U.S. Environmental Protection Agency

The National Priorities List (NPL) identifies the targets for long-term action under the "Superfund" law, the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). The law sets up a trust fund (expected to total \$1.6 billion over the 5-year life of the Act) to help pay for cleaning up abandoned or uncontrolled hazardous waste sites that threaten public health, welfare, or the environment. The U.S. Environmental Protection Agency (EPA) has the primary responsibility for managing cleanup activities under Superfund.

To date, EPA has inventoried almost 19,000 uncontrolled hazardous waste sites. Some require emergency action because they represent an immediate threat. EPA cleans up such sites promptly through its removal program. To be eligible for a long-term "remedial action" under Superfund, however, a site must be listed on the NPL. As of October 1984, 538 sites have met the criteria for inclusion in the NPL. Another 248 sites have been proposed for addition to the NPL. These totals result from the following notices published in the *Federal Register*.

Date	Number of Sites
October 23, 1981	115 ("Interim Priority List")
July 23, 1982	45 ("Expanded Eligibility List")
December 30, 1982	418 (proposal of first NPL, including 153 of 160 sites published previously)
March 4, 1983	1 (proposal of Times Beach, Missouri)
September 8, 1983	406 (promulgation of first NPL; seven sites continue to be proposed)
September 8, 1983	133 (proposal of Update #1)
May 8, 1984	4 (promulgation of 4 San Gabriel Valley Sites in California)
September 21, 1984	128 (promulgation of Update #1; four sites continue to be proposed)
October 15, 1984	244 (proposal of Update #2)

Current NPL (September 1984)

EPA published the first official NPL of hazardous waste sites in September 1983. It was the result of EPA's consideration of comments received during the 60-day public comment period on the 419 sites proposed in December 1982 and March 1983. Of the 419, 7 were not promulgated in the September 1983 NPL because their scores on EPA's Hazard Ranking System (HRS) were below the cut-off for listing, another 7 sites were held over in proposed status because EPA needed more time to analyze the technical comments and resolve other issues; 1 was split into 2 sites. The September 1983 NPL thus consisted of 406 sites.

In September 1983, EPA also proposed 133 new sites for listing (Proposed NPL Update #1). Four of the proposed update sites were added to the NPL in a separate action in May 1984 because EPA recognized that a serious problem exists at the sites that required taking immediate remedial action. The sites, which involve the drinking water supplies for 500,000 people, are the San Gabriel Valley, Areas 1-4, in Los Angeles County, California. This action raised the NPL to 410 sites.

After completing its evaluation of most sites on Proposed NPL Update #1, as well as the 7 in the continuing-to-be-proposed status, EPA added 128 sites to the NPL in September 1984 — 123 of the Proposed Update #1 sites and 5 of the continuing-to-be proposed sites. The details of this action are discussed below. This brought the total sites on the NPL to 538.

Disposition of Sites on Proposed NPL Update #1 (September 1983)

EPA received 128 comments on Proposed Update #1, of which 112 pertained to 50 sites; the remainder involved sites that were not proposed, or generic or technical issues that did not pertain to specific sites.

Of the 133 sites proposed in Update #1, the four San Gabriel sites were added to the final NPL earlier, 2 sites were dropped, and 4 continued to be proposed. EPA thus added 123 Update #1 sites to the NPL in September 1984.

Two sites were not listed because of changes in HRS scores resulting from EPA's review of public comments and other information. A total of 14 scores changed, but in only 2 cases did the final scores drop below the cut-off point. The two sites are

- Old Brine Sludge Landfill, Delaware City, Delaware. The ground water contaminated by the site is not used as a source of drinking water. New information indicated that the contaminated ground water is not connected to deep ground water (which is a source of drinking water), as originally reported.

-
- Rosch Property, Roy, Washington EPA determined that drums on the site are not leaking, as originally reported. In addition, a reduction in the estimate of hazardous wastes present lowered the score.

Four sites continue to be proposed:

- Olin Corp (Areas 1, 2 & 4), Augusta, Georgia. EPA determined that certain sections of the appropriate scoring documents for the site were not in the public docket and so were not available during the comment period. EPA provided an additional 60-day comment period for this site following the September 21, 1984, promulgation of Update #1 in the *Federal Register*.
- Quail Run Mobile Manor, Gray Summit, Missouri. This site does not meet the current criteria for placing a site on the NPL. These criteria are specified in the National Contingency Plan (NCP), the Federal regulation by which CERCLA is implemented. EPA is considering modifying the NCP in such a way that Quail Run and similar sites will qualify for the NPL on the basis of additional criteria. These additional criteria for listing are explained in the Preamble to Proposed Update #1 (48 *Federal Register* 40675, September 8, 1983).
- Sand Springs Petrochemical Complex, Sand Springs, Oklahoma. EPA determined that certain sections of the appropriate scoring documents for the site were not in the public docket and so were not available during the comment period. EPA provided an additional 60-day comment period for this site following the September 21, 1984, promulgation of Update #1 in the *Federal Register*.
- Pig Road, New Waverly, Texas. EPA determined that further sampling and analysis are necessary to verify the site's score.

**Disposition of Sites
That Continued
To Be Proposed in
September 1983**

EPA completed its analysis of technical comments and resolved technical issues for the seven sites proposed in December 1982 and continued to be proposed in the September 1983 rulemaking. The following two sites were dropped from consideration:

- Kingman Airport Industrial Area, Kingman, Arizona. EPA determined that the elevated levels of hexavalent chromium occur naturally in ground water in the area and are probably not related to any industrial or other human activity. EPA has decided not to include sites in the NPL if the contamination is determined to occur naturally.
- Littlefield Township Dump, Oden, Michigan. EPA found that an error had been made in the population affected by the site. The correct population figure drops the HRS score to below the cut-off point.

Based on the completion of additional analysis, EPA added these five sites to the NPL

- Airco, Calvert, Kentucky
- Bayou Sorrel, Bayou Sorrel, Louisiana
- Clare Water Supply, Clare, Michigan
- Electrovoice, Buchanan, Michigan
- Whitehall Municipal Wells, Whitehall, Michigan

Description of List

Each entry on the list contains the name of the site, the State and city or county in which it is located, and the corresponding EPA Region. The entries are arranged according to their scores on the HRS. HRS scores are designed to take into account a standard set of factors related to risks from potential or actual migration of substances through ground water, surface water, and air. Listing by rank serves both as an information and management tool, allowing EPA and the States to decide which sites warrant detailed investigation to determine what, if any, response is needed.

The 538 sites on the NPL are in 11 groups, 50 to a group (except for the last group of 38). The scores on the NPL (except for some sites designated by States as their top priority) range from 75.60 to 28.62. An HRS score of 28.50 was selected as the cut-off point for the first proposed NPL to identify at least 400 sites, the minimum specified by CERCLA. The range within most of the groups of 50 is only 2 to 4 points. For convenience, the sites are numbered. However, EPA considers sites within a group to represent approximately the same threat to public health, welfare, or the environment.

CERCLA allows a State or Territory to designate a top-priority site; 36 did so. These sites must be listed in the first 100, regardless of score. Of the 36 top priority sites, 9 are included in the first 100 on the basis of their scores. The remaining 27 have scores that would not place them in the top 100. They are included at the bottom of the second group of 50. Of the 27, 8 have scores below 28.50.

Each entry on the NPL is also accompanied by one or more notations referencing the status of response and cleanup activities at the site at the time the list was prepared (September 21, 1984). In the past, EPA categorized NPL sites based on the type of response at each site (fund-financed, enforcement, and/or voluntary action). EPA is now expanding the prior categorization system in two ways. First, Federal enforcement actions are separated from State enforcement actions. Second, the status of site cleanup activities is designated by three

new cleanup status codes. The codes identify sites where significant cleanup activities are underway or completed. Five response categories are used to designate the type of response underway. One or more categories may apply to each site. The five are:

- V** The Voluntary or Negotiated Response category includes sites where private parties have started or completed response actions pursuant to settlement agreements or consent decrees to which EPA or the State is a party.
- R** The Federal and/or State Response category includes sites at which EPA or State agencies have started or completed response actions.
- F** The Federal Enforcement category includes sites where the United States has filed a civil complaint (including cost recovery actions) or issued an administrative order. It also includes sites at which a Federal court has mandated some form of response action following a judicial proceeding.
- S** The State Enforcement category includes sites where a State has filed a civil complaint or issued an administrative order. It also includes sites at which a State court has mandated some form of response action following a judicial proceeding.
- D** Category To Be Determined. The category includes all sites not listed in any other category. A wide range of activities may be in progress at sites in this category. EPA or a State may be evaluating the type of response action to undertake, or an enforcement case may be under consideration. Responsible parties may be undertaking cleanup actions that are not covered by a consent decree or an administrative order.

EPA has decided to indicate for informational purposes the status of fund- financed field activities underway or completed, as well as the status where responsible parties are conducting cleanup activities under a consent decree, court order, or an administrative order. Remedial planning or engineering studies do not receive a cleanup status code.

Many sites are cleaned up in stages or "operable units"—that is, a discrete action taken as part of the entire site cleanup that significantly decreases or eliminates contamination, threat of contamination, or pathway of exposure. One or more operable units may be necessary before EPA will consider the cleanup of a hazardous waste site completed. A simple action such as constructing a fence is not considered an operable unit for coding purposes.

Three cleanup status codes are used (Only one code can be used at a site because the codes are mutually exclusive). The three codes are:

- I** Implementation activities are underway for one or more operable units. Field work is in progress at the site, but no operable units are completed.
- O** Implementation activities for one or more (but not all) operable units are completed. Some field work has been completed, but additional work is necessary.
- C** Implementation activities for all operable units are completed. All actions agreed upon for remedial action at the site have been completed, and work has started to monitor the effectiveness of the cleanup. Further site activities could occur if EPA considers them necessary.

Distribution of Sites — Current NPL

Of the 50 States, the District of Columbia, and 6 territories, 6 have no sites on the current NPL. They are Alaska, the District of Columbia, Hawaii, Nebraska, Nevada, and the Virgin Islands. New Jersey has the largest number of sites (85), followed by Michigan (47), Pennsylvania (39), and Florida and New York (29 each).

TOTAL SITES LISTED: 538

Proposed Update #2 (October 1984)

Proposed Update #2 consists of 244 sites—208 non-Federal and 36 Federal facilities.

Federal Facility Sites

This is the first time that EPA is proposing Federally owned sites. CERCLA Section 111(e)(3) prohibits use of the trust fund for remedial actions at Federally owned facilities. In the past, EPA listed sites where the Federal government was involved in the following ways

- The Federal government had formerly owned the land
- The Federal government may have contributed to the problem

EPA did not list any sites where:

- The contamination resulted solely from a Federal facility, regardless of whether contamination remained on-site or had migrated off-site
- The source of contamination resulted from a combination of Federal and non-Federal facilities
- The source had not been conclusively established as coming from a Federal facility

EPA intends to continue its original policy regarding these sites. However, EPA now believes that it is appropriate to list Federal facility sites separately on the NPL when such facilities meet the criteria for inclusion. This approach has been endorsed by comments received from the public. Federal facility sites are listed when the HRS scores are equal to or above 28.50 so as to focus public attention and appropriate resources on the most serious sites, even though they are not eligible for fund-financed remedial action.

For Proposed Update #2, Federal sites are presented in a separate NPL section. It contains only the sites where the problem appears to result solely from a Federal facility, regardless of whether contamination remains on-site or has migrated off-site.

EPA is preparing a proposed amendment to the National Contingency Plan (the Federal regulation under which CERCLA is implemented) to allow promulgation of these Federal facility sites on the NPL. For Proposed Update #2, EPA scored those Federal facilities identified by Federal agencies and the States as NPL candidates where *sufficient information existed to apply the HRS*. However, EPA does not intend to promulgate any of the Federal sites on Proposed Update #2 until the proposed amendment to the National Contingency Plan is final. In the meantime, EPA is continuing to work with Federal agencies to investigate potential problems and implement corrective measures at Federal sites.

The 244 sites in Update #2 are presented in two sections — non-Federal and Federal — followed by the four sites that continue to be proposed from Update #1. Each entry contains the name of the site, the State and city or county in which it is located, and the corresponding EPA Region. Each section is arranged in groups according to HRS scores. On the NPL of September 1984, the sites are arranged in groups of 50. The sites in each of the two sections of Proposed Update #2 are arranged in groups corresponding to the scores of groups of 50 sites on the September 1984 NPL.

Essentially the same response categories are assigned for Federal facility sites as for non-Federal sites. A Federal agency response is indicated by the (R) category. When the (R) category does not apply, other Federal agency activities at that site, such as evaluating the appropriate response to undertake, are indicated by the (D) category. Cleanup codes are assigned to Federal facility sites in the same manner as they are to non-Federal sites.

**Distribution of Sites —
Proposed Update #2**

Of the States and Territories, 17 have no sites on Proposed Update #2. They are Alaska, American Samoa, Commonwealth of Marianas, Connecticut, the District of Columbia, Guam, Idaho, Nevada, New Mexico, North Dakota, Puerto Rico, South Carolina, South Dakota, Trust Territories, Vermont, the Virgin Islands, and Wyoming. The State with the most sites on Proposed Update #2 is California, with 41 sites. Of these, 19 are in the South Bay Area of San Francisco and appear to share a common ground water problem. Other States proposing a large number of sites are New York (29), Texas (15), Michigan (12), and Illinois and Minnesota (11 each).

Non-Federal Sites, Proposed Update No. 2

Current and Proposed Sites

A total of 786 sites appear on the list by State: 538 on the NPL, 244 on Update #2, and 4 that continue to be proposed from Update #1.

Distribution of Sites — Current and Proposed

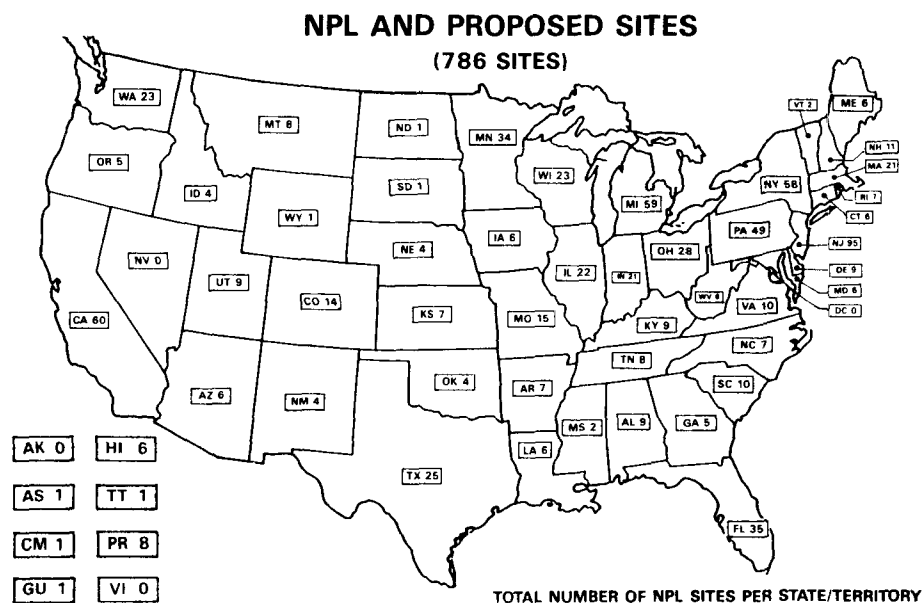

After a period of public comment and revisions, the proposed sites that continue to score above the cut-off point will be merged into the current NPL. Alaska, the District of Columbia, Nevada, and the Virgin Islands have no sites on or proposed for the NPL. When NPL and proposed sites are combined, New Jersey has the largest number with 95, followed by California (60), Michigan (59), and New York (58). By EPA Region, Region 5 (Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin) leads with 187 sites.

Activities and Problems at Sites

A wide range of activities were involved in the operations at sites on or proposed for the NPL. Landfilling was the major type of activity, taking place at about 42 percent of all sites. Other major activities were surface impoundments (34 percent) and drums (24 percent).

Most of the sites have problems involving ground water. At 74 percent, hazardous materials were detected in ground water. About 46 percent of the sites had problems with surface water, and 17 percent with air.

A variety of pollutants, primarily heavy metals and organic solvents, were detected in ground water, surface water, air, and the environment at sites on and proposed for the NPL.

^a Includes 244 Update #2 Sites Plus 4 Update #1 Sites That Continue To Be Proposed.

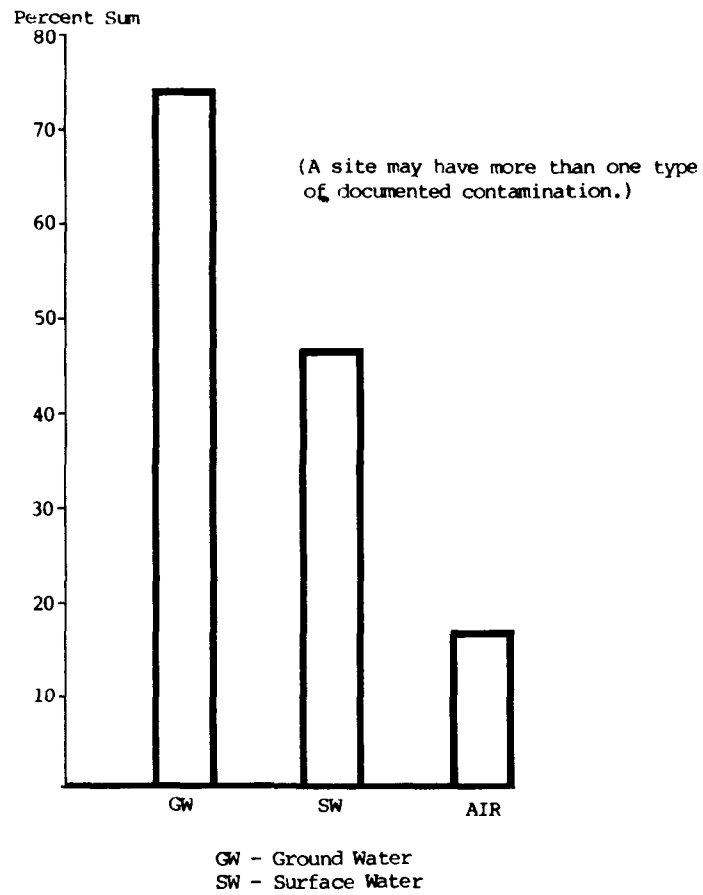

Types of Activities at Current and Proposed Sites, in Order of Occurrence

Surface Impoundment
 Landfill
 Drums
 Open Dump
 Tank, Above-Ground
 Pile
 Transporter
 Chemical Manufacturing
 Recycling/Recovery
 Tank, Below-Ground
 Well Field
 Chemical/Physical Treatment
 Manufacturing Other Than
 Chemical
Incineration
 Wood Preserving
 Waste Oil Processing
 Midnight Dumping
 Solvent Recovery
 Spill Site
 Sand/Gravel Pit
 Mining Site
 Military Ordnance
 Ore Processing/Smelting
 Electroplating
 Storage, Not Otherwise
 Specified
 Biological Treatment
 Open Burning
 Battery Recycling
 Road Oiling Site
 Landfarm
 Wetland
 Foundry
 Underground Injection
 Laundry/Dry Cleaning
 Drum Recycling
 Laboratory
 Surface Water Outfall
 Sink Hole
 Underground Fire
 Explosive Disposal

Types of Activities at Current and Proposed Sites (786) October 1984

**Documented Contamination at Current and
Proposed Sites (786)
October 1984**

Sites Not Promulgated^a

State/Site Name/Location	Date Proposed or announced	Dropout
AR Arkansas Allen Transformer Fort Smith	10/81	12/82

^a Failed to meet NPL criteria.

Sites Cleaned up to Date^a

State/Site Name/Location	Date
GA Georgia Luminous Processes, Inc. ^b Athens	1982
MD Maryland Chemical Metals Industries, Inc. ^b Baltimore	1982
MI Michigan Gratiot County Golf Course ^c St. Louis	1983
MS Mississippi Walcott Chemical Co Warehouses ^b Greenville	1982
OH Ohio Chemical & Minerals Reclamation ^b Cleveland	1982
PA Pennsylvania Butler Tunnel ^b Pittston	1982

^aDoes not include sites currently on the NPL with a cleanup status code of "C"

^bOn the Interim Priority List or Expanded Eligibility List, but cleaned up before December 1982, when the first NPL was proposed.

^cOn the first proposed NPL, but cleaned up before the first NPL was promulgated in September 1983

Current NPL and Proposed Sites (by State)^a

United States 538 NPL + 248 Proposed = 786 sites

SITE NAME/Location	Date proposed ^b	Position on lists ^c
--------------------	-------------------------------	-----------------------------------

AL ALABAMA (7 NPL + 2 proposed = 9 sites)

CIBA-GEIGY CORP. (MCINTOSH PLANT) McIntosh	9/83	124
MOWBRAY ENGINEERING CO. Greenville	12/82	118
OLIN CORP. (MCINTOSH PLANT) McIntosh	9/83	320
PERDIDO GROUND WATER CONTAMINATION Perdido	12/82	511
STAUFFER CHEMICAL CO. (COLD CREEK PLANT) Bucks	9/83	204
STAUFFER CHEMICAL CO. (LEMOYNE PLANT) Axis	9/83	467
TRIANA/TENNESSEE RIVER (once listed as TRIANA(REDSTONE) ARSENAL) Limestone/Morgan Counties	10/81	31

ALABAMA ARMY AMMUNITION PLANT ^f Childersburg	10/84	Gr 8
ANNISTON ARMY DEPOT (SOUTHEAST INDUSTRIAL AREA) ^f Anniston	10/84	Gr 3

^a Includes 244 sites proposed as Update #2, plus 4 sites proposed in September 1983 as part of Update #1. The current NPL sites (including any Update #1 sites) for each State are listed first alphabetically, followed by Proposed Update #2 sites, also alphabetically.

^b Date first eligible for Superfund remedial action. First NPL proposed December 1982. Some sites announced in October 1981 and July 1982.

^c NPL sites are numbered 1-538. Proposed sites are placed in one of 11 groups corresponding to the 11 groups (50 in each group) in the NPL.

^d Continuing to be proposed.

^f Federal facility.

* Designated as State's top priority.
