The Preliminary Biennial RCRA Hazardous Waste Report (Based on 1993 Data)

EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

The United States Environmental Protection Agency (EPA), in cooperation with the States,[1] biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this preliminary report is to communicate the findings of EPA's 1993 Biennial Reporting System (BRS) data collection efforts to the public, government agencies, and the regulated community,[2] as well as to allow an assessment of the quality and completeness of the data submissions on which the report is based. (For further discussion of data quality and completeness see page ES-7). The preliminary report consists of five documents (a "State Summary Analysis" will be included in the final report) :

- Executive Summary--an overview of national hazardous waste generation and management practices;
- National Analysis--a detailed look at waste handling practices in the EPA regions, the states and at the largest facilities in the nation, including quantities of generation, management, shipments and receipts, and interstate imports and exports, as well as counts of generators and managers;
- State Detail Analysis--a detailed look at each state's waste handling practices, including overall totals for generation, management, and shipments and receipts, as well as totals for the largest fifty facilities;
- List of Large Quantity Generators--identifies every hazardous waste generator in the United States that reported itself to be a large quantity generator in 1993; and
- List of Treatment, Storage and Disposal Facilities--identifies every hazardous waste manager in the United States that reported itself to be a treatment, storage or disposal facility in 1993.

[1]The term "state" includes the District of Columbia, Puerto Rico, Guam, the Navajo Nation, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

[2]While BRS respondents have submitted Confidential Business Information (CBI) pursuant to 40 CFR 260.2(b), none of these data have been included in this preliminary report.

RCRA HAZARDOUS WASTE GENERATION

In 1993, 22,615 large quantity generators produced 235 million tons of hazardous wastes regulated by RCRA.[3] This is a decrease of 811 generators and 70 million tons of waste compared to 1991. As identified in Exhibit 1, the largest hazardous waste generating states were Texas (67 million tons), New York (45 million tons), Louisiana (32 million tons), and Michigan (21 million tons). Together, these states accounted for 70% of the national total.

In comparing 1993 data with those of earlier reports, it is important to note that many new wastes were captured by RCRA in 1990 with the promulgation of the Toxicity Characteristic (TC) Rule. The TC Rule added 25 new hazardous waste codes (D018-D043) and required more stringent analytical tests for the presence of toxic constituents in waste. These codes captured, at a minimum, 76 million tons of wastes that were not regulated before 1990. An additional 41 million tons were described by D018-D043 mixed with other waste codes. This suggests that the new toxicity characteristic wastes captured between 76 and 117 million tons of wastes that were not included in the 1989 Biennial Report, but were included in the 1993 report.

Hazardous waste generators are included in "The Preliminary Biennial RCRA Hazardous Waste Report" if they identified themselves as large quantity generators. The following are the federal criteria for being a large quantity generator:

- The generator generated in any single month 1,000 kg (2,200 lbs. or 1.1 tons) or more of RCRA hazardous waste; or

- The generator generated in any single month, or accumulated at any time, 1 kg (2.2 lbs) of RCRA acute hazardous waste; or

- The generator generated, or accumulated, at any time more than 100 kg (220 lbs) of spill cleanup material contaminated with RCRA acute hazardous waste.

[3]This quantity only includes waste managed in treatment units subject to RCRA permitting standards or transportation regulations. Hazardous waste managed in units exempt from RCRA permitting standards, such as treatment systems permitted by the National Pollutant Discharge Elimination System (NPDES), is not included in this report.

According to these criteria, a generator that reports more than 13.2 tons (12 months x 1.1 tons) of annual hazardous waste generation must be a large quantity generator, because the generator must have generated at least 1.1 tons in at least one month. A generator that reports less than 13.2 tons in a year may not be a large quantity generator, because they may have generated less than 1.1 tons in every month. Of the 22,615 generators that identified themselves as large quantity generators, there are 13,473 generators that generated more than 13.2 tons in 1993, 7,570 that generated between 1.1 and 13.2 tons, and 1,572 that generated less than 1.1 tons.

It is important to note that the large quantity generators identified in this report have been included on the basis of the best available and most current information provided electronically to the EPA by the States. Both the EPA and the States have made significant efforts to ensure the accuracy of these data. However, the large quantity generator counts may include some generators that met lower, state-defined thresholds for large quantity generators. The EPA and the States endeavor to control for variation in state programs, but it is not always possible to distinguish generators that the federal threshold determines to be large quantity generators from generators that a state threshold determines to be large quantity generators. The EPA and the States also endeavor to ensure that only federally regulated wastes are counted in the determination of federal large quantity generators, but the large quantity generator counts may include generators that, when determining whether they were large quantity generators, counted wastes regulated only by their states or wastes that are exempt from federal regulation.

RCRA HAZARDOUS WASTE MANAGEMENT

In 1993, 3,792 treatment, storage, or disposal facilities (TSDs) subject to RCRA permitting standards managed 211 million tons of hazardous waste. This represents a 70 facility decrease in the number of TSDs and an 84 million ton decrease in the amount of waste managed as compared to 1991. As identified in Exhibit 2, the states managing the largest quantities of hazardous wastes were Texas (58 million tons), New York (45 million tons), Louisiana (31 million tons), and Michigan (21 million tons). Together, these states accounted for 73% of the national management total.

The majority (69.7%) of the national total was managed in aqueous treatment units. Ninety-seven (97) million tons were managed in aqueous organic treatment units, 7 million tons in aqueous inorganic treatment units, and 43 million tons in both inorganic and organic aqueous treatment units.

Land disposal accounts for 12.6% of the management total. Nationwide, 24 million tons of hazardous wastes were disposed in underground injection wells, 1.6 million tons were disposed in landfills, 275 thousand tons were managed in surface impoundments, and 159 thousand tons were managed by land treatment (land farming).

Recovery operations account for 1.6% of the national management total. Facilities reported that 858 thousand tons were managed in solvent recovery units, 1.3 million tons were managed in fuel blending units, 756 thousand tons were managed in metals recovery units, and 501 thousand tons were recovered by other methods such as acid regeneration, waste oil recovery, and non-solvent organic recovery.

Thermal treatment accounts for 1.7% of the national management total. A total of 1.8 million tons were incinerated, while facilities reused 1.8 million tons as fuel in boilers or industrial furnaces.

RCRA HAZARDOUS WASTE SHIPMENTS AND RECEIPTS

In 1993, 22,665 shippers reported shipping a total of 20 million tons of hazardous waste, of which 7 million tons were shipped interstate. The states that shipped (in or out of state) the largest quantities of wastes were Michigan (4.2 million tons), Texas (4.1 million tons), and Utah (2.4 million tons). The states that received the largest quantities of waste (from in or out of state) were Texas (1.3 million tons), California (981 thousand tons), and Ohio (846 thousand tons). The largest importers were Pennsylvania (419 thousand tons), Ohio (418 thousand tons), and Indiana (340 thousand tons). The largest exporters were Michigan (1.5 million tons), California (1.2 million tons), and Texas (318 thousand tons).

DATA QUALITY AND COMPLETENESS

The data presented in this report have been provided by States to their respective EPA regional offices. In some cases data were also collected by EPA Regional offices. When the data were transmitted to EPA Headquarters, the state or region that collected the data provided an indication of how complete the data were for each state that was being transmitted. Exhibit 3 lists the current level of completion for each state according to one of the four categories described below.

1. State believes data submission is complete.

   State has indicated that it provided all required data for all handlers that were required to file the 1993 Biennial Report, including all LQGs and TSDs in the state. (Please note that sites claiming confidential business information have been excluded from all volumes of this report.)

2. State believes data submission is incomplete.

   State has indicated that its data omitted handlers that were required to file the 1993 Biennial Report. Data for these states will probably change when a full submission is received for the state.

3. No data received from state.

   State has not provided any data to EPA.

4. Data translation error has occurred.

   The data submitted appear to contain a systematic data error.

The Preliminary Biennial RCRA Hazardous Waste Report (Based on 1993 Data)

LIST OF TREATMENT, STORAGE OR DISPOSAL FACILITIES IN THE UNITED STATES

INTRODUCTION TO LIST OF TREATMENT, STORAGE OR DISPOSAL FACILITIES

This document contains a list of treatment, storage and disposal facilities, as identified by EPA's Biennial Report. The Biennial Report is a census of hazardous waste generators and managers that are regulated by the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. Section 3004 provides authority for the EPA Administrator to promulgate standards that shall include, but need not be limited to, requirements respecting the maintenance of records of all hazardous wastes treated, stored or disposed of and the manner in which such wastes are treated, stored or disposed of. There are 3,792 treatment, storage and disposal facilities on this list.

How To Get Copies of the List

Copies of this list, either hardcopy or on floppy disk, may be obtained through the RCRA Hotline by calling 1-800-424-9346. Further information about the TSDs on the list may be obtained through the National Technical Information Service, from whom copies of the entire 1993 Biennial Reporting System database may be purchased.

The Federal Definition of a TSD Facility

A TSD facility, according to 40 CFR 260.10, is a facility that performs one or more of the following functions:

Treatment--Any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize it, or render it non-hazardous or less hazardous, or to recover it, make it safer to transport, store or dispose of, or amenable for recovery, storage or volume reduction.

Storage--The holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed, or stored elsewhere.

Disposal--The discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste into or on any land or water so that the waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including ground waters.

What Is On This List

Those facilities that are on this list identified themselves as TSD facilities when they indicated that they had RCRA-permitted or interim status storage, or that they conducted treatment, disposal or recycling in units subject to RCRA permitting requirements in Boxes A and B, respectively, in Section VI on the Identification and Certification Form of the "1993 Hazardous Waste Report Instructions and Forms." A TSD on the list may have its associated management quantity listed as zero if:

- It identified itself as a TSD but did not report any information about treatment, storage or disposal quantities.

- It only identified itself as a TSD because of wastes that it stored. While waste storage is an appropriate reason for a facility to identify itself as a TSD, the quantities of waste that are stored are not counted toward overall management totals.
