

Air

# **Metallic Material Processing Plants - Background Information for Proposed Standards Volume 2: Appendices**

**NSPS**

## APPENDIX A. CREATION OF THE BACKGROUND INFORMATION DOCUMENT

In August 1979, the U.S. Environmental Protection Agency promulgated a list of 63 major source categories and ranked them in order of priority for NSPS development (44 FR 49222). The method used to rank the source categories was preceded by the Administrator's determination that these sources contribute significantly to air pollution that may reasonably be anticipated to endanger public health or welfare. Following this determination, source category rankings were based on the quantity of emissions from each source category and the mobility and competitive nature of each stationary source category. The metallic mineral processing industry was ranked 14th in priority on a list of source categories selected by EPA.

Based upon the results of a screening study conducted during May to October 1978, work on the Background Information Document (BID) was initiated for the metallic mineral category.

In June 1978, a literature survey was begun and the industry was canvassed by phone to obtain information on plant operations and to determine which plants, if any, appeared to be well controlled. Plant visits were then scheduled to obtain information on process details, quantities of emissions, and emission control equipment. The feasibility of emission testing was also determined during the plant visits. The significant events relating to this effort are discussed in the chronology below.

### A.1 CHRONOLOGY

The chronology beginning on the next page lists the important events which have occurred in the development of background information for a New Source Performance Standard for the Metallic Mineral Processing Industry.

Date	Activity
June 13, 1978	Literature survey initiated for screening study.
June 23, 1978	First contact with the American Mining Congress.
July 6, 1978	Telephone survey of metallic mineral processing plants initiated.
August 8, 1978	Plant visit to NL Industries, Inc., MacIntyre Development, New York.
August 14-15, 1978	Plant visit to St. Joe Lead Company, Brushy Creek, Fletcher, and Viburnum Operations, Missouri.
August 15, 1978	Plant visit to Cominco American, Inc., Magmont Mine, Missouri.
August 17, 1978	Plant visit to Climax Molybdenum Co., Henderson Operations, Colorado.
August 18, 1978	Plant visit to Climax Molybdenum Co., Climax Operations, Colorado.
August 21, 1978	Plant visit to Aluminum Company of America, Arkansas Operations, Arkansas.
August 22, 1978	Plant visit to Reynolds Metals Co., Sherwin Alumina Plant, Texas.
August 23, 1979	Plant visit to New Jersey Zinc Co., Sterling Operations, New Jersey.
August 24, 1979	Plant visit to Cyprus Mines Corp., Cyprus Bagdad Operations, Arizona.
August 28, 1978	Plant visit to Homestake Mining Co., Black Hills Operations, South Dakota.
August 29, 1978	Plant visit to The Anaconda Company, Mineral Resources Group, Butte Operations, Montana.
August 30, 1978	Plant visit to Sunshine Mining Co., Sunshine Mine, Idaho.

Date	Activity
August 31, 1978	Plant visit to Earth Resources Co., DeLamar Silver Mine, Idaho.
October 1, 1978	Initiate work on Background Information Document.
December 4, 1978	Plant visit to Pickands, Mather & Co., Taconite Harbor Facility, Minnesota.
December 5, 1978	Plant visit to Duluth, Missabe, and Iron Range Railway Co., Two Harbors Facility, Minnesota.
December 5, 1978	Plant visit to Duluth, Missabe, and Iron Range Railway Co., Duluth Harbor Facility, Minnesota.
March 1, 1979	Plant visit to Union Carbide Corp., Hot Springs Operation, Arkansas.
March 8, 1979	Plant visit to Exxon Minerals Co., Highland Uranium Operations, Wyoming.
March 19, 1979	Plant visit to The Anaconda Company, Mineral Resources Group, New Mexico Operations.
April 30, 1979	Plant visit to E.I. DuPont de Nemours & Co., Inc., Highland Plant, Florida.
May 17, 1979	Plant visit to Union Carbide Corp., Emerson Operations, Nevada.
May 18, 1979	Plant visit to Magma Copper Co., San Manuel Division, Arizona.
July 25-26, 1979	Emission testing at Pickands, Mather & Co., Taconite Harbor Facility, Minnesota.
August 23-30, 1979	Emission testing at Climax Molybdenum Co., Henderson Operations, Colorado.
September 26 - October 1, 1979	Emission testing at Exxon Minerals Co., Highland Uranium Operations, Wyoming.
October 23-26, 1979	Emission testing at The Anaconda Company, Mineral Resources Group, Butte Operations, Montana.

Date	Activity
November 7, 1979	Plant visit to Martin Marietta Alumina, Inc., Kingshill Alumina Plant, Virgin Islands.
November 12-17, 1979	Emission testing at Cyprus Mines Corp., Cyprus Bagdad Operations, Arizona.
November 19-29, 1979	Emission testing at New Jersey Zinc Co., Sterling Operations, New Jersey.
December 4-8, 1979	Emission testing at Union Carbide Corp., Hot Springs Operations, Arkansas.
January 14-17, 1980	Emission testing at Homestake Mining Co., Black Hills Operations, South Dakota.
January 17, 1980	Plant visit to Earth Resources Co., Delamar Silver Mine, Idaho.
April 9-10, 1980	Plant visit to Inspiration Consolidated Copper Co., Inspiration, Arizona.
June 23-25, 1980	Emission testing at Reynolds Metals Co., Sherwin Alumina Plant, Texas.
April 29, 1981	National Air Pollution Control Techniques Advisory Committee Meeting (NAPCTAC).
June 16-17, 1981	Emission testing at Alumax Inc., Goose Creek, South Carolina

APPENDIX B. INDEX TO ENVIRONMENTAL IMPACT CONSIDERATIONS

Agency Guidelines for Preparing Regulatory  
Action Environmental Impact Statements  
(39 FR 37419)

Location Within the Background Information Document

(1) Background and summary of regulatory alternatives

The regulatory alternatives from which standards will be chosen for proposal are summarized in Chapter 1, Section 1.1.

Statutory basis for proposing standards

The statutory basis for proposing standards is summarized in Chapter 2, Section 2.1.

Relationship to other regulatory agency actions

The various relationships between the regulatory agency actions are discussed in Chapters 3, 7, and 8.

Industry affected by the regulatory alternatives

A discussion of the industry affected by the regulatory alternatives is presented in Chapter 3, Section 3.1. Further details covering the "business/economic" nature of the industry is presented in Chapter 9, Section 9.1.

Specific processes affected by the regulatory alternatives

The specific processes and facilities affected by the regulatory alternatives are summarized in Chapter 1, Section 1.1. A detailed technical discussion of the sources and processes affected by the regulatory alternatives is presented in Chapter 3, Section 3.2.

Availability of control technology

Information on the availability of control technology is given in Chapter 4.

Existing regulations

A discussion of existing regulations on the industry to be affected by the regulatory alternatives is included in Chapter 3, Section 3.3 and Chapter 8, Section 8.2.

(continued)

APPENDIX B. INDEX TO ENVIRONMENTAL IMPACT CONSIDERATIONS (concluded)

Agency Guidelines for Preparing Regulatory  
Action-Environmental Impact Statements  
(39 FR 37419)

Location Within the Background Information Document

(2) Economic impact of the regulatory  
alternatives

Costs

The costs of alternative control techniques are discussed in Chapter 8, Section 8.1. Other cost considerations affecting the metallic minerals processing industry are discussed in Chapter 8, Section 8.2.

Economic impacts

The economic impact of the regulatory alternatives on costs is discussed in Chapter 9, Section 9.2.

P 2

(3) Environmental impact of the  
regulatory alternatives

Air pollution

The air pollution impact of the regulatory alternatives is discussed in Chapter 7, Section 7.1.

Water pollution

The water pollution impact of the regulatory alternatives is discussed in Chapter 7, Section 7.2.

Solid waste disposal

The solid waste disposal impact of the regulatory alternatives is discussed in Chapter 7, Section 7.3.

Energy impact

The energy impacts of the regulatory alternatives is discussed in Chapter 7, Section 7.4.

Noise impact

The noise impact of the regulatory alternatives is discussed in Chapter 7, Section 7.5.

APPENDIX C  
SUMMARY OF TEST DATA

Numerous sources were tested by EPA to evaluate the best systems of particulate-emission control available for metallic mineral plant process operations. These process operations include crushers, screens, dryers, storage bins, truck and railcar loading and unloading operations, other material handling operations, and conveyor transfer points. The tables presented in this appendix summarize the emission points and test parameters at each process tested, the results of the particulate-emission tests, particle size distribution tests, and visible emission observations. Also included are tables summarizing the mathematical modelling of medium- and high-energy venturi scrubber performance on actual particulate emission sources.

Emissions data included in Appendix C were gathered from 17 mineral processing plants. Of the 17, 9 process metallic minerals and 8 process nonmetallic minerals. At the 17 plants, 39 control units were tested. Fourteen of these control units were wet scrubbers and 25 were bag-houses. Table C-1 is a summary of the plants and process points tested. This table outlines the process operations ducted to each control device, the points where emissions were tested, and the type of tests performed at each point. A total of 55 tests of fugitive emissions at hoods or pick-up points are also reported in this appendix. Tables C-2 through C-241 summarize the actual results of the various tests performed at these plants. Included in these tables are results of particulate-emission tests (by EPA Method 5), particulate-size-distribution analysis (by cascade impactor method), and visible emissions observations (by Methods 9 and 22). Tables C-242 through C-246 summarize the venturi scrubber mathematical modelling data. The data predicts the performance of 15-inch pressure drop and 30-inch

pressure drop venturi scrubbers on actual measured emission points. The modeling was performed according to guidelines set forth in the document SR-52 Programmable Calculator Programs for Venturi Scrubbers and Electrostatic Precipitators (EPA-600/7-78-026).

Table C-1. TESTS PERFORMED AT METALLIC AND  
NON-METALLIC MINERAL PROCESSING PLANTS

Plant/ ore type	Control unit	Average process rate (TPH)	Test point	Type tests performed <sup>a</sup>
A/Copper	A-1 Baghouse	60.4	Truck loadout conveyor	5,PS
			Truck loadout hood	5,PS
			Baghouse outlet	5,9
			Truck dump hopper hood (fugitive)	9,22
			Railroad car loading chute (fugitive)	9,22
	A-1 Scrubber	2,567	Total inlet	5,PS
			Primary crusher conveyor exhaust	5,PS
			Primary crusher surge bin exhaust	5,PS
			Scrubber outlet	5,PS,9
	A-2 Scrubber	599	Secondary crusher scrubber inlet (total inlet)	5,PS
			Secondary crusher exhaust (inlet to scrubber)	5,PS
			Scrubber outlet	5,PS,9
			Secondary crusher tunnel outlet (fugitive)	9,22
			Secondary crusher reclaim feeder hood (fugitive)	9,22
	B/Molybdenum	B-1 Scrubber		Primary crusher transfer points exhaust duct
Primary crusher, crusher pit exhaust duct				5,PS
Primary crusher, scrubber outlet				5,PS,9
Railroad car unloading (fugitive)				9,22
Crusher building (fugitive)				9,22

(continued)

Table C-1. (Continued)

Plant/ ore type	Control unit	Average process rate (TPH)	Test point	Type tests performed <sup>a</sup>
	B-2 Scrubber		Pebble screening & milling, total scrubber inlet	5,PS
			Pebble screening & milling, screen exhaust duct	5,PS
			Pebble screening & milling, bucket elevator exhaust duct	5,PS
			Pebble screening & milling, scrubber outlet	5,PS,9
			Bucket elevator exhaust hood (fugitive)	9,22
			Pebble screen hood (fugitive)	9,22
	B-3 Scrubber		Molybdenum dryer, scrubber inlet	5,PS
			Molybdenum dryer, scrubber outlet	5,PS,9
			Dryer area (fugitive)	9,22
C/Uranium	C-1 Scrubber	365	Crusher scrubber inlet duct	5,PS
			Crusher transfer point exhaust (inlet to scrubber)	5,PS
			Crusher pressure grizzly exhaust (inlet to scrubber)	5,PS
			Crusher scrubber outlet duct	5,PS,9
			Crusher transfer point area (fugitive)	9,22
			Grizzly hood & crusher entrance process hoods (fugitive)	9,22
			Crusher grizzly (fugitive)	9,22

(continued)

Table C-1. (Continued)

Plant/ ore type	Control unit	Average process rate (TPH)	Test point	Type tests performed <sup>a</sup>
	C-2 Scrubber	349	Fine ore bins scrubber inlet duct	5,PS,9
			Fine ore bins hopper exhaust	5,PS
			Fine ore bins scrubber outlet duct	5,PS,9
			Fine ore bins hopper exhaust process area (fugitive)	9,22
	C-3 Scrubber		Packaging area exhaust duct	5,PS
			Packaging area (fugitive)	9,22
	C-4 Scrubber		Dryer scrubber inlet duct	5,PS
			Dryer scrubber outlet duct	5,PS,9
D/Vanadium	D-1 Scrubber		Dryer scrubber inlet, north	5,PS
			Dryer scrubber inlet, south	5,PS
			Dryer cyclone inlet, north	5,PS
			Dryer cyclone inlet, south	5,PS
			Dryer scrubber outlet	5,9
			Dryer conveyor or transfer point (fugitive)	9,22
	D-2 Scrubber		Grinder conveyor inlet (fugitive)	9,22
E/Iron	E-1 Scrubber		Secondary & tertiary crusher, rotoclone discharge stack, west	5,9

Table C-244. VENTURI SCRUBBER MODELLING DATA;  
BASED ON THE MOLYBDENUM DRYER SCRUBBER INLET, SCRUBBER B-3

Calculation of overall penetration using a given pressure drop for a venturi scrubber operating under given test conditions

Modelling data for: 15" venturi 30" venturi

Given:

Temperature (°C)	66	66
Empirical factor (usually 0.5)	0.5	0.5
Mass mean particle diameter (microns)	1.75	1.75
Geometric standard deviation	1.5	1.5
Initial particle diameter for integration (microns)	0.1	0.1
Final particle diameter for integration (microns)	1.0	1.0
Particle diameter increment for integration (microns)	0.1	0.1
Density of liquid (g/cm <sup>3</sup> )	1.0	1.0
Liquid to gas flow rate ratio (m <sup>3</sup> /m <sup>3</sup> )	9.36 x 10 <sup>-4</sup>	1.0695 x 10 <sup>-3</sup>
Gas velocity in venturi throat (cm/sec)	7028	9300
Gas viscosity (poise)	1.8 x 10 <sup>-4</sup>	1.8 x 10 <sup>-4</sup>
Density of the particles (g/cm <sup>3</sup> )	3.8	3.8

Penetration results:

<u>Particle size integration intervals (microns)</u>	<u>*Weighted penetration</u>	
	15" venturi	30" venturi
0.1 - 1.0	0.0017510204	0.0002471797
1.0 - 5.0	0.0043085551	0.0005062783
5.0 - 10.0	0.0000092926	0.0000010697
10.0 - 20.0	0.0000000197	0.0000000023
Total penetration	0.0060688878	0.00075453
Percent efficiency = (1-penetration)x100	99.4%	99.92%

Particulate concentration at scrubber inlet, as tested.

	g/DNm <sup>3</sup>	(gr/dscf)
run 1	0.485	(0.212)
run 2	0.384	(0.168)
run 3	0.670	(0.293)

\* Weighted penetration is that portion of the total penetration attributable to a specific particle size interval based on the particle size distribution parameters given above. Total penetration = (1-efficiency).

Table C-245. VENTURI SCRUBBER MODELLING DATA;  
 BASED ON THE TOTAL INLET DUCT, SCRUBBER C-4

Calculation of overall penetration using a given pressure drop for a venturi scrubber operating under given test conditions

Modelling data for:	15" venturi	30" venturi
<u>Given:</u>		
Temperature (°C)	57.6	57.6
Empirical factor (usually 0.5)	0.5	0.5

## APPENDIX D

### D.1 EMISSION MEASUREMENT METHODS

During the standard support study for the metallic minerals industry, EPA conducted particulate emission tests at eight facilities; three were controlled with baghouses and three with scrubbers, and two with a combination of both. A data base of iron ore beneficiation and non-metallic minerals were also taken into consideration for this study. There were three test runs before and after each control system. The tests were run in accordance with EPA Method 5 (40 CFR Part 60 - Appendix A). Method 5 provides detailed procedures and equipment criteria, and other considerations necessary to obtain accurate and representative particulate emission data. Visible emission data were taken during the EPA tests in accordance with Method 9 (40 CFR Part 60 - Appendix A).

Of the eight facilities tested, minor modifications were required at seven sites. Three facilities using the scrubber control system had cyclonic flows at the outlet test points. Testing procedures at these locations were altered to adhere to Method 1-2.4 (40 CFR Part 60 - Appendix A). Even with this method the flow balance between inlet and outlet test points dictated EPA's decision to recalculate these data using only inlet flows. Two facilities contained high moisture in the ore being processed which resulted in plugged probe nozzles during the sampling. Normal testing times were shortened to obtain a sample in order to successfully complete testing program.

### D.2 MONITORING SYSTEMS

The opacity monitoring systems that are adequate for other stationary sources, such as steam generators, covered by performance specifications contained in Appendix B of 40 CFR 60 Federal Register, October 6, 1975, are also technically feasible for the metallic mineral industry except where condensed moisture is present in the exhaust stream. When wet scrubbers

are used for emission reductions from metallic mineral facilities, monitoring of opacity is not applicable; therefore, another parameter, such as pressure drop, would need to be monitored as an indicator of emission control.

Equipment and installation costs for visible emission monitoring are estimated to be about \$18,000 to \$20,000 per site. Annual operating costs which include the recording and reducing the data, are estimated at about \$8,000 to \$9,000 per site. Some savings in operating costs may be achieved if multiple systems are used at a given facility.

### D.3 PERFORMANCE TEST METHODS

Consistent with the data upon which the new source standards have been established, the recommended performance test method for particulate matter is Method 5 (Appendix A, 40 CFR 60 - Federal Register, December 23, 1971, as amended August 18, 1977). In order to perform Method 5, Methods 1 through 5 must be used.

Subpart A of 40 CFR 60 requires that affected facilities which are subject to standards of performance for stationary sources must be constructed so the sampling ports adequate for the performance tests are provided. Platforms, access, and utilities necessary to perform testing at those ports must be provided.

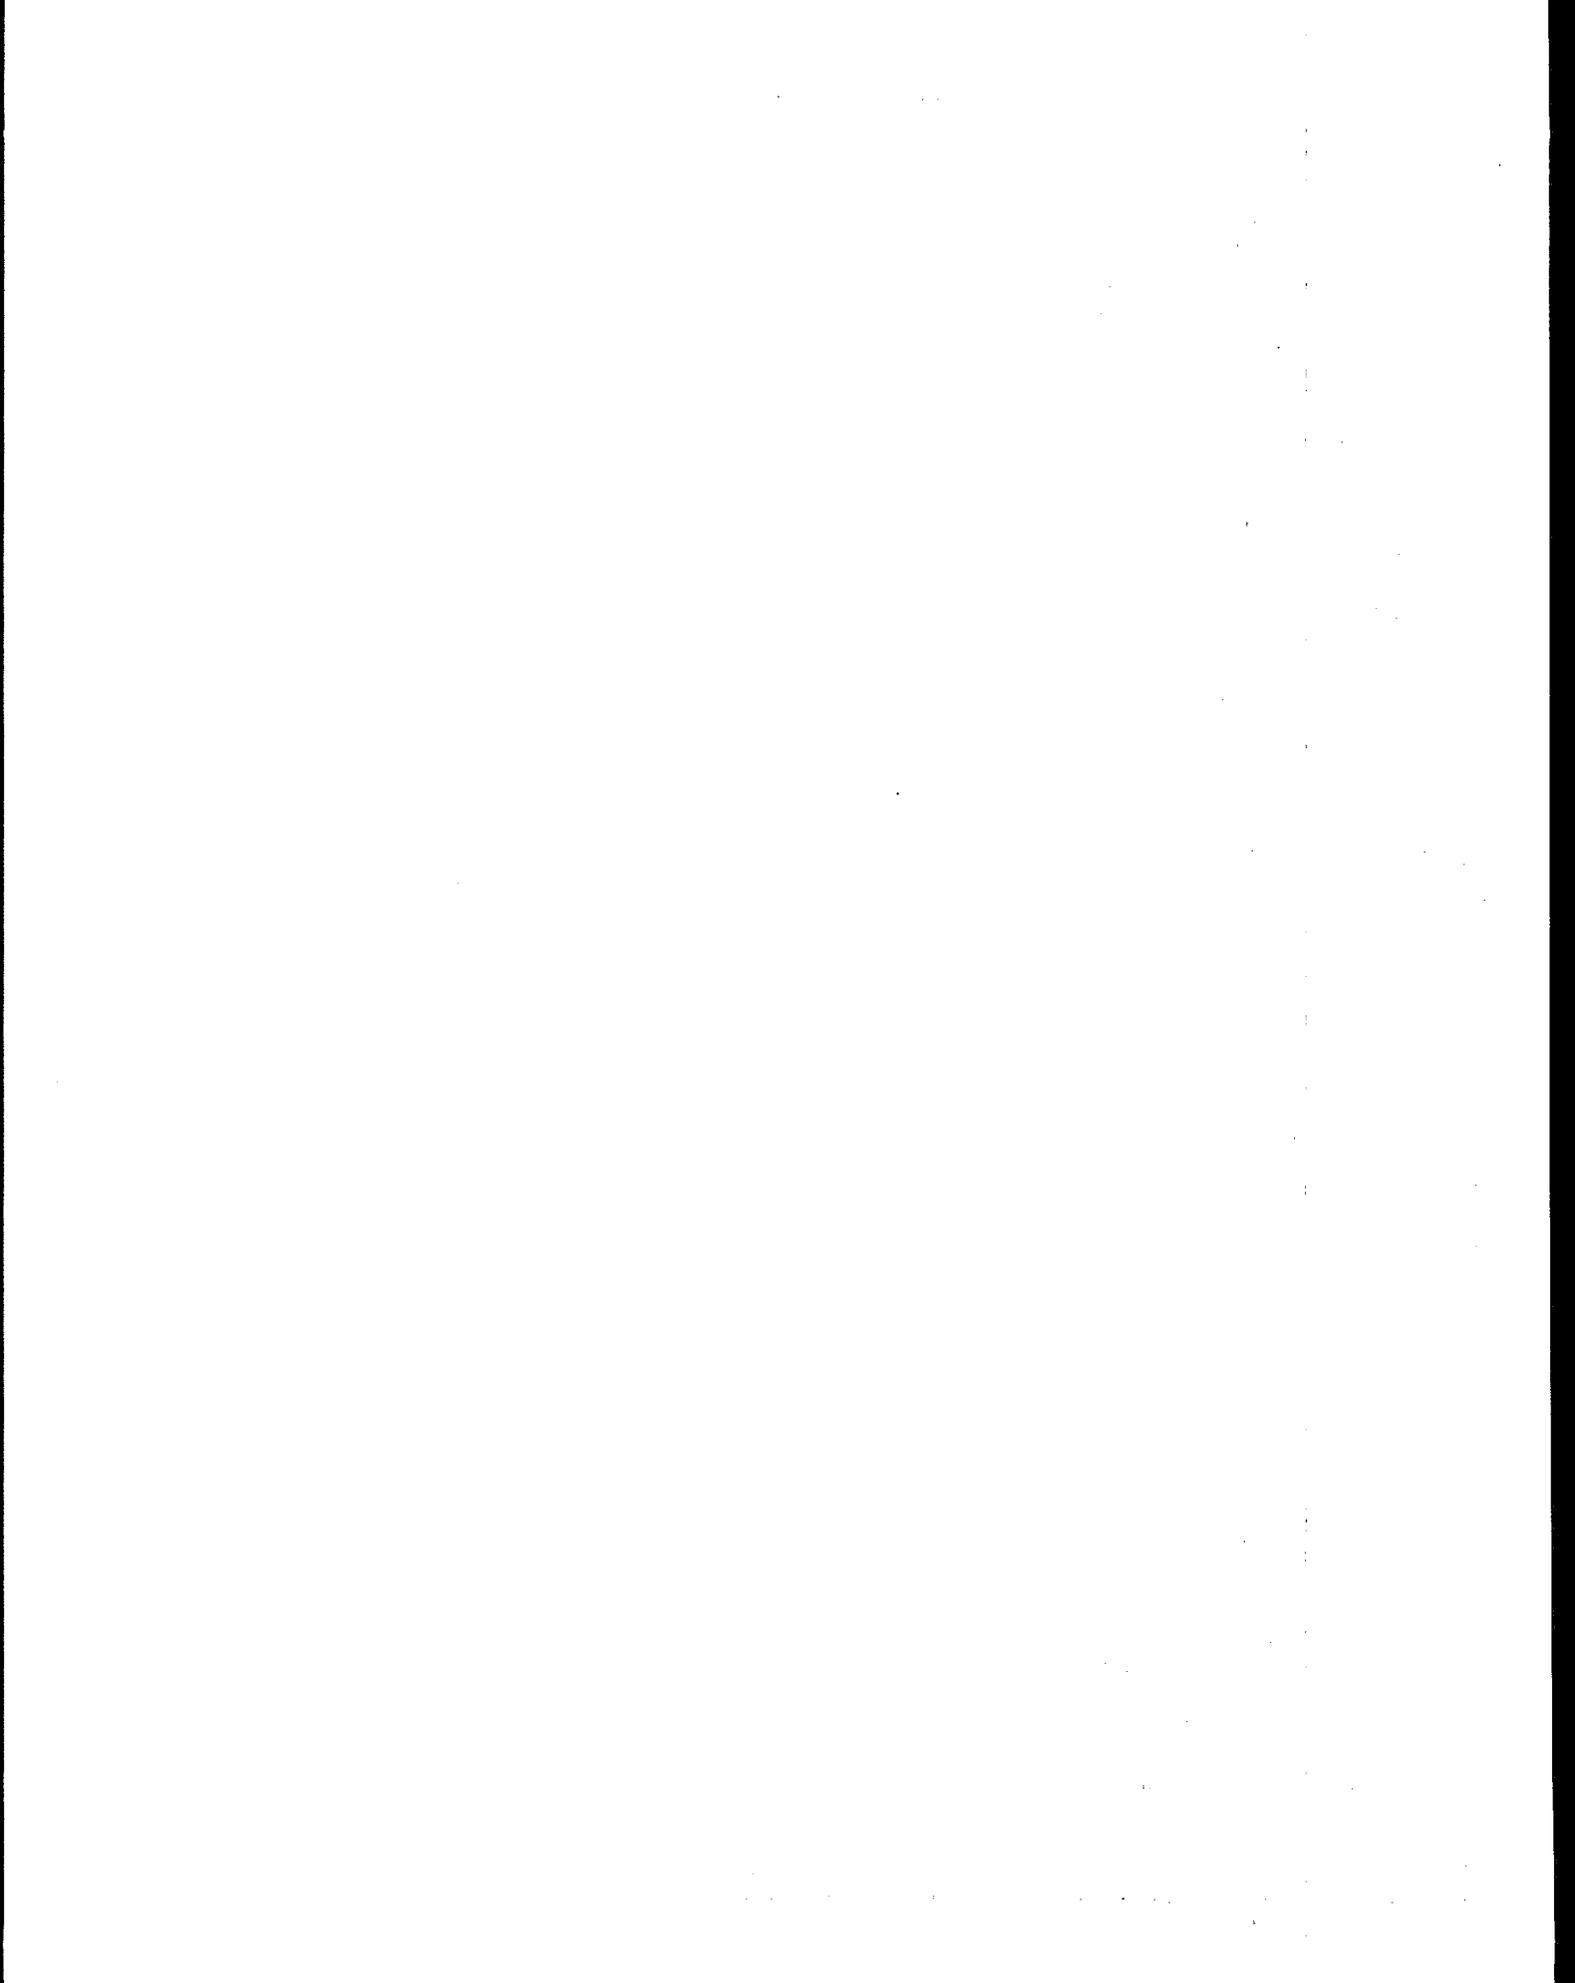

Sampling costs for performing a test consisting of three Method 5 runs is estimated to range from \$5,000 to \$9,000. If in-plant personnel are used to conduct tests, the cost will be somewhat less.

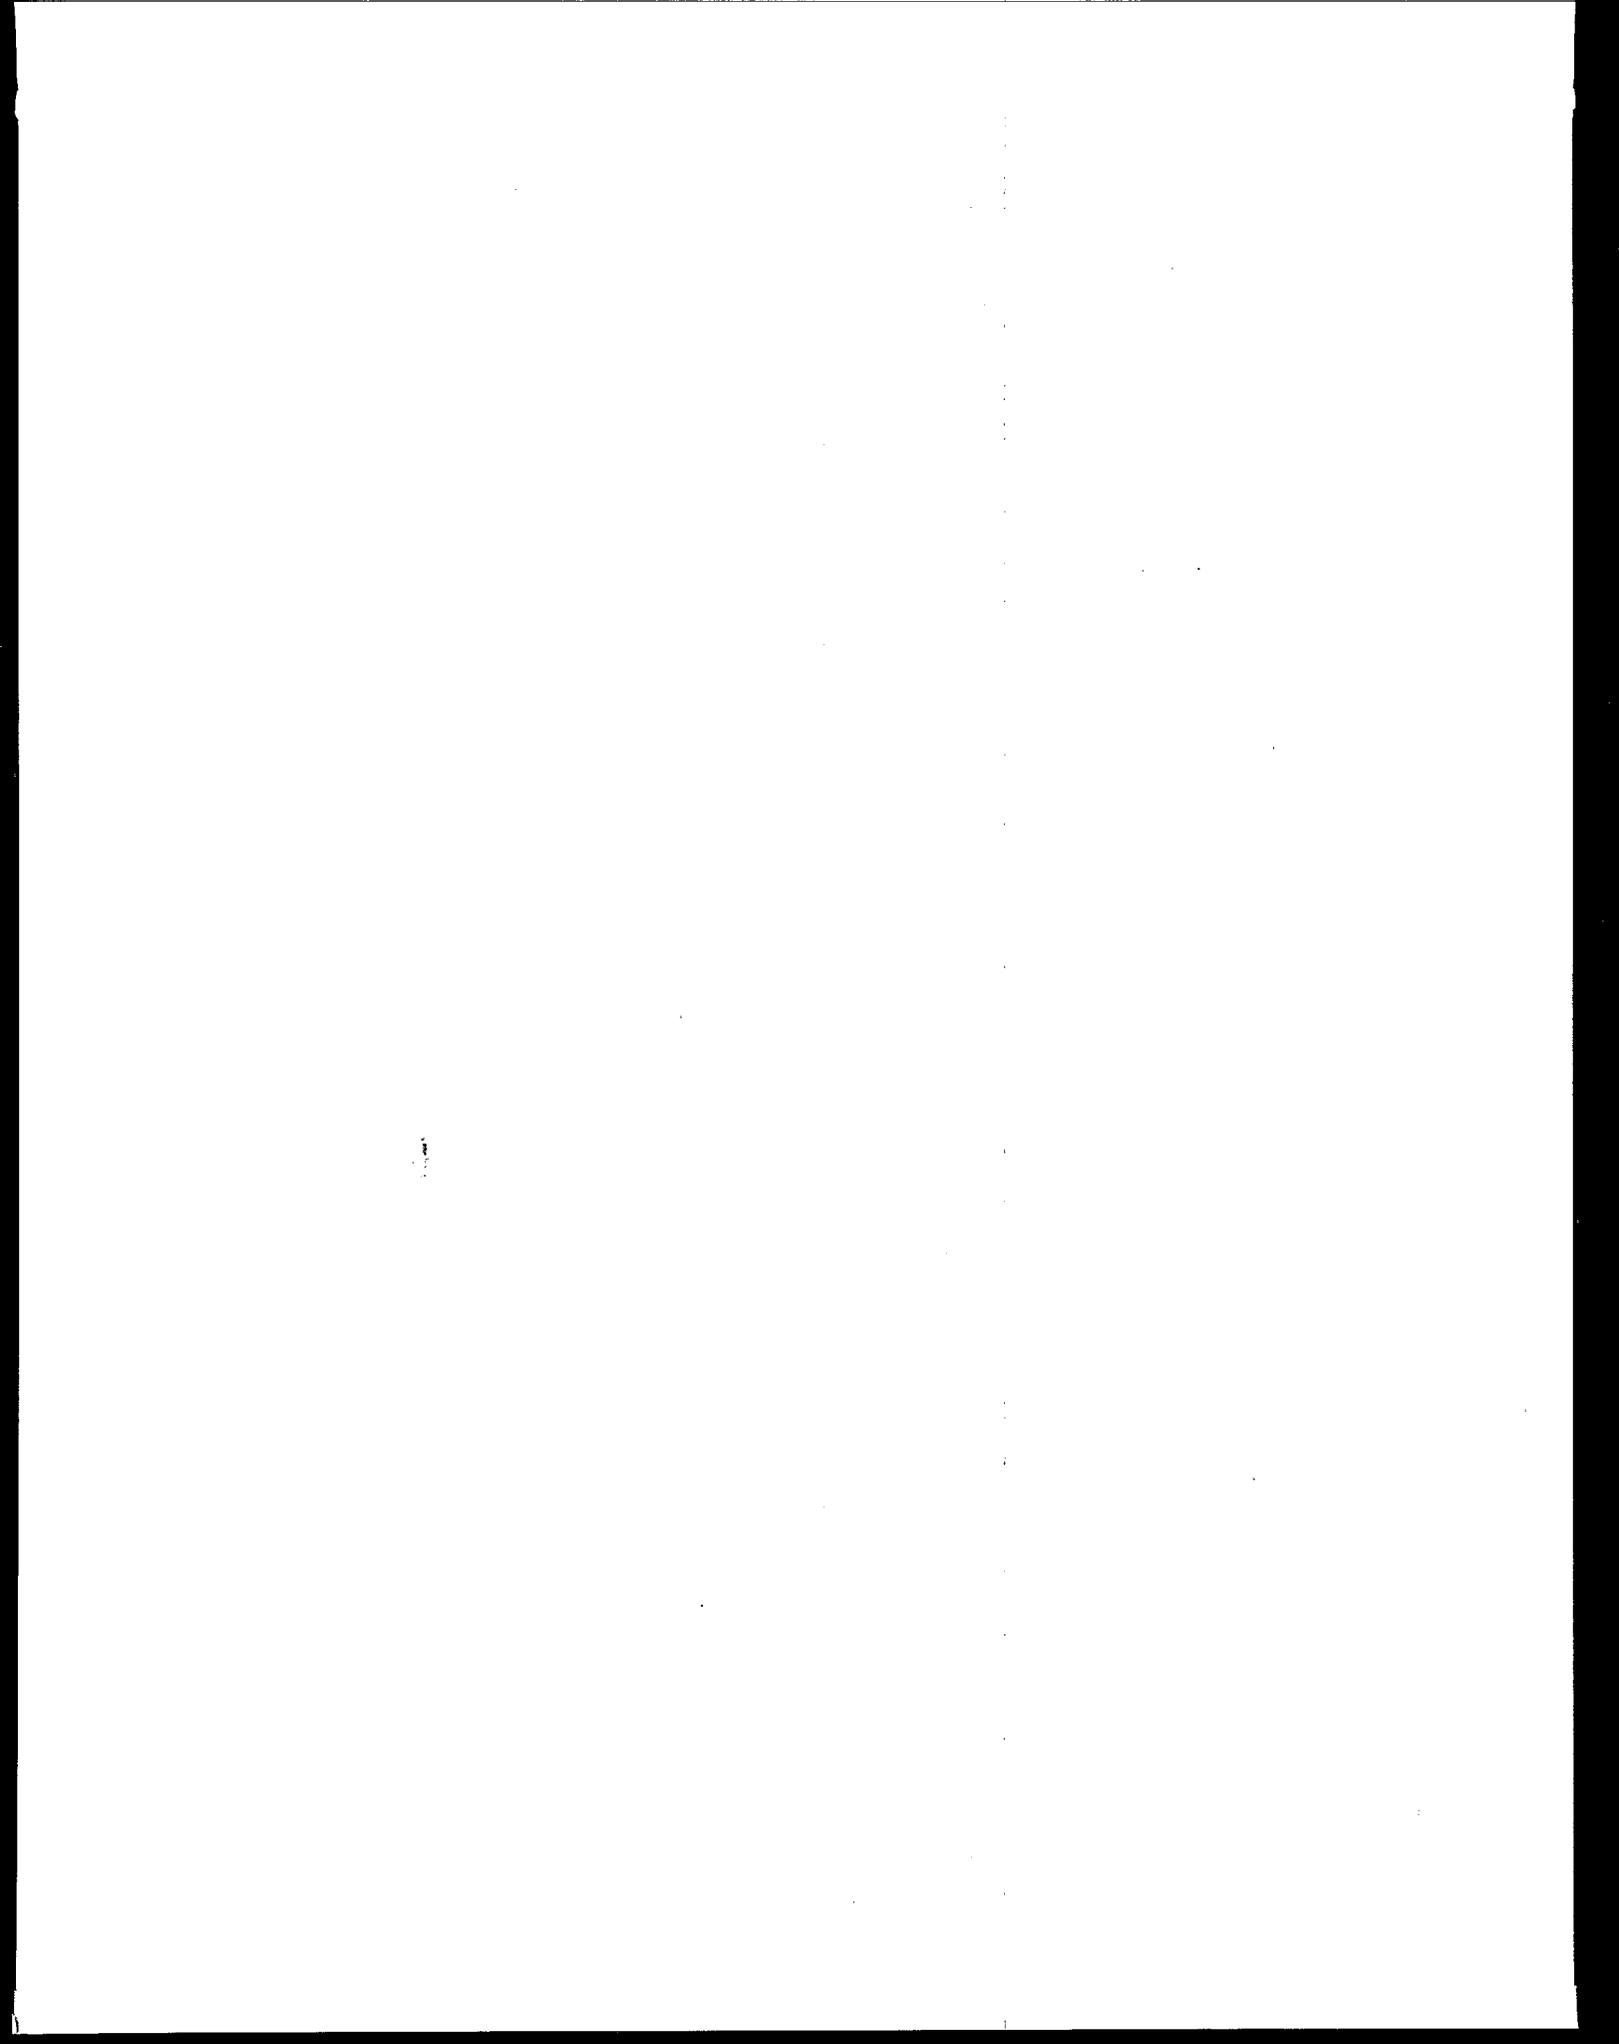

The recommended performance test method for visible emission is Method 9 (Appendix A, 40 CFR 60, Federal Register, November 12, 1974).

15. SUPPLEMENTARY NOTES				
16. ABSTRACT  Standards of performance for the control of particulate matter emissions from metallic mineral processing plants are being proposed under the authority of Section 111 of the Clean Air Act. These standards would apply to facilities at processing plants for which construction or modification began on or after the date of proposal of the regulation. This document contains background information and environmental and economic impact assessments of the regulatory alternatives considered in developing proposed standards.
