# Executive Summary

## The Biennial RCRA Hazardous Waste Report (Based on 1991 Data)

## EXECUTIVE SUMMARY

The United States Environmental Protection Agency (EPA), in cooperation with the States,<sup>1</sup> biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The purpose of this report is to communicate the findings of EPA's 1991 Biennial Reporting System (BRS) data collection efforts to the public, government agencies, and the regulated community.<sup>2</sup> The report consists of six documents:

- o Executive Summary--an overview of national hazardous waste generation and management practices;
- o National Analysis--a detailed look at waste handling practices in the EPA regions, the states and at the largest facilities in the nation, including quantities of generation, management, shipments and receipts, and interstate imports and exports, as well as counts of generators and managers;
- o State Summary Analysis--two-page overviews of the generation and management practices of individual states;
- o State Detail Analysis--a detailed look at each state's waste handling practices, including overall totals for generation, management, and shipments and receipts, as well as totals for the largest fifty facilities;
- o List of Large Quantity Generators--identifies every hazardous waste generator in the United States that reported itself to be a large quantity generator in 1991; and
- o List of Treatment, Storage and Disposal Facilities--identifies every hazardous waste manager in the United States that reported itself to be a treatment, storage or disposal facility in 1991.

<sup>1</sup>The term "state" includes the District of Columbia, Puerto Rico, Guam, the Trust Territories, and the Virgin Islands, in addition to the 50 United States.

<sup>2</sup>BRS respondents have submitted Confidential Business Information (CBI) pursuant to 40 CFR 260.2(b). While not included in any public BRS database, CBI has been incorporated into this report wherever possible. Where CBI has been omitted to preserve confidentiality, a footnote has been provided.

## RCRA HAZARDOUS WASTE GENERATION

In 1991, 23,426 large quantity generators produced 306 million tons of hazardous wastes regulated by RCRA.<sup>3</sup> This is an increase of 3,000 generators and 108 million tons of waste compared to 1989. As identified in Exhibit 1, the largest hazardous waste generating states were Texas (104 million tons), Michigan (32 million tons), Louisiana (31 million tons), and New Jersey (29 million tons). Together, these states accounted for 64% of the national total.

In comparing 1991 and 1989 data, it is important to note that many new wastes were captured by RCRA in 1990 with the promulgation of the Toxicity Characteristic (TC) Rule. The TC Rule added 25 new hazardous waste codes (D018-D043) and required more stringent analytical tests for the presence of toxic constituents in waste. These codes captured, at a minimum, 137 million tons of previously unregulated wastes. An additional 25 million tons were described by D018-D043 mixed with other waste codes. This suggests that the new toxicity characteristic waste listings captured between 137 and 162 million tons of previously non-regulated wastes. Excluding these newly regulated wastes, the amount of hazardous waste generated in 1991 was between 29 and 54 million tons less than the 198 million tons reported in 1989.

Hazardous waste generators are included in the "National Biennial RCRA Hazardous Waste Report" if they identified themselves as large quantity generators. The following are the federal criteria for being a large quantity generator:

- o The generator generated in any single month 1,000 kg (2,200 lbs. or 1.1 tons) or more of RCRA hazardous waste; or
- o The generator generated in any single month, or accumulated at any time, 1 kg (2.2 lbs) of RCRA acute hazardous waste; or
- o The generator generated or accumulated at any time more than 100 kg (220

---

<sup>3</sup>This quantity only includes waste managed in treatment units subject to RCRA permitting standards or transportation regulations. Hazardous waste managed in units exempt from RCRA permitting standards, such as treatment systems permitted by the National Pollutant Discharge Elimination System (NPDES), was not included in this report.

lbs) of spill cleanup material contaminated with RCRA acute hazardous waste.

According to these criteria, a generator that reports more than 13.2 tons (12 months x 1.1 tons) of annual hazardous waste generation must be a large quantity generator, because the generator must have generated at least 1.1 tons in at least one month. A generator that reports less than 13.2 tons in a year may not be a large quantity generator, because they may have generated less than 1.1 tons in every month. Of the 23,426 generators that identified themselves as large quantity generators, there are 14,190 generators that generated more than 13.2 tons in 1991, 8,086 that generated between 1.1 and 13.2 tons, and 1,150 that generated less than 1.1 tons.

It is important to note that the large quantity generators identified in this report have been included on the basis of the best available and most current information provided electronically to the EPA by the States. Both the EPA and the States have made significant efforts to ensure the accuracy of these data. However, the large quantity generator counts may include some generators that met lower, state-defined thresholds for large quantity generators. The EPA and the States endeavor to control for variation in state programs, but it is not always possible to distinguish generators that the federal threshold determines to be large quantity generators from generators that a state threshold determines to be large quantity generators. The EPA and the States also endeavor to ensure that only federally regulated wastes are counted in the determination of federal large quantity generators, but the large quantity generator counts may include generators that, when determining whether they were large quantity generators, counted wastes regulated only by their states or wastes that are exempt from federal regulation.

## **RCRA HAZARDOUS WASTE MANAGEMENT**

In 1991, 3,862 treatment, storage, or disposal facilities (TSDs) subject to RCRA permitting standards managed 294 million tons of hazardous waste. This represents an 800 facility increase in the number of TSDs and a 98 million ton increase in the amount of waste managed as compared to 1989. As identified in Exhibit 2, the states managing the largest quantities of hazardous wastes were Texas (104 million tons), Michigan (32 million tons), Louisiana (32 million tons), and New Jersey (30 million tons). Together, these

states accounted for 67% of the national management total.

The majority (76%) of the national total was managed in aqueous treatment units. One hundred and thirty-two (132) million tons were managed in aqueous organic treatment units, 19 million tons in aqueous inorganic treatment units, and 74 million tons in both inorganic and organic aqueous treatment units.

Land disposal accounts for 9.0% of the management total. Nationwide, 23 million tons of hazardous wastes were disposed in underground injection wells, 1.7 million tons were disposed in landfills, 240 thousand tons were managed in surface impoundments, and 52 thousand tons were managed by land application (land farming).

Recovery operations account for 2.2% of the national management total. Facilities reported that 3.6 million tons were managed in solvent recovery units, 1.4 million tons were managed in fuel blending units, 1.0 million tons were managed in metals recovery units, and 480 thousand tons were recovered by other methods such as acid regeneration, waste oil recovery, and non-solvent organic recovery.

Thermal treatment accounts for 1.1% of the national management total. A total of 1.9 million tons were incinerated, while facilities reused 1.5 million tons as fuel in boilers or industrial furnaces.

## RCRA HAZARDOUS WASTE SHIPMENTS AND RECEIPTS

In 1991, 24,000 facilities reported shipping a total of 13 million tons of waste, of which five million tons were shipped interstate. The states that shipped (in or out of state) the largest quantities of wastes were Texas, Connecticut and Michigan. The states that received the largest quantities of waste (from in or out of state) were California, Ohio and Michigan. The largest net importers (imports minus exports) were Ohio (150 thousand tons), South Carolina (127 thousand tons), and Kansas (110 thousand tons). The largest net exporters (exports minus imports) were Massachusetts (197 thousand tons), California (136 thousand tons), and Texas (131 thousand tons).

# List of Treatment, Storage, and Disposal Facilities in the United States

The Biennial RCRA  
Hazardous Waste Report  
(Based on 1991 Data)

## **INTRODUCTION TO LIST OF TREATMENT, STORAGE AND DISPOSAL FACILITIES**

This document contains a list of treatment, storage and disposal facilities, as identified by EPA's Biennial Report. The Biennial Report is a census of hazardous waste generators and managers that are regulated by the Resource Conservation and Recovery Act (RCRA). Section 3004 provides authority for the EPA Administrator to promulgate standards that shall include, but need not be limited to, requirements respecting the maintenance of records of all hazardous wastes treated, stored or disposed of and the manner in which such wastes are treated, stored or disposed of. There are 3,845 treatment, storage and disposal facilities on this list.

### **How To Get Copies of the List**

Copies of this list, either hardcopy or on floppy disk, may be obtained through the RCRA Hotline by calling 1-800-424-9346. Further information about the TSDs on the list may be obtained through the National Technical Information Service, from whom copies of the entire 1991 Biennial Reporting System database may be purchased.

### **The Federal Definition of a TSD Facility**

A TSD facility, according to 40 CFR 260.10, is a facility that performs one or more of the following functions:

**Treatment**--Any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize it, or render it non-hazardous or less hazardous, or to recover it, make it safer to transport, store or dispose of, or amenable for recovery, storage or volume reduction.

**Storage**--The holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed, or stored elsewhere.

**Disposal**--The discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste into or on any land or water so that the waste or any constituent thereof may

enter the environment or be emitted into the air or discharged into any waters, including ground waters.

**What Is On This List**

Those facilities that are on this list identified themselves as TSD facilities when they indicated that they had RCRA-permitted or interim status storage, or that they conducted treatment, disposal or recycling in units subject to RCRA permitting requirements in Boxes A and B, respectively, in Section VII on the Identification and Certification Form of the "1991 Hazardous Waste Report Instructions and Forms." A TSD on the list may have its associated management quantity listed as zero if:

- o It identified itself as a TSD but did not report any information about treatment, storage or disposal quantities.
- o It only identified itself as a TSD because of wastes that it stored. While waste storage is an appropriate reason for a facility to identify itself as a TSD, the quantities of waste that are stored are not counted toward overall management totals.

**Treatment, Storage, or Disposal Facilities By State**
