Contract Number 68-01-6058

Project Number WA-80-A055

## INTRODUCTION

This digest is compiled to provide general information to the public as well as to Federal, State, and local officials. It contains excerpts from the individual Federal-State water quality standards establishing pollutant specific criteria for interstate surface waters. The water quality standards program is implemented by the U. S. Environmental Protection Agency where responsibility for providing water quality recommendations, approving State-adopted standards for interstate waters, evaluating adherence to the standards, and overseeing enforcement of standards compliance, has been mandated by Congress.

Standards, a nationwide strategy for surface water quality management, contain three major elements: the use (recreation, drinking water, fish and wildlife propagation, industrial, or agricultural) to be made of the navigable water; criteria to protect these uses; and an antidegradation statement to protect existing high quality waters, from degradation by the addition of pollutants.

Water quality criteria (numerical or narrative specifications) for physical, chemical, temperature, and biological constituents are stated in the July 1976 U. S. Environmental Protection Agency publication Quality Criteria for Water (QCW), available from the Government Printing Office, Washington, D. C. The 1976 QCW, commonly referred to as the "Red Book," is the most current compilation of scientific information used by the Agency as a basis for assessing water quality. This publication is subject to periodic updating and revisions in light of new scientific and technical information.

This digest summarizes fifteen pesticides which are usually incorporated into State Water Quality Standards and for which EPA has recommended criteria in the 1976 Quality Criteria for Water. These pesticides are: Aldrin/dieldrin, chlordane, chlorophenoxy herbicides, DDT, demeton, endosulfan, endrin, guthion, heptachlor, lindane, malathion, methoxychlor, mirex, parathion, and toxaphene. All of these chemicals are man-made for the control of insects, fungus and other plant and animal diseases or disease vectors. The presence of any of these substances in national waters are a result of an intrusion from non-point sources associated with agricultural or forestry application and point source production facility effluents. To control the presence of aldrin/dieldrin, DDT (DDD and DDE), endrin and toxaphene in water, EPA promulgated effluent standards for manufacturers of these pesticides (40 CFR 129).

All of these substances exert detrimental effects on aquatic and animal life; some are suspected mutagens or carcinogens. For these reasons EPA recommended the following ambient water quality criteria for each compound:

aldrin/dieldrin	0.003 ug/l for freshwater and marine aquatic life. The persistence, bioaccumulation potential, and carcinogenicity of aldrin/dieldrin caution human exposure to a minimum.
-----------------	---

chlordane	0.01 ug/l for freshwater aquatic life 0.004 ug/l for marine aquatic life. The persistence, bioaccumulation potential, and carcinogenicity of chlordane caution human exposure to a minimum.
chlorophenoxy herbicides	2,4-D 100 ug/l for domestic water supply (health). 2,4,5-TP 10 ug/l for domestic water supply (health).
DDT	0.001 ug/l for freshwater and marine aquatic life. The persistence, bioaccumulation potential, and carcinogenicity of DDT caution human exposure to a minimum.
demeton	0.1 ug/l for freshwater and marine aquatic life.
endosulfan	0.003 ug/l for freshwater aquatic life 0.001 ug/l for marine aquatic life.
endrin	0.2 ug/l for domestic water supply (health). 0.004 ug/l for freshwater and marine aquatic life.
guthion	0.01 ug/l for freshwater and marine aquatic life.
heptachlor	0.001 ug/l for freshwater and marine aquatic life. The persistence, bioaccumulation potential and carcinogenicity of heptachlor caution human exposure to a minimum.
lindane	4.0 ug/l for domestic water supply (health). 0.01 ug/l for freshwater aquatic life. 0.004 ug/l for marine aquatic life.
malathion	0.1 ug/l for freshwater and marine aquatic life.
methoxychlor	100 ug/l for domestic water supply (health). 0.03 ug/l for freshwater and marine aquatic life.
mirex	0.001 ug/l for freshwater and marine aquatic life.
parathion	0.04 ug/l for freshwater and marine aquatic life.
toxaphene	5 ug/l for domestic water supply (health). 0.005 ug/l for freshwater and marine aquatic life.

Since water quality standards experience revisions and upgrading from time to time, following procedures set forth in the Clean Water Act, individual entries in this digest may be superseded. As these revisions are accomplished and allowing for the States to revise their standards accordingly, this digest will be updated and reissued. Because this publication is not intended for use other than as a general information resource, to obtain the latest information and for special purposes and applications, the reader needs to refer to the current approved water quality standards. These can be obtained from the State water pollution control agencies or the EPA or Regional Offices.

Individual State-adopted criteria follow:

## PESTICIDES

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Alabama <sup>1.</sup>	Not Specified	All
	Toxic Substances narrative: only such amounts, whether alone or in combination with other substances as will not render the waters unsafe or unsuitable as a source of water supply for drinking or food-processing purposes, or injurious to fish, wildlife and aquatic life.	Public water supply
	Toxic Substances narrative: only such amounts, whether alone or in combination with other substances or wastes, as will not: render the water unsafe or unsuitable for swimming and water-contact sports; be injurious to fish, wildlife and aquatic life or, where applicable, shrimp and crabs; impair the waters for any other usage established for this classification.	Swimming and other whole body water-contact sports
	Toxic substances narrative: Only such amounts, whether alone or in combination with other substances, as will not: be injurious to fish and aquatic life, including shrimp and crabs; exceed one-tenth of the 96-hour median tolerance limit for fish, aquatic life or shellfish, including shrimp and crabs.	Shellfish harvesting
	Toxic Substances narrative: Only such amounts, whether alone or in combination with other substances, as will not: be injurious to fish and aquatic life including shrimp and crabs in estuarine or salt waters or the propagation thereof; not to exceed one-tenth of the 96-hour median tolerance limit for fish and aquatic life including shrimp and crabs in salt and estuarine waters except that other limiting concentrations may be used when factually justified and approved by the Commission.	Fish and wildlife

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Alabama (con't)	<p>Only such amounts as will not render the waters unsuitable for agricultural irrigation, livestock watering, industrial cooling, industrial process water supply purposes, and fish survival, nor interfere with downstream uses.</p> <p>Only such amounts as will not render the waters unsuitable for industrial cooling and industrial process water supply purposes, nor interfere with downstream water uses.</p> <p>Only such amounts as will not render the waters unsuitable for agricultural irrigation, livestock watering, industrial cooling, and industrial process water supply purposes, where applicable nor interfere with downstream water use.</p>	<p>Agricultural and industrial water supply</p> <p>Industrial operations</p> <p>Navigation</p>
Alaska <sup>2.</sup>	<p>Not specified</p> <p>Toxic substances narrative: shall not exceed <u>Alaska Drinking Water Standards</u> or EPA <u>Quality Criteria for Water</u>.</p> <p>Toxic substances narrative: same as I. (A) (i) where contact with a product destined for subsequent human consumption is present. Same as I. (C) or FWPCA <u>Water Quality Criteria</u> as applicable to substances for stockwaters. Concentrations for irrigation waters shall not exceed <u>FWPCA Water Quality Criteria</u> or <u>WQC 1972</u>.</p> <p>Toxic substances narrative: shall not individually or in combination exceed 0.01 times the lowest measured 96-hour LC<sub>50</sub> for life stages of species identified by the department as being the most sensitive, biologically important to the situation or exceed criteria cited in EPA <u>Quality Criteria for Water</u> or <u>Alaska Drinking Water Standards</u> whichever concentration is less.</p>	<p>All</p> <p>I. Fresh water</p> <p>(A) water supply</p> <p>(i) drinking, culinary and food processing</p> <p>(ii) agriculture, including irrigation and stock watering</p> <p>(iii) aquaculture</p>

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Alaska (con't)	Toxic substances narrative: substances shall not be present which pose hazards to worker contact.	(iv) industrial, including any water supplies used in association with a manufacturing or production enterprise other than food processing), including mining, placer mining, energy production or development
	Toxic substances narrative: same as I. (A) (i).	(B) water recreation (i) contact recreation.
	Toxic substances narrative: substances shall not be present which pose hazards to incidental human contact.	(ii) secondary recreation
	Toxic substances narrative: shall not individually or in combination exceed 0.01 times the lowest measured 96 hour LC <sub>50</sub> for life stages of species identified by the department as being the most sensitive, biologically important to the location, or exceed criteria cited in EPA <u>Quality Criteria for Water</u> or <u>Alaska Drinking Water Standards</u> whichever concentration is less.	(C) growth and propagation of fish, shellfish, other aquatic life, and wildlife including waterfowl and furbearers
	Toxic substances narrative: same as I. (A) (iii).	II. Marine water (A) water supply (i) aquaculture
	Toxic substances narrative: shall not exceed EPA <u>Quality Criteria for Water</u> as applicable to the substance.	(ii) seafood processing
	Toxic substances narrative: same as I. (A) (iv).	(iii) industrial, including any water supplies used in association with a manufacturing or production enterprise (other than food processing) including mining, placer mining, energy production or development

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Alaska (con't)	<p>Toxic substances narrative: same as II. (A) (ii).</p> <p>Toxic substances narrative: same as I. (B) (ii).</p> <p>Toxic substances narrative: same as I. (C).</p> <p>Toxic substances narrative:same as I. (C) but excluding the phrase "<u>or Alaska Drinking Water Standards.</u>"</p> <p>Means those materials, or combinations of materials, including disease-causing agents which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available, cause death, disease, behavioral abnormalities, malignancy, genetic mutation, physiological abnormalities (including malfunctions in reproduction) or physical deformations, in affected organisms or their offspring; the term includes the following substances, and any other substance identified as a toxic pollutant under sec. 307 (a) of the Clean Water Act of 1977 (33 U.S.C. sec. 466 et seq.); (See Definitions Digest)</p>	<p>(B) water recreation</p> <p>(i) contact recreation</p> <p>(ii) secondary recreation</p> <p>(C) growth and propagation of fish, shellfish, aquatic life, and wildlife including seabirds, waterfowl and furbearers</p> <p>(D) harvesting for consumption of raw mollusks or other raw aquatic life</p>
Arizona <sup>3</sup>	<p>Not Specified</p> <p>Toxic substances narrative: Toxic substances shall be kept below levels which are deleterious to human, animal, plant or aquatic life, or in amounts sufficient to interfere with the beneficial use of the water. As a minimum evaluation for the presence of toxic substances, a water</p>	<p>All</p> <p>All surface waters</p>

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Arizona (con't)	shall be evaluated by use of a 96-hour bioassay, guided by the document <u>Standard Methods for the Examination of Water and Wastewater</u> . The survival of the test organisms shall not be less than that in controls which utilize appropriate experimental water.	
Arkansas <sup>4</sup>	Not specified	All
	Toxic substances narrative: Toxic materials attributable to municipal, industrial, agricultural, or other waste discharges, shall not be present in receiving waters in such quantities as to be toxic to human, animal, plant or aquatic life or to interfere with the normal propagation of aquatic life. For any toxicants, concentrations in the receiving waters after mixing shall not exceed 0.01 of the 96-hour TLM, unless they can be shown to be non-persistent and noncumulative, and to exhibit no synergistic interactions with other waste or stream components. In no case shall concentrations exceed 0.05 of the 96-hour TLM.	All
California <sup>A</sup>	No individual pesticide or combination of pesticides shall be present in concentrations that adversely affect beneficial uses. There shall be no bioaccumulation in pesticide concentrations found in bottom sediments or aquatic life.  Total identifiable chlorinated hydrocarbon pesticides shall not be present at concentrations detectable within the accuracy of analytical methods prescribed in <u>Standard Methods for the Examination of Water and Wastewater</u> , latest edition, or other equivalent methods approved by the Executive Officer.	All
Colorado <sup>5</sup>	<u>Chlorinated Pesticides:</u>  0.000003 Aldrin (1)  0.000003 Dieldrin (1)  0.000001 DDT (DDD & DDE)	Aquatic life  Aquatic life  Aquatic life

Oklahoma  
(con't)

approved application rate may result in instream concentrations in exceed of 0.05 mg/l. Therefore, temporary excursions not to exceed 0.1 mg/l will be allowed in the event unforeseen rainfall events occur within 24 hours after application.

The decrease in diversity of benthic macroinvertebrates between an upstream and downstream station shall not exceed one (1), unless caused by natural conditions or phenomena. The determination of this parameter shall be made in conjunction with the Similarity Index.

The equation used for determining species diversity ( $\bar{d}$ ) is expressed:

$$\bar{d} = \frac{s}{n} \sum_{i=1}^s (n_i/n) \log_2(n_i/n)$$

Where (s) equals the total number of taxa in the sample; ( $n_i$ ) equals the number of individuals per taxon; and (n) equals the total number of individuals of all taxa.

For point sources, a minimum set of six (6) samples must be collected above the discharge point and six (6) samples at the end of the mixing zone. Each set of six (6) samples shall be pooled and the resulting diversities shall be used in determining compliance. Samples should be collected from a variety of substrate types if available, but similar substrates must be sampled above and below the discharge. Values of diversity shall not be based on less than one hundred (100) individuals.

Benthos shall be collected with a Surber sampler, Ekman dredge, or comparable sampler. In streams where grab samples do not accurately reflect the benthic assemblage, the artificial substrate sampler shall be used. Artificial substrate samplers shall be of the Hester-Dendy or basket type. A minimum

<u>State</u>	<u>Criteria values in mg/l</u>	<u>Designated Stream Use</u>
Oklahoma (con't)	<p>instream duration of six (6) weeks shall be allowed for colonization of artificial substrate samplers.</p> <p>Where multiple discharges are in close proximity on the stream segment and overlapping of mixing zones occurs, diversity values may be used only in support of other data collected to determine compliance with these standards.</p> <p>The pH values shall be between 6.5 and 8.5 for Oklahoma's water; pH values less than 6.5 or greater than 8.5 must not be due to waste discharge(s).</p> <p>The control measures for other substances not heretofore mentioned will be based on applicable Federal and State statutes, rules and regulations and accumulated scientific data on limits above which injury from use occurs. Such control measures when adopted pursuant to 75 O.S. 1971, §301 et seq. will become a part of these standards.</p>	
Oregon <sup>34</sup>	<p>Not specified</p> <p>No wastes shall be discharged and no activities shall be conducted which either alone or in combination with other wastes or activities will cause toxic conditions that are deleterious to fish or other aquatic life or affect the potability of drinking water.</p> <p>Toxic Substances shall not exceed those criteria contained in the 1976 and subsequent edition(s) of the EPA Publication, "Quality Criteria for Water." These standards shall apply unless supporting data show conclusively that beneficial uses will not be adversely affected by exceeding the standards by a specific amount or that a more stringent standard is warranted to protect beneficial uses.</p>	<p>All</p> <p>All</p>
