Tissue Mills which Use Postconsumer Recovered Paper

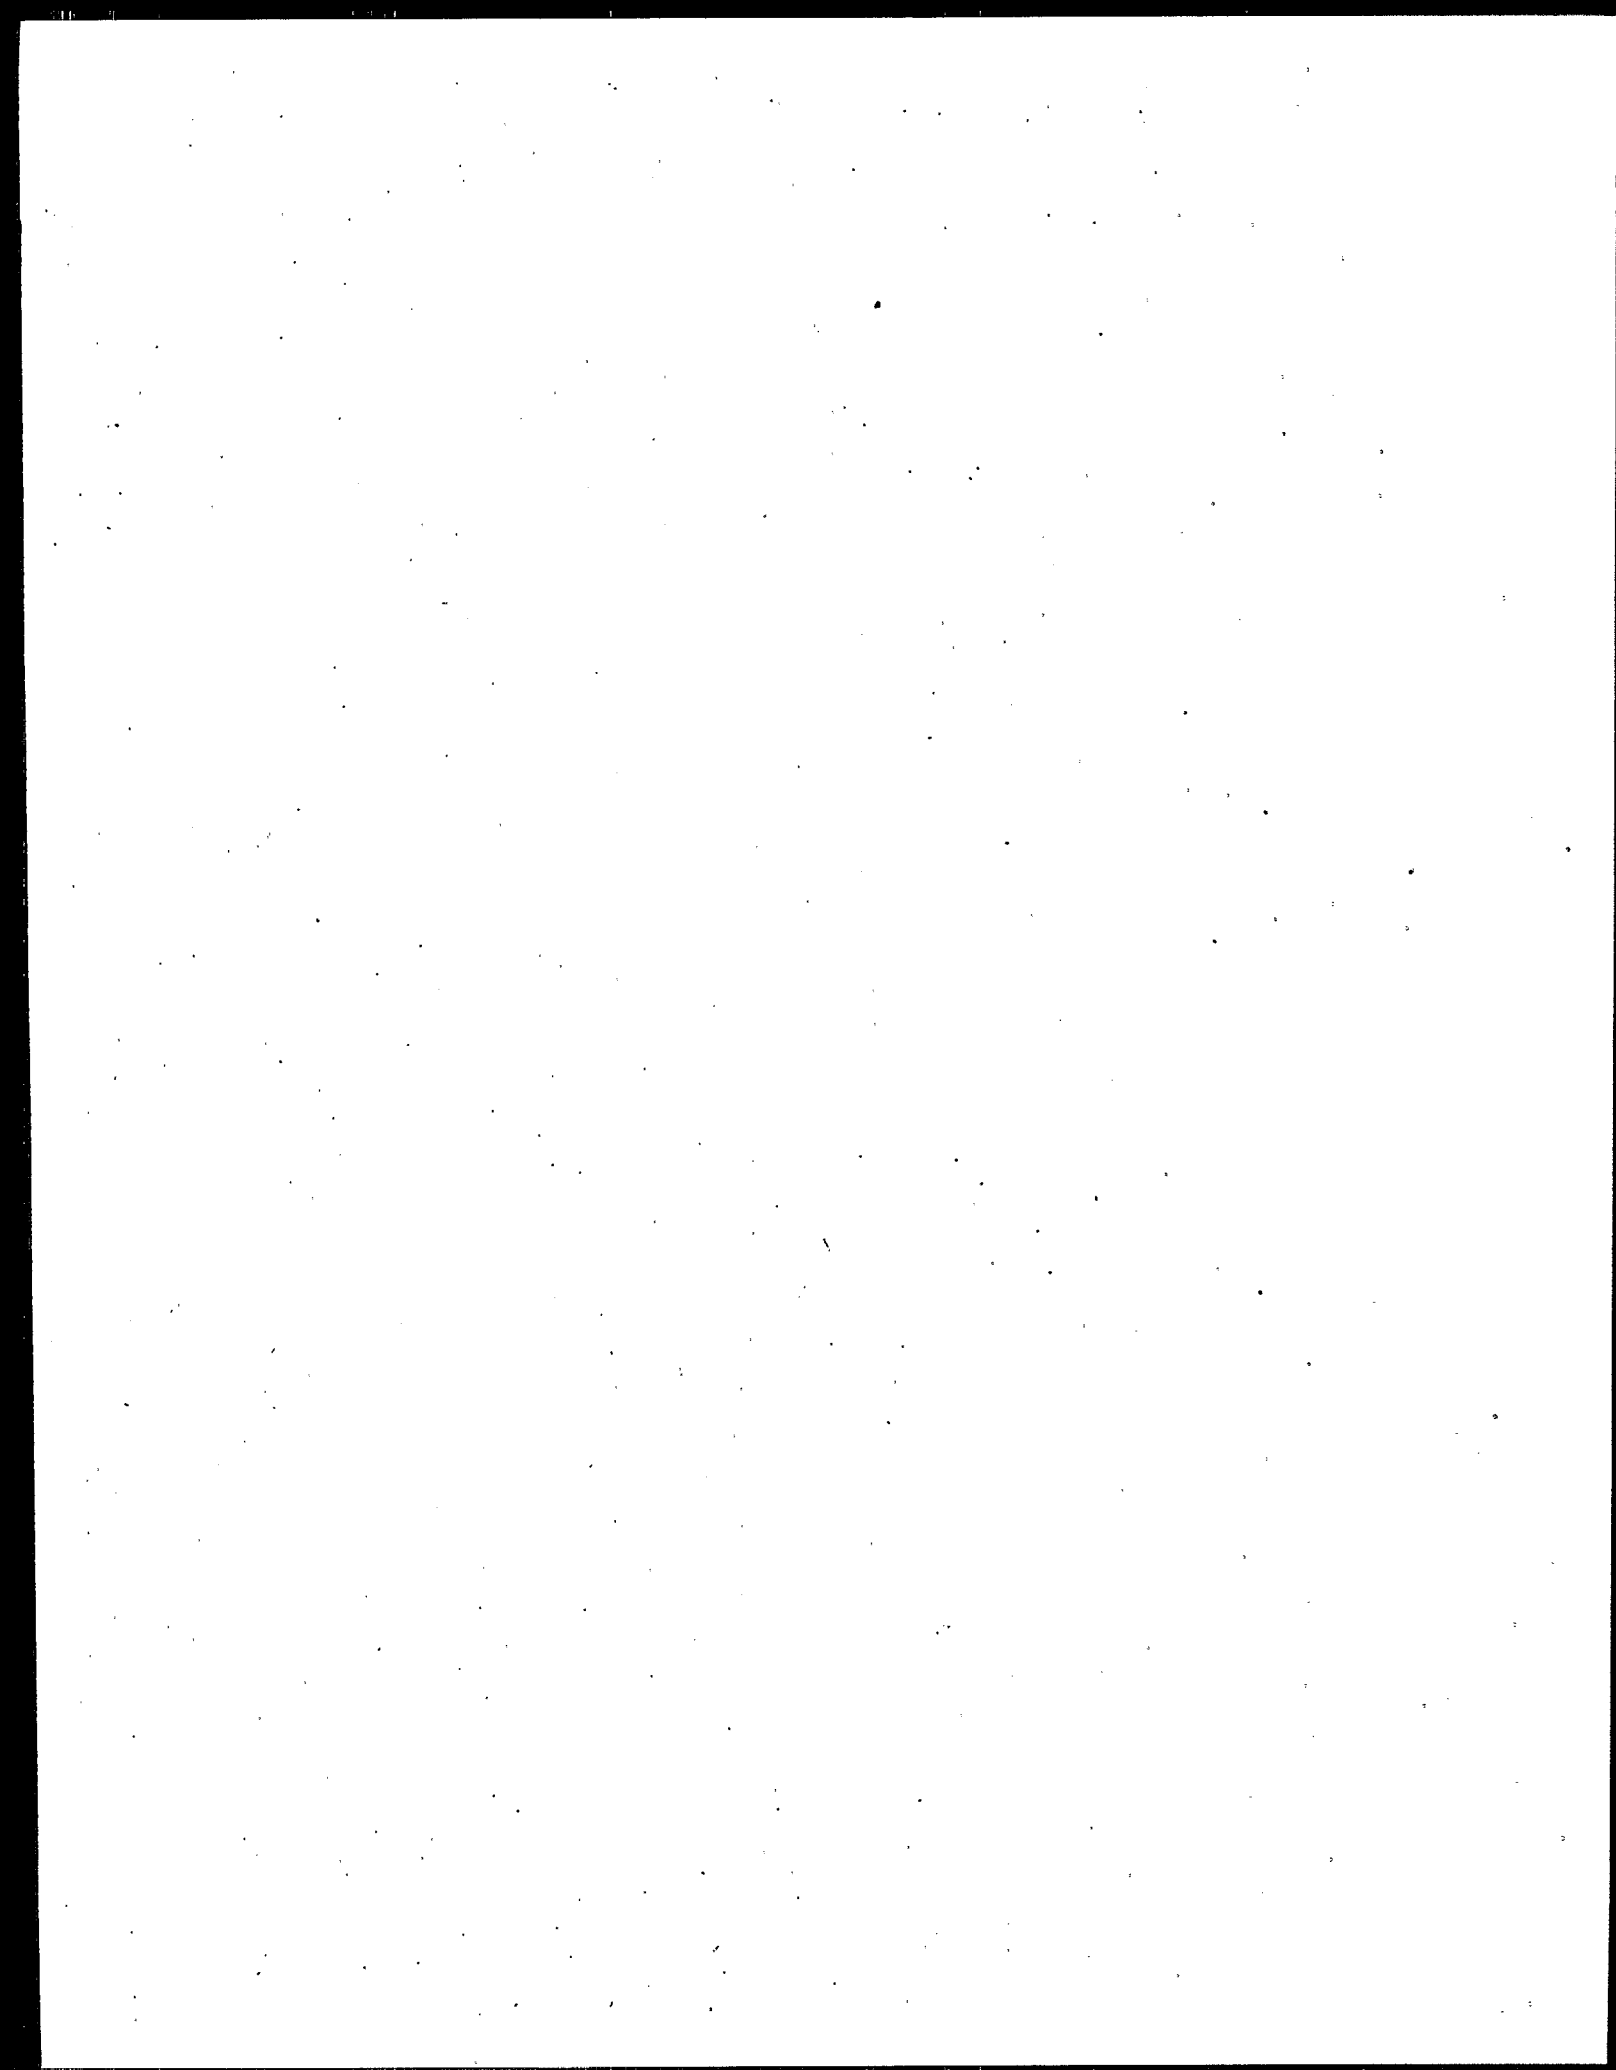

Tissue Mills Which Use Postconsumer Recovered Paper

This list was prepared for the Environmental Protection Agency (EPA) by Jaakko Pöyry Consulting, Tarrytown, NY. The information contained in each listing was obtained from a variety of publicly available sources which are deemed reliable, and was supplemented with data provided by individual companies/mills. However, Jaakko Pöyry Consulting does not warrant or guarantee the accuracy or completeness of the enclosed information. This list represents the latest available information as of September 29, 1994.

The listings are arranged alphabetically by corporate name and include mills in both the United States and Canada. Each listing is comprised of the following:

- Main address
- Name of person to contact for additional information - this contact is not always located at the main address and in cases where the company has more than one mill, a general contact is given
- Description of the mill/company
- List of recycled content brands including brand name, grade, total and postconsumer recovered paper content

A grade index and list of definitions are also included.

TISSUE MILLS USING POSTCONSUMER FIBER

(45500)

BASIS WEIGHT

The weight in pounds of a ream (500 sheets) of paper cut to a given standard size for that grade.

COMMODITY PAPERS

Term used to classify low-end qualities of papers. Commodity paper grades include book, copy, envelope, form bond, laser, ledger, offset, opaque. Commodity tissue grades include napkins, facial and bathroom tissue.

FIBER

A thread-like body or filament, many times longer than its diameter. Paper pulps are composed of cellulose fibers, usually of vegetable origin, such as woods and grasses.

INTEGRATED MILL

A paper mill that manufactures its own pulp.

POST-CONSUMER FIBER

Paper, paperboard, and fibrous wastes from retail stores, office buildings, homes and so forth, after they have passed through their end-usage as a consumer item.

RECOVERED PAPER

Paper that has been recovered or diverted from the solid waste stream. This does not include those materials and by-products generated from, and commonly reused within, the original manufacturing process.

SPECIALTY GRADES

Papers made with unique characteristics and properties suitable for specific purposes or in accordance with special order specifications. These grades usually cannot be used for anything other than their intended special purpose. Specialty paper grades include bond & writing, bristols, carbonless, cotton-fiber, cover, index, tablet, and text. Specialty tissue grades include deep colored tissue, wipes, wrapping material, and protective packing.

TISSUE PAPER

Category of papers characterized by extreme lightness and transparency. Used to manufacture a broad range of products including napkins, bathroom and facial tissue, sanitary products, wrapping material, protective packing paper, stock for waxing and twisting, etc.

TOWELLING PAPER

A class of highly absorbent paper with fairly good strength properties. It is made especially for industrial, domestic, and institutional wiping purposes.
