NORTHEAST CORRIDOR REGIONAL MODELING PROJECT ANNUAL EMISSION INVENTORY COMPILATION AND FORMATTING Volume XI: Pennsylvania Emission Inventory

LIBRARY

**U. S. ENVIRONMENTAL PROTECTION AGENCY
EDISON, N. J. 07017**

This report is the result of an EPA/State/
Contractor effort and is an accurate
description of the NECRMP data base work
to date. Data revision and improvement
are expected as the Project continues,
so the contents of this document should
be considered an interim step toward the
finally modeled data base.

NORTHEAST CORRIDOR REGIONAL MODELING PROJECT ANNUAL EMISSION INVENTORY COMPILATION AND FORMATTING

Volume XI: Pennsylvania Emission Inventory

by
GCA Corporation
Bedford, MA

Contract No. 68-02-3510

EPA Project Officers: James H. Southerland
Thomas F. Lahre

Prepared For
U.S. Environmental Protection Agency
Office of Air, Noise and Radiation
Office of Air Quality Planning and Standards
Research Triangle Park, NC 27711

October 1982

This report has been reviewed by the Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, and approved for publication as received from GCA Corporation, Bedford, MA. Approval does not signify that the contents necessarily reflect the views and policies of the U.S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use. Copies of this report are available from the Air Management Technology Branch, Monitoring and Data Analysis Division, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, NC 27711.

SECTION 1

INTRODUCTION

BACKGROUND

On a nationwide basis, nonattainment of the National Ambient Air Quality Standard (NAAQS) for ozone is one of the most serious and widespread air pollution problems facing the air quality management community. The Northeast Corridor, a megalopolis of urban and suburban areas extending from Washington, D.C. to Boston, bears a large extent of the ozone problem. The United States Environmental Protection Agency (U.S. EPA), in cooperation with the northeastern states, local agencies, and Metropolitan Planning Organizations (MPOs), has undertaken the Northeast Corridor Regional Modeling Project (NECRMP) to develop regional and urban ozone control strategies through the use of photochemical air quality simulation models.

To employ a regional model, an inventory of point and area source emissions converging the entire NECRMP study area had to be assembled and placed into a common format. Unfortunately, existing data bases were inadequate to either properly test or validate a regional model. To this end, U.S. EPA's Office of Air Quality Planning and Standards (OAQPS) retained GCA/Technology Division to complete an annual inventory for use in NECRMP. The study area, shown in Figure 1, includes the entire northeast quadrant of the United States from longitude 69 degrees to 82 degrees West, and latitude 38 degrees to 45 degrees North.

OBJECTIVES

The objective of the effort reported in this volume was to assemble the most current, comprehensive and accurate emission inventory possible for the Commonwealth of Pennsylvania. This was achieved through the cooperation of the Pennsylvania Department of Environmental Resources (PADER) and the U.S. Environmental Protection Agency's Region III office (EPA/Region III). The intent of the program was to avoid direct contact between GCA and individual facilities in Pennsylvania. Rather, GCA worked directly with the PADER which in turn contacted sources when necessary. GCA reviewed the PADER- and EPA-supplied data and submitted lists of potential errors back to the PADER, which was responsible for confirming the data or supplying corrections, as necessary. The major pollutants of interest were volatile organic compounds (VOC) and oxides of nitrogen (NO_x) although particulates (TSP), sulfur oxides (SO_x) and carbon monoxide (CO) emissions were also compiled for point sources. Because of this emphasis, quality assurance checks focused primarily on sources of VOC and NO_x .

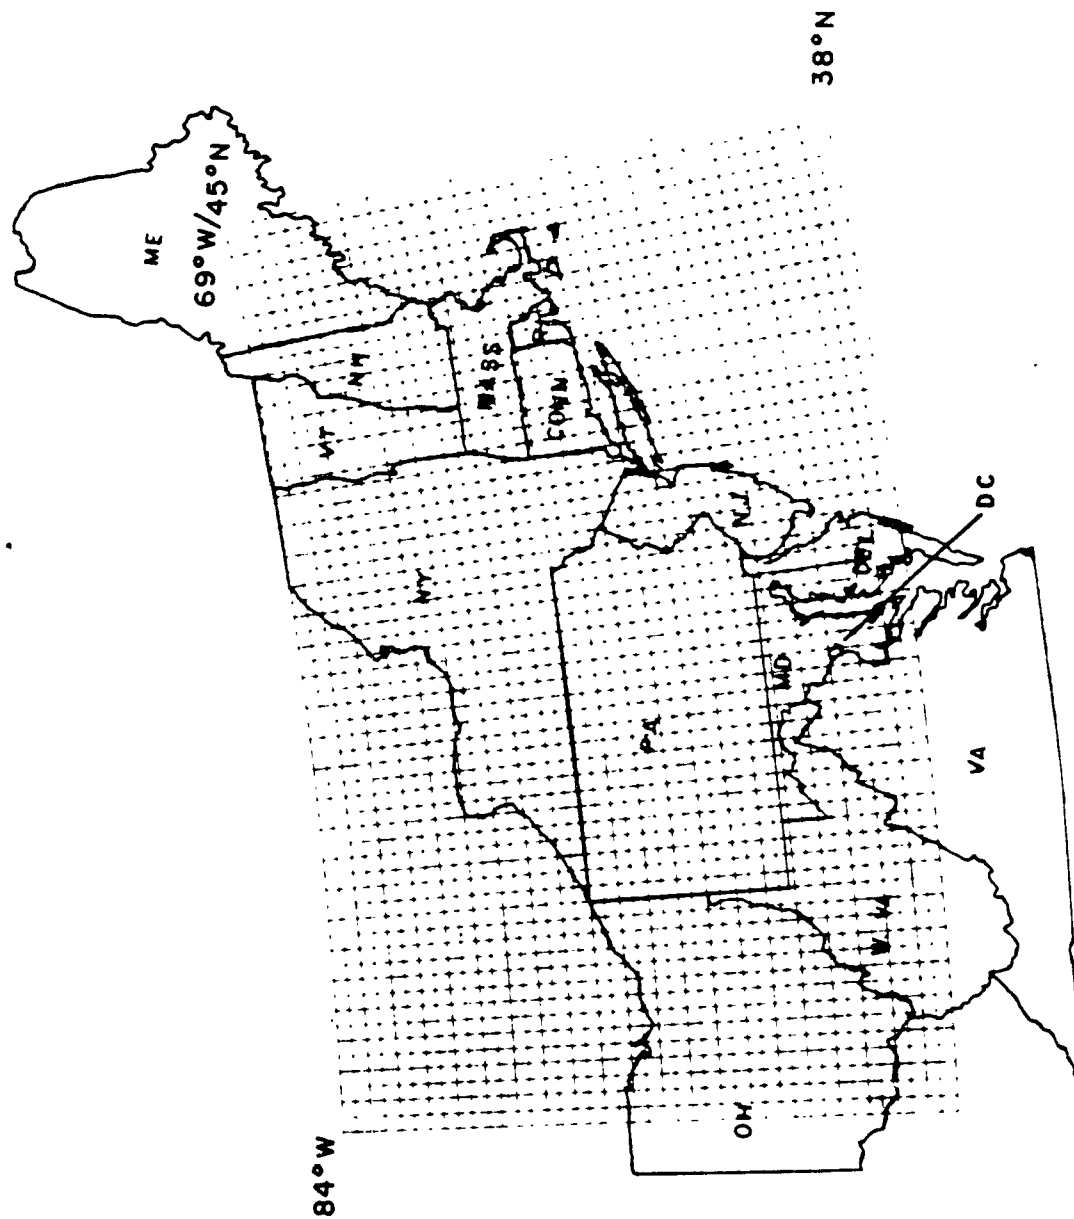

Figure 1. Boundaries of regional model grid system.

The completed inventories were computerized for further use in the NECRMP study. Point source data were computerized in the format specified in the Emission Inventory System/Point Source User's Guide¹ and area source data were coded into Emission Inventory System/Area Source (EIS/AS)² format.

REPORT ORGANIZATION

The results of the NECRMP annual emission inventory are reported in an 18 volume set of documents. Volume I in this series describes the background of the program and discusses the methodology used to compile and verify the annual emission inventory. Volumes II through XVI present a more detailed discussion of each state's inventory effort. Volume XVII describes the spatial, temporal, and species allocation factors developed to allow for the creation of modeler's tapes from the completed inventory. Volume XVIII presents a summary of the point and area source inventories for the entire study area. Also included in Volume XVIII is a detailed analysis of the overall quality of the data base and an assessment of the data's suitability for use in photochemical modeling. A directory of the NECRMP annual emission inventory reports is presented in Table 1.

This volume, which presents a discussion of the annual emission inventory for Pennsylvania, consists of five sections including this introduction. Section 2 describes the project history and includes a summary of the major events that relate to the Pennsylvania inventory development. Section 3 discusses in greater detail the point source inventory task while the area source inventory development is covered in Section 4. All references cited in the volume are identified in Section 5. Appendices A and B present county emissions for point and area sources, respectively, while all computer routines used to fix "generic" problems with the Pennsylvania point source data are provided in Appendix C. Appendix D presents a comparison of the final NECRMP inventory with the Pennsylvania ozone SIP filed by the Pennsylvania Department of Environmental Resources (DER).

SECTION 2

PROJECT HISTORY

AGENCY CONTACTS

The EPA Project Officer provided agency contacts in the Pennsylvania Department of Environmental Resources (PADER) and the U.S. Environmental Protection Agency's Region III office (EPA/Region III). The PADER contact was responsible for confirming data, supplying required corrections or additional data, interfacing with individual sources and other Pennsylvania agencies as necessary, and concurring on the comprehensiveness and accuracy of the final data base. The PADER contact was also responsible for providing data, as needed, to assist in a detailed review of the point and area source data for errors, inconsistencies and missing data elements.

SUMMARY OF EVENTS

Summaries of major milestones pertaining to the Pennsylvania portion of the NECRMP annual emission inventory are provided separately for the point source and area source data, as follows.

Point Sources

- PADER forwarded point source data (1978) for all of Pennsylvania, except Philadelphia and Allegheny Counties to EPA in NEDS format 9/10/81
- Engineering-Science, Inc. (E-S) forwarded Pennsylvania point source data to GCA. Two separate tapes were supplied. The first reflecting 1978 data for all counties except Allegheny and Philadelphia, as received from PADER; the second reflecting 1979 data for Philadelphia County, as received from the Philadelphia AMS 9/23/81
- Allegheny County point source inventory (1980) developed by GCA under a separate assignment³ merged with the above point source data 11/15/81
- E-S forwarded updated point source data (1978) for Bucks, Chester, Delaware, and Montgomery Counties in EIS/P&R format to GCA 12/4/81

- E-S notified GCA of changes to the EIS/P&R file covering Bucks, Chester, Delaware, and Montgomery Counties 12/22/81
- GCA completed QA audit and forwarded lists of omissions, potential problems, and questions to the PADER (no response received from PADER) 1/11/82
- EIS/PS master file (1978, 1979, 1980) forwarded to EPA 5/4/82

Area Sources

Work on the Pennsylvania area source inventory occurred between August 1982 and February 1983. The completed EIS/AS master file was forwarded to EPA on February 18, 1983. Key events are highlighted below.

- PADER completed area source inventory (1980) and forwarded it to EPA/Region III 7/1/82
- EPA Project Officer forwarded Pennsylvania area source data to GCA 8/11/82
- GCA reviewed area source data and forwarded lists of potential problems and questions to the EPA Project Officer and the PADER contact 9/2/82
- EPA/Region III forwarded PADER responses to questions on aircraft and gasoline marketing to GCA 11/4/82
- GCA completed area source inventory for Pennsylvania and forwarded EIS/AS master file to the EPA 2/18/83

SECTION 3

POINT SOURCE INVENTORY

DATA PROCUREMENT

A computer tape containing National Emission Data System (NEDS) formatted data for Pennsylvania was supplied by Engineering-Science, Inc. (E-S) at the request of the EPA Project Officer on September 23, 1981. The tape contained two separate files; the first representing 1978 point source data for the Commonwealth of Pennsylvania (minus Allegheny and Philadelphia Counties) as received from the Pennsylvania Department of Environmental Resources (PADER), the second representing 1979 point source data for Philadelphia County as received from the Philadelphia Air Management Services (PAMS). On December 4, 1981, E-S forwarded updated point source data for four counties in the Philadelphia area: Bucks, Chester, Delaware, and Montgomery. These data, supplied in Emission Inventory System/Permits & Registration (EIS/P&R) format, were converted into NEDS format and substituted for the appropriate counties in the original file prior to data review and correction efforts. Point source data (1980) for Allegheny County were developed under a separate assignment by GCA/Technology Division³ to fulfill the requirements of both the 1982 ozone State Implementation Plans (SIPs) and the NECRMP annual emission inventory. The Allegheny County point source data were available in NEDS format.

The individual components of the Pennsylvania point source inventory were merged into a single file representing 13,590 individual emission points at 2,137 facilities.

DATA REVIEW AND UPDATE

The Pennsylvania point source data were converted into EIS/PS format and subjected to the quality assurance (QA) checks contained in the GCA-modified version of the NEDS-to-EIS/PS Conversion Editor.² The data were then subjected to the remaining QA measures in the NECRMP Annual Emission Inventory QA program, which are described in Volume I.⁴

One QA measure was to cross-check sources listed in the Directory of Volatile Organic Compound (VOC) Sources Covered by Reasonably Available Control Technology Requirements (RACT),⁵ the "Organic Chemical Producers Data Base,"⁶ and the Emissions Inventory for the SURE Region⁷ against those facilities reported in the Pennsylvania point source inventory. GCA forwarded to the PADER lists of facilities reported in the above references

^bDirectory of VOC Sources Covered by Reasonable Available Control Technology Requirements.⁶

that were not included in the Pennsylvania emission inventory. The PADER did not respond to GCA's list of potential omissions, which is presented in Table 2. (No sources were found in the SURE Inventory that were not covered in the PA point source inventory).

A manual review was undertaken of all sources emitting more than 100 tons/year of VOC or NO_x or 500 tons/year of any criteria pollutant. Additionally, all "error", "conditional," or "warning" messages resulting from the conversion of data from NEDS format to EIS/PS¹ format were examined.

A number generic problems hampering conversion of the NEDS formatted data into EIS/PS format were encountered and had to be addressed using the computer routines presented in Appendix C. These are discussed as follows.

For a number of sources, emission control equipment codes were blank, but the corresponding estimated control efficiency fields were coded as zeros. To successfully pass the EIS system edit checks,¹ the control device and efficiency fields had to be either both blank or both numeric. Blank control device fields were zero-filled using a computer routine, which is presented in Appendix C.

For virtually all boiler sources within the Pennsylvania inventory, an extra "dummy" NEDS Card 6 was present with a source classification code (SCC) of "0-00-000-00". These records were deleted using an Appendix C computer routine. A number of other sources had multiple duplicate SCCs at the same point. The EIS/PS system rejects NEDS Card 6 records with duplicate SCCs. These sources were brought to the attention of the PADER. However, no response was received. Therefore, these duplicates were automatically dropped.

Leading zeros were missing for a number of point IDs resulting in a card rejection from the EIS/PS system. All non-numeric characters in the point I.D. fields were replaced with zeros using an Appendix C routine. A number of sources also had point IDs of "00". Although this point ID code is technically valid, the EIS system does not handle these points correctly; a disastrous sorting problem is encountered when creating a master file with these IDs. These point IDs were changed to "01" and all subsequent points within the facility were renumbered as appropriate.

A number of sources were missing ownership codes and confidentiality codes. Although not serious problems, the large number of "conditional" error messages resulting from the omission of these fields made the error listings unmanageably large. Blank ownership codes were replaced with "P" indicating private ownership and blank confidentiality codes were replaced with "2" indicating nonconfidential data. Similarly, a number of sources had zeros coded for the percent annual throughput fields. These were changed to reflect four uniform seasons. Most sources coded as plumes rather than stacks did not report plume temperatures. These were changed to 77°F.

In addition to the above problems which were addressed by computer routines, numerous other problems were detected during the QA review. A number of sources with questionable stack data were encountered. Most often, these involved stacks with reported diameters in excess of 20 percent of the stack height; a number of stacks had reported diameters exceeding 50 percent of the stack height, and a few stack diameters exceeded the stack height.

Other suspicious stack data included questionably high stacks, low stack temperatures, exit velocities not within expected ranges, and inconsistencies between stack and plume values. Questionably high CO and SO₂ emissions estimates were also noted for a number of sources.

All of the above problems were documented and forwarded to the Pennsylvania DER for resolution on 11 January 1982. Unfortunately, GCA did not receive responses from the Pennsylvania DER. Thus, except for the "generic" problems addressed by the Appendix C computer routines, the final EIS/PS master file reflects the data essentially as received by GCA.

Engineering-Science, Inc., did notify GCA of changes affecting four facilities, however.⁸ These changes, which are reflected in the EIS/PS master file, are described in Table 3.

TABLE 3. UPDATES MADE TO PENNSYLVANIA POINT SOURCES

Facility	NEDS facility ID	Update action taken
<u>Bucks County (1200)</u>		
U.S. Steel	0020	Changed emissions estimates for TSP, SO ₂ , NO _x , VOC, and CO at one point. Changed year of record to 1980.
<u>Philadelphia County (7160)</u>		
Allied Chemical	1551	Changed VOC emissions estimate at one point. Changed year of record to 1980.
Hastings & Co.	1585	Changed VOC emissions estimate at one point. Changed year of record to 1980.
Philadelphia Electric-- N. Delaware Ave.	4903	Changed NO _x emissions estimate at one point. Changed year of record to 1980.

RESULTS

For reporting purposes, point source emissions for Pennsylvania were aggregated into 70 categories based on specific SCC-SIC combinations. A complete description of the codes used to aggregate emissions is presented in

Volume I.⁴ For points with multiple SCCs, no attempt was made to split emissions into more than one category. In these instances, the primary SCC was used to account for all emissions at that point. .

Statewide point source emissions (1978-1980) are presented, by category, in Table 4. County totals, by category, are presented in Appendix A.

A list of "major" facilities was developed by totalling emissions at each facility using a criteria of 100 tons/year of VOC or NO_x to define a major source. These facilities, and their reported emissions for all five criteria pollutants, are presented in Table 5.

The completed Pennsylvania point source inventory was written onto computer tape for delivery to EPA. Included on the tape, which was forwarded on May 4, 1982, were the following files.

- EIS/PS Master File (1978-1980)
- NEDS (1978-1980) (converted from EIS/PS masterfile)

SECTION 4

AREA SOURCE INVENTORY

OBJECTIVES

The area source emission inventory task entailed reviewing area source inventories prepared by the states for technical accuracy and consistency with EPA-prescribed procedures and developing these area source inventories where state-developed inventories were unavailable. The major objective of this effort was to ensure that all emissions of VOC and NO_x were accounted for and that the procedures used to develop the inventories were consistent from state to state. It was also important that the inventories be disaggregated into sufficient categories to allow for application of temporal and pollutant allocation factors and the evaluation of control scenarios in subsequent modeling efforts.

Data Procurement and Review

The 1980 Pennsylvania area source inventory was completed by the PADER and supplied to the EPA/Region III on July 1, 1982, which, in turn, was forwarded to GCA on August 11, 1982. GCA reviewed the area source data for comprehensiveness and consistency with the area source methodologies presented in Volume I.⁴ GCA identified several area source categories which were not included in the Pennsylvania inventory. A number of composite categories which had to be further disaggregated were identified. The results of GCA's review were forwarded to the EPA Project Officer and the PADER contact on September 2, 1982.

On November 4, 1982, GCA received the PADER responses to the GCA review, via EPA/Region III. Not all of the issues identified by GCA were resolved, although the PADER did supply response to the questions concerning the aircraft and gasoline marketing categories. GCA was able to disaggregate the remaining composite categories based on information from neighboring states' area source emission inventories and utilized NEDS 1980 emissions data for the omitted categories.

The completed area source inventory for Pennsylvania was forwarded to the EPA Project Officer On February 18, 1983 in EIS/AS format.

In some instances, GCA had to develop emission factors, activity rates, and/or emissions for various categories to supplement the PADER supplied data. This was necessary to meet the requirements of the EIS/AS system and, in some cases, to be more consistent with Volume I⁴ methodologies. The specific categories to which this applies are discussed below in detail.

Gasoline Marketing--

The PADER provided activity rates, emissions estimates and emission factors for the Stage I and Stage II gasoline evaporation categories. The PADER estimate for Stage I evaporation included storage tank breathing. GCA disaggregated the emissions for Stage I and storage tank breathing into separate categories. An AP-42 emission factor¹⁵ of 0.12 lb/10³ gal was used to cover evaporative losses during transport by tanker trucks. GCA reviewed the Pennsylvania point source inventory and verified that emissions for tank truck loading were completely covered.

Degreasing, Dry Cleaning, Architectural Surface Coating, Graphic Arts, Commercial Consumer Solvent Use--

GCA calculated VOC emissions (tons/year) using the 1980 Census of Population⁹ and the per capita emission factors provided by the PADER, which agreed with those recommended in the EPA Guidelines.¹⁰

Automobile Refinishing--

GCA converted VOC emissions from kg/day to tons/year using temporal factors provided by the PADER. Using the Volume I¹⁰ factor of 2.6 lb/employee-year, GCA back calculated the employment figures for each county.

Pesticides--

GCA calculated VOC emissions from pesticides application using an average emission factor of 3.5 lb of VOC/yr/harvested acre.¹⁰ Acreage information was found in the County and City Data Book.¹¹

Cutback Asphalt--

Temporal factors provided by the PADER were used to convert emissions from kg/day to tons/year. A VOC emission factor of 2000 lb/ton was then used to enable coding into EIS/AS.

Highway Vehicles--

Combined emission totals (for both VOC and NO_x) for the six on-highway vehicle categories were available for each county in kg/day for a typical summer weekday. GCA multiplied daily emissions by 365 to convert the emissions to tons/year consistent with Volume XVII.¹² The emission totals were distributed to specific vehicle classes based on the ratios used in the Ohio Area Source Inventory.¹³ Emission factors from the Ohio Inventory¹³ were used to back calculate VMT.

Fuel Use--

The PADER did not supply data on area source fuel combustion. Therefore, 1980 emissions from the NEDS system were used.¹⁴ The statewide emissions estimates were distributed to counties based on the 1980 Census of Population.⁹ Activity rates were back calculated using the appropriate AP-42 emission factors.¹⁵

Railroads--

Temporal allocation factors from Volume XVII¹² were used to convert emissions reported in kg/day for a typical summer weekday to tons/year. AP-42 emission factors,¹⁵ supplied by the PADER, were used to back calculate the activity rates.

Vessels--

Combined emission totals (for both VOC and NO_x) for gasoline, residual and distillate oil vessels were available for each county in kg/day for a typical summer weekday. GCA used temporal allocation factors from Volume XVII¹² to convert the emissions to tons/year. The emission totals were disaggregated to each of the individual vessel categories based on the ratios obtained from the Ohio Area Source Inventory.¹³ Utilizing the derived annual emissions and the appropriate AP-42 emission factors¹⁵ for residual and distillate oil powered vessels, the activity rates were back calculated. The emission factors for gasoline powered vessels was obtained from the Ohio Inventory.¹³

Off-Highway Vehicles--

Emission totals in kg/day for a typical summer weekday were converted to tons/year using the temporal allocation factors reported in Volume XVII.¹² The composite emissions were allocated to gasoline and diesel powered vehicles using the ratio found in the Ohio Area Source Inventory¹³ and activity rates were back calculated using the Ohio emission factors.¹³

Onsite Incineration, Open Burning--

PADER did not supply information concerning these two categories. Therefore, GCA used 1980 estimates from the NEDS system. The statewide VOC and NO_x emissions were distributed to counties based on the 1980 Census of Population.⁹ Activity rates were back calculated using the appropriate AP-42¹⁵ VOC emission factors.

Structural Fires, Forest Fires--

Emissions (kg/day for a typical summer weekday) and emission factors were provided by the PADER. The emissions were converted to tons/year using temporal factors also supplied by the PADER.

Development of the EIS/AS Master File

After emissions were verified for all area source categories on a countywide basis, the completed inventory was coded and keypunched in EIS/AS format and subjected to the series of computerized QA checks included in the EIS/AS System.² The completed Master File was then manually verified for accuracy before the finalized data were written onto computer tape for delivery to EPA.

Table 6 presents a list of the area source categories included in the Pennsylvania portion of the NECRMP inventory. Also identified for each category is the type of VOC represented by the emission factor (total or reactive).

APPENDIX D

COMPARISON OF NECRMP INVENTORY FOR PENNSYLVANIA AND THE PENNSYLVANIA OZONE SIP INVENTORY

A comparison of the NECRMP inventory for Pennsylvania and the Pennsylvania Ozone SIP inventory was conducted.* Result of this comparison are presented in Attachments I through VII, which follow. A more comprehensive discussion of this comparison can be found in Volume XVIII of the NECRMP series.

Attachment I compares countywide point source emissions in the Philadelphia Nonattainment area for VOC and NO_x. Attachment II presents a list of major VOC sources in the Pennsylvania SIP and NECRMP inventories differing by more than 100 tons per year of VOC. A similar comparison for NO_x emitters is presented in Attachment III. As shown in Attachment III, United States Steel in Butler County, alone, accounts for most of the NO_x discrepancy between the two inventories.

Area source VOC and NO_x emissions are compared in Attachments IV and V, respectively. Attachment VI compares the NECRMP emission totals for the Philadelphia AQCR with those in the Urban Airshed inventory developed by Engineering-Science. While the point source totals are in good agreement, less agreement exists between NECRMP and the Airshed nonhighway area source totals. Attachment VII shows that most of this difference arises from the inclusion in the Airshed inventory of various industrial components not included in the NECRMP (or SIP) inventories, calculated using national emission-per-employee factors applied to employee totals in various SIC codes.

*Tom Lahre, EPA/OAQPS, June 2, 1983 memorandum to J. Southerland entitled: Review of Northeast Corridor Regional Modeling Project (NECRMP) Inventory for Pennsylvania.

ATTACHMENT I

COUNTYWIDE POINT SOURCE EMISSION TOTALS IN PENNSYLVANIA NONATTAINMENT
AREAS: SIP vs. NECRMP

County		SIP Point Source VOC Total, TPY		NECRMP Point Source VOC Total, TPY	Comment
		1978	1980		
Bucks	(1200)	21,693	23,244	21,604	(county totals erroneously listed in SIP for '80 and '78 as 25,675 and 25,824).

ATTACHMENT VII

COMPARISON OF NECRMP AND AIRSHED INVENTORIES

NON-HIGHWAY EVAPORATION SOURCES*

Source Category	Urban Airshed	NECRMP	Comments
Degreasing	13,897	5,017	Nationwide emissions-per-employee factors used in Airshed inventory to encompass open top and conveyorized degreasers, as well as small cold cleaners.
Drycleaning	4,675	2,635	Airshed inventory includes industrial drycleaning component.
Arch. Coatings	9,201	8,470	Same procedures used.
Auto Refinishing	5,150	4,183	Same procedures used.
Other Small Industrial Coatings	26,888	0	Engineering-Science used national emission-per-employee factors to cover various industrial coating operations.
Graphic Arts	1,182	1,279	Same procedures used.
Con/Comm Solvent	20,005	11,600	Airshed inventory used 10 lb/cap-year vs. 6.3 lb/cap-year in NECRMP.
Cutback Asphalt	522	403	
Gasoline Marketing	11,456	10,512	NECRMP inventory lower even though it includes a bulk plant and terminal truck loading component not included in Airshed inventory
Other Small Industrial Processes	11,689	0	Engineering-Science used SRAB-supplied emission-per-employee factors to cover various manufacturing processes
Pesticides	<u>2,265</u>	<u>440</u>	
TOTAL	106,930	44,539	

*All emissions expressed are tons per year.

TECHNICAL REPORT DATA

(Please read Instructions on the reverse before completing)

1. REPORT NO. GCA-450/4-82-013k		2.		3. RECIPIENT'S ACCESSION NO.	
4. TITLE AND SUBTITLE Northeast Corridor Regional Modeling Project Annual Emission Inventory Compilation and Formatting Volume XI: Pennsylvania Emission Inventory				5. REPORT DATE June 1983	
				6. PERFORMING ORGANIZATION CODE	
7. AUTHOR(S) Frederick M. Sellars, Barbara J. Bosy, Andrea M. Kiddie, Mark E. Connolly				8. PERFORMING ORGANIZATION REPORT NO. GCA-TR-82-17-G(11)	
9. PERFORMING ORGANIZATION NAME AND ADDRESS GCA/Technology Division 213 Burlington Road Bedford, Massachusetts 01730				10. PROGRAM ELEMENT NO.	
				11. CONTRACT/GRANT NO. 68-02-3510, Work Assignment Nos. 7 and 26	
12. SPONSORING AGENCY NAME AND ADDRESS U.S. Environmental Protection Agency, Air Management Technology Branch, Monitoring and Data Analysis Division, Office of Air Quality Planning and Standards, Research Triangle Park, North Carolina 27711				13. TYPE OF REPORT AND PERIOD COVERED Final	
				14. SPONSORING AGENCY CODE	
15. SUPPLEMENTARY NOTES EPA Project Officers: James H. Southerland and Thomas F. Lahre					
16. ABSTRACT This report discusses the development of the Northeast Corridor Regional Modeling Project (NECRMP) annual regional emission inventory. The inventory reflects 1979/1980 data and focuses on point, area and mobile source emissions of Volatile Organic Compounds (VOC) and Nitrogen Oxides (NO _x), although particulate, sulfur oxides and carbon monoxide emissions were also compiled for point sources, the study area includes the entire northeast quadrant of the United States from longitude 69° to 82° West, and latitude 38° to 45° North. This Volume discusses the annual inventory for Pennsylvania.

INSTRUCTIONS

- 1. REPORT NUMBER**
Insert the EPA report number as it appears on the cover of the publication.
- 2. LEAVE BLANK**
- 3. RECIPIENTS ACCESSION NUMBER**
Reserved for use by each report recipient.
- 4. TITLE AND SUBTITLE**
Title should indicate clearly and briefly the subject coverage of the report, and be displayed prominently. Set subtitle, if used, in smaller type or otherwise subordinate it to main title. When a report is prepared in more than one volume, repeat the primary title, add volume number and include subtitle for the specific title.
- 5. REPORT DATE**
Each report shall carry a date indicating at least month and year. Indicate the basis on which it was selected (*e.g.*, *date of issue*, *date of approval*, *date of preparation*, *etc.*).
- 6. PERFORMING ORGANIZATION CODE**
Leave blank.
- 7. AUTHOR(S)**
Give name(s) in conventional order (*John R. Doe*, *J. Robert Doe*, *etc.*). List author's affiliation if it differs from the performing organization.
- 8. PERFORMING ORGANIZATION REPORT NUMBER**
Insert if performing organization wishes to assign this number.
- 9. PERFORMING ORGANIZATION NAME AND ADDRESS**
Give name, street, city, state, and ZIP code. List no more than two levels of an organizational hierarchy.
- 10. PROGRAM ELEMENT NUMBER**
Use the program element number under which the report was prepared. Subordinate numbers may be included in parentheses.
- 11. CONTRACT/GRANT NUMBER**
Insert contract or grant number under which report was prepared.
- 12. SPONSORING AGENCY NAME AND ADDRESS**
Include ZIP code.
- 13. TYPE OF REPORT AND PERIOD COVERED**
Indicate interim, final, *etc.*, and if applicable, dates covered.
- 14. SPONSORING AGENCY CODE**
Insert appropriate code.
- 15. SUPPLEMENTARY NOTES**
Enter information not included elsewhere but useful, such as: Prepared in cooperation with, Translation of, Presented at conference of, To be published in, Supersedes, Supplements, *etc.*
- 16. ABSTRACT**
Include a brief (*200 words or less*) factual summary of the most significant information contained in the report. If the report contains a significant bibliography or literature survey, mention it here.
- 17. KEY WORDS AND DOCUMENT ANALYSIS**
 - (a) DESCRIPTORS - Select from the Thesaurus of Engineering and Scientific Terms the proper authorized terms that identify the major concept of the research and are sufficiently specific and precise to be used as index entries for cataloging.
 - (b) IDENTIFIERS AND OPEN-ENDED TERMS - Use identifiers for project names, code names, equipment designators, *etc.* Use open-ended terms written in descriptor form for those subjects for which no descriptor exists.
 - (c) COSATI FIELD GROUP - Field and group assignments are to be taken from the 1965 COSATI Subject Category List. Since the majority of documents are multidisciplinary in nature, the Primary Field/Group assignment(s) will be specific discipline, area of human endeavor, or type of physical object. The application(s) will be cross-referenced with secondary Field/Group assignments that will follow the primary posting(s).
- 18. DISTRIBUTION STATEMENT**
Denote releasability to the public or limitation for reasons other than security for example "Release Unlimited." Cite any availability to the public, with address and price.
- 19 & 20. SECURITY CLASSIFICATION**
DO NOT submit classified reports to the National Technical Information Service.
- 21. NUMBER OF PAGES**
Insert the total number of pages, including this one and unnumbered pages, but exclude distribution list, if any.
- 22. PRICE**
Insert the price set by the National Technical Information Service or the Government Printing Office, if known.
