National Recommended Water Quality Criteria: 2002

## Human Health Criteria Calculation Matrix

## Notices

This document contains information regarding the calculation of the human health criteria contained in the document entitled, National Recommended Water Quality Criteria: 2002. This document provides: cancer potency factors ( $\mathrm{q} 1 * \mathrm{~s}$ ); reference doses (RfDs); relative source contributions (RSCs); fish intake values; and equations used to derive the human health criteria in the aforementioned compilation.

This document is not a regulation and cannot substitute for the Clean Water Act or Environmental Protection Agency (EPA) regulations. Thus, the criteria in the calculation matrix cannot impose legally binding requirements on EPA, states, authorized tribes or the regulated community.

## FOOTNOTES:

1. IRIS values as of May 17, 2002 are presented. IRIS information is presented in some cases even though it may not be used to calculate criteria. All units are as follows: $\mathrm{q} 1^{*}=$ per $\mathrm{mg} / \mathrm{kg}-$ day; $\mathrm{RfD}=\mathrm{mg} / \mathrm{kg}-\mathrm{d} ; \mathrm{BCF}=\mathrm{L} / \mathrm{kg} ;$ and $\mathrm{FI}=17.5 \mathrm{~g} /$ day (unless otherwise noted)
2. Calculations are based on the following methodologies: Guidelines and Methodologies Used in the Preparation of Health Effects Assessment Chapters of the Consent Decree Water Criteria Documents (45FR79347) and Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (2000), EPA-822-B-00-004, October 2000)
3. Reference cite refers to an IRIS coversheet, AWQC criterion document or other document which serves as the basis for the criterion
 Rule (Stage 2 DBPR ) is completed, since public comment on the relative source contribution (RSC) for chloroform is anticipated
4. In IRIS, EPA has listed thallium sulfate, not thallium alone. The thallium RfD included in the matrix is based on: $\mathrm{NOAL}=0.25 \mathrm{mg} \mathrm{TL} \mathrm{SO}_{4} / \mathrm{kg}-\mathrm{d} ; \mathrm{UF}=3000$; fraction TL in
$\mathrm{TL}_{2} \mathrm{SO}_{4}=0.81$
5. Original 1980 ADIs were expressed as $\mathrm{mg} /$ day. These have been converted to $\mathrm{mg} / \mathrm{kg}$-day to make them comparable to present day RfDs. All $\mathrm{q} 1 * \mathrm{~s}$ are in kg -day/mg or per mg/kg-day
6. The fish tissue bioconcentration factor (BCF) from the 1980 criteria documents was retained unless otherwise noted. No BAFs were derived for this effort.
7. Criteria based on carcinogenicity $\left(\mathrm{q} 1^{*}\right)$, reflect $10^{-6}$ risk
8. The q1* of $1.75 \mathrm{mg} / \mathrm{kg}$-d was derived from the risk per unit concentration in drinking water from IRIS: $5 \times 10^{-5}$ risk per ug/L in drinking water
9. This criterion was not revised as part of this effort. EPA has published revisions for this criterion in the Federal Register and is soliciting scientific views on the revised value.
10. Although a q1* and RfD are available in IRIS, the $\mathrm{q} 1^{*}$ was used to derive the criterion because it resulted in the more stringent criterion.
11. These criteria were not published or promulgated in the NTR or CTR. These criteria were calculated based on the RfD presented in IRIS.

## Using cancer potency, q1*:

For consumption of water and organisms:

|  | $10^{-6} \bullet 70 \mathrm{~kg} \bullet 1000 \mu \mathrm{~m} / \mathrm{mg}$ |
| :---: | :---: |
| AWQC [ $\mu \mathrm{g} / \mathrm{L}]=$ |  |
| $\mathrm{q} 1 *[\mathrm{~kg}-\mathrm{d} / \mathrm{mg}](2 \mathrm{~L} / \mathrm{d}+(0.0065 \mathrm{~kg} / \mathrm{d} \bullet \mathrm{BCF}[\mathrm{L} / \mathrm{kg}]))$ |  |

For consumption of organisms only:

|  | $10^{-6} \bullet 70 \mathrm{~kg} \bullet 1000 \mu \mathrm{~g} / \mathrm{mg}$ |
| :---: | :---: |
| AWQC $[\mu \mathrm{g} / \mathrm{L}]=$ |  |
| $\mathrm{q} 1 *[\mathrm{~kg}-\mathrm{d} / \mathrm{mg}] \bullet 0.0065 \mathrm{~kg} / \mathrm{d} \bullet \mathrm{BCF}[\mathrm{L} / \mathrm{kg}]$ |  |

## U sing Reference Dose:

For consumption of water and organisms:

F or consumption of organisms only:

|  | RfD [mg/kg-d] ${ }^{\text {c }} 70 \mathrm{~kg} \bullet 1000 \mu \mathrm{~g} / \mathrm{mg}$ |
| :---: | :---: |
| $\operatorname{AWQC}[\mu \mathrm{g} / \mathrm{L}]=$ | -------------------------------------------1 |
|  | $0.0065 \mathrm{~kg} / \mathrm{d} \bullet \mathrm{BCF}[\mathrm{L} / \mathrm{kg}]$ |

$\mathrm{AWQC}=$ Ambient water quality criteria $=$ national recommended water quality criteria
$\mathrm{q} 1^{*}=$ Cancer potency factor $\mathrm{kg}-\mathrm{d} / \mathrm{mg}$ or per $\mathrm{mg} / \mathrm{kg}$-day
$\mathrm{RfD}=$ Reference dose $\mathrm{mg} / \mathrm{kg}-\mathrm{d}$
DI = Drinking water intake $2 \mathrm{~L} /$ day
BW = Human body weight 70 kg
FI $=$ Fish intake $0.0065 \mathrm{~kg} /$ day
$\mathrm{BCF}=$ Bioconcentration factor $\mathrm{L} / \mathrm{kg}$

## Linear Approach

Using cancer potency, q1*:
For consumption of water and organisms:

For consumption of organisms only:

## Using Reference Dose:

For consumption of water and organisms:
$\operatorname{AWQC}[\mu \mathrm{g} / \mathrm{L}]=[\operatorname{RfD}[\mathrm{mg} / \mathrm{kg}-\mathrm{d}] \bullet \operatorname{RSC} *(70 \mathrm{~kg} / 2 \mathrm{~L} / \mathrm{d}+(0.0175 \mathrm{~kg} / \mathrm{d} \bullet \mathrm{BCF}[\mathrm{L} / \mathrm{kg}])] \bullet 1000 \mu \mathrm{~g} / \mathrm{mg}$ or ( - RSC)

For consumption of organisms only:
$\operatorname{AWQC}[\mu \mathrm{g} / \mathrm{L}]=[\operatorname{RfD}[\mathrm{mg} / \mathrm{kg}-\mathrm{d}]$RSC • (70 kg/ ( $0.0175 \mathrm{~kg} /$BCF [L/kg]))
$1000 \mu \mathrm{~g} / \mathrm{mg}$ ( - RSC)

Nonlinear Approach (Presented for information only- no criteria in matrix based on nonlinear approach currently)
For consumption of water and organisms:

```
AWQC [ug/L] = POD/UF \bullet RSC \bullet (BW/DI + (FI \bullet BCF)
```

For consumption of organisms only:
$\mathrm{AWQC}[\mathrm{ug} / \mathrm{L}]=\mathrm{POD} / \mathrm{UF} \bullet \mathrm{RSC} \bullet *(\mathrm{BW} /(\mathrm{FI} \bullet \mathrm{BCF})$

AWQC = Ambient water quality criteria = national recommended water quality criteria
$\mathrm{q} 1^{*}=$ Cancer potency factor $\mathrm{kg}-\mathrm{d} / \mathrm{mg}$ or per $\mathrm{mg} / \mathrm{kg}$-day
$\mathrm{RSD}=$ Risk specific dose $10^{-6} / \mathrm{q} 1 * \mathrm{mg} / \mathrm{kg}$-day
RfD $=$ Reference dose $\mathrm{mg} / \mathrm{kg}-\mathrm{d}$
$\mathrm{DI}=$ Drinking water intake $2 \mathrm{~L} /$ day
BW = Human body weight 70 kg
FI = Fish intake $0.0175 \mathrm{~kg} /$ day
$\mathrm{BCF}=$ Bioconcentration factor $\mathrm{L} / \mathrm{kg}$
UF $=$ Uncertainty factor (unitless)
RSC $=$ Relative source contribution (percentage of subtraction)
POD $=$ Point of departure $\mathrm{mg} / \mathrm{kg}$-day

## FOOTNOTES:

1. Criteria based on carcinogenicity $\left(\mathrm{q} 1^{*}\right)$, reflect $10^{-6}$ risk.
2. The fish tissue bioconcentration factor (BCF) from the 1980 criteria documents was retained unless otherwise noted. No BAFs were derived for this effort.
3. Reference cite refers to an IRIS coversheet, AWQC criterion document or other document which serves as the basis for the criterion.
