TABLES

VOLUME I

Number		Page
1	Highest ranking candidate fishes for use as 301(h) bioaccumulation monitoring species	7
2	Recommended megainvertebrate species for 301(h) bioaccumulation monitoring	12
3	Summary of data on priority pollutant concentrations in muscle tissue of American lobster (*Homarus americanus*)	17
4	Summary of data on priority pollutant concentrations in whole California mussel (*Mytilus californianus*)	18
5	Summary of data on priority pollutant concentrations in liver tissue of Dover sole (*Microstomus pacificus*)	19
6	Summary of data on priority pollutant concentrations in muscle tissue of Dover sole (*Microstomus pacificus*)	20
7	Summary of data on priority pollutant concentrations in muscle tissue of Dungeness crab (*Cancer magister*)	21
8	Summary of data on priority pollutant concentrations in whole edible mussel (*Mytilus edulis*)	22
9	Summary of data on priority pollutant concentrations in liver tissue of English sole (*Parophrys vetulus*)	23
10	Summary of data on priority pollutant concentrations in muscle tissue of English sole (*Parophrys vetulus*)	24
11	Summary of data on priority pollutant concentrations in whole hard clam (*Mercenaria mercenaria*)	25
12	Summary of data on priority pollutant concentrations in ocean quahog (*Arctica islandica*)	26
13	Summary of data on priority pollutant concentrations in muscle tissue of eastern rock crab (*Cancer irroratus*)	27
14	Summary of data on priority pollutant concentrations in whole soft-shell clam (*Mya arenaria*)	28

15 Summary of data on priority pollutant concentrations in muscle tissue of spiny lobster (Panulirus interruptus) 29

16 Summary of data on priority pollutant concentrations in muscle tissue of spot (Leiostomus xanthurus) 30

17 Summary of data on priority pollutant concentrations in liver tissue of starry flounder (Platichthys stellatus) 31

18 Summary of data on priority pollutant concentrations in muscle tissue of starry flounder (Platichthys stellatus) 32

19 Summary of data on priority pollutant concentrations in surf clam (Spisula solidissima) 33

20 Summary of data on priority pollutant concentrations in liver tissue of winter flounder (Pseudopleuronectes americanus) 34

21 Summary of data on priority pollutant concentrations in muscle tissue of winter flounder (Pseudopleuronectes americanus) 35

22 Summary of data on priority pollutant concentrations in muscle tissue of yellow crab (Cancer anthonyi) 36

23 Concentrations of acid-extractable and volatile priority pollutants in selected target species 38

24 Approximate trace metal detection limits for tissue 46

25 Minimum and maximum trace metal detection limits reported for tissue samples from recommended target species 48

26 Minimum and maximum trace organic compound detection limits reported for tissue samples from recommended target species 51

27 Recommended organic priority pollutant detection limits for tissue 53

VOLUME II

A-1 Scores of bioaccumulation monitoring candidates on five selection criteria A-1

A-2 Scientific and common names of species considered for bio-accumulation monitoring A-13

D-1 Historical metals data compiled by study D-1

D-2 Historical organic chemical data compiled by study D-51

D-3 Historical metals data sorted by species, tissue, and sampling area D-172

D-4 Historical organic chemical data sorted by species, tissues, and sampling area D-222

D-5 Notes on specific historical data sets in Tables D-1 through D-4 D-343

APPENDIX A

SELECTION OF TARGET FISHES FOR BIOACCUMULATION MONITORING

TABLE A-1. SCORES OF BIOACCUMULATION MONITORING CANDIDATES ON FIVE SELECTION CRITERIA

State/Locality — Scores on Criteria

MASSACHUSETTS

Swampscott (Source: Raytheon 1973)

Species	Habitat	Prey	Distribution	Size	Abundance	Total
Yellowtail flounder	3	3	2	2	3	13
Winter flounder	3	3	2	2	3	13
Ocean pout	3	3	1	3	3	13
Longhorn sculpin	3	2	1	2	3	11
Atlantic cod	2	1	1	3	3	10
Little skate	3	3	1	2	2	11
Red hake	2	1	3	3	2	11
White hake	2	1	1	3	2	9
Windowpane	3	2	3	2	2	12

TABLE A-2. SCIENTIFIC AND COMMON NAMES OF SPECIES CONSIDERED FOR BIOACCUMULATION MONITORING

Family	Scientific Name	Common Name
Rajidae	*Raja binoculata*	Big skate
	Raja erinacea	Little skate
	Raja inornata	California skate
	Raja ocellata	Winter skate
Chimaeridae	*Hydrolagus colliei*	Spotted ratfish
Anguillidae	*Anguilla rostrata*	American eel
Congridae	*Conger oceanicus*	Conger eel
Clupeidae	*Alosa aestivalis*	Blueback herring
	Alosa sapidissima	American shad
	Brevoortia tyrannus	Atlantic menhaden
	Clupea harengus harengus	Pacific herring
Engraulidae	*Anchoa hepsetus*	Striped anchovy
	Anchoa mitchilli	Bay anchovy
	Engraulis mordax	Northern anchovy
Osmeridae	*Allosmerus elongatus*	Whitebait smelt
	Osmerus mordax	Rainbow smelt
	Spirinchus starksi	Night smelt
Argentinidae	*Argentina sialis*	Pacific argentine
Synodontidae	*Synodus lucioceps*	California lizardfish
Batrachoididae	*Opsanus tau*	Oyster toadfish
	Porichthys notatus	Plainfin midshipman
Lophiidae	*Lophius americanus*	Goosefish
Gadidae	*Enchelyopus cimbrius*	Fourbeard rockling
	Gadus morhua	Atlantic cod
	Merluccius bilinearis	Silver hake
	Microgadus proximus	Pacific tomcod
	Microgadus tomcod	Atlantic tomcod
	Pollachius virens	Pollock
	Urophycis chuss	Red hake
	Urophycis regia	Spotted hake
	Urophycis tenuis	White hake

TABLE A-2. (Continued)

Ophidiidae	Chilara taylori	Spotted cusk-eel
	Ophidion marginatum	Striped cusk-eel
Zoarcidae	Lycodopsis pacifica	Blackbelly eelpout
	Macrozoarces americanus	Ocean pout
Atherinidae	Atherinops affinis	Topsmelt
	Menidia menidia	Atlantic silverside
Gasterosteidae	Aulorhynchus flavidus	Tube-snout
Syngnathidae	Syngnathus fuscus	Northern pipefish
	Syngnathus leptorhynchus	Bay pipefish
Percichthyidae	Morone americana	White perch
	Morone saxatilis	Striped bass
Serranidae	Centropristis striata	Black sea bass
Pomatomidae	Pomatomus saltatrix	Bluefish
Sparidae	Lagodon rhomboides	Pinfish
	Stenotomus chrysops	Scup
Sciaenidae	Bairdiella chrysoura	Silver perch
	Cynoscion regalis	Weakfish
	Genyonemus Lineatus	White croaker
	Leiostomus xanthurus	Spot
	Micropogonias undulatus	Atlantic croaker
Embiotocidae	Cymatogaster aggregata	Shiner perch
	Embiotoca jacksoni	Black perch
	Embiotoca lateralis	Striped seaperch
	Hyperprosopan anale	Spotfin surfperch
	Hyperprosopon argenteum	Walleye surfperch
	Hypsurus caryi	Rainbow seaperch
	Phanerodan furcatus	White seaperch
	Rhacochilus vacca	Pile perch
	Zalembius rosaceus	Pink seaperch
Labridae	Tautoga onitis	Tautog
	Tautogolabrus adspersus	Cunner
Sphyraenidae	Sphyraena guachancho	Guaguanche
Bathymasteridae	Ronquilus jordani	Northern ronquil

TABLE A-2. (Continued)

Gobiidae	Acanthogobius flavimanus	Yellowfin goby
	Gillichthys mirabilis	Longjaw mudsucker
	Gobiosoma ginsburgi	Seaboard goby
	Lepidogobius lepidus	Bay goby
Stromateidae	Peprilus simillimus	Pacific pompano
	Peprilus triacanthus	Butterfish
Scorpaenidae	Scorpaena guttata	California scorpionfish
	Sebastes dalli	Splitnose rockfish
	Sebastes miniatus	Vermilion rockfish
	Sebastes paucispinis	Bocaccio
	Sebastes saxicola	Stripetail rockfish
	Sebastes semicinctus	Halfbanded rockfish
Triglidae	Prionotus carolinus	Northern sea robin
	Prionotus evolans	Striped sea robin
Hexagrammidae	Zaniolepis latipinnis	Longspine combfish
Cottidae	Artedius fenestralis	Padded sculpin
	Chitonotus pugetensis	Roughback sculpin
	Hemitripterus americanus	Sea raven
	Icelinus quadriseriatus	Yellowchin sculpin
	Leptocottus armatus	Pacific staghorn sculpin
	Myoxocephalus aenaeus	Grubby
	Myoxocephalus octodecemspinosus	Longhorn sculpin
Agonidae	Odontopyxis trispinosa	Pygmy poacher
Bothidae	Citharichthys sordidus	Pacific sanddab
	Citharichthys stigmaeus	Speckled sanddab
	Citharichthys xanthostigma	Longfin sanddab
	Etropus microstomus	Smallmouth flounder
	Hippoglossina stomata	Bigmouth sole
	Paralichthys californicus	California halibut
	Paralichthys dentatus	Summer flounder
	Paralichthys oblongatus	Fourspot flounder
	Scophthalmus aquosus	Windowpane
	Xystreurys liolepis	Fantail sole
Pleuronectidae	Eopsetta jordani	Petrale sole
	Glyptocephalus cynoglossus	Witch flounder
	Glyptocephalus zachirus	Rex sole
	Hypsopsetta guttulata	Diamond turbot
	Lepidopsetta bilineata	Rock sole
	Limanda ferruginea	Yellowtail flounder
	Lyopsetta exilis	Slender sole
	Microstomus pacificus	Dover sole
	Parophrys vetulus	English sole

TABLE A-2. (Continued)

Pleuronectidae (cont.)	*Platichthys stellatus*	Starry flounder
	Pleuronichthys coenosus	C-O sole
	Pleuronichthys decurrens	Curlfin sole
	Pleuronichthys verticalis	Hornyhead turbot
	Psettichthys melanostictus	Sand sole
	Pseudopleuronectes americanus	Winter flounder
Soleidae	*Trinectes maculatus*	Hogchoker
Cynoglossidae	*Symphurus atricauda*	California tonguefish
Tetraodontidae	*Sphoeroides maculatus*	Northern puffer

APPENDIX B

EVALUATION CRITERIA FOR HISTORICAL DATA REVIEW

MANDATORY

1. The study must have been published no earlier than 1974.

2. The study must have examined target organisms within U.S. territorial waters.

HIGH QUALITY PAPERS

1. Samples collected in scientific and orderly manner; sampling locations, dates, and methods clearly specified; method of compositing samples clearly indicated.

2. Sample preparation methods specified and correct.

   - Contamination avoided during processing
   - Samples kept frozen during transport and storage
   - Metal digestion conducted by wet (acid) digestion
   - Organic extraction carried out using Soxhlet extraction
   - Cleanup conducted using Sephadex column.

3. Samples analyzed with preferred instrument.

   - Organic analysis using GC and confirmed with GC/MS; quantified using peak area and internal standard

   - Mercury analysis with cold-vapor technique

   - Arsenic and selenium analyzed by gaseous hydride AA or graphite furnace AA

   - Representative chromatogram for organic analysis included.

4. Adequate QA/QC used and specified.

   - Spike and recovery data given

   - NBS certified samples processed in parallel with samples, agreement specified

   - Procedural blanks analyzed every 10 samples

   - Detection limits given and acceptable

5. Lipid content of organisms specified and conversion factors given.

6. Paper subjected to peer review in the scientific community.

ACCEPTABLE PAPERS

1. Organic compounds analyzed by GC, but not confirmed with GC/MS; analysis conducted on HPLC; external standard quantification.

2. Adequate tissue cleanup performed; Florisil column.

3. Mercury analysis by stannous chloride reduction method.

4. Metal samples digested using dry ash, and accompanied by acceptable QA/QC.

5. Some QA/QC performed; results borderline or not reported.

6. Organic samples digested with hexane:acetonitrile solvents in high-speed blender

7. Data from in-house state or federal agencies with little or no peer review.

REJECTED PAPERS

1. Papers without Mandatory requirements.

2. Samples collected from unknown areas, at unknown dates, or by non-scientific personnel (e.g., commercial fishermen or processing houses).

3. No sample cleanup procedures used.

4. Digestion for metal analysis using dry-ash method, with no QA/QC data supplied; no separate digestion for mercury analysis (common digestion, then split for analysis).

5. No QA/QC specified or supplied.

6. No methods data furnished.

7. Tissues from different species pooled for analysis.

8. Sample analyzed by inadequate method or instrument.

- Mercury analysis with anything other than cold-vapor or stannous-chloride reduction method

- Benzo(a)pyrene analysis using TLC/fluorimetry

- Organic analysis using retention times only, without standards.

9. Data not subjected to any peer review.

Young et al. 1978b	R	9
Young et al. 1979	R	8
Young et al. 1980	A	
Young et al. 1981	R	9

[a] A = Accept data.
R = Reject data.

[b] Reasons for rejection of data:

1 = Format precluded use of data (e.g., figure only).
2 = Sample type documentation was inadequate.
3 = Sampling location was not specified or unclear.
4 = Commercial seafood outlet provided samples.
5 = Sample preparation and analytical methods were poorly documented.
6 = Sample preparation was inadequate.
7 = Analytical method was inadequate.
8 = Tissue type was inappropriate.
9 = Data were out-of-date or reported previously.

APPENDIX D

COMPILATION OF HISTORICAL DATA ON PRIORITY POLLUTANT CONCENTRATIONS IN TISSUES OF RECOMMENDED TARGET SPECIES

Available data on priority pollutants in tissues of recommended target species are shown in Tables D-1 through D-4. Tables D-1 and D-3 contain data on metals, and Tables D-2 and D-4 contain data on organic priority pollutants. Tables D-1 and D-2 contain the data for each data set by study as it was compiled. To aid in tracing data to its original source, the order of presentation of data within a study in Tables D-1 and D-2 matches the original authors' formats as much as possible. Tables D-3 and D-4 contain the same data sorted by species, tissue type, and site category. Only data that were judged to be of adequate quality according to the evaluation criteria in Appendix C are included in the data tables.

The following section describes the format of each data table and defines abbreviations used in the tables. Additional notes on specific data sets are provided in Table D-5.

GENERAL FORMAT

The first pages of each table contain columns of information which document the nature of the sample and the analytical technique. These pages are numbered 1A, 1B, 1C, etc. in the upper right corner. Subsequent pages contain the data for each selected contaminant. Each row of data is identified by the columns labeled "Organism", "Location", "Site", "Date", and "Tissue" on the left-hand border of the table. The pollutant concentration data for a particular sample characterized on page 1A are shown on pages 2A, 3A, 4A, etc. Similarly, the data for a sample appearing first on page 1B are found on pages 2B, 3B, 4B, etc.

ORGANISM

Common name of recommended target species. Scientific names can be found elsewhere in this report.

LOCATION

Geographic location of sample. Numbers following location name are station numbers from the original authors.

SITE

Category of sampling locations:

PE = Near a known contaminant source, east coast
PW = Near a known contaminant source, west coast
RE = Removed from known contaminant sources, east coast
RW = Removed from known contaminant sources, west coast

The category was derived from information given by the original authors or assigned subjectively based on relative proximity of sampling location to urbanized area or known source of pollution. Site categories were assigned before examining the data.

DATE

Sampling date [month/year, season/year, or year(s)]:

Sp = Spring
S = Summer
F = Fall
W = Winter

TISSUE

Kind of tissue analyzed:

M = Muscle
L = Liver
W = Whole-body soft parts
F = Foot

INSTRUMENT

Analytical instrument:

AA = Atomic absorption spectrophotometry
GC = Gas chromatography
MS = Mass spectrophotometry

REFERENCE

Author/date citation.

I

Numerical index for each row of data within a data set.

SAMPLE

Kind of sample:

I = Individual organism
IA = Mean of samples from individual organisms
IM = Median of sample data from individual organisms
C = Single composite sample
CA = Mean of composite samples
CM = Median of composite samples

N1

Number of individuals per sample (>1 for all composite samples).

N2

Number of replicate samples, either number of composite samples or number of individuals on which the mean or median is based.

VALUE

Tissue concentration of pollutant (ppm for metals, ppb for organic chemicals; wet-weight basis). Datum is either for a single sample, for a mean, or for a median (see SAMPLE column). The number of significant figures generally coincides with the last non-zero digit. Values that were obtained by conversion from the dry-weight concentration may include nonsignificant digits.

< = Quantitation limit, or possibly a detection limit that was not defined as such by original authors

U = Undetected

MINIMUM

Lower end of the range reported by the original authors. See notes under VALUE.

MAXIMUM

Upper end of the range reported by the original authors. See notes under VALUE.

TABLE D-5. NOTES ON SPECIFIC HISTORICAL DATA SETS IN TABLES D-1 THROUGH D-4

Authors	Notes
Metals Table	
de Goeij et al. 1974	Authors did not specify outfall site locations
Genest and Hatch 1981	Values are annual averages of 12 monthly samples taken at three sites east of New Bedford Harbor: Angelica Pt., Mattapoisett; Mattapoisett Neck; and West Island, Fairhaven
Goldberg et al. 1983	1976 Pb values were obtained using flame AA spectrophotometry and are therefore not comparable to the 1977, 1978 data (graphite AA Spectrophotometry)
Ladd et al. 1984	Values were converted from dry to wet weight by dividing by 5.8
McDermott et al. 1976	Dry to wet weight conversions were made using authors' conversion factor of 4.0
Reid et al. 1982	Hg analyses were conducted on individual organisms (1-4 replicates)
Wenzloff et al. 1979	Samples were pooled from various sites, some possibly polluted
Young et al. 1978	Coastal control sites = sites at LaJolla, Pt. Dume, and Dana Pt.
Organics Table	
Clark 1983	Values were converted from dry to wet weights by dividing dry values by 8.9 (author's figure)
Gossett et al. 1983	ΣPCB values = Arochlor 1254 + Arochlor 1242. Trichlorobenzene value = Σ1,2,4 TCB + 1,3,5 TCB

Ladd et al. 1984	Dry weight data was divided by 5.8 to arrive at wet weight conversions shown. Mercury in *Mytilus californianus* at Pacific Grove outrigger site was 0.0004 ppm
MacLeod et al. 1981	Chlordane values are for γ-chlordane only. DDE values are for both o,p' and p,p' isomers. DDT values are for p,p' isomer only. Dry to wet weight conversions were made using authors' dry weight percentages, which varied among samples
Malins et al. 1980	Number of organisms per sample (N_1) was not specified. Chlordane values are for αchlordane only. DDT values are for the p,p' isomer only. Dry to wet weight conversions were made using authors' dry weight percentages, which varied among samples
McDermott et al. 1978	Number of replicate samples (N_2) was not specified
McDermott-Ehrlich et al. 1978	Number of replicate samples (N_2) was not specified. Σ PCB values = Aroclor 1242 + Aroclor 1254.
Pruell et al 1984	Composite samples of 100 g each were analyzed; number of organisms/ sample was not specified. Only Dutch Island data is listed. Sampling locations for other (commercial) samples were not specified. Data for "medium" and "large" size organisms are listed separately.
Sherwood et al. 1980	ΣPCB values = Aroclor 1242 + Aroclor 1254 + Aroclor 1260
Tetra Tech 1985b	"Less-than" symbol indicates that detection limits were used for some individual samples when calculating the mean. Values appearing in the DDT, DDE, and DDD columns are for the p,p' isomer only

Young and Alexander 1977	Number of organisms per sample (N_1) was not specified. Σ PCB values are for PCB 1254 only. Dry to wet weight conversions were made using authors' conversion factor of 4.4
Young and McDermott 1975	ΣPCB values are for Aroclor 1254 only. Dry to wet weight conversions were made by dividing dry values by 5.8
Young et al. 1980	ΣPCB value is for PCB 1254 only
