## INTRODUCTION

Because of the long physical and biological half lives of many of the transuranium radionuclides, because of their relatively high toxicity and because of their increasing worldwide inventory and distribution, it is imperative that their potential hazard to humans be assessed. To this end, in recent years, the Environmental Monitoring Systems Laboratory at Las Vegas, Nevada (EMSL-LV) has carried out a series of studies on the biological transport of plutonium, americium, neptunium, and curium in lactating dairy cattle and goats. Ruminants in general and cattle in particular form one of the more important links in the human food chain. Milk and milk products constitute a significant portion of the human diet, especially for children. In addition, beef, which also forms an important fraction of the diet in the United States, is in part derived from culled dairy animals.

This summary consists of a compilation of detailed data from a series of previously published studies. It has been prepared to present the data from all of these studies in a single source to be used by regulatory agencies in their transport modeling and hazard assessment activities. Selected source materials for the data presented in this document have been published either in the Proceedings of the Nevada Applied Ecology Group (NAEG) or as EMSL-LV publications and are listed in the References section. The references listed there have been categorized as "Data Base References" and "Body Weight and Tissue Weight References."

## METHODS AND MATERIALS

Most of the studies covered in this report were conducted at an experimental farm in Area 15 of the Nevada Test Site. Pertinent experimental parameters for individual animals are summarized in Table 1, and each animal is referenced to the appropriate appendix table(s) where results for the individual animals are presented. The radionuclide content of tissue or biological product for each animal is expressed as a percentage of the administered dose per gram of tissue or product.

Oral doses were placed in gelatin capsules containing either cellulose fiber or starch as absorbants and were administered to the animal by means of a balling gun. Intravenous doses were made up to approximately 5 ml in volume and were administered by jugular venipuncture. No adjustments of intravenous or oral dose were made for individual variations in animal weight.

Prior to beginning each experiment, animals were placed in metabolism stalls. Daily milk, urine, and fecal samples, as well as frequent blood

samples, were taken beginning at least 1 day prior to dosing and continuing throughout the experimental period. Each cow was catheterized with an indwelling inflatable urinary catheter, and the urine was collected through a polyethylene tube that drained into a 20-liter plastic bottle. A polyethylene-lined pan placed under the metal grid at the rear of each stall facilitated collection of feces. Milk was collected with individual bucket milkers twice daily. Blood samples were taken by jugular venipuncture. All urine, milk and fecal collections were weighed and, for some of the studies, morning and evening collections were combined into a single 24-hour composite for each animal. Composites were mixed by shaking thoroughly in plastic containers. Weighed subsamples were then taken from each composite and placed in individual containers with formaldehyde added as a preservative. Large fecal collections were mixed in a 30-quart Hobart food mixer.

The goats were maintained under conditions similar to those of the cows but in small, elevated metabolism stalls that permitted ready access for hand milking. Urine was collected by catheter, and fecal pellets were collected in a tray. Occasionally, the pellets had to be ground in an electric meat grinder to homogenize or mix the daily fecal collections.

Cows and goats were sacrificed by an intravenous euthanasia solution. Each animal was weighed at time of sacrifice and partially exsanguinated before tissue samples were collected. Organs and tissues were removed from the animals within 60 minutes of sacrifice. Extraneous adipose tissue or muscle was trimmed from the samples, formaldehyde was added as a preservative, and each sample was sealed in an appropriate container. Total weights were taken on most organs so that the percentage of the administered dose retained by a specific tissue or organ could be calculated. When this was not practical, for example, in the case of muscle, bone, or blood, total nuclide content was based on extrapolated organ weights using the respective

percentage of body weight reported by Davis *et al.* (1975), Smith and Baldwin (1974), and Mathews *et al.* (1975). Nuclide concentrations in the various bone samples were averaged in order to estimate retention in bone. However, specific data for individual bone types are reported wherever they are available.

Appropriate spiked standards for feces, milk, urine, plasma, blood cells, distilled water, and either agar or animal tissue were prepared for each study. The amount of added nuclide was based on the calculated range (percentage of dose per gram) expected to be observed in samples of milk, urine, etc., throughout the project. The analytical procedures used during each of these studies have been presented in the previously referenced Nevada Applied Ecology Group reports. Plutonium and americium samples were quantified using a phoswich detector, which consists of a thin NaI scintillator backed by a thick CsI scintillator used in an anticoincidence mode in order to reduce background. Selected curium, neptunium, and americium samples were assayed using NaI(Tl) detectors in either a solid or well-type configuration. After assaying the samples by direct counting, radiochemical analyses were performed on: (1) a portion of the spiked standard samples and on selected split samples (for quality assurance purposes), (2) sets of samples that demonstrated considerable between-animal or within-animal variability, and (3) samples that contained nuclide concentrations in the fCi/g range, publications as listed in the references. The information contained in this data base has been derived from 35 lactating dairy animals, (20 cows and 15 goats) that had been administered plutonium, americium, neptunium, or curium. Certain minor differences between values reported here and those reported in the original NAEG publications will be evident. These minor changes have been made in order to present the data in a comparative format. For example, in this summary the nuclide concentrations in milk, urine, and feces have all been based on 24-hour collection intervals, slightly altering those peaking times and concentrations that had originally been based on 12-hour collection intervals.

Specific areas summarized in this report include: (1) transport of the nuclides across the gut, (2) the fraction of the nuclide transported to milk expressed as a percentage of the administered dose, (3) plasma clearance rates, (4) urinary and fecal excretion characteristics, and (5) tissue deposition patterns. In addition, this summary also presents data on nuclide concentrations in milk, urine, feces, blood plasma, and tissues for individual animals. The Appendix is divided into two parts: Appendix A contains summary and comparative tables relating the above information to the four transuranium radionuclides; Appendix B contains data from individual animals used in preparation of the comparative tables shown in Appendix A. Appendix B tables are cross indexed with individual animal parameters shown in Table 1, which gives each animal number, nuclide dosing specifics, and the daily output of milk, urine, and feces from each animal.

## APPENDIX A

This Appendix consists of 25 summary and comparative tables relative to the uptake and transport of neptunium, plutonium, americium, and curium in milk, blood, urine, and feces. These tables also report tissue concentrations of the four transuranium radionuclides. Values reported in Appendix A are generally mean values for each nuclide obtained from one or more studies.

TABLE A-1. NUMBERS OF LACTATING ANIMALS AND TIMES AT WHICH THEY WERE SLAUGHTERED FOLLOWING A SINGLE ACUTE RADIONUCLIDE DOSE

Nuclide	Number of Animals				Approximate Sacrifice Time			
	Oral Dose		Intravenous Dose		Oral Dose		Intravenous Dose	
	Cow	Goat	Cow	Goat	Cow	Goat	Cow	Goat
<sup>238</sup> Pu	4	**	4	1	3 mo	**	1 w	1 mo
<sup>243</sup> Cm	1	3	1	3	1 w	1 w	1 w	1 w
<sup>241</sup> Am	2	2	2	2	1 w	1 w	1 w	1 w
<sup>234</sup> Np	**	2	**	1	**	1 w	**	1 w
<sup>238, 239</sup> Pu	3	**	**	**	1 w	**	**	**

\*\* No single oral plutonium doses were given to dairy goats; no oral or intravenous neptunium doses were given to dairy cows; and oral doses of mixed plutonium-238 and plutonium-239 were given to dairy cows.

TABLE A-2. GROSS ESTIMATE OF NUCLIDE UPTAKE IN DAIRY ANIMALS FOLLOWING ORAL DOSES OF EITHER PLUTONIUM-238, AMERICIUM-241, CURIUM-243, OR NEPTUNIUM-234\*

Animal	Nuclide	% of Oral Dose Absorbed
Cows	citrate-buffered plutonium nitrate	$2.5 \times 10^{-2}$
	plutonium dioxide	$3.0 \times 10^{-3}$
	americium chloride	$1.4 \times 10^{-2}$
	curium chloride	$2.0 \times 10^{-2}$
Goats	americium nitrate	$1.4 \times 10^{-2}$
	curium chloride	$6.0 \times 10^{-3}$
	citrato-buffered neptunium chloride	$4.8 \times 10^{-1}$

\* Mean approximation of gastrointestinal absorption composed of (1) total nuclide transport to milk and urine, (2) recovered activity estimate for animal carcass, and (3) the extrapolated amount of absorbed nuclide return to the digestive tract

TABLE A-3. NUCLIDE RETENTION IN THE SKELETON OF DAIRY COWS FOLLOWING EITHER ORAL OR INTRAVENOUS DOSES OF PLUTONIUM-238, AMERICIUM-241, OR CURIUM-243  
 (Values expressed as a percentage of the administered dose\*)

Nuclide	Animal Number	Sacrifice Time (days)	Extrapolated** % of Dose Retained in Skeleton	Bones Used for Percentage Calculation	Extrapolated*** % of Dose in Bone Based Only on Femur Concentration
Plutonium nitrate (single oral dose)	Cow 39	93	$6.4 \times 10^{-3}$	Femur, rib, vertebra	$1.4 \times 10^{-3}$
	Cow 87	93	$1.1 \times 10^{-2}$	Femur, rib, vertebra	$3.4 \times 10^{-3}$
Americium chloride (single oral dose)	Cow 269	8	$5.3 \times 10^{-3}$	Femur, rib, vertebra	$4.3 \times 10^{-3}$
	Cow 281	8	$6.0 \times 10^{-3}$	Femur, rib, vertebra	$4.1 \times 10^{-3}$
Curium chloride (single oral dose)	Cow 256	7	$1.1 \times 10^{-2}$	Femur, sternum	$6.8 \times 10^{-3}$
Plutonium dioxide (multiple oral dose)	Cow 122	42	$1.3 \times 10^{-3}$	Femur, rib, vertebra	$2.2 \times 10^{-4}$
	Cow 185	42	$2.0 \times 10^{-3}$	Femur, rib, vertebra	$2.4 \times 10^{-4}$
	Cow 117	73	$1.6 \times 10^{-3}$	Femur, rib, vertebra	$4.9 \times 10^{-4}$
	Cow 134	73	$1.9 \times 10^{-3}$	Femur, rib, vertebra	$6.5 \times 10^{-4}$

\* Sacrifice time in days after dosing

\*\* Limited data available

TABLE A-8. TRANSPORT OF PLUTONIUM-238 TO BOVINE MILK, URINE, AND FECES FOLLOWING ORAL PLUTONIUM DIOXIDE DOSES OF 1 mCi PER ANIMAL PER DAY FOR 19 CONSECUTIVE DAYS

Sample	Peak Concentration (% daily dose per g)	Time of Peak Concentration (dosing day)	Total Nuclide Transport* (% of total dose)
Cow 117:			
Milk	$3.9 \times 10^{-9}$	10	$3.3 \times 10^{-5}$
Urine	$1.8 \times 10^{-8}$	15	$2.1 \times 10^{-4}$
Feces	$6.3 \times 10^{-3}$	10	>100
Cow 122:			
Milk	$8.9 \times 10^{-10}$	5	$9.0 \times 10^{-6}$
Urine	$1.4 \times 10^{-8}$	3	$1.9 \times 10^{-4}$
Feces	$7.8 \times 10^{-3}$	5	>100
Cow 134:			
Milk	$2.0 \times 10^{-9}$	11	$1.4 \times 10^{-5}$
Urine	$1.2 \times 10^{-8}$	10 and 14	$1.9 \times 10^{-4}$
Feces	$6.9 \times 10^{-3}$	14	>100
Cow 185:			
Milk	$5.1 \times 10^{-9}$	11	$3.0 \times 10^{-5}$
Urine	$1.8 \times 10^{-8}$	14	$2.0 \times 10^{-4}$
Feces	$8.0 \times 10^{-3}$	6 and 12	>100

\* Total nuclide transport for dosing period (19 days) and for first 7 days after last dose was administered (Note: Plutonium excretion in feces should approach 100 percent of dose following nuclide ingestion. Calculations for the four cows exceed 100 percent due to inaccuracies associated with fecal determinations.)

TABLE A-9. COMPARISON OF AMERICIUM-241, CURIUM-243, AND NEPTUNIUM-234 RETENTION IN DAIRY GOATS  
 (Values expressed as a mean percentage of the dose per gram of tissue)

Tissue or Organ	Oral Dose			Intravenous Dose

## APPENDIX B

Appendix B consists of 46 tables of data from individual animals. These data were used to prepare the comparative tables included in Appendix A. The tables in Appendix B are cross indexed with individual animal parameters shown in Table 1 of the text. Table 1 gives the animal number, describes the radionuclide dose administered, and reports the daily output of milk, urine, and feces from each animal.

TABLE B-42. BACKGROUND INFORMATION ON DAIRY COWS GIVEN A SINGLE ORAL DOSE  
OF MIXED  $^{238}\text{Pu}$  AND  $^{239}\text{Pu}$  DIOXIDES

Animal No.	Dose, mCi		Activity Ratio <sup>1</sup> in Dose	Mass Ratio <sup>1</sup> in Dose	Animal Dose Day	Weight, Kg Sacrifice Day	Average Daily Output, Kg Per Day				Days Lactating <sup>3</sup>
	$^{238}\text{Pu}$	$^{239}\text{Pu}$					Milk Previous to Study <sup>2</sup>	Urine During Study	Feces During Study		
351	1.73	1.62	1.07	0.0034	553	510	25	19	27	34	86
349	2.30	2.16	1.06	0.0034	626	599	17	14	26	29	136
352	43.3	1.38	31.4	0.100	635	594	19	14	26	34	125
346	Control		-	-	628	556	22	22	19	25	32

<sup>1</sup>Ratios used hereafter in the series of tables on this study are the activity ratios normalized to indicate differences in metabolism; a ratio of unity indicates the activity ratio in a sample was the same as that in the  $^{238}\text{Pu}$  and  $^{239}\text{Pu}$  dose administered. Ratios are always  $^{238}\text{Pu}$ ,  $^{239}\text{Pu}$ .

<sup>2</sup>During week of August 18, 1977.

<sup>3</sup>As of November 14, 1977 (Dose Day). All cows in second lactation.

TABLE B-43. PLUTONIUM-238 AND PLUTONIUM-239 RECOVERED FROM COW 351  
AFTER A SINGLE ORAL DOSE OF MIXED PLUTONIUM OXIDES\*

Time After Dosing (h)	Serum			Milk			Urine		
	$^{238}\text{Pu}$ (% x $10^{-10}$ /g)	$^{239}\text{Pu}$ (% x $10^{-10}$ /g)	Ratio**	$^{238}\text{Pu}$ (% x $10^{-10}$ /g)	$^{239}\text{Pu}$ (% x $10^{-10}$ /g)	Ratio**	$^{238}\text{Pu}$ (% x $10^{-10}$ /g)	$^{239}\text{Pu}$ (% x $10^{-10}$ /g)	Ratio**
24	0.68	0.76	0.90	-	-	-	-	-	-
48	1.6	1.0	1.6	6.4	5.2	1.2	ND	ND	-

144	0.65	0.54	1.2	-	-	-	-	-	-
Sac	0.30	1.0	.30	-	-	-	-	-	-

\* 1.73 mCi plutonium-238 and 1.62 mCi plutonium-239; the two isotopes were homogeneously mixed within the same plutonium oxide particles, the mass median diameter of the particles was approximately 1.5 micrometer.

\*\* Ratio normalized to indicate differences in metabolism; a ratio of unity indicates no difference. The data have not been corrected for normal background levels in samples.

ND Not detectable.

\* Activity ratio normalized to indicate differences in metabolism; a ratio of unity indicates no difference. Data are not corrected for normal background plutonium levels in tissues.

## DISTRIBUTION

1 - 40 Environmental Monitoring and Support Laboratory-Las Vegas  
41 Mahlon E. Gates, Manager, DOE/NV, Las Vegas, NV  
42 Troy E. Wade, DOE/NV, Las Vegas, NV  
43 David G. Jackson, DOE/NV, Las Vegas, NV  
44 Paul J. Mudra, DOE/NV, Las Vegas, NV  
45 Elwood M. Douthett, DOE/NV, Las Vegas, NV  
46 - 47 Winnie Howard, DOE/NV, Las Vegas, NV  
48 - 49 Paul B. Dunaway, DOE/NV, Las Vegas, NV  
50 Roger Ray, DOE/NV, Las Vegas, NV  
51 Robert W. Taft, DOE/NV, Las Vegas, NV  
52 Leon Silverstrom, DOE/NV, Las Vegas, NV  
53 Robert W. Newman, DOE/NV, Las Vegas, NV  
54 Bruce W. Church, DOE/NV, Las Vegas, NV  
55 - 56 Technical Library, DOE/NV, Las Vegas, NV  
57 Chief, NOB/DNA, DOE/NV, Las Vegas, NV  
58 Hal Hollister, GTN, DOE/HQ, Washington, DC  
59 Tommy F. McCraw, EV, DOE/HQ, Washington, DC  
60 L. Joe Deal, EV, DOE/HQ, Washington, DC  
61 - 65 Major General William W. Hoover, Director, OMA, DOE/HQ,  
Washington, DC  
66 Gordon C. Facer, OMA, DOE/HQ, Washington, DC  
67 Robert L. Watters, EV, DOE/HQ, Washington, DC  
68 Ruth Clusen, EV, DOE/HQ, Washington, DC  
69 Robert W. Wood, EV, DOE/HQ, Washington, DC  
70 William S. Osburn, Jr., EV, DOE/HQ, Washington, DC  
71 Ray Brechbill, DOE/SAN, Oakland, CA  
72 Marcy Williamson, RESL/INEL, DOE/ID, Idaho Falls, ID  
73 Steven V. Kaye, Oak Ridge National Lab., Oak Ridge, TN  
74 Nancy Vaughan, ESIC, Oak Ridge National Lab., Oak Ridge, TN  
75 H. E. Walburg, CARL, Oak Ridge, TN  
76 Assistant Administrator for Research and Development, EPA,  
Washington, DC  
77 Deputy Assistant Asministrator for Monitoring and Technical  
Support, ORD, EPA, Washington, DC  
78 Acting Deputy Assistant Administrator for Radiation Programs, EPA,  
Washington, DC  
79 Director, Monitoring Technology Division, Office of Monitoring  
and Technical Support, ORD, EPA, Washington, DC  
80 Director, Technical Support Division, Office of Monitoring and  
Technical Support, ORD, EPA, Washington, DC  
81 Director, Criteria Development and Special Studies Division,  
Office of Health and Ecological Effects, ORD, EPA,  
Washington, DC

- 82 Library, EPA, Washington, DC  
83 Regional Administrator, Region IX, EPA, San Francisco, CA  
84 Regional Radiation Representative, Region IX, EPA,  
    San Francisco, CA  
85 Director, Radiochemistry and Nuclear Engineering Branch,  
    EPA, Cincinnati, OH  
86 Director, Eastern Environmental Radiation Facility, EPA,  
    Montgomery, AL  
87 Harold F. Mueller, NOAA/WSNSO, Las Vegas, NV  
88 Gilbert J. Ferber, NOAA/WSNSO, Silver Spring, MD  
89 K. M. Oswald, Manager, Health and Safety, LLL, Mercury, NV  
90 Richard L. Wagner, LLL, Livermore, CA  
91 Howard W. Tewes, LLL, Livermore, CA  
92 Paul L. Phelps, LLL, Livermore, CA  
93 Mortimer L. Mendelsohn, LLL, Livermore, CA  
94 J. C. Hopkins, LASL, Los Alamos, NM  
95 Harry S. Jordan, LASL, Los Alamos, NM  
96 Lamar J. Johnson, LASL, Los Alamos, NM  
97 George E. Tucker, Sandia Lab., Albuquerque, NM  
98 Carter D. Broyles, Sandia Lab., Albuquerque, NM  
99 Melvin L. Merritt, Sandia Lab., Albuquerque, NM  
100 R. Glen Fuller, Oracle, AZ  
101 W. E. Martin, BCL, Columbus, OH  
102 Arden E. Bicker, REECO, Mercury, NV  
103 Savino W. Cavender, REECO, Mercury, NV  
104 Auda F. Morrow, CETO, Mercury, NV  
105 Joseph H. Dryden, NTSSO, DOE/NV, Mercury, NV  
106 Billy Moore, DOE/NV, Las Vegas, NV  
107 Leo Bustad, Director, Veterinary Medicine, Washington  
    State University, Pullman, WA  
108 Vincent Schultz, Washington State University, Pullman WA  
109 Arthur Wallace, University of California, Los Angeles, CA  
110 Wesley E. Niles, University of Nevada, Las Vegas, NV  
111 Library, University of Nevada, Las Vegas, NV  
112 Verle R. Bohman, University of Nevada, Reno, NV  
113 Lloyd P. Smith, President, Desert Research Institute,  
    University of Nevada, Reno, NV  
114 Paul R. Fenske, Desert Research Institute, University of  
    Nevada, Reno, NV  
115 William W. Twenhofel, U.S. Geological Survey, Denver, CO  
116 Manager, Desert National Wildlife Range, U.S. Fish and  
    Wildlife Service, Las Vegas, NV  
117 Supervisor, Region III, Nevada Fish and Game Department,  
    Las Vegas, NV  
118 Paul Lyons, Nevada Wildlife Research, Division of Archives,  
    Capitol Building Annex, Carson City, NV  
119 L. L. Skolil, San Diego State University, San Diego, CA  
120 C. S. Fore, ESIC, Oak Ridge National Lab., Oak Ridge, TN
