Chesapeake Bay Program

The Chesapeake Bay Program is a unique regional partnership leading and directing restoration of Chesapeake Bay since 1983. The Chesapeake Bay Program partners include the states of Maryland, Pennsylvania, and Virginia; the District of Columbia; the Chesapeake Bay Commission, a tri-state legislative body; the U.S. Environmental Protection Agency (EPA), which represents the federal government; and participating citizen advisory groups.

In the *1987 Chesapeake Bay Agreement*, Chesapeake Bay Program partners set a goal to reduce the nutrients nitrogen and phosphorus entering the Bay by 40% by the year 2000. In the *1992 Amendments* to the *Chesapeake Bay Agreement*, partners agreed to maintain the 40% goal beyond the year 2000 and to attack nutrients at their source--upstream in the tributaries. The Chesapeake Executive Council, made up of the governors of Maryland, Pennsylvania, and Virginia; the mayor of Washington, D.C.; the EPA administrator; and the chair of the Chesapeake Bay Commission, guided the restoration effort in 1993 with five directives addressing key areas of the restoration, including the tributaries, toxics, underwater bay grasses, fish passages, and agricultural nonpoint source pollution. In 1994, partners outlined initiatives for habitat restoration of aquatic, riparian, and upland environments; nutrient reduction in the Bay's tributaries; and toxics reductions, with an emphasis on pollution prevention

The 1995 *Local Government Partnership Initiative* engages the watershed's 1,650 local governments in the Bay restoration effort. The Chesapeake Executive Council followed this in 1996 by adopting the *Local Government Participation Action Plan* and the *Priorities for Action for Land, Growth and Stewardship in the Chesapeake Bay Region*, which address land use management, growth and development, stream corridor protection, and infrastructure improvements. A 1996 riparian forest buffers initiative furthers the Bay Program's commitment to improving water quality and enhancing habitat with the goal of increasing riparian buffers on 2,010 miles of stream and shoreline in the watershed by the year 2010.

Since its inception, the Chesapeake Bay Program's highest priority has been the restoration of the Bay's living resources--its finfish, shellfish, bay grasses, and other aquatic life and wildlife Improvements include fisheries and habitat restoration, recovery of bay grasses, nutrient reductions, and significant advances in estuarine science.

Acknowledgments

Development of *A Comprehensive List of Chesapeake Bay Basin Species 1997* was supported by the U.S. Environmental Protection Agency (Contract CB-993038-02-0) and the Interstate Commission on the Potomac River Basin, an interstate compact river basin commission whose signatories are the U. S. Environmental Protection Agency, Maryland, Virginia, Pennsylvania, West Virginia and the District of Columbia.

Sources of Species Information

A Comprehensive List of Chesapeake Bay Basin Species 1997 is an update of a 1992 document published by the Environmental Protection Agency Chesapeake Bay Program Office (CBP/TRS 70/92). It provides a list of aquatic and aquatic-associated organisms found in recent decades in the Chesapeake Bay Basin. The list was originally extracted from monitoring data collected by federal and state agencies and private institutions. An extensive search identified other available aquatic Chesapeake Bay species information. Species data were collected from the following agencies:

- Interstate Commission on the Potomac River Basin
- Maryland Department of the Environment
- Virginia Institute of Marine Sciences

Species identified by these sources were then verified and merged with:

- preexisting EPA Chesapeake Bay species list

In addition, three documents were reviewed to identify and include water-associated biota such as waterfowl, raptors and wetlands vegetation:

- *Habitat Requirements for Chespeake Bay Living Resources.* 1991. Editors: S. L. Funderburk, S. J. Jordan, J. A. Mihursky and D. Riley for the Living Resources Subcommittee of the Chesapeake Bay Program.
- *Distribution of Submerged Aquatic Vegetation in the Chesapeake Bay.* 1989. Virginia Institute of Marine Sciences, Gloucester Point, VA.
- *Life in the Chesapeake Bay.* 1984. A. J. Lippson and R. L. Lippson. The Johns Hopkins University Press.

A comprehensive species list for the Potomac Estuary developed by the Interstate Commission on the Potomac River Basin in 1993 was used to begin updating the 1992 CBP document. The Commission had collected species information from master lists of the following organizations and monitoring programs:

- Academy of Natural Sciences, Benedict Estuarine Research Center
- Versar, Inc.
- Gunston Cove Ecosystem Monitoring Program, George Mason University
- District of Columbia Biomonitoring Program
- Public Health Service National Water Quality Network (1958 - 1968)

and from documents:

- *Environmental Atlas of the Potomac Estuary.* undated. A. J. Lippson et al. Prepared by Environmental Center, Martin Marietta Corporation for the Power Plant Siting Program, Maryland Department of Natural Resources.
- *Index and Field Guide to the Fishes of the District of Columbia.* 1987. J. D. Cummins. District of Columbia, Department of Consumer and Regulatory Affairs, Environmental Control Division, Fisheries.
- *Field Guide to the Submerged Aquatic Vegetation of Chesapeake Bay.* 1990. L. M. Hurley. US Fish & Wildlife Service, Chesapeake Bay Estuary Program.

Newly identified species in the Maryland and Virginia Chesapeake Bay biomonitoring programs were added and the list reviewed to remove duplications and errors. Species were then matched by scientific name to their National Oceanographic Data Center (NODC) codes. Any remaining species that could not be matched by either NODC code or scientific name were reexamined. If they proved to be valid species, they were given temporary codes.

Organization and Availability

The master list of Chesapeake basin species compiled in this report is arranged alphabetically by scientific name. Associated with each species is its most recent NODC code, its Taxon Serial Number (TSN) recently developed by EPA, NOAA and other organizations, and its common name if one exists. The document is available in hardcopy from:

Biological Monitoring Data Manager
US EPA Chesapeake Bay Program
410 Severn Avenue
Annapolis, MD 21403

An ASCII, comma delimited file of the species master list and associated species codes is available to users with accounts on the CBP CHESIE computer. The file is located in the CHESIE directory LR disk:[LR.PUBLIC] and is named NODCCODE.TXT. This document is also available on the CBP Internet Home Page (http://www.epa.gov/r3chespk/) as SPECIE97.PDF.

NODC and Taxonomic Serial Number Codes

This document makes extensive use of the NODC Taxon Codes Version 7.0. The NODC Taxon Code is a hierarchial system of numerical codes used to represent the scientific names of organisms. The code links the Linnean system of biological nomenclature to a numerical schema that facilitates modern methods of computerized data storage and retrieval. An NODC code contains a maximum of 12 digits partitioned into 2-digit couplets. Each couplet represents one or more levels of the taxonomic hierarchy. For example,

Digit	Represents
1-2	Phylum
3-4	Class and/or Order
5-6	Family
7-8	Genus
9-10	Species
11-12	Subspecies

One drawback of the NODC code is it changes over time to reflect current changes in taxonomic classifications. However, it provides data analysts with a tool for sorting organisms along taxonomic lines.

The Taxonomic Serial Number (TSN) of each organism is also provided in this document. Federal agencies developing the NODC code have also adopted the TSN code which assigns each recognized species a permanent number. The TSN allows a species to be tracked over time regardless of changes in name and taxonomic classification. When used in conjunction with the NODC, the TSN overcomes the problem of numeric changes in the NODC code whenever species are reclassified.

In cases where a species is recognized in the scientific literature but has not yet been assigned an NODC Code and a TSN, temporary values have been assigned. The value BAYxxxx has been assigned to all species without TSN. Partial NODC Codes have been assigned with alphabetic characters in place of missing digits for missing genus and species values.

Chesapeake Bay Program

The Chesapeake Bay Program is a unique regional partnership leading and directing restoration of Chesapeake Bay since 1983. The Chesapeake Bay Program partners include the states of Maryland, Pennsylvania, and Virginia; the District of Columbia, the Chesapeake Bay Commission, a tri-state legislative body; the U.S. Environmental Protection Agency (EPA), which represents the federal government; and participating citizen advisory groups.

In the *1987 Chesapeake Bay Agreement*, Chesapeake Bay Program partners set a goal to reduce the nutrients nitrogen and phosphorus entering the Bay by 40% by the year 2000. In the *1992 Amendments* to the *Chesapeake Bay Agreement*, partners agreed to maintain the 40% goal beyond the year 2000 and to attack nutrients at their source--upstream in the tributaries. The Chesapeake Executive Council, made up of the governors of Maryland, Pennsylvania, and Virginia; the mayor of Washington, D.C.; the EPA administrator; and the chair of the Chesapeake Bay Commission, guided the restoration effort in 1993 with five directives addressing key areas of the restoration, including the tributaries, toxics, underwater bay grasses, fish passages, and agricultural nonpoint source pollution. In 1994, partners outlined initiatives for habitat restoration of aquatic, riparian, and upland environments; nutrient reduction in the Bay's tributaries; and toxics reductions, with an emphasis on pollution prevention.

The 1995 *Local Government Partnership Initiative* engages the watershed's 1,650 local governments in the Bay restoration effort. The Chesapeake Executive Council followed this in 1996 by adopting the *Local Government Participation Action Plan* and the *Priorities for Action for Land, Growth and Stewardship in the Chesapeake Bay Region*, which address land use management, growth and development, stream corridor protection, and infrastructure improvements. A 1996 riparian forest buffers initiative furthers the Bay Program's commitment to improving water quality and enhancing habitat with the goal of increasing riparian buffers on 2,010 miles of stream and shoreline in the watershed by the year 2010.

Since its inception, the Chesapeake Bay Program's highest priority has been the restoration of the Bay's living resources--its finfish, shellfish, bay grasses, and other aquatic life and wildlife Improvements include fisheries and habitat restoration, recovery of bay grasses, nutrient reductions, and significant advances in estuarine science

Acknowledgments

Development of *A Comprehensive List of Chesapeake Bay Basin Species 1997* was supported by the U.S. Environmental Protection Agency (Contract CB-993038-02-0) and the Interstate Commission on the Potomac River Basin, an interstate compact river basin commission whose signatories are the U. S. Environmental Protection Agency, Maryland, Virginia, Pennsylvania, West Virginia and the District of Columbia.

Sources of Species Information

A Comprehensive List of Chesapeake Bay Basin Species 1997 is an update of a 1992 document published by the Environmental Protection Agency Chesapeake Bay Program Office (CBP/TRS 70/92). It provides a list of aquatic and aquatic-associated organisms found in recent decades in the Chesapeake Bay Basin. The list was originally extracted from monitoring data collected by federal and state agencies and private institutions. An extensive search identified other available aquatic Chesapeake Bay species information. Species data were collected from the following agencies:

- Interstate Commission on the Potomac River Basin
- Maryland Department of the Environment
- Virginia Institute of Marine Sciences

Species identified by these sources were then verified and merged with:

- preexisting EPA Chesapeake Bay species list

In addition, three documents were reviewed to identify and include water-associated biota such as waterfowl, raptors and wetlands vegetation:

- *Habitat Requirements for Chespeake Bay Living Resources.* 1991. Editors: S. L. Funderburk, S. J. Jordan, J. A. Mihursky and D. Riley for the Living Resources Subcommittee of the Chesapeake Bay Program.
- *Distribution of Submerged Aquatic Vegetation in the Chesapeake Bay.* 1989. Virginia Institute of Marine Sciences, Gloucester Point, VA.
- *Life in the Chesapeake Bay.* 1984. A. J. Lippson and R. L. Lippson. The Johns Hopkins University Press.

A comprehensive species list for the Potomac Estuary developed by the Interstate Commission on the Potomac River Basin in 1993 was used to begin updating the 1992 CBP document. The Commission had collected species information from master lists of the following organizations and monitoring programs:

- Academy of Natural Sciences, Benedict Estuarine Research Center
- Versar, Inc.
- Gunston Cove Ecosystem Monitoring Program, George Mason University
- District of Columbia Biomonitoring Program
- Public Health Service National Water Quality Network (1958 - 1968)

and from documents:

- *Environmental Atlas of the Potomac Estuary.* undated. A. J. Lippson et al. Prepared by Environmental Center, Martin Marietta Corporation for the Power Plant Siting Program, Maryland Department of Natural Resources.
- *Index and Field Guide to the Fishes of the District of Columbia.* 1987. J. D. Cummins. District of Columbia, Department of Consumer and Regulatory Affairs, Environmental Control Division, Fisheries.
- *Field Guide to the Submerged Aquatic Vegetation of Chesapeake Bay.* 1990. L. M. Hurley. US Fish & Wildlife Service, Chesapeake Bay Estuary Program.

Newly identified species in the Maryland and Virginia Chesapeake Bay biomonitoring programs were added and the list reviewed to remove duplications and errors. Species were then matched by scientific name to their National Oceanographic Data Center (NODC) codes. Any remaining species that could not be matched by either NODC code or scientific name were reexamined. If they proved to be valid species, they were given temporary codes.

Organization and Availability

The master list of Chesapeake basin species compiled in this report is arranged alphabetically by scientific name. Associated with each species is its most recent NODC code, its Taxon Serial Number (TSN) recently developed by EPA, NOAA and other organizations, and its common name if one exists. The document is available in hardcopy from:

Biological Monitoring Data Manager
US EPA Chesapeake Bay Program
410 Severn Avenue
Annapolis, MD 21403

An ASCII, comma delimited file of the species master list and associated species codes is available to users with accounts on the CBP CHESIE computer. The file is located in the CHESIE directory LR disk:[LR.PUBLIC] and is named NODCCODE.TXT. This document is also available on the CBP Internet Home Page (http://www.epa.gov/r3chespk/) as SPECIE97.PDF.

NODC and Taxonomic Serial Number Codes

This document makes extensive use of the NODC Taxon Codes Version 7.0. The NODC Taxon Code is a hierarchial system of numerical codes used to represent the scientific names of organisms. The code links the Linnean system of biological nomenclature to a numerical schema that facilitates modern methods of computerized data storage and retrieval. An NODC code contains a maximum of 12 digits partitioned into 2-digit couplets. Each couplet represents one or more levels of the taxonomic hierarchy. For example,

Digit	Represents
1-2	Phylum
3-4	Class and/or Order
5-6	Family
7-8	Genus
9-10	Species
11-12	Subspecies

One drawback of the NODC code is it changes over time to reflect current changes in taxonomic classifications. However, it provides data analysts with a tool for sorting organisms along taxonomic lines.

The Taxonomic Serial Number (TSN) of each organism is also provided in this document. Federal agencies developing the NODC code have also adopted the TSN code which assigns each recognized species a permanent number. The TSN allows a species to be tracked over time regardless of changes in name and taxonomic classification. When used in conjunction with the NODC, the TSN overcomes the problem of numeric changes in the NODC code whenever species are reclassified.

In cases where a species is recognized in the scientific literature but has not yet been assigned an NODC Code and a TSN, temporary values have been assigned. The value BAYxxxx has been assigned to all species without TSN. Partial NODC Codes have been assigned with alphabetic characters in place of missing digits for missing genus and species values.
