# AIR TOXICS INFORMATION CLEARINGHOUSE

Office of Air Quality Planning and Standards  
Research Triangle Park, North Carolina 27711

000R85105

STAPPA / ALAPCO

State and Territorial Air Pollution Program Administrators  
Association of Local Air Pollution Control Officials

## Second Interim Report of Selected Information on State and Local Agency Air Toxics Activities

March 1985

DCN 85-203-024-15-09

EPA No. 68-02-3889, WA 15

AIR TOXICS INFORMATION CLEARINGHOUSE:

SECOND INTERIM REPORT OF SELECTED INFORMATION  
ON STATE AND LOCAL AGENCY  
AIR TOXICS ACTIVITIES

Final Report

Prepared for:

Karen L. Blanchard, Project Officer  
Strategies and Air Standards Division  
Office of Air Quality Planning and Standards  
U.S. Environmental Protection Agency  
Research Triangle Park, North Carolina 27711

Prepared by:

Sandra A. Smith  
Radian Corporation  
8501 Mo-Pac Boulevard  
Austin, Texas 78766

13 March 1985

U.S. Environmental Protection Agency,  
Region V, Library  
230 South Dearborn Street  
Chicago, Illinois 60604

## **DISCLAIMER**

This report has been reviewed by the Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, and approved for publication as received from the Radian Corporation. Approval does not signify that the contents necessarily reflect the views and policies of the U.S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

## PREFACE

EPA has focused most of its past efforts in the control of air toxics on the Clean Air Act §112 programs (National Emission Standards for Hazardous Air Pollutants). The amount of time involved for §112 listing and eventual control is extensive. The public is concerned over continuing exposure to potentially toxic air pollutants. The resultant public pressure has had an impact such that many state and local agencies have developed or are now actively developing air toxics regulatory programs apart from Federal activities.

In response to state and local agency requests for assistance in information exchange, EPA has formed an information dissemination center, known as the Air Toxics Information Clearinghouse. It is being implemented in close coordination with the State and Territorial Air Pollution Program Administrators (STAPPA) and the Association of Local Air Pollution Control Officials (ALAPCO).

The purpose of this report is to disseminate information provided to the Clearinghouse by state and local air agencies on their air toxics activities. This report supersedes "Interim Report of Selected Information on State and Local Agency Air Toxics Activities," published in September 1984. It both updates and extends the information in the first report. This report includes air toxics contacts, regulatory program information, acceptable ambient concentrations and standards, research and methods development activities, permitting information, source testing information, and ambient monitoring information.

When the Clearinghouse automated database is fully implemented and the collected data are entered into the automated system, it will be possible to select and sort the data by state or locality, pollutant, source, and other key words. Plans call for the data provided by state and local air agencies to be expanded and updated on a regular basis. The Clearinghouse will distribute this information in regular periodic reports to Clearinghouse users. Users also will be able to directly query the database and view the response

on a terminal or printout, if compatible equipment is available. In addition, the Clearinghouse staff will respond to specific written or telephone inquiries made directly to them or through the EPA Regional Offices.

This report was submitted in partial fulfillment of Contract No. 68-02-3889, Work Assignment 15, by Radian Corporation under the sponsorship of the U.S. Environmental Protection Agency. Compilation of the data was completed on March 8, 1985.

This report is one of several documents designed to initiate information exchange on air toxics prior to completion of implementation of the Clearinghouse database. Other documents published by the Clearinghouse during the interim period include the Air Toxics Information Clearinghouse Newsletter (ongoing), a bibliography of selected EPA reports and Federal Register notices, a bibliography of selected health effects and risk assessment information, and a report on on-going research and regulatory development projects.

The data contained in this report have been presented essentially as received by the Clearinghouse from state and local agencies. Updates or corrections to these data should be reported to:

Sandra Smith  
Radian Corporation  
P. O. Box 9948

Table 12. Ambient Monitoring Information . . . . .	142

## PART 1. INTRODUCTION

In May 1984 the first Clearinghouse data collection form was distributed to the 271 state, territorial, and local air agencies on the STAPPA and ALAPCO mailing lists. This form (Clearinghouse Form 1) requested air toxics program contact names and telephone numbers in six areas of expertise: regulatory program, permitting, source tests, ambient monitoring, emissions inventory, and health effects. Based on the response to Form 1, additional data collection forms were distributed in June 1984 to the identified state and local agency contacts. These forms were designed to collect information on state and local regulatory programs, sources of air toxics, ambient monitoring and toxicity testing. The first "Interim Report of Selected Information on State and Local Agency Air Toxics Activities" (September 1984) presented selected portions of data submitted to the Clearinghouse by state and local agencies as of August 17, 1984.

In January 1985, a second phase of data collection was initiated to update the regulatory program information and to collect permitting and source testing information. This report presents data submitted by state and local agencies during both the first and second phases of data collection as of March 8, 1985.

All of the data will be entered into an automated database system located at EPA, Office of Air Quality Planning and Standards in Research Triangle Park, NC. When the automated database is fully operational (scheduled for mid 1985), it will be possible to select and sort the data by state or locality, pollutant, source, and other key words. Plans call for the data provided by state and local agencies to be expanded and updated on a regular basis. The Clearinghouse will distribute this information in regular periodic reports to Clearinghouse users. Users also will be able to directly query the database and view the response on a terminal or printout, if compatible equipment is available. In addition, the Clearinghouse staff will respond to specific written or telephone inquiries made directly to them or through the EPA Regional Offices.

Part 2 of this report lists air toxics contact names and telephone numbers. Part 3 contains updated summaries of state and local air toxics programs. Information on occupational standards and recommendations and acceptable ambient concentrations or standards established by state and local agencies is presented in Part 4. This part also lists safety factors used by state and local agencies to derive acceptable ambient concentrations from occupational limits. Part 5 describes pollutant research and methods development activities reported by state and local agencies. Parts 6 and 7 present state and local permitting and source testing information, respectively. Part 8 is comprised of ambient monitoring data supplied by state and local agencies.

## PART 2. AIR TOXICS CONTACTS

State and local air toxics contact names and telephone numbers have been compiled for six areas of expertise: regulatory program, permitting, source testing, ambient monitoring, emissions inventory, and health effects. Forty-nine states, two territories, and 23 localities provided contacts in at least one of these areas. These are listed in Table 1 for states and Table 2 for localities. These contacts will be able to provide more detailed information about a state's or locality's air toxics activities than is contained in this report. If the reader has a question regarding source testing activities in the State of Minnesota, for example, the contact name listed for source testing in Minnesota should be consulted. If a contact name is not listed for a specific area of expertise, the primary Clearinghouse contact (marked with a "\*") should be consulted.

The contact names are provided to promote the exchange of information on air toxics activities among state and local agencies and other interested parties. These contact names supersede the original list of air toxics contacts compiled by the Clearinghouse and distributed in March 1983 and update the list presented in "Interim Report of Selected Information on State and Local Agency Air Toxics Activities," published in September, 1984.

### PART 3. REGULATORY PROGRAM INFORMATION

Regulatory program information has been collected from 39 states, 1 territory, and 15 localities. Tables 3 and 4, for states and localities respectively, describe the programs in terms of the status of air toxics program development, the structure of the program, the scope of the program, program application, and comments concerning the program and/or related research activities. Information on acceptable ambient concentrations or standards for individual pollutants is given in Part 4. Pollutant research and methods development activities are described in Part 5. The reader should address any questions or requests for additional information about a state or local regulatory program to the regulatory program contacts identified in Tables 1 and 2 in Part 2.

TABLE 3. STATE AGENCY REGULATOR PROGRAM INFORMATION

State	Program Status	Program Structure	Program Scope	Application	Comments
Alabama	In place	Promulgated general regulation prohibiting air pollution. Informal guidelines based on use of TLVs to estimate acceptable ambient concentrations.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 2.5% TLV/1 hr.	Program applies to all pollutants emitted by new sources.
Arizona	Evaluating need	-	-	-	-
Arkansas	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 15% TLV. Use of control technology requirements.	All sources controlled through permit program.
California	In place (effective 1/1/84)	Lawsislation which established a multi-step procedure for air toxics identification and control.	Specified list of pollutants -- 47 candidates for regulation. 3 of these presently being considered.	Use of control technology requirements. Use of risk assessment on a case-specific basis.	Extensive research efforts: source tests, ambient monitoring, dispersion modeling, ambient exposure, pollutant research on benzene, ethylene dibromide, and ethylene dichloride.
Colorado	In preparation	Promulgated regulations (tentative).	Specific list of pollutants (tentative).	Toxics inventory in progress.	-
Connecticut	In preparation (late 1985 or early 1986)	Promulgated regulations.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 0.5%, 1%, or 2% TLV/8 hr., depending on pollutant group. Use of formally adopted ambient standards. Use of control technology requirements. Emissions inventory.	-
Delaware	In preparation (Sept. 1985)	Promulgated regulations.	Not limited to specific list of pollutants, sources, or source categories.	-	-

(Continued)

TABLE 3 . Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
Georgia	In preparation (9/1/84)	Informal guidelines.	Includes substances with known toxic effects but which are not specifically regulated by Federal or state statutes.	Use of acceptable ambient concentrations derived from 15% TLV/24 hr if not known human carcinogen, 0.33% TLV/24 hr if known human carcinogen.	Program will apply to all toxic pollutants from proposed new or modified sources.
Hawaii	None planned	-	-	-	-
Idaho*	In preparation	-	-	-	-
Illinois	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentration derived from 0.33% TLV if non-carcinogen; some standards based on original health effects research. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on case-by-case basis; currently revising risk assessment procedures of other agencies. Maintenance of emissions inventory for air toxics.	Methods development: ambient monitoring, dispersion modeling, emergency response, indoor/outdoor lead levels, emissions modeling for lead from slag pile.
Indiana	In preparation	Informal guidelines (tentative).	Specified list of pollutants (tentative).	Program is largely on a volunteer basis. State makes suggestions, but currently has no authority to mandate.	-
Iowa	In preparation	Informal guidelines.	Not limited to specific list of pollutants, source, or source categories.	Use of acceptable ambient concentrations derived from 15% TLV. Use of control technology requirements.	-
Kansas	None planned	-	-	-	-

\*Information obtained by phone.

(Continued)

TABLE 3. Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
Kentucky	In preparation (1985, tentative)	Promulgated regulations (tentative).	Specified list of pollutants (tentative).	Use of acceptable ambient concentrations. Use of ambient standards for H <sub>2</sub> S, gaseous fluorides, and fluorides. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	Emissions inventory currently in progress. Results will determine regulatory approach. Report of inventory results will be presented to legislature in February 1985.
Maine	In preparation (1985)	-	Not limited to specific list of pollutants, sources, or source categories.	Use of safety factor on TLV (tentative); use of original health effects research. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis (tentative).	-
Maryland	In preparation (Sept. 1985)	-	-	-	-
Massachusetts	In preparation (summer 1985)	-	-	-	-
Michigan	In place	Promulgated regulations. Informal Guidelines to carry out rules.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient air concentrations based on TLV, original health effects research (toxic model). Use of control technology requirements for sources of specified pollutants. Use of risk assessment used on case-by-case basis.	Have developed models and applications for emissions from landfills and landfill excavation, time scaling factors for different averaging times, dilution factor matrix.
Minnesota	In place (new sources); in preparation for existing sources (1/87)	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient air concentrations (TLV), original health effects research. Use of risk assessment on a case-specific basis.	State of Michigan framework used as policy for new sources. Conducting ambient monitoring with portable photionization chromatograph and adsorption tubes. Measuring acidic deposition (and deposition content) in wet and dry forms. Unique dry sampler.

(Continued)

TABLE 3. Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
Mississippi	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 3.3% TLV (usually); original health effects research. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	-
Montana	No formal program	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of formally adopted ambient standards for P- and BiS; acceptable ambient air concentrations for others (TLV/42). BACT required for all permitted sources with uncontrolled emissions >25 tons/yr.	-
Nebraska	None planned	-	-	-	-
Nevada	In place	Promulgated regulations.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 10% TLV. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	-
New Hampshire	In preparation (1985)	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 1% TLV. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	Regulation Amendment is expected to be required for enforcement of the guidelines. Developing methods for solid absorbent collection of various VOC's and monitoring of ambient TRS.
New Jersey	In place	Promulgated regulations and informal guidelines.	Limited to specific lists of pollutants. Not limited to specific list of sources or source categories.	Use of acceptable ambient concentrations, control technology requirements for sources of specified pollutants, and risk assessment on a case-by-case basis.	Involved in ambient monitoring of non-traditional sources such as landfills.

(Continued)

TABLE 3. Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
New Mexico	In preparation	Promulgated regulations.	—	Use of formally adopted standards for H <sub>2</sub> S, ammonia, HCN, and HCl. Air toxics emissions inventory required by air pollution control grant.	Required by air pollution control grant to develop an air toxics program plan.
New York	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations. Maintains emissions inventory.	Has pollutant research and toxicity testing program.
North Carolina	In preparation (11/1/85)	Undecided.	Limited to specific list of pollutants.	Use of acceptable ambient concentrations derived from TLVs (tentative). Emissions inventory planned.	—
Oregon	In place for specific sources. Expanded program in preparation (6/85)	—	Current program limited to specific sources. Expanded program will not be limited to specific list of sources or source categories.	Program in place for control of fluorides from aluminum plants and H <sub>2</sub> S and mercaptans from kraft mills. Some other plants controlled by permit on case-by-case basis.	—
Rhode Island	In preparation (9/84)	Promulgated regulations.	Limited to specific list of pollutants. Not limited to specific list of sources or source categories.	Use of acceptable ambient concentrations derived from 1% TLV/24 hr. original health effects research. Use of control technology requirements on a case-specific basis. Maintenance of emissions inventory.	—
South Carolina	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient air concentrations (1/420 TLV). Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	Air toxics program being developed may lead to specific regulations.
South Dakota	None planned in immediate future	—	—	—	Intends to perform state-wide non-criteria pollutant emissions inventory in 1985. Will evaluate need for program and perhaps develop program in next two-three years.

(Continued)

TABLE 3. Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
Tennessee	In place	Promulgated regulations and informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from TLVs. Use of control technology requirements.	Air toxics evaluations performed on case-by-case basis using any available information including health assessment documents, ambient air standards set by other agencies, EPA guidelines, modeling techniques, TLV levels, etc.
Texas	In place	Informal guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from 1% occupational standard for 30-min. max and 0.1% occupational standard for annual max); original health effects research. Use of control technology requirements for sources of specified pollutants. Maintenance of emissions inventory which includes air toxics.	Developing data base for 800 substances. Conducting R&D in source testing, ambient monitoring, emergency response procedures, ambient exposure assessment, assessment of human exposure to complex mixtures of contaminants.
Vermont	In place for new sources; new program for existing and new sources in preparation (10/84)	Not yet decided; probably will be formally adopted regulation.	Limited to specific list of pollutants.	Use of acceptable ambient concentrations (1/420 TLV). Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis.	—
Virginia	In place	Promulgated regulations.	Limited to specific list of pollutants and sources or source categories.	Use of acceptable ambient concentrations derived from 1% TLV for carcinogens and 1.7% TLV for noncarcinogens.	The program in place is considered a pilot program and is subject to change.
Washington	In preparation (1986)	Informal guidelines (tentative).	Limited to specific list of pollutants. Not limited to a specific list of sources or source categories (tentative).	Engaged in establishing state-wide emissions inventory of traditional point and non-point sources of air toxics.	Regulatory processes and options are under discussion and evaluation. Program will rely on extent of problem based on data collected in emissions inventory.

TABLE 3. Continued

State	Program Status	Program Structure	Program Scope	Application	Comments
Wisconsin	In preparation (12/85)	Informal guide-lines (tentative).	Not limited to specific list of pollutants, sources, or source categories (tentative).	Use of acceptable ambient concentrations derived from 2.5% TLV. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	Currently specifies emissions limits for beryllium and asbestos and ambient concentrations for lead and mercury. General limitations for cadmium, chromium, chlorine, fluoride, lead, pesticides, and radioactive material.
Virgin Islands*	In preparation (Fiscal 1985)	-	-	-	-

\*Information obtained by phone.

TABLE 4 . LOCAL AGENCY REGULATORY PROGRAM INFORMATION

Locality	Program Status	Program Structure	Program Scope	Application	Comments
Maricopa Co., AZ	In preparation (1986), inventory in progress	Promulgated regulations and informal guidelines (tentative).	Limited to specific list of pollutants, but not limited to specific list of sources or source categories (tentative).  Emissions inventory in progress.	Use of formally adopted standard, basis not decided. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis (tentative).	-
Sacramento Co., CA	In place	Formal, written set of guidelines.	Not limited to specific list of pollutants, sources, or source categories.	Use of projected concentration numbers at receptor sites for risk assessment purposes.	-
Santa Barbara Co., CA	In place	Promulgated regulations.	Not limited to specific list of pollutants, sources, or source categories.	Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis. Maintenance of emissions inventory.	-
South Coast AQMD, CA	In place	Promulgated regulations and informal guidelines.	Limited to specific lists of pollutants, sources, or source categories.	Use of acceptable ambient concentrations and formally adopted standards. Use of control technology requirements for sources of specified pollutants. Risk assessment conducted by State.	-
Jacksonville, FL	In preparation (1985)	-	-	Establishment of acceptable ambient concentrations and formal toxicics rule following risk assessment (tentative).	Plans to develop control strategy for non-criteria pollutants following an air toxics inventory in field and laboratory research.
Evanston, IL	In place	Promulgated regulations.	Limited to specific lists of pollutants, sources, or source categories.	Use of acceptable ambient concentrations derived from TLVs and original health effects research. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis.	R&D on Drager pump, decibel meter, high vol flow meter, pagers for emergency response.

(Continued)

TABLE 4. Continued

Locality	Program Status	Program Structure	Program Scope	Application	Comments
Clark Co., NV	No formal program	Informal guidelines.	Limited to specific list of sources or source categories. Not limited to specific list of pollutants.	Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-by-case basis. Maintenance of emissions inventory.	-
Hudson Regional Health Comm. (NJ)	In preparation	Informal guidelines.	Limited to specific list of pollutants, but not limited to specific list of sources or source categories.	Maintenance of carefully monitored registration/inventory program.	No enforcement authority in cases involving contravention to informal standards.
Cleveland, OH	In preparation (1985)	Informal guidelines at this time; promulgated regulations tentative.	Not limited to specific list of pollutants, sources, or source categories (tentative).	Use of acceptable ambient concentrations and formally adopted standards (tentative) based on original health effects research. Use of control technology requirements for sources of specified pollutants. Use of risk assessment on a case-specific basis.	Lead studies, rare earth tracer studies with NASA, indoor formaldehyde studies.
Toledo, OH	Note planned	-	-	-	Review air toxics as part of State new source review/permit program. BACT required for all new sources. Existing sources may be addressed on nuisance basis.
Lane Regional Air Pollution Authority (OR)	In preparation (1986)	Informal guidelines. Promulgated regulations for TRS.	-	Use of BACT on new sources of any pollutant. Existing inventory of selected pollutants planned.	Initiating initial steps of problem definition to determine what, if any, further air toxics controls are appropriate.
Allegheny Co., PA	In preparation	-	-	-	Completion of air toxics inventory in 1985.
Philadelphia, PA	In place	Informal guidelines.	Limited to specific list of pollutants, but not limited to specific list of sources or source categories.	Use of acceptable ambient concentrations (1/42 TLV or 1/420 TLV); original health effects research. Maintenance of emissions inventory.	Involved with EPA (EMSL) in TENAX-GC/MS methods development, involved with EPA (IEMP) in multi-media toxics study.

(Continued)

TABLE 4 . Continued

Locality	Program Status	Program Structure	Program Scope	Application	Comments
Chattanooga, TN (Hamilton Co.)	Developed but not adopted	Informal guidelines (tentative).	Use of specific list of pollutants as well as broad definition of toxics (tentative).	Use of acceptable ambient concentrations (25 TLV for non-carcinogen, 0.33% TLV for carcinogen). Use of control technology requirements for sources of specified pollutants (tentative).	Studying applicability of chemical mass balance to arsenic control program development and techniques for ambient air arsenic monitoring.
Puget Sound, WA	In place for arsenic only; air toxics inventory in progress	Promulgated regulations for arsenic.	Arsenic only - specific list of sources and source categories. Regulations drafted for wood treating plants and waste oil combustion.	Use of control technology requirements for sources of arsenic. Air toxics inventory (1983 base year) complete for point sources. Area sources scheduled for completion in 1985.	

#### PART 4. ACCEPTABLE AMBIENT CONCENTRATIONS OR STANDARDS

Many states and localities use some form of ambient guideline or standard for the control of toxic air pollutants. Most of these use "factored" occupational values as a basis for developing the ambient limit, at least for some pollutants. A factored occupational value is the use of a constant fractional value to apply to all of a specific set of occupational limits to convert from a workplace guideline (based on exposure to a particular contaminant over an eight-hour day, five days a week) to an ambient guideline. Some states and localities apply different factors to different categories of pollutants based on toxicity or carcinogenicity.

The occupational limits used most commonly for this purpose are the Threshold Limit Value-Time Weighted Averages (TLV-TWAs) for workplace exposures established by the American Conference of Governmental Industrial Hygienists (ACGIH), the Occupational Safety and Health Administration (OSHA) permissible exposure levels for airborne substances in the work place, and the National Institute for Occupational Safety and Health (NIOSH) recommended criteria for occupational exposures in air. The ACGIH TLV-TWA is the time-weighted average concentration for a normal 8-hour workday and a 40-hour workweek, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect. They are based on the best available information from industrial experience, from experimental human and animal studies, and when possible, from a combination of the three. NIOSH, which is the research arm of OSHA, prepares "criteria documents" which are used by OSHA in promulgation of its occupational standards. The NIOSH recommendations are based primarily on medical science, whereas OSHA considers technical feasibility and economic factors in its role as regulator.

The safety factors and averaging times used by some states and localities to derive ambient limits are indicated in Table 5. The safety factors range from 1/1000 (0.1%) all the way to 100% (no safety factor) for selected pollutants. Commonly used safety factors are 1/420, 1/300, 1/100, 1/50, 1/42, and 1/30. Generally, the smaller the fraction used to adjust the occupational limit, the more stringent is the ambient guideline. Equally important, however, is the averaging time over which the concentration is computed. The

shorter the averaging time, the more stringent is the guideline. Averaging times used in conjunction with the safety factors by state and local agencies include 30-minute, 1-hour, 8-hour, 24-hour, and 1-year.

Table 6 lists acceptable ambient concentrations or standards and averaging times established by five states and two localities: Connecticut, Illinois, Michigan, Nevada, New York, the South Coast Air Quality Management District (SCAQMD) in California, and Philadelphia, Pennsylvania. These 7 states and localities reported a significant number of values for specific pollutants, or specified a means to derive the values. All of the values are reported in units of  $\mu\text{g}/\text{m}^3$ , unless otherwise indicated. Values reported in other units (ppm or ppb) were converted to  $\mu\text{g}/\text{m}^3$  using the ratio between ppm and  $\text{mg}/\text{m}^3$  employed by ACGIH to establish TLV-TWAs. It should be noted that the values listed for Connecticut have been proposed but are not yet adopted.

Table 6 also records the TLV-TWAs for workplace exposures established by ACGIH, the OSHA permissible exposure levels for airborne substances in the work place, the NIOSH criteria for occupational exposures in air, and various lists of carcinogens compiled by ACGIH, the International Agency for Research on Cancer (IARC), the National Cancer Institute (NCI) and the National Toxicology Program (NTP). These sources of information, together with original health effects research, are frequently used by states and localities to derive acceptable ambient concentrations or standards.

Table 7 lists acceptable ambient concentrations or standards established by 7 additional states and localities that reported only a limited number of values. These values are reported separately only because there was not sufficient room to include them in Table 6.

Tables 6 and 7 report ambient limits only if the state or locality specified the values by pollutant or provided sufficient information with which to calculate the values. Values were calculated for Nevada and New York. Although most states and localities rely primarily on the ACGIH TLVs for this

purpose, some use NIOSH criteria, OSHA standards, or a combination of these occupational limits. Moreover, some states and localities apply a safety factor to an entire set of occupational limits, whereas others derive acceptable ambient concentrations in this manner only for selected pollutants. It is the intention of the Clearinghouse to expand Table 6 to include values established using the factored occupational limit approach. The Clearinghouse will solicit details from state and local agencies to make these calculations and publish a report with more complete listings of acceptable ambient concentrations in the near future.

TABLE 5. SAFETY FACTORS USED TO DERIVE ACCEPTABLE AMBIENT CONCENTRATIONS FROM OCCUPATIONAL LIMITS

State or Locality	Safety Factor Applied to Occupational Limit	Averaging Time
Alabama	2.5% (1/40)	1 hour
Arkansas	1% (1/100)	24 hour
Connecticut <sup>1</sup>	0.5% (1/200), 1% (1/100), or 2% (1/50), depending on pollutant group	8 hour
Georgia <sup>1</sup>	0.33% (1/300) if known human carcinogen, 1% (1/100) if not known human carcinogen	24 hour
Illinois	0.33% (1/300) for non carcinogens	24 hour
Indiana <sup>1</sup>	1% (1/100)	24 hour
Michigan	1% (1/100) for selected pollutants	8 hour
Minnesota	1% (1/100)	8 hour
Mississippi	3.3% (1/30), usually	NA <sup>2</sup>
Montana	2.4% (1/42)	1 year <sup>3</sup>
Nevada	10% (1/10)	8 hour
New Hampshire <sup>1</sup>	1% (1/100)	NA <sup>2</sup>
New York	0.33% (1/300), 2% (1/50) depending on toxicity category	1 year
Rhode Island <sup>1</sup>	1% (1/100)	24 hour
South Carolina	0.24% (1/420)	NA <sup>2</sup>
Texas	1% (1/100), 0.1% (1/1000)	30 minute 1 year

(Continued)

TABLE 5. Continued

State or Locality	Safety Factor Applied to Occupational Limit	Averaging Time
Vermont	0.24% (1/420)	24 hour or 1 year depending on pol- lutant
Virginia	1% (1/100) for carcin- ogens	24 hour
	1.7% (1/60) for non- carcinogens	24 hour
Wisconsin <sup>1</sup>	2.4% (1/42)	NA <sup>2</sup>
Wyoming <sup>3</sup>	2.4% (1/42), 2% (1/50), 0.33% (1/300)	1 year, 24 hour, 1 hour
SCAQMD, California	100% for selected pol- lutants	8 hour
Philadelphia, Pennsylvania	0.24% (1/420) or 2.4% (1/42)	1 year

<sup>1</sup>Tentative: program in preparation.<sup>2</sup>Not available at the time of this writing.<sup>3</sup>As reported in Radian Corporation, "Survey of State and Local Agency Programs for Control of Toxic Air Pollutants," Draft Report, Prepared for U.S. EPA, Office of Air Quality Planning and Standards, State and Territorial Air Pollution Program Administrators, and Association of Local Air Pollution Control Officials, June 8, 1983.

## PART 5. RESEARCH AND METHODS DEVELOPMENT ACTIVITIES

A number of states and localities actively sponsor or participate in pollutant research and methods development activities. Table 8 summarizes pollutant research reported to the Clearinghouse by state and local agencies by pollutant, type of research (health assessment, source assessment, exposure assessment, risk assessment, toxicity testing, epidemiological study, monitoring study, and emission factor development), and the availability of supporting documentation. Table 9 describes methods development activities in seven areas: 1) emissions testing; 2) ambient monitoring; 3) dispersion modeling application, evaluation, and development; 4) emergency response procedures,; 5) ambient exposure assessment; 6) emissions modeling from non-traditional sources (e.g., impoundments and landfills); and 7) other (e.g., indoor/outdoor exposure relationships). Methods development activities include research and operations to improve existing or develop new methods to evaluate or control toxic air pollutants. Table 9 presents methods development activities as reported by state and local agencies with minimal editing. The reader should address any questions or requests for additional information about the research or methods development activities identified in Tables 8 or 9 to the regulatory program contacts identified in Tables 1 and 2 in Part 2.

TABLE 9. METHODS DEVELOPMENT ACTIVITIES

State or Locality	Source Testing	Ambient Monitoring	Dispersion Modeling	Emergency Response	Ambient Exposure Assessment	Emissions Modeling from Non-Traditional Sources	Other
CA	ARB develops sampling methods & analytical methods as well as conducts source tests to determine emissions of toxic air contaminants from stationary sources.	The ARB has two laboratories, the Sacramento Laboratory & Haeger-Sait Laboratory, involved in ambient monitoring & analysis. The Sacramento Laboratory is currently refining field sampling & laboratory analysis procedures preparatory to initiating a state-wide ambient toxics sampling network for benzene & selected halogenated hydrocarbons.	ARB applies dispersion models to a wide range of toxic emissions. Development of methods for certain chemicals is probable in the future.	--	Ambient air data is collected & analyzed along with modeling analyses to estimate hourly, 24 hour & annual concentrations.	ARB has developed a model for estimating hourly emissions from application of wood-oil.	--
CO	--		Procedures to determine maximum allowable concentrations in the stack.			Slag pile at Granite City (industrial fugitive lead).	1) Indoor/outdoor relationship between lead levels in Granite City;
IL	--	DAPC has requested ambient monitoring at hazardous waste incineration facilities, pesticide manufacturing facilities, and other facilities which emit toxics which cannot be evaluated by dispersion modeling methods.	Use of traditional dispersion models, especially the Industrial Source Complex (ISC) model. Also using receptor modeling techniques.	Evaluation guide for releases of hazardous gases or vapors (calculation of evacuation distance) has been written and methods are utilized.	--		2) Air quality study of South Chicago for mercury pollutants. (Draft report available.)
IN	--	Methods are being developed for measuring various VOCs using an HP5800C in conjunction with a Unicon series 810 concentrator.	Have capability but have done little to date.	Handled by a separate emergency response team.	--		--
IA	Captan. adapting standard methods to corn roaster testing.	--	Captan and corn roaster using EPA approved methods.	--			
MI	--				Michigan has developed models and applications for emissions from landfills and landfill excavation projects (e.g., Berlin & Farro site).	Michigan has developed models and applications for emissions from landfills and landfill excavation projects (e.g., Berlin & Farro site).	(Continued)

TABLE 9. Continued

State or Locality	Source Testing	Ambient Monitoring	Dispersion Modeling	Emergency Response	Ambient Exposure Assessment	Emissions Modeling from Non-Traditional Sources*	Other
MN	--	Minnesota is currently conducting limited sampling with a portable photoionization chromatograph and adsorption tubes. A source apportionment study is in progress related to wood combustion. A wood-related residential site will be instituted this fall.	--	--	--	MPCA is strongly involved in the measurement of acidic deposition in wet & dry forms. The trace element content of deposition is also measured. Minnesota's dry sampler is unique. Money has been appropriated for future trace organic sampling primarily in remote areas.	--
MI	Case specific research of literature is done during permit review process.	Review will be conducted if needed but the State has not yet done any ambient monitoring.	--	--	--	Conducted as follow-up to ambient monitoring and modeling projects.	--
NH	--	Solid absorbent collection of various VOC's. Also method development to monitor ambient TRS.	--	--	Bureau of Emergency Response has been established and is functional.	Monitoring of emissions from non-traditional sources (e.g., emissions from landfill vents, etc.).	--
NJ	Source test methods development is primarily related to toxics emitted from incineration units.	Office of Science & Research has conducted monitoring "campaigns" for VOC, metal, & organic particulate fractions. Particulate portion has been assumed by Air program.	Developed dispersion modeling protocol in conjunction with NESCAM.	Bureau of Emergency Response has been established and is functional.	Conducted as follow-up to ambient monitoring and modeling projects.	Informal emissions modeling from non-traditional sources, like mobile debris tailings disposal sites, has been done.	--
NM	--	Carbon monoxide source apportionment study for Albuquerque, NM. This is a short term study using diocotous samples and a carbon monoxide monitor. Model development and revisions occur when needed for house use.	--	--	--	--	--

(Continued)

TABLE 9 . Continued

State or Locality	Source Testing	Ambient Monitoring	Dispersion Modeling	Emergency Response	Ambient Exposure Assessment	Emissions Modeling from Non-Traditional Sources	Other
NC	NC has conducted ROM emission tests on small to medium sizes of industrial wood-fired boilers.	--	--	--	--	--	--
RI	--	Improvement of sensitivity of analytical methods for ambient monitoring.	--	--	--	--	--
TN	Very limited as necessary to conduct testing for non-criteria pollutants where specified methods are not available or equipment is not available.	--	--	--	--	--	--
TX	Developed sampling train for use in monitoring chlorinated organics from stacks. Using it to determine combustion efficiencies and combustion products at hot mix plants. Developing methods for collecting samples near hazardous waste sites using pesticide head bit-vols.	All toxic compounds to be emitted are modeled as a part of permit review. Non-traditional sources are included in the model evaluation. Odorous compounds are also included in the review.	Presently involved in project to enhance emergency response planning and coordination. Will involve integration of SIP Section VIII, State Emergency Management Plan, and TACB Manual for Emergency Episodes.	Monitoring sites have been chosen in Harris County to monitor ambient exposure levels for arsenic, benzene, formaldehyde, PCB's lead, vinyl chloride, PNA's, ethylene oxide, epichlorohydrin, and acrylonitrile. Planning is underway for locating additional sites in Galveston, Jefferson, and Orange counties.	All sources, including non-traditional ones, are modeled using procedures developed at this Agency. Odorous compounds are also included in this modeling.	TACB has completed a project to assess the feasibility of in-situ monitoring using biological test systems to assess possible human health consequences of exposure to complex mixtures of contaminants in ambient air. Final report is available now. The Agency is currently managing a contract to assess the sensitivity of certain biological test systems. If these biological test systems respond to contaminants at ambient levels, TACB plans to develop a mobile biological monitoring unit. A final report will be available by August 31, 1985.	(Cont 1 max d)

TABLE 9. Continued

State or Locality	Source Testing	Ambient Monitoring	Dispersion Modeling	Emergency Response	Ambient Exposure Assessment		Non-Traditional Sources	Other
					Emergency Response	Exposures Modeling from Non-Traditional Sources		
WA	Just beginning to perform source & ambient tests on some selected sources and specific air toxics (i.e., PCBs). This program will expand as the program progresses.	--	--	Bulletin responses are handled on local level. Expansion in this area for air toxic emergencies on a statewide level (Dept. of Ecology) is expected in future.	--	--	--	--
SDMO, CA	SDMO develops source test methods primarily to determine compliance with rules and regulations, and permitting requirements. Specific methods applicable to landfill have been developed.	Refined ambient air monitoring has been developed for vinyl chloride.	SDMO conducts atmospheric modeling of a source to determine risk in conjunction with the risk assessment by the California Department of Health Services.	An emergency technical assistance program for toxic spills is currently in place.	Ambient air data for vinyl chloride from landfills are collected along with modeling analysis to estimate hourly, 24 hour and annual concentrations.	Bulletins of vinyl chloride from landfills are modeled to determine risk.	--	--
Branston, IL	Development of Drager pump and Decibel meter.	High volume flow meter.	--	Pagers.	--	--	--	--
Clark County, NV	Development of monitoring methods for chlorines, ammonia, nitrates, chlorides.	--	--	--	Monitoring study on landfills & composts.	Monitoring indoor concentrations of benzene, carbon monoxide, formaldehyde.	--	--
Cleveland, OH	EPA designed tests for source monitoring are studied and used for assessment & compliance purposes.	--	--	Done on a case-by-case basis and researched depending on time limitations and the hazard involved.	--	Indoor formaldehyde studies were conducted over a 2 year span and outdoor ambient concentrations also studied for comparison. Sources of formaldehyde also investigated.	--	--
Lake Region, OR	A quality assurance program for TBS emissions monitoring is under development by the state agency.	--	--	--	--	This may be incorporated as part of emissions inventory.	--	--
Philadelphia, PA	--	--	--	Cooperative agreement with EPA (DASL) for TBNX-GC/MS and other methods development.	--	Participation with EPA (IDB) in multi-media toxics study.	--	(Cont'd next)

TABLE 9. Continued

State or Locality	Source Testing	Ambient Monitoring	Dispersion Modeling	Emergency Response	Ambient Exposure Assessment	Emissions Modeling from Non-Traditional Sources	Other
Chattanooga-Hamilton Co., TN	In conjunction with TVA, developing a 24 hour method for monitoring toxic air pollutants.	- -	- -	- -	Conducting extensive monitoring study in Chattanooga neighborhood (criteria pollutants, inhalable particulates, and broad range of organics). Planning to use results in conjunction with epidemiological study of same neighborhood to assess exposure and health risk.	- -	- -
Pudget Sound, WA	Applicability of chemical mass balance to arsenic control program development.	Techniques for ambient air arsenic monitoring.	- -	- -	- -	- -	- -

## PART 6. PERMITTING INFORMATION

The most frequent mechanism for controlling non-criteria emissions is through source permitting. The Clearinghouse plans to establish a registry of permitted sources of air toxics which includes data on pollutant emissions, emission limits, and control equipment. This information can be used for purposes such as determining what non-criteria pollutants might be emitted by a specific facility, identifying potentially applicable control equipment/ requirements for a particular facility, or prioritizing facilities for permitting or other air toxics control decisions.

Table 10 presents information collected to date on 43 facilities permitted by twelve states or localities. Data include facility category, SIC Code, State or locality, year(s) permit issued/amended, permit identification number, control equipment, pollutants, emission limit, and source of emissions. The information is organized by the SIC Code of the permitted facilities in the following order (including only those categories in which permitting information is currently available):

- Agriculture Services (SIC 07)
- Lumber and Wood Products (SIC 24)
- Furniture and Fixtures (SIC 25)
- Paper and Allied Products (SIC 26)
- Chemicals and Allied Products (SIC 28)
- Rubber and Miscellaneous Plastics (SIC 30)
- Primary Metal Industries (SIC 33)
- Instruments and Related Products (SIC 38)
- Electric, Gas, and Sanitary Services (SIC 49)
- Automobile Repair, Services, and Garages (SIC 75).

These SIC categories will be expanded as the Clearinghouse collects more permitting data. The reader should address any questions or requests for additional information about the permits identified in Table 10 to the permitting contacts identified in Tables 1 and 2 in Part 2.

## PART 7. SOURCE TESTING INFORMATION

Many states and localities conduct emissions testing for non-criteria air pollutants as part of their air toxics control program. Table 11 presents information collected to date on 36 facilities tested by eleven states or localities. Data include the facility category, SIC Code, state or locality, test date, test or facility identification number, sampling technique, analytical method, pollutants, measured emission rates, and location of measurement. The information is organized by the SIC Code of the tested facilities in the following order (including only those categories in which source testing information is currently available):

- Agricultural Services (SIC 07)
- Furniture and Fixtures (SIC 25)
- Paper and Allied Products (SIC 26)
- Chemicals and Allied Products (SIC 28)
- Petroleum and Coal Products (SIC 29)
- Rubber and Miscellaneous Plastics Products (SIC 30)
- Primary Metals Industries (SIC 33)
- Fabricated Metals Products (SIC 34)
- Transportation Equipment (SIC 37)
- Instruments and Related Products (SIC 38)
- Electric, Gas, and Sanitary Services (SIC 49)
- Personal Services (SIC 72).

These SIC categories will be expanded as the Clearinghouse collects more source testing data. The reader should address any questions or requests for additional information about the source tests identified in Table 11 to the source testing contacts identified in Tables 1 and 2 in Part 2.

## PART 8. AMBIENT MONITORING INFORMATION

Ambient monitoring information has been collected from 19 states and localities on more than 100 pollutants. Table 12 presents these data, including the pollutant measured, state or locality conducting the measurement, and the sampling technique and analytical method used by the state or locality. The sampling techniques and analytical methods have been coded; an explanation of the code is provided at the end of the table. The reader should address any questions or requests for additional information on a state or local agency's ambient monitoring activities to the ambient monitoring contacts identified in Tables 1 and 2 in Part 2.

**APPENDIX A**  
**Data Collection Forms**

This appendix includes the six data collection forms used to solicit information from state and local agencies for inclusion in the Clearinghouse database. They are:

- Form 1. Agency General Information
- Form 2. Regulatory Program Information
- Form 3. Permitting Information
- Form 4. Ambient Monitoring Information
- Form 5. Toxicity Test Results
- Form 6. Source Testing Information

This report presents the information collected using these forms. No data have been received to date from Form 5 (Toxicity Test Results).

National Air Toxics Information Clearinghouse

Form 1. Agency General Information

I. Agency Information

Agency Name: \_\_\_\_\_ Telephone \_\_\_\_\_  
Address: \_\_\_\_\_  
City, State, Zip: \_\_\_\_\_

II: Air Toxics Program Information

Please indicate below the areas in which you have information to share with other Clearinghouse users regarding non-criteria air pollutants. Also, please give the name and telephone number (if different from above) of a contact person in the areas of expertise noted below. This person will receive data collection forms, and may be contacted directly by the Clearinghouse staff or other Clearinghouse users with requests for information. Page 2 presents the kinds of information that will be sought under each of the identified subject areas.

<u>Subject Area<sup>1</sup></u>	<u>Name</u>	<u>Telephone Number</u>
Regulatory Program:	_____	_____
Permitting:	_____	_____
Source Tests:	_____	_____
Ambient Monitoring:	_____	_____
Emissions Inventory:	_____	_____
Health Effects:	_____	_____

<sup>1</sup> If you have so much information to submit in any of these areas such that it may be a reporting burden, please circle the appropriate subject area and someone from the Clearinghouse staff will contact you to discuss sending representative samples.

Please return this form to:

Ms. Sandra Smith  
Radian Corp.  
8501 Mo-Pac Blvd.  
P.O. Box 9948  
Austin, Texas 78766

If you have questions on completing this form,  
please call Sandra Smith (512) 454-4797.

INFORMATION FOR POSSIBLE SUBMITTAL TO THE NATIONAL AIR TOXICS  
INFORMATION CLEARINGHOUSE

**Please indicate by circling the appropriate numbers below the kinds of information on toxic air pollutants that you have and are willing to submit to the National Air Toxics Information Clearinghouse**

<u>Subject Area</u>	<u>Information Needs</u>			
Regulatory Program Information	1) Basis for establishment of program  2) Pollutants regulated or for which guidelines exist  3) Sources regulated  4) Acceptable ambient concentrations and basis	5) Research on pollutants toxicity source assessment exposure assessment risk assessment monitoring study emission factor development  6) Pollutant ranking schemes  7) Risk assessment guidelines	8) Pollutant categorization schemes  9) Detailed descriptions of control programs in place  10) Results of state/local sponsored toxicity testing  11) Results of industry sponsored toxicity testing	
Permitting Data (from a representative sample of cases)	1) List of permits for toxics by source category  2) Pollutants emitted by source category  3) Emission factors (if used)  4) Estimated emission rates	5) Emission limits  6) Averaging time  7) Control requirements  8) Process description  9) Basis for emission rate estimate	10) Control efficiency of equipment  11) Total estimated emission reduction  12) Basis for emission limit  13) Detailed descriptions of selected case studies	
Source Test Data (from a representative sample of source tests)	1) List of source tests by source category  2) Pollutants detected by source category  3) Measured emission rates	4) Process description  5) Emission control equipment  6) Control efficiency of equipment	7) Source test methods  8) Quality assurance procedures  9) Case studies	
Ambient Monitoring Data (from a representative sample of studies)	1) List of pollutants monitored  2) Reference to study  3) Site, location  4) Site classification	5) Pollutants measured  6) Period of study  7) Concentrations detected  8) Averaging period	9) Monitoring methods  10) Site selection criteria  11) Quality assurance procedures  12) Case studies

NATIONAL AIR TOXICS INFORMATION CLEARINGHOUSE  
Form 2. Regulatory Program Information

Please complete this form with respect to the control of non-criteria air pollutants by your agency. If you have already submitted this form to the Clearinghouse at some time in the past, please consider this a request for revised or updated information. If you have questions on completing this form, please call: Sandra Smith, Radian Corporation, (512)454-4797.

I. General Information

Agency Name: \_\_\_\_\_ Date: \_\_\_\_\_

This form was completed by: \_\_\_\_\_ Telephone: ( ) \_\_\_\_\_

II. Air Toxics Program Information

Please check yes or no for the following statements with respect to the control of non-criteria air pollutants by your agency.

Yes      No

Program Status

- \_\_\_\_ 1. We have an air toxics control program currently in place. (This does not include delegation of NESHAPs authority).
- \_\_\_\_ 2. We are developing an air toxics program which is scheduled to be in place by (date) \_\_\_\_\_.

Program Structure

- \_\_\_\_ 3. Our air toxics control program is based on promulgated regulations.
- \_\_\_\_ 4. Our air toxics control program is based on informal guidelines.

Program Scope

- \_\_\_\_ 5. The scope of our program is limited to a specified list of pollutants.
- \_\_\_\_ 6. The scope of our program is limited to a specified list of sources or source categories.

Application

- \_\_\_\_ 7. We use acceptable ambient concentrations in the permit review process.
- \_\_\_\_ 8. We use formally adopted ambient standards for non-criteria air pollutants.
- \_\_\_\_ 9. Some or all of our acceptable ambient concentrations or standards are based on the application of a safety factor to an established Threshold Limit Value (TLV). We use the following safety factor(s): \_\_\_\_\_.
- \_\_\_\_ 10. Some or all of our acceptable ambient concentrations or standards are based on the results of original health effects research.
- \_\_\_\_ 11. We use control technology requirements, such as "state of the art" for sources of specified pollutants.
- \_\_\_\_ 12. We use risk assessment on a case-specific bases.
- \_\_\_\_ 13. We maintain an emissions inventory for air toxics.

Comments or Clarification: \_\_\_\_\_

### III. Acceptable Ambient Concentrations/Ambient Standards

If you have established acceptable ambient concentrations or ambient standards, please supply the following information to the extent that it applies to your air toxics control program.

CAS # or Pollutant Name <sup>1</sup>	Acceptable Ambient Concentration <sup>2</sup> (specify unit)	Averaging Time <sup>3</sup>	Basis <sup>4</sup> (/)	If Concentration is Based on Threshold Limit Value			
				a	b	c	d
ACGIH	OSHA	NIOSH	Used				
1.				-	-	-	-
2.				-	-	-	-
3.				-	-	-	-
4.				-	-	-	-
5.				-	-	-	-
6.				-	-	-	-
7.				-	-	-	-
8.				-	-	-	-
9.				-	-	-	-
10.				-	-	-	-
11.				-	-	-	-
12.				-	-	-	-
13.				-	-	-	-
14.				-	-	-	-
15.				-	-	-	-
16.				-	-	-	-
17.				-	-	-	-
18.				-	-	-	-
19.				-	-	-	-
20.				-	-	-	-

Comments or Clarification:

---

---

---

---

<sup>1</sup>If more than 20 pollutants, please continue on duplicate page.

<sup>2</sup>See instructions for clarification of terms.

<sup>3</sup>15-minute, 1-hour, 24-hour, annual, etc.

<sup>4</sup>

- a. TLV/safety factor
- b. agency-sponsored original research
- c. adoption of concentration set by another agency or group
- d. other

---

IV Pollutant Research

If your agency sponsors or participates in a pollutant assessment or research program (not including methods development-see Section V), please supply the following information to the extent that it applies to your air toxics control program. Please supply the same information if you are aware of relevant research conducted by other agencies in your state or locality.

CAS # or Pollutant Name <sup>1</sup>	Type of Research or Assessment Activities <sup>2</sup>								Other (specify) _____	Is supporting documentation available? Yes _____ No _____
	HA	SA	EA	TT	ES	MS	EF	RA		
1. _____	_____	_____	_____	_____	_____	_____	_____	_____	_____	_____
2. _____	_____	_____	_____	_____	_____	_____	_____	_____	_____	_____
3. _____	_____	_____	_____	_____	_____	_____	_____	_____	_____	_____
4. _____	_____	_____	_____	_____	_____	_____	_____	_____	_____	_____

V. Methods Development Activities

If your agency sponsors or participates in methods development or research in any of the following areas, please indicate below:

	<u>Yes</u>	<u>No</u>	<u>Explain, if yes</u>
1. Emissions Testing	—	—	_____
			_____
2. Ambient Monitoring	—	—	_____
			_____
3. Dispersion Modeling Application, Evaluation and Development	—	—	_____
			_____
4. Emergency Response Procedures	—	—	_____
			_____
5. Ambient Exposure Assessment	—	—	_____
			_____
6. Emissions Modeling from Non-Traditional Sources (e.g., impoundments and landfills)	—	—	_____
			_____
7. Other (e.g., indoor/outdoor exposure relationships)	—	—	_____
			_____
			_____
			_____
			_____

VI. Non-Health Related Impacts

Please submit in the space provided below or attach any information you may have on case studies of non-health related impacts of non-criteria air pollutants (e.g., odor, vegetation damage).

NATIONAL AIR TOXICS INFORMATION CLEARINGHOUSE  
Form 3. Permitting Information

Please complete this form for permitted facilities (e.g., individual plants at a specific site) emitting non-criteria air pollutants which you believe will be of interest to other state and local agencies. The purpose of this form is to establish a registry of permitted sources and pollutants emitted so that other state and local agencies can benefit from the information you have. Please make duplicate copies of this form for as many facilities as you are willing to register with the Clearinghouse. If you have such a large volume of information that it would be more easily transferred by computer rather than by completing these forms, please call Sandra Smith, Radian Corporation, (512)454-4797. Questions on completing this form also should be directed to Sandra Smith.

I. General Information

Agency Name: \_\_\_\_\_

This form was completed by: \_\_\_\_\_

Telephone: ( ) \_\_\_\_\_

Date: \_\_\_\_\_

II. Permitted Facilities

Permitted Facilities <sup>1</sup>	Non-Criteria Pollutants <sup>3</sup> (CAS # <sup>2</sup> or Pollutant Name)	Emission Limit or Equivalent, if Applicable (specify unit)	Source of Emissions Subject to Limit <sup>2</sup> (total, process, handling, storage, fugitive, combustion, other - specify)
1. Facility Category <sup>2</sup> : _____	1. _____	_____	_____
2. _____	2. _____	_____	_____
3. _____	3. _____	_____	_____
4-digit SIC Code <sup>2</sup> : _____	4. _____	_____	_____
Year(s) Permit Issued/ Amended: _____	5. _____	_____	_____
Permit Identification Number <sup>2</sup> : _____	6. _____	_____	_____
Control Equipment: _____	7. _____	_____	_____
8. _____	8. _____	_____	_____
2. Facility Category <sup>2</sup> : _____	1. _____	_____	_____
3. _____	2. _____	_____	_____
4-digit SIC Code <sup>2</sup> : _____	3. _____	_____	_____
Year(s) Permit Issued/ Amended: _____	4. _____	_____	_____
Permit Identification Number <sup>2</sup> : _____	5. _____	_____	_____
Control Equipment: _____	6. _____	_____	_____
7. _____	7. _____	_____	_____
8. _____	8. _____	_____	_____

**II. Permitted Facilities (continued)**

<u>Permitted Facilities<sup>1</sup></u>	<u>Non-Criteria Pollutants<sup>3</sup> (CAS #2 or Pollutant Name)</u>	Source of Emissions Subject to Limit <sup>2</sup> (total, process, handling, storage, fugitive, combustion, other - specify)	Emission Limit or Equivalent, if Applicable (specify unit)
3. Facility Category <sup>2</sup> :	1. _____ 2. _____ 3. _____ 4-digit SIC Code: Year(s) Permit Issued/ Amended: Permit Identification Number <sup>2</sup> : Control Equipment:	_____	_____
4. Facility Category <sup>2</sup> :	1. _____ 2. _____ 3. _____ 4-digit SIC Code: Year(s) Permit Issued/ Amended: Permit Identification Number <sup>2</sup> : Control Equipment:	_____	_____
5. Facility Category <sup>2</sup> :	1. _____ 2. _____ 3. _____ 4-digit SIC Code: Year(s) Permit Issued/ Amended: Permit Identification Number <sup>2</sup> : Control Equipment:	_____	_____

<sup>1</sup>To register more than five facilities, continue on duplicate form.

<sup>2</sup>See instructions for clarification of terms.

<sup>3</sup>If more than 8 pollutants per facility, cross out facility category which follows and continue with pollutant list.

NATIONAL AIR TOXICS INFORMATION CLEARINGHOUSE  
Form 4. Ambient Monitoring Information

Please return this form to:

Ms. Sandra Smith  
Radian Corporation  
P.O. Box 9948  
Austin, TX 78766

If you have questions on completing this  
form, call:  
Sandra Smith  
Radian Corporation  
(512) 454-4797

I. General Information

Agency Name: \_\_\_\_\_

This form was completed by: \_\_\_\_\_ Telephone: ( ) \_\_\_\_\_

II. Pollutants Monitored

Please list the non-criteria pollutants (or CAS numbers) for which ambient monitoring data are available, the year(s) the measurement took place, the location of the measurement, and the sample collection technique<sup>1</sup> and analytical method<sup>2</sup> used.

	CAS # or Pollutant Measured <sup>3</sup>	Year Measured	Location of Measurement (city/county)	Sampling Technique <sup>1</sup>	Analytical Method <sup>2</sup>
1.	_____	_____	_____	_____	_____
2.	_____	_____	_____	_____	_____
3.	_____	_____	_____	_____	_____
4.	_____	_____	_____	_____	_____
5.	_____	_____	_____	_____	_____
6.	_____	_____	_____	_____	_____
7.	_____	_____	_____	_____	_____
8.	_____	_____	_____	_____	_____
9.	_____	_____	_____	_____	_____
10.	_____	_____	_____	_____	_____
11.	_____	_____	_____	_____	_____
12.	_____	_____	_____	_____	_____
13.	_____	_____	_____	_____	_____
14.	_____	_____	_____	_____	_____
15.	_____	_____	_____	_____	_____

<sup>1</sup>Technique used to collect ambient air sample, e.g., single or multi-stage solid sorbent tubes, cryogenic traps, charcoal traps, particulate samplers, etc.

<sup>2</sup>Methodology used to analyze sample for chemical constituents, e.g., gas chromatography/mass spectrometry (GC/MS), gas chromatography-electron capture detection (GC-ECD), etc.

<sup>3</sup>If more than 15 pollutants, please continue on duplicate form.

NATIONAL AIR TOXICS INFORMATION CLEARINGHOUSE  
Form 5. Toxicity Test Results

Please return this form to:

Ms. Sandra Smith  
Radian Corporation  
P.O. Box 9948  
Austin, TX 78766

If you have questions on completing this form,  
please call:

Sandra Smith, Radian Corporation  
(512) 454-4797

Please complete this form for each pollutant for which you have the results of agency-sponsored or industry-sponsored toxicity testing which you are willing to share with the Clearinghouse. Fill out only those sections for which you have test results. Use a separate form for each pollutant.

I. General Information

Agency Name: \_\_\_\_\_

This form was completed by: \_\_\_\_\_

Telephone: ( ) \_\_\_\_\_

Pollutant Name: \_\_\_\_\_

II. Mutagenicity, Teratogenicity, Carcinogenicity Test Observations

Give the observations from each of the following tests (dose and effects).

Mutagenicity

Salmonella \_\_\_\_\_

Drosophila \_\_\_\_\_

Cell Transformation \_\_\_\_\_

Sister Chromatid Exchange \_\_\_\_\_

Other \_\_\_\_\_

Teratogenicity \_\_\_\_\_

Carcinogenicity \_\_\_\_\_

III. Acute Toxicity Test Results

Give results of acute toxicity testing (24 hours to one week, LD<sub>50</sub> determination).

Route of Administration	Dosage (specify units)		Animal Species
	Single Dose	Multiple Dose	

Observations and Other Toxic Effects:

IV. Sub Acute Toxicity Test Results

Results of sub acute toxicity testing (generally 90 days).

Route of Administration	Dosage (specify units)		Animal Species
	Daily Dose	Weekly Dose	

Observations and Other Toxic Effects:

#### V. Chronic Toxicity Test Results

Give results of chronic toxicity testing (generally 1-2 years).

Route of Administration	Dosage (specify units)			Animal Species
	Daily Dose	Weekly Dose	Other	

Observations and Other Toxic Effects:

Survival Rate of Animals During Test:

Autopsy Findings:

#### VI. Human Effects

Describe effects on humans (acute, chronic, occupational exposure and epidemiological studies):

#### VII. References

Give references to toxicity studies which document data reported on this form (if available):

Please return this form to:

 Austin, TX 78706

NATIONAL AIR TOXICS INFORMATION CLEARINGHOUSE  
 Form 6. Source Testing Information

Please complete this form for facilities (e.g., individual plants at a specific site) for which you have conducted emissions testing for non-criteria air pollutants. The purpose of this form is to establish a registry of sources which have been tested as well as sampling and analytical techniques in use. This will allow other state and local agencies to benefit from your experience in this area. Please make duplicate copies of this form for as many facilities as you are willing to register with the Clearinghouse. If you have questions on completing this form, call: Sandra Smith, Radian Corporation, (512) 454-4797.
