors are related to point source activity levels through the NEDS Source Classification Codes (SCC) determined and recorded for each point source. The SCC gives specific identification of the source (i.e., industrial coal-fired boiler, solid waste incinerator, gray iron cupola, etc.) and defines the units of the activity level recorded in the point source file. Appropriate emission factors are designated for each SCC and are multiplied by the activity level to calculate the emissions. For cases where a control device is indicated in the point source file, the given control device efficiency is included in the emission calculation so that estimated actual emissions are computed for all sources. Additionally, provision is made for the direct recording of emissions determined

by stack tests or engineering material balances for specific sources. It is assumed that emissions, determined by these latter methods, provide a more precise estimate than those calculated by the application of an emission factor. Further, when the emission estimates recorded in the point source file are indicated to have been determined by a source test or material balance, the computer program that calculates emissions will substitute these data for emission estimates calculated through use of factors.

Some SCCs do not have corresponding emission factors in the NEDS emission factor file. These SCCs are general in nature (i.e., termed miscellaneous or unspecified) and are used for the categorization of point sources that are otherwise not classifiable. A source will fall in these categories when (1) no emission information is available, (2) the source is inadequately identified, or (3) the source is unique, or nearly unique, and therefore cannot be assigned a specific SCC.

Some of the sources in such miscellaneous categories are subjected to engineering analysis and assumptions of emissions are derived. The resulting emissions estimates are incorporated into the point source file and carry the same weight as do sources' calculated emissions estimates. The National Emissions Reports are based on all emissions estimates in the NEDS point source file, however derived.

The error caused by having no estimates for some point sources, and "guess" estimates for a few others, is insignificant when totals are summarized for the nation as a whole, but may be fairly sizable for local areas where a number of point sources could not be assigned a specific SCC. All the evidence suggests that the problem of missing emission estimates for a few point sources is not major when considered in relation to (1) potential imprecision introduced through an application of emission factors to specific point sources, or (2) the imprecision introduced through calculation of area source activity levels for small geographic areas.

TABLE FORMATS

The tables that appear in this report are constructed according to the following hierarchy. First is the United States summary. This is followed by summary tables for each state (in alphabetical order) with individual AQCRs (in numerical order) appearing immediately after the state in which they exist. Portions of Interstate AQCRs within the state are treated the same as a whole AQCR. The last tables that appear are those that give sums of portions of Interstate AQCRs.

ADJUSTMENTS TO GRAND TOTAL (1972)

The United States summary contained herein does not reflect certain source categories and data deficits. For a more accurate picture of the nationwide emissions, the following additions to the grand total should be considered part of the United States summary.

Category	Particulates, tons/yr	SO_x, tons/yr	NO_x, tons/yr	HC, tons/yr	CO, tons/yr
New York point sources	343,000	1,028,000	421,000	140,000	49,000

		14. SPONSORING AGENCY CODE
15. SUPPLEMENTARY NOTES		

16. ABSTRACT

The National Emissions Reports summarize annual cumulative estimates of source emissions of five criteria pollutants: particulates, sulfur oxides, nitrogen oxides, hydrocarbons, and carbon monoxide. Source emissions data are reported to the U. S. Environmental Protection Agency under provisions of Section 110 of The Clean Air Act, as amended 1970, and EPA Regulations, Title 40, Code of Federal Regulations, Part 51.7. Summary data are presented for the nation as a whole, for individual states, and for Air Quality Control Regions and individual interstate portions thereof.

The data compilations result from the operations of the National Emissions Data System (NEDS), which functions as a component of the comprehensive EPA air information system--the Aerometric and Emissions Reporting System (AEROS). AEROS is managed by the National Air Data Branch, Monitoring and Data Analysis Division, Office of Air Quality Planning and Standards, U. S. Environmental Protection Agency, at Research Triangle Park, North Carolina 27711.

EPA Form 2220-1 (9-73)

INSTRUCTIONS

1. **REPORT NUMBER**
Insert the EPA report number as it appears on the cover of the publication.

2. **LEAVE BLANK**

3. **RECIPIENTS ACCESSION NUMBER**
Reserved for use by each report recipient.

4. **TITLE AND SUBTITLE**
Title should indicate clearly and briefly the subject coverage of the report, and be displayed prominently. Set subtitle, if used, in smaller type or otherwise subordinate it to main title. When a report is prepared in more than one volume, repeat the primary title, add volume number and include subtitle for the specific title.

5. **REPORT DATE**
Each report shall carry a date indicating at least month and year. Indicate the basis on which it was selected *(e.g., date of issue, date of approval, date of preparation, etc.)*.

6. **PERFORMING ORGANIZATION CODE**
Leave blank.

AUTHOR(S)
Give name(s) in conventional order *(John R. Doe, J. Robert Doe, etc.)*. List author's affiliation if it differs from the performing organization.

8. **PERFORMING ORGANIZATION REPORT NUMBER**
Insert if performing organization wishes to assign this number.

9. **PERFORMING ORGANIZATION NAME AND ADDRESS**
Give name, street, city, state, and ZIP code. List no more than two levels of an organizational hirearchy.

10. **PROGRAM ELEMENT NUMBER**
Use the program element number under which the report was prepared. Subordinate numbers may be included in parentheses.

11. **CONTRACT/GRANT NUMBER**
Insert contract or grant number under which report was prepared.

SPONSORING AGENCY NAME AND ADDRESS
Include ZIP code.

13. **TYPE OF REPORT AND PERIOD COVERED**
Indicate interim final, etc., and if applicable, dates covered.

14. **SPONSORING AGENCY CODE**
Leave blank.

15. **SUPPLEMENTARY NOTES**
Enter information not included elsewhere but useful, such as: Prepared in cooperation with, Translation of, Presented at conference of, To be published in, Supersedes, Supplements, etc.

16. **ABSTRACT**
Include a brief *(200 words or less)* factual summary of the most significant information contained in the report. If the report contains a significant bibliography or literature survey, mention it here.

17. **KEY WORDS AND DOCUMENT ANALYSIS**
(a) DESCRIPTORS - Select from the Thesaurus of Engineering and Scientific Terms the proper authorized terms that identify the major concept of the research and are sufficiently specific and precise to be used as index entries for cataloging.

(b) IDENTIFIERS AND OPEN-ENDED TERMS - Use identifiers for project names, code names, equipment designators, etc. Use open-ended terms written in descriptor form for those subjects for which no descriptor exists.

(c) COSATI FIELD GROUP - Field and group assignments are to be taken from the 1965 COSATI Subject Category List. Since the majority of documents are multidisciplinary in nature, the Primary Field/Group assignment(s) will be specific discipline, area of human endeavor, or type of physical object. The application(s) will be cross-referenced with secondary Field/Group assignments that will follow the primary posting(s).

18. **DISTRIBUTION STATEMENT**
Denote releasability to the public or limitation for reasons other than security for example "Release Unlimited." Cite any availability to the public, with address and price.

19. & 20. **SECURITY CLASSIFICATION**
DO NOT submit classified reports to the National Technical Information service.

21. **NUMBER OF PAGES**
Insert the total number of pages, including this one and unnumbered pages, but exclude distribution list, if any.

22. **PRICE**
Insert the price set by the National Technical Information Service or the Government Printing Office, if known.
