This report is published by the U.S. Environmental Protection Agency (EPA) to report information of general interest in the field of air pollution. Copies are available free of charge to Federal employees, current contractors and grantees, and nonprofit organizations - as supplies permit - from the Library Services Office (MD-35), U.S. Environmental Protection Agency, Research Triangle Park, North Carolina 27711; or, for a fee, from the National Technical Information Services, 5285 Port Royal Road, Springfield, Virginia 22161.

Publication No. EPA-450/4-90-003

ABSTRACT

This report provides industrial Source Classification Codes (SCCs) and emission factors for use in the estimation, storage and retrieval of point source air pollutant emissions in the Aerometric Information Retrieval System (AIRS) Facility Subsystem (AFS) of the U.S. Environmental Protection Agency. These codes and factors have been developed for the six criteria pollutants: particulate matter (with TSP as the indicator pollutant), sulfur oxides, nitrogen oxides, reactive volatile organic compounds, carbon monoxide, and lead. The major goal of this document is to provide assistance to State air pollution emission inventory personnel who prepare air emissions data for submission to the U.S. Environmental Protection Agency as required by the U.S. Code of Federal Regulations (40CFR). Calculation of emission estimates is discussed as well as the Source Classification Code (SCC) system of associating air pollution estimates with unique, identifiable industrial processes.

-- USER INFORMATION --

AIRS/FACILITY SUBSYSTEM SOURCE CLASSIFICATION CODES
AND
EMISSION FACTOR LISTING FOR CRITERIA AIR POLLUTANTS

The Source Classification Codes (SCCs) are the "building blocks" upon which the National Emissions Data System (NEDS) -- the national depository of point source emission data -- was structured. **NEDS has now been completely replaced by the new Aerometric Information Retrieval System (AIRS)/Facility Subsystem (AFS).** The SCCs used in NEDS will continue to be used in AFS. Each SCC represents a unique process or function within a source category logically associated with a point of air pollution emissions. In AFS, any operation that causes air pollution can be represented by one or more of these SCCs. SCC is a very critical data item since, without an appropriate SCC, a process can not be properly identified for retrieval purposes, nor the emissions properly calculated.

PURPOSE OF THIS DOCUMENT

The purpose of this document is to establish a more efficient process and a well-defined structure for accessing and presenting emission factor information generated by EPA. In addition, this document:

- (1) consolidates by SCC, all currently available emission factors into one document;
- (2) corrects or deletes previously published emission factors, as necessary; and
- (3) provides newly developed SCCs and emission factors.

This document will be revised, and revisions distributed, as the development of new emission factors may warrant. This document does NOT take the place of Compilation of Air Pollutant Emission Factors, Fourth Edition, AP-42.

WHAT THIS DOCUMENT CONTAINS

Emission factors for the six criteria pollutants (PM₁₀, Sulfur Oxides, Nitrogen Oxides, Volatile Organic Compounds, Carbon Monoxide, and Lead) that correspond to

each SCC are presented in this document. These factors are intended for use as default values if a State AFS user cannot supply better estimates of emissions. These factors, for the most part, are taken directly from AP-42. In certain cases, however, they may be (1) derived from information not yet incorporated into AP-42 or (2) based merely on the similarity of one process to another for which emissions information **does** exist.

The Source Classification Code and Emission Factor Listing in this document replaces all previous listings. The inventory has been updated to include all emission factor changes and additions through the latest supplement to AP-42. This revised document contains a number of new SCCs.

SOURCES OF SCCs AND EMISSION FACTORS

This document contains emission factor listings for the six criteria pollutants as mentioned above. In addition, Particulate Matter (PM) emission factors are retained in this document, even though PM₁₀ has replaced PM/TSP as a criteria pollutant. All emission factors reported in the following documents are consolidated and presented in a tabular format in this document:

- AP-42 (Fourth Edition, September 1985)
- Supplement A to AP-42 (December 1986)
- Supplement B to AP-42 (September 1988)
- Criteria Pollutant Emission Factors for the 1985 NAPAP Emissions Inventory, (May 1987)
- Interim Report on New or Revised PM₁₀ and Other Emission Factors (April 1988) and
- Gap Filling PM₁₀ Emission Factors for Selected Open Area Dust Sources, EPA-450/4-88-003, (February 1988)
- NEDS SCC/Emission Factor Listing - PM₁₀ (Second Edition, August 1988)

OTHER FORMS OF THIS DOCUMENT

The IBM magnetic tape version of the entire AFS/SCC file is available to requestors with mainframe computer capabilities/access from the National Air Data Branch of the U.S. EPA at the address given below. A PC diskette version of this

document is also available. The PC version (requires 512K of RAM and an IBM PC-XT or more advanced type machine) features user friendly menus to assist in retrieval and access of emission factors selected by one of the following field descriptions:

- Source Classification Code,
- SIC Code,
- Industry Group Name, or
- SCC Process Name.

Within the selected categories, users can see emission factors for all pollutants. This PC diskette version will also allow users to "customize" their own copy of the diskette/document by enabling emission factor changes or the addition of new SCCs and emission factors. Any comments regarding these computerized formats should be directed to:

ADDITIONAL INFORMATION ABOUT AFS

More information regarding the AIRS Facility Subsystem -- data coding, data entry and retrieval capabilities -- is contained in the following AIRS User Guides:

AIRS Volume VIII: Coding Facility Emissions Data
AIRS Volume IX: Storing Facility Emissions Data
AIRS Volume X: Retrieving Facility Emissions Data

For information on the availability of these publications, please feel free to contact NADB at the above address.

QUALITY OF NEW EMISSION FACTORS

Emission factor estimates that have been added to this listing are not of the known quality as the previously reported AP-42 based emission factors. By AP-42 standards, these estimates should be considered of "E" quality, because they have not been subjected to rigorous quality assurance. In some cases, the new emission factors may be of higher quality, but the data must be extensively reviewed and verified before higher ratings could be validated. The goal of some recent efforts was to fill gaps in previous documents and to consolidate all criteria emission factors within one document. As previously discussed, information was gathered from a variety of sources, including unverified State data, secondary references such as draft or unpublished reports, and personal communication.

HOW TO CALCULATE EMISSIONS

In order to calculate emissions using the emission factors in this publication, certain data values must be present, including:

- (1) an annual operating rate;
- (2) fuel parameters, if applicable;
- (3) emission factor from the SCC file; and
- (4) percent control efficiency, if a control device is present.

Calculated emissions are derived as follows:

Calculated Emissions (Tons/Year) =

$$\frac{\text{Annual Operating Rate for SCC}}{\text{2,000 Pounds/Ton}} \times \frac{\text{Emission Factor From SCC File}}{\text{2,000 Pounds/Ton}} \times \frac{\text{Fuel Parameters If Applicable}}{\text{100}} \times \frac{\text{100 - \% Control Efficiency}}{\text{100}}$$

Where:

Annual Operating Rate = SCC Units/Year

Emission Factor = Pounds/SCC Unit

Fuel Parameter = Ash or Sulfur Content of Fuel by Weight Percent

Control Efficiency = Pollutant Control Device Percent Efficiency

Fugitive Emissions Calculations

The AFS SCCs were recently expanded to include many individual unit operations within chemical process units. One additional SCC in most chemical process units is for **"Fugitive Emissions: General"**. Fugitive emissions or equipment leaks are not proportional to production rate, but rather are associated with process unit complexity (i.e., the number of equipment components in the process unit). As a result, the emissions from equipment leaks are presented in pounds per process unit-year, not pounds/SCC unit like other SCCs. To implement the fugitive emissions estimate given in the listing, the source must be coded with AFS emission estimation method code 8 (emissions to be calculated by a computerized method) with an associated annual fuel process rate that indicates the number of process units in operation during the year. This permits the AFS inventory computer program automatically to calculate emissions. Emission estimates are presented for equipment leaks in a limited number of chemical process unit types.

VOC Emissions Calculation

Agency policy and EPA guidance to States on the preparation of VOC emission inventories indicate that certain VOCs that are considered to be photochemically nonreactive under atmospheric conditions should be excluded from emission inventories for ozone State Implementation Plan (SIP) development. This subject is discussed further in the report Procedures for the Preparation of Emission Inventories for Precursors of Ozone, Volume I, Third Edition, (EPA-450/14-88-021). However, some of these photochemically nonreactive VOCs are toxic (e.g., methylene chloride) and should be included in the air toxics inventories. Air toxics are not addressed specifically in this document. Compiling toxics inventories may involve different needs and requirements.

Nonreactive VOC components are identified by data given in the Air Emission Species Manual, Volume 1 -- Volatile Organic Compounds Species Profiles, (EPA 450/2-88-003a) and in AP-42. However, some categories do not have VOC species data. These categories use the AP-42 nonmethane VOC emission factors to represent reactive

VOC emission factors. The following compounds are considered to be photochemically nonreactive:

- Methane
- Ethane
- Trichlorotrifluoroethane (Freon 113)
- Methylene Chloride
- 1,1,1-Trichloroethane (Methyl Chloroform)
- Trichlorofluoromethane
- Dichlorodifluoromethane
- Chlorodifluoromethane
- Trifluoromethane
- Dichlorotetrafluoroethane

SO_x Emission Calculations

Emissions of sulfur oxides (SO_x) represent the total weight of gaseous SO₂ and SO₃ emissions expressed as the equivalent weight of sulfur dioxide SO₂. SO₃ emissions are adjusted to the equivalent weight of SO₂ by multiplying the SO₃ emissions by the ratio of molecular weights (64/80) to express as the equivalent weight of SO₂. The weight of SO₂ and SO₃ adjusted to an equivalent weight of SO₂ are then added and reported as SO₂ emissions. Particulate sulfate is reported as particulate rather than SO₂.

NO_x Emission Calculations

For NO_x emissions, the emissions are expressed as the equivalent weight of NO₂, regardless of what NO_x species are actually emitted. Molecular weight adjustments similar to those shown above for SO₂ to an NO₂ basis are appropriate. All emission factors that appear in this document are expressed as the equivalent weight of NO₂. Normally, AP-42 emission factors for NO_x are expressed as NO₂, unless indicated otherwise.

WHOM TO CALL FOR TECHNICAL ASSISTANCE

Emission Factors

Comments, questions, or requests for assistance should be addressed to:

**Chief, Criteria Emissions Section (MD-14)
Office of Air Quality Planning and Standards
U.S. Environmental Protection Agency
Research Triangle Park, NC 27711**

**Commercial: (919) 541-5575
FTS: 629-5575**

Source Classification Codes

Comments, questions, or requests for assistance should be addressed to:

**Chief, Operations and Maintenance Section (MD-14)

HELP US IMPROVE THIS DOCUMENT

A brief questionnaire discussing the usefulness and format of this publication (with a postage-paid return envelope) has been included at the end of the document. Since this document is prepared to assist emissions inventory personnel, please take a moment to fill out the form and return it to us and let us know if this document is useful or how its' content and format could be more helpful.

In the questionnaire, you may also request additional copies of this listing and changes of address where necessary. Our goal is to get this document into the hands of all State personnel to whom it will provide assistance in preparing good emissions inventories.

LIST OF ABBREVIATIONS AND SYMBOLS

ABBREVIATIONS

A	-- Ash content of fuel, by weight percent
BBL	-- Barrels*
BOF	-- Basic Oxygen Furnace
CHP	-- Cumene Hydroperoxide
DCB _Z	-- Dichlorobenzene
DCB	-- Dichlorobutene

*42 gal/bbl is the standard as used in the oil industry. For other industries, different gallons/bbl apply.

[†] Typical value based on common boiler design parameters. Value will vary depending upon steam temperature and pressure.

KEY TO EMISSION FACTORS

1. An "A" accompanying an emission factor means that this factor is the weighted average ash content of the fuel burned, expressed as a percent. See, for example, SCC 1-01-001-01 on page 19. If the weighted average ash content of the pulverized anthracite coal burned were five percent (5%), then the emission factor would become 2.3×5 , or 11.5 pounds, of PM_{10} emitted per ton of anthracite coal burned (before control).
2. An "S" accompanying an emission factor means that this factor is the weighted average sulfur content of the fuel burned, expressed as a percent. See, for example, SCC 1-01-004-01 on page 20. If the weighted average sulfur content of the Grade 6 oil burned were three percent (3%), then the emission factor would become 9.6×3 , or 28.8, pounds of PM_{10} emitted per one thousand gallons of Grade 6 oil burned (before control).
3. The entry "---" means that, as yet, we have no emission factor for this SCC. See, for example, SCC 1-01-002-17 on page 19.
4. The entry "xxx" means that EPA will not produce a generic emission factor for this SCC because of the variability of operating parameters from point to point. See, for example, SCC 1-02-007-99 on page 24.
5. "PART" refers to **all** particulate matter of **all** sizes. PM_{10} refers only to particulate matter from 0.0 to 10.0 microns in diameter.

EXPLANATORY NOTES: Individual SIC Groups or SCCs

- (a) Both boiler capacities and fuel throughputs should be reported to AFS for all boilers. (p. 19, 21, 27)
- (b) This TSP emission factor is an approximation. Particulate emissions from residual oil combustion can be more accurately estimated from the equation $\text{lb}/1000 \text{ gallon} = 10S + 3$. See AP-42, page 1.3-2. (p. 20 & 26)
- (c) The emission factor(s) is not from AP-42. The factor(s) is from other EPA documents, State data, or other miscellaneous sources. (p. 21, 23, 27, 32, 33, 34, 90, 94, 95, 98, 99, 106, 109, 119, 125, 126, 128, 140, 146, 176, 192, 193)
- (d) Based on a typical concentration of lead in Waste Oil of 0.04%. See AP-42, page 1.11-2. (pp. 21, 25, 27, 28, 168)
- (e) Manufacture of inorganic pigments is classified under SCC 3-01-035-**. (p. 40)
- (f) For molded and fabricated rubber and plastics products, see SCC 3-08-***-***, 3-30-002-**, and 4-02-002-**. (p. 41, 43, 44)
- (g) The particulate emission factor for the sulfuric acid contact process is an assumed average value, from a range of values given in AP-42, Table 5.17-2. (p. 46)
- (h) Also applies to the sulfur recovery plant at petroleum refineries and natural gas production fields. (p. 51)
- (i) See 3-01-301-** for other chlorobenzene process codes. (p. 59)
- (j) Grain processing and milling are included in SCCs 3-02-007-** thru 3-02-008-**. For grain elevators, see SCC 3-02-005-**, 3-02-006-**, and 3-02-031-**. (p. 79)
- (k) Units refer to amount of grain processed through each operation. If only the total amount of grain received or shipped is known, see AP-42, Table 6.4-2 for typical

ratios of tons processed to tons shipped or received. (p. 79, 80, 81, 87)

- (l) The particulate emission factor(s) applies to emissions at the inlet to the baghouse or other control device. Indicate the control device and efficiency to estimate properly the actual emissions. (p. 81, 82)
- (m) Codes 3-03-003-09, -10, and -11 represent individual operations within this SCC (3-03-003-07). (p. 90)
- (n) Apply for all metallic minerals, except as noted. Low moisture ore is defined as having less than 4 percent moisture content by weight for ore entering the primary crusher. High moisture ore has over 4 percent by weight. (p. 100, 101)
- (o) Emission factor(s) does not apply to bauxite ore.
- (p) Emission factor(s) does not apply to drying of titanium/zirconium sands. See SCC 3-03-012-** for titanium processing. (p. 101)
- (q) Particulate factors calculated from emission factors given in Table 7.9-2, Footnotes b-e.
- (r) These SCCs also apply to coal cleaning operations at power plants. (p. 120, 121)
- (s) Expressed as emission rate at point of release. For uncontrolled sources, to account for emissions that settle out within the plant, code a fictitious control device code for particulate of 006 (low efficiency gravitational collector), with appropriate control efficiency. See AP-42 for table of typical control efficiencies for gravitational settling.
- (t) Several processes that routinely occur in Major Group 29 can be found under other major groups. Specifically, note the following: (p. 135, 136)
 - waste of process gas and/or liquid fired boilers - SCC 1-02-***-**.
 - internal combustion compressor engines - SCC 2-02-***-**.
 - amine sweetening process - SCC 3-10-002-**.
 - sulfur recovery process - SCC 3-01-032-**.
 - sulfuric acid plant - SCC 3-01-022-** or 3-01-023-**.

- (u) For Surface Coating Operations, see SCC 4-02-019-** and 4-02-021-**. (p. 144)
- (v) For tire retreading operations, see SCC 3-08-005-**. (p. 146)
- (w) For specific printing SCCs, see SCC 4-05-***-**. (p. 159)
- (x) In-process fuel codes must always be used in conjunction with the appropriate process code. (p. 169, 171)
- (y) These are general SCCs, applicable to all industrial categories. (p. 171, 172)
- (z) This SCC should be used only to provide rough estimates of emissions for cases when information on amount of fabric processed is not available.
- (aa) Includes Major Group 34 fabricated metal products, Major Group 35 small appliances, and other coating operations Major Group 33-39 not specified elsewhere. (p. 179)

TECHNICAL REPORT DATA <i>(Please read Instructions on the reverse before completing)</i>		
1. REPORT NO. EPA-450/4-90-003	2.	3. RECIPIENT'S ACCESSION NO.
4. TITLE AND SUBTITLE "AIRS Facility Subsystem Source Classification Codes and Emission Factor Listing for Criteria Air Pollutants"		5. REPORT DATE March 1990
		6. PERFORMING ORGANIZATION CODE
7. AUTHOR(S) National Air Data Branch, U.S. EPA Monitoring & Reports Branch, U.S. EPA		8. PERFORMING ORGANIZATION REPORT NO.
9. PERFORMING ORGANIZATION NAME AND ADDRESS U.S. Environmental Protection Agency Office of Air and Radiation Office of Air Quality Planning & Standards Research Triangle Park, North Carolina 27711		10. PROGRAM ELEMENT NO.
		11. CONTRACT/GRANT NO.
12. SPONSORING AGENCY NAME AND ADDRESS National Air Data Branch - U.S. EPA Mail Drop 14 Research Triangle Park, North Carolina 27711		13. TYPE OF REPORT AND PERIOD COVERED Final - 1990-91
		14. SPONSORING AGENCY CODE
15. SUPPLEMENTARY NOTES (919) 541-5582 or (FTS) 629-5582		
16. ABSTRACT This publication contains emission factors which may be used to estimate air pollution emissions from stationary point sources (such as industrial plants) for six criteria pollutants: PM ₁₀ , Sulfur Oxides, Nitrogen Oxides, Reactive Volatile Organic Compounds, Carbon Monoxide and Lead. Factors are grouped by "source classification codes" which are used by EPA to store and retrieve point source emission data. Each SCC represents a unique process or function within a source category logically associated with a point of air pollution emissions. This document also briefly explains how to calculate estimated point source emissions.		
17. KEY WORDS AND DOCUMENT ANALYSIS

U.S. EPA National Air Data Branch

"Criteria Pollutant Source Classification Codes and Emission Factor Listing"

EPA 450/4-90-003: PUBLICATION SURVEY & ORDER FORM

The National Air Data Branch is happy to provide you with the attached SCC/ Emission Factor listing. In order to help us serve you and meet your data needs better, please take a few moments to answer the following questions and return this form to the address indicated at the end of the questionnaire. If you have more detailed questions and comments please feel free to call us.

Please print or type:

Organization Name:

Your Name:

Address:

City:

State

ZIP:

Phone:

QUESTIONS:

1. Is this document useful to you? YES () NO ()

2. Do you want to receive updates and revisions?

--YES, send to address given above. ()

--YES, send to address which follows: ()

Name _____

Address _____

City/ST/ZIP _____

--NO, do not send future updates. ()

3. Do you need to make additional distributions of this document?

(Note: Our ability to send additional copies is not unlimited, but we will do the best we can--ORDER FORM ON BACK)

--YES () I need additional copies for:

--NO ()

4. Do you prepare emissions inventories? YES () NO ()

If you answered YES, please CONTINUE TO NEXT COLUMN.

If you answered NO, please use the envelope provided and return this form to the address indicated at the bottom of the reverse side of this form

5 (a) In your state, who calculates the point source emissions that you report to EPA Regional Offices for entry into the National Emission Data System (NEDS)? _____

(b) Please indicate the rough percentages of the total reported emissions that are estimated by each group shown below:

___% estimated by OWNER/OPERATORS of sources
___% estimated by CONTRACTORS hired by the state
___% estimated by STATE Personnel in state regional offices
___% estimated by STATE Personnel in central state office
___% estimated by OTHER: (please specify) _____

6 If state personnel calculate the emissions noted above, what percent of the work is done by each of the following:

___% prepared by a Central MAINFRAME COMPUTER
___% prepared by a PC or Programmable Desk CALCULATOR
___% prepared by PAPER & PENCIL
___% prepared by OTHER (please specify) _____

7. How many state personnel are involved in preparing emissions inventories? _____

8. What emissions size cut-off do you use for calculating and storing point source emissions:

_____ > 100 Tons
_____ > 50 Tons
_____ > 10 Tons
_____ None
_____ Other (please specify) _____

MORE

Page Two:

EPA 450/4-90-003: PUBLICATION SURVEY & ORDER FORM

QUESTIONS : (continued)

9. Do you calculate and store AREA-SOURCE Emissions?

() YES () NO

10. Do you update your emissions data on a scheduled basis?

() YES () NO

If "YES," please describe: (For example: "We update emissions when operating permits are renewed. Permits are renewed annually for sources that emit 1000 tons/year and every three years for smaller sources.")

11. OTHER COMMENTS:

THANK YOU for taking the time to answer these questions. The information you have provided in this questionnaire will help us to better understand how state emission inventories are prepared and how the EPA can help. We'd be happy to talk to you at anytime about problems or suggestions for improving emission inventories.

ORDER FORM: Please send items checked below to address given on page one of this questionnaire:

☐

Additional Copies of This Document

(Supply is limited, but we'll do the best we can.)

☐

Emission Factors on Magnetic Tape

(Please send a blank magnetic tape to NADB at the address below.)

☐

SCC/Emission Factors PC Diskette

(Requires 512K RAM, 4 Megabytes of hard disk space and works best on PC/XT, PC/AT, or more ADVANCED type PCs. User-friendly menu system.)

Please use the enclosed envelope to send your reply to:

United States Environmental Protection Agency
Office of Air Quality Planning and Standards
National Air Data Branch (MD-14)
