Vehicular Products Containing Recovered Materials

VEHICULAR PRODUCTS

This list of manufacturers and suppliers of vehicular products containing recovered materials was prepared to facilitate implementation of the U.S. Environmental Protection Agency's (EPA) Comprehensive Procurement Guideline (CPG) and to assist customers interested in purchasing and using products containing recovered materials. Some manufacturers provided the names and locations of regional or local suppliers.

Each listing is based on information provided by the manufacturer. Product information was not verified, and no guarantee, expressed or implied, is made as to the accuracy or completeness of the information provided. Inclusion in this listing does not represent an endorsement by EPA.

For information on or copies of the CPG, contact EPA's RCRA Hotline at 800 424-9346 or access EPA's CPG Web site at <www.epa.gov/cpg>.

This list contains information on the following products or supplies:

Fax: 706 354-0338

ENGINE COOLANTS

Engine coolant recycling methods include 1) power flushing the radiator and then restoring the coolant to the vehicle, 2) collecting coolant for bulk recycling, 3) onsite servicing by a mobile unit that restores and sells back the recycled coolant to the customer, or 4) shipping the coolant to a central service center (the shipper must be prepared to bear the costs of clean-up should a spill occur).

Some suppliers of onsite engine coolant recycling equipment and their products are listed below. There are a variety of processing methods in which costs and capacities vary greatly. Careful consideration, therefore, should be given to unit and operating cost information provided below so that equipment purchases can be tailored to agency needs. Since no industrywide standards exist for recycling equipment, the quality of the recycled product should be the final determinant. In making such determinations, the following factors should be considered:

- Does the equipment have an acceptable "inhibitor balance" to prevent corrosion in customer vehicles?
- What hazardous waste byproducts are produced as a result of the process?
- How can those byproducts be safely disposed and what is the additional cost of that disposal?
