NATIONAL AIR
POLLUTION CONTROL
ADMINISTRATION

Enclosed is the annual summary of 1969 raw data from the Interstate Effects Surveillance Network for the period January 1, 1969, to December 31, 1969. Included is a frequency distribution of the 1968 data for your convenience to evaluate your particular station. Due to personnel limitations, we were unable to produce a 1969 frequency distribution. In addition, you may wish to compare results with the Type 4 Climatic Control (Clean) Stations appropriate to your region.

For your information the following should be noted:

1. If for comparative purposes you wish to convert the dustfall data reported in grams/meter² to tons/mile², multiply the figure given by 2.86. To convert other data from tons/mile² to grams/meter², multiply the tons/mile² reading by 0.35.
2. The 1969 corrosion data is reported as corrosion penetration rate in microns per year (μ py). Corrosion data in the past has been reported as weight loss per panel per day in milligrams (mpd). The following are the conversion factors:

Zinc: μ py = 3.3 x mpd
Steel: μ py = 3.0 x mpd

3. The 1969 sulfation data as measured by lead peroxide plates is reported as μ g SO₂/cm²/day. The following is the conversion factor:

$$\mu\text{g SO}_2/\text{cm}^2/\text{day} = \text{mg SO}_3/100 \text{ cm}^2/\text{day} \times 8$$

4. Sticky paper data is collected weekly, but reported as monthly averages to conserve space. Analysis of monthly averages revealed no significant deviation from the weekly values.
5. The 1969 sticky paper data is reported as particles per millimeter. The following is the conversion factor:

$$\text{particles per mm}^2 = 100 \text{ particles per in}^2 \times 0.155$$

Cincinnati, Ohio
May 1970**

The APTD series of reports is issued by the National Air Pollution Control Administration to report technical data of interest to a limited readership. Copies of APTD reports may be obtained upon request, as supplies permit, from the Office of Technical Information and Publications, National Air Pollution Control Administration, U. S. Department of Health, Education, and Welfare, 1033 Wade Avenue, Raleigh, North Carolina 27605.

Key Words: air pollution, pollutant effects network, raw data, effects on materials, dustfall

National Air Pollution Control Administration Publication No. APTD 70-3

FREQUENCY DISTRIBUTIONS

The following frequency distributions of component data are provided for comparison, if you so desire, of a particular station with the national network.

EFFECT COMPONENTS - 1968
CUMULATIVE FREQUENCY DISTRIBUTION BY MEASUREMENT

Measurement	Exposure Interval	Period observed	No. of samples	Min.	Percent of values less than stated values					
					10%	25%	50%	75%	90%	Max.
Zinc corrosion rate (microns per year)	1 year	Jan. 1968 - Dec. 1968	216	0.1	0.64	1.05	1.87	3.53	4.93	15.4
Steel corrosion rate (microns per year)	1 year	Jan. 1968 - Dec. 1968	204	0	6	16	29	42	53	88
Steel corrosion rate (microns per year)	3 mos.	Jan. 1968 - Mar. 1968	196	0	3	20	45	68	86	146
		Apr. 1968 - June 1968	201	0	3	9	39	70	101	173
		July 1968 - Sept. 1968	245	1	4	12	36	64	87	194
		Oct. 1968 - Dec. 1968	232	0	3	8	34	67	88	179
		Jan. 1968 - Dec. 1968	874	0	3	11	38	67	89	194
