DISCLAIMER

This report has been reviewed by the Office of Air Quality Planning and Standards, U. S. Environmental Protection Agency, and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the U. S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

PREFACE

The National Air Toxics Information Clearinghouse has been established by the U.S. Environmental Protection Agency (EPA), Office of Air Quality Planning and Standards, to support State and local agencies in the control of non-criteria air pollutants. The Clearinghouse is intended to facilitate information exchange among State and local agencies, and between EPA and State and local agencies, and to minimize duplication of effort. For the purposes of the Clearinghouse, a toxic air pollutant is defined as any non-criteria air pollutant. Inclusion of a pollutant in the Clearinghouse does not necessarily mean that it is toxic at ambient concentrations. The Clearinghouse consists of a computerized data base (NATICH) which contains information on potentially toxic air pollutants, hard copy reports of information from the data base (such as this one), special reports, and a bi-monthly newsletter.

The purpose of this report is to disseminate information provided to the NATICH data base by State and local air agencies and EPA on their air toxics activities. This report supersedes previous reports published in September 1984, March 1985, September 1985, July 1986, July 1987, July 1988, July 1989, July 1990, and September 1991. It updates the information in the first nine reports and contains information received through August 5, 1992. This report includes a listing of State and local agencies that have provided information to the Clearinghouse, air toxics contacts, regulatory program information, acceptable ambient concentration guidelines or standards and the bases of those guidelines/standards, pollutant research information, methods development activities, permitting data, source testing data, ambient monitoring information, emissions inventory information, and risk assessment information. Because of the large volume of data that now resides in the data base, this document reports only a subset of the permitting and source testing data.

Plans call for the data provided by both Federal and State and local air agencies to be expanded and updated on a regular basis. The Clearinghouse distributes this information periodically in reports to Clearinghouse users. Users also can directly query the data base and view the response on a terminal or printout.[1] For information on obtaining on-line access to the NATICH data base, governmental agency personnel may contact the appropriate regional office air toxics contact listed below. Users outside the government may obtain access to the data base by contacting an NCC representative of the National Technical Information Service at (703) 487-4650.

In addition to the information presented in this report, the NATICH data base currently contains citations and abstracts of air toxics-related documents and descriptions of relevant ongoing research and regulatory development projects at the Federal, State, and local levels. This information is expanded and updated on a regular basis and periodically distributed to Clearinghouse users as separate documents.

This report contains 13 sections which contain information submitted by State and local agencies. Section 1 lists the name, address, phone number, and abbreviation assigned by the data base to State and local agencies. The agency abbreviation is included in many tables instead of the full name of the agency; therefore, it will be helpful to become familiar with these abbreviations. Section 2 lists air toxics contact names and telephone numbers, and the number of work-years assigned to air toxics by each agency. Section 3 contains updated summary descriptions of State and local air toxics programs. Information on acceptable ambient concentration guidelines and standards is presented in Section 4. Sections 5 and 6 describe pollutant research and methods development activities, respectively. Section 7 provides case history descriptions of non-health related impacts associated with toxic air pollutants. Section 8 is comprised of ambient monitoring information.

Section 9 presents general permitting and source testing information, including the number of permits and source tests registered in the Clearinghouse. Section 10 presents selected permitting information sorted by pollutant and by SIC code. Each permit reported in this section is identified with an internally generated access number. A more complete description of each permit can be found in Appendix A, in consecutive order by access number. Similarly structured information on selected source tests is presented in Section 11 and Appendix B. The permits and source tests selected for inclusion here were determined to be notable by the agencies providing the information. Section 12 contains a description of activities in the area of emissions inventory. Section 13 contains general information on how State and local agencies conduct risk assessments and specific information on sources or facilities for which a risk assessment has been conducted.

Information on toxic air pollutants is entered into the data base, stored, and reported by Chemical Abstracts Service Registry Number (CAS #). Clearinghouse acronyms prefaced with "CL - " have been assigned to groups of similar pollutants where no CAS # was applicable. Appendix C provides a list of Clearinghouse chemical acronyms used in place of the CAS #.

The data contained in this report have been presented essentially as received by the Clearinghouse from State and local agencies and from EPA. Updates or corrections to these data should be reported to:

SECTION 1

STATE AND LOCAL AGENCIES

Table 1-1 lists the name, address, phone number, and abbreviation assigned by the data base of State and local agencies that have provided information to the Clearinghouse. The agencies are presented in alphabetical order by State.

The agency abbreviation is included in many subsequent tables in this report instead of the full name of the agency. Therefore, it will be helpful to become familiar with these abbreviations. Generally, the abbreviation consists simply of the two-letter State abbreviations for the State agencies. For the local agencies, an abbreviation of the city, county, or local district name is added to the two-letter State abbreviation. For example, the abbreviation for the Bureau of Air Quality Control for the State of Pennsylvania is PA; the abbreviation for Air Management Services for the City of Philadelphia is PA-Phil.

Currently, all 50 State agencies, 2 territories, 92 local agencies, 1 Federal agency, and the District of Columbia have provided some information to the Clearinghouse. Two provinces in Canada have also submitted information.

SECTION 2

AIR TOXICS CONTACTS

State and local air toxics contact names and telephone numbers have been compiled for eleven areas of expertise: regulatory program, permitting, source testing, ambient monitoring, emissions inventory, health effects, indoor air, compliance/enforcement, dispersion/exposure modeling, risk communication, and SARA 313. Tables 2-1, 2-2, and 2-3 list the contacts, in alphabetical order by State. If a name is particularly long, or if two names were submitted, the name may be truncated to fit into the space available. These contacts will be able to provide more detailed information about a State's or locality's air toxics activities than is contained in this report. If the reader has a question regarding source testing activities in the State of Minnesota, for example, the contact name listed for source testing in Minnesota should be consulted. If a contact is not listed for a specific area of expertise, please consult with one of the other listed contacts. A total of 136 agencies have listed at least one air toxics contact name with the Clearinghouse.

The contact names are provided to promote the exchange of information on air toxics activities among State and local agencies and other interested parties. These contact names supersede lists of air toxics contacts previously reported by the Clearinghouse.

Table 2-4 provides the number of work-years assigned to air toxics, including management levels, for each of the 11 areas of expertise listed above. Only those agencies submitting work-year information are presented in Table 2-4. According to these data, 19 of the 85 agencies that provided this information (22%) report a total of more than 20 work-years assigned to air toxics.

SECTION 3

REGULATORY PROGRAM INFORMATION

Table 3-1 describes State and local air toxics regulatory programs in terms of the status of air toxics program development, the structure of the program, the scope of the program, and program application. Information on acceptable ambient concentration guidelines or standards for individual pollutants is given in Section 4. Pollutant research, methods development activities, and non-health related impacts are described in Sections 5, 6, and 7, respectively.

The information presented in Table 3-1 is in the format of "C" (Current Program), "F" (Future Program), and "N" (No Program) responses to a series of 20 questions. The 20 questions are listed in a key to Table 3-1 at the end of the narrative portion of this section, prior to the table.

Table 3-1 contains regulatory program information for 37 State and 48 local agencies. According to this table, 69 agencies either have an air toxics program in place or plan to develop a program in the future. Of the 85 agencies for which information is available, 53 (62%) have current program, 16 (19%) plan future programs, and 16 (19%) neither have a program in place nor plan to develop a program.

Table 3-1 also indicates whether or not an agency has submitted comments on its regulatory program. Table 3-2 lists comments on the regulatory programs as provided by State and local agencies. The comments may apply to the regulatory program in general or to specific elements of the program in reference to one of the questions listed in the keys to the tables.

The reader should address any questions or requests for additional information about a State or local regulatory program to the regulatory program contacts identified in Table 2-1 in Section 2.

KEY TO TABLE 3-1
REGULATORY PROGRAM INFORMATION

C = Current Program (statement applies to a program or program element currently in place)
F = Future Program (statement applies to a program or program element planned for the near-term future)
N = No Program (statement applies neither to a current nor to a planned future program or program element)

PROGRAM STATUS

1. We have an **air toxics control program in place** (in addition to delegation of NESHAPS authority).

PROGRAM STRUCTURE

2. Our air toxics control program is based on **promulgated regulations**.

3. Our air toxics control program is based on **guidelines** rather than formally promulgated regulations.

PROGRAM SCOPE

4. The scope of our program includes a **specified list of pollutants**.

5. The scope of our program includes a **specified list of sources or source categories.**

6. The scope of our program includes the **permitting of new sources** for air toxics.

7. The scope of our program includes **evaluation of existing sources** as well as new sources.

8. Our program includes **facility size or other cutoffs** for certain source types or pollutants.

APPLICATION

9. We use **acceptable ambient concentration guidelines** for air toxics in the permit review process.

10. We use formally adopted **acceptable ambient concentration standards** for air toxics in the permit review process.

11. Some or all of our acceptable ambient concentration guidelines or standards are **based on the application of an uncertainty factor to an established Occupational Exposure Level (OEL).**

KEY TO TABLE 3-1
REGULATORY PROGRAM INFORMATION
(continued)

12. Some or all of our acceptable ambient concentration guidelines or standards are **based on the results of a health effects literature review** by our agency.

13. We use **technology-based control requirements**, such as "state-of-the-art" controls for identified sources of specified pollutants.

14. We perform **cancer risk assessments**.

15. We perform **risk assessments for health effects other than cancer**.

16. We maintain an **emissions inventory** for air toxics.

17. We have taken **enforcement actions** to specifically control sources of air toxics emissions.

18. We have used the **permit renewal process** to require control of air toxics.

19. We have **accident prevention planning** requirements for sources of air toxics.

20. We have **emergency response planning** requirements for sources of air toxics.

Toxic air pollutants are classified into one of four categories- 1. Acute irritant 2. Acute systemic 3. Chronic 4. Carcinogenic AAL's for the first three categories are based on TLV's (STELs and 8-hr TWAs) with safety factors varying from 10 to 160, and averaging times 15 minutes - 24 hours. Carcinogens are based on unit risk with an annual averaging time. Some of the carcinogens AAL's are based on the maximum likelihood estimate (MLE) of the dose, rather than the statistical 95% upperbound confidence limit (UCL). The program includes 105 pollutants as listed in NC Admin. Code Title 15A.

SECTION 4

ACCEPTABLE AMBIENT CONCENTRATION GUIDELINES OR STANDARDS

According to Table 3-1 in Section 3, 67 States and localities use or plan to use some form of ambient guideline or standard for the control of toxic air pollutants. These acceptable ambient concentration guidelines or standards and the bases for developing them are listed in Table 4-1, in alphabetical order by pollutant.[1] In addition to the pollutant and Chemical Abstracts Service (CA) number,[2] State or local agency, concentration, and units, Table 4-1 lists the averaging time over which the concentration is computed. Common averaging times used by State and local agencies in conjunction with acceptable ambient concentration guidelines or standards include 30-minute, 1-hour, 8-hour, 24-hour, and 1-year.

Acceptable ambient guidelines or standards established by State and local agencies vary widely. For example, concentrations listed for acetaldehyde range from 0.4 $\mu g/m^3$ for an annual average to 27,000 $\mu g/m^3$ for a 15-minute average.

Table 4-1 presents the basis used by State and local agencies for developing ambient limits. It indicates whether or not the agency bases its acceptable ambient concentrations on factored occupational exposure levels and, if they do, the uncertainty factors used. If an agency bases its acceptable concentration guidelines or standards on agency-sponsored original research, adoption of a concentration set by another agency, or on other sources, this information is also noted. In this table, a "Y" stands for yes, an "N" for no. According to Table 3-1 in the previous section, 62 of the 85 agencies (73%) that have established or plan to establish acceptable ambient concentration guidelines or standards use occupational exposure levels (OEL) as a basis for developing ambient limits, at least for some pollutants.

Table 4-1 also indicates whether or not an agency has submitted comments on their acceptable ambient concentration guidelines or standards. All comments are provided in Table 4-2. Please note that a "Y" in the comments

---

[1]It should be noted that the values listed may not be referred to by the States or localities as acceptable ambient concentrations. For example, the values listed for Connecticut are referred to as Hazard Limiting Values.

[2]The CA number is a unique number assigned to chemicals by the American Chemical Society CA Registry System. The CA numbers are independent of nomenclature and have no chemical significance. They are assigned as each new chemical substance enters the CA Registry System. When a CA number was not assigned by the CA Registry System, the data base assigned the substance an identifier consisting of some combination of letters beginning with CL (for Clearinghouse). Appendix C lists these Clearinghouse-assigned chemical identifiers.

their acceptable ambient concentrations to the Clearinghouse. The comments do not necessarily refer to any specific pollutant.

A factored occupational exposure level is the use of an uncertainty factor to apply to some or all of a specific set of occupational limits to convert from a workplace guideline to an ambient guideline. Uncertainty factors may be applied to account for sensitive populations (e.g., infants, elderly) as opposed to "healthy" workers, as well as for continuous as opposed to workplace (8-hour) exposure. Some States and localities apply different factors to different categories of pollutants based on toxicity or carcinogenicity. Generally, the larger the number used to adjust the occupational limit, the more stringent is the ambient guideline, although the averaging time is also important in this respect. Reported uncertainty factors used by State and local agencies range from 10 to 4200.

The occupational exposure levels used most commonly for this purpose are the Threshold Limit Value-Time Weighted Averages (TLV-TWAs) for workplace exposures established by the American Conference of Governmental Industrial Hygienists (ACGIH), the Occupational Safety and Health Administration (OSHA) permissible exposure levels (PEL) for airborne substances in the workplace, and the National Institute for Occupational Safety and Health (NIOSH) recommended criteria for occupational exposures in air. The ACGIH TLV-TWA is the time-weighted average concentration for a normal 8-hour workday and a 40-hour work week, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect. They are based on the best available information from industrial experience, from experimental human and animal studies, and when possible, from a combination of the three. NIOSH, which is the research arm of OSHA, prepares "criteria documents" which are used by OSHA in promulgation of its occupational standards. The NIOSH recommendations are based primarily on medial science, whereas OSHA considers technical feasibility and economic factors in its role as regulator.

Although most States and localities rely primarily on the ACGIH TLVs if the acceptable ambient concentration guidelines or standards are based on occupational values, some use NIOSH criteria, OSHA standards, or a combination of these occupational limits. Moreover, some States and localities apply an uncertainty factor to an entire set of occupational limits, whereas others derive acceptable ambient concentration guidelines or standards in this manner only for selected pollutants. A Clearinghouse publication entitled "Rationale for Air Toxics Control in Seven State and Local Agencies" (August 1985) describes in detail the approaches used by four State and three local agencies for determining acceptable ambient concentration guidelines or standards.

Most of the values reported in Table 4-1 are presented in units of micrograms per cubic meter of air ($\mu g/m^3$) or milligrams per cubic meter of air (mg/m^3), unless otherwise indicated. If a pollutant is listed and the value for concentration is 0.00E+00, the agency did not submit a limit or may be considering the development of an acceptable ambient concentration for that pollutant. An uncertainty factor of 0.0000 indicates that a value was not provided (not that the uncertainty factor was zero).

The reader should address any questions or requests for additional information about acceptable ambient concentrations to the regulatory program or health effects contacts identified in Tables 2-1 and 2-2 in Section 2.

AK	Research from available published & unpublished literatures.
AL	ALL NON-CRITERA POLLUTANTS FROM NEW SOURCES ARE EVALUATED BY THE TLV/40 AND TLV/420 STANDARDS.
AL-JEFFER	THE HAZARDOUS AIR POLLUTANT EMISSIONS FROM NEW OR MODIFIED SOURCES ARE EVALUATED. THE MAXIMUM HOURLY CONCENTRATION IS COMPARED TO 1/40 OF THE TLV AND THE ANNUAL CONCENTRATION IS COMPARED TO 1/420 OF THE TLV.
AZ	USED EPA'S HEALTH ASSESSMENT DOCUMENTS TO SET A LIMIT, BASED ON A ONE IN A MILLION RISK OF CANCER, FOR AN AIR STRIPPER TO BE USED TO REMOVE TCE FROM GROUND WATER. CONTACT RICH ROBBINS (602-257-6953) FOR MORE INFO. BASES & SOURCES.
AZ-PHOENIX	We are using the Arizona Ambient Air Quality guidelines developed by Arizona Departments of Environmental Quality and Health Services.
AZ-PIGICO	ABOVE ARE OUR AMBIENT AIR STANDARDS WHICH MAY OR NOT BE TOXIC, DEPENDING ON CONCENTRATION.
CA	Agency does not use acceptable ambient concentration guidelines as standards. We use the AELs for risk assessments for H & SC 42315, AB 2588, Nuisance, and NSR toxic rules.
CA-VENTURA	CARCINOGENS REGULATED BASED ON EPA OR OEHHA UNIT RISK FACTORS AND POLICY. NON-CANCER AELS USED WERE DEVELOPED BY CAL-EPA OEHHA AND ARE LISTED IN THE AIR TOXICS "HOT SPOTS" RISK ASSESSMENT GUIDELINES.
CA-LASSEN	ALL OTHERS ESTABLISED ON CASE BY CASE BASIS. 75-21-8 95 TO 99% CONTROL EFFICIENCY.
-------	SEE CAPCOA'S AIR TOXICS "HOT SPOTS" RISK ASSESSMENT GUIDELINES.
CO	NO CONCENTRATIONS ESTABLISHED.
CO-ELPASO	NO INFORMATION AVAILABLE AT THIS TIME - STATE OFFICE WILL BE MAKING THIS DETERMINATION.

THE 2.0 UG/M3 ACRYLONITRILE STANDARD IS THE DE MINIMUS EXEMPTION LEVEL FOR REQUIRING AN AMBIENT MONITORING STUDY BY THE FACILITY. THIS LEVEL REPRESENTS THE CONCENTRATION THE DEPARTMENT BELIEVES IS FIVE TIMES THE MINIMUM DETECTABLE LEVEL FOR ACRYLONITRILE WITH CURRENTLY AVAILABLE AMBIENT MONITORING EQUIPMENT.

WE USE AGGIH TLV'S FOR 1988/89 AND CORRECT FOR AS CATEGORY A OR B SUBSTANCES.

FL-PINELLA

AAC is calculated from 1. Reference doses, 2. Reference Air Concentrations, and 3. OEL's, in that order.
Value given is "No Threat Level" from the Florida Air Toxics Working List (Draft Version 1.0), dated January 1991.

KS-WICHITA	KANSAS FURTHER EVALUATION LEVELS (KFELS) PROPOSED BY THE AIR TOXICS ADVISORY COUNCIL WERE PASSED BY THE STATE LEGISLATURE IN 1987. ALL PERMITTING IS CURRENTLY HANDLED THROUGH THE KANSAS DEPT OF HEALTH AND ENVIRONMENT (KDHE). KFEL'S ARE REVIEWED REGULARLY AND ARE BASED ON CARCINOGENIC RISK. IN ADDITION TO THE KFEL LIST WE ALSO USE 1/420TH OF THE ACGIH TLV FOR NON-CARCINOGENS.

NC-MCDEP	LIST OF POLLUTANTS AND AALS ARE EQUIVALENT TO THOSE ADOPTED BY THE STATE OF NORTH CAROLINA.
ND	ALL ACCEPTABLE AMBIENT CONCENTRATION GUIDELINES ARE BASED ON ACGIH VALUES WITH AN UNCERTAINTY FACTOR OF 100. THE AVERAGING TIME IS EITHER 8 HOURS (MOST) OR 1 HOUR. LAER IS REQUIRED FOR POLLUTANTS KNOWN TO CAUSE CANCER IN HUMANS. BACT IS REQUIRED FOR POLLUTANTS SUSPECTED OF CAUSING CANCER IN HUMANS. DIFFERENT CONCENTRATIONS FOR THE SAME POLLUTANT REFLECT SALT VS. METALS, VAPOR VS. DUST, OTHER ISOMERS, ETC.

SECTION 5

POLLUTANT RESEARCH

A number of States and localities actively sponsor or participate in pollutant research. Table 5-1 summarizes pollutant research for over 200 pollutants reported to the Clearinghouse by State and local agencies by pollutant and CAS number, type of research (i.e., health assessment, source assessment, exposure assessment, toxicity testing, epidemiologic study, monitoring study, emission factor development, and risk assessment), and the availability of supporting documentation. The type of research is indicated in the table using the abbreviations below:

HA	Health Assessment
SA	Source Assessment
EA	Exposure Assessment
TT	Toxicity Testing
ES	Epidemiologic Study
MS	Monitoring Study
EF	Emission Factor Development
RA	Risk Assessment
Other	Other Research

"DOC?" refers to the availability of supporting documentation.

As in Table 4-1 on acceptable ambient concentration guidelines or standards, Table 5-1 indicates whether or not an agency has submitted comments on their pollutant research. All comments are provided in Table 5-2. A "Y" in the comments column in Table 5-1 indicates only that the agency has submitted comments on their pollutant research. The comments do not necessarily refer to any specific pollutant.

The reader should address any questions or requests for additional information about pollutant research to the regulatory program contacts identified in Table 2-1 in Section 2.

Current State and locality sponsored research is referenced in the NATICH Ongoing Research and Regulatory Development Projects document. The Bibliography of Selected Reports and Federal Register Notices Related to Air Toxics provides citations for previous research.

AZ

BY NOV. 1, 1993 A STATE PROGRAM FOR THE CONTROL OF HAZARDOUS AIR POLLUTANTS IS TO BE ESTABLISHED. IDENTIFICATION OF HAZARDOUS SUBSTANCES, IDENTIFICATION AND EVALUATION OF METHODS FOR CONDUCTING AMBIENT AIR MONITORING, MEASURING EMISSIONS, PERFORMING RELATED ANALYSES, AND AMBIENT AIR MONITORING ARE TO BE INCLUDED. FINDINGS AND RECOMMENDATIONS ARE TO BE PUBLISHED BY SEPT. 1, 1995.

CA

Chlorinated dioxins of concern include: 2,3,7,8 Tetrachloro, 1,2,3, 7,8 Pentachloro, 1,2,3,4,7,8 Hexachloro, 1,2,3,6,7,8 Hexachloro, 1,2, 3,7,8,9 Hexachloro, 1,2,3,4,6,7,8 Heptachloro.
Chlorinated dibenzofurans of concern include: 2,3,7,8 Tetrachloro, 1,2,3,7,8 Pentachloro, 2,3,4,7,8 Pentachloro, 1,2,3,4,7,8 Hexachloro, 1,2,3,6,7,8 Hexachloro, 1,2,3,7,8,9 Hexachloro, 2,3,4,6,7,8 Hexachloro, 1,2,3,4,6,7,8 Heptachloro, 1,2,3,4,7,8,9 Heptachloro.

CA-BAAQMD

BAAQMD IS CURRENTLY PREPARING REPORTS ON EMISSIONS OF CARBON TETRACHLORIDE AND PERCHLOROETHLYENE FROM DOW CHEMICAL.
BAAQMD IS ALSO PREPARING A REPORT ON EMISSIONS OF METALS FROM SEVERAL SOURCE CATEGORIES, INCLUDING IRON FOUNDRIES AND POTWS.
SOURCE TESTING IS UNDERWAY TO SUPPORT DEVELOPMENT OF A CONTROL MEASURE FOR HEXAVALENT CHROMIUM FROM CHROME PLATERS. THIS WORK IS IN COOPERATION WITH THE CALIF AIR RESOURCES BOARD.

CA-SCAQMD

POLLUTANTS #2 TO 16 ARE PART OF THE LONG-TERM POLLUTANT MONITORING PROGRAM. FORMALDEHYDE MONITORING AND RISK/EXPOSURE ASSESSMENTS IS A ONE-YEAR PROGRAM (1988-89). WITH THE POTENTIAL LARGE SCALE INTRODUCTION OF METHANOL AS AN ALTERNATIVE FUEL FOR THE SOUTH COAST AIR BASIN, IT IS ESSENTIAL TO ESTABLISH BASELINE FORMALDEHYDE CONCENTRATIONS AND TO DEVELOP MODELING TECHNIQUES TO PREDICT ITS CONCENTRATIONS. POLLUTANTS 2, 8, AND 13 HAVE BEEN INCLUDED IN SITE SPECIFIC AMBIENT AIR MONITORING PROGRAMS, UPDATED 3/89.

SECTION 6

METHODS DEVELOPMENT ACTIVITIES

A number of States and localities sponsor or participate in methods development activities. Tables 6-1 though 6-8 describe methods development activities in eight areas, respectively: 1) emissions testing; 2) ambient monitoring; 3) dispersion modeling application, evaluation, and/or development; 4) accident prevention and/or emergency response procedures; 5) ambient exposure assessment; 6) emissions modeling from non-traditional sources (e.g., impoundments and landfills); 7) indoor air characterization, mitigation; and 8) other (e.g., indoor/outdoor exposure relationships). Methods development activities include research and operations to improve existing or develop new methods to evaluate or control toxic air pollutants.

These tables present methods development activities as reported by State and local agencies. The reader should address any questions or requests for additional information about the methods development activities identified in this section to the regulatory program contacts identified in Table 2-1 in Section 2.

More agencies (49) reported methods development activities in the area of ambient monitoring than in the other areas listed, followed by emissions testing (33), dispersion modeling (33), and accident prevention/emergency response (27). Fewer agencies reported methods development activities in non-traditional sources (20), ambient exposure assessment (21), indoor air (13), and other (10).

AMBIENT MONITORING INFORMATION

Ambient monitoring information has been collected from States and localities on 223 toxic air pollutants. Table 8-1 presents these data, including the pollutant measured, CAS number, State or locality conducting the measurement, date and location of the measurement, and the sampling technique and analytical method used by the State or locality. Note that the Clearinghouse does not evaluate the suitability of sampling techniques or analytical methods for the evaluation of ambient air concentrations or air toxics.

Information obtained for the interim Aerometric Information and Retrieval System (AIRS) has been incorporated into this table. For further information regarding the AIRS data base contact Jake Summers at (919) 541-5695.

The reader should address any questions or requests for additional information on a State or local agency's ambient monitoring activities to the ambient monitoring contacts identified in Table 2-1 in Section 2.

SECTION 9

GENERAL PERMITTING AND SOURCE TESTING INFORMATION

State and local agencies have provided to the Clearinghouse general information about their permitting and source testing activities. The general information includes:

PERMITTING

- Total number of facilities permitted to specifically control air toxics emissions;
- Number of permitted facilities registered in the Clearinghouse;
- Whether or not permits are renewed;
- Permit renewal period (in years);
- Whether or not permitting data are maintained in computerized files; and
- When agencies expect to submit a Title 5 permit program for EPA approval.

SOURCE TESTING

- Total number of source tests conducted for air toxics evaluation;
- Number of source tests registered in the Clearinghouse; and
- Whether or not source testing data are maintained in computerized files.

Table 9-1 summarizes this information as available in the data base. The reader should address any questions or requests for additional information on general permitting and source testing information to the permitting or source testing contacts identified in Table 2-1 in Section 2.

Currently, the Clearinghouse contains information from 55 agencies on 24,084 permits and from 53 agencies on more than 493 source tests. Thirty-nine agencies report that they renew permits on a regular basis, with the renewal period ranging from 1 to 15 years. Twenty-seven agencies report that they maintain permit data in a computerized file. Seven agencies maintain source test data in a computerized file.

SECTION 10

PERMITTING INFORMATION

State and local agencies usually control toxic air pollutant emissions through source permitting. The Clearinghouse has established a registry of permitted sources of air toxics which includes data on pollutant emissions, emission limits, and control equipment. This information can be used for purposes such as determining what toxic air pollutants might be emitted by a specific facility, identifying potentially applicable control equipment/requirements for a particular facility, or prioritizing facilities for permitting or other air toxics control decisions.

Table 10-1 and 10-2 present a subset of the information collected to date on facilities permitted by States or localities. Because more than 24,000 permitted facilities are registered in the Clearinghouse, these tables include only those permits (approximately 165) identified by State and local agencies as notable (unique or of particular interest to other agencies). In Table 10-1, the information is organized alphabetically by the pollutant name. Permits involving more than 100 pollutants are listed. Table 10-2 presents the same information organized by Standard Industrial Classification (SIC) Code of the permitted facilities in numerical order. Permits involving approximately 50, 4-digit SIC codes are listed. Unclassified (by SIC Code) permitting data submitted to the Clearinghouse are listed under 0000.

Each permit case is identified in Tables 10-1 and 10-2 with an internally-generated access number. A more complete description of each permit case can be found in Appendix A, in consecutive order by access number. Appendix A provides information for each permit case on the agency, permitting contact and phone number, permit ID number, facility category, SIC Code, year permit issued, last year amended, control equipment, Source Classification Codes (SCC) (as available), pollutant names, CAS numbers, emission limits, source of emissions, and comments. Please note that a permitted emission limit of 0.00E+00 in Tables 10-1 and 10-2 or in Appendix A may not necessarily mean 0. It may mean that the limit was not submitted or that a concentration less than 0.0001 (1/10,000) was submitted before the value field was converted to scientific notation format in 1989.

Due to space limitation on Tables 10-1 and 10-2, units of measure have been abbreviated to a maximum of six characters. These abbreviations are explained as follows:

Unit Abbreviation	Unabbreviated Unit
Trace	Not measured; 0.001 lb/hr
#/HR-3	Pounds per hour to the 10^{-3}
#/HR-6	Pounds per hour to the 10^{-6}
#/M#	Pounds per 1000 pounds of input
#/GAL	Pounds per gallon
#/DAY or LB/DAY	Pounds per day
LB/T	Pounds per ton
LB/HR	Pounds per hour
TNS/YR	Tons per year
G/S or G/SEC	Grams per second
GMS/HR	Grams per hour
MG/M3	Milligrams per cubic meter
GR/SCF	Grains per 100 dry standard cubic feet
PPM	Parts per million
1% OEL	1 percent of the Occupational Exposure Limit
VISIBL	Visible emissions
NO/DCT	No detectible concentration
UG/HR	Micrograms per hour
G/MG	Grams per milligram
UG/*	Micrograms per day standard cubic meter
MG/*	Milligrams per day standard cubic meter
TBD	To be determined

The reader should address any questions or requests for additional information about the permits identified in Table 10-1 and 10-2 to the permitting contacts identified in Appendix A or Table 2-1 in Section 2. The permit ID number identified in Appendix A should be used as a reference to a specific permit case in any communications with the State or local agency that issued the permit. If, however, the permit ID number begins with the letters "CL," it was assigned by the Clearinghouse for record keeping purposes and has no connection with the records kept by the State or local agency that issued the permit.

SECTION 11

SOURCE TESTING INFORMATION

Many States and localities conduct emissions testing for toxic air pollutants. Tables 11-1 and 11-2 present data collected to date on facilities tested by States or localities (about 167 source tests). As in the permitting data tables, only a subset of the data are presented. These source testing data tables contain only those source tests entered into the database from January 1, 1988 to the present which have been identified by State and local agencies as notable (unique or of particular interest to other agencies.) In Table 11-1, the information is organized alphabetically by pollutant name. Source tests involving more than 100 pollutants are listed. Table 11-2 presents the same information organized by Standard Industrial Classification Code (SIC) of the tested facilities in numerical order. Source Tests involving 36, 4-digit SIC codes are listed. Unclassified (by SIC Code) source testing data submitted to the Clearinghouse are listed under 0000.

Each source test reported in this section is identified in Tables 11-1 and 11-2 with an internally-generated access number. A more complete description of each source test can be found in Appendix B, in consecutive order by access number. Appendix B provides information for each source test on the agency, source testing contact and phone number, the test ID number, facility category, SIC Code, test date, sampling technique and analytical method, Source Classification Codes (SCC), as available, and pollutant names, CAS numbers, emission rates, location of measurement, and comments. Please note that a measured emission rate of 0.00E+00 in Tables 11-1 and 11-2 or in Appendix B may not necessarily mean 0. It may mean that the rate was not submitted or that a concentration less than 0.0001 (1/10,000) was submitted before the value field was converted to scientific notation format in 1989.

The reader should address any questions or requests for additional information about the source tests identified in Tables 11-1 and 11-2 to the source testing contacts identified in Appendix B or in Table 2-1 in Section 2. The source test ID number identified in Appendix B should be used a reference to a specific source test in any communications with the State or local agency that conducted the test. If, however, the test ID number begins with the letters "CL," it was assigned by the Clearinghouse for record keeping purposes and has no connection with the records kept by the State or local agency that conducted the test.

SECTION 12

EMISSIONS INVENTORY INFORMATION

The emissions inventory information presented in this section will be useful to State and local agencies that are beginning to develop inventories of toxic air pollutants, as well as to agencies that need emission information for certain source categories or pollutants. Table 12-1 provides information on the status, data collection methodology, scope, information collected, and size of State and local emission inventories of toxic air pollutants for 116 agencies. Emissions inventory information is presented in Table 12-1 in "yes" and "no" and fill-in-the-blank answers to a series of 14 questions. The 14 questions are listed in a key to Table 12-1 at the end of the narrative potion of this section, prior to the table.

Of the 116 agencies that have submitted information, 75 (65%) have compiled an air toxics emissions inventory. An additional 26 agencies (22%) of those submitting information plan to compile an inventory. Forty agencies report that they update inventory data regularly, with a frequency ranging from daily to every 5 years.

Table 12-1 also indicates whether or not an agency submitted comments on its emissions inventory. Table 12-2 lists comments on the emissions inventory as provided by State and local agencies. The comments may apply to the emissions inventory in general or to specific elements of the inventory in reference to one of the 14 questions listed in the key to Table 2-1.

Table 12-3 provides inventory data, including pollutant name, CAS number, annual emissions, and area (State, county, city, etc.) for more than 500 pollutants. Please note that an annual emissions of 0.00E+00 may not necessarily mean 0. It may mean that the rate was not submitted or that a rate less than 0.0001 (1/10,000) was submitted before the value field was converted to scientific notation format in 1989.

The reader should address any questions or requests for additional information about the emissions inventory data listed in Tables 12-1, 12-2, and 12-3 to the emissions inventory contacts listed in Table 2-2 in Section 2.

INVENTORY STATUS

1. We have compiled an air toxics emissions inventory.

2. If no inventory exists, are there plans to compile one? When? (year) ___

DATA COLLECTION METHODOLOGY

3. Is your inventory based on data supplied through the permit process?

4. Is your inventory based on questionnaires sent to sources?

5. How often is your inventory updated:

   a) All data updated regularly? (frequency? _____).
   b) Portions updated regularly? (frequency? _____).
   c) Updated irregularly.
   d) Existing inventory is the result of a one-time effort with no known plans to update. When was inventory completed? _____

INVENTORY SCOPE

6. Which pollutants does your inventory cover:

   a) A specific list of pollutants.
   b) "Open ended," covering any substance for which information is provided.

7. Does inventory information cover primarily only larger point sources?

8. Does inventory information include numerous small sources that are typically handled as area sources in criteria pollutant inventories?

9. Are there any particular sources or source categories that are the main focus of the emissions inventory?

INVENTORY INFORMATION

10. What types of data are collected and stored?

   a) Source description
   b) Stack and exhaust flow data
   c) Throughput and activity levels
   d) Control device type and efficiencies

11. How are total emissions determined?

a) Emissions data supplied by industry.
b) Agency uses emissions factors to calculate emissions.
c) Both of the above.

12. Is the inventory computerized (i.e., created and maintained using a computer?)

INVENTORY SIZE

13. How many sources are included in your agency's inventory? _____

14. How many pollutants are included in your agency's inventory? _____

CA

1. Existing inventory information for limited specific substances is available prsuant to California's Toxic Air Contaminants Identification & Control Program.
2. We are developing a comprehensive toxic emissions inventory through California's air toxics "Hot Spots" inventory data submitted by each facility. The program phases facilities in over 3 years, beginning with 25 ton or more criteria pollutant facilities and several preliminary toxic survey lists. Portions of the first-phase data are being entered into the computer data system now. Preliminary summary reports are expected to be available in fall of 1991.
3. Several thousand facilities will be included in 1991; several thousand more in later years.
4. Over 500 substances (specified by the "Hot Spots" Act requirements) will be addressed, approximately half of these quantitatively.

CA-SCAQMD

THE SCAQMD HAS COMPLETED A 1982 INVENTORY FOR 30 SPECIES AND HAS UPDATED THE INVENTORY TO 1984 FOR 20 OF THESE POLLUTANTS. RESULTS FROM THIS UPDATE WILL BE AVAILABLE BY THE END OF FEBRUARY 1986.

4. Some parts of the inventory are compiled using questionnaire supplied by the District. Generally this practice was used for small facilities such as gasoline stations and dry cleaners.

7. The phase one of the inventory dealt primarily with larger point sources. In the subsequent years the focus will shift to intermediate and smaller facilities.

10. Maximum hourly and annual average emission rate.

10F. Compliance data are not applicable at this time.

11. Emissions data are determined using industry supplied information. The District has verified all data. Some data were calculated using point source tests, others used emissions factors approved by the EPA and the California Air Resources Board.

MA	THE PRESENT INVENTORY (SSEIS) IS AN AIR EMISSION INVENTORY WITH TOXICS INFORMATION.___THE SOURCE FILE INCLUDES SPECIFIC CHEMICALS BY CAS NUMBER AT THE SUB-SCC LEVEL (SEGMENT LEVEL). STORAGE TANKS ARE INVENTORIED AND CLASSIFIED BY LOCATION (UNDERGROUND, ETC.) AND SIZE.
MD-PG	7. Includes all toxics on the premise, not just emission points.
ME	SINCE IT IS AN OPEN ENDED LIST THIS NUMBER IS SUBJECT TO CHANGE. WE ARE TRYING TO CROSSLINK THE DATA COLLECTED WITH SARA 313 DATA THE NUMBER OF POLLUTANTS (90) IS AN ESTIMATE
MN	NEDS SOURCES AND OTHER SOURCES SELECTED BY SIC CODE WERE SURVEYED. INFORMATION REGARDING THE ATTACHED LIST AS WELL AS "OTHER" EMISSIONS WAS REQUESTED. BASED UPON THE SURVEY, A PRIORITIZED LIST OF SOURCES WAS DRAWN UP TO ORIENT FUTURE PERMIT RENEWAL PRIORITIES.
MO	A ONE-TIME ONLY SCREENING SURVEY WAS SENT TO MOST POINT SOURCES, COVERING 197 CHEMICALS AND 7 COMPOUND CATEGORIES. DATA COLLECTION WAS COMPLETED BY MAY 1987. AREA SOURCES AND ANNUAL UPDATES OF LARGER POINT SOURCES WILL BE INCORPORATED INTO THE CRITERIA POLLUTANT INVENTORY PROCESS SOMETIME IN THE FUTURE. THE FORMAT TO BE USED IS NOT YET KNOWN. SINCE THE SOURCES HAVE BEEN INVENTORIED FOR CRITERIA POLLUTANTS, STACK DATA, PROCESS INFO, AND OPERATIONAL DATA ARE ALREADY AVAILABLE. INFORMATION ON HAZARDOUS SUBSTANCES THAT WAS NOT REQUIRED BY THE SURVEY, BUT VOLUNTARILY SUBMITTED WITH IT, WAS INCLUDED IN THE INVENTORY DATA BASE. THE CALCULATION OF MISSING EMISSION RATES, AND THE VERIFICATION OF OTHERS, WILL PROCEED AS RESOURCES PERMIT. STATE-WIDE EMISSIONS DATA APPEARING IN NATICH IS BASED SOLELY ON UNVERIFIED EMISSION RATES SUPPLIED BY SOURCES.

MO-STLUCO	WE SEND A TOXIC AIR POLLUTANTS QUESTIONNAIRE TO APPROXIMATELY 175 INDUSTRIES ANNUALLY. FOR CALENDAR YEAR 1991 WE SENT A QUESTIONNAIRE LISTING THE 189 CHEMICALS TARGETED IN THE CAA AMENDMENTS AS "TOXIC AIR POLLUTANTS," REQUESTING INFORMATION ON THEIR USAGE AND AMOUNT RELEASED TO THE ATMOSPHERE.
MO-SPGRCO	THE MISSOURI DEPARTMENT OF NATURAL RESOURCES HAS CONDUCTED AN INVENTORY IN OUR AREA IN RECENT MONTHS.
MT	THE INVENTORY IS CONSIDERED A CURSORY INVENTORY OF POINT SOURCES INCLUDING RELATIVELY SMALL POINT SOURCES. HOWEVER, THE INVENTORY DOES NOT INCLUDE SIGNIFICANT AREA SOURCES OF AIR TOXICS SUCH AS RESIDENTIAL WOOD BURNING, FORESTRY SLASH BURNING, AUTOMOBILE EXHAUST, GASOLINE DISTRIBUTION AND MARKETING, AND HERBICIDE AND PESTICIDE APPLICATION. THE DATA PRESENTED IN PART III ONLY INCLUDES POLLUTANTS WITH AN ANNUAL STATEWIDE EMISSION RATE GREATER THAN 5 TONS.
NC	THE INVENTORY IS UPDATED WHENEVER SOURCES RENEW PERMITS OR APPLY FOR NEW PERMITS.
NC-FORCO	ALL OF OUR PERMITTED SOURCES AIR TOXIC EMISSIONS WERE INCLUDED IN THE EMISSIONS INVENTORY.

PA	PRELIMINARY INVENTORY STARTED JULY 1985 ON POTENTIAL EMITTERS OF 38 SUBSTANCES. QUANTITATIVE DATA WAS COLLECTED IN 1986 AND COMPUTERIZED IN 1987. DATA REPRESENTS ONLY 181 FACILITIES IN PA EXCLUSIVE OF PHILA DELPHIA AND ALLEGHENY COUNTIES._CHLORINATED BENZENES WERE REPORTED AS BENZENE HEXACHLORIDE (CAS NO 58-89-9) SOLELY TO PERMIT ENTRY OF THE REPORTED EMISSIONS OF CHLORINATED BENZENES WHICH WERE NOT SPECIATED. BECAUSE OF RESOURCE CONSTRAINTS, IT WAS NOT POSSIBLE TO RETAIN THE AIR TOXICS INVENTORY DATA IN COMPUTER STORAGE. A HARD COPY OF THE DATA WA S RETAINED; HOWEVER IT WOULD BE NECESSARY TO RECONSTRUCT MUCH OF THE INFORMATION MANUALLY BY COMPARING WITH THE CRITERIA POLLUTANT DATA AVAILABLE FOR THE SOURCES COVERED. SINCE THE 1985 INVENTORY DATA WAS NEVER VERIFIED, IT WOULD BE UNLIKELY THAT RESOURCES WOULD EVER BE DEDI CATED TO THAT TASK.
PA-PHIL.	3/89 THERE ARE SOURCES WITH APPLICABLE EMISSIONS. THE INVENTORY REPRESENTS MAXIMUM EMISSION LDVELS AND MAY NOT BE REFLECTIVE OR DAY TO DAY ACTUAL EMISSIONS, OR ACTUAL ANNUAL EMISSIONS.
PA-PITT.	THE BUREAUS BIGGEST AIR TOXICS SOURCES ARE THREE COKE OVEN FACILITIES IN THE COUNTY. HOWEVER, EMISSION DATA IS ALSO GATHERED ON MEDIUM SIZE SOURCES AS WELL. SMALL SOURCES ARE TREATED AS AREA SOURCES, AND ARE NOT INCLUDED IN THE CURRENT SURVEY.
RI	THERE WAS A ONE TIME INVENTORY OF 500 SOURCES IN OCTOBER 1984 WHICH GATHERED USE INFORMATION FOR 122 SUBSTANCES. SINCE MARCH 1988, SOURCES ARE INVENTORIED FOR THEIR USE OF THE 40 LISTED TOXIC SUBSTANCES ANNUALLY CONCURRENTLY WITH CRITERIA POLLUTANT INVENTORIES. IN 1989 THEY WERE ALSO ASKED TO SUPPLY DATA ON USE AND EMISSIONS OF 20 ADDITIONAL TOXICS WHICH MAY BE REGULATED IN THE FUTURE.

TN-CHAT.	INVENTORY CONTAINS 114 NON-CRITERIA AND 7 CRITERIA POLLUTANTS. INVENTORY IS BEING EXPANDED TO INCLUDE ALL LOCAL EMISSIONS OF THE 189 HAZARDOUS AIR POLLUTANTS LISTED UNDER TITLE III (SECTION 112(B)) OF THE 1990 AMENDMENTS TO THE CLEAN AIR ACT. THE NUMBER OF COMPANIES IN THE INVENTORY IS 220. THESE COMPANIES CONTAIN A TOTAL OF 1208 INDIVIDUALLY PERMITTED EMISSION POINTS.
TN-MEMPHIS	5. THIS AGENCY IS ALSO PLANNING TO COMPILE AN UPDATE FOR 1991 BASE YEAR EMISSION INVENTORY. SOURCES IDENTIFIED FROM VOC EMISSION INVENTORY IN SHELBY COUNTY. 7. TN-KNOX	AS INVENTORY IS IN DEVELOPMENTAL STAGES, THE NUMBER OF SOURCES AND POLLUTANTS CONTINUES TO GROW. DATA COLLECTION METHODOLOGY INCLUDES QUESTIONAIRES AND REVIEW OF PERMITTED SOURCES.
TX	7. Inventories conducted for ozone nonattainment areas include point sources down to 10 T/Y VOC and include all categories as required by EPA guidance (Refineries, petrochemicals, surface coating, etc.) 8. Small source emissions are estimated as VOC with area source methodology & then speciated into toxics based on EPA species profiles - available only for ozone/ CO nonattainment areas. 9. Focus is on sources in ozone, CO & PM-10 nonattainment areas with reporting required for all emissions.
VA	1. WE ARE IN THE PROCESS OF COMPILING AN INVENTORY WHICH WILL NOT BE COMPLETED FOR SEVERAL YEARS. 7/8. THE INVENTORY COVERS BOTH LARGE AND SMALL SOURCES. SOME AREA-TYPE SOURCES ARE EVALUATED AS POINT SOURCES. 12. THE INVENTORY WILL BE STORED IN A PC ACCESSABLE DATABASE WITH COMPLETION SCHEDULED FOR 01/01/91.
VT	VERMONT IS IN THE PROCESS OF REVISING ITS AIR TOXICS EMISSION INVENTORY. THE CURRENT REGISTRATION PROGRAM WILL BE EXPANDED TO INCLUDE TOXIC EMISSIONS. CURRENTLY IT CONSISTS OF ONLY CRITERIA POLLUTANTS. THIS EFFORT WILL BE ON-GOING OVER THE NEXT YEAR. VT WILL USE THE INVENTORY TO PRIORITIZE SOURCES THAT MAY BE SIGNIFICANT REGARDING EMISSIONS OF AIR TOXICS.

SECTION 13

RISK ASSESSMENT INFORMATION

This section provides general information on how agencies conduct risk assessments and specific information on sources or facilities for which a risk assessment has been conducted. It consists of two tables: 1) general information and risk assessment methodology (Table 13-1), and 2) facility-specific risk assessment results (Table 13-2). This information will be useful for purposes such as identifying risk assessment methodologies used by other State and local agencies, determining facility categories which have been the subject of a risk assessment, and prioritizing facilities for review based on the results of risk assessment studies of similar facilities.

The data base can accommodate only one set of risk assessment study results per pollutant (that is, per CAS number) for each facility-specific study reported to the Clearinghouse. Each study receives a unique, internally generated identification number.

TABLE 13-1: RISK ASSESSMENT METHODOLOGY

AGENCY: AL DEPT. OF ENV. MANAGEMENT

RISK ASSESSMENT IS DONE ON A LIMITED BASIS IN ANTICIPATION AND PREPARATION FOR NEW AIR TOXIC GUIDELINES OR REGULATIONS. DISPERSION MODELING IS USED TO PREDICT THE MAXIMUM CONCENTRATION OCCURING OFF PLANT PROPERTY. THIS CONCENTRATION IS MULTIPLIED BY THE POLLUTANT-SPECIFIC UNIT RISK FACTOR TO GET THE MAXIMUM INDIVIDUAL RISK. (ACCEPTABLE 1/100,000)

AGENCY: CA AIR RESOURCES BOARD

ARB STAFF REVIEWS RISK ASSESSMENTS PREPARED ACCORDING TO THE METHODOLOGIES DESCRIBED IN THE CA AIR POLLUTION CONTROL OFFICERS ASSOC. AIR TOXICS "HOT SPOTS" PROGRAM RISK ASSESSMENT GUIDELINES, JAN. 1991, OR IN THE HEALTH RISK ASSESSMENT GUIDELINES FOR NONHAZARDOUS WASTE INCINERATORS, AUG. 1990 AND THE FEB. 7, 1991 REVISIONS.

AGENCY: PINELLAS COUNTY AIR POLLUTION CONTROL BOARD

WE CONDUCT SCREENING LEVEL ANALYSES FOR PROPOSED NEW SOURCES AND EXISTING SOURCES APPLYING FOR PERMIT RENEWAL USING AIR DISPERSION MODELING RESULTS (SCREEN, ISC). EPA UNIT RISK FACTORS ARE USED FOR CARCINOGENS AND RFCS, RFDS, AND DELS ARE USED FOR NON-CARCINOGENS. SCREENING IS FOR MAXIMALLY EXPOSED IND. IF ANALYSIS RISK IS > 1 X 10E-06 OR TOTAL HAZARD INDEX > 1, MORE STUDY OR INCREASE EM.

AGENCY: CO DEPT. OF HEALTH

OUR AGENCY HAS CONDUCTED LIMITED RISK ASSESSMENTS, USING BOTH MODELED & MONITORED CONCENTRATION. WE USE MIR-OFF PROPERTY FOR CARCINOGENS, TAKING ONLY INHALATION INTO CONSIDERATION. WE USE URFS PUBLISHED IN HEAST. WE DO NOT ADJUST CONCENTRATIONS TO STP/SEA LEVEL.

TABLE 13-1: RISK ASSESSMENT METHODOLOGY

AGENCY: BROWARD COUNTY OFFICE OF NATURAL RESOURCE PROTECTION

RISK ESTIMATES ARE CALCULATED AS FUNCTION OF THE POLLUTANT POTENCY OR UNIT RISK, EXPOSURE IS CALCU LATED AS FUNCTION OF POLLUTANT CONCENTRATION, CONT ACT RATE, ROUTE OF EXPOSURE. CANCER AND NON-CANCER RISK EVALUATION FOR THE MAXIMUM EXPOSED INDIVIDUAL

AGENCY: PRINCE GEORGE'S COUNTY HEALTH DEPARTMENT

SCREENING ANALYSIS ONLY - FURTHER ANALYSIS IS REFERRED TO STATE OF MARYLAND.

AGENCY: MT DEPT. OF HEALTH AND ENV. SCIENCES, AIR QUALITY BUREAU

THE AQB DID NOT PERFORM ANY RISK ASSESSMENTS IN THE PAST YEAR. SOME RISK ASSESSMENT WORK WAS DONE IN THE PAST AND UTILIZED EPA RISK FACTORS OR UNIT RISK FACTORS.

AGENCY: NJ DEPT. OF ENV. PROT. AND ENERGY

MAJOR SOURCES: RA DONE BY APPLICANT. INHALATION; O THER EXPOSURE DEPENDS ON FACILITY SIZE. METHOD.: N RC'S 4 STEPS. BASED ON RESULTS OF ISC DISPERSION M ODELING. UNIT RISK FACTORS & RFCS MOSTLY FROM EPA. MINOR SOURCES: NEW & MODIFIED PERMIT APPLICATIONS SCREENED IN-HOUSE FOR 56 CARCINOGENS. RISK: MAX. I NDIVIDUAL; <1E-6 - NEGLIGIBLE; >1E-4 - UNACCEPTABL E; IN BETWEEN - CASE-BY-CASE EVALUATION.

AGENCY: NM ENV. IMPROVEMENT DIV., AIR QUALITY BUR.

THERE ARE NO ONGOING RISK ASSESSMENT ACTIVITIES.

TABLE 13-1: RISK ASSESSMENT METHODOLOGY

AGENCY: OHIO EPA, DIV. OF AIR POLLUTION CONTROL

OHIO EPA USES BOTH MODELING AND MONITORING DATA, W/U.S. EPA DERIVED UNIT RISK VALUES FOR CANCER RISK ASSESSMENT. MAX. IND. RISK AS WELL AS POP. BURDENS ARE CALCULATED. MULTI-PATHWAY ESPOSURES ARE EVALUATED FOR RCRA RISKS. WE ARE ALSO ATTEMPTING TO USE RISK ASSESSMENT FOR NEW SOURCE PERMITS, ALTHOUGH THE METHODOLOGY HAS NOT BEEN PUT IN PLACE YET.

AGENCY: OK DEPT. OF HEALTH, AIR QUALITY SERVICE

RISK ASSESSSMENT METHODOLOGY IS BASED PRIMARILY ON THE MODEL SET FORTH BY THE SUPERFUND PROGRAM. EPA UNIT RISK VALUES/REFERENCE CONCENTRATIONS ARE UTILIZED. MULTIPATHWAY EXPOSURE ROUTES; CANCER AND NONCANCER RISKS; MAXIMUM INDIVIDUAL RISK; MODELING AND/OR MONITORING DATA IS UTILIZED.

AGENCY: CHATTANOOGA-HAMILTON CO. AIR POLLUTION CONTROL BUREAU

FOR ALL NEW SOURCES, DISPERSION MODELING IS PERFORMED. RESULTING CALCULATED MAXIMUM AMBIENT OFFSITE CONCENTRATIONS ARE COMPARED AGAINST HEALTH BASED GUIDELINES. FOR NON-CARCINOGENS, THE ACGIH TLV-TWA DIVIDED BY A SAFETY FACTOR IS USED. FOR CARCINOGENS, THE MAXIMUM AMBIENT ANNUAL CONCENTRATION IS MULTIPLIED BY THE UNIT RISK FACTOR. LOCAL GOAL IS RISK LEVEL LESS THAN 1 X 10-6.

AGENCY: WY DEPT. OF ENV. QUALITY, AIR QUALTIY DIV.

THE DIVISION SCREENS PROPOSED NEW SOURCES USING DISPERSION MODELING AND UNIT RISK FACTORS FOR CARCINOGENS AND RFCS FOR NON-CARCINOGENS. IF RFC DOESN'T EXIST, TLV/42 IS USED. ANALYSIS IS FOR MAXIMUM EXPOSED INDIVIDUAL VIA INHALATION ONLY.

APPENDIX A

PERMIT DESCRIPTIONS

Appendix A provides a complete description of each permit case listed in Tables 10-1 and 10-2 in Section 10. Permit cases are described in consecutive order by access number. Each description contains information on agency name, permitting contact and phone number, permit ID number, facility category, SIC Code, year permit issued, last year amended, control equipment, Source Classification Codes (SCC) as available, pollutant names, CAS number, emission limits, source of emissions, and comments. Note that a permitted emission limit of 0.00E+00 may not necessarily mean 0. It may mean that the limit was not submitted or that a concentration less than 0.0001 (1/10,000) was submitted before the value field was converted to scientific notation format in 1989.

APPENDIX B

SOURCE TEST DESCRIPTIONS

Appendix B provides a complete description of each source test listed in Tables 11-1 and 11-2 in Section 11. Source tests are described in consecutive order by access number. Each description contains information on agency name, source testing contact and phone number, test ID number, facility category, SIC Code, test date, sampling technique and analytical method, Source Classification Codes (SCC), pollutant names, CAS numbers, emission rates, location of measurement, and comments. Note that a measured emission rate of 0.00E+00 may not necessarily mean 0. It may mean that the rate was not submitted or that a concentration less than 0.0001 (1/10,000) was submitted before the value field was converted to scientific notation format in 1989.

APPENDIX C

CLEARINGHOUSE IDENTIFIERS FOR CHEMICAL GROUP

Information on toxic air pollutants is entered into the data base, stored, and reported by Chemical Abstracts Service Registry Number (CAS number). Clearinghouse identifiers prefaced with "CL - " have been assigned to groups os similar pollutants where no CAS number was applicable. Appendix C provides a list of Clearinghouse chemical acronyms used in place of the CAS number.

APPENDIX C
CLEARINGHOUSE CAS NUMBERS

CL-CAS	POLLUTANT NAME
CL-ABRAS	ABRASIVES
CL-ACID	ACIDIC COMPOUNDS INCLUDING ACID GASES
CL-ADIP	ADIPATES
CL-ALDEHYD	ALDEHYDES
CL-ALKYLPB	ALKYL LEAD COMPOUNDS
CL-ALLERG	ALLERGENS
CL-ALMERC	ALKYL MERCURY COMPOUNDS
CL-ALUM	ALUMINUM COMPOUNDS
CL-AMINE	AMINES
CL-AROMHC	AROMATIC HYDROCARBONS
CL-BACT	BACTERIA
CL-BISMUTH	BISMUTH COMPOUNDS
CL-BORON	BORON COMPOUNDS
CL-BROM	BROMINE COMPOUNDS
CL-BTX	BENZENE,TOLUENE,XYLENE
CL-CADMIUM	CADMIUM COMPOUNDS
CL-CARBON	TOTAL CARBON
CL-CARCIN	CARCINOGENS
CL-CFC	CHLOROFLUOROCARBONS
CL-CHC	CHLORINATED HYDROCARBONS
CL-CHELATE	CHELATING AGENTS
CL-CHEMOTH	CHEMOTHERAPEUTICS
CL-CHLOR	CHLORINE COMPOUNDS
CL-CHROME	CHROMIUM COMPOUNDS
CL-COALDUS	COAL DUST
CL-COBALT	COBALT COMPOUNDS
CL-COE	COKE OVEN EMISSIONS
CL-CONEST	CONJUGATED ESTROGENS
CL-CONSUMR	CONSUMER PRODUCTS
CL-COPPER	COPPER COMPOUNDS
CL-COTDUST	COTTON DUST
CL-CREOSOL	CREOSOLS
CL-CUTFLU	CUTTING FLUIDS
CL-DGAEA	DIETHYLENE GLYCOL ALKYL ETHERS/ACETATES
CL-DIESEL	DIESEL FUEL EMISSIONS
CL-DIISOCY	DIISOCYANATES
CL-DIOXIN	DIOXINS
CL-DYE	DYES
CL-ESTROG	ESTROGENS AND PROGESTINS(NOT CONJUGATED)
CL-ETHERS	ETHERS
CL-ETS	ENVIRONMENTAL TOBACCO SMOKE
CL-EXPLO	EXPLOSIVES
CL-FUELOIL	WASTE DERIVED FUEL OIL EMISSIONS
CL-FUNG	FUNGICIDES
CL-FURAN	FURANS
CL-GLASS	FIBROUS GLASS DUST
CL-GRAIN	GRAIN DUST
CL-HALOGHC	HALOGENATED HYDROCARBONS
CL-HALOME	HALOMETHANES
CL-HAPS	TITLE III HAZARDOUS AIR POLLUTANTS
CL-HAZWAST	HAZARDOUS WASTES
CL-HCARB	HYDROCARBONS
CL-HEPTANE	HEPTANE ISOMERS
CL-HERB	HERBICIDES
CL-HEXANE	HEXANE ISOMERS
CL-IAP	INDOOR AIR POLLUTANTS
CL-INCIN	INCINERATORS
CL-INMERC	ARYL AND INORGANIC MERCURY COMPOUNDS
CL-INORGAN	INORGANIC COMPOUNDS
CL-INOTIN	INORGANIC TIN AND OXIDE COMPOUNDS
CL-INSMOLY	INSOLUBLE MOLYBDENUM COMPOUNDS
CL-INSNICK	INSOLUBLE NICKLE COMPOUNDS
CL-INSRHOD	INSOLUBLE RHODIUM COMPOUNDS
CL-INSTUNG	INSOLUBLE TUNGSTEN COMPOUNDS
CL-IRON	IRON COMPOUNDS
CL-KETONE	KETONES
CL-LEAD	LEAD COMPOUNDS
CL-LS	LACTOL SPIRITS
CL-MANG	MANGANESE COMPOUNDS
CL-MAPP	METHYL ACETYLENE-PROPADIENE MIXTURE
CL-METAL	METALLIC COMPOUNDS
CL-METOXBZ	METHOXYBENZENE COMPOUNDS
CL-MINDUST	MINERAL DUSTS
CL-MINFIB	MINERAL FIBERS
CL-MOM	MINERAL OIL MIST
CL-MS	MINERAL SPIRITS
CL-NICKEL	NICKEL COMPOUNDS
CL-NITRATE	NITRATES
CL-NITRITE	NITRITES
CL-NITROSO	NITROSO COMPOUNDS
CL-NMHC	NON-METHANE HYDROCARBONS
CL-ODOR	ODORS
CL-OH	HYDROXIDES
CL-ORGANIC	ORGANIC COMPOUNDS
CL-PAH	POLYCYCLIC AROMATIC HYDROCARBONS
CL-PATHOGN	PATHOGENS
CL-PBB	POLYBROMINATED BIPHENYLS
CL-PCO	PHOTOCHEMICAL OXIDANTS
CL-PERLITE	PERLITES
CL-PEST	PESTICIDES
