**EPA ACTIVITIES RELATED TO SOURCES OF
GROUND-WATER CONTAMINATION**

Office of Ground-Water Protection
U.S. Environmental Protection Agency
Washington, D.C.

February 1987

ACKNOWLEDGEMENTS

This document was prepared for the U.S. Environmental Protection Agency, Office of Ground-Water Protection (OGWP) by Booz, Allen and Hamilton Inc. Ms. Wendy Blake-Coleman of OGWP served as the Task Manager for this project.

The program information contained in the document was collected with the help of a network of AA liaisons to the Office of Ground-Water Protection and representatives from the Regional Offices of Ground Water. The network included the following persons:

Carol Jones - Office of Enforcement and Compliance Monitoring

Brendan Doyle - Office of Policy, Planning and Evaluation

Margaret Schneider - Office of External Affairs

Wendy Blake-Coleman - Office of Water

Joan LaRock - Office for Solid Waste and Emergency Response

Louise Wise - Office for Solid Waste and Emergency Response

John Russell - Office for Air and Radiation

Carol Panasewich - Office for Pesticides and Toxic Substances

Karen Hammerstrom - Office for Pesticides and Toxic Substances

James Basilico - Office for Research and Development

Bruce Rosinoff - Region I Office of Ground Water

John Malleck - Region II Office of Ground Water

Tom Merski - Region III Office of Ground Water

ACKNOWLEDGEMENTS
(Continued)

Stallings Howell - Region IV Ground-Water Protection Branch
Chuck Job - Region V Office of Ground Water
Joyce Lehe - Region VI Office of Ground Water
Timothy Amsden - Region VII Office of Ground Water
Richard Long - Region VIII Office of Ground Water
James Thompson - Region IX Office of Ground Water
Bill Mullen - Region X Office of Ground Water

The following people were also instrumental in helping the core group collect and review data:

Francoise Brasier - Office of Drinking Water
Katherine Minsch - Office of Marine and Estuarine Protection
Marie Perez - Office of Municipal Pollution Control
David Eng - Office of Water Enforcement and Permits
Rod Frederick - Office of Water Regulations and Standards
Susan Sawtelle - Office of Solid Waste
Holly Sawin - Office of Federal Activities

OGWP would also like to extend its thanks to the numerous other EPA staff who helped review the document.

The Booz, Allen and Hamilton Inc. staff who were involved in developing this document were Joanne Wyman, Raymond Rose, David Colbert, Robert Kravitz, and Jerry Strauss.

I. EXECUTIVE SUMMARY

I. EXECUTIVE SUMMARY

One of the major elements discussed in the 1984 EPA Ground-Water Protection Strategy was the need to more effectively coordinate internal EPA ground-water protection activities. Building upon earlier efforts, the Office of Ground-Water Protection (OGWP) undertook a special project during the summer and fall of 1986 in which all Headquarters program offices and Regional offices were surveyed to determine the type, scope, and status of ground-water quality protection activities that were being conducted by the Agency. This information and contact names were placed in an automated data base so that it would be accessible to EPA staff for program coordination activities. Another major purpose of the OGWP survey was to computerize this activity information so that it would be useful to Agency staff in answering future Congressional and public inquiries. This report contains the results of the survey. It is intended to serve as a basis for internal discussion about the Agency's agenda for addressing ground-water issues.

The survey focused on Agency activities that address 33 sources of ground-water contamination listed in the 1984 Office of Technology Assessment (OTA) report Protecting The Nation's Groundwater From Contamination (OTA 1984). This list contains sources ranging from landfills to road salt applications. The OTA report had been requested by the Senate Committee on Environment and Public Works to increase members' knowledge about national activities to protect ground-water quality. Both the report and the 33 sources of contamination were highlighted in hearings of the Senate Subcommittee on Toxic Substances and Environmental Oversight on ground-water issues during 1985.

This report contains a listing of approximately 270 EPA programs and activities that address these 33 OTA-listed sources. Inventory information was obtained through a work group composed of liaisons appointed by each Assistant Administrator and representatives of each Regional Ground-Water Office. This group in turn developed a large network of EPA staff who supplied and reviewed the program and activity listings and summaries contained in sections IV and V of this report.

The inventory is not exhaustive, largely because EPA offices are continually initiating new activities. Rather, it provides the reader with a representative picture of the EPA's ground-water protection efforts as of the fall of 1986. The large number of offices involved in the survey and the

variability in their involvement with ground-water issues makes it difficult to get a definitive and even picture of the activities across the Agency. However, despite the variability of data obtained, some conclusions can be drawn about the Agency's ground-water activity.

The Agency is currently addressing 25 of the 33 sources listed in the OTA report. Not surprisingly, a significant distinction occurs in the level of Agency activity focused on sources that are clearly and directly regulated under EPA's statutory mandates and those that are not. An important exception appears to be fertilizer application, which is receiving focused attention in connection with the major strategic initiative to develop a strategy regarding agricultural chemicals in ground water.

Waste management is receiving the greatest amount of Agency attention among the ground-water problems that were listed by OTA. Seven individual waste management sources receive the most attention: abandoned waste sites, landfills, land application, injection wells, surface impoundments, underground storage tanks and waste piles. A substantial amount of the activity surrounding these seven sources falls under the Resource Conservation and Recovery Act (RCRA) implemented by the Office of Solid Waste, but there are also major efforts to address these sources through the Safe Drinking Water Act (SDWA), the Clean Water Act (CWA), and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Pesticide application is the only exclusively non-waste management source receiving extensive Agency attention. Major preventive activities are being put in place such as increased consideration of the leaching potential of pesticides during the registration process, encouragement of management practices by pesticide users to minimize pesticide leaching to ground water, and the development of an overall Agency strategy for addressing agricultural chemicals.

Non-waste sources with substantial reported activity are enhanced oil recovery and mining-related injection wells and underground storage tanks storing non-wastes such as petroleum products and raw chemicals. These sources are addressed in concert with waste management wells and tanks.

The eight OTA listed sources for which Agency program offices did not report ground-water activities were: material stock piles, graveyards, animal burial, animal feedlots, atmospheric deposition and percolation, natural leaching and other wells.

A small but important number of Agency activities demonstrate the Agency's increasing emphasis on preventive measures and comprehensive resource management. Activities in this area emphasize areawide and institutional issues as well as technical best management practices rather than the control of individual sources. Examples of efforts in this area include the grants to States to develop ground-water strategies and programs (CWA-106) and Region I's Cape Cod Aquifer Management Project.

A substantial number of the activities reported by program offices encompass a broad spectrum of policy and scientific support issues. These activities provide essential technical and institutional information that decisionmakers need to carry out source-specific and resource-based activities implemented by the Agency. Policy development, research efforts, standards development and data management fall under this category.

The information contained in this report reflects the status of EPA ground-water activities as of October 1986. New activities aimed at providing better information about the resource and protective measures as well as more effective regulation of contamination sources are initiated continually. Questions about the status of activities on any of the individual sources listed in the document should be addressed to either the program offices or individuals listed as contacts in section IV of this report.

II. INTRODUCTION

II. INTRODUCTION

Public concern for protecting the nation's ground water is one of the most pressing environmental issues of the 1980s. At a time when reliance on ground water as a source of water supplies is increasing, there is mounting evidence that the nation's ground water is already contaminated and is threatened by significant future pollution incidents. A wide variety of contaminants with adverse health, environment, economic and social impacts have been detected in ground water throughout the nation.

Recognition of this public concern prompted the Senate Committee on Environment and Public Works to ask the Office of Technology Assessment (OTA) to study the nation's knowledge about and experience in dealing with ground-water contamination problems. The result was a two-volume report on the status of nationwide efforts to protect the nation's vital ground-water resources.

This report, entitled Protecting the Nation's Groundwater From Contamination (October 1984), concludes that Federal, State and local efforts to protect the ground water remain inadequate. Impediments to an effective national program for ground-water protection include significant overlaps and gaps in existing statutes, a focus on detection and cleanup rather than prevention of contamination, coverage of a limited number of the actual and potential contaminants and their sources, and an emphasis on protection of public but not private drinking water supplies.

OTA's report contained a list of 33 sources of actual or potential ground-water contamination (see Exhibit II-1). This list served as a focal point for ground-water hearings held by the Senate Subcommittee on Toxic Substances and Environmental Oversight in 1985. The Office of Ground-Water Protection (OGWP) subsequently decided to compile an inventory of Agency-wide activities that address the sources on the OTA list, in order to respond to future Congressional inquiries and to facilitate intra-Agency coordination on ground-water activities.

Study Purpose

OGWP's objective in undertaking this inventory was to identify and analyze those Agency policies, programs and significant projects that address major sources of ground-water contamination. The inventory is not exhaustive, because of the continuous evolution of Agency activities, but is representa-

EXHIBIT II-1
Sources of Ground-Water Contamination

Category I—Sources designed to discharge substances	
Subsurface percolation (e.g., septic tanks and cesspools)	Open burning and detonation sites
Injection wells	Radioactive disposal sites
Hazardous waste	
Non-hazardous waste (e.g., brine disposal and drainage)	Category III—Sources designed to retain substances during transport or transmission
Non-waste (e.g., enhanced recovery, artificial recharge, solution mining, and in-situ mining)	Pipelines
Land application	Hazardous waste
Wastewater (e.g., spray irrigation)	Non-hazardous waste
Wastewater byproducts (e.g., sludge)	Non-waste
Hazardous waste	Materials transport and transfer operations
Non-hazardous waste	Hazardous waste
Category II—Sources designed to store, treat, and/or dispose of substances; discharge through unplanned release	Non-hazardous waste
Landfills	Non-waste
Industrial hazardous waste	
Industrial non-hazardous waste	Category IV—Sources discharging substances as consequence of other planned activities
Municipal sanitary	Irrigation practices (e.g., return flow)
Open dumps, including illegal dumping (waste)	Pesticide applications
Residential (or local) disposal (waste)	Fertilizer applications
Surface impoundments	Animal feeding operations
Hazardous waste	De-icing salts applications
Non-hazardous waste	Urban runoff
Waste tailings	Percolation of atmospheric pollutants
Waste piles	Mining and mine drainage
Hazardous waste	Surface mine-related
Non-hazardous waste	Underground mine-related
Materials stockpiles (non-waste)	
Graveyards	Category V—Sources providing conduit or inducing discharge through altered flow patterns
Animal burial	Production wells
Aboveground storage tanks	Oil (and gas) wells
Hazardous waste	Geothermal and heat recovery wells
Non-hazardous waste	Water supply wells
Non-waste	Other wells (non-waste)
Underground storage tanks	Monitoring wells
Hazardous waste	Exploration wells
Non-hazardous waste	Construction excavation
Non-waste	
Containers	Category VI—Naturally occurring sources whose discharge is created and/or exacerbated by human activity
Hazardous waste	Groundwater—surface water interactions
Non-hazardous waste	Natural leaching
Non-waste	Salt-water intrusion/brackish water upconing (or intrusion of other poor-quality natural water)

Source: Office of Technology Assessment, Protecting The Nation's Groundwater From Contamination, October 1984.

tive of the scope and depth of current ground-water protection efforts. The report is not meant to be an in-depth analysis of EPA's ground-water programs; rather it serves as a starting point for internal discussion and for establishment of a framework for an organized Agency agenda to address ground-water issues.

Study Methodology

The project was an Agency-wide cooperative effort, coordinated by the Office of Ground-Water Protection. Initially OGWP worked with staff liaisons designated by each Assistant Administrator and Regional Office. These staff liaisons, in turn, developed an extensive network which provided OGWP with information throughout the project. The information provided formed the basis for the automated inventory contained in Section IV of this report and the source summaries contained in Section V.

III. FINDINGS

III. FINDINGS

EPA program offices reported 270 ground-water related activities to OWGP. These efforts consist of source-specific, resource-based, and policy and scientific support activities. Source-specific activities include policies, regulations, guidance, studies or other activities that address a single type of contaminant source, such as underground storage tanks, pesticide application or injection wells. Included in this group are activities such as guidance for Superfund, that potentially address many sources on OTA's list but in any given situation typically apply to a single source category. Resource-based activities focus on area-wide institutional and technical issues associated with comprehensive management and protection of the ground-water resources rather than the control of individual sources. Activities in the policy and scientific support group encompass studies and projects that provide information Agency decisionmakers need to carry out source-specific and resource-oriented activities.

Within each of these three categories, activities are either regulatory or non-regulatory in nature. Regulatory activities are those designed to implement the mandates under the major environmental statutes EPA administers. These activities may consist of studies supporting regulatory developments, standard-setting for sources, promulgation of quality standards for environmental media, and the establishment and implementation of permit programs. Non-regulatory activities include technical assistance, training, research and special studies.

A. Source-Specific Activities

Most of the Agency's ground-water related activity is source-specific. EPA program offices report some level of activity for 25 of the 33 sources OTA identified, as well as for nuclear facilities and abandoned waste sites which were not included on the OTA list.

These 35 sources can be grouped into three general categories: waste management, commercial/production, and chemical application/other. Waste management sources generally refers to facilities where by-products of industrial, commercial and other human activities are treated, stored or disposed. The commercial/production category includes the use, storage, handling, transport or development (i.e., production) of materials, resources and finished products that can result in ground-water contamination. Chemical application/other consists of the application of specific chemicals or substances

to land for beneficial purposes (e.g., fertilizers, pesticides, de-icing salts) as well as a variety of miscellaneous sources. Some sources, such as underground storage tanks and injection wells, fit more than one category (see Exhibit III-1).

The Agency's emphasis clearly is on waste management. Twenty-three of the 35 OTA listed sources are related to waste management, and EPA is addressing 19 of them. This category cumulatively accounts for the largest amount of activity (See Exhibit III-2).

Within the waste management category, seven sources are receiving substantial attention in terms of the number and significance of activities. These sources are landfills, land application, waste piles, surface impoundments, underground storage tanks, injection wells and abandoned waste sites (which may encompass the previous six). All are regulated to some extent under the Resource Conservation and Recovery Act (RCRA), but some are regulated under other statutes, as well. Land application (of sewage sludge), for example, is also subject to the Clean Water Act (CWA), while the Safe Drinking Water Act (SDWA) regulates underground injection wells and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA/Superfund) addresses abandoned waste sites not covered under RCRA. The activities EPA has undertaken to control these sources are primarily regulatory in nature. They include studies that support the development of specific standards and requirements, as well as guidance and permitting activities to implement the regulatory requirements. In addition, major activity is taking place under Superfund, including policies and guidance, as well as research and development to support efforts to assess the extent of contamination at abandoned waste sites and implement cleanup methods.

Moderate regulatory activity was reported for mining/mine drainage, and limited regulatory activities were reported for another eight waste management sources. Open dumps, waste tailings, aboveground storage tanks, containers, open burning, radioactive disposal sites, pipelines and nuclear facilities are regulated under a variety of Federal statutes. Some of these sources, such as containers and open dumps, are incorporated into large regulatory programs such as RCRA. Although the data may have underplayed the attention accorded these sources, the biggest distinction between these eight and the seven first-tier sources appears to be the number of reported guidance documents and studies. Verification of this distinction, though, would require a more extensive program analysis.

Program offices reported exclusively non-regulatory activities for three additional waste management sources--subsurface percolation (i.e., septic systems), animal feedlots and urban runoff. Septic systems are receiving moderate attention, in the form of various guidance manuals. Historically, this guidance has focused on system design, installation and operation technologies and has been linked to the construction grants program; but recent OGWP-sponsored guidance has emphasized institutional approaches for managing septic systems in order to protect the ground-water resource.

Outside the waste management category, three sources received extensive attention: injection wells, underground storage tanks and pesticide application. Of these three sources, pesticide application was the only source on the OTA list that had extensive reported activity. Most of the activity related to pesticide application was regulatory in nature under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), and reflects the recent integration of ground-water concerns into the process of evaluating pesticides for registration and setting restrictions on their use. A number of other regulatory and non-regulatory efforts currently supplement this pesticide registration program under FIFRA. A major effort is the National Survey of Pesticides in Drinking Water Wells, which is designed to assess the current extent of ground-water contamination from pesticides and enable EPA and the States to project the likelihood of future contamination from the use of various pesticides under different conditions. Other activities include the development of health advisories and maximum contaminant levels (MCLs) for drinking water under the SDWA, CERCLA efforts to mitigate threats from improper pesticide disposal practices, pesticide applicator training under FIFRA, and efforts to develop practical measures the agricultural community can voluntarily adopt to prevent the leaching of pesticides to ground water. The extent of the Agency's activities to address pesticides is just beginning to emerge, but once the strategy for agricultural chemicals in ground water is completed, the Agency will have a clear-cut set of objectives and action items for the next 5-10 years.

The remainder of sources addressed are in the commercial/production or chemical application/other categories. Activity reported is limited to moderate, depending upon the sources (see Exhibits III-3 and III-4). Moderate activity is reported only for two sources: mining, for which EPA has regulatory authority, and fertilizer application, which is being addressed together with pesticides in the agricultural chemicals in ground-water strategy. Limited activity, consisting of special projects or regulations linked to larger programs, was reported for materials transport, pipelines, animal feedlots, production

wells, irrigation, de-icing, urban runoff, atmospheric deposition and percolation, and natural leaching and salt water intrusion.

Nine sources had no reported ground-water protection related activity: material stock-piles, graveyards, animal burial, animal feeding, percolation of atmospheric pollutants, other wells, ground-water/surface water interaction, construction excavation and residential disposal. Residential disposal is defined as the indiscriminate, unsupervised discarding of wastes into drains and sewers. It does not include disposal of domestic wastes in landfills, septic systems or other regulated facilities.

B. Resource-Based Activities

Much of EPA's effort focuses on overall ground-water resource protection rather than on the control of individual types of contaminant sources. Activity in this area is usually non-regulatory in nature and aims to integrate technical and institutional aspects of ground-water protection in a given locale. Activities in this category consist of many program development and special projects. Programmatic activities, such as the new Wellhead Protection and Sole Source Aquifer Demonstration Programs as well as the near coastal initiative, estuary, and non-point source programs fall into this category. Special projects, such as the Cape Cod aquifer demonstration program, not only have an area-wide or Regional perspective but often represent substantial cooperation between EPA and either State and local authorities or other Federal agencies such as the U.S. Geological Survey and the Department of Agriculture. Examples of other activities in this category are the Federal Facilities Program which fosters Federal agency compliance with ground-water policies and regulations and the grants under sections 106 and 205(j) of the Clean Water Act. These grants are used to assist States in developing their ground-water protection programs and strategies.

C. Policy And Scientific Support Activities

A significant number of reported activities provide EPA decisionmakers with policy and technical information they need to carry out the source-specific and resource-based activities described above. These activities cover four areas: policy, research and special studies, standards development and data management.

Policy

In August, 1984, EPA issued a Ground-Water Protection Strategy to guide the Agency's efforts to protect the nation's ground-water resources. This strategy established a policy of differential protection for each of three classes of ground water based on the value to society, use and vulnerability of ground-water resources. Guidelines for ground-water classification currently are under development and define the key classification terms and concepts and describe the procedures and information needs for classifying ground water. To the extent possible, these guidelines will be incorporated into all Agency program operations.

Research and Special Studies

An extensive research program provides support to EPA program offices as they make regulatory decisions. The emphasis of the ground-water research has been on improving EPA's ability to detect, monitor and predict contamination. Reported activities include surveys of ground-water contamination and contaminant sources, studies to improve sampling plans and monitoring techniques, and projects to improve or develop new models that predict contaminant transport rates, transformation and fate.

Standards Development

EPA has promulgated or is developing sets of health-based regulations that do not directly address any of the 35 sources examined in this study. These regulations, nevertheless, are a significant component of EPA's overall approach to ground-water protection. Health-based drinking water standards, for example, will serve as a basis for determining the extent of corrective action at RCRA facilities and cleanup at Superfund sites. These programmatic interdependencies will become increasingly significant as the Office of Drinking Water develops additional maximum contaminant levels.

Data Management

OGWP has a major effort underway to ascertain who needs ground-water data nationwide, what kind of data they need, how much of that data currently is available, what needs are remaining and how the data can best be organized.

IV. LIST OF SOURCE-RELATED ACTIVITIES
BY PROGRAM OFFICE

IV. LIST OF SOURCE-RELATED ACTIVITIES BY PROGRAM OFFICE

The cornerstone of the project was the development of an automated list of the significant ground-water activities of each EPA office. Working with the staff liaisons designated by each Assistant Administrator and each Region, the Office of Ground-Water Protection identified 14 categories of significant activity (See Exhibit IV-1). The liaisons also identified the sources of contamination their offices address (See Exhibit IV-2) and provided or reviewed the following information for each ground-water activity within their offices: project title, contact, cooperating offices, source addressed, status and summary. Exhibit IV-3 provides a key to the automated data base, Exhibit IV-4 is a list of acronyms for EPA's program offices, and Exhibit IV-5 is an index to the data base.

EXHIBIT IV-1
CATEGORIES OF SIGNIFICANT ACTIVITY

ACTIVITY CATEGORY	DESCRIPTION
POLICY	A statement of EPA's
STRATEGY	A framework for future action (e.g., Ground-Water Protection Strategy; Ground-Water Monitoring Strategy; Agricultural Chemicals in Ground Water Strategy; Nonpoint Source Strategy)
REGULATION	Formal rules/standards established by statutory authority in accordance with rulemaking procedures pursuant to the Administrative Procedures Act and EPA Operations
PERMIT	An approval to operate within specified limitations (e.g., emission limitation, operating procedures)
GUIDANCE	Any official document (e.g. memorandum; manual, handbook) setting forth administrative, operational, technical procedures and guidelines (e.g., Technical Enforcement Guidance Document for Ground-Water Monitoring; Ground-Water Classification Guidelines); includes design manuals, state-of-the-art handbooks
COMPLIANCE MONITORING	Activities such as surveillance, inspection, monitoring designed to 1) identify incidents of noncompliance contamination that violates statutory, regulatory and/or permit provisions and 2) promote actions to re-establish compliance
ENFORCEMENT	Responses to noncompliance such as notices of violation, civil and criminal case development, and administrative orders

EXHIBIT IV-1 (CONTINUED)
CATEGORIES OF SIGNIFICANT ACTIVITY

ACTIVITY CATEGORY	DESCRIPTION
FEDERAL FUNDING	Grants, cooperative agreements with States and localities or private institutions (e.g., universities) for program activities, special studies, demonstration projects
STUDIES	Projects to assemble and/or analyze technical, financial or institutional information about a ground-water issue; includes EPA surveys of contaminants in ground water, risk assessments, summaries of current State/local practices, analyses of regulatory costs
RESEARCH AND DEVELOPMENT	Activities to improve techniques and technologies for predicting extent of contamination and for preventing, abating, mitigating and cleaning up contamination (e.g., transport/fate studies)
RESPONSE	Prevention, mitigation, abatement or cleanup of actual or threatened contamination in response to an actual or potential release of a hazardous substance or of a contaminant or pollution that poses imminent and substantial danger (e.g., CERCLA emergency response, remedial action)
TRAINING	Various instructional activities to improve manpower skills for identifying and addressing (prevention, corrective action) sources of contamination
TECHNICAL ASSISTANCE	Technical advice and/or counsel to organizations within or outside EPA; may include technology transfer/information exchange through workshops, publications
INTERAGENCY COORDINATION	Technical support to program of another Federal agency (e.g., Rural Clean Water Program) or requests for participation by another Federal agency in EPA activities; includes EPA review of activities of other Federal agencies (e.g., NEPA, CWA 404).

EXHIBIT IV-2
Activity by Office

EXHIBIT IV-3
Key To List Of Source-Related Activity

I. OFFICE CODES

See Exhibit IV-4

II. CONTACTS

Through extensive communication with all offices, OGWP attempted to identify the specific individual with lead responsibility for a listed activity. Where no individual was identified, the ground-water liaison was listed.

III. SOURCES

The sources include the 33 on OTA's list as well as abandoned waste sites and non-waste nuclear facilities. Non source-specific categories are listed as resource-based or policy and scientific support. Entries labelled "multiple" fall under the source-specific category in the body of the report. Although the activity could apply to multiple categories of sources, at any particular time it usually addresses a single source category. Program offices either supplied or reviewed all information on the sources each listed activity addresses.

IV. STATUS

In most cases, OGWP obtained either specific or approximate dates that activities were or will be completed. Where no information was available, the data base shows "N/A." The term "in progress" means that the project is underway, but information on an estimated completion date is unavailable.

For activities that are continuous in nature, such as permitting programs, the data base contains the phrase "ongoing".

V. SUMMARY

Program staff provided or reviewed a summary of each listed activity. OGWP subsequently edited the summaries in order to shorten them for inclusion in the automated data base.

EXHIBIT IV-4
Office Acronyms

OW	- Office of Water
	OWRS - Office of Water Regulation and Standards
	OWPE - Office of Water Enforcement and Permits
	OMPC - Office of Municipal Pollution Control
	OMPE - Office of Marine and Estuarine Protection
	ODW - Office of Drinking Water
	OGWP - Office of Ground-Water Protection
OSWER	- Office of Solid Waste and Emergency Response
	OERR - Office of Emergency and Remedial Response
	OSW - Office of Solid Waste
	OUST - Office of Underground Storage Tanks
	OWPE - Office of Waste Programs Enforcement
OPTS	- Office of Pesticides and Toxic Substance
	OPMO - Office of Program Management and Operations
	OCM - Office of Compliance Monitoring
	OPP - Office of Pesticide Programs
	OTS - Office of Toxic Substances
OPPE	- Office of Policy, Planning, and Evaluation
	OPA - Office of Policy Analysis
	OSR - Office of Standards and Regulations
	OMSE - Office of Management Systems and Evaluation
OECM	- Office of Enforcement and Compliance Monitoring
OEA	- Office of External Affairs
OFA	- Office of Federal Activities
OAR	- Office of Air and Radiation
ORP	- Office of Radiation Programs
ORD	- Office of Research and Development

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
SUBSURFACE PERCOLATION	OGWP- 8	SEPTIC SYSTEMS AND GROUND-WATER PROTECTION: A PROGRAM MANAGER'S GUIDE AND REFERENCE BOOK AND AN EXECUTIVE'S GUIDE	OGWP LEE BRAEM 382-7077	GUIDANCE	7/86	AIDS STATE AND LOCAL OFFICIALS IN DEVELOPING AND ADMINISTERING PROGRAMS TO PROTECT GROUND WATER FROM CONTAMINATION BY SEPTIC SYSTEMS. DESCRIBES SEPTIC SYSTEMS AND THE KEY ELEMENTS OF A SEPTIC SYSTEM MANAGEMENT PROGRAM. ANALYZES ISSUES, AND MAKES RECOMMENDATIONS.
SUBSURFACE PERCOLATION	OMPC- 1	CONSTRUCTION GRANTS PROGRAM FOR MUNICIPAL WASTEWATER TREATMENT WORKS	OMPC/PAD BILL KRAMER 382-7259	GUIDANCE	1985	CALLS FOR CONSIDERATION OF EXISTING WATER QUALITY, QUANTITY, AND USE OF SURFACE AND GROUND WATER IN PREPARING A FACILITY PLAN; PROVIDES GUIDELINES FOR SELECTING BEST PRACTICABLE WASTE TREATMENT TECHNOLOGIES FOR SLUDGE TREATMENT AND DISPOSAL.
SUBSURFACE PERCOLATION	OMPC- 2	ON-SITE WASTEWATER TREATMENT AND DISPOSAL SYSTEMS	OMPC/WFD MARIE PEREZ 382-7286	GUIDANCE	2/87	OUTLINES TECHNICAL INFORMATION ON ON-SITE WASTEWATER TREATMENT AND DISPOSAL SYSTEMS FOR THOSE INVOLVED IN THE DESIGN, CONSTRUCTION, OPERATION, MAINTENANCE, AND REGULATION OF SUCH SYSTEMS.
SUBSURFACE PERCOLATION	OMPC-11	SEPTAGE TREATMENT AND DISPOSAL HANDBOOK	OMPC/WFD MARIE PEREZ 382-7286	GUIDANCE	10/84	PRESENTS UP-TO-DATE INFORMATION ON SITE PERFORMANCE, OPERATION AND MAINTENANCE, COST, AND ENERGY NEEDS ASSOCIATED WITH SEPTAGE TREATMENT.
SUBSURFACE PERCOLATION	OSR- 3	INNOVATIVE RESPONSES TO NONPOINT SOURCES OF GROUND-WATER CONTAMINATION - PHASE I	OSR BRENDAN DOYLE 382-5604	STUDY	IN PROGRESS	EVALUATES SEVERAL MANAGEMENT APPROACHES TO PREVENT NONPOINT SOURCE GROUND-WATER CONTAMINATION. INVESTIGATED PESTICIDE APPLICATION, SALT WATER INTRUSION, IRRIGATION, AND DE-ICING. WILL RESULT IN A SERIES OF CASE STUDIES/DemonSTRATION PROJECTS OVER THE NEXT SEVERAL YEARS.
SUBSURFACE PERCOLATION	OSR- 6	INNOVATIVE APPROACHES TO PREVENTION AND REDUCTION OF GROUND-WATER CONTAMINATION THROUGH IMPROVED LOCAL MANAGEMENT - PHASE II	OSR/ARS CHRIS PRINS 382-2717	STUDY	9/86	CASE STUDY OF LOCAL CONTRACTUAL AGREEMENTS USED IN IDAHO TO PROTECT A SOLE SOURCE AQUIFER FROM NITRATE CONTAMINATION.
SUBSURFACE PERCOLATION	OTS- 1	TSCA GROUND-WATER STRATEGY	OTS/ED KAREN HAMMERSTROM 382-3896	STRATEGY	1986	ADDRESSES CONTAMINATION OF GROUND WATER FROM SELECTED TOXIC SUBSTANCES; EXAMINES TSCA AUTHORITY TO COLLECT AND ASSESS DATA ON HEALTH AND ENVIRONMENTAL EFFECTS OF TOXIC SUBSTANCES THAT CONTAMINATE

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
SUBSURFACE PERIODATION	PRO- 1	SURVEY OF WOOD TREATMENT FACILITIES	REGION X/OCEN BILL MULLEN FTS 399-1216	STUDY	10/86	GROUND WATER, AND PROVIDES INFORMATION TO OTHER EPA OFFICES TO CONTROL THE PRODUCTION, TRANSPORT, STORAGE, DISPOSAL, AND USE OF TOXIC SUBSTANCES.
						SURVEYS PRESENT AND PAST FACILITIES ENGAGED IN WOOD TREATMENT WITH PENTACHLOROPHENOL; CONTAINS A LIST OF SITES WHERE GROUND-WATER CONTAMINATION IS LIKELY TO OCCUR.

GROUND-WATER ACTIVITIES SURVEY						
SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
INJECTION WELLS	ODW- 4	RESTRICTIONS ON UNDERGROUND INJECTION OF WASTE	ODW/SPO THOMAS BELK 382-5508	REGULATION	6/87	INVESTIGATES DISPOSAL OF HAZARDOUS WASTE THROUGH UNDERGROUND INJECTION TO DETERMINE WHETHER SUCH PRACTICES ARE PROTECTIVE OF HUMAN HEALTH AND THE ENVIRONMENT.
INJECTION WELLS	ODW- 5	REGULATIONS FOR THE UIC PROGRAM	ODW/SPO ROGER ANZOLIN 382-5559	REGULATION	1984	ESTABLISHES TECHNICAL STANDARDS FOR THE CONSTRUCTION, TESTING AND OPERATIONS OF WELLS; SETS REQUIREMENTS FOR EPA AND STATE ADMINISTERED PROGRAMS; PURPOSE IS TO PROTECT GROUND WATER THAT SERVES AS A SOURCE OF DRINKING WATER.
INJECTION WELLS	ODW- 6	REVIEW AND ISSUANCE OF PERMITS FOR EXISTING WELLS	ODW/SPO ROGER ANZOLIN 382-5559	PERMIT	ONGOING	ISSUES PERMITS TO OWNERS AND OPERATORS OF INJECTION WELLS IN NON-DELEGATED STATES TO PROTECT UNDERGROUND SOURCES OF DRINKING WATER.
INJECTION WELLS	ODW- 7	MECHANICAL INTEGRITY EVALUATION	ODW/SPO ROGER ANZOLIN 382-5559	STUDY	1986	MONITORS AND REVIEWS MECHANICAL INTEGRITY OF WELLS AUTHORIZED BY RULE TO DETERMINE WELL COMPLIANCE AND ASSESS ADEQUACY OF CURRENT REGULATIONS.
INJECTION WELLS	ODW- 8	CLASS V ASSESSMENT	ODW/SPO LARRY GRAHAM 382-7593	STUDY	1986	DETERMINES THE POTENTIAL FOR CONTAMINATION OF GROUND WATER FROM CLASS V WELLS; INCLUDES A REPORT TO CONGRESS IN SEPTEMBER, 1987.
INJECTION WELLS	ODW- 9	REPORT TO CONGRESS ON INJECTION OF HAZARDOUS WASTE	ODW/SPO ROGER ANZOLIN 382-5559	STUDY	5/85	CONSISTS OF AN INVENTORY OF ALL WELLS WHICH INJECT HAZARDOUS WASTE AS REQUIRED BY THE 1984 AMENDMENTS TO RICRA.
INJECTION WELLS	ODW-10	CLASS I WELL FAILURES	ODW/SPO ROGER ANZOLIN 382-5559	STUDY	1986	ASSESSES THE CAUSES OF CONTAMINATION OF GROUND WATER FROM DEEP WELL INJECTION.
INJECTION WELLS	ODW-11	STATE GRANTS	ODW JENTAI YANG 382-5542	FEDERAL FUNDING	ONGOING	CONSISTS OF FORMULA GRANTS TO DELEGATED STATES TO CARRY OUT THEIR PROGRAMS TO PROTECT UNDERGROUND SOURCES OF DRINKING WATER.
INJECTION WELLS	ODEM- 1	DEVELOPMENT AND MANAGEMENT OF UIC ENFORCEMENT CASES	ODEM CHERYL WASSERMAN 382-7550	ENFORCEMENT	ONGOING	DEVELOPS CIVIL JUDICIAL CASES FOR VIOLATIONS OF THE SAFE DRINKING WATER ACT. INCLUDES PREPARING, NEGOTIATING, AND REFERRING CASES TO OOL.
INJECTION	OPA- 2	INVESTIGATION OF IMPORTANT	OPA/ERAD	STUDY	FY86	IDENTIFIES FACTORS GOVERNING THE

INJECTION WELLS	RD3- 2	GAS/OIL FIELD BRINE DISPOSAL COMPLIANCE	ED STIGGALL 382-7124	COMPLIANCE MONITORING	9/86	LOCATES AND CHARACTERIZATION OF WASTE DISPOSAL.
INJECTION WELLS	RD3- 4	RESOURCE EXTRACTION ACTIVITIES	REGION III/OGW TOM MERSKI FTS 597-2786	STRATEGY	N/A	USES EPIC AERIAL PHOTOGRAPHY TO IDENTIFY POTENTIAL DISCHARGERS TO SURFACE/SUBFICIAL AQUIFERS VIA GAS FIELD BRINE DISPOSAL INTO SHALLOW WELLS OR SEPTIC TANKS; SUBSEQUENT ACTION IS TAKEN TO COMPEL ALTERNATIVE BRINE DISPOSAL METHODS OR FURTHER ENFORCEMENT.
						INCREASES AWARENESS OF ACCEPTABLE MEASURES FOR BRINE DISPOSAL AND PROMOTES COMPLIANCE WITH SPILL PREVENTION CONTROL AND COUNTERMEASURES; PROTECTS BOTH SURFACE AND GROUND WATERS.

GROUND-WATER ACTIVITIES SURVEY						
SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
LAND APPLICATION	OECM- 2	DEVELOPMENT AND MANAGEMENT OF RORA AND CERCLA ENFORCEMENT CASES	OECM CHERYL WASSERMAN 382-7550	ENFORCEMENT	ONGOING	DEVELOPS CIVIL JUDICIAL CASES FOR VIOLATIONS OF RORA AND CERCLA REGULATIONS, INCLUDING FAILURE TO ADEQUATELY MONITOR THE GROUND WATER. INCLUDES PREPARING AND NEGOTIATING CASES THROUGH REFERRAL TO THE DEPARTMENT OF JUSTICE.
LAND APPLICATION	OMPC- 1	CONSTRUCTION GRANTS PROGRAM FOR MUNICIPAL WASTEWATER TREATMENT WORKS	OMPC/MFO BILL KRAMER 382-7259	GUIDANCE	1985	CALLS FOR CONSIDERATION OF EXISTING WATER QUALITY, QUANTITY, AND USE OF SURFACE AND GROUND WATER IN PREPARING A FACILITY PLAN; PROVIDES GUIDELINES FOR SELECTING BEST PRACTICABLE WASTE TREATMENT TECHNOLOGIES FOR SLUDGE TREATMENT AND DISPOSAL.
LAND APPLICATION	OMPC- 3	ASSESSMENT OF AVAILABILITY OF GROUND-WATER MONITORING DATA FROM LAND TREATMENT AND LAGOON SYSTEMS	OMPC/MFO JAMES WHEELER 382-7388	TECH ASST	IN PROGRESS	IDENTIFIES THIRTY-SEVEN STATES THAT HAVE REQUIREMENTS FOR GROUND-WATER MONITORING AT LAND TREATMENT SYSTEMS AND DESCRIBES THESE REQUIREMENTS.
LAND APPLICATION	OMPC- 6	STATE SLUDGE PROGRAM REGULATIONS	OMPC/MFO CHARLES E. GROSS 382-2333	REGULATION	2/87	REQUIRES STATES TO DEVELOP SLUDGE MANAGEMENT PROGRAMS OR IMPROVE EXISTING ONES AND OBTAIN EPA APPROVAL; NPMW 2/4/86.
LAND APPLICATION	OMPC- 7	LAND APPLICATION OF MUNICIPAL SLUDGES	OMPC CHARLES E. GROSS 382-2333	GUIDANCE	10/82	CONTAINS NATIONAL PROCEDURE FOR DESIGN OF MUNICIPAL SLUDGE LAND APPLICATION SYSTEMS INCLUDING GROUND-WATER CONSTRAINTS.
LAND APPLICATION	OMPC- 9	LAND TREATMENT OF MUNICIPAL WASTEWATER	OMPC/MFO BOB BASTIAN 382-2333	GUIDANCE	10/81	CONTAINS A CHAPTER ON HEALTH AND ENVIRONMENTAL EFFECTS, INCLUDING GROUND WATER, IN A MANUAL COVERING STATE-OF-THE-ART PROCESS DESIGN FOR LAND TREATMENT SYSTEMS.
LAND APPLICATION	OMPC-10	LAND TREATMENT OF MUNICIPAL WASTEWATER: SUPPLEMENT ON RAPID INFILTRATION AND OVERLAND FLOW	OMPC/MFO JIM WHEELER 382-7388	GUIDANCE	10/84	DISCUSSES HOW SITE SELECTION AND STATE-OF-THE-ART DESIGN AFFECT HEALTH AND PROVIDE ENVIRONMENTAL PROTECTION.
LAND APPLICATION	OMPC-12	UTILIZATION OF MUNICIPAL WASTEWATER AND SLUDGE ON LAND	OMPC/MFO CHARLES E. GROSS BOB BASTIAN 382-2333	STUDY	1983	CONSISTS OF WORKSHOP PROCEEDINGS THAT GENERALLY DISCUSS HYDROLOGIC MANAGEMENT, NUTRIENT-TRACE METAL PATHOGENS, SPECIFIC ORGANIC COMPOUND METALS, AND AN OVERVIEW OF PUBLIC HEALTH EFFECTS.

GROUND-WATER ACTIVITIES SURVEY							
SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY	
LAND APPLICATION	DMPC-13	SLUDGE TREATMENT AND DISPOSAL	DMPC/MFD CHARLES E. GROSS 382-2333	GUIDANCE	10/84	PRESENTS A CONTEMPORARY REVIEW OF SLUDGE PROCESSING TECHNOLOGY AND PROCEDURES FOR PROPER DESIGN, SITE SELECTION, AND FINAL DISPOSAL TECHNIQUES.	
LAND APPLICATION	OPA- 5	INTERMEDIA IMPACT OF SLUDGE UTILIZATION AND DISPOSAL	OPA/ERAD BRENDAN DOYLE 382-5604	STUDY	7/86	DEVELOPS AND TESTS A METHODOLOGY FOR EVALUATING THE COST-EFFECTIVENESS OF OPTIONS FOR RE-USE AND/OR DISPOSAL OF MUNICIPAL SEWAGE SLUDGE; MODELS GROUND-WATER CONTAMINATION FROM LANDFILLING AND LAND APPLICATIONS.	
LAND APPLICATION	OSW- 3	LAND DISPOSAL RESTRICTION RULE	OSW/CAO STEVE WEIL 382-4770	REGULATION	5/28/86	SETS SCHEDULE FOR DETERMINING THE HAZARDOUS WASTES FOR WHICH TO SET LAND DISPOSAL BANS IN ACCORDANCE WITH THE 1984 RCRA AMENDMENTS; THE PURPOSE IS TO REDUCE GROUND-WATER CONTAMINATION.	
LAND APPLICATION	OSW- 4	LAND DISPOSAL RESTRICTION FRAMEWORK/SOLVENTS AND DIOXINS	OSW/CAO STEVE WEIL 382-4770	REGULATION	11/8/86	ESTABLISHES THE FRAMEWORK FOR THE RESTRICTION OF LAND ON DISPOSAL OF WASTES CONTAINING DIOXINS AND SOLVENTS; INCLUDES PRE-DISPOSAL TREATMENT STANDARDS, PROCEDURES FOR FILING FOR VARIANCES, CRITERIA FOR SETTING EFFECTIVE DATES FOR BANS, AND FOR CASE-BY-CASE EXEMPTIONS FROM THESE DATES.	
LAND APPLICATION	OSW- 5	LAND DISPOSAL RESTRICTION OF CALIFORNIA WASTES	OSW/CAO STEVE WEIL 382-4770	REGULATION	7/87	ESTABLISHES TREATMENT STANDARDS AND ASSOCIATED EFFECTIVE DATES FOR BANNING THE LAND DISPOSAL OF A GROUP OF HAZARDOUS WASTES KNOWN AS THE CALIFORNIA LIST.	
LAND APPLICATION	OSW- 6	LAND DISPOSAL RESTRICTION OF LISTED WASTES	OSW/CAO STEVE WEIL 382-4770	REGULATION	11/86	ESTABLISHES TREATMENT STANDARDS FOR THE RCRA LISTED HAZARDOUS WASTES AND EFFECTIVE DATES FOR RESTRICTIONS ON THE LAND DISPOSAL OF THESE WASTES.	
LAND APPLICATION	OSW- 7	REVISION TO SMALL QUANTITY GENERATOR RULE	OSW/CAO BOB AXELRAD 382-4637	REGULATION	3/24/86	REQUIRES GENERATORS OF OVER 100KG PER MONTH OF HAZARDOUS WASTE TO COMPLY WITH RCRA REGULATIONS; REPLACES PREVIOUSLY HIGHER THRESHOLD OF 1000KG PER MONTH.	
LAND APPLICATION	OSW- 8	SMALL QUANTITY GENERATOR STUDIES	OSW/CAO BOB AXELRAD 382-4637	STUDY	4/87	PRESENTS RESULTS OF A NATIONAL SURVEY (REQUIRED BY 1984 RCRA AMENDMENTS) OF GENERATORS OF HAZARDOUS WASTE WHO	

GROUND-WATER ACTIVITIES SURVEY					
SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	SUMMARY
					PRODUCE LESS THAN 1,000KG PER MONTH; A STUDY OF THE MANIFEST SYSTEM AS IT APPLIES TO SMALL QUANTITY GENERATORS; A STUDY OF LICENSING OF TRANSPORTERS; AND A STUDY OF HAZARDOUS WASTES MANAGEMENT BY EDUCATIONAL INSTITUTIONS.
LAND APPLICATION	OSW-12	HAZARDOUS WASTE PERMIT PROGRAM	OSW/PSPD BRUCE MEDOLE 362-4746	REGULATION	ONGOING SETS TECHNICAL STANDARDS AND OPERATING REQUIREMENTS THROUGH PERMITS FOR EACH HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITY.
LAND APPLICATION	OSW-14	STANDARDS APPLICABLE TO OWNERS AND OPERATORS OF HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES	OSW/WND PAT FOX 362-4453	REGULATION	ONGOING IMPOSES MANAGEMENT, DESIGN, AND OPERATING STANDARDS ON ALL FACILITIES THAT TREAT, STORE, OR DISPOSE OF HAZARDOUS WASTE; SPECIFIES GROUND-WATER MONITORING AND PROTECTION REQUIREMENTS IN SUBPART F.
LAND APPLICATION	OSW-15	CRITERIA FOR CLASSIFICATION OF SOLID WASTE DISPOSAL FACILITIES AND PRACTICES	OSW/WND MIKE FLYNN 362-4489	REGULATION	3/88 ESTABLISHES GENERAL FEDERAL PERFORMANCE CRITERIA, ENFORCEABLE BY THE STATES AND THROUGH CITIZEN SUITS, FOR DETERMINING WHICH SOLID WASTE DISPOSAL FACILITIES AND PRACTICES POSE A REASONABLE PROBABILITY OF ADVERSE EFFECTS ON HUMAN HEALTH OR THE ENVIRONMENT; SPECIFIES GROUND-WATER PROTECTION CRITERIA.
LAND APPLICATION	OSW-16	GUIDELINES FOR LAND DISPOSAL OF SOLID WASTE [40 CFR 241]	OSW/WND MIKE FLYNN 362-4489	GUIDANCE	8/23/79 IMPOSES REQUIREMENTS AND RECOMMENDS PROCEDURES, MANDATORY FOR FEDERAL AGENCIES AND SUGGESTED FOR STATE AND LOCAL GOVERNMENT AGENCIES, FOR ENVIRONMENTALLY ACCEPTABLE DISPOSAL OF SOLID WASTE; SPECIFIES GROUND-WATER PROTECTION REQUIREMENTS.
LAND APPLICATION	OSW-17	SUBTITLE D STUDY	OSW/WND MIKE FLYNN 362-4489	STUDY	11/87 CONSISTS OF MULTIPLE STUDIES WHICH ASSESS ADEQUACY OF EXISTING SUBTITLE D CRITERIA (40 CFR 267) TO PROTECT HUMAN HEALTH AND THE ENVIRONMENT AND WILL SUPPORT CRITERIA CHANGES MANDATED BY CONGRESS IN 1984 AMENDMENTS. PROTECTION OF GROUND WATER IS A PRIMARY FOCUS OF THE CRITERIA REVISION.
LAND APPLICATION	OSW-18	LOCATION STANDARDS FOR HAZARDOUS WASTE TREATMENT, STORAGE, AND DISPOSAL FACILITIES	OSW/WND GLEN GALEN 362-4678	REGULATION	9/88 SPECIFIES CRITERIA FOR DETERMINING SUITABLE LOCATIONS FOR FACILITIES THAT TREAT, STORE, OR DISPOSE OF HAZARDOUS

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
LAND APPLICATION	OSM-24	USE OF APPENDIX VIII FOR GROUND-WATER MONITORING	OSM/WMD JERRY GARMAN 475-7415	GUIDANCE	6/96	REVISES LIST OF HAZARDOUS CONSTITUENTS FOR WHICH RCRA FACILITIES MUST MONITOR GROUND WATER; INCLUDES GUIDANCE FOR GROUND-WATER MONITORING REQUIREMENTS.
LAND APPLICATION	OSM-26	REVISION OF STATISTICAL TEST USED TO IDENTIFY GROUND-WATER CONTAMINATION	OSM/WMD VERNON MYERS 382-4495	REGULATION	7/96	SUGGESTS REVISION IN ORDER TO IMPROVE ACCURACY OF STUDENTS' T-TEST FOR DETERMINING WHETHER A RELEASE FROM A HAZARDOUS WASTE FACILITY TO GROUND WATER HAS OCCURRED.
LAND APPLICATION	OSM-27	AQ. GUIDELINES	OSM/WMD VERNON MYERS 382-4495	GUIDANCE	1/97	ESTABLISHES PROCEDURES FOR SETTING SITE-SPECIFIC AQIS FOR USE IN GROUND-WATER MONITORING AT HAZARDOUS WASTE LAND DISPOSAL FACILITIES.
LAND APPLICATION	OSM-29	INTEGRATED OSM GROUND-WATER STRATEGY	OSM/WMD ART DAY 382-4680	STRATEGY	10/96	INTEGRATES ALL EXISTING AND PLANNED OSM REGULATIONS OR GUIDANCE RELATING TO GROUND-WATER PROTECTION AND WILL OUTLINE EPA'S POLICY FOR MAKING GROUND-WATER RELATED PERMITTING AND VARIANCE DECISIONS UNDER RCRA.
LAND APPLICATION	OSMER-2	NATIONAL DIOXIN STRATEGY	OSMER JIM QUNNINGS 382-4686	STRATEGY	3/96	PROMOTES PROPER DISPOSAL/TREATMENT OF DIOXINS, PREVENTING LEACHING TO SOIL AND GROUND WATER AND PROTECTING HUMAN HEALTH.
LAND APPLICATION	OSMER-6	EVALUATION OF THE RCRA SUBPART F GROUND-WATER MONITORING PROGRAM	OSMER JOAN LAROCK 382-4617	STUDY	1/96	IDENTIFIES IMPEDEMENTS TO IMPLEMENTATION OF MONITORING AND RECOMMENDS GUIDANCE, TRAINING, REGULATIONS, TECHNOLOGY, AND ADMINISTRATIVE PROCEDURES TO OVERCOME THESE OBSTACLES.
LAND APPLICATION	OMEP-1	DISPOSAL OF POLLUTANTS INTO WELLS, POTS, OR BY LAND APPLICATION	OMEP JAMES GALLUP 475-9541	REGULATION	1978	PROVIDES VARIANCES FOR EFFLUENT LIMITATIONS AND STANDARDS WHEN A DISCHARGER'S PROCESS WASTEWATER IS DISPOSED INTO A POTW BY LAND APPLICATION OR INTO A WELL INSTEAD OF INTO Navigable WATERS.
LAND APPLICATION	OMEP-1	RCRA GROUND-WATER MONITORING TECHNICAL ENFORCEMENT GUIDANCE DOCUMENT	OMEP/RED KENNETH JENNINGS 475-9374	GUIDANCE	9/96	PROVIDES GUIDANCE ON EVALUATING THE ADEQUACY OF HYDROGEOLOGIC ASSESSMENT PERFORMED BY UNIVERS/OPERATORS OF RCRA LANDFILLS.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	TO/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
LAND APPLICATION	OMPE- 2	COMPLIANCE ORDER GUIDANCE DOCUMENT	LLOYD GUERRA 392-4908	GUIDANCE	8/85	PROVIDES GUIDANCE FOR THE REGIONS IN DEVELOPING ADMINISTRATIVE ORDERS FOR VIOLATORS OF THE RCRA GROUND-WATER MONITORING REQUIREMENTS.
LAND APPLICATION	OMPE- 4	INSPECTIONS OF RCRA FACILITIES	CALL REGIONS/ RCRA BRANCH	COMPLIANCE MONITORING	ONGOING	INSPECTS RCRA-REGULATED FACILITIES TO DETERMINE THEIR COMPLIANCE WITH VARIOUS RCRA REQUIREMENTS AND DETERMINE WHETHER HAZARDOUS CONSTITUENTS HAVE BEEN RELEASED INTO THE ENVIRONMENT.
LAND APPLICATION	OMPE- 5	ENFORCEMENT ACTION FOR GROUND-WATER VIOLATIONS	CALL REGIONS/RCRA BRANCH	ENFORCEMENT	ONGOING	ENCOMPASSES ENFORCEMENT ACTIONS AGAINST FACILITIES THAT HAVE VIOLATED RCRA GROUND-WATER MONITORING REQUIREMENTS AND HAVE RELEASED HAZARDOUS CONSTITUENTS TO ANY MEDIA, INCLUDING GROUND WATER.
LAND APPLICATION	OMPE- 7	CORRECTIVE ACTION PLAN	OMPE/RED VIRGINIA STEINER 475-8328	GUIDANCE	11/86	ESTABLISHES PROCEDURES FOR INVESTIGATING AND CLEANING UP CONTAMINANTS FROM RCRA FACILITIES THAT THREATEN GROUND WATER.
LAND APPLICATION	OMRS- 8	ORGANIC CHEMICALS, PLASTICS AND SYNTHETIC FIBERS INDUSTRY, AND PESTICIDE CHEMICALS INDUSTRY EFFLUENT GUIDELINE REGULATIONS	OMRS/TD WOODY FORSHET TOM FIELDING 392-7124	REGULATION	1978	INCLUDES A DATABASE OF WASTEWATER TREATMENT PRACTICES USED AT EXISTING PLANTS (INCLUDING LAND APPLICATION AND DEEP WELL INJECTION) ASSEMBLED DURING REGULATORY DEVELOPMENT. BPT WAS PUBLISHED IN 1978. BAT IS UNDER DEVELOPMENT.
LAND APPLICATION	OMRS-12	PROPOSED REGULATIONS UNDER SECTION 405(d) CLEAN WATER ACT CREATING CRITERIA FOR THE USE AND DISPOSAL OF SEWAGE SLUDGE	OMRS/CSD AL RUBIN 245-3036	REGULATION	9/87	ESTABLISHES ENFORCEABLE CRITERIA FOR SEWAGE SLUDGE DISPOSED OF IN A MONOFILL LANDFILL OR RECYCLED AS A RESOURCE THROUGH SEVERAL LAND APPLICATION TECHNIQUES.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
LANDFILLS	DECM- 2	DEVELOPMENT AND MANAGEMENT OF RCRA AND CERCLA ENFORCEMENT CASES	DECM CHERYL WASSERMAN 382-7550	ENFORCEMENT	ONGOING	DEVELOPS CIVIL JUDICIAL CASES FOR VIOLATIONS OF RCRA AND CERCLA REGULATIONS, INCLUDING FAILURE TO ADEQUATELY MONITOR THE GROUND WATER. INCLUDES PREPARING AND NEGOTIATING CASES THROUGH REFERRAL TO THE DEPARTMENT OF JUSTICE.
LANDFILLS	OPA- 1	CHOOSING A GROUND-WATER MONITORING PERIOD	OPA/ERAD JOHN CHAMBERLIN 382-2762	STUDY	F Y84	ANALYZES ENGINEERING, ECONOMIC AND RISK/COST CRITERIA FOR CHOOSING A GROUND-WATER MONITORING PERIOD FOR HAZARDOUS WASTE SITES.
LANDFILLS	OPA- 6	INVENTORY OF POTENTIAL GROUND-WATER CONTAMINATION SOURCES IN SOLE SOURCE AQUIFERS	OPA/ERAD BRENDAN DOYLE 382-5604	STUDY	10/85	IDENTIFIES THE CONTAMINATION SOURCES IN FOUR SOLE SOURCE AQUIFERS; COVERS EXISTING INFORMATION ON THE GEOLOGY, HYDROLOGY, WATER QUALITY, WATER QUANTITY, POTNS, INDUSTRIAL FACILITIES, RCRA SITES, SUPERFUND SITES, UIC FACILITIES, AND EXISTING CONTROLS.
LANDFILLS	ORD- 1	HAZARDOUS WASTE SURFACE IMPOUNDMENTS	ORD JIM BASILICO 382-5747	STUDY	IN PROGRESS	ASSESSES AND DEVELOPS IMPROVED DESIGN, OPERATION, AND CLOSURE PROCEDURES FOR LANDFILLS, SURFACE IMPOUNDMENTS, AND WASTE PILES USED FOR HAZARDOUS WASTE MANAGEMENT.
LANDFILLS	ORD- 2	HAZARDOUS WASTE TECHNICAL RESOURCE DOCUMENTS	ORD JIM BASILICO 382-6747	STUDY	IN PROGRESS	UPDATES TECHNICAL MANUALS ON DESIGN, CONSTRUCTION, OPERATION AND MONITORING OF LANDFILLS AND SURFACE IMPOUNDMENTS THAT RECEIVE HAZARDOUS WASTES.
LANDFILLS	ORD- 3	SUPPORT FOR LAND DISPOSAL PROGRAM	ORD JIM BASILICO 382-6747	STUDY	IN PROGRESS	DEVELOPS DESIGN, OPERATION, MAINTENANCE AND CLOSURE PROCEDURES FOR LANDFILLS; INCLUDES A DISCUSSION OF LINERS AND LEACHATE COLLECTION AND TREATMENT EFFICIENCY.
LANDFILLS	OSW- 3	LAND DISPOSAL RESTRICTION RULE	OSW/CAO STEVE NEIL 382-4770	REGULATION	5/28/86	SETS SCHEDULE FOR DETERMINING THE HAZARDOUS WASTES FOR WHICH TO SET LAND DISPOSAL BANS IN ACCORDANCE WITH THE 1984 RCRA AMENDMENTS; THE PURPOSE IS TO REDUCE GROUND-WATER CONTAMINATION.
LANDFILLS	OSW- 4	LAND DISPOSAL RESTRICTION FRAMEWORK/SOLVENTS AND DIOXINS	OSW/CAO STEVE NEIL 382-4770	REGULATION	11/8/86	ESTABLISHES THE FRAMEWORK FOR THE RESTRICTION OF LAND ON DISPOSAL OF WASTES CONTAINING DIOXINS AND SOLVENTS;

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
SALT WATER INTRUSION	OPA - 9	EFFECTS OF CLIMATE CHANGE ON HYDROLOGIC CONDITIONS	OPA JIM TITUS 362-7821	STUDY	IN PROGRESS	CONSISTS OF A SERIES OF STUDIES THAT EXAMINE GLOBAL WARMING PATTERNS AND INCREASED CARBON DIOXIDE. TWO HYDROLOGICAL IMPACTS DISCUSSED ARE SALINITY INTRUSION INTO FRESH WATER AQUIFERS DUE TO A RISE IN SEA LEVEL AND DE-SALINIFICATION AND REDACTION IN GROUND WATER LEVELS AS A RESULT OF CHANGING RAINFALL PATTERNS.

GROUND WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
ABANDONED WASTE SITE	OAR- 7	HAZARD ASSESSMENT - SUPERFUND SUPPORT	OAR BILL GUNTER 475-9630	GUIDANCE	IN PROGRESS	ASSISTS IN ACCIDENT, INCIDENT, AND ASSESSMENT MONITORING AT SUPERFUND SITES HAVING RADIACTIVE CONTAMINATION. EVALUATES ALL POTENTIAL PATHWAYS TO MAN, INCLUDING DRINKING WATER.
ABANDONED WASTE SITE	OERC- 2	DEVELOPMENT AND MANAGEMENT OF RCRA AND CERCLA ENFORCEMENT CASES	OERC CORYN, WASEMAN 382-7550	ENFORCEMENT	ONGOING	DEVELOPS CIVIL JUDICIAL CASES FOR VIOLATIONS OF RCRA AND CERCLA REGULATIONS, INQUIRING FAILURE TO ADEQUATELY MONITOR THE GROUND WATER. INCLUDES PREPARING AND NEGOTIATING CASES THROUGH REFERRAL TO THE DEPARTMENT OF JUSTICE.
ABANDONED WASTE SITE	OERA- 2	DRAFT SUPERFUND EXPOSURE ASSESSMENT MANUAL	OPE MIKE KOSAKOWSKI 382-6611	GUIDANCE	1/86	PROVIDES FRAMEWORK FOR ASSESSING HUMAN EXPOSURE FROM CONTAMINANTS AT SUPERFUND SITES; COVERS ANALYSIS OF CONTAMINANTS, DETERMINATION OF FATE, AND EVALUATION OF NATURE AND MAGNITUDE OF HUMAN POPULATION EXPOSURE.
ABANDONED WASTE SITE	OERA- 3	DER/EPAS COMPLIANCE POLICY MANUAL	DER/EPAS STEPHEN SMITH 382-2200	GUIDANCE	6/87	PROVIDES GUIDANCE FOR IMPLEMENTING EPA POLICY ON COMPLIANCE OF CERCLA REMEDIAL ACTIONS WITH THE REQUIREMENTS OF OTHER FEDERAL ENVIRONMENTAL AND PUBLIC HEALTH STATUTES.
ABANDONED WASTE SITE	OERA- 4	CERCLA REMEDIAL ACTIONS AND NEPA/EIS FUNCTIONAL EQUIVALENCY	OERA DICK HYDE 475-0334	GUIDANCE	N/A	PROVIDES GUIDANCE ON SUPERFUND/NEPA INTERACTION TO ENSURE THAT REMEDIAL ACTION MEET FUNCTIONAL EQUIVALENCY REQUIREMENTS OF NEPA.
ABANDONED WASTE SITE	OERA- 5	EMERGENCY RESPONSE CLEANUP SERVICES CONTRACTS	DER/ERD LIMA GARRETT MASK I 382-2668	RESPONSE	ONGOING	PROVIDES SERVICES TO CLEAN UP CONTAMINATION AT PERMANENTLY FUNDED REMOVAL SITES.
ABANDONED WASTE SITE	OERA- 6	SUPERFUND REMOVAL PROCEDURES--REVISION #3	DER/ERD SHERYL HANCKINS 382-2650	GUIDANCE	1/87	PROVIDES PROCEDURES FOR PLANNING AND CONDUCTING REMOVAL ACTIONS; INCLUDES AN APPROACH FOR DETERMINING THE TYPE AND EXTENT OF THREAT AND FOR SELECTING AN APPROPRIATE RESPONSE ACTION.
ABANDONED WASTE SITE	OERA- 7	ACTION LEVELS FOR DRINKING WATER CONTAMINATION INCIDENTS UNDER THE NEW NATIONAL CONTINGENCY PLAN	OER/ERD HANS CRAMP 382-2188	RESPONSE	12/86	DISCUSSES SIX OPTIONS FOR SETTING AN ACTION LEVEL AT WHICH TO INITIATE RESPONSE AT SITES WITH DRINKING WATER CONTAMINATION.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
ABANDONED WASTE SITE	DE-RA- 8	REPORTABLE QUANTITIES (40 CFR 302)	DEARR/HSCD JOHN ALLY 362-2190	REGULATION	9/86 FINAL 12/86 PROPOSED	REQUIRES RELEASES OF DESIGNATED SUBSTANCES TO REPORT TO THE FEDERAL GOVERNMENT THOSE RELEASES THAT EXCEED A SPECIFIED THRESHOLD; EFFORTS ARE UNLIKELY TO EXPAND THE REQUIREMENTS TO INCLUDE POTENTIAL CARCINOGENS, CHRONICALLY TOXIC SUBSTANCES, RADIONUCLIDES, AND AIR TOXICANTS. 717 SUBSTANCES WILL HAVE RULES FORMULATED.
ABANDONED WASTE SITE	DE-RAH- 9	TECHNICAL ASSISTANCE TEAM (TAT) CONTRACTS	DEARR/HSCD LINDA GARCZYNSKI 362-2669	RESPONSE	ONGOING	INCLUDES HYDROGEOLOGIC INVESTIGATIONS TO IDENTIFY CONTAMINATION AT SUPERFUND INCIDENTS AND TECHNICAL SUPPORT DURING RESPONSE.
ABANDONED WASTE SITE	DE-RAH-11	NATIONAL PRIORITIES LIST (NPL)	DEARR/HSCD JANE METCALF 362-7383	REGULATION	UPDATE DUE 12/86	IDENTIFIES THOSE HAZARDOUS WASTE SITES THAT POSE THE MOST POTENTIAL RISK TO HUMAN HEALTH AND THE ENVIRONMENT; THE PRIORITY RANKING OF SITES LISTED ON THE NPL HAVE GROUND-WATER CONTAMINATION.
ABANDONED WASTE SITE	DE-RAH-12	REMEDIAL CONTRACTS	DEARR/HSCD STEVE HOOPER 362-2640	RESPONSE	ONGOING	INCLUDES PRELIMINARY ASSESSMENTS, SITE INSPECTIONS, REMEDIAL INVESTIGATIONS AND FEASIBILITY STUDIES THAT CHARACTERIZE THE EXTENT OF CONTAMINATION IN GROUND WATER AND ALL OTHER MEDIA AND ESTABLISH CLEANUP MEASURES.
ABANDONED WASTE SITE	DE-RA-13	STATE PARTICIPATION IN THE SUPERFUND REMEDIAL PROGRAM	DEARR/HSCD JAN WINE 362-2465	GUIDANCE	ONGOING	DISCUSSES POLICIES AND PROCEDURES FOR STATE PARTICIPATION IN ALL PHASES OF CLEANUP.
ABANDONED WASTE SITE	DE-RA-14	INTERIM PROCEDURES FOR DELETING SITES FROM THE NATIONAL PRIORITIES LIST	DEARR/HSCD STEVE GOLIAN 475-6703	GUIDANCE	6/86	GUIDANCE FOR DETERMINING WHETHER SITE CLEANUP HAS BEEN SUFFICIENTLY ADVANCED TO DELETE THE SITE FROM NPL.
ABANDONED WASTE SITE	DE-RA-15	DRAFT SITE INSPECTION SAMPLING STRATEGY TO SUPPORT HAZARD RANKING SYSTEM SCORING	DEARR/HSCD LUCY SIEBOLD 362-2454	GUIDANCE	1/86	PROVIDES SITE INSPECTION TEAM WITH TECHNICAL GUIDANCE ON HOW TO DEVELOP A SAMPLING PLAN, INCLUDING THE SELECTION OF SAMPLING POINTS.
ABANDONED WASTE SITE	DE-RA-16	HAZARD RANKING SYSTEM (HRS APPENDIX A)	DEARR/HSCD STEVE CALDWELL 475-6904	REGULATION	REVISION DUE 4/88	EVALUATES RISKS FROM MULTI-MEDIA PATHWAYS OF CONTAMINATION AND SELECTS AS THE BASIS FOR SITING SITES FOR THE NATIONAL PRIORITIES LIST.
ABANDONED	DE-RA-17	GUIDANCE ON REMEDIAL INVESTIGATIONS	DEARR/HSCD	GUIDANCE	6/85	HIGHLIGHTS TECHNICAL AND PRINCIPAL

GROUND WATER ACTIVITIES SURVEY						
SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
WASTE SITE	UNDER CERCLA	STEVE GULIAN 475-6703				INFORMATION ON HOW TO CONDUCT THE MEDIA INVESTIGATIONS THAT CHARACTERIZE THE GROUND WATER AND OTHER CONTAMINANT PROBLEMS AT THE SITE.
ABANDONED WASTE SITE	DEPA-18	GUIDANCE ON FEASIBILITY STUDIES UNDER CERCLA	DEPA/HSCD STEVE GULIAN 475-6703	GUIDANCE	6/85	PROVIDES GUIDELINES FOR DEVELOPING AND EVALUATING ALTERNATIVE CLEANUP ACTIONS AT SITES ON THE NATIONAL PRIORITIES LIST.
ABANDONED WASTE SITE	DEPA-18	GUIDANCE DOCUMENT FOR CLEANUP OF SURFACE IMPOUNDMENTS	DEPA/HSCD ED BARTH 382-7898	GUIDANCE	8/86	PROVIDES APPROACH TO CONDUCTING LIMITED MEDIA INVESTIGATIONS FOR SURFACE IMPOUNDMENTS.
ABANDONED WASTE SITE	DEPA-20	MULTIPLE SOURCE GROUND-WATER STRATEGY	DEPA/HSCD BILL HANSEN	STRATEGY	IN PROGRESS	PROVIDES OVERVIEW OF EPA'S APPROACH TO UNDERTAKING A SUPERFUND CLEANUP IN RESPONSE TO GROUND-WATER CONTAMINATION ATTRIBUTABLE TO MULTIPLE SOURCES.
ABANDONED WASTE SITE	DEPA-21	DRAFT GROUND-WATER DECISION GUIDANCE FOR SUPERFUND SITES	DEPA/HSCD ED BARTH 382-7898	GUIDANCE	9/86	PROVIDES OVERVIEW OF DECISION-MAKING APPROACH FOR GROUND-WATER SITUATIONS.
ABANDONED WASTE SITE	DEPA-22	GUIDANCE DOCUMENT FOR PROVIDING ALTERNATE WATER SUPPLIES	DEPA/HSCD RANDY KAL TREIDER 382-2448	GUIDANCE	FY87	ESTABLISHES GUIDANCE FOR PROVIDING ALTERNATE WATER SUPPLY TO USERS OF A SYSTEM CONTAMINATED BY A SUPERFUND SITE.
ABANDONED WASTE SITE	DEPA-23	FIELD OPERATIONS MANUAL	DEPA STEVE HOOPER 475-6688	GUIDANCE	FY87	STANDARDIZES PROCEDURES FOR FIELD INVESTIGATION ACTIVITIES INVOLVING GROUND-WATER MONITORING.
ABANDONED WASTE SITE	ORD- 5	ENGINEERING SUPPORT FOR SITE AND SITUATION ASSESSMENT	ORD JIM BASILICO 382-5747	STUDY	ONGOING	APPLIES ENGINEERING EXPERTISE TO ASSESSMENTS OF HAZARDOUS WASTE SITES (E.G., WASTE CHARACTERISTICS, HYDROLOGY, GEOLOGY, AND SOIL CHARACTERISTICS).
ABANDONED WASTE SITE	ORD- 6	EVALUATE TECHNOLOGY TO MANAGE UNCONTROLLED WASTE SITES	ORD JIM BASILICO 382-5747	STUDY	IN PROGRESS	EVALUATES IMPROVED AND NEW TECHNOLOGIES FOR SHORT-TERM, LONG-TERM ACTIONS TO CLEAN UP SPILLS AND NEWLY DISCOVERED RELEASES OF HAZARDOUS SUBSTANCES FROM UNCONTROLLED WASTE SITES.
ABANDONED WASTE SITE	ORD- 7	PREPARE AND CONTAIN HAZARDOUS MATERIAL RELEASES	ORD JIM BASILICO 382-5747	STUDY	IN PROGRESS	ADAPTS INDUSTRIAL TECHNOLOGIES IN ORDER TO IMPROVE THE PREVENTION AND CONTROL OF GROUND-WATER CONTAMINATION AND OTHER POLLUTION.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	TO/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
ABANDONED WASTE SITE	ORD- 8	SPECIAL BIOGRADATION PROCESSES FOR DETOXIFYING CONTAMINATED SOILS	ODD JIM BASILICO 382-5747	STUDY	IN PROGRESS	DEVELOPS AND EVALUATES BIOMEDICAL METHODS TO DETOXIFY OR INFLUXIFY CHEMICALS IN SOILS AND THUS PREVENT LEACHING TO GROUND WATER.
ABANDONED WASTE SITE	ORD-10	DETERMINATION OF WASTE MOBILITY BY THE USE OF MICROBIALS	ODD JIM BASILICO 382-5747	STUDY	IN PROGRESS	EVALUATES SOIL PROFILE AND ADULTH MICROBIOLOGY; FOR THEIR CAPACITY TO PREDICT HAZARDOUS WASTE MOVEMENT; COMPARES RESULTS WITH FIELD VERIFICATION STUDIES.
ABANDONED WASTE SITE	ORD-18	GEOPHYSICAL SURVEYS OF HAZARDOUS WASTE SITES	ODD JIM BASILICO 382-5747	MONITORING	IN PROGRESS	DEVELOPS AN IMPROVED ELECTROMAGNETIC INDUCTION INSTRUMENT. EVALUATES SURFACE AND BOREHOLE GEOPHYSICAL TECHNIQUES, AND EVALUATES THE CAPABILITY OF SEISMIC REFLECTION TECHNIQUES TO DETERMINE SUBSURFACE LATERAL GEOLOGICAL NON-HOMOGENEITIES.
ABANDONED WASTE SITE	ORD-19	UNSATURATED ZONE MONITORING FOR HAZARDOUS WASTE SITES	ODD JIM BASILICO 382-5747	STUDY	IN PROGRESS	EVALUATES AGRICULTURAL EQUIPMENT AND METHODS FOR MONITORING IN THE VAUCUSE ZONE TO INFLUENCE AND PREDICT LEACHING OF POLLUTANTS FROM HAZARDOUS WASTES.
ABANDONED WASTE SITE	ORD-21	BOREHOLE SENSING FOR HAZARDOUS WASTE SITE MONITORING	ODD JIM BASILICO 382-5747	STUDY	IN PROGRESS	DESIGNS, BUILDS, MODIFIES, AND EVALUATES SENSING DEVICES AND METHODS USED TO OBTAIN HYDROLOGIC DATA FROM MONITORING WELLS AT HAZARDOUS WASTE SITES.
ABANDONED WASTE SITE	ORD-25	PRACTICAL STRATEGY FOR ORGANIC PLUME ASSESSMENT	ODD JIM BASILICO 382-5747	STUDY	IN PROGRESS	INCLUDES SURVEYS AT CONTAMINATED AIR POLLUTION BASES AND SYNTHESIZES EXPERIENCE GAINED INTO A STRATEGY FOR LOCATING ORGANIC CONTAMINATION.
ABANDONED WASTE SITE	OSR- 1	ASSESSING CONTAMINATION FROM A SUPERFUND SITE	OSR/CSPO JOHN WARREN 382-2680	STUDY	10/87	EXAMINES THE APPLICABILITY OF STATISTICAL SAMPLING PROTOCOLS FOR ASSESSING CONTAMINATION LEVELS AT CERCLA SITES.
ABANDONED WASTE SITE	OSR- 2	STATISTICS AND CERCLA GROUND-WATER CONTAMINATION	OSR/CSPO JOHN WARREN 382-2680	STUDY	6/87	EXAMINES THE PERFORMANCE OF SEVERAL STATISTICAL METHODOLOGIES AT CERCLA SITES HAVING WIDELY DISPARATE CONTAMINATION PROFILES; USES ACTUAL DATA TO TEST THEORETICAL TECHNIQUES FOR ASSESSING THE MAGNITUDE AND EXTENT OF GROUND-WATER CONTAMINATION.
ABANDONED	OSRA- 7	PROCEDURES FOR PLANNING AND	OSRA	GUIDANCE	5/85	PROVIDES PROCEDURES FOR PLANNING WHEN

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
WASTE SITE	IMPLEMENTING OFF-SITE RESPONSE ACTIONS	MIKE KILPATRICK 382-4835				TO SEND SUPERHUMAN WASTE OFF-SITE FOR DISPOSAL OR TREATMENT AND HOW TO IDENTIFY AND SELECT AN APPROPRIATE HUHA FACILITY.
ABANDONED WASTE SITE	DOWME- 8 MEMORANDA OF UNDERSTANDING WITH FEDERAL AGENCIES	OSWERA JIM JORDITT 382-2205	INTERAGENCY	ONGOING		ESTABLISHES EACH AGENCY'S RESPONSIBILITY FOR HELPING EPA CLEAN UP CONTAMINATION OF THE GROUND WATER AND OTHER MEDIA OR PREVENT HUMAN EXPOSURE TO THE CONTAMINATION.
ABANDONED WASTE SITE	DWPE- 3 CORRECTIVE ACTION ORDER GUIDANCE	DWPE/RED MARK GIBERSON 382-4849	GUIDANCE	COMPLETE		PROVIDES GUIDANCE TO REGIONS IN WHITING CONCERNING ACTION ORDERS FOR RICHA FACILITIES THAT CONTAMINATE THE GROUND WATER.
ABANDONED WASTE SITE	DWPE- 6 DRAFT INTERIM MEASURES GUIDANCE	DWPE/RED JACKIE MOYA 382-3122	GUIDANCE	5/86		DESCRIBES THE CONDITIONS UNDERR WHICH ENFORCEMENT ACTION SHOULD BE USED. INTERIM MEASURES TO REMOVE OR ISOLATE THE SPREAD OF CONTAMINATION OF ENVIRONMENTAL MEDIA, INCLUDING GROUND WATER.
ABANDONED WASTE SITE	RDS- 1 UPPER LAKES CONNECTING CHANNELS STUDY-GROUND-WATER COMPONENT	REVION V/DEN GERI ANNE GARL FTS 886-1490	RESPONSE	1987		IDENTIFIES POTENTIAL WASTE AND CHEMICAL SITES ALONG THE CORRIDOR OF CHANNELS; RANKS SITES ACCORDING TO THE AMOUNT OF GROUND WATER CONTAMINATION RELEASED TO THE CHANNELS; SUPPORTS PREPARATION OF A REMEDIAL ACTION PLAN.

GROUND WATER ACTIVITIES SURVEY						
SOURCE	IV/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
NUCLEAR	OAR- 4	RADIOLOGICAL ACCIDENT AND INCIDENT ASSESSMENT MONITORING (EMERGENCY RESPONSE)	OAR JOHN RUSSELL 475-9820	TECHNICAL ASSISTANCE	ONGOING	INSTITUTES DECISION MAKERS ON HOW TO USE MONITORING INFORMATION TO ESTIMATE HUMAN CHRONIC EXPOSURE FROM THE ACCIDENTAL RELEASES AND TO DECIDE ON THE NEED TO DIVERT WATER SUPPLIES.
NUCLEAR	OAR- 5	PROTECTIVE ACTION GUIDANCE FOR NUCLEAR INCIDENTS	OAR JOHN RUSSELL 475-9820	GUIDANCE	N/A	ASSISTS FEDERAL AGENCIES AND THE STATES IN ENVIRONMENTAL MONITORING, RISK ASSESSMENT, PROTECTIVE ACTION DECISIONS, AND ENSURING THE SAFETY OF THE PUBLIC; INCLUDES ASSISTING IN THE ASSESSMENT OF GROUND WATER CONTAMINATION.
NUCLEAR	OAR- 9	ENVIRONMENTAL RADIATION PROTECTION STANDARDS FOR NUCLEAR POWER OPERATIONS	OAR/CSD JOHN RUSSELL 475-9820	REGULATION	1/77	SPECIFIES LEVELS BELOW WHICH NORMAN OPERATIONS OF THE URANIUM FULL CYCLE ARE DETERMINED TO BE ENVIRONMENTALLY ACCEPTABLE.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
MULTIPLE	OECM- 3	DEVELOPMENT OF CRIMINAL ENFORCEMENT CASES	OECM CHERYL WASSERMAN 382-7550	ENFORCEMENT	ONGOING	DEVELOPS CRIMINAL CASES UNDER H.R.C.A., CE H.A. A, S.D.A., AND FIFTHA-FOR VIOLENT ATTURNS, INCLUDING CONTAMINATION OF GROUND WATER.
MULTIPLE	OECM- 4	SUPPORT FOR CRIMINAL ENFORCEMENT ACTIONS	OECM CHERYL WASSERMAN 382-7550	ENFORCEMENT	ONGOING	PROVIDES TECHNICAL SUPPORT FOR DEVELOPING CRIMINAL ENFORCEMENT ACTIONS; INCLUDES MONITORING AND TESTING GROUND WATER AND GATHERING EVIDENCE OF CRIMINAL CONTAMINATION.
MULTIPLE	OFA- 2	FEDERAL FACILITIES COMPLIANCE PROGRAM	OFA/FFCB LEE HERBIG, JR. 382-5806	REVIEW	ONGOING	PROMOTES FEDERAL FACILITIES' COMPLIANCE WITH APPLICABLE ENVIRONMENTAL STATUTES AND REGULATIONS; ENCOMPASSES A RANGE OF GROUND WATER RELATED CONCERNHS; ESPECIALLY COMPLIANCE WITH THE GROUND WATER MONITORING REQUIREMENTS UNDER SUBTITLE C OF H.R.C.A.
MULTIPLE	OFA- 9	STANDARDS APPLICABLE TO GENERATORS OF HAZARDOUS WASTE	OSW/CAO 608 AXEL RAD 382-5216	REGULATION	3/88	IMPOSES MANAGEMENT, WASTE TESTING, AND PAPERWORK STANDARDS ON GENERATORS OF HAZARDOUS WASTE.
MULTIPLE	OSWER- 1	CHEMICAL EMERGENCY PREPAREDNESS PROGRAM--INTERIM GUIDANCE	OWNER ELAINE DAVIES JIM MACKRIS 475-0323	GUIDANCE	11/85	HELPS COMMUNITIES PREPARE FOR SERIOUS CHEMICAL ACCIDENTS; RESPONSE PLANS.
MULTIPLE	OMP- 1	OMA SECTION 404 DREDGE AND FILL PROGRAM	OMP JOHN MEAGHER 382-5043	REGULATION	ONGOING	INCLUDES AUTHORITY FOR EPA TO USE UR RESTRICT DISCHARGE OR DREDGED OR FILLED MATERIAL IF THAT ACTIVITY WILL HAVE ADVERSE IMPACTS ON MUNICIPAL WATER SUPPLIES, SHELFISH BEDS AND FISHERY AREAS; DEVELOPS AND USES GUIDELINES TO EVALUATE A BROAD RANGE OF ENVIRONMENTAL IMPACTS, INCLUDING THOSE IN WATER SUPPLIES.

GROUND-WATER ACTIVITIES SURVEY

SOURCE	ID/LEAD OFFICE	TITLE	CONTACT	TYPE OF ACTIVITY	STATUS	SUMMARY
RE RESOURCE-BASED	OPA- 1	ENVIRONMENTAL REVIEW PROGRAM	OPA/FALD BILL DICKERSON 382-5049	REVIEW	ONGOING	EXAMINES AND EVALUATES PROPOSED FACILITIES TO IDENTIFY AND MITIGATE ENVIRONMENTAL IMPACTS. ENSURES EPA POLICIES, REGULATORY RESPONSIBILITIES AND ENVIRONMENTAL EXPERTISE ARE IMPLEMENTED.
RE RESOURCE-BASED	OMP-10	MANAGEMENT PROTECTION PLANS	OMP ROBERT DEE 382-7077	GUIDANCE	6/87	PROVIDES GUIDANCE FOR PREPARING, COMPREHENSIVE MANAGEMENT PLANS FOR CRITICAL AQUIFER PROTECTION AREAS; AND ELEMENTS OF A STATEWIDE PROTECTION PROGRAM; IDENTIFIES MEASURES AND TECHNIQUES THAT STATES, LOCALITIES, AND OTHERS HAVE FOUND USEFUL IN PROTECTING GROUND WATER.
RE RESOURCE-BASED	OMP-11	SOLE SOURCE AQUIFER PROGRAM	OMP LEE BRAEN 382-7077	REVIEW	ONGOING	PROVIDES FOR SSA DESIGNATION AND REVIEW OF FEWER THAN PROJECTS IN SOLE SOURCE AQUIFERS (SSAs).
RE RESOURCE-BASED	ONEP- 1	NEAR COASTAL WATER STRATEGIC PLANNING INITIATIVE	ONEP KATHERINE MINSCH 382-7166	STRATEGY	1987	SUMMARIZES DEGRADATION PROBLEMS IN NEAR COASTAL WATERS AND DEVELOPS PRACTICAL OPTIONS TO DEAL WITH NEAR COASTAL WATER CONTAMINATION PROBLEMS.
RE RESOURCE-BASED	ONEP- 2	NATIONAL ESTUARIES PROGRAM	ONEP KATHERINE MINSCH 382-7166	PLANS	ONGOING	DEVELOPS MANAGEMENT STRATEGIES FOR ESTUARIES SUCH AS BILLY BAY, MARSHANSETT BAY, LONG ISLAND SOUND, PLATE SOUND, SAN FRANCISCO BAY AND ALBERMARLE PARMICO SOUND; IDENTIFIES WHETHER A GROUND WATER CONTAMINATION IS A PROBLEM.
RE RESOURCE-BASED	OPA- 3	COMPARATIVE RISK ANALYSIS OF GROUND-WATER CONTAMINATION SOURCES	OPA/RID HOPE PILLSBURY 382-2704	STUDY	1986	USES OSM'S LINEAR LOCATION MODEL AS A FRAMEWORK FOR COMPARING THE POTENTIAL INDIVIDUAL HUMAN HEALTH RISK FROM VARIOUS SOURCES IN A VARIETY OF LOCATIONS AND HYDROGEOLOGIC SETTINGS; PROVIDES A WAY TO SET ACTION PRIORITIES BETWEEN SOURCE TYPES.
RE RESOURCE-BASED	OSR- 3	INNOVATIVE RESPONSES TO NONPOINT SOURCES OF GROUND-WATER CONTAMINATION - PHASE I	OSR BRIANNA DOYLE 382-5604	STUDY	IN PROGRESS	EVALUATES SEVERAL MANAGEMENT APPROACHES TO PREVENT NONPOINT SOURCE GROUND WATER CONTAMINATION. INVESTIGATED POSSIBLE APPLICATION, SALT WATER INTRUSION, IRRIGATION, AND DEICING. WILL RESULT IN A SERIES OF CASE STUDIES/Demonstration PROJECTS OVER THE

V. SOURCE DESCRIPTION SUMMARIES

V. SOURCE DESCRIPTION SUMMARIES

This section contains a summary description for each of the 33 sources listed in the OTA report Protecting The Nation's Groundwater From Contamination. The summaries are intended to supplement the information contained in the activity list of Section IV.

Each summary contains the following information; definition of the source, potential contaminants associated with the source, extent of the potential problem (i.e., number of facilities, volume of contaminants), geographical distribution and major EPA activities to address source contamination. The first four elements summarize information in the 1984 OTA report and other reference documents listed in Exhibit V-1.

The automated data base presented in Section IV serves as the basis for the summary element "Major Categories of EPA Activities."

There has been no major effort to update this information, however, EPA program offices have supplemented and updated some of OTA's data for some of the major sources addressed by the Agency.

EXHIBIT V-1
LIST OF REFERENCES

Information presented in the first four elements of the source summaries was derived from the OTA report or EPA staff, unless otherwise noted. EPA staff relied on the other references listed below.

1. ICF, Inc. and Pope Ried Associated, Inc. Hazardous Waste Tanks Risk Analysis. Washington, D.C.: June 1986.
2. U.S. Congress, Office of Technology Assessment. Protecting the Nation's Groundwater From Contamination (OTA-0-233). Washington, D.C.: October 1984
3. U.S. EPA. Phase I Subtitle D Study. Washington, D.C.: 1986.
4. U.S. EPA, Office of Drinking Water. Report to Congress on Injection of Hazardous Waste (EPA 540/9-85-003). Washington, D.C.: May 1985.
5. U.S. EPA, Office of Drinking Water. UIC Well Inventory. Washington, D.C.: March 1986.

1. SUBSURFACE PERCOLATION

Definition

Buried tank and drainage systems designed to collect water borne wastes, remove settleable solids from liquid by gravity separation, and permit percolation into the soil of clarified effluent.

Potential Contaminants

Hydrocarbons, metals, nitrates, phosphates, microorganisms, cleaning agents (TCE).

Extent of Potential Problem

An estimated 22 million domestic septic systems were in operation in the United States in 1980, and approximately one-half million new ones are installed annually. A 1983 report indicates that these systems release between 820 and 1,460 billion gallons of waste annually. It is estimated that 25,000 industrial septic systems discharge between 1.2-1.9 billion gallons of waste annually (OTA, 1984).

Septic systems pose a threat to the ground water from improper siting (e.g., too high a density per unit area for a particular hydrogeologic setting), overloaded systems, use of cleaning agents, end of design life, and improper disposal of septage (EPA, 1986).

Geographical Distribution

The highest regional densities of use are in the eastern third of the country and along portions of the west coast (OTA, 1984).

1. SUBSURFACE PERCOLATION
(Continued)

Major
Categories
of EPA
Activities

Guidance - The 5 OMPC guidance manuals issued by EPA emphasize use of the proper siting design, operation and maintenance technologies to prevent system failure, and subsequent ground-water contamination. An OGWP manual targets State and local officials and provides guidance on developing and administering programs that will protect ground water.

Strategy - The Agency is in the early stages of examining how to use TSCA to more effectively control septic tank additives.

2. INJECTION WELLS

Definition

Subsurface emplacement of fluids. Activities encompass industrial, municipal (sewage), agricultural, urban runoff, brine injection, enhanced oil recovery, solution mining, artificial recharge, in-site recovery wells and other drainage wells. EPA has established 5 classes of injection wells for regulatory purposes: Class I, hazardous and nonhazardous waste wells injected below underground sources of drinking water; Class II, oil and gas wells; Class III, solution mining wells; Class IV, hazardous waste wells injecting into or above underground sources of drinking water (banned by EPA); and Class V, all other types of wells.

Potential Contaminants

Hydrocarbons, metals, non metals, organics, organic and inorganic acids, microorganisms, radionuclides.

Extent of Potential Problem

A FY 86 inventory indicated that there were 280,752 operable injection wells in the United States (EPA, 1986). These include: 555 Class I wells, 161,397 Class II wells, 22,727 Class III wells, 14 Class IV wells, and 96,059 Class V wells.

Class I - At the time of the FY 86 EPA survey there were 252 hazardous Class I wells. EPA estimates that 11.539 billion gallons of hazardous waste were injected in 1983.

Class II - OTA has estimated that approximately 525 billion gallons of brine are disposed of annually and that 24.5 billion gallons of water are used annually for enhanced oil recovery.

Class IV - Class IV wells are now illegal. When discovered, a site evaluation study is done, and if warranted, they are plugged and abandoned.

2. INJECTION WELLS
(Continued)

Extent of
Potential
Problem
(Continued)

Class V - There were approximately 116,150 Class V wells as of March 1986. The most common of these wells are agricultural, industrial, and storm water runoff.

Ground-water contamination can result from either active or inactive injection wells. This contamination commonly occurs because of faulty well construction, improperly plugged or abandoned wells near the injection well, faulty or fractured confining strata, lateral displacement or direct injection into underground sources of drinking water.

Geographical
Distribution

The majority of Class I hazardous waste injection wells are located in the Gulf Coast and Great Lakes States. Class II oil and gas wells are distributed throughout the United States, with at least 17 states reporting some type of contamination incident. Class V agricultural drainage wells are most common in IA, ID, TX and CA. Class V industrial drainage wells are present mainly in NY and NJ while Class V storm water drainage wells are most common in the western States.

Major
Categories
of EPA
Activities

Regulations - EPA has a major regulatory program for controlling underground injection practices (SDWA). This program establishes technical criteria and standards for the construction, operation, monitoring and testing of wells. The technical standards are implemented through a permitting program administered either by EPA or approved States. There are two efforts underway which may result in additional regulatory action. One is the land disposal restriction rule under the Hazardous and Solid Waste Amendments of 1984, Sections 210(f) and (g)/RCRA 3004(f) and (g). The second is the Class V well assessment.

2. INJECTION WELLS
(Continued)

Major
Categories
of EPA
Activities
(Continued)

Studies - An assessment of hazardous waste injection required by the 1984 RCRA amendments to determine whether injection of wastes is protective of human health (as defined in this Act) is underway. Components of the study include: an analysis of logging and testing requirements, causes and consequences of well failures, and an assessment of geological, geochemical, and hydrologic characteristics.

Additionally an assessment of the number, location and potential of contamination associated with Class V wells is in process. A report is due to Congress in September 1987.

3. LAND APPLICATION

<u>Definition</u>	Application of treated wastewater, wastewater byproducts (e.g., sludge), hazardous waste or nonhazardous waste to the land which then acts as a medium for treatment and disposal (e.g., spray irrigation, overland flow).
<u>Potential Contaminants</u>	Nitrogen, phosphorous, heavy metals, hydrocarbons microorganisms and radionuclides.
<u>Extent of Potential Problem</u>	<p><u>Sludge</u> - at least 2,463 publicly-owned treatment works (POTW) currently apply liquid or thickened sludge on land. Over 7 million dry tons of sludge are produced by POTWs, with over 20 percent of municipal sludge generated being applied directly to the land. Industrial sludge data is lacking.</p> <p><u>Land Treatment</u> - over 1000 POTWs currently use or plan to use this method.</p> <p><u>Hazardous Waste</u> - EPA estimates there are at most 250 land treatment units using primarily petroleum and wood preserving wastes.</p> <p><u>Nonhazardous Waste</u> - A 1986 EPA report estimates the number of nonhazardous land application units to be 18,889. Of these 11,937 receive municipal sewage, 5,605 are industrial, 726 are oil and gas, and 621 are other types of facilities.</p>
<u>Geographical Distribution</u>	Unknown.

3. LAND APPLICATION
(Continued)

Major
Categories
of EPA
Activities

Regulation - Two major regulatory programs pertain to land application. One addresses the application of municipal sludge and land treatment of wastewater through the Clean Water Act (CWA). The other applies to nonhazardous and hazardous solid waste and is regulated under the Resource Conservation and Recovery Act (RCRA) Subtitles C and D.

Guidance - Substantial guidance has been developed pertaining to system operations and ground-water monitoring under Subtitles C and D of RCRA. Guidance manuals have also been developed by the Office of Research and Development and the Office of Municipal Pollution Control on best practicable waste treatment techniques for POTW land treatment facilities and land application of municipal sludge.

Studies - Because of the land disposal restriction in the 1984 Amendments to the RCRA, land treatment may be prohibited in some cases. Several major studies are underway to better assess the impact of land treatment and land application practices on ground water.

4. LANDFILLS

Definition

Historically, landfills have been the most common method for disposing of solid wastes. These wastes are classified as either hazardous or nonhazardous. RCRA regulations define hazardous waste and specifically exclude various waste products such as domestic sewage wastes, irrigation return flows, certain radioactive wastes, and some industrial wastes. Municipal landfills receive solid waste products that generally, but not always, are nonhazardous. Industrial landfills receive wastes from industries, and these wastes typically are hazardous.

Potential Contaminants

Organics, inorganics, microorganisms, radionuclides.

Extent of Potential Problem

A 1986 EPA survey estimates 16,416 landfills in the United States. This includes 9284 municipal landfills and 3511 industrial landfills. Of this total there are approximately 700 hazardous landfills at 136 facilities.

During 1984, municipal solid waste disposal facilities handled about 133 million tons of municipal solid wastes.

Geographical Distribution

The distribution of landfills appears to follow the general distribution of the population. Consequently, landfills are concentrated around urban population centers and industrial facilities.

4. LANDFILLS
(Continued)

Major
Categories
of EPA
Activities

Policy/Strategy - OSW is developing an integrated ground-water strategy that outlines EPA's policy for making ground-water related RCRA Subtitle C permitting and variance decisions for hazardous waste land disposal facilities including landfills. It will encompass all regulations and guidance pertaining to ground water.

Regulation - Two major regulatory programs address landfills. Subtitle C of RCRA regulates hazardous waste landfills by establishing management, design, location and operating standards as well as ground-water monitoring and corrective action requirements. Additional regulations to implement the restrictions on land disposal enacted by Congress in 1984 are under development.

Subtitle D of RCRA until recently consisted predominately of broad performance-based criteria for nonhazardous waste landfills. However, more specific criteria are under development to govern the location and performance of these facilities.

Subtitle C is designed to be administered initially by EPA and eventually delegated to States. Subtitle D is designed to be State implemented from the start.

Guidance - Eight guidance manuals issued or under development by OSW and OWPE implement the provisions of Subtitles C and D of RCRA. Several specifically address ground-water monitoring, while others pertain to facility location, compliance orders and corrective action.

4. LANDFILLS
(Continued)

Major
Categories
of EPA
Activities
(Continued)

Enforcement - OWPE conducts enforcement activities that focus specifically on ground water.

Studies - Most studies are related in some way to regulatory development under RCRA. They include small generator issues, Subtitle D implementation, and compliance with ground-water protection requirements.

5. OPEN DUMPS

Definition

A dump is a land disposal site where solid wastes are deposited without regard for the design, operation or maintenance of the site. At such sites, dumping usually is unauthorized and unsupervised, and the wastes are left uncovered. A wide variety of types of wastes have been deposited in open dumps.

Potential Contaminants

Organics, inorganics, and microorganisms.

Extent of Potential Problem

Estimates of open dumps range from 1,856 (EPA, 1985) to 2,396 (Waste Age, 1983). These are probably minimum estimates, because many open dumps still may be unidentified.

Geographical Distribution

55 States and Territories reported open dumps to EPA's Open Dump Inventory.

Major Categories of EPA Activities

Regulation - Open dumps are subject to the criteria EPA has developed for classification of solid waste disposal facilities and practices (RCRA). These rules will set performance criteria to protect the ground water, among other things.

Studies - EPA annually updates an inventory of open dumps. The States have identified those solid waste facilities that are open dumps and probably pose risks to health and the environment.

6. RESIDENTIAL (LOCAL) DISPOSAL

<u>Definition</u>	Practices in this category encompass the indiscriminate, unsupervised disposal of household wastes into gutters, sewers, storm drains and backyard burning pits. Supervised disposal in municipal landfills is not covered.
<u>Potential Contaminants</u>	Organic chemicals, metals, nonmetal inorganics, inorganic acids, microorganisms.
<u>Extent of Potential Problem</u>	<p>Household wastes encompass a wide range of product materials: pesticides, paint products, cleaners, automobile products, asphalt and roofing tar; and batteries. Although little quantitative information is available on the patterns of ultimate disposal of these household substances, there is some information on how much of these substances are consumed. Over 90 percent of households use pesticides, and these household uses represent 5-10 percent of all pesticide use in the U.S. Annual household cleaner usage is estimated to be 0.4-5.6 million tons.</p> <p>Residential disposal may contaminate ground water in several ways. Hazardous materials in the ashes from uncontrolled burning can leach into the ground water. Spilled oil, pesticides and fertilizers also can be washed away and leach. Toxic wastes poured down household drains can corrode pipes, cause septic system malfunctions, and interfere with municipal sewage treatment facilities, all of which may lead to ground-water contamination.</p>

6. RESIDENTIAL (LOCAL) DISPOSAL
(Continued)

Geographical
Distribution

The pattern of residential disposal reflects population density and distribution (OTA, 1984).

Major
Categories
of EPA
Activities

None reported.

7. SURFACE IMPOUNDMENTS

Definition

Surface impoundments are natural depressions or manmade holding areas such as excavations, lagoons, or dikes. Small impoundments, commonly referred to as "pits," are used by industries, municipalities, agricultural operations or households for special purposes such as waste storage or sludge disposal. Wastewater in impoundments is treated in several ways: chemical coagulation and precipitation, pH adjustment, biological oxidation, separation of suspended solids from liquids, and temperature reductions. Non discharging impoundments lose liquid through evaporation and/or seepage. Other impoundments discharge their liquid periodically or continuously into streams, lakes, bays or the ocean.

Potential Contaminants

Organic chemicals, metals, nonmetal inorganics, inorganic acids, microorganisms, radionuclides.

Extent of Potential Problem

EPA's Phase I Subtitle D Study (EPA 1986), reports that there are 191,822 surface impoundments in the United States. Types of impoundments include: 16,232 (8%) industrial, 2,426 (1.2%) municipal, 17,159 (9%) agricultural, 19,813 (10%) mining, 125,074 (65%) oil and gas and 11,118 other. In addition, there are 3,184 known hazardous waste treatment, storage, or disposal impoundments located at approximately 400 facilities.

Surface impoundments are thought to constitute one of the biggest threats to ground water, given the estimated numbers and volumes of waste. About 70 percent of the known impoundments are located in hydrogeologically vulnerable areas, as defined under the 1986 RCRA guidance. In addition, 37 percent are located over aquifers currently serving as sources of drinking water.

7. SURFACE IMPOUNDMENTS
(Continued)

Geographical
Distribution

Surface impoundments are found in numerous locations throughout the United States. States with the highest number of nonhazardous surface impoundments are AR, KS, LA, NM, OH, OK, PA, TX, WV.

Major
Categories
of EPA
Activities

Regulations - Surface impoundments handle both hazardous and nonhazardous waste and thus are subject to regulatory programs under both Subtitle C and Subtitle D of RCRA. Subtitle C, which regulates hazardous waste, includes current and pending regulations pertaining to restrictions on land disposal, requirements for small quantity generators, standards for owners/operators of treatment, storage and disposal (TSD) facilities, location standards for TSD facilities. Requirements for the hazardous waste program are implemented through a permit program.

Performance criteria under the Subtitle D program address nonhazardous waste and are being revised to be more specific and stringent as required under the 1984 Amendments to RCRA.

Guidance - Numerous guidance manuals accompany the RCRA Subtitle C regulatory program. These manuals establish policies and procedures and provide technical information for both the regulatory agencies and the regulated community.

Studies - A number of studies have been completed or are underway and generally are intended to support development of new regulations required by the 1984 amendments to RCRA and under Subtitle D of RCRA.

8. and 9. WASTE TAILINGS AND WASTE PILES

Definition

Waste tailings and piles are solid wastes typically associated with mining operations. Piles generally are disturbed soil and overburden from surface mining or waste rock from subsurface mining. Tailings result from on-site operations of cleaning and extracting ores. Both types of waste are piled on the land surface or used as fill.

Potential Contaminants

Arsenic, sulfuric acid, copper, selenium, molybdenum, uranium, thorium, radium, lead manganese and vanadium.

Extent of Potential Problem

Mining -- total annual waste material from mining operations is approximately 2.3 billion tons, which includes both waste piles and tailings.

Metal mining -- about 250 million tons are deposited each year in ponds.

Uranium mining -- estimates of known amounts of tailings are about 215 million tons per year at both active and inactive sites.

Hazardous waste piles -- piles at an estimated 174 facilities contained about 0.39 billion gallons in 1981; the actual amount probably is higher, because this represents the amount of waste only at facilities regulated under Federal law (OTA, 1984).

Geographical Distribution

Unknown.

8. and 9. WASTE TAILINGS AND WASTE PILES
(Continued)

Major
Categories
of EPA
Activities

Regulation - Waste piles are subject to the programs under Subtitles C and D of RCRA. Subtitle C pertains to hazardous waste treatment, storage and disposal facilities; Subtitle D addresses solid (nonhazardous) waste disposal facilities. Regulations under Subtitle C include the future restrictions on land disposal, revision to the small quantity generation rule, location standards and ground-water monitoring and protection requirements. Similar regulations for Subtitle D are under development.

Guidance - Eight guidance manuals issued or under development by OSW and OWPE implement Subtitles C and D of RCRA. Several manuals specifically address ground-water monitoring, while others pertain to facility location, compliance orders and corrective action.

Enforcement/Compliance Monitoring - OWPE conducts enforcement activities that focus specifically on ground water.

Studies - Most of the studies are related to regulatory development under RCRA. They include small generator issues, Subtitle D implementation, and compliance with ground-water protection requirements.

10. MATERIALS STOCKPILES

<u>Definition</u>	Storage piles for substances produced or used in a production process. Materials in stockpiles include crushed stone, copper ore, iron ore, and uranium ore, potash, titanium, phosphate rock, gypsum, coal, sand and gravel.
<u>Potential Contaminants</u>	From coal stockpiles: aluminum, iron, calcium, magnesium, sodium, potassium, sulfur, phosphate, and trace levels of arsenic, cadmium, mercury, lead, zinc, uranium, copper and cobalt; from other stockpiles: metals or nonmetals, depending upon the substance stockpiled.
<u>Extent of Potential Problem</u>	Little is known about the amounts of stockpiled materials. Based on an estimated annual materials production of 3.4 billion tons, approximately 700 million tons per year are stockpiled.
<u>Geographical Distribution</u>	Nationwide.
<u>Major Categories of EPA Activities</u>	None reported.

11. GRAVEYARDS

<u>Definition</u>	Cemetery; burial ground.
<u>Potential Contaminants</u>	Metals, nonmetals and microorganisms.
<u>Extent of Potential Problem</u>	Cemeteries are distributed throughout the United States. The potential for contamination will depend on soil types, depth to ground water, types of caskets used and annual rainfall. Contamination appears to be localized.
<u>Geographical Distribution</u>	Nationwide.
<u>Major Categories of EPA Activities</u>	None reported.

12. ANIMAL BURIAL

Definition

This category covers the disposal of animal carcasses. Mass burials are rare and occur in areas with large concentrations of livestock and in local landfills or open dumps. Individual burials typically take place in special sections of municipal landfills or in residential backyards.

Potential Contaminants

Contamination of the ground water is highly site-specific and depends on disposal practices, surface and subsurface hydrology, proximity of the site to water sources, the type and amount of disposed material and the cause of death.

Extent of Potential Problem

The problem is highly site-specific and depends on disposal practices, surface and subsurface hydrology, the proximity of the burial sites to water sources, the amount of disposed material and the cause of death.

Geographical Distribution

Unknown.

Major Categories of EPA Activities

None reported.

13. ABOVEGROUND STORAGE TANKS

Definition

Stationary devices designed to contain an accumulation of waste or nonwaste materials (EPA, 1986). These tanks for chemical storage are used in industrial, commercial and agricultural operations as well as at individual residences.

Potential Contaminants

Organics, metal/nonmetal inorganics, inorganic acids, microorganisms, radionuclides.

Extent of Potential Problem

Releases from aboveground tanks, commonly due to spills, overflow, or operator errors may result in the contamination of ground water (see "Hazardous Waste Tanks Risk Analysis", ICF, Inc. and Pope Reid Assoc., Inc., June 1986).

Geographical Distribution

Nationwide.

Major Categories of EPA Activities

Regulation - Aboveground storage tanks containing hazardous wastes are regulated under Subtitle C of RCRA. Recently revised standards for storage or treatment of hazardous waste in tank systems are designed to protect ground water (51 FR 25422).

Guidance - The document "Technical Resource Document for the Storage and Treatment of Hazardous Waste In Tank Systems" is available to assist owners and operators in complying with the hazardous waste tank standards (NTIS Ref. No. PB-87-134391).

14. UNDERGROUND STORAGE TANKS

Definition

Underground storage tanks consist of buried tanks and associated piping systems used to store petroleum products, other chemicals and wastes. Industries use tanks primarily for fuel storage, but also for storage of a wide range of other substances such as acids, metals, industrial solvents, technical grade chemicals, and chemical wastes. Commercial enterprises and residences utilize the storage tanks almost exclusively for fuel storage.

Potential Contaminants

Organics, metals, inorganic acids, microorganisms, radionuclides.

Extent of Potential Problem

About half of the approximately 1.3 million regulated carbon steel tanks are used for retail motor fuel sales, primarily at service stations; and half are used for motor fuel storage at nonretail businesses. Tanks regulated by EPA represent only one-fourth to one-half of all steel tanks. Therefore, the total number of steel tanks is somewhere between 2.4 million and 4.8 million. Some estimates are as high as 7 million tanks. Steel tanks are used in almost every sector of U.S. business including farming operations, trucking operations, and government agencies.

About 100,000 fiberglass tanks used for underground storage of petroleum products; several thousand are in use for storage of non-petroleum products.

The estimated cumulative capacity of all steel and fiberglass tanks is 25 billion gallons, but the extent to which that capacity is used is unknown.

14. UNDERGROUND STORAGE TANKS
(Continued)

Extent of
Potential
Problem
(Continued)

About 2,031 hazardous waste storage tanks (not included in the above figures) and treatment tanks are regulated under RCRA. This figure does not include tanks operating under NPDES permits, which account for an estimated 13.8 billion gallons of waste.

Geographical
Distribution

Tanks are widespread throughout the country; gasoline storage tanks are distributed in proportion to population density.

Major
Categories
of EPA
Activities

Regulation - Hazardous wastes are regulated under Subtitle C of RCRA. Petroleum and hazardous substance tanks are subject to a notification requirement and to an "interim provision" under Subtitle I of RCRA. The notification rule requires owners to notify State authorities of the location of their tanks. Final tank rules are under development.

Guidance - The principal guidance pertains to the interim prohibition on the installation of new tanks which are corrodable.

Studies - Numerous studies are underway to support regulatory development including areawide studies of the extent of contamination from leaking tanks and analyses of leaking tank incidents, tank technologies, economic impacts of regulatory options, retrofitting technologies, leak detection techniques, and costs and effectiveness of corrective action technologies (petroleum).

Research and Development - An assessment of leak detection and tank testing methods and analysis of various response criteria and cleanup technologies for remediation of releases are underway.

15. CONTAINERS

<u>Definition</u>	Containers include storage barrels and drums that hold both wastes and nonwaste products. They can be moved relatively easily, although some may be buried.
<u>Potential Contaminants</u>	Organic chemicals, metals, nonmetals, in-organic acids, microorganisms and radionuclides.
<u>Extent of Potential Problem</u>	Little information is available on containers. Information on containers regulated under RCRA shows that in 1981 about 3,577 facilities used containers to store 0.16 billion gallons of hazardous waste.
<u>Geographical Distribution</u>	Unknown.
<u>Major Categories of EPA Activities</u>	Containers are addressed under Subtitle C of RCRA. RCRA regulates treatment and storage of hazardous waste in containers, and also regulates the disposal of containerized wastes in landfills.

16. OPEN BURNING AND DETONATION SITES

<u>Definition</u>	This category includes burning grounds and ammunition detonation sites such as those operated by the Department of Defense. It also includes sites on the National Priorities List under Superfund that have had fires or were operated as burning sites. Not included are cases of burning in backyards and at landfills which fall under the categories of open dumps, residential disposal, or landfills.
<u>Potential Contaminants</u>	Inorganics, including heavy metals; organics, including TNT.
<u>Extent of Potential Problem</u>	There are between 50 and 100 open burning and detonation facilities.
<u>Geographical Distribution</u>	Unknown.
<u>Major Categories of EPA Activities</u>	<u>Regulation</u> - Open burning and detonation of hazardous waste cannot currently receive a RCRA permit under Subtitle C. In 1987 OSW expects to issue final regulations under which these practices may be permitted under RCRA. The requirements will include provisions to protect ground water.

17. RADIOACTIVE DISPOSAL SITES

Definition

This category covers disposal of five basic types of wastes at the generation site as well as off-site. Spent fuel is the discharged irradiated fuel from nuclear power plant operations. High level wastes are from the initial processing of irradiated reactor fuels. Transuranic wastes result primarily from fuel reprocessing and from the manufacture of plutonium-containing products. Low-level wastes are in liquid, gaseous, and solid forms and typically are generated by nuclear reactors used for power and weapons production, research and commercial activities. Finally, uranium mill tailings are the earthen residues left from uranium extraction. The waste rock from these mining operations is covered under waste tailings and waste piles.

Potential Contaminants

Radioactive cesium, plutonium, strontium, cobalt, radium, thorium, uranium.

Extent of Potential Problem

Six low-level sites were operating prior to the mid-1970s; three closed, two are accepting reduced volumes, leaving one major site in Washington. The Departments of Defense and Energy also maintain 22 sites.

For high-level wastes, there are three government sites as well as a commercial site where DOE has responsibility.

Seven transuranic sites are used.

Commercial spent fuel -- there are two commercial sites as well as on-site storage at about 100 power reactor facilities.

In 1985 DOE estimated that the total amount of radioactive wastes at various storage sites was: 0.37 million cubic yards of transuranic wastes, 4.32 million cubic yards of low-level wastes, and about 14,000 tons of spent fuel and 0.46 million cubic yards of high-level waste (DOE 1986).

17. RADIOACTIVE DISPOSAL SITES
(Continued)

Extent of
Potential
Problem
(Continued)

Radioactivity poses a significant threat to ground water because of the longevity of isotopes, their ability to migrate undetected and their serious health effects. Numerous radionuclides emitting alpha, beta, and gamma radiation have been detected in ground water.

Geographical
Distribution

Low-level - Commercial: IL, KY, NV, NY, SC, WA.

Low-level - Major government: ID, NV, NM, OH, SC, TN, WA.

High-level - WA (Hanford), ID (Idaho Falls), SC (Aiken), NY (West Valley).

Transuranic - generally at same locations as low-level and high-level.

Major
Categories
of EPA
Activities

Regulation - EPA promulgated environmental standards for the management and disposal of spent nuclear fuel, high-level and transuranic radioactive wastes. These rules set exposure limits from contaminated ground water. Additional regulations are under development that will set standards for the disposal of low-level radioactive wastes and establish standards for protecting the public from radioactive residues in drinking or irrigation water near contaminated disposal sites.

Guidance - An EPA guidance document on transuranium elements establishes dose rate limits for human exposure to transuranium elements in the general environment.

18. PIPELINES

Definition

Pipelines transport, collect and distribute wastes as well as nonwaste products. Principal wastes are municipal sewage, while nonwastes include petroleum products, natural gas, ammonia, coal and sulfur.

Potential Contaminants

Organics, metals, inorganic acids, and microorganisms.

Extent of Potential Problem

Approximately 175,000 miles of pipeline carrying 9.63 billion bbls of petroleum products per year were in operation in the United States in 1976.

About 700,000 miles of sewer pipeline in 1976 carried an estimated amount of 5.6 trillion gallons of sewage in 1978.

Geographical Distribution

Pipelines are found throughout the United States. Sewage pipelines most often are located in densely populated areas.

Major Categories of EPA Activities

Studies - Two studies are underway: the domestic sewage study which promotes pretreatment of aqueous hazardous waste discharged to sewers and the exfiltration study which evaluates how leaks from sewage pipelines affect ground water.

19. MATERIAL TRANSPORT AND TRANSFER OPERATIONS

<u>Definition</u>	Material transport and transfer operations refer to the movement of substances by vehicles such as truck and railroad along transportation corridors. The category also includes handling facilities such as airport and loading docks.
<u>Potential Contaminants</u>	Organics, metals, inorganic acids, microorganisms, and radionuclides.
<u>Extent of Potential Problem</u>	The principal concern from these operations is spills of substances that could contaminate the ground water. Estimates of spills vary from just under 10,000 up to approximately 16,000 per year, including spills from pipelines. These spills account for approximately 14 million tons of hazardous materials or about 0.35 percent of the 4 billion tons shipped annually (OTA, 1984).
<u>Geographical Distribution</u>	Nationwide.
<u>Major Categories of EPA Activities</u>	<u>Regulation</u> - The major regulatory effort is under RCRA. Standards for transporters of hazardous waste cover such items as packaging and labeling and incorporate requirements of the Department of Transportation. A second regulation designed to protect the ground water from the storage and disposal of used oil is under development.

20. IRRIGATION PRACTICES

<u>Definition</u>	The artificial application of water to land to assist in the production of crops.
<u>Potential Contaminants</u>	Fertilizers, pesticides, naturally occurring contaminants (e.g., selenium) and sediment.
<u>Extent of Potential Problem</u>	About 60% of the ground-water use in 1980 was for irrigation. About 14% of all crop-land in the United States is irrigated. Irrigation is a potential threat to ground water because the irrigation return flows tend to concentrate salts, fertilizers, and pesticides. Salinity can increase because of evaporation, transpiration and leaching of saline soils (OTA, 1984).
<u>Geographical Distribution</u>	Irrigation is most common in the West, Central and Southern Plains as well as in Arkansas and Florida.
<u>Major Categories of EPA Activities</u>	None reported.

21. PESTICIDE APPLICATIONS
(Continued)

Major
Categories
of EPA
Activities

Regulation - Under the Federal Insecticide, Fungicide and Rodenticide Act, EPA has broad authority to require data needed to evaluate the environmental and human health effects of pesticides to determine whether a pesticide should be allowed on the market and with what use restrictions.

Additionally, EPA has the power to regulate the use of pesticides via the pesticide label. Each of these authorities has been and is being used to address pesticides which may pose a threat to ground water.

EPA is also developing a rule to restrict to certified applicators, the use of pesticides meeting certain environmental fate, toxicity and use pattern criteria and establishing special label requirements for use of pesticides in irrigation systems.

Guidance - EPA is developing ground-water monitoring guidelines to improve the quality and validity of registrant and State ground-water monitoring studies.

Enforcement - EPA oversees cooperative agreements under which States identify pesticide enforcement priorities. About 14 States have identified pesticides in ground water as a concern and are conducting monitoring.

Studies - A major effort is the national survey of pesticides in drinking water which will sample about five dozen pesticides in about 1500 wells to estimate the national incidence of contamination and assess relationships among agricultural use patterns and practices and hydrogeological characteristics; smaller projects include studies in Cape Cod (impact of turf use pesticides), Dougherty Plain (leaching of aldicarb and metolachlor in peanut fields), Collier County (contamination in shallow aquifers), North Iowa and other locations; additionally, EPA is overseeing four registrant monitoring studies.

21. PESTICIDE APPLICATIONS

<u>Definition</u>	Pesticides are chemicals used to control insects, weeds, and other undesirable organisms. Most pesticide use is in agricultural operations (69-72%). Government agencies and industrial/commercial organizations account for another 21% and the remainder consists of home and garden uses.
<u>Potential Contaminants</u>	1200-1400 active ingredients. Contaminants already detected include alachlor, aldicarb, atrazine, bromacil, carbofuran, cyanazine, DBCP, DCPA, 1, 2 dichloropropane, dyfonate, EDB, metolachlor, metribuzen, oxamyl, simazine, and 1,2,3 trichloropropane. The extent of ground-water contamination cannot be determined with current data.
<u>Extent of Potential Problem</u>	About 552 million pounds of active ingredients were applied to major field crops in 1982. Approximately 280 million acre-treatments are conducted annually. Contamination of the ground water can occur from applications to crops and subsequent leaching as well as from spills, accidents, disposal of excess pesticides and disposal of wastewater from airplanes. In any given location, though, contamination is dependent upon the chemical-physical properties of the pesticide, hydrogeologic setting and agricultural practices (OTA, 1984).
<u>Geographical Distribution</u>	Contamination from 17 different pesticides has been detected in 23 different States including Arizona, Arkansas, California, Florida, Hawaii, Iowa, Maine, Maryland, Massachusetts, Nebraska, New Jersey, New York, North Carolina, Oregon, Pennsylvania, Rhode Island, South Carolina, Texas, Virginia, Washington, Wisconsin (OTA, 1984).

22. FERTILIZER APPLICATIONS

Definition

Fertilizers are chemicals used in agricultural and other operations to improve the growth of crops and other plants.

Potential Contaminants

Nitrates, phosphates.

Extent of Potential Problem

Use of commercial fertilizer has steadily declined in the 1980s, from 54 million tons in 1980-1981 to 42.3 million tons in 1982-1983. Fertilizers used in 1981-1982 contained 11.1 million tons of nitrogen, 4.8 million tons of phosphates and 5.6 million of potash (OTA, 1984).

Geographical Distribution

The five States with the highest fertilizer use in 1981-1982 were California, Illinois, Indiana, Iowa and Texas (OTA, 1984).

Major Categories of EPA Activities

Policy/Strategy - Fertilizers have emerged as a critical ground-water issue. They are being addressed under the Agricultural Chemicals in Ground-Water Strategy which will identify EPA's policy objectives and implementation actions for the next 5-10 years. Under the TSCA ground-water strategy EPA also is examining how to use TSCA authority to develop and assess data on the problem.

Studies - Two studies examined the potential for contamination with conservation tillage and in certain hydrogeologic settings.

23. ANIMAL FEEDING OPERATIONS

Definition

Animal feeding operations are located on farms and at special feedlots. Feedlots are commercial operations at which cattle are fattened until they are ready for market.

Potential Contaminants

Nitrogen, bacteria, viruses, phosphates.

Extent of Potential Problem

The number of feedlots with more than 1,000 animals has increased markedly in the past 20 years. In 1982, there were approximately 1,935 cattle feedlots marketing about 16.8 million cattle. The combined inventory of animals on farms and at feedlots during 1978 included 106 million cattle and calves, 59 million hogs and pigs, 12 million sheep and lambs, 2.2 million ponies and horses, over 359 million chickens and more than 140 million turkeys. Manure and other wastes pose the most significant threats to ground water through leachate that enters the subsurface.

Density of the animal population, not the size of the feedlot, and depth to ground water are the factors that determine the potential for ground-water contamination from any particular feedlot or farm. Ground-water contamination occurs when large numbers of animals in a limited area overburden the assimilative capacity of the soil. Experts estimate that 25 percent of the 718,000 farms with fewer than 300 animals have the potential to degrade the ground water; data are insufficient to estimate runoff and leachate from large feedlots (OTA, 1984).

23. ANIMAL FEEDING OPERATIONS
(Continued)

Geographical
Distribution

Feedlots are located primarily in the Corn Belt and High Plains. The principal rearing regions are the South for poultry, the West for sheep and the Midwest for hogs (OTA, 1984).

Major
Categories
of EPA
Activities

None reported.

24. DE-ICING SALTS APPLICATIONS

<u>Definition</u>	This category includes year-round stockpiles of salts as well as applications of salts to improve driving conditions on snow and ice-covered roads.
<u>Potential Contaminants</u>	Chromate, phosphate, ferric ferrocyanide, sodium ferrocyanide, chloride.
<u>Extent of Potential Problem</u>	<p>During the winter of 1982-1983, a minimum of 9.35 million tons of dry salts and abrasives as well as 1.78 million gallons of liquid salts were applied to the nation's highways. This is an average of 15.5 tons of dry salts and abrasives and 2.9 gallons of liquid salts applied per lane mile. Salting rates generally range from 355-1,065 pounds per mile per application.</p> <p>Many cases of ground-water contamination from stockpile leachates and runoff from salt-treated roads have been documented. No estimates of the total amount of salts likely to reach the ground water is available. Technology to minimize leachate from stockpiles is available, so research now is focusing on methods to reduce contamination from treated roads. Methods under consideration include redesigning roads, installing runoff collection systems and developing alternatives to existing de-icing salts (OTA, 1984).</p>
<u>Geographical Distribution</u>	Use of de-icing salts occurs primarily in the snow belt which consists of populous areas in the Northeast and the Mideast.

24. DE-ICING SALTS APPLICATIONS
(Continued)

Major
Categories
of EPA
Activities

Studies - EPA is analyzing processes used to clean transportation equipment and will determine whether there is a need to require runoff controls to prevent surface and ground-water contamination.

25. URBAN RUNOFF

Definition:

Urban runoff is the portion of total rainfall that flows over the land surface. The runoff is often channeled by drainage networks and contains a broad array of contaminants associated with urban activities. Major contaminants are automobile emissions.

Potential Contaminants

Suspended solids and toxic substances, especially heavy metals and hydrocarbons, bacteria, nutrients, and petroleum residues.

Extent of Potential Problem

EPA estimates that over 21.2 million urban acres contributed storm water runoff in 1970; this figure is expected to increase to 32.6 million acres by the year 2000. There is no data on the extent to which this runoff and storm water infiltration are contributing to ground-water contamination. The point of discharge, proximity of the discharge to aquifers, and a variety of hydrogeologic factors determine the potential for ground-water contamination. Contamination usually occurs when recharge basins or other storm water detention basins and storage systems are used to contain large volumes of runoff.

Geographical Distribution

Urban and suburban areas throughout the country.

25. URBAN RUNOFF
(Continued)

Major
Categories
of EPA
Activities

Studies - The National Urban Runoff Program examined the effects of urban runoff on water quality at 30 sites nationwide. Two of the studies (Fresno, California and Long Island, New York) analyzed ground-water impacts where runoff infiltrated the soil from storm water detention basins and recharge basins.

Two current studies in Region VIII are assessing the fate and transport of urban runoff pollutants in ground water. The studies emphasize water supply impacts and the role of storm water drains (Class V wells) in causing ground-water contamination.

26. PERCOLATION OF ATMOSPHERIC POLLUTANTS

<u>Definition</u>	This category includes the dry deposition of pollutants between storms or transport in snow and water during storms. These pollutants result from a variety of sources including automobile emissions and various industrial processes. Acid rain is one type of atmospheric pollutant transported via percolation.
<u>Potential Contaminants</u>	Sulfur and nitrogen compounds, asbestos, heavy metals.
<u>Extent of Potential Problem</u>	Unknown.
<u>Geographical Distribution</u>	Acid rain, though widely distributed, is found primarily around the Great Lakes, the Northeast and south central Canada; percolation and distribution of other pollutants is a function of where they are released and the prevailing weather patterns.
<u>Major Categories of EPA Activities</u>	None reported.

27. MINING AND MINE DRAINAGE

Definition

This category encompasses extraction of ores and minerals. The mining methods used are a function of topography, geology, environmental constraints, and the ore itself. Surface mining operations include quarrying, open-pit, opencut, opencast, stripping, placing, and dredging.

Potential Contaminants

Coal -- acids, toxic inorganics (heavy metals), and nutrients.

Phosphate -- radium, uranium, and fluorides.

Metallic Ores -- sulfuric acid, lead, cadmium, arsenic sulfate, and cyanide from gold/silver leaching operations.

Extent of Potential Problem

In 1976, there were over 15,000 active coal mines in the United States and 67,000 inactive mines. The total affected land area is estimated at 4 million acres. Approximately 480 million tons of coal are extracted from surface mines annually, while 300 million tons are extracted from deep mines. These mining operations are responsible for generating 3.6 million tons of acid annually from disposal of coal mining wastes. Total acid generated could be as high as 10 million tons annually including both active and abandoned sites.

Ground water is threatened from excavations and operations which can intercept and/or disrupt ground-water flow as well as from the formation of acid mine drainage. An estimated 360,000-1.0 million tons of acid enter the ground water each year.

27. MINING AND MINE DRAINAGE
(Continued)

Geographical Distribution

The most productive coal mining areas coincide with EPA's Regions III and VIII, producing 213 and 190 million tons of coal respectively annually. EPA's Regions IV and V are the next most productive producing 170 and 110 million tons of coal respectively annually in the Midwest. Deep underground mines are located primarily in Appalachia and surface mines in the West and Midwest (OTA, 1984).

Phosphate mines are concentrated in Florida, with North Carolina being the only other state with phosphate rock mining of any size.

Concentration of metallic ores varies depending on the type of metal being mined. Copper mines are located in 14 States, with Arizona leading in production with 68% of the production. Lead mining is concentrated in Missouri, zinc mining is common in Tennessee and New York, placer gold mining is concentrated in Alaska, vein gold mining predominates in Nevada, and 92% of iron comes from mines in the Lake Superior region.

Major Categories of EPA Activities

Regulation - EPA regulates effluent from surface and underground coal mines; regulation of such discharge can encompass ground-water issues. EPA is developing risk-based regulations for wastes from the mining, milling, and leaching of ores and minerals. These will be proposed in 1988 under RCRA Subtitle D.

Studies - The current regulation of mining operations and waste disposal is being assessed by the Agency. In the area of non-fuel ores and minerals, EPA is conducting assessments to identify, evaluate, and rank risks associated with mine wastes. Methods for the prediction of acid formation and prevention, control of acid formation, and the mitigation of leaching from mining sites are being evaluated.

27. MINING AND MINE DRAINAGE
(Continued)

Major
Categories
of EPA
Activities
(Continued)

Other studies have included an assessment of ground-water impacts from uranium mining and milling in New Mexico and the quality of ground water in parts of Florida exposed to phosphate mining.

28. PRODUCTION WELLS

Definition

Production wells include oil, geothermal and heat recovery and water supply wells.

Potential Contaminants

Organics, metals, other inorganics, microorganisms, and radionuclides.

Extent of Potential Problem

Oil wells -- about 548,000 produced approximately 3.1 billion bbls of crude oil in 1980; there may be as many as 1.2 million abandoned production wells.

Irrigation wells -- more than 376,000 supply water to about 126,000 farms.

All production wells have a similar potential to contaminate the ground water. Installation, operation, and plugging techniques are some of the key factors.

Geographical Distribution

Oil wells are found nationwide. Geothermal wells occur primarily in California, Nevada and Idaho. Water supply wells are estimated to be most numerous in the Southwest, the Central Plains, Idaho and Florida.

Major Categories of EPA Activities

Regulations - Onshore oil and gas regulations are under revision.

OSW is studying whether wastes associated with the exploration, development, and production of oil, gas and geothermal energy should be regulated as hazardous wastes under RCRA.

29. OTHER WELLS

<u>Definition</u>	These are wells used for a variety of monitoring and exploration activities.
<u>Potential Contaminants</u>	Organics, inorganics, microorganisms, and radionuclides.
<u>Extent of Potential Problem</u>	Unknown.
<u>Geographical Distribution</u>	Unknown.
<u>Major Categories of EPA Activities</u>	None reported.

30. CONSTRUCTION EXCAVATION

Definition

Excavation includes clearing, pest control, rough grading, facility construction, and post-construction restoration.

Potential Contaminants

Pesticides, diesel fuel, oil, calcium chloride, and a variety of other contaminants.

Extent of Potential Problem

Excavation at construction sites can contaminate the ground water in several ways. These include pesticide use, spills of petroleum products, contaminants from dust control and from concrete.

Geographical Distribution

Throughout the United States, particularly in areas experiencing heavy growth; temporary in nature.

Major Categories of EPA Activities

None reported.

31. GROUND-WATER/SURFACE WATER INTERACTIONS

<u>Definition</u>	In certain settings the elevation of surface waters are above the local ground-water table, a situation which favors downward leakage of these surface waters. Contaminants can be transported to and recharge or contaminate underlying ground water by this mechanism.
<u>Potential Contaminants</u>	Organics, inorganics, microorganisms, radionuclides.
<u>Extent of Potential Problem</u>	Unknown.
<u>Geographical Distribution</u>	Unknown.
<u>Major Categories of EPA Activities</u>	None reported.

32. NATURAL LEACHING

<u>Definition</u>	Natural leaching refers to the dissolution of geologic materials which then filtrate into the ground water.
<u>Potential Contaminants</u>	Inorganics and radionuclides.
<u>Extent of Potential Problem</u>	Unknown.
<u>Geographical Distribution</u>	Unknown, very localized.
<u>Major Categories of EPA Activities</u>	<u>Studies</u> - EPA has undertaken a few specialized projects in this area. One such project examined methods to detect geological areas which should not be considered for water supply because of naturally occurring contaminants such as chromium, selenium, uranium and arsenic. In a second project the nationwide occurrence of radon and other natural radioactivity in public water supplies was surveyed.
