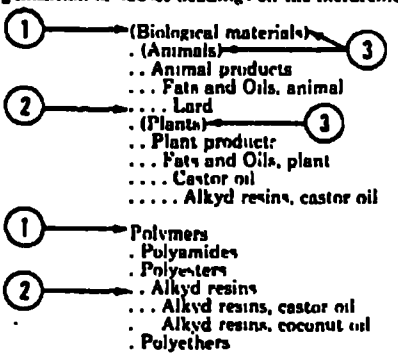
USER GUIDE TO THE UVCB INDEX

Chemical Substances included in this index are substances of Unknown or Variable composition, Complex reaction products, or Biological materials. These substances lack an accepted molecular formula representation. They can be found by CAS Registry Number on the Inventory or by name in the *Substance Name Index*, they cannot be found in the *Molecular Formula Index*. The *UVCB Index* is intended to provide an alternate method for finding these substances on the Inventory.

Chemical substances in the *UVCB Index* have been grouped into subsets consisting of closely related substances. Typically, the subsets highlight a structural feature of the substance (e.g., the subset heading "Acid Chlorides," "Alkaline earth compounds," "Polyoxyalkylenes") or a significant precursor (e.g., "Castor oil," "Tallow"), or provide a general description (e.g., "Resins," "Waxes"). The subset headings used for this index are presented in the form of a hierarchical listing immediately following this discussion.

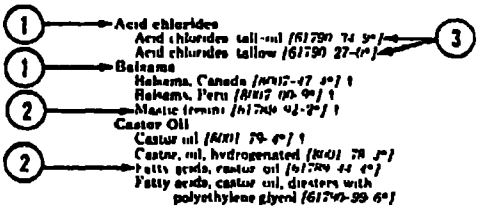
Most of the substances in the *UVCB Index* have been assigned to more than one subset heading. For example, the substance polyethylene glycol diester of castor oil acids has been placed under the subset headings "Castor oil" and "Polyoxyalkylenes." Iron naphthenate has been placed under "Group VIII element compounds" and "Naphthenic acids." Trimethyl (soybean oil alkyl) ammonium chloride appears under "Quaternary ammonium compounds" and "Soybean oil."

To assist users in searching for substances in the *UVCB Index* the subset headings developed for the index are listed preceding the list itself in a general hierarchy or arrangement of terms in order of increasing specificity. This will serve to guide the user to the most appropriate subsets for the substances of interest. The following key illustrates the organization of subset headings on the hierarchical listing



The most general subset headings (1) are placed alphabetically at the left margin of the hierarchy. Subset headings of greater specificity (2) are placed alphabetically below the headings. Thus, under the general heading "Biological materials" there will be found the following headings of increasing specificity—"Plants" (preceded by one period), "Plant products" (preceded by two periods), "Fats and Oils, plant" (preceded by three periods), "Castor oil" (preceded by four periods), and "Alkyd resins, castor oil" (preceded by five periods). (The subset heading "Alkyd resins" has been subdivided into ten parts according to the oil or oil derivative incorporated in the resin). Note that "Alkyd resins, castor oil" also occurs under the heading "Polymers". Many subset headings occur more than once in the hierarchy according to their natural subdivisions. Terms of hierarchical importance which have not yet been used as subset headings in the *UVCB Index* but which are necessary to provide a logical framework for the hierarchy are enclosed in parentheses (3).

ILLUSTRATIVE KEY TO ENTRIES AS THEY APPEAR IN THE UVCB INDEX



In the *UVCB Index*, each subset heading (1) is listed in boldface type in alphabetic order. The names of the individual substances (2) are then listed in alphabetic order under each subset heading, along with their CAS Registry Numbers (3). The names which appear in the *UVCB Index* are preferred names for the substances. The subset headings (1) are *not* Inventory substances. Only the substances listed under the subset headings along with their CAS Registry Numbers are Inventory substances.
