

# EPA's BEACH Report: Connecticut 2008 Swimming Season

May 2009

## Introduction

The BEACH Act of 2000 requires that coastal and Great Lakes states and territories report to EPA on beach monitoring and notification data for their coastal recreation waters. The BEACH Act defines coastal recreation waters as the Great Lakes and coastal waters (including coastal estuaries) that states, territories, and authorized tribes officially recognize or designate for swimming, bathing, surfing, or similar activities in the water.

This fact sheet summarizes beach monitoring and notification data submitted to EPA by the State of Connecticut for the 2008 swimming season.

The Connecticut Department of Public Health collects monitored beach data for 66 marine beaches located along its shoreline with Long Island Sound. Local health departments monitor 62 of these beaches. The Connecticut Department of Environmental Protection monitors the remaining four State Park marine beaches.

Connecticut has adopted a set of beach monitoring guidelines that are based on U.S. EPA standards for recreational bathing waters. These guidelines have been in effect since May 1989. They were revised most recently in April 2003.

Questions about a municipal beach should be directed to the shoreline local health department that monitors it. Questions about a State Park beach should be directed to the Connecticut Department of Environmental Protection.

Figure 1. Connecticut coastal counties.

Table 1. Breakdown of monitored and unmonitored coastal beaches by county for 2008.

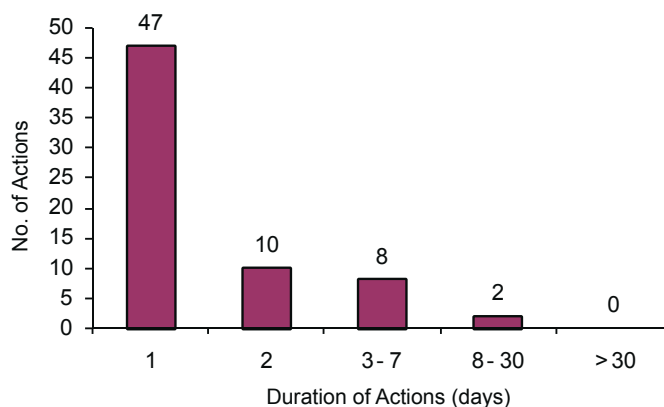

County	Total Beaches	Monitored	Not Monitored
FAIRFIELD	28	28	0
MIDDLESEX	5	5	0
NEW HAVEN	19	19	0
NEW LONDON	14	14	0
TOTALS	66	66	0

## 2008 Summary Results

### How many notification actions were reported and how long were they?

When water quality standards are exceeded at a particular beach, Connecticut's approach is to issue a beach advisory or closure to warn people to avoid contact with the ocean water. A total of 24 monitored beaches had at least one notification action issued during the 2008 swimming season. About 85 percent of Connecticut's notification actions lasted two days or less. Figure 2 presents a full breakdown of notification action durations.

**Figure 2: Beach notification actions by duration.**

### What percentage of days were beaches under a notification action?

For Connecticut's 2008 swimming season, actions were reported about 2 percent of the time (Figure 3).

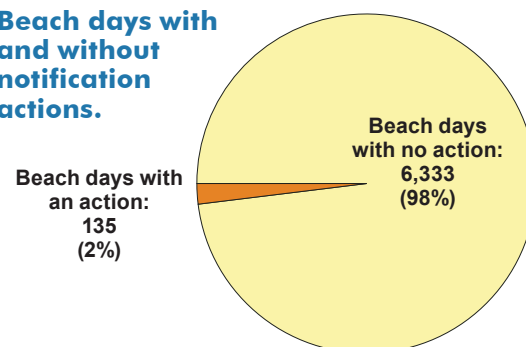

### How do 2008 results compare to previous years?

Table 2 compares 2008 notification action data with monitored beach data from previous years.

### What pollution sources possibly affect investigated monitored beaches?

Figure 4 displays the percentage of Connecticut's investigated monitored beaches possibly affected by various pollution sources. In 2008, 71 percent of the beaches included storm-related runoff as a possible source. No pollution sources were identified at 23 percent of the beaches.

**Figure 3: Beach days with and without notification actions.**

**Table 2. Beach notification actions, 2006–2008.**

	2006	2007	2008
Number of monitored beaches	67	66	66
Number of beaches affected by notification actions	40	33	24
Percentage of beaches affected by notification actions	60%	50%	36%
Percentage of beach days affected by notification actions	3%	2%	2%
