**Radon Gas has been in
the environment for
millions of years.**

**Radon is a naturally occurring
radioactive gas.**

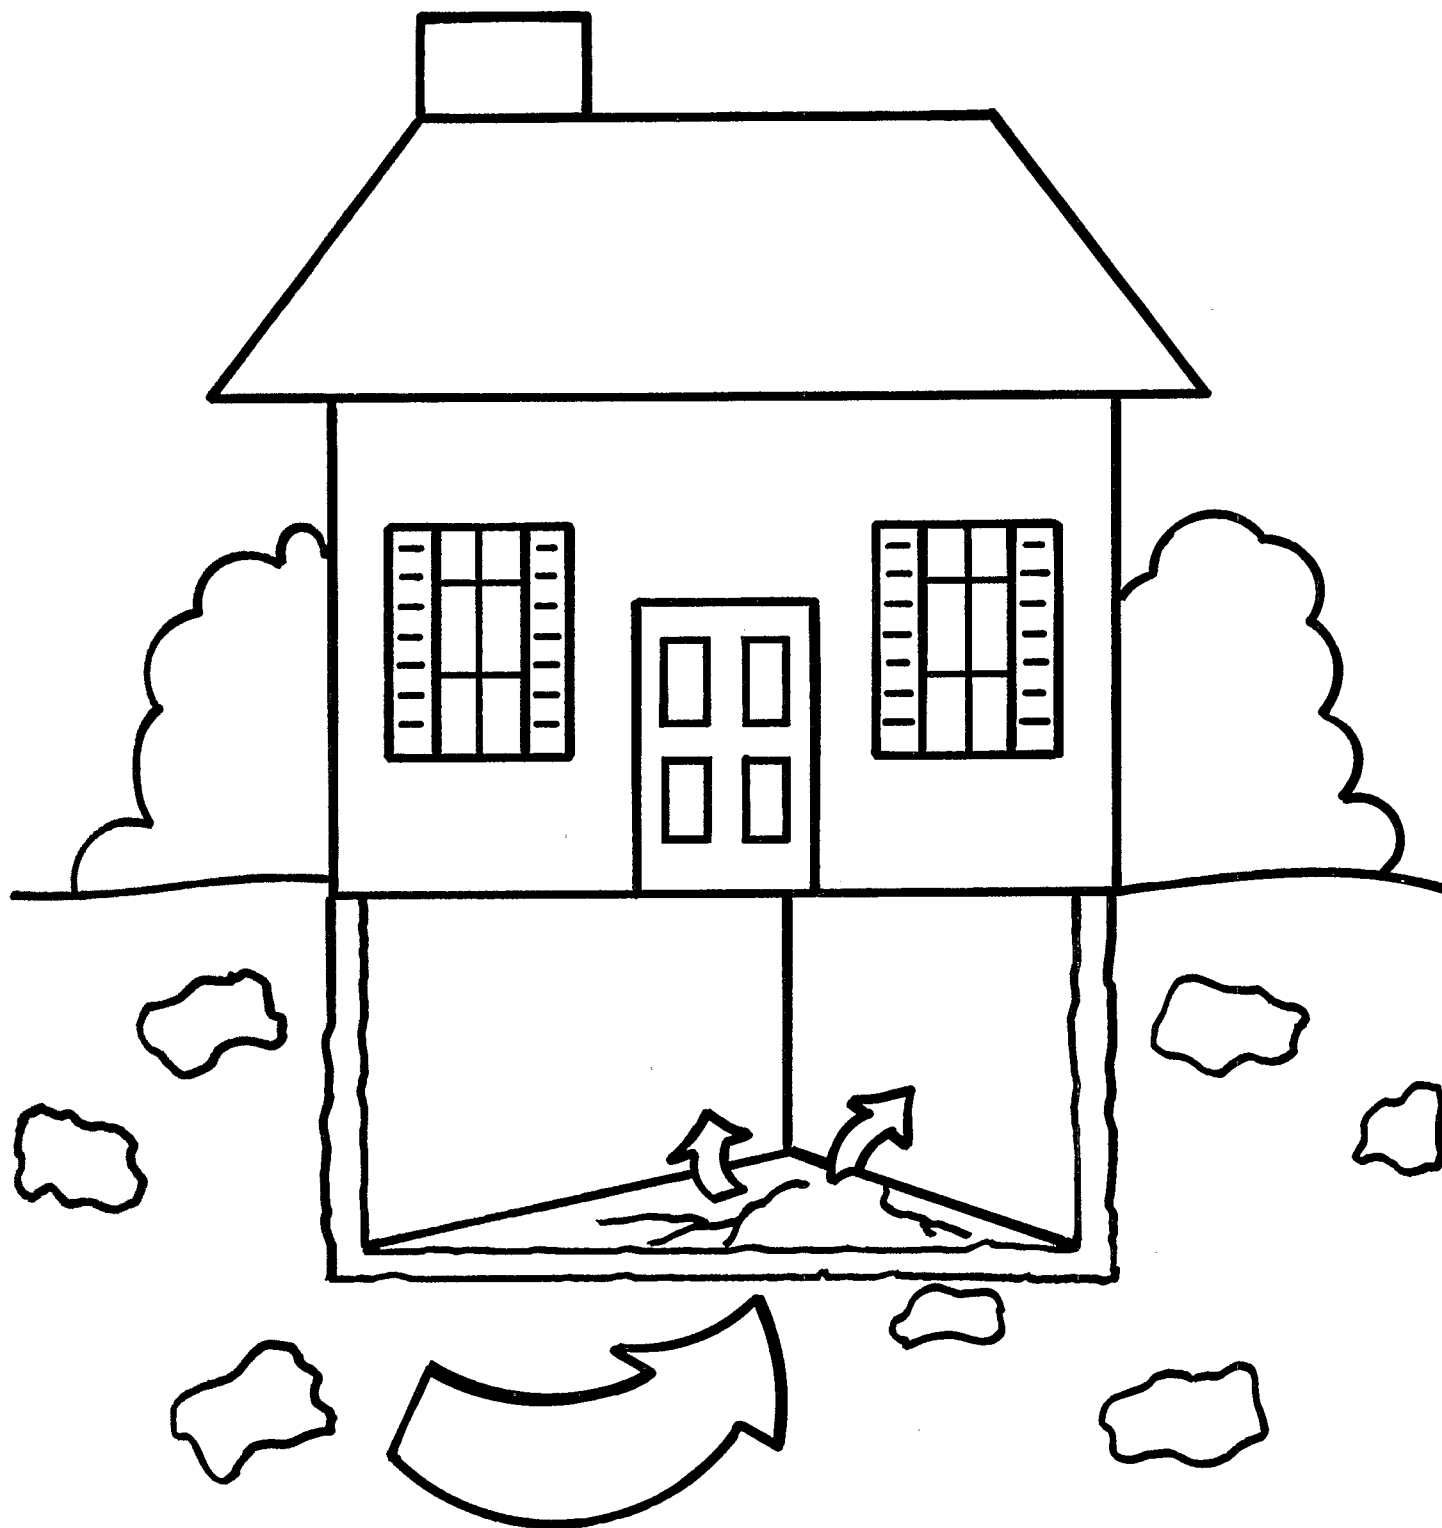

Radon is colorless, odorless and tasteless.

**High levels of Radon gas have been found
in many parts of the world.**

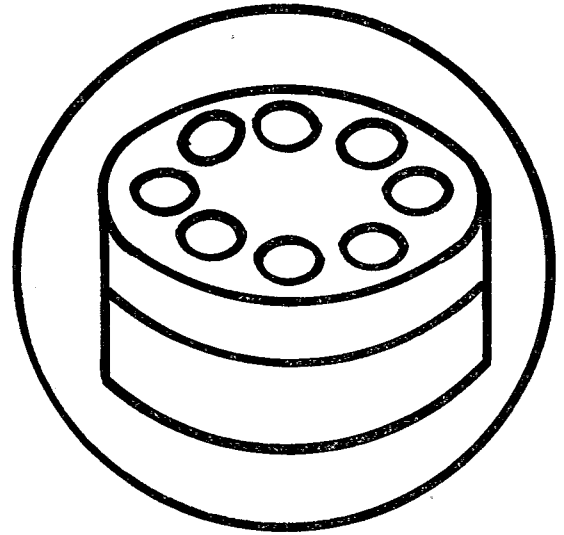

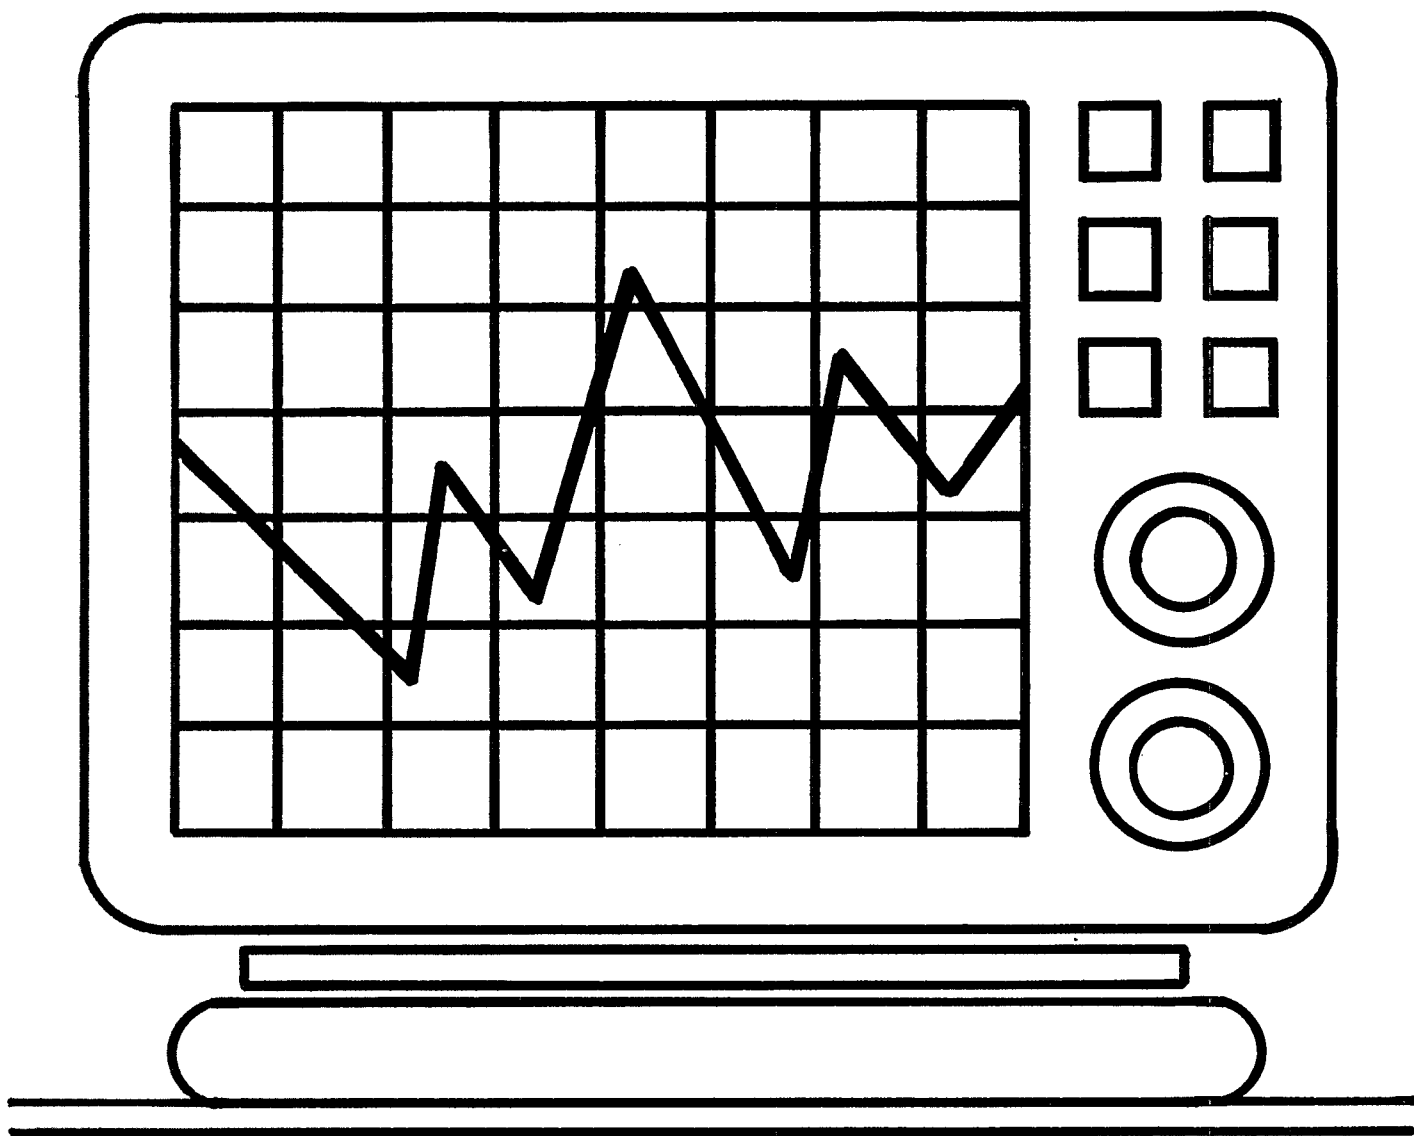

High levels of Radon gas have been found in this part of the country.

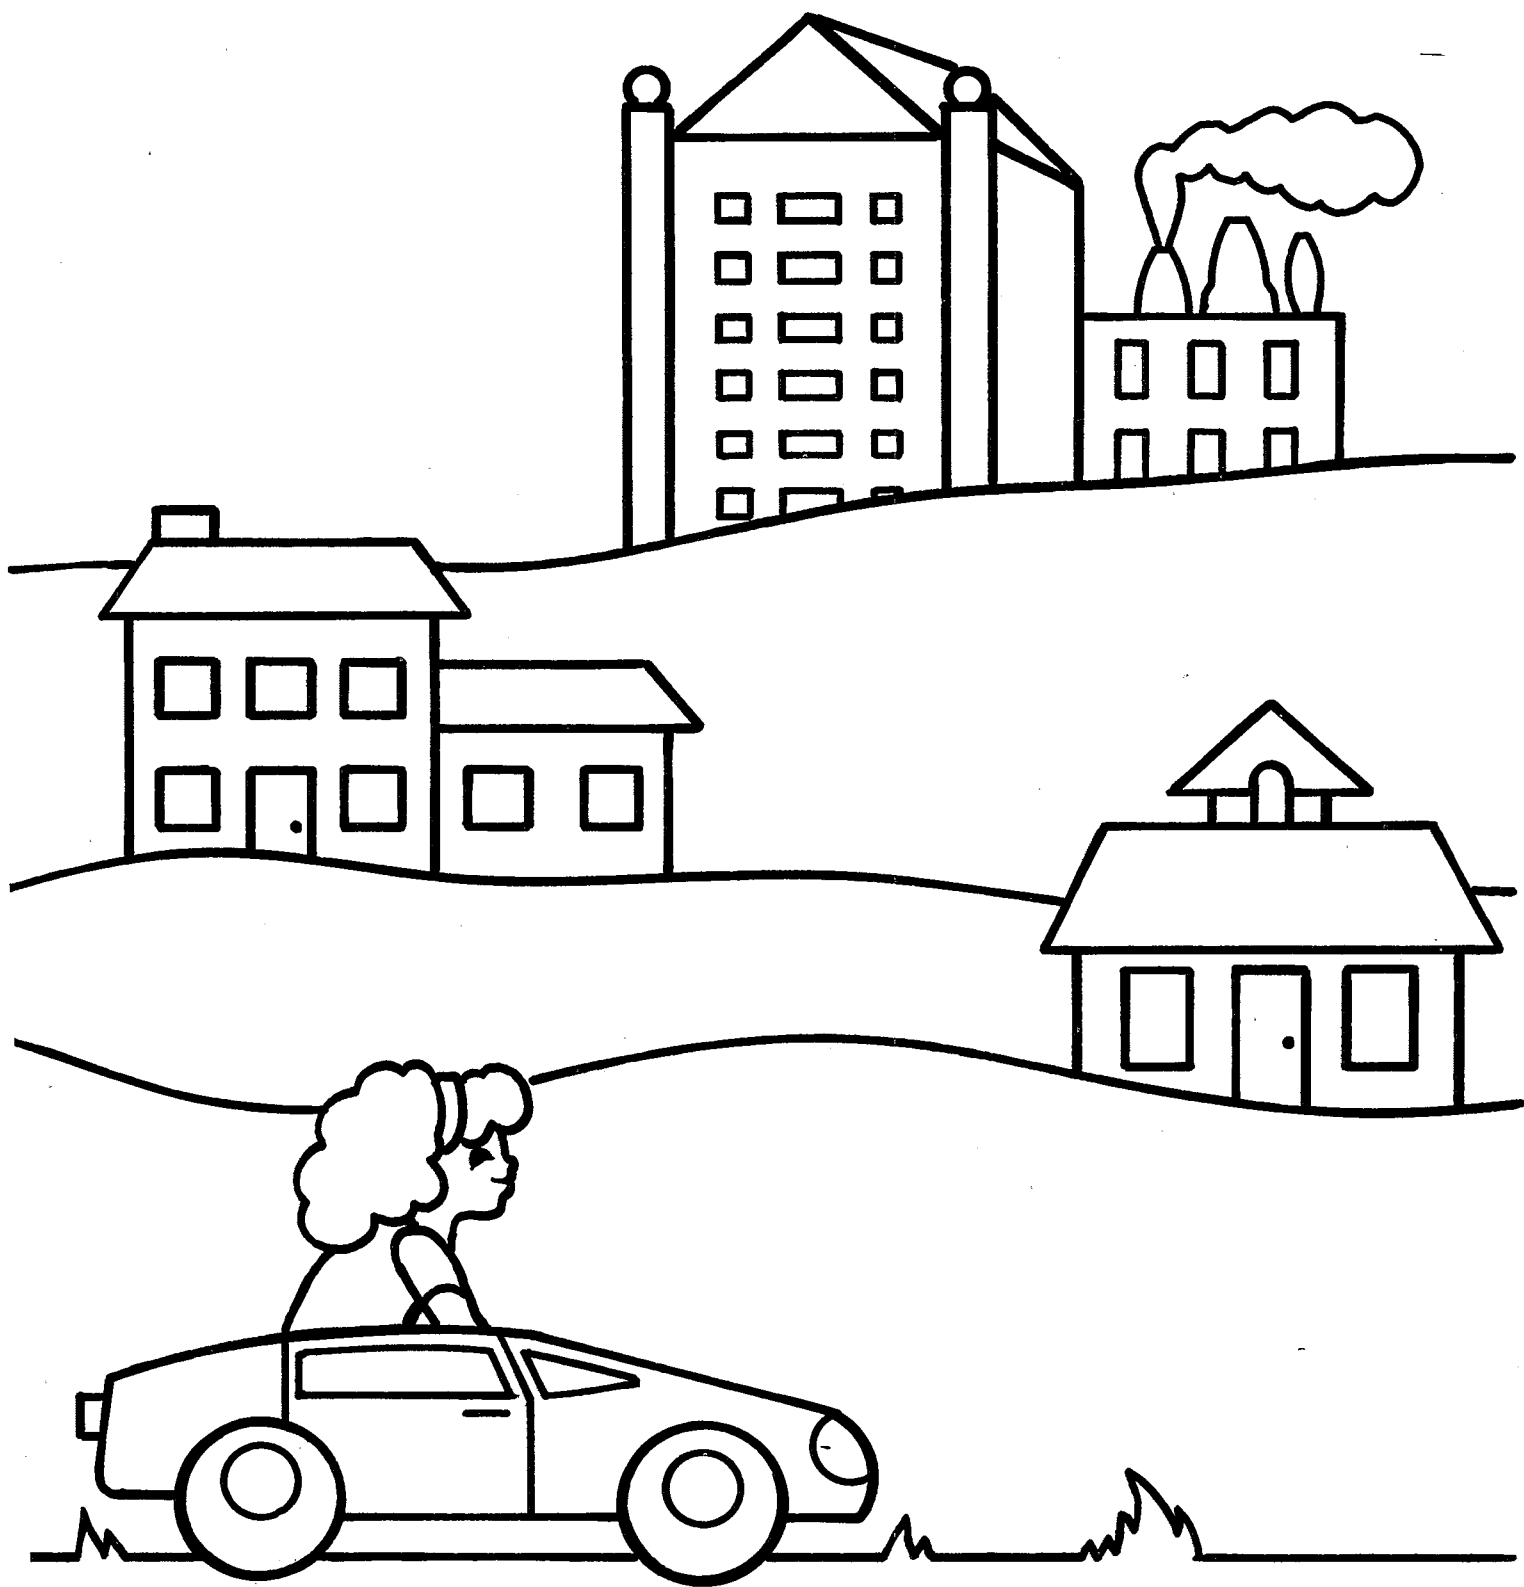

The most common entries for radon include cracks in foundations, and openings around sump pumps, pipes and drains.

The only way to be sure your home is free of Radon gas is to test for Radon. Radon can be detected using a relatively inexpensive test kit. When testing for radon it is very important to follow the test kit instructions carefully.

**The Environmental Protection Agency's
Radon action level is 4 picocuries
per liter of air.**

**Radon can be removed from your home,
work place, or school.**

**Radon detection and removal training
has been provided to a limited
number of local contractors by the
US Environmental Protection Agency.**

Call your local health department for more information about Radon in this area, or call:
