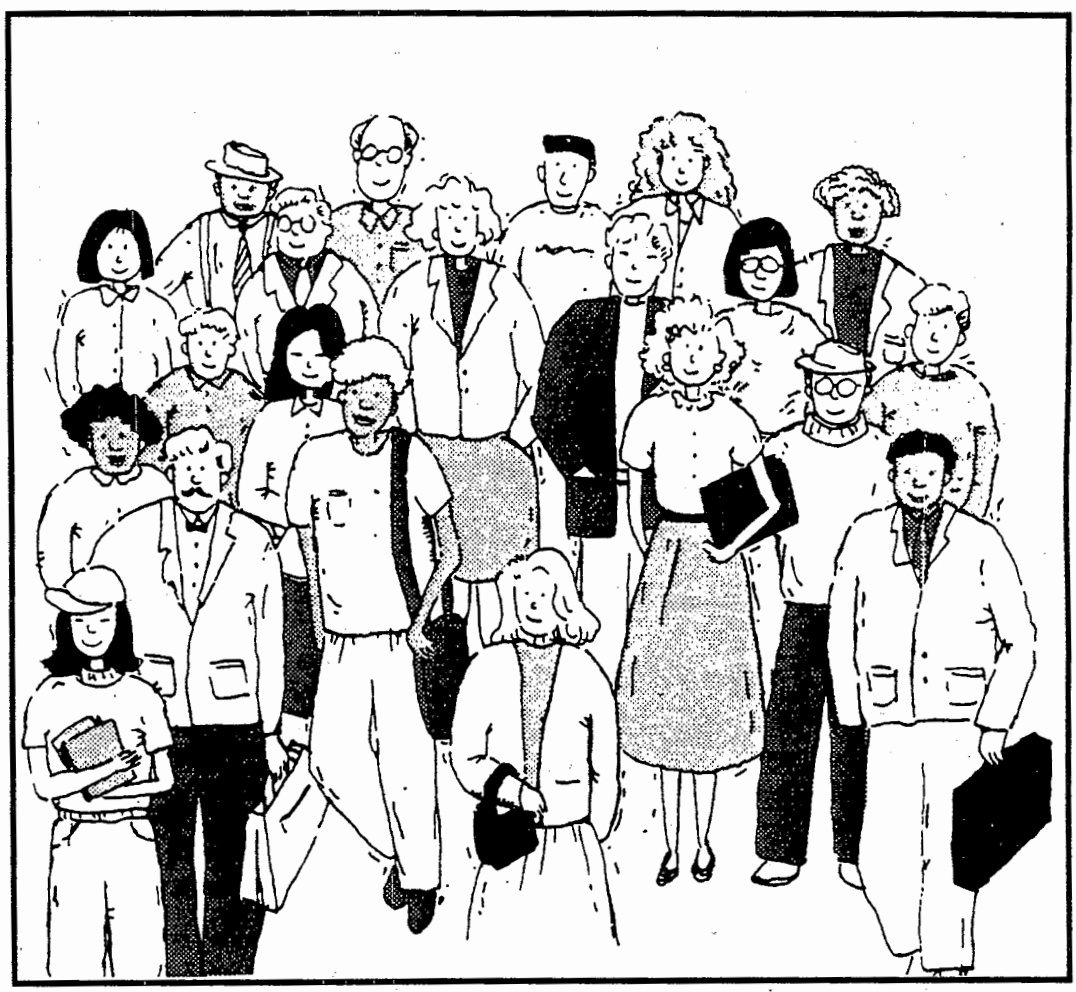
RCRA Public Participation Manual



RCRA Public Participation Manual

1996 Edition

United States Environmental Protection Agency
Office of Solid Waste, Permits Branch
Mail Code 5303 W
401 M Street,, SW
Washington, DC 20460

Statement

This manual reviews regulatory requirements and provides policy guidance to help implement the RCRA program. The policies set forth in the attached manual are not final agency action, but are intended solely as guidance. They are not intended, nor can they be relied on, to create any rights enforceable by any party in litigation with the United States. EPA officials may decide to follow the guidance provided, or to act at variance with the guidance, based on an analysis of specific site circumstances. The Agency also reserves the right to change this guidance at any time without public notice.

This manual replaces and supersedes the 1993 RCRA Public Involvement Manual *(EPA 530-R-93-006). This manual is designed for use by agency staff, public interest organizations, private citizens, and owners/operators of hazardous waste management facilities.*

Acknowledgments

The RCRA Public Participation Manual was developed by the Office of Solid Waste with the invaluable help of a task group comprised of EPA and State regulators, industry representatives, and representatives of public interest groups. EPA would like to thank the members of the task group who provided their able services to this effort. For a full listing of participants, please refer to Appendix Q.

Table of Contents

What This Manual Can Do For You

A Handbook for All Stakeholders

This document is a user's manual for public participation activities in the permitting process. In the same way that a user's manual explains how a car or an appliance works, this manual explains how public participation works in the RCRA permitting process and how citizens, regulators, and industry can cooperate to make it work better.

EPA teamed up with a diverse group of stakeholders from the environmental community, industry, and government agencies to produce this manual. The manual emphasizes the importance of cooperation and communication, and highlights the public's role in providing valuable input during the permitting process. The manual also furthers EPA's commitments to early and meaningful involvement for communities, open access to information, and the important role of public participation in addressing environmental justice concerns.

EPA wrote this manual to help all stakeholders in the permitting process. Here is how the manual can help you:

If you are a citizen...
This manual provides a clear description of the many public participation activities that are required by federal regulations. The manual also points out steps that agencies, company owners, and public interest groups can take to provide more public input into the process. In this manual, you will also find a list of people and organizations that you can contact to learn more about the permitting process and about community organizing.

If you are a government regulator...
This manual provides specific details about public participation requirements and outlines EPA's current policies. The manual also explains activities that you can conduct to provide better information to the public and to invite more public input into your RCRA permitting work. By reading this manual, you will learn how to open a dialogue with other stakeholders, how to assess communities and be sensitive to their concerns, how to plan for public participation, how to fulfill all the regulatory requirements, and how to go beyond the requirements.

If you are a member of a public interest or environmental group...
Reading this manual will let you know what public participation events are required under federal regulations, and how your organization can get involved. It provides useful tips, based on the experience of public participation practitioners, on how to interact with other stakeholders and

how to conduct public participation activities. The manual also provides contacts and publications that you can tap into for more information.

If you own or operate a hazardous waste management facility...
This manual describes when and how to conduct the public participation events involved in the permitting process. It points out the events you are responsible for and lets you know how the permitting agency will conduct other activities. By reading the manual, you will find out how to interact with the community around your facility, and how to be sensitive to their concerns, and how to cooperate and communicate with all stakeholders. The manual also describes public participation opportunities you can provide that go beyond the requirements.

Other Sources of Information

EPA is compiling a reference list of public participation and risk communication literature. For this list, EPA is interested in the following subjects areas: community organizing, community involvement and participation, environmental justice, risk communication, creative problem-solving, alternative dispute resolutions, participatory activities, environmental activism, and information-sharing. EPA is not interested in technical documents or data related to permitting. To initially solicit items for the reference list, EPA published a notice in the Federal Register (61 FR 15942). EPA intends to update the list periodically; any additional items people wish to propose for inclusion in the reference list may be submitted to the attention of the RCRA Permits Branch, Office of Solid Waste (5303W), U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460. Please do not send the original document. Include the full names of all authors, full titles, publisher, date of publication, city where the work was published, an abstract, and an address and/or phone number where one can write or call to obtain the publication (if applicable).

An initial draft of this reference list is available through the RCRA Hotline, or through the RCRA Information Center, in Docket Number F-95-PPCF-FFFFF, (see Appendix A for the appropriate telephone numbers).

If you are not trying to find out about public participation in the permitting process for facilities that store, treat, or dispose of hazardous wastes, then this manual will not be the best one for you. The following are suggestions of places to look for related information:

- If you are trying to learn more about public participation in the Superfund program, refer to *Community Relations in Superfund: A Handbook* (USEPA, EPA/540/R-92/009, OSWER Directive 9230.0-3C, January 1992).

- If you are trying to learn more about the siting of hazardous waste management facilities prior to permitting, you will most likely need to contact your local or state officials. See Appendix B for a list of state agency contacts. EPA is planning to issue guidance on this

topic during 1996. Contact the RCRA Hotline (see Appendix A for the number) for more information.

- If you are trying to learn about hazardous substances (other than wastes) stored by facilities or amounts of toxic substances released to the environment, you will want to find out more about the Emergency Planning and Community Right-to-Know Act (EPCRA), or and the Toxics Release Inventory (TRI). Call EPA HQ, your Regional Office, or the RCRA/Superfund Hotline (see Appendix A for phone numbers) for more information. Information on accessing EPA data is available in Appendix R.

- If you are trying to find out about how the public can participate in siting municipal waste landfills, refer to *Sites for Our Solid Waste: A Guidebook for Effective Public Involvement* (USEPA, EPA/530-SW-90-019, March 1990).

If you are unsure about whether a facility in your area will need a RCRA permit, you can contact your State agency or your Regional EPA office (see the Appendices A and B for numbers).

Chapter 1
Introduction

Overview of this Manual

This manual covers federal public participation requirements. States may have additional requirements.

This manual is a guide to improving cooperation and communication among all participants in the RCRA permitting process. Like the September 1993 RCRA Public Involvement Manual (EPA530-R-93-006), this manual outlines public participation procedures and what staff in EPA and RCRA-authorized state programs can do to ensure that the public has an early and meaningful role in the process. However, this new manual goes beyond the scope of past manuals by providing public participation guidance to regulated industries and the communities that interact with them.

The broader scope of today's manual reflects EPA's belief that all stakeholders have a role in providing for meaningful public participation. Permitting agencies, public interest organizations, community members, and regulated facilities are all stakeholders in RCRA permitting actions. Each group has an interest in the permitting process and, moreover, can take steps to increase public participation and improve communication. This manual provides guidance for all RCRA stakeholders who seek to achieve these goals. Of course, the Federal and State agencies still administer RCRA and its public participation activities, but EPA acknowledges that members of communities and owners and operators of hazardous waste management facilities also play an integral role in the permitting process.

One reason for the broader scope of this guidance document is that facility owners and operators have more formal responsibilities than ever in RCRA public participation. This trend in EPA's approach, demonstrated through regulations such as the permit modifications procedures in 40 CFR 270.42 (52 FR 35838, September 23, 1987) and the part 124 changes in the "RCRA Expanded Public Participation" rule (60 FR 63417-34, December 11, 1995), has made facility owners and operators responsible for a number of public participation activities -- from public notices to meetings and information repositories. These new regulations underscore EPA's support for strengthening the link between facilities and their host communities.

This manual will also be helpful to many private companies that have adopted, or are establishing, public participation programs as part of their commitment to good corporate citizenship. While these activities often take place outside of the official RCRA permitting process, EPA supports

facilities in their efforts to inform and involve the public. This manual will guide facility owners and operators as they implement the public participation requirements of the RCRA program, especially those in the RCRA Expanded Public Participation rule. The manual will help facility owners and operators go beyond the regulatory requirements, expand their public participation activities, and build lasting relationships with surrounding communities.

Citizens are an essential component of the RCRA permitting process. The formal public participation activities, required by regulation, aim to provide citizens with both access to information and opportunities to participate in the process. Some citizens and other groups have expressed concerns about barriers to involvement in RCRA permitting. EPA was also concerned -- as are many members of the public -- that formal public participation begins too late in the permitting process and that RCRA permitting information is not always accessible to people. In response to these concerns and others, EPA promulgated the RCRA Expanded Public Participation rule. We hope that this rule and its accompanying policy statement will improve access to permitting information and enhance public participation.

Some of the most meaningful involvement for citizens may occur outside of the official process.

EPA recognizes that valuable public participation can take place outside of the formal procedures mandated by regulation. Through informal channels, citizens communicate and interact with other citizens, public interest groups, regulated facilities, and permitting agencies. EPA supports communities in their efforts to carry out informal means of participation that go beyond regulatory standards. Some of the most meaningful and informative involvement for citizens may come through activities not organized by permitting agencies or regulated facilities. We hope that this manual will be a valuable resource for communities and public interest groups that are concerned about RCRA facilities in their area.

Following this introductory chapter, the manual is organized as follows:

Chapter 2, “Guidelines for a Successful Public Participation Program,” introduces some basic public participation concepts and points out principles of public participation that we encourage all RCRA stakeholders to follow.

Chapter 3, “Public Participation in RCRA Permitting,” covers the basic steps in the RCRA permitting process and the public participation activities that accompany them. After reviewing the requirements, the chapter provides a list of additional participation activities to supplement the requirements.

Chapter 4, “Public Participation for RCRA Corrective Action Under Permits and §3008(h) Orders,” details EPA’s public participation guidelines for the corrective action program. This chapter reflects the

current agency position on these issues as the corrective action program continues to evolve.

Chapter 5, “Public Participation Activities: How to do Them,” provides detailed descriptions for dozens of public participation techniques -- required and optional, formal and informal. The chapter explains all of the public participation methods mentioned in the previous chapters and provides information on additional methods.

The Appendices provide resources that will help any participant in the RCRA permitting or corrective action programs. Included in the Appendices are: phone numbers and addresses for contact persons at all state agencies, the 10 EPA Regional offices, and EPA Headquarters; current permitting fact sheets; example notices and press releases; and EPA policy memoranda.

If you already have a general knowledge of the RCRA permitting program, you may want to skip ahead to Chapter 2 at this point.

The Big Picture

The RCRA program involves many people and organizations with roles that vary greatly. Congress writes or amends the Act which, when signed by the President, becomes law. After the Office of Solid Waste and Emergency Response (OSWER) at EPA develops the regulations that more specifically define and explain how the law will be implemented, the RCRA program is implemented by both EPA Headquarters (OSWER) and staff in EPA regional offices. The states may, in turn, apply to EPA for the authority to run all or part of the RCRA program. In doing so, a state may adopt the federal program outright or develop its own program, as long as it is at least as stringent and as broad in scope as the federal program. The regulated community is involved with the RCRA program because it must comply with the law and its regulations. Finally, the general public participates by providing input and comments at almost every stage of the program's development and implementation.

RCRA and its 1984 Amendments

The Resource Conservation and Recovery Act, an amendment to the Solid Waste Disposal Act, was enacted by Congress in 1976 to address a problem of enormous magnitude -- how to safely manage and dispose of the huge volumes of municipal and industrial solid waste generated nationwide. The goals set by RCRA were:

- To protect human health and the environment;
- To reduce waste and conserve energy and natural resources; and

RCRA GOALS

- To protect human health and the environment
- To reduce waste and conserve energy and natural resources
- To reduce or eliminate the generation of hazardous waste as expeditiously as possible

- To reduce or eliminate the generation of hazardous waste as expeditiously as possible (also referred to as waste minimization and pollution prevention).

The Act continues to evolve as Congress amends it to reflect changing needs. It has been amended several times since 1976, most significantly on November 8, 1984. The 1984 amendments, called the Hazardous and Solid Waste Amendments (HSWA), significantly expand the scope and requirements of RCRA. The HSWA provisions related to corrective action at RCRA facilities are described later in this chapter.

The program outlined under Subtitle C of the Act is the one most people think about when RCRA is mentioned. Subtitle C establishes a program to manage hazardous wastes from cradle to grave. The objective of the Subtitle C program is to ensure that hazardous waste is handled in a manner that protects human health and the environment. To this end, EPA established regulations under Subtitle C regarding the generation; transportation; and treatment, storage, and disposal of hazardous waste. These regulations are found in Title 40 of the Code of Federal Regulations (CFR), in Parts 261-266 and Parts 268-270. [Note: The CFR contains all the general and permanent rules published by the Executive departments and agencies of the Federal Government.]

The Subtitle C program has resulted in perhaps the most comprehensive regulatory program EPA has ever developed. The Subtitle C regulations first identify those solid wastes that are "hazardous" and then establish various administrative requirements for the three categories of hazardous waste handlers: (1) generators; (2) transporters; and (3) owners or operators of treatment, storage, and disposal (TSD) facilities. This manual applies only to the TSD facilities, and the term "facilities" in this manual refers only to TSD facilities. The Subtitle C regulations set technical standards for the design and safe operation of hazardous waste facilities. These standards are designed to minimize the release of hazardous waste into the environment. Furthermore, the regulations for RCRA facilities serve as the basis for developing and issuing (or denying) permits to each facility. Issuing permits is essential to the Subtitle C regulatory program because it is through the permitting process that the regulatory agency actually applies the technical standards to facilities.

RCRA Facility Permitting

Owners or operators of TSD facilities are required to submit a comprehensive permit application covering all aspects of the design, operation, maintenance, and closure of the facility. Owners and operators are also required to certify annually that they have a waste minimization program in place. Many companies have found waste minimization is often a cost-effective alternative or supplement to waste management. Facilities in existence on November 19, 1980, operate under interim status until a final permit decision is made. Similarly, facilities that are in

existence when new regulations are promulgated that subject them to RCRA Subtitle C may also operate under interim status while they proceed through the permitting process. New facilities are ineligible for interim status and must receive a RCRA permit before construction can commence.

The permit application is divided into two parts: A and B. Part A is a short, standard form that collects general information about a facility. Part B is much more detailed and requires the owner or operator to supply detailed and highly technical information about facility operations. Because there is no standard form for Part B, the owner or operator must rely on the regulations to determine what to include in this part of the application. Existing facilities that received hazardous waste on or after November 19, 1980, or subsequently fell under Subtitle C due to new regulations, submitted their Part As when applying for interim status. Their Part B applications can be either submitted voluntarily or called in by the regulatory agency. Owners or operators of new facilities must submit Parts A and B simultaneously at least 180 days prior to the date on which they expect to begin physical construction; however, construction cannot begin until the agency has issued the permit. Permit applications are processed according to the procedures found in 40 CFR Part 124.

The RCRA Corrective Action Program

RCRA requires owners and operators of RCRA facilities to clean up contamination resulting from present and past practices, including those practices of previous owners of the facility. These clean up activities are known as corrective action. HSWA added three provisions for corrective action, thus significantly expanding EPA's authority to initiate corrective action at both permitted RCRA facilities and facilities operating under interim status. Section 3004(u) of HSWA requires that any permit issued under RCRA §3005(c) to a facility after November 8, 1984 address corrective action for releases of hazardous wastes or hazardous constituents from any solid waste management unit (SWMU) at the facility. If all corrective action activities cannot be completed prior to permit issuance, then the permit must include a “schedule of compliance” establishing deadlines and financial assurances for completing the required corrective actions. Section 3004(v) authorizes EPA to require corrective action beyond the facility boundary, if necessary. Finally, §3008(h) authorizes EPA to issue administrative (i.e., enforcement) orders or bring court action to require corrective action or other measures, as appropriate, when there is, or has been, release of hazardous waste or hazardous constituents from a RCRA facility operating under interim status.

Corrective action is typically carried out by the facility owner or operator under the requirements or conditions stated in the RCRA permit or administrative order. In some cases, the owner or operator is required, through an order, to begin corrective action prior to permit issuance. If the regulatory agency issues a permit to the facility prior to completion of all activities specified in the order, then the agency may require the owner or

operator to continue all or some of the activities under the order, or may incorporate the requirements of the order into the RCRA permit schedule of compliance.

Public Participation in the RCRA Program

Section 7004(b) of RCRA gives EPA broad authority to provide for, encourage, and assist public participation in the development, revision, implementation, and enforcement of any regulation, guideline, or program under RCRA. In addition, the statute specifies certain public notices (radio, newspaper, and a letter to relevant agencies) that EPA must provide before issuing any RCRA permit. The statute also establishes a process by which the public can dispute a permit and request a public hearing to discuss it.

In fulfilling its statutory mandate, EPA has written regulations to implement the RCRA program. To carry out its public participation responsibilities under the Act, EPA has used its authority to develop specific public participation activities in the RCRA permitting program. As we explain in more detail in the following chapters, EPA's RCRA regulations provide for public participation at all hazardous waste management facilities -- from before permit application, through the permitting process, and during the permit life.

Chapter 2
Guidelines for a Successful Public Participation Program

What is Public Participation?

The RCRA permitting process brings government, private industry, public interest groups, and citizens together to make important decisions about hazardous waste management facilities. These groups and individuals have a stake in the facility under consideration, its operations, corrective action, or changes in its design or administration. As "stakeholders" they will communicate and interact throughout the permitting process and possibly throughout the life of the facility.

Public participation plays an integral role in the RCRA permitting process. Officially speaking, EPA uses the term "public participation" to denote the activities where permitting agencies and permittees encourage public input and feedback, conduct a dialogue with the public, provide access to decision-makers, assimilate public viewpoints and preferences, and demonstrate that those viewpoints and preferences have been considered by the decision-makers (see 40 CFR 25.3(b)). "The public" in this case refers not only to private citizens, but also representatives of consumer, environmental, and minority associations; trade, industrial, agricultural, and labor organizations; public health, scientific, and professional societies; civic associations; public officials; and governmental and educational associations (see 40 CFR 25.3(a)). When one considers "the public" in this broad sense, public participation can mean any stakeholder activity carried out to increase public's ability to understand and influence the RCRA permitting process.

Public participation increases the public's ability to understand and influence the process.

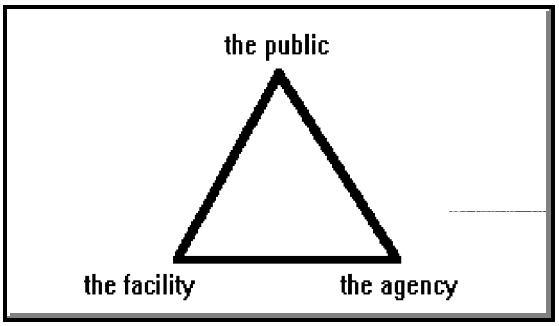


Figure 1 -- The Public Participation Triangle

We can represent the relations between these stakeholders as a triangle with the regulators, the facility owner/operator, and the interested public each forming a corner. Out of each corner runs a

Public participation is a dialogue.

line that represents each group's communication with the other participants in the process.

In the best case, the stakeholders interact well, the lines of communication are strong between all the parties, and information flows in both directions around the triangle. This last point is important: *public participation is a dialogue*. You will read more about this dialogue later in this chapter.

Why Bother With Public Participation?

There are a number of reasons why agencies, facilities, and interest groups should provide for RCRA public participation and why citizens should make an effort to participate in RCRA decision-making. The first, and most obvious reason, is that facilities and permitting agencies are required to conduct public participation activities under the Act and its implementing regulations. Additional activities provided by facilities, agencies, and other organizations in the community can complement the required activities.

The second reason to bother with public participation is "good government." Permitting agencies are charged with making many controversial decisions, which should not be made by technical expertise alone. Public participation in controversial decision-making is an essential element of the good government philosophy. Community members have a right to be heard and to expect government agencies to be open and responsive.

Public input can help the agency and the permittee make better technical decisions.

In addition to providing good government, the third reason for encouraging public input is that it can help agencies reach better technical solutions and, thus, make better policy decisions. Public input can also help permittees or prospective applicants make better business and technical decisions. A community is most qualified to tell you about its own needs, and people who live with a facility every day will have the familiarity to provide useful insights. Experience has shown that RCRA actions often benefit from public participation. With public input, permitting decisions can gain a breadth and an appreciation of local circumstances that technical staff alone could not provide.

The fourth reason to bother with public participation is that RCRA actions are more likely to be accepted and supported by community members who can see that they have had an active role in shaping the decision. Showing community members that the regulatory agency or the facility is willing to address community concerns will establish the foundation for improved understanding and community involvement in the process, even if members of the community do not always agree with the outcome of that process. By promoting public participation, permitting agencies can reduce the potential for concern over less consequential risks and dedicate more

resources to addressing serious risks and issues. Many companies have also found that promoting early and meaningful public participation can save resources in the long run by avoiding delays and lawsuits based on public opposition.

What Makes A Successful Public Participation Program?

A successful public participation program is inclusive. It allows members of the community to have an active voice in the RCRA decision-making process. Agency staff, facility personnel, and citizens will be able to talk openly and frankly with one another about RCRA-related issues, and search for mutually-agreeable solutions to differences.

In addition to the paragraph above, a successful public participation program will meet the targets set out in the subsections that make up the remainder of this chapter. The principles in these following subsections are applicable to all public participation activities.

Dialogue and Feedback

A vital and successful public participation program requires a dialogue, not a monologue. In other words, information must flow in loops between any two stakeholder groups. For example, the regulators should not just release information to the facility owner/operator, who passes it to the community, who then contacts the regulators. The regulator should make the information available to everyone and ask for feedback. Each corner of the triangle must keep the two-way conversation going with the two remaining corners.

The address and phone number of a contact person should appear on fact sheets, notices and other outreach materials.

Open communication lines require participants to be accessible to the other stakeholders. An effective way to make your group accessible is to designate a **contact person** for every permitting activity. The contact person should make his or her address and phone number available to the other stakeholders by printing it on any fact sheets or other informational materials produced by the organization. The contact person will field all inquiries on the permitting activity at hand. Other people involved in the process will appreciate this single and accessible point of contact.

Public participation should encourage “feedback loops.”

Without an active two-way communications process, no party will benefit from the "feedback loop" that public participation should provide. For example, if the regulatory agency sends out a fact sheet about an upcoming permit action, that fact sheet alone does not constitute public participation. Missing is the "feedback loop," or a way for the agency to hear from those who read the fact sheet. To get feedback, the agency might name a contact person in the fact sheet and encourage telephone or written comments, place calls to civic or neighborhood associations, visit a community group, or hold a meeting or workshop to discuss material in the fact sheet. Feedback loops enable the agency to monitor public interest or concern,

adjust public participation activities, and respond quickly and effectively to changing needs. The feedback loop is a useful tool for all stakeholders in the process.

Members of the public have valid concerns and can often improve the quality of permits and agency decisions.

Even if a feedback loop operates successfully, public participation cannot be successful if the permitting agency or the facility is reluctant or unable to consider changes to a proposed activity or permit action based on public comment or other input. While the decision-makers at the agency or the facility need not incorporate every change recommended by the public, they should give serious consideration to these suggestions and respond by explaining why they agree or disagree. Members of the public, like other stakeholders in the process, have valid concerns and can often contribute information and ideas that improve the quality of permits and agency decisions. Regulators and facility owner/operators should take special notice of this point and make available more opportunities for public participation.

Honesty and Openness

As we emphasized in the section above, participants in the RCRA permitting process should make all efforts to establish open paths of communication. Being honest and open is the best way to earn trust and credibility with the other stakeholders in the process. Making information available to the community and providing for community input can improve public perception of the permitting agency or the facility and lead to greater trust and credibility. Trust and credibility, in turn, can lead to better communication and cooperation and can focus the public debate on issues of environmental and economic impacts.

Establishing trust should be the cornerstone of your public participation activities. The following is a list of things to remember when establishing your credibility:

1. Remember the factors that are necessary for establishing trust -- consistency, competence, care, and honor.
2. Encourage meaningful involvement by other stakeholders.
3. Pay attention to process.
4. Explain the process and eliminate any mystery.
5. Be forthcoming with information and involve the public from the outset.
6. Focus on building trust as well as generating good data.
7. Follow up. Get back to people. Fulfill your obligations.
8. Make only promises that you can keep.
9. Provide information that meets people's needs.
10. Get the facts straight.
11. Coordinate within your organization.
12. Don't give mixed messages.
13. Listen to what other stakeholders are telling you.

14. Enlist the help of organizations that have credibility with communities.
15. Avoid secret meetings.

This list was adapted from the manual *Improving Dialogue With Communities* (New Jersey Department of Environmental Protection, 1988). This manual and a number of other sources produced by states, EPA, trade groups, and public interest groups are available for more information on trust and credibility factors.

A Commitment to the Public

Public officials have ethical obligations to the public that have a practical value in building the foundation necessary for successful communication:

* informing the public of the consequences of taking, or not taking, a proposed action;

* showing people how to participate so that interested people can;

* keeping the public informed about significant issues and proposed project changes;

* providing all segments of the public with equal access to information and to decision-makers;

* assuring that the public has the opportunity to understand official programs and proposed actions, and that the government fully considers the public's concerns; and

* seeking the full spectrum of opinion within the community, not only from the business community and other agencies, but also from neighborhood and community groups, environmental organizations, and interests with other points of view.

(Adapted from *Sites for our Solid Waste*, Environmental Protection Agency, EPA/530-SW-90-019, March 1990 and 40 CFR 25.3(c)).

An Informed and Active Citizenry

If you are a citizen who is interested in a permitting issue, the regulations provide a number of opportunities to access information and get involved. The following activities are some things citizens can do to be influential and well-informed participants.

C Contact the permitting agency early. Identify the designated contact person for the project (the name should be on fact sheets and notices, or available by calling the agency).

C Do background research by talking to local officials, contacting

research or industrial organizations, reading permitting agency material, and interacting with interested groups in the community.

- Perform an assessment. Request background information from the permitting agency, local officials, and the facility ownership. Ask about day-to-day activities, the decision-making structure, and current policies and procedures; inquire about how the proposed project fits into larger political issues, local planning, and the facility's business plans. Request special information that may open up additional solutions, including pollution prevention approaches that may reduce or recycle the amount of waste that is managed in the facility.

- Ask to have your name put on the facility mailing list for notices, fact sheets, and other documents distributed by the agency. Add your name to mailing lists maintained by involved environmental groups, public interest and civic organizations.

- Tell the permitting agency, the facility owner/operator, and other involved groups what types of public participation activities will be most useful for you and your community. Inform them about the communication pathways in your area (e.g., what newspapers people read most, what radio stations are popular), the best locations for information repositories and meetings, and other information needs in the community (e.g., multilingual publications).

- Submit written comments that are clear, concise, and well-documented. Remember that, by law, permitting agencies must consider all significant written comments submitted during a formal comment period.

- Participate in public hearings and other meetings; provide oral testimony that supports your position. Remember that a public hearing is not required unless someone specifically requests one in writing.

- If any material needs further explanation, if you need to clear up some details about the facility or the permitting process, or you would like to express specific concerns, then request an informational meeting with the permitting agency or the appropriate organization, such as the State's pollution prevention technical assistance office.

- Follow the process closely. Watch for permitting agency decisions and review its responses to public comments. Be aware that you have an opportunity to appeal agency decisions.

- Remember that your interest and input are important to the agency

and other concerned stakeholders.

- To get tips about community organizing, information about how to participate in the regulatory process, or possible referrals to other involved groups in your area, you can contact the local League of Women Voters chapter. If you cannot contact a local chapter, or one does not exist, you can contact the state chapter. Phone numbers and addresses are provided in Appendix C.

EPA encourages citizens to consider these recommendations and follow them where applicable. At the same time, EPA recognizes that the best way to participate will be different in every situation. Citizens should contact other concerned persons, community organizations, and environmental groups to determine how citizens can best influence the permitting process.

Starting Early

A good public participation effort involves the public early in the process, encourages feedback, and addresses public concerns before initial decisions. The permitting agency, the facility owner/operator, and public interest organizations involved in the RCRA permitting process should make all reasonable efforts to provide for early stakeholder participation and open access to information. These efforts should include informing and seeking feedback from impacted communities before any significant actions. You should avoid the appearance of making decisions before public input. Even in cases where the facility and the agency meet privately in the early stages of the process, they should keep up the lines of communication with the public. One State agency has found success by making a meeting summary available to the public in an information repository whenever the regulators meet with facility staff. Such gestures can increase public faith while reassuring people that the agency will seek public input before making major permitting decisions.

EPA encourages public participation activities throughout the RCRA permitting process, especially when the activities foster an early, open dialogue with potentially affected parties. This can be particularly effective in exploring alternatives to treatment or that go beyond compliance, including for example, pollution prevention.

Early outreach and straightforward information can establish trust among the other stakeholders while reducing misinformation and rumors. Key contacts in the community should always know about planned activities that will be visible to members of the community, such as construction work or excavation related to facility expansions or corrective action. Interested people or groups in the community can use early participation activities to

make their concerns and suggestions known before major decisions take place. Since early participation activities may be the first word that people hear about a permitting activity, EPA is requiring expanded notice efforts before the facility submits a permit application (see "Notice of the Pre-Application Meeting" in Chapter 3). All stakeholders should use their knowledge of individual communities and local communication channels (e.g., contacts in the community, the media, civic and religious organizations) to foster effective information-sharing.

RCRA regulations require facilities and agencies to start public participation activities prior to application submittal, and continue them through the entire life of the permit. In essence, the facility owner or operator cannot put off public participation. EPA encourages permit applicants and permit holders to take early public participation activities seriously -- early activities can set the tone for the permitting process and even the entire life of the facility.

Start early and plan ahead: public interest in a facility can grow rapidly and unexpectedly.

Setting up an effective public participation program is a valuable use of time and resources. External pressure to start public participation work may not be present at the outset of a project, because members of the public may be unaware of the facility's operations and the regulatory agency's activities. However, public interest in a facility can grow rapidly and unexpectedly. Participants can best prepare for such situations by assessing their communities, taking proactive steps, and preparing for contingencies.

Getting the news out early gives people time to react. Other stakeholders can offer better information and suggestions when they have some time to think about it. For example, a facility can better incorporate community concerns into its permit application if it hears public concerns well before application submittal. Agencies and facilities owe the public the same courtesy, allowing citizens adequate time to review, evaluate, and comment on important information. By the same token, citizen participants should do their best to make their interests known early. If a citizen is invited to participate early, but decides not to and raises issues at the end of a process, then that citizen risks losing credibility with other stakeholders in the process.

Finally, extensive early outreach (as we point out in the following section) will make the permitting process or the corrective action smoother over the long run. Early outreach brings issues to the surface before stakeholders have invested great amounts of time and resources in a project; these issues are easier to address at an early stage. Moreover, early outreach minimizes the possibility that the public will feel like the agency or the facility is surprising them with an undesirable project. By providing early notice, agencies and facilities can avoid the public reactions that have "blind-sided" some projects in the past.

Assessing the Situation

Community assessments are an important step to take before preparing or revising a public participation strategy. Assessments are essential tools for facility owners who are applying for a RCRA permit (including interim status facilities), seeking a major permit modification, or undertaking significant corrective action. Permitting agencies should focus their assessments on communities where a major new facility is seeking a permit, or in other cases where permitting activity or corrective action has the potential to evoke public interest. Additionally, assessments may be appropriate at any stage during the life of a facility, especially in situations where the level of public interest seems to be changing.

Community assessments allow agencies, facility owners, and public interest groups to tailor regulatory requirements and additional activities to fit the needs of particular communities. Each community is different and has its own way of spreading information and getting people interested. Important institutions and groups will also vary from place to place, as will socioeconomic status, culture and traditions, political and religious activity, and values. The facility owner, public interest groups, and the agency should make all reasonable efforts to learn the facts about the affected community. These data are essential to choosing public participation activities that will be useful and meaningful for the community.

Every community is different. What works in one community may not work in another.

Determining the Level of Public Interest

Some permitting activities do not generate much interest or concern among community members. Other activities will evoke strong interest and will require a much greater public participation effort. Although there are no hard and fast rules that make a facility a low- or high-profile facility, the level of interest will depend on a number of factors, such as (1) the type of RCRA action and its implications for public health and welfare; (2) the current relationships among the community, the facility, the regulatory agency or agencies, and other groups; and (3) the larger context in which the RCRA action is taking place, including the political situation, economics, and important community issues. Exhibit 2-1 (at the end of this Chapter) provides a guide for determining a facility's potential to be low-, medium-, or high-interest to the public.

Public participation activities should change over time to suit the level of interest in a facility.

While these guidelines can be useful as an early planning tool to predict public interest, agencies and facility owners should be flexible and prepared for rapid changes in the level of public interest in a permitting activity. The apparent level of public interest does not always reflect the potential for public interest. In some cases, the regulatory minimum will be sufficient. In other cases, the agency or facility should be prepared to provide additional input and information, as needed. Public participation activities should correspond to the level of community interest as it changes over

time.

Public interest, environmental, and civic organizations also assess their communities to determine the amount of interest in a permitting activity. These organizations can take steps to encourage public participation in the permitting process. Door-to-door canvassing, public information sessions, flyers, fact sheets, neighborhood bulletins, and mailings are all methods of sharing information with the public and encouraging citizen involvement. Organizations that are attempting to encourage public participation may find the rest of this section useful. In addition, more information for such groups is available by contacting the League of Women Voters (see Appendix C for contacts).

Community Assessment Methods

Facility owners should gather background information about the community before seeking a permit or a permit modification. Regulators should find out about community concerns at the outset of a major project or any project that seems likely to raise significant public interest. Public interest groups may want to perform similar background work. As emphasized in the previous section, understanding a community is essential to creating a successful public participation effort.

The facility owner is responsible for collecting his or her own information about a community before initiating any permitting activity (e.g., before requesting a permit modification or applying for a permit). Permitting agencies, on the other hand, should dedicate their resources, using their own judgment, to learning about concerns in the community and assessing communities where there is a high level of interest in a permitting activity. In some cases, permitting agencies and facility owners have cooperated to do joint outreach activities, and believe that the agency presence has made members of the community more comfortable during interviews or other activities. EPA does not recommend such cooperation as a rule (because, for example, other stakeholders could perceive this as "taking sides"). Permitting agencies should use their discretion and maintain the agency's proper role during any such activities.

EPA recommends the following steps for gathering information about the community. Although facility owners may want to follow these steps before every major permitting activity (e.g., applying for a permit or a major modification), permitting agencies should focus on major activities at facilities that have the potential to raise significant public interest :

- Reviewing news clippings and other information that indicates how the community is reacting to the facility or the permitting activity.

- Talking to colleagues or anyone who has experience working with members of the particular community.

- Contacting companies, universities, local governments, civic groups, or public interest organizations that already have experience in the community. These groups may be able to provide useful information about community concerns, demographics, or reactions to other industry in the area. They may be able to point you towards other existing sources of community information.

If it seems like there is a low level of interest in the facility at this point, and things are not likely to change, the agency and the facility owner can begin planning the required public participation activities.

If, however, the facility shows indications of being a moderate- to high-interest level facility, a more detailed analysis of the community might be necessary, and additional public participation activities planned.

EPA recommends community interviews when there is a high level of public interest.

- To get a fuller picture, staff from the agency or the facility should consider contacting community leaders and representatives of major community groups to talk about the facility and the planned RCRA action. These interviews should represent a fair cross-section of viewpoints in the community. The community representatives may have a feel for how much community interest there is in a permitting activity. They also may be able to provide advice on how to handle the situation.

- If there are indications of likely high interest from the outset (e.g., a facility that is likely to be controversial is seeking a permit), the agency or the facility owner should consider conducting a broad range of **community interviews** with as many individuals as possible, including the facility's immediate neighbors, representatives from agencies that will participate in the RCRA action, community organizations, and individuals who have expressed interest in the facility (e.g., people on the agency's mailing list, newspaper reporters, local officials). A detailed discussion of how to conduct **community interviews** is provided in Chapter 5.

- After collecting the necessary information, the agency or the facility may wish to prepare a brief summary of major community concerns and issues (no more than five pages). The summary can be integrated into the public participation plan document or used as the basis for developing a "Question and Answer"-type **fact sheet** to distribute back to the community. See Chapter 5 for additional information on these activities.

Exhibit 2-2 at the end of this Chapter summarizes the steps to take in

determining the level of public interest in facilities and gathering background information.

Targeting Public Participation in Communities

The scope of the affected community will vary from facility to facility.

This initial assessment should provide a good idea about the scope and makeup of the "affected community." Pinpointing the affected community can be a difficult process; everyone has a different definition. EPA will not try to define the affected community here because its composition will vary with the particular characteristics of each facility and its surrounding community. *In some cases*, however, it may be appropriate to target a segment of the population that is broader than the "affected community." For instance, the appropriate target for early public notices and some other activities may go beyond people who are directly affected, to include citizens who are potentially interested or concerned about the facility. EPA recognizes that the distinction between "affected" and "concerned" or "interested" will not be completely clear in all cases. Permitting agencies should use their best judgment.

EPA realizes that resources will limit the breadth of any public participation program and that focus is necessary. It is clear that some people will have a more direct interest than others in a particular permitting activity. Given practical resource limitations, public participation activities should focus first on people with a more direct interest in a RCRA facility, while also realizing that "direct interest" is not always determined by physical proximity to a facility alone. It is impossible to point out all people who have a direct interest, but, as a general guideline, people with the most direct interests will live in the general vicinity of the facility, or have the potential to be affected by releases to groundwater, air, surface water or the local environment (e.g., through game, livestock, or agriculture or damage to natural areas). Direct interests may also include people who live on or near roads that will accept increased traffic of hazardous waste-carrying vehicles. EPA acknowledges that people residing a significant distance from the facility may have legitimate and important concerns, but EPA thinks it is reasonable to focus limited public participation resources on communities with direct interests. See the section on "The Mailing List" in Chapter 3 for a list of organizations that you should consider when thinking about the interested or affected community.

The Citizen's Role

Citizens in the community may want to assess the permitting situation, the agency (or agencies) involved, and the facility owner/operator. As we pointed out in the section above, citizens can get background on a permitting issue by talking to local officials, contacting research or industrial organizations, reading permitting agency material, and interacting

with interested groups in the community. Citizens may also want to find out about day-to-day activities at the facility or the agency, the decision-making structures they use, and their current policies and procedures. Citizens may want to get more information on the owner's/operator's involvement with other facilities or other activities. The contact persons for the facility and the agency are also good to know. Citizens can also talk to local officials, the agency, or the facility to find out how the proposed project fits into larger political issues, what local planning issues are involved, and what the facility's business plans are.

Individual community members can take part in the assessment process by providing input to other stakeholders through interviews, focus groups, or other methods used in community assessments (also see the section on "An Informed and Active Citizenry" earlier in this Chapter). This guidance manual gives an overview of the RCRA permitting process which individual community members may find helpful. The Appendices at the end of this manual provides other resources and contacts (the RCRA Hotline, agency phone numbers, and League of Women Voters' contacts) that citizens can access. EPA is also compiling a reference list of public participation and risk communication literature. The list is available through either the RCRA Information Center, in Docket Number F-95-PPCF-FFFFF, or through the RCRA Hotline (see Appendix A for appropriate telephone numbers). Members of the public can find out about permit activities in their area by contacting the permitting agency, talking to environmental groups or public interest organizations, reading state, federal, and private environmental publications in the library, looking for zoning signs or other announcements, attending public meetings and hearings, watching the legal notice section of the newspaper or checking display advertisements, listening to local talk shows, or keeping up with local events through town bulletins, associations, or council meetings.

Valuable public interaction can take place outside of the formal permitting process.

In addition, members of the community can contact the permitting agency or the facility -- outside of any formal activity -- to give early input and to share their concerns. Community members should suggest public participation activities, meeting locations, or means of communication that will work well in their community. This sort of informal communication, via letter or interview, can be very helpful, especially in terms of establishing a public participation plan (see Chapter 5 for a description of public participation plans). EPA also recognizes that valuable public interaction takes place outside of the formal permitting process. Citizens may choose to contact other groups in the community that have an interest in the permitting activity. Environmental, public interest, and civic organizations often play a role in the RCRA permitting process. These groups can provide interested citizens the opportunity to participate in efforts to influence the permitting process through collective action.

Alternatively, citizens may see fit to create new organizations to discuss issues related to the permitting process or to provide input into the process.

Planning for Participation

A good public participation program avoids misunderstandings by anticipating the needs of the participants. It provides activities and informational materials that meet the needs of, and communicate clearly to, specific community members and groups. The public participation plan is the agency's schedule and strategy for public participation during the initial permitting process, significant corrective actions, and other permitting activities at facilities receiving high levels of public interest.

After assessing the situation, the agency should have an approximate idea of how interested the public is in the facility. Based on the information from the community assessment, the agency should draft a plan addressing public participation activities throughout the prospective permitting process and the life of the facility. For permitting activities and corrective actions that do not raise a high level of public interest in the community, the public participation plan will be a simple document, outlining the regulatory requirements. Major permitting activities and other high-interest activities will require a more detailed plan with participation opportunities that go beyond the requirements. Agency staff should keep in mind that community interest in a particular facility can change at any time; good plans will prepare for contingencies.

EPA recognizes that permitting agencies do not always have the resources they need to perform all the public participation activities they would like to perform. Agency staff must consider resources in all stages of the process, but particularly when developing a public participation plan. To make fewer resources go further, agencies should consider working with community groups, public interest organizations, and facility owners/operators to plan public participation events. Some relatively inexpensive activities can be very effective. More information on making use of additional resources is available in Appendix M. Information on the resources needed to perform specific public participation activities is available in Chapter 5.

The plan should create a structure for information to flow both to and from the public.

The goal of the public participation activities in the plan is to meet the specific needs of members of the community by creating a structure for information to flow both to and from the public. Anyone who plans public participation activities should strive for useful and timely exchange of information with the public. Again, EPA strongly encourages anyone conducting public participation activities to solicit public input on the types of communication and outreach activities that will work best in each

community. The agency, facility, civic and public interest groups should coordinate their public participation efforts, emphasizing two-way information exchange and avoiding unnecessary duplication in their activities.

To identify activities for the public participation program, the agency should go through the following steps:

1. list the major community issues and concerns;
2. list the community characteristics that will have a bearing on how you address these issues; and
3. list the activities that will address the community's concerns during the permitting process and, if applicable, corrective action.

Once the agency has outlined activities for the facility at hand, it should put together a strategy for implementing the activities. In general, the following are the areas of responsibility for public participation that the agency should consider:

- **Interacting with the media, especially on high-profile facilities.** If there is a high degree of interest in the facility, it will be important to have a media contact person who can get information out quickly, accurately, and consistently. The assistance of a public affairs office is often necessary (where applicable).

- **Interacting with elected officials.** For facilities receiving a moderate to high level of interest, it is often beneficial to work with elected officials to provide them with information they need to answer their constituents' questions. Put together a team of people who can fill the information needs of public officials. This team should include senior people who can answer policy questions when necessary.

- **Answering telephone and written inquiries.** It is important to follow up on all requests for information that you receive from stakeholders. Designate one person to be responsible for putting together the answers to questions in a form that is understandable to the public. This "contact person" should be named in all fact sheets and public notices. Remember the importance of two-way communication and the public participation triangle.

- **Coordinating public participation with other stakeholders.** It is crucial that all the people who are working on public participation be aware of what activities are being planned for the facility and any other facilities in the area, so that activities can complement each

other whenever possible. At the least, try to avoid conflicts between competing activities. Be sensitive to major events (e.g., celebrations, other meetings, religious revivals, fundraisers, elections) and important dates (e.g., local holidays, graduations) in the community.

- **Maintaining the mailing list and information repositories.** A mailing list is required under RCRA and the agency should update it to include new people or organizations who have expressed an interest in the facility. The facility and other organizations should refer to the agency any requests to be on the official facility mailing list. If public information repositories are established for the facility, they should be indexed and updated at least quarterly, or as required by the permitting agency. The facility may want to obtain a copy of the mailing list to use for distributing information.

- **Planning and conducting public meetings.** Set-up and coordination are critical to the success of public meetings. Public participation staff will need to choose a location for meetings based on public input and the need for comfort and accessibility. The public participation coordinator will need to schedule speakers, plan the agenda, and provide a mediator (if necessary) at the meeting. Chapter 5 provides more detail on public meetings, hearings, workshops, etc.

- **Handling production/distribution/placement of information, including fact sheets, public notices, news releases, meeting handouts and overheads, etc.** Much of your public participation time will be spent developing and producing information for interested stakeholders. Permitting agency staff may want to refer to Appendix M for a list of resources that can ease fact sheet and information production. Sometimes you may need to refer stakeholders to other agencies that have information readily available, such as the State pollution prevention technical assistance office, which often have fact sheets and technical experts available. A list of pollution prevention contacts is included in Appendix S.

Public participation activities should coincide with major steps in the permitting process.

The next step is to figure out a schedule of public participation activities. This schedule should include activities that are required by EPA regulations. In general, the timing of additional public participation activities should correspond to the completion of major steps in the technical process (e.g., application submittal, draft permit issuance, completion of the RFI). These are the times when members of the public may have new questions or concerns about the proposed action or the facility in light of new information, especially during corrective action. The regulators and the facility owner/operator should also be prepared to notify the public when any major activity will be taking place at the facility (e.g., start of construction for corrective action) or has taken place (e.g.,

emergency response to releases).

Permitting agencies should take the lead in writing and revising public participation plans, while allowing for input from other stakeholders and coordinating with activities held by the facility, public interest groups, and community organizations. The agency may want to involve other stakeholders in a group process to form a comprehensive plan. Depending on the amount of public interest in a facility, the plan could be an informal one- or two-page document or a formal public involvement plan that will be available to members of the community for comment. At a minimum, the plan should include a list of the specific public participation activities for the facility and a schedule for when they will occur. We encourage agencies to make these plans -- formal and informal -- available to the public.

Developing a written public participation plan will help staff account for all the necessary steps in the permitting or corrective action process. A formal plan will also let the public know what type of activities to expect during the process. EPA recommends that a formal plan contain the following sections:

- executive summary;
- introduction/overview;
- facility history;
- the RCRA action taking place;
- summary of community interviews, outlining concerns;
- a description of any early consultation (e.g., interviews with group leaders) that led to development of the plan;
- a list of the major issues likely to emerge during the process;
- an estimation of the level of public interest likely to be generated by the decision under consideration;
- public participation activities and schedule;
- a list of the agencies, groups, and key individuals most likely to be interested in the process;
- a list of key contacts; and
- information on meeting and repository locations, where applicable.

Communities can provide valuable advice on what public participation activities will work best.

EPA encourages permitting agencies to seek public input on the plans; final plans should be available for public review. This sort of input is important for getting the public involved early in the process. In addition, communities can provide useful advice on what channels of communication will work best in the area and what sort of activities will provide the most effective participation. Communities can provide practical solutions that improve communication and may even save resources. For example, in one community where rumors spread easily, citizens suggested that the agency put status reports on voicemail so that people could call in for

regular updates.

There are numerous ways that the community can contribute during the planning stage. Citizens can decide how interested they are in a particular activity by discussing issues with other stakeholders, accessing relevant documents, or calling hotlines or other experts. Those who would like to participate in the formal process can use this time to raise questions or develop their ideas. Some citizens may want to submit comments to the agency on the public participation plan. Moreover, EPA encourages interested citizens to meet together to discuss the potential impact of RCRA actions on their communities. Citizen groups may want to invite experts from the facility, the permitting agency, engineers, environmental contractors, scientists, health experts, and attorneys to speak at their meetings.

Understanding and Interaction Between Stakeholders

While each stakeholder shares the responsibility of providing open and two-way communication, the roles and responsibilities of the different stakeholders differ substantially. Participants in the RCRA permitting process should acknowledge these differences and account for them as they approach the process. We encourage participants to do their best to understand the interests and concerns of the other participants by following the principles below:

* Strive to respect other stakeholders and their opinions. Avoid personal attacks.

* Understand that people have different levels of understanding of RCRA. Not everyone is an expert, but everyone should have the chance to know all the facts.

* Realize that decisions made during the permitting process can have profound economic and social impacts. These decisions are very real and important; people will live and work with them every day.

* Acknowledge that statutory and regulatory requirements limit what can happen during the permitting process. Remember that everyone -- citizens, regulators, facility owners/operators, and public interest workers -- has resource and time constraints

* Recognize that people have concerns that go beyond the scientific or technical details. These concerns deserve respect.

* Build your credibility by being fair, open, and respectful.

* Try to understand the values and interests of other stakeholders before jumping to conclusions.

Promoting Environmental Justice

Environmental justice refers to the fair distribution of environmental risks across socioeconomic and racial groups. Some groups and individuals associated with environmental justice issues have raised the concern that EPA and some State environmental agencies do not provide equal protection under the nation's environmental laws. With regard to the RCRA permitting program, most of the concern surrounds the potential additional risk that hazardous waste facilities may pose when located near low-income or minority communities that already face an environmental burden from multiple sources.

On February 11, 1994, the President issued Executive Order 12898, directing federal agencies to identify and address the environmental concerns and issues of minority and low-income communities. EPA is committed to the principles in this Executive Order. Furthermore, in an effort to make environmental justice an integral part of the way we do business, the Agency issued a policy directive, in September 1994 (OSWER 9200.3-17), that requires all future OSWER policy and guidance documents to consider environmental justice issues.

EPA is committed to equal protection in the implementation and enforcement of the nation's environmental laws. Moreover, providing environmental justice for all U.S. residents is a major priority for EPA.

In the area of public participation, the Agency has made changes that will empower communities and potentially increase their voice in the permitting process. In the "RCRA Expanded Public Participation" rule (60 FR 63417-34, December 11, 1995), EPA created more opportunity for public involvement in the permitting process and increased access to permitting information. The rule gives all communities a greater voice in decision making and a clear opportunity to participate in permit decisions early in the process.

New EPA rules will empower communities by giving them a greater voice in the permitting process.

EPA strongly encourages facilities and permitting agencies to make all reasonable efforts to ensure that all segments of the population have an equal opportunity to participate in the permitting process and have equal access to information in the process. These efforts may include, but are not limited to:

- **Providing interpreters, if needed, for public meetings.** Communicating with the community in its language is essential for the two-way information flow required to ensure the public an equitable voice in RCRA public participation activities.

- **Providing multilingual fact sheets and other information.** Making sure that the materials presented to the public are written clearly in

the community's primary language.

- **Tailoring your public participation program to the specific needs of the community.** Developing a program that specifically addresses the community's needs will demonstrate to community members your interest in achieving environmental equity and fostering a sense of cooperation.

- **Identifying internal channels of communication that the community relies upon for its information, especially those channels that reach the community in its own language.** Examples of these "channels" are a particular radio show or station, a local television station, a non-English newspaper, or even influential religious leaders. By identifying and making use of these valuable communication channels, you can be sure that the information you want to publicize reaches its target audience.

- **Encouraging the formation of a citizens advisory group to serve as the voice of the community.** Such groups can provide meaningful participation and empowerment for the affected community (see Chapter 5 for more detail).

(Additional steps you can take to promote environmental justice are available in Appendix D).

Although EPA has taken steps on a national level to address environmental justice issues, many of these issues can be addressed more effectively at a local level and on a site-specific basis. Local agencies and leaders have an important role to play in addressing environmental justice concerns.

The RCRA permitting process is intended to ensure that facilities are operated in a manner that is protective of human health and the environment. Environmental justice concerns are often broader in scope, going beyond the technical design and operation of the facility to include socio-economic, ethnic, and racial factors for the surrounding community. Within the context of public participation in RCRA permitting, the best way to address environmental justice concerns is through active communication. Keeping open lines of communication among permitting agencies, facility owners, and community members is a good way to promote awareness and understanding of the permitting process, the facility operations, and the community's concerns. Providing frequent opportunities for community participation empowers the community to play an important role throughout the process.

Permitting agencies should be forthright in explaining the scope and limitations of permitting regulations to the community. Agencies should

also make sure that citizens understand their rights within the permitting process (e.g., submitting comments, requesting a public hearing, appealing permit decisions). Facility owners should strive to establish good relations with the community and routinely interact with community members and organizations, seeking input and feedback when making significant decisions. Communities should gather information about other rights, outside of the permitting process, such as those afforded under Title VI of the Civil Rights Act.

Supporting Community-Based Environmental Protection

In its May, 1995 Action Plan, EPA's Office of Solid Waste and Emergency Response (OSWER) endorses community-based environmental protection (CBEP). CBEP is a method of solving environmental problems in the context of the community in which they occur. OSWER's plan points to CBEP as a method that "brings the government closer to the people it is meant to serve." It also heralds CBEP as "a new way of accomplishing traditional tasks in a more effective, more responsive manner."

Stakeholder involvement is one of the keys to CBEP. OSWER's plan points to CBEP efforts as ones that "must empower and equip the community to participate in environmental decisions, taking into account not only the human but also the ecological and socioeconomic health of a place." Thus, the involvement and cooperation of the community, facility owners and operators, and agency personnel in the permitting process will fuel CBEP efforts. Moreover, increased access to information and opportunities for participation in the permitting process (like those in the RCRA Expanded Public Participation Rule) will empower communities and enable them to practice CBEP.

We encourage permitting agencies, facility owners and operators, public interest groups, and members of the community to carry out the spirit of this manual. As we emphasized in the section on “Promoting Environmental Justice” above, the best solutions to many environmental challenges are available at the local community level, and no problem can be solved without input from local stakeholders. Only by cooperating, communicating, and providing feedback and equal opportunities can community-based programs reach their potential for solving environmental problems.

The best solutions to many environmental challenges are available at the community level.

Permitting agencies can take a lead role in promoting a CBEP approach by discussing RCRA issues in coordination with other environmental concerns in a given area. Program distinctions between water, air, waste, and toxics are less important to stakeholders outside of the agency. Agency staff should be prepared to address RCRA concerns in the context of air and water issues that may reach beyond a particular facility. Many companies are particularly interested in finding opportunities to reduce process wastes

through pollution prevention and recycling that affect air, water, and waste permit requirements. Several states are embarking on "whole facility" approaches to permitting to take advantage of this approach. Permitting agencies should consider using **fact sheets** and **availability sessions** to explain RCRA's relationship to other programs. Combining public meetings across program lines could also make the entire environmental picture more clear to stakeholders.

Re-evaluating and Adjusting the Public Participation Program

As RCRA activity increases at a facility and becomes more visible, public interest in a site can increase dramatically. Interest can also fade away without warning. Participants in the permitting process should anticipate and plan for sudden changes in the level of interest in a facility. Periodic communication with key community contacts can help to anticipate changes in the attitude or interest of other stakeholders. All participants should make sure to keep their key contacts informed of all planned activities -- especially activities that are highly visible and tend to raise a lot of interest, such as construction work or excavation related to cleanups.

In addition, at facilities that are receiving high levels of public interest, the agency or the facility may want to conduct follow-up community interviews at a key point (or points) in the decision-making process. These interviews will help predict major shifts in public interest or concern. The agency should also encourage members of the community to submit comments throughout the process and especially during formal comment periods. Agency staff should make clear to the public (e.g., through fact sheets) how the comment and response process works.

Permitting agencies, facility owners, and other involved organizations should evaluate the effectiveness of public participation programs regularly through the process. The permitting process is complex and the best way to measure the success of a public participation plan is not always clear. The following are indicators that a public participation program is working:

- stakeholders are not asking the same questions over and over again;
- stakeholders are not raising concerns about a lack of information;
- the appropriate contact person is handling inquiries in a timely manner;
- most of the public participation time is not devoted to correcting breakdowns in the information-sharing triangle (see above) between the community, the agency, and the facility;
- the channels of communication are well-defined and open;
- interested parties are providing informed comments on the project; and

- members of the public are bringing their concerns to stakeholders that are actively involved in the process, rather than taking them directly to the press or elected officials.
- Creative, more flexible, technical solutions, including pollution prevention solutions, are being explored.

The best way to evaluate the success of a public participation program is to ask other stakeholders what is and isn't working.

If the program is not achieving these objectives, then the agency, facility, and involved groups need to assess their techniques and determine what changes will improve the program. If members of the community are dissatisfied, then public participation activities may not be reaching the right target audiences. The community may not have adequate access to information or may not be understanding it because it is too complex. In some cases, the public may need more detailed information. The community may feel uncomfortable in relations with the facility or the agency, or the agency or the facility may be uncomfortable relating to the community. The facility may not understand its role in the process in relation to the agency's role. All of these difficulties can reduce the effectiveness of the public participation program. The best way to find out what is going wrong is to talk to the community and the other stakeholders. Ask them what is working and where improvements are needed. Modify public participation activities based on their suggestions and your own time and resource limitations.

Members of the community should have a chance to evaluate the public participation activities that the agency, the facility, and public interest or other groups are employing. EPA encourages participants to solicit feedback from the public, going beyond the regulatory requirements where necessary. **Surveys**, **interviews**, or **informal meetings** are all effective ways to gather feedback. In addition, the agency, facility, and involved groups should explain the permitting process to the community, update the community on significant activities, and provide information that community members can access and understand. If these standards are not being met, then the community should communicate its concerns to the appropriate contact person. Citizen input is the feedback that makes two-way communication work. All involved organizations should create a means for citizens to let them know if public participation activities are not working (e.g., use of a contact person, suggestion boxes, hotlines, surveys, etc.). Once these organizations know where the breakdown is occurring, they can adjust their programs to address community concerns.

Chapter Summary

Public participation, defined broadly, is any stakeholder activity carried out to increase public input or understanding of the RCRA permitting process.

The public participation triangle represents the communication between the public, regulators, and the facility.

Public participation is based on a dialogue.

Public participation is required, it can lead to better technical decisions, and it can engender public support for a project.

A successful public participation program allows members of the community to have an active voice in the process and to have free access to important information. Participants in a successful program will also pursue the following benchmarks:

- Creating a dialogue that provides for feedback;
- Establishing trust and credibility in the community through honesty and openness;
- Fostering an informed and active citizenry that follows the process, gives input to other stakeholders, and discusses issues with other concerned groups and people;
- Ensuring that public officials meet their obligations to the public;
- Involving the public early in the process, receiving feedback, and addressing public concerns before making decisions;
- Assessing the community to find out from citizens what types of activities would best allow them to participate;
- Planning your public participation activities ahead of time, allowing flexibility for changing interest levels in the community;
- Understanding and respecting the values and limitations of other stakeholders;
- Taking steps, such as issuing multilingual fact sheets or encouraging the formation of citizen advisory groups, to ensure that all segments of the interested community have an equal opportunity to receive information and participate in the process;
- Supporting efforts to respond to environmental challenges on a community level; and
- Periodically evaluating the effectiveness of your program in the community and adjusting as community attitudes and interest levels evolve.

Exhibit 2-1
Determining the Likely Level of Public Interest in a RCRA Facility

Level of Interest	Type of RCRA Action	Community Members' Relationships With Facility/Regulatory Agency	Larger Context
Low Level of Public Interest in a Facility	C The RCRA activity is unlikely to be controversial (e.g., a routine modification) C There is no contamination at the facility that could come into direct contact with the public	C People do not live near the facility C There is a history of good relations between the facility and members of the community C Members of the community have expressed confidence in the regulatory agency and/or the facility	C The facility receives very little media attention and is not a political issue C Community members have not shown any past interest in hazardous waste issues
Moderate Level of Public Interest in a Facility	C The RCRA action may involve activities, such as §3008(h) corrective action activities, that contribute to a public perception that the facility is not operating safely C Examples may include permits for storage and on-site activities and routine corrective actions. C Highly toxic and/or carcinogenic wastes may be involved (e.g., dioxins)	C A relatively large number of people live near the facility C There is a history of mediocre relations between the facility and members of the community C The facility is important to the community economically, and the action may affect facility operations C Members of the community have had little or poor contact with the regulatory agency C Local elected officials have expressed concern about the facility	C Community members have shown concern about hazardous waste issues in the past C The facility receives some media attention and there are organized environmental groups interested in the action C There are other RCRA facilities or CERCLA sites in the area that have raised interest or concern
High Level of Public Interest in a Facility	C The RCRA action includes a controversial technology or is high-profile for other reasons (e.g., media attention) C Highly toxic and/or highly carcinogenic wastes are involved (e.g., dioxins) C There is potential for release of hazardous substances or constituents that poses potential harm to the community and the environment C There is direct or potential community contact with contamination from the facility (e.g., contaminated drinking water wells or recreation lake)	C The nearest residential population is within a one-mile radius C A relatively large number of people live near the facility C There is a history of poor relations between the facility and the community C The facility has violated regulations and community members have little confidence in the regulatory agency to prevent future violations C There is organized community opposition to the facility's hazardous waste management practices or to the action C Outside groups, such as national environmental organizations, or state or federal elected officials have expressed concern about the facility or action C The economy of the area is tied to the facility's operations	C Community members have shown concern about hazardous waste issues in the past C Facility activities are an issue covered widely in the media C There is interest in the facility as a political issue, at the local, state, or federal level (e.g., statewide and/or national environmental groups are interested in the regulatory action) C There are other issues of importance to members of the community that could affect the RCRA action (e.g., concern over a cancer cluster near an area where a facility is applying for a permit to operate an incinerator) C There are other RCRA facilities or CERCLA sites nearby that have been controversial

Exhibit 2-2
Steps in Evaluating Facilities and Gathering Information

Step 1: Review the RCRA Action

Is it:

☐ Likely to be a controversial action (e.g., permitting a commercial waste management facility)
☐ Unlikely to be a controversial action

Step 2: Talk to colleagues who have worked in this community about their interactions with members of the public

C Has there been a large degree of public interest or concern about other projects?
C Have members of the public shown confidence in the regulatory agency?

Step 3: Review regulatory agency (or any other) files on the facility

Are there:

☐ A lot of inquiries from members of the public
Major concern(s)_____
Any organized groups?_____
☐ Few inquiries from members of the public
☐ Clippings from newspapers or other media coverage

Step 4: Formulate your preliminary impression of the community based on the above information

Step 5: Talk with several key community leaders to confirm your impression

People to interview:

1. _____
2. _____
3. _____

Step 6: Determine the anticipated level of community interest based on the above information

☐ Low (go to Step 7)
☐ Moderate (next step: conduct additional community interviews with one member of each community subgroup)
☐ High (next step: conduct a full set of community assessment interviews)

Step 7: Write a brief summary of any major community concerns/issues

Chapter 3
Public Participation During the RCRA Permitting Process

Introduction

The previous chapter examined the importance of public participation and the information-sharing triangle, while reviewing the critical components for building a successful public participation program. Chapter 3 describes the specific public participation activities that EPA requires or recommends during each phase of the RCRA permitting process, beginning before submission of the RCRA part B permit application, continuing through the preparation of draft and final permit decision, and throughout the life of the RCRA permit.

States may have their own public participation requirements in addition to the federal

Section 7004(b) of RCRA and EPA's permitting regulations, found in 40 CFR Parts 124 and 270, form the foundation for mandatory public participation activities during the permitting process for both operating and post-closure permits. The reader should note that the corrective action schedule of compliance and other corrective action provisions are typically part of the RCRA permit under 40 CFR Part 270 (unless carried out under an enforcement order). Changes to these sections of the permit must follow the permit modifications procedures of 40 CFR Part 270.41 or 270.42. We review the corrective action public participation procedures in Chapter 4.

RCRA permitting regulations require an array of public participation procedures during the permitting process and the life of the permit. However, situations often occur where the facility and the agency will need to go beyond the requirements in 40 CFR Parts 124 and 270. Following the assessment and planning guidance we provided in Chapter 2, participants in the permitting process will discover whether a certain permitting activity deserves greater public participation. Regulators, facility staff, or community groups may want to consider expanded public participation activities (described in this chapter and in Chapter 5) -- if resources allow -- at priority facilities, controversial facilities, or at facilities where the affected community has a particular need for greater involvement or access to information. Participants in the process should seek input from other stakeholders to determine if the public participation activities are adequate. The permitting agency may suggest that the facility or public interest

groups conduct additional activities to supplement required activities and strengthen communication and trust among stakeholders. In addition, EPA encourages the community to suggest additional public participation activities to the permitting agency, the facility, or community and public interest groups.

In December 1995, EPA expanded the public participation requirements in the RCRA program by promulgating new regulations. The new regulations, known as the "RCRA Expanded Public Participation" rule (60 FR 63417, December 11, 1995), require earlier public involvement in the permitting process, expand public notice for significant events, and enhance the exchange of permitting information. The new requirements, which we describe more fully in this chapter, include: (1) a public meeting held by the facility prior to submitting the part B RCRA permit application; (2) expanded notice requirements, including use of a posted sign, a broadcast notice, and a newspaper display advertisement to publicize the meeting; (3) notification of the public when the agency receives a permit application and makes it available for public review; (4) permitting agency discretion to establish an information repository, which will be supplied and maintained by the applicant or permit holder; and, (5) additional notices during the trial burn period for combustion facilities.

In addition to the new regulatory requirements, EPA is taking steps to ensure equitable public participation in the RCRA permitting process. On December 20, 1995 EPA Office of Solid Waste and Emergency Response (OSWER) Assistant Administrator Elliot Laws issued a memorandum to the EPA Regional Administrators stating the Agency's policy to ensure equal access to permitting information and provide an equal opportunity for all citizens to be involved in the RCRA permitting process (see Appendix N). In this manual, we are strongly encouraging facilities to meet the same standard of equitable public participation. EPA is committed to equal protection of our citizens under the nation's environmental laws and urges all participants in the RCRA permitting process to strive for environmental justice, equal opportunity to participate in permitting, and equal access to information.

Public participation activities should fit the diversity, character, and culture of the affected community.

To meet this standard, EPA (when it is the permitting agency) will issue multilingual notices and fact sheets and use translators, where necessary, in areas where the affected community contains significant numbers of people who do not speak English as a first language. In addition, the Agency recommends that facilities make efforts to tailor public participation activities to fit the diversity, character, and culture of the affected community. When communicating with a community, participants in the permitting process should take into account the particular pathways and methods of information transfer that are used by that community. These principles are applicable to all public participation activities, and EPA

encourages their adoption by all participants in the RCRA permitting process. See the section entitled "Promoting Environmental Justice" in Chapter 2 for more information.

Public Participation During the Permit Decision Process

The permit decision process is composed of a number of steps. Each step is accompanied by public participation requirements. As we have mentioned, the regulatory minimum for public participation may not be sufficient in all cases. Permitting agencies and facilities should consider going beyond the regulatory requirements, where necessary, to provide for meaningful and equitable public participation.

For the sake of simplicity, in this manual we will divide the permit decision process into four steps:

- the pre-application stage;
- application submittal, agency notice and review;
- preparation of the draft permit, public comment period, and the public hearing; and
- response to public comments and the final permit decision.

Stakeholders should keep in mind that the permit decision process is lengthy and can be complex and confusing. Keeping the lines of communication open during the process takes effort on the part of all participants. This effort is especially critical during the long periods of time while the agency is reviewing the permit or the facility may be responding to a Notice of Deficiency (which we describe later in this Chapter). The agency, the applicant, and other interested groups should take steps to keep the community involved and informed during these "down" times.

We also encourage stakeholders to learn about the process, ask questions, and discuss it with the other participants. Permitting agencies in particular, should make efforts to disseminate fact sheets and information packages about the permitting process. Agencies, public interest groups, or facilities may want to perform other public information tasks (see chapter 5 for descriptions) to ensure that all stakeholders understand, and are comfortable with, the permitting process.

Step One: The Pre-Application Stage

Required Activities

The RCRA Expanded Public Participation rule requires a new permit applicant (or a facility that is applying to renew a permit while making significant changes) to hold a public meeting prior to submitting the part B RCRA permit application. This meeting is the earliest formal step in the

RCRA permitting process.

Early public input can improve the quality of any permitting activity; the public can contribute information and recommendations that will be helpful to agencies as they make permitting decisions and to facilities as they develop their applications and proposals.

The Pre-Application Meeting

The most important goal EPA hopes to achieve from the pre-application meeting requirement is the opening of a dialogue between the permit applicant and the community. We believe that the applicant should open this dialogue at the beginning of the process. The meeting will give the public direct input to facility personnel; at the same time, facility personnel can gain an understanding of public expectations and attempt to address public concerns before submitting a permit application. We hope that this requirement will help address the public concern that public participation occurs too late in the RCRA permitting process.

Conducting the Meeting

The pre-application meeting will allow the facility to hear and respond to public concerns.

The pre-application meeting should provide an open, flexible, and informal occasion for the applicant and the public to discuss the various aspects of a hazardous waste management facility's operations. Discussion at the pre-application meeting need not concern the technical aspects of the permit application in extensive detail; such technical examination is more suited to the draft permit stage (which we describe later in this Chapter). We anticipate that the applicant and the public will use this meeting to share information, learn about each other's concerns, and start building the framework for a solid working relationship. The pre-application stage is also an excellent time to explore the facility's level of expertise in waste minimization and pollution prevention, and the potential for involving the facility's waste minimization experts in the public participation process.

While a formal meeting style (i.e., like a public hearing) may suit some permitting situations, EPA realizes that it will not fit in all cases. With this idea in mind, EPA has written the regulations to allow flexibility in the type of "meeting" held by the permit applicant. For instance, an applicant may decide to hold an availability session or open house (see Chapter 5) in place of a traditional meeting. As long as this approach meets the requirements and the spirit of § 124.31 (as presented in this section), EPA will not preclude applicants from tailoring meeting styles to fit particular situations.

Regardless of the type of meeting that the applicant decides to hold, the applicant (as well as the other participants in the process) should strive for equitable participation and access to information during the pre-application meeting and the notice of the meeting (see "Promoting Environmental

Justice" in Chapter 2 and the Introduction to this Chapter).

At the meeting, permit applicants should address, at the level of detail that is practical (based on available information), the following topics: what type of facility the company will operate; the location of the facility; the general processes involved and the types of wastes to be generated and managed at the facility; and the extent to which waste minimization and pollution prevention may supplement or replace waste treatment needs. The discussions should also include the transportation routes to be used by waste transporters and planned procedures and equipment for preventing or responding to accidents or releases.

Addressing community concerns at the start of a project can prevent misunderstanding and opposition in the long run.

These are examples of the types of issues that might be of particular concern to a community and about which the community might be able to provide useful suggestions to the applicant. The applicant might then be able to incorporate that information into the proposed facility design or operations, either as part of the initial application, if time allows, or at subsequent stages in the process (e.g., in submitting revisions to its application, or in responding to a Notice of Deficiency issued by the permitting agency). By learning about and addressing public concerns up front, the applicant may be able to prevent misunderstanding from escalating into community opposition. Moreover, the public will have a clear and open opportunity to interact and communicate with the potential applicant.

The applicant should make a good faith effort to provide the public with sufficient information about the proposed facility operations. While we do not expect applicants to go into extensive detail at the pre-application stage, they should provide the public with enough information to understand the facility operations and the potential impacts on human health and the environment. We encourage applicants to provide **fact sheets**, information packets, or other materials (see Chapter 5) that explain the proposed operations, company policies, waste minimization proposals, or other information that is relevant to the proposed facility.

The permitting agency may choose to make permitting and pollution prevention fact sheets available at the meeting. One such fact sheet is included as Appendix J of this manual. EPA recommends that permit applicants distribute this fact sheet (or a similar one produced by the state agency) at the pre-application meeting, especially in cases where a representative of the permitting agency does not attend. EPA does not expect permit applicants to answer questions about the RCRA permitting process at the pre-application meeting -- particularly where the applicant is not sure of the answer. We advise the applicant to let a representative of the permitting agency answer such questions. If an agency representative is not available at the meeting, then the applicant should provide the name of

an agency contact person and the number of the RCRA Hotline (available in Appendix A) or an applicable State information line.

Some applicants may want to consider inviting or hiring a moderator to conduct the pre-application meeting. The moderator should be a neutral third party (e.g., a civic organization, non-profit community group, or a consultant) that is not a stakeholder in the permitting decision process. A moderator can lend objectivity to the proceedings and help to keep the discussions fair, under control, and on track. Regardless of whether a third party conducts the meeting, facility representatives should be present to answer questions and interact with the community.

EPA regulations are flexible with regard to conducting the pre-application meeting. One of the few requirements is for the applicant to post a sign-in sheet, or a similar mechanism, to allow participants to volunteer their names and addresses for inclusion on the facility mailing list (see § 124.31(b)) . The applicant should understand that attendees may not want to put their names on a mailing list; the sign-in sheet always should be voluntary. The applicant should make clear at the meeting that people can contact the permitting agency directly to add their names to the facility mailing list at any time.

The applicant must submit the list of attendees, along with a "summary" of the pre-application meeting, as a component of the part B permit application. We do not intend for the meeting summary to be a verbatim account of the meeting. EPA recognizes how difficult it is to keep a word-for-word record of a public meeting. Applicants should make a good faith effort to provide an accurate summary of the meeting. While the regulations do not indicate a particular format for the meeting summary, we recommend a type-written document that identifies major issues, points made in support of those issues, and any response made by the applicant or other attendees.

As mentioned above, the applicant must submit the summary as a component of the part B application. This component should be a typewritten hard-copy. Since the part B application is available for review by the public, attaching the summary as part of the application assures that people who are unable to attend the meeting will have an opportunity to find out what happened. We encourage applicants to make the summary available in other formats where a community has special needs (e.g., on audio tape for visually impaired residents).

The facility must conduct the pre-application meeting.

The RCRA Expanded Public Participation rule requires the facility to conduct the pre-application meeting. We believe that the applicant should conduct the meeting in an effort to establish a dialogue with the community. EPA encourages permitting agencies to attend pre-application

meetings, in appropriate circumstances, but *the facility must conduct the pre-application meeting*. Agency attendance may, at times, be useful in gaining a better understanding of public perceptions and issues for a particular facility, and for clarifying issues related to the permitting process. However, agency staff should ensure that their attendance does not detract from the main purposes of the meeting, such as opening a dialogue between the facility and the community, and clarifying for the public the role of the applicant in the permitting process.

The regulations do not preclude State agencies and permit applicants from working together to combine State siting meetings with pre-application meetings. EPA encourages them to do so, provided that the combined meetings fulfill the requirements in § 124.31. If meetings are combined, the portion of the meeting that is dedicated to the RCRA facility permit must be run by the applicant; the regulatory agency must give the applicant the floor for a sufficient time period. In notifying the public of the meeting, under § 124.31(d), the applicant must make clear that the RCRA portion of the meeting is separate from the general siting discussion.

The pre-application meeting will provide the community with a clear entry point for participation at an early stage in the permitting process. We encourage members of the community to become involved at the pre-application stage. Public comments and suggestions are easier for the facility to address at this early stage than later on in the process. For this reason, public input can have a greater impact at this stage. Interested citizens should attend the meeting and participate in the informal dialogue.

The public can learn more about the facility and the company seeking a permit before attending the meeting by contacting the facility, or by contacting other stakeholders in the community. Some community members may want to research to learn more about the planned (or already existing) facility. If you are interested in obtaining more information on the facility or the permitting process, you may want to contact the permitting agency or the corporation that owns the facility. Additional information about past and present owners, past waste spills and releases, complaints, and the status of other state, local, and federal permits may be available from the following: the planning board, City Hall or the town council, the county health department, local newspapers, the library, and local fire and rescue departments. These sources will give you access to information such as deeds and environmental testing results.

Meeting attendees can become part of the facility mailing list by adding their names and addresses to the sign-up sheet at the meeting or by sending their names directly to the permitting agency. People on this list will receive any significant information sent out by the agency or the facility regarding the facility.

Citizens should note that not all aspects of the permit application will be clear at the pre-application stage, in part, because EPA is encouraging facilities to meet with the public before making all final decisions on their permit applications. This way, the facility owner/operator will be more flexible and can react more effectively to suggestions and concerns raised in the meeting. Participants at the meeting should note that the facility owner/operator will not know the answer to all questions about the permitting process. The permitting agency and the RCRA/Superfund Hotline will be available to answer questions about the permitting process and other RCRA requirements (remember that States may have different procedures than EPA)..

Date, Time, and Location of the Meeting

The timing of the meeting is flexible. EPA believes that flexibility is necessary because the optimal timing for the meeting will vary depending on a number of factors, including the nature of the facility and the public's familiarity with the proposed project and its owner/operator. The applicant should choose a time for the meeting while considering the following factors: (1) the community must receive adequate notice before the facility submits a permit application; (2) the facility's plans for construction or operation need to be flexible enough to react to significant public concerns and to make changes to the application, if necessary; (3) the meeting should not take place so long before submittal of the application that the community will forget the facility. We encourage applicants to make a good faith effort to choose the best date for the pre-application meeting.

While the final rule requires the facility to hold *only one pre-application meeting*, cases may arise where more than one meeting is preferable. For instance, if a facility holds one public meeting and takes several months to a year to submit the application, then the facility owner/operator should consider holding a second meeting. In other cases, the facility may want to hold a few meetings of different types (e.g., a **public meeting** as well as an **availability session**). Of course, permitting agencies or other stakeholder groups may decide to hold additional public meetings where appropriate.

The applicant should avoid scheduling the meeting at a time that conflicts with other important community activities.

The permit applicant should encourage full and equitable public participation by holding the pre-application meeting at a time and place that is convenient to the public. The applicant should schedule the meeting at a time when the community is most likely to be available. Many communities, for instance, may prefer a meeting held after normal business hours. Meeting schedulers should avoid holding the meeting at a time that will conflict with important community activities (e.g., social, religious, or political events, other meetings, school activities, or local occasions). The applicant should also make sure that the meeting place has adequate space and is conducive to the type of meeting that the applicant will conduct.

Finally, the meeting location should have suitable access for all persons; if such a location cannot be procured, then the applicant should make all reasonable efforts to provide for equitable participation in the meeting (e.g., by responding to written comments).

Some members of the affected community may not feel comfortable with meetings held on facility property. Applicants should address community concerns in this area. EPA encourages applicants to hold the pre-application meeting on neutral public ground, such as a local library, a community center, a fire station, town hall, or school.

Notice of the Pre-Application Meeting

EPA developed the pre-application meeting notice requirements with the goal of encouraging facilities to reach as many members of the public as possible, within reasonable means. The expanded notice requirements are intended to reach a broad audience and to encourage as many people as possible to attend the meeting. Attendance at the meeting may also provide an indication of the level of public interest in the facility, although low attendance does not necessarily equal low interest. Using the list of attendees from the meeting will allow agencies to develop larger mailing lists; these lists, in turn, will help the facility and the agency to update more people more often about the permitting process.

The new rule requires the applicant to provide notice of the pre-application meeting to the public in three ways:

- *A newspaper display advertisement.* The applicant must print a display advertisement in a newspaper of general circulation in the community. The display ad should be located at a spot in the paper calculated to give effective notice to the general public (see the example in Appendix H). The ad should be large enough to be seen easily by the reader. In addition to the display ad, we also encourage facilities to place advertisements in free newspapers, community bulletins, newsletters, and other low-cost or free publications. In some cases, potential interest in the facility may extend beyond the host community. Under these circumstances, we encourage the applicant either to publish the display ad so that it reaches neighboring communities or to place additional ads in the newspapers of those communities.

- *A visible and accessible sign.* The applicant must provide notice on a clearly-marked sign at or near the facility (or the proposed facility site). If the applicant places the sign on the facility property, then the sign must be large enough to be readable from the nearest point where the public would pass -- on foot or by vehicle -- by the site. EPA anticipates that the signs will be similar in size to zoning notice signs required by local zoning boards (of course, this size will vary according to the prerogative of the

zoning board). If a sign on the facility grounds is not practical or useful -- for instance, if the facility is in a remote area -- then the applicant should choose a suitable alternative, such as placing the sign at a nearby point of significant vehicular or pedestrian traffic (e.g., the closest major intersection). In the case that local zoning restrictions prohibit the use of such a sign in the immediate vicinity of the facility, the facility should pursue other available options, such as placing notices on a community bulletin board or a sign at the town hall or community center. EPA intends the requirement that the sign be posted "at or near" the facility to be interpreted flexibly, in view of local circumstances and our intent to inform the public about the meeting. In addition to the requirements of § 124.31, we encourage the applicant to place additional signs or flyers in nearby commercial, residential, or downtown areas. Supermarkets, hardware or department stores, malls, libraries, or local gathering places may have bulletin boards for posting notices and flyers. EPA encourages facilities to keep track of posted signs and remove them after the meeting.

- *A broadcast media announcement.* The applicant must broadcast the notice at least once on at least one local radio or television station. EPA expects that the applicant will broadcast the notice at a time and on a station that will effectively disseminate the notice. The applicant may employ another medium, aside from television or radio, with prior approval of the permitting agency. Many communities run their own cable channels for local news and activities; this medium may be used to target a local audience, often at no charge. Television spots may be advantageous for delivering pertinent information about a hazardous waste management facility directly to the people at home.

Choose notice methods that will spread the word over all segments of the affected community.

Sample notices are provided in Appendix H and more may be available by contacting the permitting agency.

EPA encourages facilities to pick a mixture of public notice tools that meets the regulations and will allow the affected community to receive equitable, timely, and effective notice of the pre-application meeting. Such a mixture may include a number of different and specialized notices that target specific groups within each community. One example of such a targeted notice would be the use of a translated advertisement on Chinese-speaking local access television station to reach a Chinese-American enclave in an area where the community members are affected by the permitting activity. Specific segments of the affected community can be targeted by strategic placement of the newspaper display ad, the timing and station of a radio spot, the geographic location of signs, use of free newspapers, and multi-lingual notices. EPA does not require that the applicant try to reach the largest audience with each method of public notice (e.g., the radio spot need not be placed on the most popular station). Instead, the applicant should use a combination of methods (including

translations) to spread the word over all segments of the affected community, taking into account the channels of information that are most useful in reaching diverse groups.

EPA encourages applicants to go beyond the minimum requirements in the regulations when providing notice of the pre-application meeting. The following suggestions will help in providing an effective broadcast notice. In some rural areas, community members may listen to or watch predominantly one radio or television station; in this case, the applicant should use this station as the vehicle for the notice. Some areas are part of a radio market (i.e., defined by services such as Arbitron's Radio Market Definitions) or television market and have competing radio and television stations. Where there is more than one station, the facility owner or operator should consider carefully the likely audience of the station in order to ensure that a substantial number of people will see or hear the ad. Areas with many competing stations are more likely to have audiences that may be delineated, for instance, by age, ethnicity, or income. In these situations, broadcasting the notice on several stations, or in more than one language, may be beneficial. In all cases, EPA suggests that the announcement occur at listening or viewing hours with a substantial audience -- hours that will vary for each community as well as for specific groups. The facility may consult with broadcast stations and community members to determine the best times to broadcast the notice.

The regulations also require the applicant to send a copy of the notice to the permitting agency. Applicants must follow this provision, but we encourage facilities to contact the appropriate agencies before this stage. *Applicants should consider informing the agency of their intent to seek a permit before planning the pre-application meeting.* Like other stakeholders in the permitting process, the permitting agency can benefit from receiving information as early as possible in the process. In addition, the permitting agency may be able to provide guidance about how to run the pre-application meeting or what types of public notice work best in a particular community.

EPA also encourages the applicant to send a copy of the notice to all members of the facility mailing list, if one exists. This suggestion applies especially to facility owners who are applying for a permit renewal and must comply with § 124.31 because they are seeking to make a change on the level of a class 3 permit modification. At these facilities, the mailing list will already exist and people on the list will be interested in learning about the most recent activity at the facility. A mailing list will most likely not exist for new applicants.

Getting the word out at this early stage is essential to assuring adequate community participation during the entire permitting process. For this

Free papers, existing newsletters, press releases, and word-of-mouth are inexpensive ways to notify the public.

reason, we encourage the applicant to take additional steps, within reasonable means, to announce the meeting. We do not intend for applicants to spend large amounts of additional time and resources; on the contrary, there are many simple and inexpensive mechanisms for distributing information. Free announcements on television or radio, advertisements in free papers, town newsletters, flyers, small signs, and press releases are all ways to disseminate information at little or no cost. We also encourage facilities to pass information through local community groups and Local Emergency Planning Committees (established under section 301 of the Superfund Amendments and Re-Authorization Act (SARA)), professional and trade associations, planning commissions, civic leaders, school organizations, religious organizations, and special interest groups. Other stakeholders involved in the process are also good conduits for spreading news about the pre-application meeting.

The regulations require that the notice contain several pieces of information: (1) the date, time, and location of the meeting; (2) a brief description of the purpose of the meeting; (3) a brief description of the facility and proposed operations, including the address or a map (i.e., a sketched or copied street map) of the facility location; (4) a statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting; and (5) the name, address, and telephone number of a contact person for the applicant.

The format of the notice is flexible as long as it communicates this information. The description of the purpose of the meeting should explain the facility's intent to submit a permit application and set out other objectives for the meeting. When describing the facility, the owner/operator should briefly cover what sort of facility it is or will be (e.g., a hazardous waste incinerator), what types of wastes it may handle, and what sort of operations will take place at the facility (e.g., types of manufacturing, commercial treatment of waste, etc.). For the facility map, the owner/operator should provide a photocopy of a street map or a sketched map, the purpose of which is to let the public know just where the facility is or will be. Finally, persons needing "special access" would include anyone who may have difficulty with stairs or some entrances, persons who are visually or hearing impaired, or any person who foresees some difficulty in attending the meeting without some help. EPA does not expect facilities to provide transportation to persons who cannot find other means of reaching the meeting.

The telephone contact provided by the applicant in the pre-application notice is an important addition to the public participation resources during this phase. EPA encourages members of the community to contact the facility, the permitting agency (see Appendices A and B for State and Federal contacts) or other interested groups in the community, as necessary,

to become acquainted with the permitting process and the facility plans.

EPA is not requiring the facility to submit proof of the public notice; however, we are requiring the facility to keep proof of the notice. The Agency is concerned that proof of the notices may be needed in the case of a lawsuit. The applicant should establish a simple file containing proofs for the notice. Acceptable forms of proof would include a receipt for the radio or TV broadcast, a photograph of the sign, and a photocopy of the newspaper advertisement or tear sheets.

The Facility Mailing List

The permitting agency is responsible for developing a representative mailing list for public notices under § 124.10. EPA is emphasizing the early development of a thorough mailing list as a critical step in the public participation process. If the mailing list allows the agency to keep important groups and individuals in the community up-to-date on activities at a facility, then the permitting agency and the facility will be better able to gauge community sentiment throughout the permitting process. See the section on "Mailing Lists" in Chapter 5 for additional information.

EPA anticipates that the meeting attendee list required under § 124.31(c) will help the agency generate the mailing list by identifying people or organizations who demonstrate an interest in the facility and the permit process.

The permitting agency should develop the mailing list early.

In the past, mailing lists have not been fully developed, oftentimes, until the agency issued the draft permit or intent to deny the permit. EPA believes that the mailing list is an integral public participation tool which permitting agencies should create as early as possible in the process. Our intent in having the permit applicant submit the list of meeting attendees under § 124.31(c) was to allow the agency to formulate the mailing list at an earlier stage in the permitting process. Aside from the names identified by the permit applicant, we encourage permitting agencies to enhance the mailing list by contacting a wide variety of groups and individuals, such as: civic organizations, religious groups, public interest organizations, recreational groups, professional/trade associations, Local Emergency Planning Committees (LEPCs), emergency response and local health care personnel, environmental justice networks, educational and academic organizations, city hall and elected officials, planning and zoning boards, local development councils, involved State and Federal agencies, newspapers and reporters, immediate neighbors and property holders, other nearby companies or business groups, facility employees, and plant tour attendees. In addition, we encourage the agency to maintain and update the lists regularly. All commenters on permitting documents, attendees at any public meetings or persons using information repositories should be placed on the mailing list, or have the option of putting their names on the list.

Members of the community and other interested groups or individuals can contact the permitting agency to have their names put on the facility mailing list. Community and public interest organizations may want to provide the permitting agency with names for the mailing list. Refer to Appendices A and B if you would like to find the addresses and phone numbers of EPA's Regional offices and the state environmental agencies.

Additional Activities

Public participation activities should be geared to the potential level of community interest.

The level of public participation activities should correspond to the potential level of community interest in the permitting process. To determine the need for additional activities, participants should consider conducting a **community assessment** (see Chapters 2 and 5). If the level of interest is high, participants will want to do a more thorough needs assessment and prepare a formal **public participation plan** (see Chapters 2 and 5).

EPA encourages applicants to provide **fact sheets**, information packets, or other materials (see Chapter 5) at the pre-application meeting. The permitting agency may also choose to make permitting fact sheets available at the meeting. One such fact sheet is included as Appendix J of this manual. EPA recommends that permit applicants distribute this fact sheet at the pre-application meeting, especially in cases where a representative of the permitting agency does not attend.

To provide widespread notice of the pre-application meeting, the applicant may want to use notice methods that go beyond the requirements. Some of these methods, such as **public service announcements**, **existing newsletters and publications**, and **newspaper inserts** are described in Chapter 5.

In some cases, the agency, facility, or a community group may find it appropriate to hold an additional meeting during the pre-application stage. **Availability sessions** or **open houses** can provide the public with an opportunity to discuss issues face-to-face with officials or other interested people.

The "RCRA Expanded Public Participation" rule gives the permitting agency the authority to require the facility owner or operator to establish an **information repository** at any point in the permitting process or during the life of a facility. The agency should assess the need for the repository by considering a variety of factors, including: the level of public interest; the type of facility; the presence of an existing repository; and the proximity to the nearest copy of the administrative record. The information repository

An information repository makes information accessible to the public in a convenient location.

can improve the permitting process by making important information accessible to the public in a convenient location. (See Chapter 5 for more detail on information repositories). Of course, EPA encourages facilities or interested community groups to establish their own repositories for public access to information. Chapter 5 provides more guidance on how to establish a repository.

Some permitting information is quite technical and detailed. Members of the public and other stakeholders may find this information difficult to interpret. EPA encourages permitting agencies, facilities, and community groups to provide fact sheets and additional materials to make technical and complicated information more accessible to people who are not RCRA experts. **Workshops** or **availability sessions** may be useful for explaining technical information. Some citizens or community groups may want to consult other sources for help in interpreting scientific and technical data. If you are looking for such help, you may want to contact the permitting agency, facility staff, or other sources such as local colleges, universities, public interest groups, environmental and civic organizations. Additional contacts may be available in the local community. Interested citizens may be able to find out about these contacts by talking to local newspapers and other media who cover environmental issues. People who are interviewed for or quoted in news articles can be an additional source for information.

Getting as much input as possible from the community during these initial phases of the RCRA permitting process and before a draft permit is issued will be very useful during the draft permit stage. The draft permit will be more responsive to the needs and concerns of the community, and the community will be more likely to accept the permit conditions if it sees that its concerns have been heard.

Though the early meeting may reduce public concern that the agency and the facility are making important decisions before the public becomes involved, some concern may still remain. The agency and the facility are likely to have meetings that cannot, for practical purposes, be open to public participation. One State agency found that by making notes from these meetings available through an **information repository**, public trust in the agency increased.

Step Two: Application Submittal and Review

Required Activities

After the permit applicant has met with the public and considered recommendations and input from the community, he or she may choose to pursue a RCRA permit and then submit a RCRA part B permit application

to the permitting agency. Upon receiving the permit application, the permitting agency must, under § 124.32, issue a **public notice** to the facility mailing list and appropriate units of state and local government. The notice will inform recipients that the facility has submitted a permit application for agency review. In addition, the notice will inform the recipients of the location where the application is available for public review.

New EPA rules make permit applications available to the public during agency review.

Both of the provisions mentioned in the previous paragraph are the result of the RCRA Expanded Public Participation rule. EPA composed these regulations as a way to inform the public about the status of a facility's permit application early in the process .

Before issuing the notice at application submittal, the permitting agency should solicit community suggestions and input on the best place to put the application for public review (agency personnel may have gathered this information during an earlier stage in the process). We encourage the agency to issue the notice as soon as is practically possible after receiving the application. The notice must contain the following information: (1) the name and telephone number of the applicant's **contact person**; (2) the name and telephone number of the permitting agency's contact office, and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process; (3) an address to which people can write in order to be put on the facility mailing list; (4) the location where copies of the permit application and any supporting documents can be viewed and copied; (5) a brief description of the facility and proposed operations, including the address or a map (i.e., a sketched or copied street map) of the facility location on the front page of the notice; and (6) the date that the application was submitted.

Permitting agencies must place the application and any supporting materials somewhere in the vicinity of the facility or at the permitting agency's offices. The permitting agency should be sensitive to the burden on members of the affected community when determining where to place the application. Many communities do not have the resources or the time to travel several hours just to access permitting information. To make information available in these situations, the permitting agency should place the application in a place with public access in the general vicinity of the facility (e.g., a public library or community center). If such placement of the document is impractical, the agency should make sure that the public has other access to permitting information. For instance, the agency could require the facility to establish an information repository under § 124.31. If the community's information needs are on a lower level, the agency may want to make a short summary of the permit application available to the affected community. In some cases, making information available in electronic form (e.g., via diskette or Internet) may be useful.

The application should be available for review in the vicinity of the facility.

We recommend that, where feasible, the agency place the application in a location where copying facilities are available and the public has adequate access to the documents. EPA also recommends that the application be in a locale where the documents will be secure and readily available. The application should go in the information repository, if one exists. If not, a public library or other building in the vicinity of the facility may provide a suitable choice. The permitting agency's headquarters or satellite office may be adequate if not too far from the facility.

Additional Activities

The permit application review process is often lengthy. It may take anywhere from one to five years to issue a permit, depending on the facility type and level of facility owner or operator cooperation. Permit applicants and regulators should recognize that members of the public have pointed out that they often feel "in the dark" during this phase. We encourage agencies and facilities to maintain a good flow of information during application review. If resources are available, permitting agencies and facilities should plan activities during this time period to keep citizens informed about the status of the process. Holding **workshops**, conducting **informal meetings**, and providing periodic **fact sheets** and **press releases** about the facility, opportunities for pollution prevention, and the RCRA permit process can spread information and keep the community involved. Identifying a **contact person** to accept comments and answer questions will also enhance communication. A (toll-free) **telephone hotline** with recorded status reports can reduce the potential for rumors.

EPA encourages permitting agencies to respond (e.g., in writing, by phone, by holding a meeting) to comments and requests from the public during the application review process. Agencies should make good faith efforts to address public concerns and issues.

In situations where a community wants more information about potential operations at a facility and the health and environmental risks of those operations, citizens or the agency can work with the facility to set up **facility tours** and **observation decks** during the public comment period. These activities will give the community a first-hand look at a facility and the operations and activities happening on-site. (Note that safety and liability issues need to be considered before a decision is made to include these activities.) These activities may be particularly useful for a new facility or when a facility proposes a new or different technology. Facility tours also may be particularly effective for explaining pollution prevention accomplishments and opportunities. Similarly, facility owners or operators may wish to coordinate with community leaders to tour the community. This may be useful for understanding potential community concerns.

Step Three: The Draft Permit, Public Comment Period, and Public Hearing

Required Activities

After the permitting agency reviews the permit application, it must notify the applicant in writing. If the application is incomplete, the permitting agency may request that the applicant submit the missing information. This request is known as a Notice of Deficiency (NOD). The permitting agency may issue several NODs before the application is finally complete.

Once an application is complete, the permitting agency will make a decision to issue a draft permit or a notice of intent to deny the permit application (which is a type of draft permit). In either case, the agency must notify the public about the draft permit. In the notice, the permitting agency must announce the opening of a minimum 45-day public comment period on the draft permit. The agency must print the notice in a local paper, broadcast the notice over a local radio station, and send a copy of the notice to the mailing list, relevant agencies, and applicable state and local governments. We encourage agencies to attempt to reach all segments of the affected community, within reasonable means, when issuing the notice of the draft permit (see "Step One: The Pre-Application Stage" above and Chapter 5 for more information on how to notify the public). Although the agency is not required to retain documentation of the notice, we recommend keeping a simple file with proof of the notices. Forms of proof might include a receipt for the radio ad and a photocopy of the newspaper add.

EPA regulations require the permitting agency to prepare a **fact sheet** or a **statement of basis** to accompany every draft permit. This fact sheet (or statement of basis) is required by regulation and is different than commonly used informational fact sheets. This fact sheet must explain the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. The fact sheet must also include, when applicable, the following (see § 124.8(b)):

- a brief description of the type of facility or activity which is the subject of the draft permit;
- the type and quantity of wastes that are proposed to be handled at the facility;
- a brief summary of the basis for the draft permit conditions;
- reasons why any requested variances or alternatives to required standards do or do not appear justified;
- a description of the procedures for reaching a final decision on the draft permit, including (1) the beginning and ending dates of the comment period and an address to which comments can be sent, (2) procedures for requesting a hearing and the nature of

the hearing, and (3) any other public participation procedures before the final permit decision; and

- the name and telephone number of a person to contact for additional information.

EPA recommends that the permitting agency include the fact sheet with the notice of the draft permit and make the fact sheet available to all interested parties.

Any person may request a **public hearing** during the public comment period. The agency must hold a public hearing if someone submits a written notice of opposition to a draft permit and a request for a hearing, or if the public demonstrates, by the number of requests for a public hearing, a significant degree of public interest in the draft permit. The Director also may hold public hearings at his or her discretion. The agency must notify the public about the hearing at least 30 days prior to the hearing. The agency may choose to combine the hearing notice with the draft permit notice. See Chapter 5 for information on holding a public hearing. Citizens may want to request a public hearing as a forum for airing community concerns. The hearing will be a standard meeting, attended by the agency and other interested parties.

There is more required public participation during the draft permit stage than at any other time during the permitting process. We strongly recommend that permitting agencies prepare public participation plans (see Chapter 5), even for the least controversial facilities, just to keep track of the activities during this stage.

By law, the agency must consider and respond to all significant comments received during the comment period.

The comment period on the draft permit allows anyone to submit their concerns and suggestions to the agency in writing. The permitting agency must, by law, consider all comments (see § 124.11) in making the final permit decision. In addition, the agency must briefly describe and respond to all significant comments raised during the comment period or during the public hearing. EPA encourages participants to submit comments during this period.

Additional Activities

You can use public participation activities to explain technical issues or the permitting process.

Permitting agencies can keep the process open by sharing all NOD information with the public, whether through the administrative record, an **information repository**, or another activity, such as a **workshop**. If the details of the NOD are too arcane or technical, the agency can provide a short **fact sheet**. The fact sheet should not gloss over any major omissions,

but, by the same token, it should point out when an omission is of a less serious nature.

Interested community groups or the permit applicant may decide to provide additional public participation activities during this stage. Some suggestions for useful activities would include explaining the NOD process and discussing technical issues in the application by holding **availability sessions**. Another option is for citizens or other stakeholders to request one-on-one or small **informal meetings** with the permitting agency, the permit applicant, or community groups. Stakeholder groups can improve their communication and interaction by meeting together in an informal forum. An informal meeting may also be more appealing to some participants, who may see activities like public hearings as overly confrontational.

The permitting agency may want to provide a **news release** when issuing the draft permit or intent to deny.

The agency, facility, or a public interest group may want to organize an **availability session**, **facility tours**, or some other activity prior to the comment period so that the public can be better informed about the facility. Some permitting agencies have held **public meetings** prior to a public hearing to provide a better forum to discuss issues. **Telephone hotlines** or voicemail recordings can supplement public notices to inform the community about the dates and locations of public participation events.

Step Four: Response to Comments and Final Permit Decision

Remember that State procedures may be different.

Required Activities

After the public comment period closes, the regulatory agency reviews and evaluates all written and oral comments and issues a final permit decision. The agency must send a **notice of decision** (not to be confused with a "notice of deficiency," see above) to the facility owner or operator and any persons who submitted public comments or requested notice of the final permit decision. The agency must also prepare a written response to comments that includes a summary of all significant comments submitted during the public comment period and an explanation of how, in making the final permit decision, the agency addressed or rejected the comments. This summary shows the community that the agency considered the community's concerns when making the final permit decisions. The agency must make the response to comments document available as part of the administrative record.

Additional Activities

If there was high interest during the comment period, the agency or the facility may want to issue a **news release** and **fact sheet** when the decision is finalized to inform a wide audience. The permitting agency may choose to update and release the fact sheet required in § 124.8.

Public Participation During the Life of a Facility

Interim Status Public Participation

When writing RCRA, Congress granted special status to facilities that existed when the statute went into effect and for facilities that would be brought under RCRA by new regulations. EPA refers to these facilities as having "interim status." According to RCRA, interim status facilities do not need a permit to operate; instead, while they are seeking permits, they follow a category of regulations created specifically for them by EPA. When EPA or a State issues a RCRA operating permit to one of these facilities, the facility loses its interim status.

Because interim status facilities can operate without a permit, many people are concerned that some of these facilities are not as safe as permitted facilities. Interim status facilities are not required to follow -- since they are not permitted -- any standardized public participation procedures or permit modification standards (that is, until the facility owner applies for a permit). Given all these conditions, interim status facilities often pose public participation challenges even though many such facilities have been operating for years.

Regulatory agencies may need to use innovative techniques to communicate with and provide information to communities around interim status facilities. EPA acknowledges that every situation will require a different type and level of community involvement. If interest grows in a certain facility, the agency should consider holding a **workshop** or an **availability session**. Information repositories are another available tool (see Chapter 5). The agency should take steps to explain the special situation of interim status facilities to citizens. Of course, if an interim status facility begins to attract public interest, permitting agencies should consider moving the facility towards getting a permit and undergoing the public participation steps in the permitting process.

Owners and operators of interim status facilities should involve the public even before they formally start to pursue a RCRA permit. One thing the facility owners could do to improve access to information is to make a draft part B application available to the public before submitting it to the

permitting agency. Facility owners who submitted part B applications in the past might make their applications available as well. (Note: any interim status facility that submits its part B application on or after June 11, 1996, will be subject to the standards of the RCRA Expanded Public Participation Rule and, thus, its application will be available for public review upon submission). The facility may also want to set up an **on-site information booth** or provide other background materials to the public. Establishing a **contact person** and making his or her name available to the public can improve communication between the facility and the community. Experience has shown that a good facility-community relationship during interim status will make for a more cooperative permitting process.

Members of the public will often have questions or concerns while a facility is in interim status. Citizens can contact the facility, the regulatory agency, or the RCRA/Superfund Hotline to ask questions or to inquire about other sources of information. Citizens may also want to contact public interest organizations, local government, or other involved citizens for more information. Interim status facilities will eventually need to enter the RCRA permitting process, which citizens can use as an opportunity to air concerns and to encourage the facility to make important changes.

Permit Modifications

Modifications can be initiated by either the agency or the facility.

Over time, a permitted facility may need to modify its permit. Just as public participation is a component of the initial permit process, it is also a part of the permit modification process. This section discusses different kinds of permit modifications and their corresponding public participation requirements. It is important to note that public participation responsibilities and activities vary depending on, first, who initiated the modification (i.e., the regulatory agency or the facility owner or operator) and, second, the degree to which the modification would change substantive provisions of the permit. No matter who initiates the modification, when a modification is proposed, only those permit conditions subject to modification are reopened for public comment.

State permitting agencies may have modifications processes that differ from the federal requirements. Contact your State agency (see Appendix B) for more details.

There are many reasons to modify a permit. In some cases, the regulatory agency may initiate a permit modification under 40 CFR 270.41. This section of the regulations identifies three causes for which the regulatory agency may require a permit modification: (1) alterations or additions to the permitted facility or activity; (2) new information received by the regulatory agency; or (3) new standards, regulations, or judicial decisions affecting the human health or environmental basis of a facility permit. In

addition, the regulatory agency may modify a compliance schedule for corrective action in the permit. Modifications initiated by the regulatory agency are subject to the full 40 CFR Part 124 permitting requirements, as described earlier in this chapter. Specifically, the permitting agency must

- Issue public notice of the draft modification;
- Prepare a fact sheet or statement of basis;
- Announce a 45-day public comment period;
- Hold a public hearing, if requested, with 30-day advance notice;
- Issue notice of the final modification decision; and
- Consider and respond to all significant comments.

More often, however, the facility owner or operator requests a permit modification to improve facility operations or make changes in response to new standards. Facility-initiated modifications are categorized under 40 CFR 270.42 as Class 1, 2, or 3 according to how substantively they change the original permit. Class 1 modifications require the least public involvement; Class 3, the most. Like agency-initiated modifications, a decision to grant or deny a Class 3 permit modification request is subject to the public participation procedures of 40 CFR Part 124.

Since facility owners or operators initiate modifications more often than the regulatory agency, the remainder of this chapter lays out the requirements for facility-initiated modifications. The permitting agency is also encouraged to follow these public participation activities, even if not required under an agency-initiated modification. Appendix L consists of an EPA fact sheet entitled "Modifying RCRA Permits," which provides more detail on permit modifications and associated public participation activities. Exhibit 3-1 at the end of this Chapter presents an easy-to-read synopsis of modification requirements and timelines.

When the Facility Owner or Operator Initiates a Modification

When a facility owner or operator wants to change a RCRA permit, he or she informs the regulatory agency and interested members of the public, either before making the change if it is substantive (Class 2 or 3), or soon after (with a few exceptions), if the change is minor (Class 1). In any case, this is relatively *early* notification for members of the public, who often perceive that RCRA actions are "done deals" by the time public comment is solicited.

When a facility initiates a modification, it is responsible for some public participation activities.

The *facility owner or operator* is responsible for conducting most of the public participation for modifications he or she initiates. In addition, the facility, rather than the regulatory agency, bears the burden of explaining

and defending its actions to the public. To ensure that the facility's public participation efforts are successful, staff from the facility and the agency should discuss how to conduct the required activities; the agency should provide guidance and assistance where necessary. Moreover, EPA encourages facilities to consult with communities to determine what activities will best promote public participation.

Class 1 Modifications

Class 1 modifications address routine and administrative changes, including updating, replacing, or relocating emergency equipment; updating certain types of schedules identified in the permit; improving monitoring, inspection, recordkeeping, or reporting procedures; and updating sampling and analytical methods to conform with revised regulatory agency guidance or regulations. They do not substantively alter the conditions in the permit or reduce the facility's ability to protect human health and the environment. With a few exceptions, most Class 1 modifications do not require approval from the regulatory agency before they are implemented. (The exceptions are listed in Appendix I to 40 CFR 270.42.)

The only public involvement requirement for Class 1 modifications is that *within 90 days of implementing a change, a facility must send a **public notice** to all parties on the mailing list compiled by the permitting agency*. The facility is responsible for obtaining a complete facility mailing list from the agency. (For more information on **mailing lists** see Chapter 5.) Any member of the public may ask the agency to review a Class 1 modification.

Class 2 Modifications

Class 2 modifications address facility-initiated changes in the types and quantities of wastes managed, technological advances, and new regulatory requirements, where such changes can be implemented without substantively altering the facility's design or the management practices prescribed by the permit. Class 2 modifications do not reduce, and, in most cases should enhance, the facility's ability to protect human health and the environment. During a Class 2 modification, there may be good opportunities to explore “low tech” pollution prevention opportunities that reduce waste generation but do not require major process changes (e.g., segregating waste streams, modifying maintenance procedures, or installing closed loop recycling).

Class 2 modifications require a number of activities, including a public notice, comment period, and a public meeting.

Class 2 modifications require the facility to submit a modification request and supporting documentation to the regulatory agency. In addition, *the facility must notify the people on its mailing list about the modification*

request and publish this notice in a major local newspaper of general circulation. The facility must publish the notice and mail the letter within seven days before or after it submits the request to the regulatory agency. The newspaper notice marks the beginning of a **60-day public comment period** and announces the time and place of a public meeting. In addition, the notice must identify a **contact person** for both the facility and the regulatory agency and must contain the statement, "The permittee's compliance history during the life of the permit being modified is available from the regulatory agency contact person." The notice should state that public comments must be submitted to the permitting agency's contact person.

The public comment period provides an opportunity for the public to review the modification request at the same time as the permitting agency. The facility must place the request for modification and supporting documentation in a location accessible to the public in the vicinity of the facility (see guidance on **information repositories** in Chapter 5 for suitable locations). The *facility must conduct the **public meeting*** no earlier than 15 days after the start of the 60-day comment period and no later than 15 days before it ends. The meeting, which tends to be less formal than a public hearing held by the regulatory agency in the draft permit stage, provides for an exchange of views between the public and the owner or operator and a chance for them to resolve conflicts concerning the permit modification. The meeting must be held, to the extent practicable, in the vicinity of the permitted facility (*the guidance on the pre-application meeting, earlier in this chapter, is applicable to this public meeting*).

The requirements for this meeting, like the pre-application meeting, are flexible. The facility is not required to provide an official transcript of the meeting, though we encourage owners/operators to consult the community and find out if this information would be useful. The permitting agency is not required to attend the meeting or respond to comments made there; however, EPA recommends that agency staff attend the meeting to clarify questions about the permitting process and to find out about any public concerns and how the owner or operator plans to address them.

The permitting agency is required to consider all written comments submitted during the public comment period and must respond in writing to all significant comments in its decision. EPA expects that the meeting will provide information to the public and improve the written comments submitted to the permitting agency. EPA anticipates that community input at the meeting may also result in voluntary revisions in the facility's modification request.

As the following paragraphs explain, the Class 2 modification procedures were written to ensure quick action by the agency. However, when seen by

the public, these procedures can be very confusing. A simple solution that the permitting agency or the facility should consider is to provide a fact sheet or a time table to the public at the meeting.

The procedures for Class 2 modifications include a default provision to ensure that the permitting agency responds promptly to the facility's request. The agency must respond to Class 2 modification requests within 90 days or, if the agency notifies the facility of an extension, 120 days. At any time during this 120-day period, the agency can: (1) approve the request, with or without changes, and modify the permit accordingly; (2) approve the request, with or without changes, as a temporary authorization having a term of up to 180 days; or (3) deny the request. If the permitting agency does not reach a final decision on the request within this period, the facility is granted an automatic authorization that permits it to conduct the requested activities for 180 days. Activities performed under this authorization must comply with all applicable federal and state hazardous waste management regulations. If the agency still has not acted within 250 days of the receipt of the modification request, *the facility must notify persons on the facility mailing list within seven days, and make a reasonable effort to notify other persons who submitted written comments*, that the automatic authorization will become permanent unless the regulatory agency approves or denies the request by day 300. The public must always have a 50-day notice before an automatic authorization becomes permanent. The agency must notify persons on the facility mailing list within 10 days of any decision to grant or deny a Class 2 modification request. The agency must also notify persons on the facility mailing list within 10 days after an automatic authorization for a Class 2 modification goes into effect.

At any time during the Class 2 procedures the agency may also reclassify the request as a Class 3 modification if there is significant public concern about the proposed modification or if the agency determines that the facility's proposal is too complex for the Class 2 procedures. This reclassification would remove the possibility of a default decision.

As previously indicated, the permitting agency may approve a temporary authorization under 40 CFR 270.42(b) for 180 days for a Class 2 modification. In addition, the agency may grant a facility temporary authorization under 40 CFR 270.42(e), which would allow the facility, without prior public notice and comment, to conduct certain activities necessary to respond promptly to changing conditions. *The facility must notify all persons on the facility mailing list about the temporary authorization request within seven days of the request.* Temporary authorizations are useful for allowing a facility owner or operator to perform a one-time or short-term activity for which the full permit modification process is inappropriate, or for allowing a facility owner or operator to initiate a necessary activity while his or her permit modification

is undergoing the Class 2 review process. A temporary authorization is valid for up to 180 days, and the permitting agency may extend the authorization for an additional 180 days if the facility initiates the appropriate Class 2 modification process for the covered activity. In addition, any extension of the activity approved in the temporary authorization must take place under Class 2 procedures.

Class 3 modifications are more likely than other modifications to raise concern.

Class 3 Modifications

Class 3 modifications address changes that substantially alter a facility or its operations. For example, a request to manage new wastes that require different management practices is a Class 3 modification.

Class 3 modifications usually involve changes that are broader or more detailed than Class 1 or 2 modifications; they are also more likely to raise concern. Though the Class 3 modifications process allows significant opportunity for public participation, additional activities may be helpful in some situations. Permit holders, regulators, and community interest groups may want to consider taking steps to encourage earlier participation. Facilities, in particular, should recognize that some Class 3 modifications will significantly alter their operations. In such cases, and in all cases where public interest may be high, *permittees should consider providing information and public participation activities prior to submitting the modification request*.

When concern is high, it is critical for the facility to consult with the agency to make sure that the facility knows how to conduct the required public participation activities. In some cases, the permitting agency might encourage the facility to go beyond the requirements and hold **workshops** and publish **fact sheets** to explain the proposed change. Public participation activities held by the agency or public interest groups can supplement the regulatory requirements.

As with Class 2 modifications, Class 3 modifications require the facility to submit a modification request and supporting documentation to the permitting agency, and *notify persons on the facility mailing list about the modification request and publish notice in a major local newspaper of general circulation*. The facility must publish the notice and mail the letter within seven days before or after the submitting the modification request to the regulatory agency. The notice must contain the same information as the Class 2 notification (see above), including an announcement of a ***public meeting*** *to be held by the facility* at least 15 days after the notice and at least 15 days before the end of the comment period. The newspaper notice marks the beginning of a **60-day public comment period.**

In holding a public meeting during the comment period, the facility owner or operator should follow the guidance for the pre-application meeting above. The requirements for this meeting are flexible. The facility is not required to provide an official transcript, though we encourage owners/operators to consult the community and find out if this information would be useful. As with Class 2 modifications, the agency is not required to attend the meeting or to respond to comments made at the meeting. However, it is important that the permitting agency attend the facility's public meeting in order to gauge concern about the proposed change and prepare appropriately for a public hearing, if one is requested. By attending the public meeting, the agency may learn whether it needs to conduct additional public participation activities (e.g., hold a **workshop** or **informal meetings**) after preparing the draft modification. The agency can also clarify questions about the permitting process. The agency should consider responding to issues raised at the meeting as part of the response to comments for the 60-day comment period. Of course, people who attend the meeting have the opportunity to submit formal comments to the permitting agency during the comment period.

At the conclusion of the 60-day comment period, the agency must consider and *respond to all significant written comments received during the comment period*. The agency must then either grant or deny the Class 3 permit modification request according to the permit modification procedures of 40 CFR Part 124.

Class 3 modifications are subject to the same public participation procedures as permit applications.

Class 3 modifications are subject to the same review and public participation procedures as permit applications, as specified in 40 CFR 270.42(c). The agency is required to perform the following tasks:

- Preparation of draft permit modification conditions or notice of intent to deny the modification;
- Publication of a **notice** of the agency's draft permit decision, which establishes a 45-day **public comment period** on the draft permit modification;
- Development of a **fact sheet** or **statement of basis**;
- Holding a **public hearing**, if requested, with **30-day advance notice**;
- Issuance of the **notice of decision** to grant or deny the permit modification; and
- Consideration and response to all significant written and oral comments received during the 45-day public comment period.

With Class 3 permit modifications, the public has 60 days to comment on the facility's requested modification and another 45 days to comment on the agency's draft permit modification or proposed notice of intent to deny the modification. And, in addition to the public meeting held by the facility owner or operator, the public may also request a **public hearing** with the

agency.

The permitting agency must notify persons on the facility mailing list within 10 days of any decision to grant or deny a Class 3 modification request. As with Class 2 modifications, the regulatory agency may grant a facility a temporary authorization to perform certain activities requested in the Class 3 modification for up to 180 days without prior public notice and comment. For example, the agency may grant temporary authorizations to ensure that corrective action and closure activities can be undertaken quickly and that sudden changes in operations not covered under a facility's permit can be addressed promptly. Activities performed under a temporary authorization must comply with all applicable federal and state hazardous waste management regulations. *The facility must issue a public notice to all persons on the facility mailing list within seven days of submitting the temporary authorization request.* The agency may grant a temporary authorization without notifying the public. The permitting agency may reissue a temporary authorization for an additional 180 days provided that the facility has initiated the appropriate Class 3 modification process for the activity covered in the temporary authorization and the agency determines that the extension is warranted to allow the facility to continue the activity while Class 3 procedures are completed. See Appendix L for an EPA fact sheet on modifying RCRA permits.

Public Participation in Closure and Post-Closure

Facilities may discontinue operations at one or more units for a number of reasons. For example, units may have reached capacity, the facility owner or operator may no longer wish to accept wastes, or the facility may have lost interim status and be required to close by the permitting agency. During closure, facility owners or operators complete treatment, storage, and disposal operations; apply final covers or caps to landfills; and dispose of or decontaminate equipment, structures, and soil. Post-closure, which applies only to land disposal facilities that do not "clean close" (i.e., remove all contaminants from the unit), is normally a 30-year period after closure during which owners or operators of disposal facilities conduct monitoring and maintenance activities to preserve the integrity of the disposal system.

Closure and Post-Closure at Permitted Facilities

EPA regulations (40 CFR 264.112 and 264.118) require facilities seeking operating permits to submit closure and post-closure plans (if appropriate) with their Part B applications in accordance with 40 CFR 270.14(b)(13). Furthermore, land disposal facilities that leave wastes in place when they close must obtain a post-closure permit, which specifies the requirements for proper post-closure care. Consequently, *the public has the opportunity to comment on a facility's closure and post-closure plans and any amendments made to the plans as part of the permitting process and permit modification procedures*, as described earlier in this chapter.

Facilities seeking permits for post-closure are exempt from the pre-application meeting requirement (§ 124.31) in the RCRA Expanded Public Participation rule. The facility, permitting agency, or community group may decide to hold some type of meeting prior to issuance of the post-closure permit. Refer to Chapter 5 for information on **public meetings**, **availability sessions**, and **workshops**.

The permitting agency or other involved organizations should be aware of closure issues that may concern the public, and they should plan public participation activities accordingly. For example, if the public has reservations about how "clean" the facility will actually be after the facility closes, public interest groups, the agency, or the facility may want to provide **fact sheets** or conduct educational **workshops** and **informational meetings** about the closure plan and the conditions at the facility.

If the facility owner or operator is leaving a facility, and possibly even the community, the public may be very concerned about whether the facility owner or operator will really be vigilant in monitoring the post-closure operations at the facility or will have enough financial resources to do so. Moreover, almost all post-closure permits will contain schedules of compliance for corrective action if a facility closes before all necessary corrective action activities are completed. As a result, public participation events in the post-closure phase need to address community concerns about corrective action. (See Chapter 4 for additional information on corrective action activities.) Note, however, that unless corrective action is required in the post-closure permit, public interest in closure plans is usually limited.

Public participation for the post-closure phase must address public concerns about corrective action.

Closure and Post-Closure at Interim Status Facilities

Facilities may also close under interim status, often under enforcement orders. Facilities that are closing under interim status must submit closure and post-closure plans (if appropriate) under 40 CFR 265.112 and 265.118. Public participation activities for interim status facilities during the closure and post-closure processes are specified in 40 CFR 265.112(d)(4) and 265.118(f). The regulations require that *the permitting agency provide the public and the facility, through a **newspaper notice**, with the opportunity to submit written comments on the closure and post-closure plans and request modifications to the plans no later than 30 days from the date of the notice*. EPA encourages permitting agencies to use other methods of notice, as appropriate, to announce the meeting. In response to a request, or at its own discretion, the agency may hold a **public hearing** on the plan(s), if such a hearing might clarify one or more of the issues concerning the plan(s). The agency must provide **public notice** at least 30 days before the hearing. The agency will approve, modify, or disapprove the plan(s) within 90 days of their receipt.

The public can petition the permitting agency to extend or reduce the post-

closure care period applicable to an interim status facility or land disposal unit. Whenever the agency is considering a petition on a post-closure plan, it will *provide the public and the facility, through a **public notice in the newspaper**, with the opportunity to submit written comments within 30 days of the date of the notice***. Again, EPA encourages permitting agencies to go beyond the newspaper notice requirement, as appropriate, to disseminate the notice. In response to a request or at its own discretion, the agency may hold a **public hearing** on the post-closure plan, if such a hearing might clarify one or more of the issues concerning the plan. The agency must provide **public notice of the hearing** at least 30 days before it occurs. If the agency tentatively decides to modify the post-closure plan, 40 CFR 265.118(g)(2) requires that *the agency provide the public and the facility, through a **public notice in the newspaper**, with the opportunity to submit written comments within 30 days of the date of the notice*, as well as the opportunity for a public hearing. After considering the comments, the regulatory agency will issue a final decision.

An interim status facility may amend its closure plan at any time prior to the notification of partial or final closure, and its post-closure plan any time during the active life of the facility or during the post-closure care period. An owner or operator with an approved closure or post-closure plan must submit a written request to the permitting agency to authorize a change. In addition, the agency may request modifications to the closure and post-closure plans. If the amendment to the closure plan would be a Class 2 or Class 3 modification, according to the criteria specified in 40 CFR 270.42, then the modification to the plan will be approved according to the procedures in 40 CFR 265.112(d)(4) detailed above. Similarly, if the amendment to the post-closure plan would be a Class 2 or Class 3 modification, according to the criteria specified in 40 CFR 270.42, the modification will be approved according to the procedures in 40 CFR 265.118(f), also described above.

Chapter Summary

Some permitting situations will call for public participation that goes beyond the regulatory requirements

The "RCRA Expanded Public Participation" rule (60 FR 63417, December 11, 1995), provides for earlier public participation in the permitting process, expands public notice for significant events, and enhances the exchange of permitting information

EPA strongly encourages permitting agencies and facilities to ensure equal access to permitting information and provide an equal opportunity for all citizens to be involved in the RCRA permitting process

The permit decision process and the required public participation activities can be divided into four key steps :

1. The Pre-Application Stage

   - Facility gives public notice and holds an informal public meeting

- Agency develops a mailing list
- Additional activities that may apply include: community assessments, public participation plans, information repositories, and fact sheets

2. Application Submittal, Notice, and Review

- Agency issues a notice to the facility mailing list and state and local governments
- Agency makes application available for public review
- Additional activities that may apply include: observation decks, facility tours, community tours, workshops, and news conferences.

3. Preparation of Draft Permit, Public Comment Period, and the Public Hearing

- Agency issues public notice of draft permit (or intent to deny)
- Agency prepares a fact sheet or statement of basis
- Agency announces a 45-day public comment period
- Hold a public hearing, if requested or at the agency's discretion, with 30-day advance notice
- Additional activities that may apply include: information sessions, workshops, news releases, and fact sheets.

4. Response to Public Comments and the Final Permit Decision

- Agency responds to all significant comments raised during the public comment period, or during any hearing
- Agency issues notice of final permit decision

The regulatory agency can initiate a permit modification under 40 CFR 270.41 following the full permitting procedures of 40 CFR Part 124. A facility may also initiate a Class 1, 2, or 3 permit modification under 40 CFR 270.42. For facility-initiated modifications, public participation activities are required of both the facility and the regulatory agency, as described below:

1. Class 1

Facility Requirements:

- Notify mailing list within 90 days

2. Class 2

Facility Requirements:

- Notify mailing list and public newspaper notice
- Announce 60-day public comment period
- Place modification request and supporting documentation in an accessible location in the vicinity of the facility
- Hold public meeting
- If the regulatory agency does not act within 250 days of the modification request, notify mailing list that automatic authorization will become permanent in 50 days

Regulatory Agency Requirements:

- Allow 60 days for public comment on the modification request
- Consider all written comments and respond in writing to all significant comments
- Issue notice to the mailing list within 10 days of any decision to grant or deny a modification request
- Issue notice to the mailing list within 10 days after an automatic authorization goes into effect

3. Class 3

Facility Requirements:

- Notify mailing list and publish newspaper notice
- Announce 60-day public comment period
- Place modification request and supporting documentation in an accessible location in the vicinity of the facility
- Hold public meeting

Regulatory Agency Requirements:

- Allow 60 days for public comment on the modification request
- Issue public notice
- Prepare a fact sheet or statement of basis
- Announce a 45-day public comment period on draft permit decision
- Hold a public hearing, if requested, with 30-day advance notice
- Issue or deny the modification request
- Respond to written and oral comments from the 45-day comment period
- Consider and respond to all significant written comments received during the 60-day comment period

For Class 2 or 3 modifications, the permitting agency may grant a facility temporary authorization to perform certain activities for up to 180 days. The facility must notify the public within seven days of making the request. The agency may grant a temporary authorization without prior public notice and comment.

For facilities seeking permits, the public has the opportunity to comment on closure and post-closure plans and any amendments to the plans as part of the permitting process and permit modification procedures. The public can also comment and request hearings on closure and post-closure plans submitted by interim status facilities. The permitting agency can initiate, and the facility can request, modifications to interim status plans; these requests are also subject to public comment.

Post-closure permits and plans often mandate corrective action.

Exhibit 3-1
Public Participation Requirements for Class 1, 2, and 3 Permit Modifications

Class 1

Type of Changes -- Routine and administrative changes

Required Activities

Within 90 days of implementing a change, facility must notify all parties on mailing list.

Class 2

Type of Changes -- Improvements in technology and management techniques

Required Activities

Day 1: Regulatory agency receives modification request.
Day 7: Facility publishes newspaper notice, notifies mailing list, and places copy of permit modification request and supporting documents in accessible location.
Days 15-45: Facility holds public meeting.
Day 60: Written public comments due to regulatory agency.
Day 90: Regulatory agency response to modification request due, including response to written comments. Deadline may be extended 30 days.
Day 120: If regulatory agency has not responded, requested activity may begin for 180 days under an automatic authorization.
Day 250: If regulatory agency still has not responded, facility notifies public that authorization will become permanent unless regulatory agency responds within 50 days.
Day 300: If regulatory agency has not responded, activity is permanently authorized.

Regulatory agency must notify mailing list within 10 days of any decision to grant or deny modification request, or after an automatic authorization goes into effect.

Class 3

Type of Changes -- Major changes to a facility and its operations

Required Activities

Day 1: Regulatory agency receives modification request.
Day 7: Facility publishes newspaper notice, notifies mailing list, and places copy of the permit modification request and supporting documents in an accessible location.
Days 15-45: Facility holds public meeting.
Day 60: Written public comments due to regulatory agency.

After the conclusion of the 60-day comment period, the regulatory agency must grant or deny the permit modification request according to the permit modification procedures of 40 CFR Part 124. These include:

- Issuing public notice of the draft permit modification or intent to deny the modification;
- Preparing a fact sheet or statement of basis;
- Announcing a 45-day public comment period;
- Holding a public hearing, if requested, with a 30-day advance notice;
- Considering and responding to all significant written and oral comments received during the 45-day comment period; and
- Issuing notice of the final permit modification.

In addition, the regulatory agency must consider and respond to all significant written comments received during the 60-day comment period.

Chapter 4
Public Participation in RCRA Corrective Action Under Permits and §3008(h) Orders

Introduction

RCRA requires owners and operators of hazardous waste management facilities to clean up contamination resulting from current and past practices. These cleanups, known as corrective actions, reduce risks to human health and the environment.

As with the rest of the RCRA program, state environmental agencies can receive authorization from EPA to implement the corrective action program. The corrective action requirements in authorized states must be at least as stringent as the federal requirements and may be more stringent. Where states implement the program, EPA plays an oversight role; the Agency implements the program in non-authorized states.

This chapter lays out a framework for corrective action public participation that follows the typical approach to facility cleanup (e.g., site investigation, analysis of alternatives, remedy selection). However, alternative approaches may be used provided they achieve the goals of full, fair, and equitable public participation. More than 5,000 facilities are subject to RCRA corrective action. The degree of cleanup necessary to protect human health and the environment varies significantly across these facilities. Few cleanups will follow exactly the same course; therefore, program implementors and facility owners/operators must be allowed significant latitude to structure the corrective action process, develop cleanup objectives, and select remedies appropriate to facility-specific circumstances. Similar latitude must be allowed in determining the best approach to public participation, in order to provide opportunities appropriate for the level of interest and responsive to community concerns.

Corrective action may take place under a permit or an enforcement order.

At the federal level, corrective actions may take place under a RCRA permit or as an enforcement order under §3008 of RCRA. In authorized states, corrective action may take place under a state-issued RCRA permit, a state cleanup order, a state voluntary cleanup program, or another state cleanup authority. Since authorized states may use a variety or combination of state authorities to compel or oversee corrective actions, EPA encourages interested individuals to check with their state agency to gather information on the available public participation opportunities.

The RCRA corrective action program is the counterpart of EPA's other hazardous waste clean-up program, "Superfund," which is formally known as the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Unlike most Superfund clean-ups, RCRA corrective actions generally take place at facilities that continue to operate, and the current facility owner or operator is involved in the cleanup. Because cleanups under RCRA and Superfund often involve similar issues, EPA encourages equivalent public participation procedures in the two programs. Thus, parts of this chapter will refer you to the *Community Relations in Superfund* handbook (EPA/540/R-92/009, January 1992), which is available by calling the RCRA/Superfund Hotline at 1-800-424-9346.

Current Status of the Corrective Action Program

The ANPR emphasizes areas of flexibility in corrective action and describes how the program is improving.

Although Subpart S regulations are not final, much of the 1990 proposal is routinely used as guidance by permit writers.

On May 1, 1996, EPA published an Advance Notice of Proposed Rulemaking (ANPR) in the Federal Register (61 FR 19432). The Notice: (1) presents EPA's strategy for writing final corrective action regulations; (2) describes the current corrective action program and requests information to help EPA identify and implement improvements to the program; and (3) emphasizes areas of flexibility in the current program and describes program improvements already underway.

Public participation during corrective action derives from a combination of regulations and EPA guidance. The regulations set out requirements that facilities and agencies must meet when a permit is issued or modified, under 40 CFR parts 124 and 270, to incorporate corrective action provisions. EPA guidance, on the other hand, suggests additional provisions that the permitting agency may include in the permit. One example of such guidance for corrective action activities is the Proposed Subpart S rule (55 FR 30798, July 27, 1990). The Subpart S regulations are not final, but much of the 1990 proposal is routinely used as guidance by permit writers.[1]

Since there are no regulations requiring public participation under §3008(h) orders, any such activities are based on guidance. EPA policy states that the opportunities for public participation should be generally the same as those

---

[1] Two provisions of the 1990 proposal were promulgated in 1993: the final corrective action management unit (CAMU) and temporary unit regulations on February 16, 1993 (58FR 8658). Under this final rule, CAMUs and temporary units may be designated by the regulatory agency in the permit prior to or during remedy selection according to the procedures in 40 CFR 270.41; these units may also be implemented through the use of Section 3008(h) orders or order modifications. Conversely, the facility may request a permit modification to implement a CAMU following the Class 3 permit modification process defined in 40 CFR 270.42. If approval of a temporary unit or time extension for a temporary unit is not requested under a Class 3 permit modification or obtained under a regulatory agency-initiated modification, the facility owner or operator may request approval for a temporary unit according to the procedures for a Class 2 permit modification. Chapter 3 (RCRA Permitting) discusses the public participation activities associated with each level of permit modification.

opportunities that accompany corrective action under a permit (see the section called "Special Considerations for Public Participation Activities Under §3008(h) Orders" below).

In the 1996 ANPR, the Agency reaffirmed using portions of the 1990 proposal as guidance.

The May 1, 1996 ANPR reaffirms the Agency's use of portions of the 1990 proposal as guidance, including many of the portions addressing public participation in corrective action. While much of the 1990 proposal will still be used as guidance, the ANPR emphasizes the need for flexibility in developing site-specific corrective action schedules and requirements, including public participation requirements tailored to meet the needs of the local community.

As described in the ANPR, EPA is actively looking for opportunities to identify and implement improvements to make the corrective action program faster, more efficient, more protective, and more focused on results. In the ANPR, the Agency emphasizes that revisions to the corrective action program should also enhance opportunities for timely and meaningful public participation.

This chapter outlines the public participation activities associated with the corrective action process under both permits and §3008(h) orders. It describes public participation activities currently required under federal regulations and policies, as well as additional activities that EPA recommends. If additional guidance is appropriate upon promulgation and re-proposal of corrective action regulations, EPA will update this chapter and make it available to the public.

The three paragraphs below provide a few guidelines for public participation, in the form of overarching principles, which should be considered throughout the corrective action process.

Early Participation

Public participation should come early in the corrective action process.

As we emphasized in Chapter 2, public participation should begin early in the permitting process. It should also begin early in the corrective action process. Many of the important decisions in a corrective action are made during the site investigation and characterization. Overseeing agencies and facilities should make all reasonable efforts to provide for early public participation during these phases.

Consistency with Superfund

A significant portion of the RCRA corrective action process is analogous to the Superfund process. Due to this similarity, EPA encourages permitting agencies and facilities to make public participation activities under the RCRA system consistent with those activities required under Superfund. For example, RCRA interim actions should provide opportunities for participation that are similar to, or go beyond, Superfund public

participation for removal actions, and similar opportunities for participation should be available under both corrective measures implementation and a Superfund remedial action.

Shared Responsibility for Public Participation Activities

The corrective action process may involve cleanup steps that are initiated by an overseeing agency or a facility owner/operator. Public participation activities will often be more useful for the public if the party who performed the latest cleanup step then conducts the public participation activity. For instance, if the facility owner/operator does a facility investigation, then it would usually be more appropriate for the facility owner/operator to run the public meeting or whatever activity follows the investigation. In addition, EPA recognizes that important forms of public participation take place outside of the formal corrective action process. The Agency encourages public interest, environmental, civic, and other organizations to provide such activities. The Agency also encourages citizens to discuss cleanup and permitting issues with knowledgeable stakeholders in the community.

Special Considerations for Public Participation Activities Under §3008(h) Orders

As we mentioned above, corrective action activities are conducted under an order issued under RCRA Section 3008(h). RCRA 3008(h) orders may be used to get corrective action started in advance of facility permitting or when a facility is closing under interim status. RCRA 3008(h) orders may be issued either on consent or unilaterally. A consent order is issued when the facility and the regulatory agency have come to an agreement about the corrective action; a unilateral order is issued when the regulatory agency and the facility have been unable to agree about the need for, or the scope of, corrective action.

As a matter of EPA policy, the substantive corrective action requirements and public participation requirements imposed under an order are generally the same as those that would occur if corrective action were taking place under a permit (61 FR 19432, May 1, 1996); however, because orders have significant administrative differences from permits there are some special considerations. For example: under a §3008(h) order, there may be limitations on the permitting agency's ability to release or discuss certain information; no public participation activities are statutorily *required* under §3008(h), though EPA policy is that public participation under corrective action orders be generally the same as under permits; and, while facility owner/operators may agree to conduct public participation activities under a consent order, under a unilateral order public participation responsibilities will likely fall to the permitting agency.

Under EPA policy, public participation requirements during corrective action are generally the same under orders and permits.

In addition to ensuring that appropriate public participation activities occur during implementation of a corrective action order, in some cases, it may

be useful to begin public participation prior to the issuance of the order by assessing the community's concerns and identifying the most appropriate means of addressing those concerns. (Assessing a community's concerns and planning for public participation is discussed in greater detail in Chapter 2.) When corrective action will take place under a consent order, care should be taken to explain to the community that corrective action orders on consent are not traditional enforcement actions in that they are simply means to expedite initiation of corrective action activities; they are not typically issued in response to a violation at the facility.

Limitations on Releasing Information: When the agency is negotiating an order with the facility, confidentiality of certain information must be maintained. The aim of these negotiations is to encourage frank discussion of all issues and to resolve differences, thereby allowing the agency to issue an order on consent rather than unilaterally. Agency staff should take notice: public disclosure of some information may be in violation of state and federal statutes, and could jeopardize the success of the negotiations, so be sure to coordinate any public notices with enforcement staff before releasing information.

Not being able to fully disclose information to the public can pose problems, particularly in a community where interest is high and citizens are requesting information. If interest in the facility is high, the project manager, project staff, and the Public Involvement Coordinator should discuss how to address citizens' concerns without breaching confidentiality. At the very least, the public deserves to know why these limitations are necessary and when and if they will be lifted.

Further constraints may be placed upon public participation if discussions with the facility break down, and the case is referred to the Department of Justice (DOJ) to initiate litigation. In this situation, public participation planning should be coordinated with the lead DOJ attorney as well.

Strongly Suggested Versus Required Activities: As discussed earlier in this Chapter, EPA's policy is that the substantive corrective action requirements and public participation requirements imposed under an order should be generally the same as those that would occur if corrective action were taking place under a permit. U.S. EPA's Office of Solid Waste and Emergency Response has issued two directives addressing public participation in §3008(h) orders: Directive 9901.3, *Guidance for Public Involvement in RCRA Section 3008(h) Actions* (May 5, 1987) and Directive 9902.6, *RCRA Corrective Action Decision Documents: The Statement of Basis and Response to Comments* (April 29, 1991). These directives suggest public participation activities in orders, even though such activities are not required by statute. The directives suggest the following activities **after** a proposed remedy has been selected:

- Writing a **statement of basis** discussing the proposed remedy;

- Providing **public notice** that a proposed remedy has been selected and the statement of basis is available;
- Providing a **public comment period** (30-45 days) on the proposed remedy;
- Holding a **public hearing** if requested; and
- Writing a **final decision** and **response to comments**.

The remainder of this Chapter reflects EPA's support for having equivalent public participation steps under both permits and orders. While there are no requirements for public participation under orders, EPA strongly suggests the activities reviewed in this Chapter. In our review of the corrective action elements (initial site assessment, site characterization, etc.) in the following pages, we discuss public participation activities that are required or additional. Because EPA strongly suggests public participation activities under orders, we present them under the "Required Activities" headings for each corrective action element.

Consent Versus Unilateral Orders: If the agency is issuing a consent order, the agency should consider negotiating with the facility to have it write a **public participation plan** (if community interest in the facility is high), or at least conduct some activities as terms of the order. If the agency is issuing a unilateral order, however, circumstances may be such that it is necessary and/or appropriate for the agency to assume all or most public participation responsibilities. Care must be used regarding the disclosure of information prior to the issuance of a unilateral order. Premature disclosure may place additional strain on the facility-agency relationship.

Public Participation In Corrective Action

Because corrective action activities involve investigation of releases and potential releases of hazardous waste, the community is likely to take an active interest. Corrective action investigations and remedial activities may be very visible to the public. Experts visit the facility to conduct investigations, trucks and equipment travel back and forth to the facility, and government agencies oversee activities. Delays in the cleanup or long "down times" between permitting activities are not uncommon. All of these factors can heighten the anxiety and concern of the community. Accordingly, the community may require more information on issues related to current or potential contamination, including levels of contamination, the extent of health and environmental risks, and the potential for future risks. The public may also seek additional opportunities to give input to the overseeing agency or the facility.

The regulatory requirements provide a baseline for adequate public participation while leaving a great deal of flexibility in the program. Some situations will call for public participation opportunities that go beyond the regulatory baseline. Where regulations do not specify public participation during corrective action, overseeing agencies and facility owners/operators

should develop site-specific public participation strategies that are consistent with existing requirements and provide for full, fair, and equitable public participation.

The scope and complexity of corrective actions will vary significantly across facilities. For this reason, EPA has created a flexible program that allows regulatory agencies to tailor corrective action requirements to facility-specific conditions and circumstances. While EPA's public participation regulations establish a baseline of requirements, some situations will call for public participation opportunities that go beyond the regulatory baseline. This is particularly true in the corrective action program because many of the specific corrective action regulations, including regulations for public participation, are not yet final and because corrective action activities often occur outside the permitting process (e.g., under a federal or state order). In this chapter, we will discuss times during the process when additional public participation can be critical. We encourage stakeholders to follow the guidance in this chapter and Chapter 2 when planning for public participation in the corrective action process.

Corrective actions, like most site cleanup activities, usually involve several key elements. These elements are:

- Initial Site Assessment (RCRA Facility Assessment (RFA));
- Site Characterization (RCRA Facility Investigation (RFI);
- Interim Actions;
- Evaluation of Remedial Alternatives (Corrective Measures Study (CMS);
- Remedy Selection;
- Remedy Implementation (Corrective Measures Implementation (CMI)); and
- Completion of the Remedy.

A successful corrective action program must be procedurally flexible; no one approach will be appropriate for all facilities.

The corrective action process is not linear. The elements above should not be viewed as prescribed steps on a path, but as evaluations that are necessary to support good cleanup decisions. Because these elements may not occur in the same order (or at all) at every facility, we encourage planners to use them as general guidelines, while leaving flexibility for changes. A successful corrective action program must be procedurally flexible; no one approach to implementing these cleanup elements will be appropriate for all facilities. The seven elements, and the public participation activities associated with them, are described in the sections below.

Refer to Chapter 3 for additional information on permitting, including permit modifications, and Chapter 5 for specific details on public participation activities described in this chapter.

The corrective action process usually begins with an initial site assessment,

Initial Site Assessment (RFA)

called a RCRA Facility Assessment or RFA. The RFA is conducted either by the overseeing agency or by the facility with subsequent agency approval. The purpose of an RFA is to gather data about a site, including releases and potential releases of hazardous waste and hazardous constituents, to determine whether a cleanup may be necessary. RFAs usually include (1) a file review of available information on the facility; (2) a visual site inspection to confirm available information on solid waste management units (SWMUs) at the facility and to note any visual evidence of releases; and (3) in some cases, a sampling visit to confirm or disprove suspected releases.

The results of an RFA are recorded in an RFA report. The RFA report will describe the facility and the waste management units present at the facility and note any releases or potential releases. It will also describe releases and potential releases from other, non-waste-management-associated sources (e.g., a spill from a product storage tank). Interested individuals may request copies of RFA reports from the appropriate EPA regional office or state agency.

In addition to the information recorded in RFA reports, if corrective action is taking place in the context of a RCRA permit, the permit application will also describe the physical condition of the facility including its subsurface geology, the waste management units present at the facility, and any releases and potential releases.

The RFA report usually serves as the basis for future corrective actions at a facility. If, after completion of the RFA, it appears likely that a release exists, then the overseeing agency will typically develop facility-specific corrective action requirements in a schedule of compliance, which will be included in the facility's permit or in a RCRA Section 3008(h) corrective action order.

In the case of corrective action implemented through a permit, the public may comment on the schedule of compliance for corrective action during permit issuance and subsequent permit modification (see Chapter 3 for more information on the permitting process and permit modifications).

When corrective action is implemented though a 3008(h) order, the public should be given an opportunity to comment on the schedule of compliance when the order is issued; however, it may take many months of discussions between the facility owner/operator and the overseeing agency before an order is issued. In the meantime, the facility owner/operator may develop a **mailing list**, modeled after the mailing list developed under the permitting process, and a **public participation plan**.

On the day the order is issued, the administrative record, containing all information considered by the agency in developing the order, is made available for inspection by the public. The agency may also want to place a copy of the administrative record at a local library close to the facility.

The overseeing agency or facility owner/operator should consider writing a **fact sheet** that gives details of the order and the corrective action process. If there is a high level of interest in the facility, an **open house** or **workshop** should be considered.

Site Characterization (RFI)

A RCRA Facility Investigation or RFI is necessary when a release or potential release is identified and additional information is necessary to determine the nature and scope of corrective action, if any, that is needed. The purpose of an RFI is to characterize the nature and extent of contamination at the facility and to support selection and implementation of a remedy or remedies or, if necessary, interim measures.

Required Activities

If corrective action is being conducted in the context of a RCRA permit, the public has the opportunity to review and comment on the scope of the RFI and RFI schedules and conditions during permit issuance. The RFI is usually conducted by following an agency-approved RFI plan. If the RFI plan is incorporated into a permit by a permit modification, then the public will have an opportunity to comment on the scope and schedule of the RFI during the modification process. See Chapter 3 for more information on public participation during permit modifications.

If corrective action is being conducted under a 3008(h) order, the public should be given the opportunity to review and comment on the scope of the RFI and RFI conditions when the order is issued and/or when the RFI workplan is approved.

RFIs can often involve numerous rounds of field investigation and can take months or even years to complete. During the RFI process, it may be necessary to change the RFI requirements or modify the RFI schedule to react to new information. When corrective action is being conducted in the context of a RCRA permit, the public has an opportunity to comment on changes to RFI conditions and schedules during the permit modification process. Significant changes to the scope of RFI requirements are typically Class 3 permit modifications, changes to RFI schedules or investigatory details (e.g., a change in the number of samples to be collected in a given sampling area) are typically considered either Class 1 or Class 2 modifications, depending on their significance. When corrective action is being conducted under an order, the public's opportunities to review changes to RFI conditions and schedules should be consistent with the opportunities that are available under a permit. The **facility mailing list,** developed during the initial stages of the permitting process, or a mailing list developed during preparation of the corrective action order, should be used and updated throughout the corrective action process in order to keep members of the community informed. (See Chapters 3 and 5 for more information on facility mailing lists.)

In some cases (e.g., where there is a high level of public interest in corrective action activities), the overseeing agency will determine that an **information repository** is needed to ensure adequate public involvement. When corrective action is being conducted under a RCRA permit the agency can require the facility to establish a repository under § 270.30(m). A repository at the RFI stage will provide access to information from an early stage in the process, though the agency has the discretion to use this provision at any stage in the permitting process or at any stage during the corrective action. If the agency decides to require a repository, it will direct the facility to notify the public of the existence of the repository, including the name and phone number of a **contact person**. See Chapter 5 for more detail on information repositories.

Additional Activities

The start of the RFI usually marks the beginning of highly visible, on-going corrective action activities at a facility. Because RFI activities are highly visible and because many of the important decisions regarding the scope of potential corrective actions may be made during the RFI, it will generally be appropriate to reevaluate community concerns and the level of public participation and to revise the **public participation plan** accordingly (see Chapter 5) when RFIs begin. Such efforts early in the process, before community concerns and issues become overwhelming, will be beneficial in the long run.

Developing and distributing **fact sheets** throughout the RFI process is an excellent way to keep in touch with the community. It is a good idea to issue a fact sheet before the RFI begins to explain the investigation's purpose and scope. Another fact sheet should be issued after the RFI is completed to report the investigation results.

EPA encourages all facilities to make the results of the RFI readily available to interested stakeholders. One means of providing access to the information is to send a **summary of the RFI report** to the **facility mailing list**, as proposed in the 1990 Subpart S proposal. The facility may choose other means of distributing the information, such as through a **fact sheet or project newsletter**. The full report should be made available for review in an **information repository**, if one exists, or through some other method that is convenient for the interested public.

The facility owner/operator should provide notice to all adjacent landowners and other persons who may have been affected by releases of contamination, via air or ground water, from the facility. EPA recommends that the owner/operator follow the provisions in the 1990 proposal (proposed § 264.560(a) and (b)) for **notifications for discoveries of contamination** (see 55 FR 30882).

Informal meetings or **workshops** held by the facility, the permitting agency, or public interest groups can provide valuable forums for discussing community concerns.

Interim Actions

Interim actions are activities used to control or abate ongoing risks to human health or the environment in advance of final remedy selection. For example, interim actions may be required in situations where contamination poses an immediate threat to human health or the environment. They also may be required to prevent further environmental degradation or contaminant migration prior to implementing the final remedy. Interim actions may occur at any point in the corrective action process; however, they are often implemented during the RFI or CMS.

Required Activities

When corrective action is proceeding under a RCRA permit, the permit may identify specific interim measures and/or stabilization measures (if they are known at the time of permit issuance) or may have general conditions that govern when interim measures might be required during the course of the corrective action. In either case, the public can comment on the interim measures strategy in the draft permit as part of the permitting process.

When corrective action is proceeding under a 3008(h) order, the public should have the opportunity to comment on specific interim measures or general interim measure conditions when the order is issued, or otherwise in a manner that is consistent with the opportunities available when corrective action takes place under a permit.

Additional Activities

In recent years EPA has increasingly emphasized the importance of interim measures and site stabilization in the corrective action program. In the ANPR, EPA notes that an overriding goal in our management of the corrective action program is to help reduce risks by emphasizing early use of interim actions (while staying consistent with the environmental objectives at the facility). If a facility owner/operator or the permitting agency anticipates that an early interim action will be the only cleanup step taken over a significant period of time, then the facility or the agency should inform the public of such a plan and receive feedback, unless the immediacy of the situation will not allow for feedback. The facility and the agency should both announce a **contact person** to provide information and respond to inquiries about the action. Agencies and facilities may find Superfund guidance on removal actions useful in the RCRA context (see *Community Relations in Superfund: A Handbook*, Chapter 5).

It is a good idea to keep the public informed of such activities by issuing **fact sheets** or holding **informal meetings**. Because interim measures can be conducted at any stage in the corrective action process, you should incorporate activities related to interim measures into the rest of your public involvement program.

Evaluation of Remedial Alternatives (CMS)

When the need for corrective measures is verified, the facility may be required to perform a Corrective Measures Study (CMS) to identify and evaluate potential remedial alternatives. In cases where EPA or a state is using performance standards or a similar approach and in cases where the preferred remedial alternative is obvious (e.g., where EPA has issued a presumptive remedy that is appropriate to site-specific conditions), submission of a formal CMS may not be necessary.

Required Activities

When corrective action is proceeding under a permit, the permit schedule of compliance may already include conditions that specify when a CMS is warranted; the public can comment on these draft permit conditions at the time of permit issuance. However, because the RFI and CMS phases may last several years, depending on the complexity of the facility, the community may be frustrated by the length of time involved and the lack of information on results or findings. Significant changes to the scope of CMS requirements, as specified in the permit, may be considered Class 3 permit modifications requiring significant public involvement. Changes to the CMS schedule, or CMS details are typically considered class 1 or 2 permit modifications, as appropriate.

Public participation during corrective action under a 3008(h) order should be consistent with public participation under a permit. The public should have the opportunity to review and comment on the scope of the CMS and CMS conditions when the order is issued and/or when the CMS workplan is approved.

Additional Activities

In the 1996 ANPR, EPA emphasizes that it expects facility owners/operators to recommend a preferred remedy as part of the CMS. While there is no formal requirement for public participation at this time, EPA strongly encourages the facility to present its preferred remedy to the community before formally submitting it to the agency. The facility should seek community input through an **informal meeting**, **availability session**, or another method that encourages dialogue. This early input is likely to improve many preferred remedies and make them more agreeable to communities. Moreover, it will make the facility and the overseeing agency aware of community concerns and ways to address them.

Holding **workshops** and **informal public meetings** about the CMS process, the remedies being considered, and the activities being conducted at the facility will keep the community involved and informed. **Fact sheets** distributed at significant milestones during the CMS can keep the community abreast of the progress that has been made.

The agency and the facility should provide the name and number of a **contact person**. A contact person will accept comments and answer questions from the community, disseminate information, demonstrate the agency's and facility's willingness to talk with the community, and give the facility or the agency an opportunity to respond to public concerns. The agency or the facility may even consider establishing a **hotline** if a large number of people call with questions. The mailing list and local newspapers are good ways to advertise availability of the hotline.

Remedy Selection

Following receipt of a recommendation of a preferred remedy from the facility owner/operator, the overseeing agency will review the preferred remedy and other remedial alternatives and decide to tentatively approve the preferred remedy, tentatively select a different remedy or require additional analysis of remedial alternatives. The tentatively selected remedy will then undergo public review and comment, usually in the form of a proposed modification to the facility's permit or corrective action order. Following public review, the agency will respond to public comments and then modify the facility permit or corrective action order to incorporate the remedy.

Required Activities

When corrective action is proceeding under a permit, public review and comment on the tentatively selected remedy is generally conducted using the procedures of 40 CFR 270.41 for agency-initiated permit modifications. For such a modification, 40 CFR 270.41 requires the same level of public participation as is required for a draft permit. The agency must release the proposed modification for public review and issue a **public notice** announcing that the proposed modification is available for review. The agency must publish this notice in a major local newspaper, broadcast it over local radio stations, and send it to all persons on the mailing list.

In addition, agency staff must prepare a **fact sheet** or **statement of basis** to explain the proposed modification and the significant factual and legal reasons for proposing the remedy. The statement of basis describes the proposed remedy, but does not select the final remedy for a facility. This approach allows for consideration of additional information during the **public comment period**. Following the comment period, public comment and/or additional data may result in changes to the remedy or in another choice of remedy. After the agency has considered all comments from the public, the final decision -- selecting the remedy or determining the need to

develop another option -- is documented in the response to comments. (For more information on statements of basis, refer to OSWER Directive 9902.6, *RCRA Corrective Action Decision Documents: The Statement of Basis and Response to Comments* (April 29, 1991)).

A **45-day public comment period** on the draft permit modification follows publication of the public notice. The comment period provides the public with an opportunity to comment, in writing, on conditions contained in the draft permit modification. If information submitted during the initial comment period appears to raise substantial new questions concerning the draft permit modification, the agency must re-open or extend the comment period.

The members of the public may request a **public hearing** on the draft permit modification. If a hearing is requested, the agency must give a **30-day advance notice** to the community that states the time and place of the hearing. The agency Director has the discretion to schedule a public meeting or hearing even if the community does not request one. In some cases, scheduling a public hearing before the public requests one may save valuable time in the modification process and demonstrate a willingness to meet with the community to hear its questions and concerns.

After the public comment period closes, the agency must review and evaluate all written and oral comments and issue a final decision on the permit modification. Then the agency must send a **notice of decision** to the facility owner or operator and any persons who submitted public comments or requested notice of the final decision and prepare a written **response to comments**. This document must include a summary of all significant comments received during the public comment period and an explanation of how they were addressed in the final permit modification or why they were rejected. The response to comments must be made available through the Administrative Record and the **information repository**, if one was established, and must be sent to the facility and all persons who submitted comments or requested a copy of your response.

When corrective action is proceeding under a 3008(h) order, the Agency's longstanding policy is that the public's opportunity to review and comment on tentatively-selected remedies should be commensurate with the opportunity that would be available if the corrective action were conducted under a permit. At a minimum, this opportunity should include: publishing a notice and a brief analysis of the tentatively-selected remedy (this is typically referred to as a statement of basis) and making supporting information available; providing a reasonable opportunity for submission of written comments; holding a public hearing or public meeting, if requested by the public or determined necessary by the overseeing agency; preparing and publishing responses to comments; and, publishing the final remedy decision and making supporting information available. Additional guidance is available in OSWER Directives 9901.3, *Guidance for Public*

Involvement in RCRA Section 3008(h) Actions (May 5, 1987) and 9902.6 *RCRA Corrective Action Decision Documents: The Statement of Basis and response to Comments* (April 29, 1991).

Additional Activities

The agency, public interest groups, or the facility should consider holding **workshops** or **informal meetings** during the public comment period to inform the public about the proposed remedy. These discussion sessions can be especially useful when information about corrective measures in a draft permit modification is quite technical or the level of community concern is high.

Remedy Implementation (CMI)

Once the overseeing agency modifies the permit or corrective action order to include the selected remedy, the facility must begin to implement the remedy. Remedy implementation typically involves detailed remedy design, remedy construction, and remedy operation and maintenance; it is called Corrective Measures Implementation or CMI. Corrective measures implementation is generally conducted in accordance with a CMI plan, approved by the overseeing agency.

Required Activities

When corrective action is proceeding under a permit, the public will have an opportunity to comment on CMI conditions and schedules during the permit modification for remedy selection or when the permit is modified to incorporate the CMI plan. Significant changes to the scope of CMI may be considered Class 3 permit modifications. Changes to the CMI schedule are typically considered either Class 1 or Class 2 permit modifications, as appropriate.

When corrective action is proceeding under a 3008(h) order, the public's opportunity to comment on CMI conditions and schedules should be consistent with the opportunities that would be available if corrective action were taking place under a permit.

Additional Activities

Remedy implementation will often involve highly visible activities, such as construction of new on-site treatment and containment systems, and staging and transportation of large volumes of materials. These activities may result in increased levels of public interest, which may already be high due to the public's participation in remedy selection.

EPA recommends that the facility notify all individuals on the facility **mailing list** when the construction plans and specifications are available for public review. If the facility has established an **information repository**,

then the plans should go in the repository; otherwise, the facility should place the plans in a convenient location with public access.

As mentioned earlier, the corrective action process can take years to complete. Additional public participation activities may be appropriate during corrective measures implementation to inform the community of the progress of the remedial action, especially if the public shows concern over the pace and scope of the cleanup operations. In particular, it may be useful to release periodic **fact sheets** to the community that report on progress of the cleanup operations. It may also be helpful to hold an **availability session/open house** near or on the site of the facility to demonstrate or explain the activities involved in the remedy.

Completion of Remedy

Once corrective measures are complete the overseeing agency will either terminate the corrective action order or modify the permit to remove the corrective action schedule of compliance. Decisions regarding completion of corrective measures can be made for an entire facility, for a portion of a facility, or for a specified unit or release. EPA policy is for the public to be given an opportunity to review and comment on all proposals to complete corrective action.

Required Activities

When corrective action is proceeding under a permit, proposals to complete corrective measures should follow the procedures for Class 3 permit modifications. See the section on Class 3 modifications in Chapter 3 for details.

When corrective action is proceeding under a 3008(h) order and a proposal to complete corrective measures is issued, the public should have notice and comment opportunities that are consistent with the opportunities available under the Class 3 permit modification procedures.

Additional Activities

In some cases, hazardous wastes or hazardous constituents will remain in or on the land after completion of corrective measures. When this occurs, the overseeing agency may require the facility to record a notation in the deed to the facility property regarding the types, concentrations, and locations of such waste or constituents.

Chapter Summary

At the federal level, corrective actions may take place under a RCRA permit or as an enforcement order under §3008 of RCRA.

In authorized states, corrective action may take place under a state-issued RCRA permit, a state cleanup order, a state voluntary cleanup program, or another state cleanup authority. Authorized states may use a variety or combination of state authorities to compel or oversee corrective actions.

EPA's recent Advance Notice of Proposed Rulemaking (ANPR) (61 FR 19432, May 1, 1996) for the corrective action program does three things: (1) it presents EPA's strategy for writing final corrective action regulations; (2) it includes a description of the current corrective action program and requests information to help EPA identify and implement improvements to the program; and (3) it emphasizes areas of flexibility in the current program and describes program improvements already underway.

The ANPR also affirmed EPA's use of the 1990 proposal as guidance and emphasized the Agency's commitment to enhanced public participation.

As a matter of EPA policy, the type and timing of public participation activities for §3008(h) orders are generally the same as those for corrective action in permitting.

There are three important distinctions between conducting public participation in corrective action under a §3008(h) order and through permitting:

1. Under a §3008(h) order, there may be limitations on the release or discussion of certain information;

2. No public participation activities are required under §3008(h) but they are strongly encouraged in guidance. In addition, the agency may require the facility to conduct additional activities as a term in the order; and

3. Facilities may agree to conduct public participation activities under a consent order, however, under a unilateral order, the responsibility will likely fall to the agency.

While being flexible, the corrective actions should provide for early public participation, seek consistency with Superfund community involvement standards, and allow facility owner/operators to perform public participation activities where appropriate.

The corrective action process is composed of seven basic elements which are not prescribed steps, but evaluations that are necessary to make good cleanup decisions. Because these elements may not occur in the same order (or at all) in every situation, we encourage planners to use them as general guidelines, while leaving flexibility for changes. A successful corrective action program must be procedurally flexible

The basic elements (with corresponding public participation activities that are currently required or suggested):

1. Initial Site Assessment (RCRA Facility Assessment)

   - Schedule of compliance will go into permit, where public can comment
   - For enforcement orders, the agency will release administrative record and make it available for public review. The agency may provide a fact sheet and hold an open house or workshop.

2. Site Characterization (RCRA Facility Investigation)

   - Update mailing list, if necessary
   - Establish information repository, if required
   - Revise public participation plan
   - Modify permit, if necessary, to reflect changes to schedule of compliance
   - Under an order, provide notice and comment on the planned RFI
   - Develop fact sheets on the investigations
   - Mail summary of RFI Report to facility mailing list and make available to the public
   - Hold informal meetings or workshops
   - Issue notifications for discovery of contamination

3. Interim Actions -- May occur at any time during the process

   - Provide for public input and feedback , as appropriate given time constraints, and announce a contact person
   - Use fact sheets and informal meetings, if appropriate

4. Evaluation of Remedial Alternatives (Corrective Measures Study)

   - Hold informal meetings or workshops when facility presents preferred remedy
   - Identify a contact person
   - Develop fact sheets on the study
   - Establish a hotline

5. Remedy Selection

   - Agency-initiated permit modifications follow 40 CFR 124 procedures, including public notice, public comment period, and a hearing (if requested)
   - For corrective action under an order, the agency should: publish a notice and a statement of basis; take public comment; holding a public hearing or public meeting, if requested by the public or determined necessary by the overseeing agency; prepare and publish responses to comments; and, publish the final remedy decision while making supporting information available.
   - Hold workshop on proposed remedy
   - Once final remedy is selected, send out notice of decision
   - Issue response to comments
   - Hold informal meetings or workshops on the final remedy

6. Corrective Measures Implementation

   - Notify public when plans and specifications are available for review
   - Develop fact sheets on remedy implementation
   - Coordinate availability session/open house

7. Completion of Remedy

   - Agency may remove schedule of compliance from the permit or terminate the order by following the Class 3 modifications procedures for a permit or a similar process for an order.

Chapter 5
Public Participation Activities: How to Do Them

Introduction

This chapter presents a "how-to" for a broad range of activities that permititng agencies, public interest groups, and facility owners/operators can use to promote public participation. The variety of activities in this chapter should fit any situation: from the formal regulatory process that EPA follows, to community-based discussions of RCRA issues, to events held by the facility owner or operator.

Some of the activities in this chapter (for instance, public hearings) will be more appropriately led by a permitting agency; however, all stakeholders can learn more about the different kinds of activities by reviewing this chapter. Moreover, EPA would like to emphasize that this list is not exhaustive. You should consult with other stakeholders to determine if these or any other public participation activities will best suit your particular situation. Several of the appendices provide contact lists for various stakeholder groups.

As we emphasized in the preceding chapters, public participation is a dialogue. It involves both getting information out to other stakeholders and getting feedback in the form of ideas, issues, and concerns. We have divided this chapter's activities to reflect the dual role of public participation. The first group of activities involves techniques that disseminate information. The second group involves techniques that are useful for gathering and exchanging information. Note that some of these activities, such as informal meetings, are useful both for disseminating and collecting information. On the other hand, some activities, such as public notices, provide one-way communication. *EPA encourages stakeholders to combine public participation techniques so that they provide two-way communication.* For instance, if an agency issues a public notice, it should create a feedback loop by including the name and number of a contact person in the notice. Similarly, a facility or a public interest group could provide for feedback in an information repository by asking users to complete surveys or by assigning a staff person to answer questions at the repository.

The following pages contain summaries of numerous public participation activities, information on how and when to conduct them, an estimate of how much effort they require, and their advantages and limitations. Each summary includes a checklist to help in conducting the activity. Examples of public notices and fact sheets are also included.

Use this directory to locate specific activities:

L Disseminating Information

L Gathering and Exchanging Information

Public Participation Plans

Regulatory Requirements

None.

Description of Activity

A public participation plan provides a community-specific plan for interacting with a community regarding the permitting or corrective action activities taking place at a RCRA facility. The plan, typically prepared by the permitting agency, assesses the level of community interest as well as the types of concerns identified through a variety of sources (e.g., **community interviews**) and, based on this information, recommends specific activities for involving the community in the RCRA process. See the section on "Planning for Participation" in Chapter 2 and the detailed sample plan in Appendix I for more information. Chapter 3 of *Community Relations in Superfund* also provides useful guidance.

The level of detail in the plan will vary according to the probable level of public interest, the type of permitting activity, the location of the facility, and other applicable factors. The steps described in this section are not all necessary in every plan. Depending on the situation, the public participation plan may vary from a two-page schedule of activities to a comprehensive study of the population, an itinerary of permitting activities, and an analysis of community concerns.

Level of Effort

A Public Participation Plan may take several days to two weeks to complete. Revision of a plan could take a few days to a week. The range of effort depends on the priority of the site and the complexity of the activities performed at that site.

How to Conduct the Activity

A Public Participation Plan should be based on information collected during community interviews (if conducted) and information obtained from other sources, such file searches, reviews of past media coverage, and community assessments done by third parties (see the section entitled "Planning for Participation" in Chapter 2). This information is analyzed and organized into a community-specific plan. Typical sections of a public participation plan are:

- Introduction -- several paragraphs clearly explaining the purpose of the document.
- Facility History -- several paragraphs to several pages providing an overview of the facility, its technical and regulatory history, and a history of past community concerns and involvement in activities at

the facility. Short cut: attach the facility fact sheet if one already exists.

- Community Concerns -- several paragraphs to several pages summarizing the concerns identified during the community interviews.

- Objectives of the Plan -- several paragraphs to several pages, depending on the objectives, providing a narrative of the major objectives of the plan. Objectives typically relate to the specific concerns outlined in the previous section.

- Public Participation Activities -- several paragraphs to several pages, depending on the plan, describing the specific activities that will be conducted to meet the objectives outlined in the previous section (e.g., meetings, fact sheets, briefings for local officials, etc.) and a schedule for conducting these activities.

- Appendices -- Appendices can be included to provide the mailing list, media contacts, and public meeting and information repository locations.

The activities in a public participation plan should be tailored to address community concerns and needs. The plan should include the kinds of activities that are discussed in this manual.

The plan should be presented in a public document that serves to demonstrate to the community that the agency (and public interest groups and the facility owner, if involved) listened to specific community concerns and developed a specific program around those concerns. EPA encourages permitting agencies to seek input from other stakeholders during development of the plan. The facility owner and public interest groups can provide information about their planned activities and the community representatives can suggest the types of activities, information channels, and logistics that will work best in the area.

Revisions of all or parts of the public participation plan for a facility may be done in order to incorporate new information, reflect changes in community concern, and adjust public participation activities to meet these changes. A revision ensures that the plan remains sensitive to citizens' concerns through the final phases of a permit determination or a corrective action. It can also evaluate which public participation activities were effective and which were not.

When to Use

Public participation plans may be prepared:

- At the beginning of the RCRA process (e.g., for facilities seeking a permit or facilities beginning corrective action) to schedule activities

and assign responsibilities;

- After community interviews (if conducted).

Public participation plans should be revised:

- When a significant change in community concerns or activities at the facility occurs (e.g., after a remedy is selected or the facility proposes a significant permit modification); and
- At least every two years for longer-term projects.

Accompanying Activities

Although they are not necessary in every case, **community interviews** can be very helpful when writing a plan. The plan typically includes the **mailing list** and provides the locations of the **information repositories** and **public hearings**.

Advantages and Limitations

Public participation plans establish a record of community concerns and needs and a set of activities to meet those needs. Because the plans are community-specific, they ensure that the community gets the information they need in a fashion that is most useful and they assist the project staff in making the most efficient use of their time when interacting with the public.

The plan represents the agency's commitment to dedicate significant resources to the activities specified; thus, agency staff should make certain that resources are available to implement all activities identified in the plan. The plan should not schedule activities that the agency will not be able to conduct.

Community concerns can change significantly and may require that the public participation plan be revised periodically. The plans should be seen as "evolving" documents. The agency may need to revise the plan often, conducting new community interviews each time. At the least, the agency should be prepared to revise activities or expand activities as the project proceeds.

Revising the plan will help to ensure that the agency continues to respond to citizens' concerns during long-term projects. Minor changes also can help a public participation planner; for example, the contacts list can incorporate changes in addresses, new telephone numbers, and the names of new officials.

Checklist for Public Participation Plans

As applicable:

- __ Review facility background file and other information sources
- __ Review comments gathered during the community interviews
- __ Coordinate with other key stakeholders to discuss the plan
- __ Write draft plan
  - __ Introduction -- explains the purpose of the document
  - __ Project History -- provides an overview of the project, its technical and regulatory history, and a history of past community concerns and involvement in the project (if available)
  - __ Community Concerns -- summary of the concerns identified during the community interviews
  - __ Objectives of the Plan -- explains the major objectives relating to specific concerns outlined in the previous section of the document
  - __ Public Participation Activities -- describes the specific activities to be conducted to meet the objectives of the plan and schedule
  - __ Appendices -- provide information on key contacts, media, public meeting and information repository locations.
- __ Coordinate internal review of plan
- __ Solicit community input on the plan
- __ Prepare final plan based on comments
- __ Distribute plan to information repositories if they exist, or make the plan available to the public in a convenient place

Public Notices

Regulatory Requirements

The permitting agency must give official public notice when issuing the draft permit (§ 124.10(c)), holding a public hearing under § 124.12, or when an appeal is granted under § 124.19. This notice must be sent by the agency to all relevant units of federal and local government, the applicant, and all parties on the facility mailing list. In addition, the notice must be broadcast over local radio stations and published in a daily or weekly major local newspaper of general circulation.

A prospective permit applicant must issue a similar, but broader, public notice to announce the pre-application meeting (§ 124.31). This notice must be published as a display advertisement in a paper of general circulation and must be sent to the permitting agency and appropriate units of local government. The applicant must also post the notice as a sign at or near the facility, and as a broadcast media announcement. The notice must include the name, address, and telephone number of a contact person for the applicant.

The facility owner/operator must provide public notice for permit modfications (including modifications to incorporate corrective action provisions) under § 270.42. For a class 1 modification, the facility must notify the facility mailing list. For a class 2 modification, the facility must notify the mailing list and publish a newspaper notice when requesting the modification. The permitting agency must notify the mailing list within 10 days of granting or denying a modification request. For a class 3 modification, the facility must publish a newspaper notice and notify the mailing list when requesting a modfication. The permitting agency must follow the procedures for modifications in part 124 when granting or denying the class 3 permit modification. The permitting agency will also notify people on the mailing list and State and local government within 10 days of any decision to grant or deny a Class 2 or 3 modification request. The Director also must notify such people within 10 days of an automatic Class 2 modification goes into effect under § 270.42(b)(6)(iii) or (v).

If the permitting agency initiates the permit modification, under § 270.41, then the agency must follow the notice requirements for a draft permit in § 124.10(c) (see above in this section). Agency-initiated modifications may include modifications during the corrective action process.

If the permitting agency requires a facility to establish an information repository under § 124.33 or § 270.30(m), the agency Director will specify notice requirements. At the least, the facility will provide written notice to the people on the mailing list.

Permitting agencies must also provide provide public notice during the trial burn stage at permitted and interim status combustion facilities (§ 270.62(b)

and (d); 270.66(d)(3) and (g)) and when an interim status facility undergoes closure or post-closure (see §§ 265.112(d)(4) and 265.118(f)).

Description of Activity

Public notices provide an official announcement of proposed agency decisions or facility activities. Notices often provide the public with the opportunity to comment on a proposed action.

Most RCRA notices contain essentially the same types of information. Where they differ is in how they are distributed by the agency or the facility. Some go to members of the mailing list, some as legal advertisements in the newspaper, and some others as signs or radio advertisements. In all cases, EPA encourages facilities and permitting agencies to make a good faith effort to reach all segments of the affected community with these notices. As we mention earlier in this manual, any organization that wants to provide public notice has a number of inexpensive and simple options available to it, including: free circulars; existing newsletters or organzation bulletins; flyers; bulletin boards; or storefront signs.

There are many effective ways to spread information. However, the job of anyone giving notice is to find out what information pathways will be most effective in a particular community. Public interest groups, the facility, and the permitting agency should seek community input on this topic. The citizens of that community are the most qualified people to explain what methods will work best in their community. **Community interviews** are one way to learn more about how the citizens communicate.

The following are the most common ways to give public notice:

- Newspaper Advertisements. Traditionally, public notices have often appeared as legal advertisements in the classified section of a newspaper. While this method provides a standard location for the ads, display advertisements (located along with other commercial advertisements) are more likely to reach a larger audience. Display advertisements offer an advantage over legal classified ads since they are larger, easier to read, and are more likely to be seen by the casual reader. A sample is available in Appendix H of this manual.
- Newspaper Inserts. Inserts stand out from other newspaper advertisements since they come as a “loose” section of the newspaper (a format often used for glossy advertisements or other solicitations). They provide a way to reach beyond the most-involved citizens to inform a broader segment of the community.
- Free Publications and Existing Newsletters. Placing a notice in a newsletter distributed by a local government, a civic or community organization, or in a free publication (e.g., a paper that highlights local or community activities) is a generally inexpensive way to target a specific audience or segment of the community. Some publications may not be appropriate for communicating information from your

organization. By publishing information through a group that has a specific political interest or bias, your organization may be perceived as endorsing these views. Permitting agencies may want to avoid associations with groups that appear to represent the agency's interests. In any case, the relationship between your organization and the newsletter or publication should be clear to the public.

You may want to consider some of the following options. Local governments sometimes send newsletters or bulletins to their entire population; such newsletters can reach an entire affected community. Planning commissions, zoning boards, or utilities often distribute regular newsletters; they may be willing to include information about permitting activities. Newsletters distributed by civic, trade, agricultural, religious, or community organizations can also disseminate information to interested readers at low cost. Some segments of the affected community may rely on a free local flyer, magazine, independent or commercial newspaper to share information.

- Public Service Announcements. Radio and television stations often broadcast, without charge, a certain number of announcements on behalf of charities, government agencies, and community groups. In particular, they are likely to run announcements of public meetings, events, or other opportunities for the public to participate. One drawback with a public service announcement is that you have no guarantee that it will go on the air. If it does go on the air, it may come at odd hours when relatively few people are listening.
- Broadcast Announcements and Advertisements. A number of RCRA notices must be broadcast over radio or another medium. Beyond these requirements (which are further explained below and in the section on "Notice of the Pre-Application Meeting" in Chapter 3), you may consider providing notice via a paid TV advertisement or over a local cable TV station. Paid advertisements can be expensive and may be seen by the public as taking a side. You can avoid this drawback by limiting information to the facts (e.g., time, date, location of the meeting). Some local access cable TV stations run a text-based community bulletin board, which may provide a useful way to distribute information.
- Signs and Bulletin Boards. The notice requirements for the pre-application meeting (§ 124.31) require posting of a visible and accessible sign. Signs can be a useful means of public notice, especially for residents and neighbors of the facility or planned facility. A sign on the site should be large enough so that passers-by, whether by foot or by vehicle, can read it. If few people are likely to pass by the site, consider posting the sign at the nearest major intersection. Another option is to place posters or bulletins on community bulletin boards (in community centers, town halls, grocery stores, on heavily-travelled streets) where people are likely to see them. The signs should contain the same information as a written or broadcast notice.

- Telephone Networks or Phone Trees. This method provides an inexpensive, yet personal, manner of spreading information. The lead agency, facility, or organization calls the first list of people, who, in turn, are responsible for calling an additional number of interested people. Phone trees are a good way to provide back up plans or reminders while reducing the number of calls made by individual staff members. As an alternative to calling the first tier, the lead agency, facility, or organization may want to distribute a short written notice.

Level of Effort

Preparing a public notice and arranging for its publication takes a day or two, depending on the need for review. Producing a television or radio ad, or building a sign will take longer, depending on the situation.

How to Conduct the Activity

To prepare a public notice:

1. **Identify the major media contacts.** While there may be many daily newspapers serving a particular area, use only one or two for the public notice. In general, use the newspaper with the widest circulation and greatest visibility in order to reach the most people and elicit the greatest response. In some cases, you may want to choose specific newspapers to reach target audiences; find out what papers the affected community reads and place your notices there. Use a similar strategy for notices in the broadcast media. If you are giving notice via more than one media, you have more flexibility for reaching specific audiences. See the section on "Notice of the Pre-Application Meeting" in Chapter 3 for more information.

2. **Take into account publication schedules.** Many local or community newspapers are published on a weekly or bi-weekly basis. This may make it difficult to coordinate the publication of the notice with the event. In such a case, consider using a city-wide newspaper that is published more frequently. If the city-wide paper is not likely to reach all segments of the affected community, you should make efforts to supplement the newspaper notice with other means of notice (e.g., signs or broadcast media).

3. **Include the following information in the public notice:**

   - Name and address of the facility owner/operator;
   - A brief description of the business conducted at the facility and the activity that is the subject of the notice;
   - Name, address and telephone number of an individual who can be contacted for further information on the activity;
   - A brief description of the comment procedures and the date, time, and place of any hearing;

- If the permit is issued by EPA, the location of the administrative record and the times when it is open for public inspection; and
- Any additional information considered appropriate.

Also, try to format the notice so that it is eye-catching. A logo can help.

4. **Announce dates, times, and locations clearly in the public notice.** When announcing an event such as a hearing, make sure that the date and time do not conflict with other public meetings, religious or non-religious holidays, or other important community events.

5. **Provide ample notice.** For RCRA permits, the public notice must allow at least 45 days for public comment. Public notice of a public hearing must be given at least 30 days prior to the hearing. Be sure to state the opening and closing dates for comment periods.

6. **If possible, review a typeset version of the notice before it is published to ensure accuracy.**

7. **Keep proof of the notice for your files.** Newspapers often can provide "tear sheets" as a record of the notice. Similar proofs are available from radio or television stations. You should consider keeping photgraphs of posted signs.

When to Use

The "Regulatory Requirements" section above reviews the mandatory public notices. In addition, agency personnel can use informal public notices to announce other major milestones or events in the permit review or corrective action process. Permitting agencies may also want to use public notices when they are establishing mailing lists. The facility must issue notices when it requests a permit modification, holds a pre-application meeting, or establishes an information repository.

Public notices can be useful for any organization involved in the RCRA permitting process. Whenever a public interest organization is planning an activity, or would like to supplement notices given by the facility or the agency, you may want to consider using one of the public notice methods in this manual. Notices can also help build your mailing lists.

Accompanying Activities

Public notices are used to announce **public comment periods** and **public hearings**. They can also be used to announce other meetings and milestones, opportunities to join the **mailing list**, as well as the availability of an **information repository**, **fact sheets**, or other permitting information.

Advantages and Limitations

Public notices are an efficient, simple means of alerting the public to important events. However, public notices should never substitute for other activities that involve direct communication with the public.

Public notices can be more effective, and provide more of a feedback loop, when they are combined with a means of gathering information from the public. Every notice should contain a **contact person** so that the public can direct comments or questions to the agency, the facility, or other stakeholder groups.

See "Description of Activity" above in this section for advantages and limitations of specific notice methods.

Checklist for Public Notices

__ Compile information to be included in the public notice:

- __ Name of agency overseeing the permit or corrective action
- __ Name, address, and phone number of contact person
- __ Facility owner/operator and description of facility activities
- __ Purpose of public notice
- __ If applicable provide the date, time, and location of public hearing (or meeting)
- __ Description of the procedures governing the public's participation in the process

__ Draft the public notice, announcement, or advertisement

__ Coordinate review of the draft public notice

__ Prepare final public notice

__ Receive final approval of public notice

__ Coordinate placement of the public notice in the local newspaper(s), coordinate distribution of the public notice to the facility mailing list, submission to radio/television stations or other publications (as applicable)

For publication in local newspaper(s):

Name of Newspaper	Publication Days	Advertising Deadline

__ Prepare procurement request or advertising voucher for public notice publication

__ Obtain price quotes (i.e., cost per column inch)

__ Determine size of public notice _____

__ Determine deadlines for publication of the public notice

__ Submit for publication

__ Request proof of publication; file proof in facility file

Checklist for Public Notices (continued)

For distribution to the mailing list:

__ Verify that facility mailing list is up-to-date

__ Produce mailing labels

__ Distribute to the mailing list

For broadcast on local radio/television stations:

___ Verify media list

___ Prepare procurement request or advertising voucher for public notice spots

___ Obtain price quotes

___ Distribute to stations

___ Request proof of airing and file in facility file

Translations

Regulatory Requirements

None. EPA strongly recommends using multilingual fact sheets, notices, and other information (as appropriate) to provide equal access to information in the permitting process.

Description of Activity

Translations provide written or oral information in a foreign language to a community with a significant number of residents who do not speak English as a first language. There are two types of translations:

- A written translation of materials originally written in English;
- A simultaneous verbal translation (i.e., word by word) of a public meeting or news conference, usually with small headsets and a radio transmitter.

Translations ensure that **all** community members are informed about activities at a facility and have the opportunity to participate in the decision-making process.

Level of Effort

The amount of time needed to translate a document depends on the length of the document and the complexity of the information in the document. You should allow at least several days for translation.

How to Conduct the Activity

To develop a successful translation:

1. **Evaluate the need** for a translation. Evaluate the demographic characteristics of the community as well as the type of public participation activities being planned. Consider whether citizens' ability to take part in an activity is limited by their inability to speak or understand English.

2. **Identify and evaluate translation services**. A successful translation depends on the skill of the translator. More problems may be created than solved if inaccurate or imprecise information is given. Many translators will not be familiar with the technical terms associated with hazardous materials and few, if any, will be familiar with the RCRA permitting and corrective action processes. This problem may be further compounded in the case of oral translations (especially simultaneous translations) as there is no time for review or quality control. Thus, it is necessary to contract someone with experience in translating technical information and check the translator's work to ensure that the content and tone are in keeping with the intent. You also need to ensure that the translator uses the same dialect as those in your intended audience.

3. **Avoid the use of jargon or highly technical terms**. As a matter of standard practice, a staff member should go over in advance all technical and RCRA terms that may cause problems with the translator.

4. **For verbal presentations, public meetings, and news conferences, plan what to say ahead of time**. If the translator has a prepared written speech to work with in advance, there is more time to work out any vocabulary "bugs" and thereby reduce the chances of faltering over unfamiliar material or making inaccurate word choices. If possible, practice with the translator before the actual meeting or presentation date.

5. **Anticipate questions from the audience and reporters**, and have at least the technical aspects (e.g., chemical names, statistics) of the answers translated in advance.

When to Use

A translation can be used:

- When a signficant portion of the community does not speak English as a first language. A written translation should be provided for fact sheets or letters, unless a presentation or public meeting would be more appropriate (e.g., the literacy rate among the foreign-speaking community is low).
- Verbal translations are recommended where there is considerable concern over the facility, extreme hostility, or suspicion of the agency's efforts to communicate with community members.

Accompanying Activities

The need for translations is often determined during the community assessment and **community interviews**. Translations are generally used for **fact sheets**, **public notices**, **presentations**, **public meetings**, **public hearings**, and **news conferences**.

Advantages and Limitations

Written translations and use of translators ensure that a greater number of community members can participate effectively in the process and, therefore, provide input to decisions concerning the RCRA-regulated process. This effort assures the community of your organization’s sincerity in providing opportunity for public participation.

Translations are very costly, especially simultaneous translations of public meetings. Sentence-by-sentence oral translations frequently double the length of public meetings, and may make information more difficult to present effectively and smoothly. In addition, very few translators are familiar with the RCRA permitting and corrective action processes. For facilities having highly volatile or sensitive problems, it may be difficult to communicate your organization’s position and involve community

members in a constructive dialogue.

Checklist for Translations

- _ Determine need for translations
- _ Identify translation service or identify staff to provide translating services
- _ Fact sheet translations
  - _ Provide English text (including text for graphics, headlines, fact sheet flag)
- _ Meeting translations
  - _ Determine if translation will be simultaneous or if translations will occur following statements.
  - _ If simultaneous, provide audio equipment for translator/participants
  - _ Prepare list of technical and RCRA terms that will need to be translated
  - _ Prepare, in advance with the translator, presentations, responses to questions

Mailing Lists

Regulatory Requirements

The permitting agency must establish and maintain the facility mailing list in accordance with § 124.10(c)(1)(ix). The agency must develop the list by: (a) including people who request in writing to be on the list; (b) soliciting persons for "area lists" from participants in past permit proceedings in that area; and (c) notifying the public of the opportunity to be put on the mailing list through periodic publication in the public press and in such publications as Regional- and State-funded newsletters, environmental bulletins, or State law journals.

Description of Activity

Mailing lists are both important databases and essential communication tools. Mailing lists ensure that concerned community members receive relevant information. They allow messages to reach broad or targeted audiences. The better the mailing list, the better the public outreach and delivery of information. Mailing lists typically include concerned residents, elected officials, appropriate federal, state, and local government contacts, local media, organized environmental groups, civic, religious and community organizations, facility employees, and local businesses.

It is recommended that you develop an internal distribution list at the same time you prepare your external mailing list. The distribution list for permitting agencies should include all technical project staff, public involvement staff, legal staff, and staff from other affected programs (Air, Water, etc.), as appropriate. This list will help ensure that all relevant project staff receive the same information about all phases of the project. Facilities and community organizations should follow similar procedures to keep their staffs and members informed.

Level of Effort

A mailing list can be developed in conjunction with other public participation activities. Depending on the size of the list, inputting information into a data base can take several days. Updating will require approximately half a day per quarter.

How to Conduct the Activity

To develop and update a mailing list, consider the following:

1. **Solicit names, addresses, and phone numbers of individuals** to be included on the list. This should include individuals who put their names and addresses on the sign-in sheet at the pre-application meeting, if applicable. Telephone numbers are useful to have so that you can contact these individuals for community interviews and to aid you when you update your list.

   Individuals to include in your mailing list:

- The people interviewed during community interviews, as well as other names these people recommend;
- All nearby residents and owners of land adjacent to the facility;
- Representatives of organizations with a potential interest in an agency program or action (e.g., outdoor recreation organizations, commerce and business groups, professional/trade associations, environmental and community organizations, environmental justice networks, health organizations, religious groups, civic and educational organizations, state organizations, universities, local development and planning boards, emergency planning committees and response personnel, facility employees);
- Any individual who attends a public meeting, workshop, or informal meeting related to the facility, or who contacts the agency regarding the facility;
- Media representatives;
- City and county officials;
- State and Federal agencies with jurisdiction over wildlife resources;
- Key agency officials; and
- The facility owner/operator.

2. **Review background files** to ensure all interested individuals are included on the mailing list.

3. **Input information into a computer system** so that it can be categorized and sorted and printed on mailing labels.

4. **Send a letter or fact sheet to the preliminary mailing list developed using 1) and 2) above.** Inform key Federal, State, and local officials, citizens, and other potentially interested parties of your activities and the status of upcoming permit applications or corrective actions. Ask whether they wish to receive information about this facility. Ask them for accurate addresses and phone numbers of other people who might be interested in the project.

5. **Update your mailing list** at least annually to ensure its correctness. Mailing lists can be updated by telephoning each individual on the list, and by using local telephone and city directories as references. The permitting agency can update the official mailing list from time to time by requesting written indication of continued interest from those listed. The agency can then delete any people who do not

respond (see § 124.10(c)(1)(ix)(C)).

See the section on "The Facility Mailing List" in Chapter 3 for more information.

When to Use

A mailing list is a required public participation activity for permitting. Additional people may want to join the list if corrective action will take place at a facility. Public interest groups or other involved organizations often have mailing lists.

- Develop a mailing list as soon as possible during the permit application phase, or as soon as the need for a RCRA Facility Investigation is identified.
- Update the mailing list regularly.

Develop a distribution at the same time you develop a mailing list.

Accompanying Activities

Mailing lists are useful in identifying individuals to contact for community interviews. They are also needed to distribute **fact sheets** and other materials on the facility. **Public notices** and sign-up sheets at **public meetings** or **information repositories** can help you build mailing lists.

Advantages and Limitations

Mailing lists provide the names of individuals and groups interested in activities at RCRA facilities. However, lists can be expensive and time-consuming to develop, and they require constant maintenance.

Checklist for Mailing Lists

Mailing List Development:

- __ Verify the list format (i.e., name, title, company, address, phone number)
- __ Consider issuing a public notice to solicit names for the mailing list
- __ Identify people to be included on the list:
  - __ People who signed the attendance sheet at the pre-application meeting (if applicable)
  - __ City elected officials (mayor and council)
  - __ City staff and appointees (city manager, planning director, committees)
  - __ County elected officials (supervisors)
  - __ County staff and appointees (administrator, planning director, health director, committees)
  - __ State elected officials (senators, representatives, governor)
  - __ State officials (health and environment officials)
  - __ Federal elected officials (U.S. Senators, U.S. Representatives)
  - __ Federal agency officials (EPA)
  - __ Residents living adjacent to facility
  - __ Other interested residents
  - __ Media
  - __ Business groups of associations
  - __ Businesses possibly affected by the facility (i.e., located down-wind of facility)
  - __ The facility owner/operator
  - __ Consultants working on the project or related projects
  - __ Local environmental groups
  - __ Other civic, religious, community, and educational groups (e.g., League of Women Voters, government associations, churches, homeowners and renters associations)
  - __ State and Federal Fish and Wildlife Agencies

Checklist for Mailing Lists (continued)

__ Have list typed

__ Prepare mailing list

__ Store on computer data base

Mailing List Updates:

__ Verify names/addresses by searching telephone directory

__ Verify names/addresses by searching city directory

__ Verify names/addresses by calling each individual

__ Consider issuing a notice asking for written indication of continued interest (§ 124.10(c)(1)(ix)(C))

Notices of Decision

Regulatory Requirements

RCRA requires the permitting agency to issue a notice of decision to accompany the final permit decision (under § 124.15 procedures). The agency must send the notice to the permit applicant and to any person who submitted written comments or requested notice of the final permit decision (§ 124.15). Note that Class 3 modifications and the corrective action final remedy selection also follow § 124.15 procedures and require a Notice of Decision.

Description of Activity

A notice of decision presents the agency's decision regarding permit issuance or denial or modification of the permit to incorporate changes such as the corrective action remedy.

Level of Effort

A notice of decision may take several days to write and review, depending on the complexity. Allow time for several rounds of revisions. If you need to develop graphics, such as site maps, allow time to produce the graphics.

How to Conduct the Activity

The notice should briefly specify the agency's final decision and the basis for that decision. The notice must also refer to the procedures for appealing a decision. Notices of decision must be sent to the facility owner/operator (permit applicant) and each person who submitted written comments or requested notice of the final permit decision. You may want to send the notice to other interested parties as well. Final permits generally become effective 30 days after the notice of decision.

When to Use

- When a permit decision has been finalized following the 45-day public comment period;
- When the permitting agency makes its final decision regarding a permit modification.

Accompanying Activities

A **response to comments** document must be issued at the same time the final permit decision is issued.

Advantages and Limitations

The notice of decision provides a clear, concise public record of the decision. However, the notice of decision should not be a substitute for other activities that involve direct two-way communication with the public.

Checklist for Notices of Decision

- _ Determine contents of the notice of decision
  - _ Decision made and basis for that decision
  - ___ Information on appeal procedures
- _ Coordinate writing the notice with technical and legal staff
  - _ Technically accurate
  - _ Satisfies statutory requirements
  - _ Provides the public with all necessary information in a clear and concise manner
- _ Coordinate internal review of notice of decision
- _ Prepare final notice of decision based on internal review comments
- ___ Notify the facility owner/operator and anyone who submitted written comments or requested notice of the final decision
- _ Notify other interested parties of the decision
- _ Place copy of the notice of decision in the administrative record and the information repository (if one exists)

Introductory Notices

Regulatory Requirements

While EPA regulations do not specifically require an introductory notice, § 124.32 provides for an agency notice at the time of application submittal. Permitting agencies may want to consider the guidance in this section (in addition to the § 124.32 requirements) when preparing the notice at application submittal. Chapter 3 provides guidance specifically for the notice at application submittal.

Description of Activity

An introductory notice explains the agency's permit application review process or the corrective action process and the opportunities for public participation in that process.

Level of Effort

The amount of time needed to prepare an introductory notice is based on whether the notice is prepared as a public notice or a fact sheet. If prepared as a public notice, allow a day or two for writing, review, and placement in newspapers and other media. If prepared as a fact sheet, allow several days to a week to write and review, depending on the layout and graphics used, and several days for printing.

How to Conduct the Activity

To prepare an introductory notice:

1. **Determine the best method to explain the permit application review or corrective action process.** An introductory notice can be presented as a public notice, a fact sheet, or a flier distributed to the facility mailing list.

2. **Prepare and distribute the notice.** Coordinate the writing and distribution of the notice with technical project staff. Take care to write the notice avoiding technical terms and jargon.

3. **Include an information contact.** Provide the name, address, and phone number of a contact person who the public can call if they have questions or need additional information about the facility. You might add a return slip to the notice for people to complete and return to your organization if they would like additional information or to be placed on a mailing list.

When to Use

An Introductory Notice can be used:

- When you find the community knows little or nothing about the RCRA process; and
- When you need to notify the public of how they can become involved in the RCRA process.

Accompanying Activities

Informal meetings, **availability sessions/open houses**, or **workshops** may be conducted following release of the notice.

Advantages and Disadvantages

An introductory notice informs the public about the agency's permit application review process and how they can be involved in the process. However, the notice is a one-way communication tool. A **contact person** should be identified in the notice so that interested members of the community can call this person if they have questions.

Checklist for Introductory Notices

- ___ Determine how you will distribute the notice.
  - ___ Public notice in newspaper
  - ___ Fact sheet or flier sent to the mailing list
- ___ Prepare draft introductory notice
- ___ Include name and phone number of a contact person
- ___ Coordinate internal review of introductory notice
- ___ Write final introductory notice based on comments received during the internal review
- ___ Verify facility mailing list is up-to-date
- ___ Request mailing labels
- ___ Distribute introductory notice

Fact Sheets/ Statements of Basis

Regulatory Requirements

EPA's regulations require the agency to develop a fact sheet or a statement of basis to accompany the draft permit. The agency will develop a fact sheet for any major hazardous waste management facility or facility that raises significant public interest (§ 124.8). The agency must prepare a statement of basis for every draft permit for which a fact sheet is not prepared (§ 124.7). Note that these requirements also apply to Class 3 modifications and agency-initiated modifications (such as the agency may use at remedy selection), which must follow the part 124 procedures. Specific requirements for these activities are described below under "How to Conduct the Activity."

Description of Activity

RCRA-required fact sheets and statements of basis summarize the current status of a permit application or corrective action. This required fact sheet (or statement of basis) is probably different than the commonly-used informational fact sheets that most people recognize. The required fact sheet must explain the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. They can vary in length and complexity from simple two-page documents to 12-page documents complete with graphic illustrations and glossaries.

The agency and other stakeholder groups may find it useful to develop other fact sheets to be used in public participation activities. These informal/informational fact sheets can explain difficult aspects of the permitting process or provide technical information in language that an ordinary person can understand. These fact sheets may come in many different varieties and levels of detail.

Fact sheets are useful for informing all interested parties about the basis for the permitting agency's decision regarding a facility permit or proposed corrective action activities. They ensure that information is distributed in a consistent fashion and that citizens understand the issues associated with RCRA programs.

Statements of basis are generally shorter than fact sheets and summarize the basis for the Agency's decision. Statements of basis are often used in the corrective action program to summarize the information contained in the RFI/CMS reports and the administrative record. They are designed to facilitate public participation in the remedy selection process by:

- Identifying the proposed remedy for a corrective action at a facility and explaining the reasons for the proposal.

- Describing other remedies that were considered in detail in the RFI and CMS reports.
- Soliciting public review and comment on all possible remedies considered in the RFI and CMS reports, and on any other plausible remedies.
- Providing information on how the public can be involved in the remedy selection process.

In emphasizing that the proposed remedy is only an initial recommendation, the statement of basis should clearly state that changes to the proposed remedy, or a change from the proposed remedy to another alternative, may be made if public comments or additional data indicate that such a change would result in a more appropriate solution. The final decision regarding the selected remedy(ies) should be documented in the final permit modification (if applicable) with the accompanying response to comments after the permitting agency has taken into consideration all comments from the public.

Level of Effort

Fact sheets and statements of basis may take from two days to two weeks to write, depending on their length and complexity. Allow time for several rounds of revisions. Allow three days for printing. (Short Cut: Use already developed RCRA templates with graphics that are on file at your agency).

How to Conduct the Activity

The first step in preparing a fact sheet is to determine the information to be presented. EPA decisionmaking regulations require that RCRA permit fact sheets contain the following types of information:

- A brief description of the type of facility or activity which is the subject of the draft permit;
- The type and quantity of wastes covered by the permit;
- A brief summary of the basis for the draft permit conditions and the reasons why any variances or alternatives to the proposed standards do or do not appear justified;
- A description of the procedures for reaching a final decision, including the beginning and ending dates of the public comment period and the address where comments can be sent, and procedures for requesting a public hearing; and
- Name and telephone number of a person to contact for additional information.

A statement of basis is prepared the same way as a fact sheet. The statement of basis summarizes essential information from the RFI and

CMS reports and the administrative record. The RFI and CMS reports should be referenced in the statement of basis. The statement of basis should:

- Briefly summarize the environmental conditions at the facility as determined during the RFI.
- Identify the proposed remedy.
- Describe the remedial alternatives evaluated in sufficient detail to provide a reasonable explanation of each remedy.
- Provide a brief analysis that supports the proposed remedy, discussed in terms of the evaluation criteria.

Select a simple format for presenting the information. Avoid using bureaucratic jargon, acronyms, or technical language in the text, and be concise.

Use formatting techniques to make the fact sheet or statement of basis more interesting and easy-to-read. People are less likely to read a fact sheet or statement of basis consisting of a solid sheet of typed text than one with clear, informative illustrations. Moreover, a well-designed document suggests that the permitting agency takes its public participation program seriously.

Coordinate the production of these documents with technical project staff. Technical staff should review them to ensure that the information conveyed is accurate and complete. Outreach staff should review them to ensure that the communication goals are being met.

Arrange for printing and distribute copies of the fact sheet or statements of basis to the mailing list, place extra copies at the information repository, and distribute additional copies at public meetings and hearings.

When to Use

While fact sheets/statements of basis are required for draft permits, they can also be helpful at other times in the permitting and corrective action processes:

- During technical review of the permit application;
- At the beginning of a RCRA facility investigation;
- When findings of the RCRA facility investigation are available;
- When the corrective action is completed; and
- When the Notice of Decision is released.

In addition, fact sheets can be written to explain a facility inspection or

emergency action, a new technology, or a community-based activity.

Fact sheets and statements of basis can be particularly useful in providing background information prior to a public meeting or public hearing.

Accompanying Activities

Fact sheets and statements of basis are generally used in conjunction with the **mailing list**, **public notices**, **public comment periods**, and **public meetings** and **hearings**. However, as stated above, they can be helpful at almost any stage in the permitting or corrective action processes.

Advantages and Limitations

Fact sheets and statements of basis are effective in summarizing facts and issues involved in permitting and corrective action processes. They communicate a consistent message to the public and the media. Produced throughout the permitting or corrective actions processes, they serve to inform the public about the regulatory process as well as the technical RCRA issues and can aid in creating a general community understanding of the project. They are relatively inexpensive and can be distributed easily and directly to the mailing list. In addition, fact sheets and statements of basis can be tailored to meet specific information needs identified during community assessments.

However, a poorly written fact sheet or statement of basis can be misleading or confusing. Documents of this type that are not written in an objective style can be perceived as being too "persuasive" and considered "propaganda" by mistrusting communities. Remember that fact sheets and statements of basis are a one-way communication tool, and therefore should always provide the name and telephone number of a contact person to encourage comments and questions.

Checklist for Fact Sheets/Statements of Basis

- _ Determine purpose and focus of fact sheet or statement of basis
- _ Develop outline
  - _ Organize contents in a logical manner
  - _ Determine appropriate graphics
- _ Verify mailing list is up-to-date
- _ Request mailing labels
- _ Coordinate preparation of fact sheet or statement of basis with technical staff as appropriate
  - _ Draft text
  - _ Draft graphics
  - _ Draft layout
  - _ Place mailing coupon on reverse side of mailing label
- _ Coordinate internal review of fact sheet or statement of basis
- _ Incorporate revisions into final fact sheet or statement of basis
- _ Proofread final fact sheet or statement of basis
- _ Arrange printing of fact sheet or statement of basis
  - _ Select paper weight, ink color, and color paper
- _ Print fact sheet or statement of basis
- _ Distribute fact sheet or statement of basis to the mailing list and place additional copies in the repository

Project Newsletters and Reports

Regulatory Requirements

None.

Description of Activity

Project newsletters and reports are means of direct communication that keep interested people informed about corrective action and permitting activities. Both publications provide a level of project detail that is not usually available from the news media. A project newsletter uses a reader-friendly, news-based format to provide regular updates on activities in the permitting process and actions taking place at the facility. Project reports may include official technical reports or other environmental documents and studies related to a particular facility. Sending these reports directly to key stakeholders can spread information more effectively than simply placing the documents in an information repository.

Level of Effort

Newsletters can require significant amounts of staff time and resources to write, copy, and distribute. Direct transmission of reports will require less staff time, but may cost more to copy and distribute.

How to Conduct the Activity

To provide a project newsletter or project reports:

1. **Assign a staff person to produce the newsletter.** Instruct project staff to direct relevant information and reports to this person.

2. **Decide on a format and style for the newsletter.** Evaluate the resources you have available for the newsletter and decide what type of newsletter you will produce. Keep in mind that a visually-attractive newsletter with plenty of graphics and simple language is more likely to be read. Avoid bureaucratic or technical jargon. The newsletter should contain real news that is useful to people. Since people who are not familiar with the project may pick up the newsletter, write it so that first-time readers can understand it.

3. **Provide for review.** Permitting agencies, in particular, will want to ensure the credibility of their newsletters by making sure that they are objective. In such cases, you may consider asking a **citizen advisory group**, a consultant, or a non-partisan civic group (e.g., the League of Women Voters), to review the document. If the public has concerns over the credibility of your organization, it may be beneficial for the citizens advisory group or a neutral body to produce the newsletter. An objective newsletter should candidly report all developments at the facility.

4. **Summarize detailed reports.** If you are distributing a technical report, you should consider including a summary. Another option is to include findings in the project newsletter and allow people to send in a clip-out request form or contact your staff for copies of the full report.

5. **Check your mailing list.** Make sure that your mailing list is up to date and includes all interested stakeholders and media contacts (see the section on **Mailing Lists** above).

6. **Update your mailing list.** Project newsletters may continue for a number of years. You should consider updating your mailing list by including an "address-currency" card in the newsletter on a regular basis (e.g., once a year). By sending in this card, people will continue to receive the newsletter.

When to Use

Project newsletters and reports can provide detailed information about a facility that is not usually available in the media. These methods may be most useful when:

- there is a high level of public interest in a facility;
- when many citizens do not have access to an information repository, or a repository has not been established;
- you would like to maintain project visibility during extended technical studies; or
- presenting the results of detailed studies through a newsletter will better inform the public.

Accompanying Activities

A **mailing list** is essential for distribution of reports and newsletters. You should consider **availability sessions**, **open houses**, or **informal meetings** to explain the results of detailed reports and studies. Always include a **contact person** in the newsletter or report.

Advantages and Limitations

Newsletters and project reports are useful ways to disseminate important information to stakeholders. Making reports widely available can enhance their credibility.

Newsletters may require significant amounts of staff time and resources. Direct distribution of technical reports may create confusion if they are not accompanied by a summary.

Checklist for Project Newsletters and Reports

- _ Assign a staff person to be in charge of producing the newsletter or reports
- _ Direct the project staff (e.g., through a memo) to forward all relevant project information to the newsletter director
- _ Decide on format, style, and frequency of distribution
- _ Draft the newsletter
- _ Review the newsletter for content, style, simple language, and visual appeal
- _ (If applicable) Send the newsletter to an assigned neutral party for review
- _ If you produce detailed project studies or reports, write a summary in simple language and attach to the report or include the summary in the newsletter
- _ Distribute the newsletter to the mailing list
- _ Update the mailing list on a regular basis

Response to Comments

Regulatory Requirements

According to § 124.17, the permitting agency must prepare a response to comments at the time that it issues a final permit decision. The agency will also issue a response to comments when making final decisions on requested Class 2 and 3 permit modifications under § 270.42 and agency-initiated modifications under § 270.41.

Description of Activity

A response to comments identifies all provisions of the draft permit or modification that were changed and the reasons for those changes. It also briefly describes and responds to all significant comments on the draft permit that were received during the public comment period.

The response to comments should be written in a clear and understandable style so that it is easy for the community to understand the reasons for the final decision and how public comments were considered.

Level of Effort

A response to comments can be a time-intensive activity because of the large amount of organization, coordination, and review needed. On average, allow several hours per comment for completion, as some questions may take only a few minutes to answer while others may involve in-depth technical and legal responses. In general, preparing response to comments documents can take from several days for low-interest facilities to several weeks for high-interest facilities.

How to Conduct the Activity

There is no required format for preparing response to comments documents. However, several EPA Regions have adopted a two part approach:

- Part I is a summary of commenters' major issues and concerns and expressly acknowledges and responds to those issues raised by the local community. "Local community" means those individuals who have identified themselves as living in the immediate vicinity of a facility. These may include local homeowners, businesses, the municipality, and facility employees. Part I should be presented by subject and should be written in a clear, concise, easy to understand manner suitable for the public.

- Part II provides detailed responses to all significant and other comments. It includes the specific legal and technical questions and, if necessary, will elaborate with technical detail on answers covered in Part I. It also should be organized by subject.

Think of Part I as a type of fact sheet for the detailed responses provided in

Part II. Because both parts deal with similar or overlapping issues, the response to comments should state clearly that any points of conflict or ambiguity between the two parts shall be resolved in favor of the detailed technical and legal presentation in the second part.

In order to effectively address all public comments, closely coordinate the preparation of responses with appropriate legal and technical staff. Also, it is important to be certain that all comments are addressed. A system of numbering all comments as they are received and referring to these numbers in all internal drafts of the response document may help keep track of them. Computer databases are a good way to keep track of and arrange the comments.

In addition, the Response to Comments should include a summary that discusses the following:

- The number of meetings, mailings, public notices, and hearings at which the public was informed or consulted about the project;
- The extent to which citizen's views were taken into account in decision-making; and
- The specific changes, if any, in the project design or scope that occurred as a result of citizen input.

Response to comments documents must be sent to the facility owner/operator and each person who submitted written comments or requested notice of the final permit decision.

When to Use

A response to comments is required for all final permit decisions and decisions on class 2 and 3 modifications..

Accompanying Activities

A response to comments usually accompanies the **notice of decision**.

Advantages and Limitations

A response to comments provides a clear record of community concerns. It provides the public with evidence that their input was considered in the decision process. The summary also is an aid in evaluating past public participation efforts and planning for subsequent activities.

Comments may be difficult to respond to at times, like when the public raises new issues, questions, or technical evidence during the public comment period. The permitting agency may need to develop new materials to respond to these questions.

Checklist for Response to Comments

- ___ After reviewing comments, determine organization of document
  - ___ Determine groups, subgroups of comments
  - ___ Where applicable, paraphrase and summarize comments
- ___ Write a response for each comment, group or subgroup of comments
- ___ Prepare an introductory statement including:
  - ___ A summary of the number and effectiveness of meetings, mailing, public notices, and hearings at which the public was informed or consulted about the project
  - ___ The numbers and kinds of diverse interests which were involved in the project
- ___ Prepare a summary statement including:
  - ___ The extent to which citizen's views were taken into account in decision-making
  - ___ The specific changes, if any, in the project design or scope that occurred as a result of citizen input.
- ___ Coordinate internal review of the Response to Comments with all necessary departments (public affairs, technical, legal)
- ___ Prepare final Response to Comments
- ___ Distribute Response to Comments to:
  - ___ Information Repository
  - ___ Facility owner/operator
  - ___ Each individual who makes written or oral comments
  - ___ Individuals who asked to receive the Response to Comments
  - ___ Appropriate agency officials
  - ___ Administrative Record

Information Repositories

Regulatory Requirements

EPA regulations authorize the permitting agency to require a facility to establish an information repository during the permitting process (§ 124.33) or during the active life of a facility (§ 270.30).

Description of Activity

An information repository is a collection of documents related to a permitting activity or corrective action. A repository can make information readily available to people who are interested in learning about, or keeping abreast of, RCRA activities in or near their community.

Information repositories are not mandatory activities in every situation. As mentioned above, RCRA regulations give the permitting agency the authority to require a facility to set up and maintain an information repository. The agency does not have to require a repository in every case; it should use its discretion. Additionally, a facility or an environmental group may voluntarily set up a repository to make it easier for people in the community to access information.

The size and location of the repository will depend on the type of permitting activity. The regulations allow the permit applicant or permittee to select the location for the repository, as long as it is in a location that is convenient and accessible to the public. If the place chosen by the facility does not have suitable access, then the permitting agency can choose a more suitable location. EPA encourages the facility and the agency to *involve the public when suggesting a location for the repository -- the potential users of the facility are best qualified to tell you if it's suitable.* See #1 under "How to Conduct the Activity" below.

The information that actually goes in the repository can differ from case to case, depending on why the repository was established. If the agency requires a facility to establish the repository, then the agency will set out the documents and other information that the facility must include in the repository. The agency will decide what information will be most useful according to the specifics of the case at hand. For instance, multi-lingual fact sheets and other documents will be most appropriate in situations where there are many non-English-speakers in an affected community. Similarly, if the community needs assistance in understanding a very technical permitting situation, then the agency and the facility should provide fact sheets and other forms of information that are more accessible to the non-technical reader. See #2 under "How to Conduct the Activity" below.

The permitting agency should assess the need, on a case-by-case basis, for an information repository at a facility. When doing so, the agency has to

consider a variety of factors, including: the level of public interest; the type of facility; the presence of an existing repository; and the proximity to the nearest copy of the administrative record. Since any of these other factors may indicate that the community already has adequate access to information, and since repositories can be resource-intensive, permitting agencies should use this authority only in cases where the community has a true need for additional access to information.

For example, in determining levels of public interest the agency staff will want to consider: What kind of turnout has there been at public meetings? What kind of responses during community interviews? What level of media attention? How many inquiries have been coming in? What levels of community involvement have there been in previous facility and/or local environmental matters? If another repository already exists, can it be augmented with materials to meet the information needs of the permit or corrective action at hand? Is it located in a convenient and accessible place? [Note: If a facility has an existing repository that does not completely satisfy the need that the agency identifies, then the agency may specify additional steps that the facility must take to make the repository meet the public need.]

Is the nearest copy of the administrative record "close enough"? The answer to this question could depend on a few things. Ask yourself some other questions first. For example: Can people get there by public transportation or only by a personal vehicle (i.e, by car or taxi)? Do most people in the community rely on public transportation, or do most people have and use their own cars? Apart from whether it is accessible by public transportation or personal vehicle, how long is the trip? Is the administrative record available for review on weekends or after business hours?

Level of Effort

Depending on the amount of available documentation, the information repository may take a week to establish, including compiling and indexing documents and arranging for placement in a library or other location. Updating may take a day or two every quarter. A public notice announcing the availability of the information repository may take between a day to write, review, and place in newspapers or send to the mailing list.

How to Conduct the Activity

To establish an information repository:

1. **Determine a suitable location.** For repositories established under §§ 124.33 or 270.30, the initial choice of location is made by the facility. If the agency decides that the facility-proposed location is not suitable, then the agency will suggest another location.

   Whether required or established voluntarily, the repository should be be convenient and accessible for people in the community. Whoever establishes the repository should consider, in particular, locations

suggested by community residents. Typical locations include local public libraries, town halls, or public health offices.

A facility may choose to set up the repository at its own offices. Before doing so, the facility owner or operator should discuss his or her intent with community representatives and/or the agency. It is important to confirm that people are comfortable about coming onto facility property and trust that you will properly maintain the information in the repository.

Facility owners and operators should be sensitive to the concern that some citizens have about repositories that are on facility property. Some people do not feel comfortable when they need to attend a meeting or a function on the facility grounds. If the members of your community may feel uncomfortable at the facility, then you should make all efforts to establish the repository at a suitable off-site location. All repositories should be in a location where its users will feel comfortable when accessing information.

In evaluating potential sites for the repository, there are several factors to consider. The location should have adequate access for disabled users, should be accessible to users of public transportation (where applicable), and should be open after normal working hours at least one night a week or on one weekend day. Repositories should be well lit and secure.

A facility should also ensure that someone in its company and someone at the repository location are identified as the information repository contacts -- to make sure that the information is kept up-to-date, orderly and accessible.

Depending on the level of community concern, or the location of the facility relative to the surrounding communities, more than one repository may be desirable. For example, if a county seat is several miles from the RCRA-regulated facility, and county officials have expressed a strong interest in the facility, two repositories may be advisable: one in the community closest to the facility, and the other in the county seat.

2. **Select and deposit the materials to be included in the repository.** For repositories established under EPA's regulations, the permitting agency will decide, on a case-by-case basis, what documents, reports, data, and information are necessary to help the repository fulfill its intended purposes, and to ensure that people in the community are provided with adequate information. The agency will provide a list of the materials to the facility. The agency has the discretion to limit the contents of repositories established under §§ 124.33 and 270.30. While there is no outright ban on materials, EPA encourages regulators to ensure that repository materials are relevant and

appropriate.

Facilities, permitting agencies, and public interest groups may decide to establish repositories aside from those required by regulation. Whoever establishes a repository should consult the public regarding what materials would be most useful to members of the surrounding community. EPA encourages parties to place substantive and appropriate materials in the repository.

If you are establishing an information repository, you should consider including the following documents:

- Background information on the company or facility;
- Fact sheets on the permitting or corrective action process;
- Meeting summary from the pre-application meeting (if one was conducted);
- Public involvement plan (if developed);
- The draft permit;
- Reports prepared as part of the corrective action investigations, including the RCRA Facility Assessment (RFA), the RCRA Facility Investigation (RFI), and the Corrective Measures Study (CMS);
- Fact sheets prepared on the draft permit or corrective action plan;
- Notice of decision;
- Response to comments;
- Copies of relevant RCRA guidance and regulations;
- A copy of the Cooperative Agreement, if the state is the lead agency for the project;
- Documentation of site sampling results;
- Brochures, fact sheets, and other information about the specific facility (including past enforcement history);
- Copies of news releases and clippings referring to the site;
- Names and phone numbers of a contact person at the facility and at the permitting agency who would be available to answer questions people may have on the materials in the repository; and
- Any other relevant material (e.g., published studies on the potential risks associated with specific chemicals that have been found stored at the facility).

You should organize the documents in binders that are easy to use and convenient for the on-site repository host. For projects that involve a large number of documents, separate file boxes should be provided as a convenience to the repository host to ensure that the documents remain organized.

3. **Publicize the existence of the repository.** For repositories required under RCRA regulations, the permitting agency will direct the facility, at a minimum, to announce the repository to all members of

facility mailing list. If you establish a repository aside from EPA's regulations, you should be sure to notify local government officials, citizen groups, and the local media of the location of the project file and hours of availability. Newsletters of local community organizations and church groups are another means of notifying the public.

4. **Keep the repository up-to-date by sending new documents to it as they are generated.** If the permitting activity is controversial or raises a lot of community interest, you should consider providing several copies of key documents so that community members can check them out for circulation. For repositories required under RCRA regulations, the facility is responsible for updating the repository with new documents and maintaining the documents in the repository.

When to Use

An information repository is recommended:

- When the agency requires the facility to establish an information repository. In making its determination, the agency will consider relevant factors, including: the level of public interest; the type of facility; the presence of an existing repository; and the proximity to the nearest copy of the administrative record; and

- When interest in the facility is high and the public needs convenient access to relevant facility documents.

Accompanying Activities

The contact person(s) should be responsible for making sure that all relevant materials have been filed in the repository.

If you establish a repository, you may want to consider setting aside time at the repository to periodically staff a "walk-up" **information table**. An information table would entail having a representative from your organization, the permitting agency, or both, available to answer questions that repository visitors may have. You may decide to establish the information table on a routine basis (for example, once a month) or at key milestones in the permitting or corrective action process (for example, after a draft permit decision or completion of the RFI).

Advantages and Limitations

An information repository provides local officials, citizens, and the media with easy access to accurate, detailed, and current data about the facility. It demonstrates that your organization is responsive to citizens' needs for comprehensive information on the facility.

An information repository is a one-way communication tool and does not allow for interaction between citizens and your organization (unless used in

conjunction with a “walk-up” information table). The information repository may also include technical documents, which may be difficult for citizens to understand.

Checklist for Information Repositories

[Note: this checklist contains all the steps for information repositories required under §§ 124.33 and 270.30. Anyone who is establishing a repository apart from these requirements should check above in this section to find out which steps apply].

__ Determine location of Information Repository; check with agency

__ Establish contact with the director of the location determined above

__ Mail a letter to the permitting agency confirming the location of the Information Repository

__ Agency will mail a list of required documents to the facility

__ Collect and compile the documents to include in the Information Repository

- __ Documents sequentially numbered
- __ Index prepared
- __ Documents placed in notebooks

__ Deliver documents to location determined above

- __ Have location director sign a letter/memo acknowledging receipt of the documents

__ Send a notice to the facility mailing list indicating the availability of the Information Repository; provide additional means of notice (e.g., newspaper, broadcast media) as appropriate

__ Update the Information Repository as key public documents are available and at key technical milestones

Exhibits

Regulatory Requirements

None.

Description of Activity

Exhibits are visual displays such as maps, charts, diagrams, photographs, or computer displays. These may be accompanied by a brief text explaining the displays and the purpose of the exhibit. Exhibits provide a creative and informative way to explain issues such as health risks or proposed corrective actions. They make technical information more accessible and understandable.

Level of Effort

Exhibits may take from one day to one week to write, design and produce depending on the complexity of the exhibit. Computer software production will take longer. Allow time for review of the exhibit's design and concept.

How to Conduct the Activity

To develop and display an exhibit:

1. **Identify the target audience.** Possible audiences include:

   - General public;
   - Concerned citizens;
   - Environmental/Public Interest groups;
   - Media representatives; and
   - Public officials.

2. **Clarify the subject.** Possible subjects include:

   - The RCRA program or the permit or corrective action process;
   - Historical background on the facility;
   - Public participation activities;
   - Corrective action or waste management technologies; and
   - Health and safety issues associated with the facility.

3. **Determine where the exhibit will be set up.** If the general public is the target audience, for example, assemble the exhibit in a highly visible location, such as a public library, convention hall, or a shopping center. If concerned citizens are the target audience, set up a temporary exhibit at a **public meeting**, **availability session/open house**, or **an informal meeting**. An exhibit could even be as simple as a bulletin board at the site or staff trailer.

4. **Design the exhibit and its scale according to the message to be transmitted.** Include photos or illustrations. Use text sparingly.

When to Use

Exhibits can be used:

- When level of interest in the facility is moderate to high;
- When information to be conveyed can be explained graphically;
- When staff time is limited and the audience is large;
- When a display can enhance other information being distributed; and
- When displays will be useful over long periods of time and at different facilities (e.g., generic posterboards on RCRA process).

Accompanying Activities

Exhibits are useful at **public meetings**, **public hearings**, and **availability sessions/open houses**. If an **observation deck** is installed at a site, a nearby exhibit could explain corrective action or compliance activities under way.

Advantages and Limitations

Exhibits tend to stimulate public interest and understanding. While a news clipping may be glanced at and easily forgotten, exhibits have a visual impact and leave a lasting impression. Exhibits also can convey information to a lot of people with a low level of effort.

Although exhibits inform the public, they are, for the most part, a one-way communication tool. One solution to this drawback is to attach blank postcards (**surveys**) to the exhibit, encouraging viewers to comment or submit inquiries by mail to the agency. Another approach is to leave the phone number of the **contact person** who can answer questions during working hours. However, these requests must be answered or citizens may perceive the agency as unresponsive to their concerns. Finally, computer touch screens can provide some feedback by answering common questions about an exhibit.

Checklist for Exhibits

- ___ Determine purpose, use of exhibit
  - ___ Identify the audience
  - ___ Clarify the message
  - ___ Determine where and how the exhibit will be displayed
    - ___ Free-standing
    - ___ Table-top display
    - ___ Will the exhibit need to be easily transported?
- ___ Coordinate design and construction with public involvement coordinator (and contractors, if available)
  - ___ Write copy
  - ___ Determine graphics
  - ___ Design the exhibit
  - ___ Coordinate review of the design, text, and graphics
  - ___ Complete the exhibit based on review comments

Briefings

Regulatory Requirements

None.

Description of Activity

Briefings are useful for sharing information with key stakeholders, whether they are involved regulators, elected officials, or members of involved public interest or environmental groups. You can use briefings to inform other stakeholders about the status of a permit application or corrective action; to provide them with materials such as technical studies; results of the technical field and community assessments; and engineering designs. These sessions are conducted in person, and the briefings usually precede release of information to the media or occur before a public meeting. Briefing key stakeholders is particularly important if an upcoming action might result in political controversy.

Level of Effort

Briefings will usually take a day to plan and conduct.

How to Conduct the Activity

To schedule and hold briefings:

1. **Inform your audience** far in advance of the date of the briefing. It is usually best to hold the initial briefing in a small public room, such as a hotel meeting room, conference room, or at the stakeholders' offices. Where relationships might be antagonistic, it may be best to hold the briefing in a neutral location.

2. **Present a short, official statement** explaining the information in the context of the RCRA process and announcing future steps in the process.

3. **Answer questions about the statement.** Anticipate questions and be prepared to answer them simply and directly.

   If the briefing has been requested, find out in advance the information that the stakeholders seek and prepare to answer these and related questions.

When to Use

Briefings are appropriate:

- When key stakeholders have expressed a moderate to high level of concern about the facility or the process;

- Before the release of new information to the media and the public;

- When unexpected events or delays occur; and
- At any point during the permit or corrective action processes. If local officials have expressed concern during the preliminary assessment of the facility, a briefing may be appropriate to explain the RCRA permitting or corrective action program and the technical actions that are scheduled for the facility.

Accompanying Activities

Briefings usually precede **news conferences**, **news releases**, **informal meetings**, or **public meetings**.

Advantages and Limitations

Briefings allow key stakeholders to question you directly about any action prior to public release of information regarding that action. By providing a "heads up," you can prepare other key stakeholders to answer questions from their constituents when the information becomes public. Briefings also allow for the exchange of information and concerns.

Because briefings are normally offered to a small select group, they are not considered to be general information dissemination to the public. Care must be taken to provide the public with ample opportunity to receive information. At briefing sessions, include the appropriate officials, taking care not to exclude people key to the public participation process. Avoid the perception that you are trying to bury facts or favor special interest groups.

Although briefings can be an effective tool for updating key stakeholders (e.g., state and local officials, community leaders, involved regulators) they always should be complemented by activities to inform the general public, such as **informal meetings** with small groups, **public meetings**, or **news conferences**.

Checklist for Briefings

__ Determine date, time, and location of briefing.

Date: _____

Time: _____

Location: _____

__ Notify key state and local officials, citizens, and other interested parties of the briefing

__ Prepare presentation

__ Prepare any handout materials

__ Conduct briefing

__ Follow-up on any questions you are unable to answer during the briefing

Presentations

Regulatory Requirements

None.

Description of Activity

Presentations are speeches, panel discussions, video tapes or slide shows held for local clubs, civic or church organizations, school classes, or concerned groups of citizens to provide a description of current RCRA activities. They help improve public understanding of the issues associated with a permitting or corrective action.

Level of Effort

One to two days may be needed to set up and schedule the presentation, prepare for it, give the presentation, and follow up on any issues raised. Add more time if you need to prepare visual equipment.

How to Conduct the Activity

Develop procedures that can be changed easily to suit different audiences. To conduct presentations:

1. **Contact groups that may be interested in learning about your work.** Announce the program through the media and in your publications. Adjust the tone and technical complexity of any presentation to suit the audience's needs.

2. **Select a standard format** such as the following:

   - Introduce yourself, your organization, the RCRA permitting or corrective action process, and the facility;
   - Describe the issues that affect your audience;
   - Discuss what is being currently done; and
   - Discuss how citizens can play a part in making decisions about the facility.

3. **Set a time limit of 20 minutes.** Consider having several staff members deliver short segments of the presentation. Allow time for a **question-and-answer session**.

4. **Schedule presentations at convenient times,** possibly evenings or weekends, or during regularly-scheduled meetings of other groups. Consult with members of your target audience to find out what time is best for them.

5. **Select supporting materials** (slides, graphics, exhibits, etc.) that will

hold the audience's attention but not distract from the speaker's message. Conduct a trial run in front of colleagues and rehearse the presentation as much as possible.

6. **If substantive issues or technical details cannot be handled in the time allowed for the presentation, name a contact for further information.**

When to Use

Presentations may be held:

- When there is moderate to high interest in a facility;
- When it is practical to integrate short RCRA presentations into meetings on other subjects; and
- When a major milestone in the RCRA process is reached.

Accompanying Activities

Fact sheets or handouts should be distributed so that participants have something to refer to after the presentation. Incorporating **exhibits** into your presentation will hold the audience's attention and aid in their understanding of the material. **Question and answer sessions** will help clear up any misunderstanding about the presentation and allow you to address complex issues in more detail

Advantages and Limitations

Because the presentation is delivered in person, the audience has a chance to ask questions, and the presenter can gauge citizens' concerns. Also, many people can be reached at one time, reducing individual inquiries. Making project staff available for community speeches and presentations will signal your organization’s interest in the community.

Presentations require substantial effort to be effective. A poorly planned presentation can distort residents' views of the situation.

Because the presentation is rehearsed, accommodating different or unanticipated concerns of the audience can be difficult. Handle these concerns during a **question-and-answer session** after the presentation.

Checklist for Presentations

- ___ Contact groups that may be interested in a presentation
- ___ Determine message(s) to be presented based on stated community interests/concerns
- ___ Prepare presentation(s) based on responses from groups contacted
  - ___ Prepare handout materials
  - ___ Prepare exhibits or other visual materials
- ___ Determine what staff are available for presentations
- ___ Schedule presentations
- ___ Conduct rehearsals
- ___ Conduct presentations
- ___ Conduct follow-up question-and-answer session after presentations
  - ___ Respond to questions you were unable to answer
  - ___ Contact group regarding other presentation topics in which they may be interested

Facility Tours

Regulatory Requirements

None, though the tour will have to comply with facility safety plans.

Description of Activity

Facility tours are scheduled trips to the facility for media representatives, local officials, and citizens during which technical and public outreach staff answer questions. Facility tours increase understanding of the issues and operations at a facility and the RCRA-regulated process underway.

Level of Effort

Facility tours generally take a day to plan and conduct.

How to Conduct the Activity

To conduct facility tours:

1. **Plan the tour ahead of time.**

   The facility owner/operator may decide to conduct a tour, or the agency may set up a tour of the facility. If agency staff plan to lead the tour, they should coordinate with the facility owner/operator. Citizens groups should arrange tours with the facility owner/operator. If there is a Citizens Advisory Panel, the members could lead or participate in tours.

   Before the tour, you should:

   - Determine tour routes;
   - Check on availability of facility personnel, if needed; and
   - Ensure that the tour complies with the safety plan for the site.

   If it is not possible to arrange tours at the facility (e.g., the facility is under construction or not yet built), perhaps it would be possible to arrange a tour at one like it. Interested community members may benefit from touring a facility that has similar operations or where similar technologies have been applied. Touring a RCRA-regulated facility can give residents a clearer perception of what to expect at their own site.

2. **Develop a list of individuals that might be interested** in participating in a tour, including:

   - Individual citizens or nearby residents who have expressed concern about the site;

- Representatives of public interest or environmental groups that have expressed interest in the site;
- Interested local officials and regulators;
- Representatives of local citizen or service groups; and
- Representatives of local newspapers, TV, and radio stations.

3. **Determine the maximum number that can be taken through the facility safely.** Keep the group small so that all who wish to ask questions may do so. Schedule additional tours as needed.

4. **Think of ways to involve tour participants.** A "hands-on" demonstration of how to read monitoring devices is one example.

5. **Anticipate questions.** Have someone available to answer technical questions in non-technical terms.

When to Use

Tours may be conducted:

- When there is moderate to high interest in the facility, especially among elected officials;
- When it is useful to show activities at the facility to increase public understanding or decrease public concern;
- When it is practical and safe to have people on facility grounds; and
- During the remedial phase of corrective action.

Accompanying Activities

Fact sheets, **exhibits**, and **presentations** complement facility tours. An **observation deck** near the facility would allow them to watch the progress of activities on their own. An **on-scene information office** would allow for an agency official to be around and for less formal tours of the facility. An alternative to a facility tour would be a **videotape presentation** showing activity and operations at the facility. This would be effective in cases where tours cannot be conducted.

Advantages and Limitations

Facility tours familiarize the media, local officials, and citizens with the operations and the individuals involved in the permitting or corrective action. Unreasonable fears about the risks of the facility may be dispelled, as might suspicion of corrective action crews working at the facility. The result is often better understanding between stakeholders.

Facility tours require considerable staff time to arrange, prepare, and coordinate. Staff may have difficulty gaining site access for non-agency

people. Insurance regulations for the facility and liability, safety and injury considerations may make tours impossible.

Checklist for Facility Tours

- _ Determine need for facility tours
- _ Coordinate tours with the facility
  - _ Tour routes
  - _ Facility personnel
  - _ Tour dates
  - _ Compliance with health and safety
- _ Determine maximum number of people that can be taken on the tour
- _ Notify interested citizens on availability of facility tours
  - _ Call interested citizens
  - _ Distribute mailing to facility mailing list
  - _ Have citizens respond and reserve space on the tour
- _ Determine plant staff or agency staff to conduct tour
- _ Prepare responses to anticipated questions
- _ Conduct tours
- _ Follow-up on any requested information from interested citizens

Observation Decks

Regulatory Requirements

None.

Description of Activity

An observation deck is an elevated deck on the facility property, near the area where corrective or RCRA-regulated activities are in progress. The deck allows interested citizens to observe facility activities or corrective actions directly in order to remove some of the unfamiliarity, and hence fear, that may encompass RCRA-regulated activities.

Level of Effort

Maintaining an observation deck may be a time-intensive activity depending on the deck's hours of operation. Up to 40 hours a week may be necessary to staff the deck. Short Cut: Consider hiring a contractor to staff the deck, or limit the hours when it is open to the public.

How to Conduct the Activity

To use an observation deck, the agency and the facility should work together to:

1. **Decide whether or not an observation deck is needed or desirable.** Gauge community interest in the facility and whether or not there is a location for a deck that would facilitate observation.

2. **Coordinate deck construction.** Determine the best location for the observation deck keeping in mind safety and public access issues.

3. **Coordinate staffing of the observation deck.** Determine the hours of operation for the observation deck. Identify staff to supervise the observation deck and prepare staff to answer questions from the public.

4. **Announce the availability of the observation deck.** Notify the community that the deck is available through public notices, fact sheets, and a mailing to the facility mailing list.

When to Use

An observation deck may be used:

- When community interest or concern is high;
- When the community's understanding of facility operations will be enhanced by direct observation;
- When there will be sufficient activity at the site to promote the community's interest;

- When staff are available to supervise public use of the deck and answer questions;
- When it is physically possible to set up an observation deck in a place where there is no danger to the public;
- When a corrective action is being implemented; and
- When a new technology is being tested or implemented.

Accompanying Activities

An observation deck could complement periodic **facility tours** or an **on-scene information office**. Citizens can initially be informed about operations or corrective actions during the tours, then can monitor the progress of these activities at their convenience from the observation deck. **Fact sheets** or an informative **exhibit** placed near the deck also could further aid in explaining facility activities.

Advantages and Limitations

An observation deck allows citizens and media representatives to observe site activities without hindering the activities.

Constructing and occupying an observation deck is expensive and needs to be supplemented with an informational/interpretive program, so that citizens understand what they see. Further, health and safety issues must thoroughly be considered so that any visitor to the observation deck is not endangered by activities at the facility.

Checklist for Observation Decks

- ___ Determine need for an observation deck
  - ___ Coordinate with facility
- ___ Identify staff available to supervise the observation deck and answer questions from interested citizens
- ___ Coordinate deck construction
- ___ Set hours of operation for the observation deck
- ___ Notify interested citizens of availability of observation deck
  - ___ Public notice
  - ___ Fact sheet
  - ___ Mailing to facility mailing list
- ___ Maintain observation deck

News Releases and Press Kits

Regulatory Requirements

None.

Description of Activity

News releases are statements that you or your organization send to the news media. You can use them to publicize progress or key milestones in the RCRA process. News releases can effectively and quickly disseminate information to large numbers of people. They also may be used to announce public meetings, report the results of public meetings or studies, and describe how citizen concerns were considered in the permit decision or corrective action.

Press kits consist of a packet of relevant information that your organization distributes to reporters. The press kit should summarize key information about the permitting process or corrective action activities. Typically a press kit is a folder with pockets for short summaries of the permitting process, technical studies, newsletters, press releases, and other background materials.

If your organization has public affairs personnel, you should coordinate with them to take on media contact responsibilities.

Level of Effort

News releases generally take eight hours to write, review, and distribute to the media.

How to Conduct the Activity

To prepare news releases and press kits:

1. **Consult with external affairs personnel who regularly work with the local media.** External affairs personnel will assure that you adhere to organization policy on media relations. They will assist in drafting the news release and can provide other helpful suggestions about the release and the materials for the press kit.

2. **Identify the relevant regional and local newspapers and broadcast media, and learn their deadlines.** Get to know the editor and environmental reporter who might cover the issue. Determine what sorts of information will be useful to them.

3. **Contact related organizations to ensure coordination.** For instance, permitting agencies should contact other regulatory agencies on the federal, state, and local levels to ensure that all facts and procedures are coordinated and correct before releasing any statement

or other materials. If your organization is local, you should coordinate with national or state-wide chapters. You may want to consider discussing the news release with other interested stakeholders (e.g., through a **briefing**). However, draft news releases should not be shared -- they are internal documents.

4. **Select the information to be communicated.** For the press release, place the most important and newsworthy elements up front and present additional information in descending order of importance. Use supporting paragraphs to elaborate on other pertinent information. Mention opportunities for public participation (i.e., public meetings, etc.) and contact persons and cite factors that might contribute to earlier implementation or delays in the corrective action or permit processing. Note the location of the information repository (if applicable) or other sources for relevant documents. If you are presenting study findings or other technical information, present it in layman's terms along with any important qualifying information (e.g., reliability of numbers or risk factors).

   The press kit should contain materials that elaborate on the information in the press release. Basic summaries of the RCRA program, the permitting process, and public participation activities are helpful materials. Background reports or studies may also be useful. Enclose the name and phone number of a contact person and invite the reporter to call him or her with any questions.

5. **The news release should be brief.** Limit it to essential facts and issues.

6. **Use simple language.** Avoid the use of professional jargon, overly technical words, and acronyms.

7. **Identify who is issuing the news release.** The top of the sheet should include:

   - Name and address of your organization;
   - Release time ("For Immediate Release" or "Please Observe Embargo Until") and date;
   - Name and phone number of the contact person for further information; and
   - Headline summarizing the activity of interest.

8. **In some cases, send copies of the release and the press kit to other stakeholders** at the same time you give them to the news media. Coordinate with the public affairs office to determine appropriateness.

When to Use

The press kit and the news release can be complementary activities, though you may choose to use either one separately. Some of the occasions when you may want to issue a news release or a press kit include:

- When significant findings are made at the site, during the process, or after a study;
- When program milestones are reached or when schedules are delayed;
- In response to growing public or media interest or after your organization takes a new policy stance;
- When you are trying to increase public interest in a facility;
- Before a public meeting to announce subject, time, place; and
- A news release should not be issued at times when it may be difficult to get in touch with responsible officials (e.g., Friday afternoons, or the day before a holiday).

Accompanying Activities

The press kit is useful as a complement to a news release. News releases and press kits can accompany any formal **public hearings** or **public meetings**. They commonly accompany **news conferences**. They should provide the name of the **contact person** whom interested reporters can contact if they want more information.

Advantages and Limitations

A news release to the local media can reach a large audience quickly and inexpensively. Press kits allow reporters to put the issue in context. If a reporter is trying to meet a deadline and cannot contact you, he or she can turn to the press kit as an authoritative source of information. If the name, address, and phone number of a contact person are included, reporters and possibly interested community members can raise questions about the information in the release.

Because news releases must be brief, they often exclude details in which the public may be interested. A news release should therefore be used in conjunction with other methods of communication that permit more attention to detail. A news release is not an appropriate vehicle for transmitting sensitive information. In some cases, a news release can call unwarranted attention to a situation; a mailing to selected individuals should be considered instead. Frequent use of news releases to announce smaller actions may reduce the impact of news releases concerning larger activities.

One potential drawback of a press kit is that reporters may ignore it or use the information incorrectly when writing a story.

News releases and press kits cannot be used in lieu of a public notice. Certain activities, such as the preparation of a draft permit, are subject to public notice requirements. See the section on “Public Notices” earlier in this Chapter for more details.

Checklist for News Releases and Press Kits

- __ Coordinate with public affairs staff
- __ Determine purpose of news release and/or press kit
- __ Coordinate writing and distribution of release or press kit with the public affairs staff
  - __ Verify that media mailing list is up-to-date
  - __ Request mailing labels
- __ Write draft news release
  - __ Type and double space news release
  - __ Indicate the source of the news release (i.e., in the upper-left-hand corner, put the name and phone number of the person writing the release, along with the agency or department name and address)
  - __ Provide release instructions (i.e., "For Immediate Release")
  - __ Date the news release
  - __ Write concisely; avoid technical terms and jargon
  - __ Number pages; if more than one page is needed, put " -- more --" at the center bottom of the page that is to be continued; succeeding pages should be numbered and "slugged" with an identifying headline or reference (i.e., "EPA -- 2"); when you come to the end of the news release, indicate the end with one of the following: -- 30 --, ####, or -- END --.
- __ Prepare materials for the press kit
  - __ Collect short descriptions of the RCRA program, permitting, and public participation processes
  - __ Include other pertinent information, such as reports, studies, and fact sheets
- __ Coordinate internal review
- __ Prepare final matierals based on review comments
- __ Distribute news release and press kit to local media

News Conferences

Regulatory Requirements

None.

Description of Activity

News conferences are information sessions or briefings held for representatives of the news media and may be open to the general public. News conferences provide all interested local media and members of the public with accurate information concerning important developments during a RCRA-regulated process. If your organization has public outreach personnel, you will probably want to coordinate news conferences with them.

Level of Effort

Allow one to two days to prepare for, rehearse, and conduct a news conference.

How to Conduct the Activity

To conduct news conferences:

1. **Coordinate all media activity through your outreach staff.** Public outreach personnel will assure that you adhere to organization policy on news conferences. They will help arrange location and equipment, etc.

2. **Evaluate the need for a news conference.** Use this technique carefully because statements made during a news conference may be misinterpreted by the media. For reporting the results of site inspections, sampling, or other preliminary information other public involvement techniques (e.g., **fact sheets**, **news releases**, or **public meetings**) may be more appropriate. A news conference announcing preliminary results of technical studies may add unnecessarily to public concerns about the facility.

3. **Notify members of the local and regional media of the time, location, and topic of the news conference.** Local officials also may be invited to attend, either as observers or participants, depending upon their interest. Including local officials at a news conference will underscore your organization's commitment to a community's interests and concerns.

4. **Anticipate reporters' questions and have your answers ready.**

5. **Present a short, official statement, both written and spoken, about developments and findings.** Explain your organization's decisions by reviewing the situation and identifying the next steps. Use visual aids, if appropriate. Live conferences leave no room for

mistakes, so preparation and rehearsal is very important.

Open the conference to questions, to be answered by your staff, local officials, and any other experts present. Have technical staff on hand to answer any technical questions. Decide ahead of time who will answer certain types of questions.

When to Use

News conferences can be used:

- When time-sensitive information needs to reach the public, and a news release may not be able to address key issues for the community;
- When staff are well-prepared to answer questions; and
- During any phase of the permit application or corrective action.

Accompanying Activities

News conferences can be held before or after formal **public hearings** or **public meetings**. They are usually accompanied by **news releases**. **Exhibits**, **telephone contacts**, **briefings**, and **mailing lists** would contribute to the planning and effectiveness of a news conference.

Advantages and Limitations

News conferences provide a large public forum for announcing plans, findings, policies, and other developments. They also are an efficient way to reach a large audience. A written news release can help ensure that the facts are presented accurately to the media. During the question and answer period, your spokesperson(s) can demonstrate knowledge of the facility and may be able to improve media relations by providing thorough, informative answers to all questions.

A news conference can focus considerable attention on the situation, potentially causing unnecessary local concern. Residents may not welcome the increased attention that such media coverage is apt to bring. News releases or lower-profile means of disseminating information should be considered as alternatives.

A risk inherent in news conferences is that the media can take comments out of context and create false impressions. This risk is heightened when staff are unprepared or when the conference is not properly structured or unanticipated questions are asked.

Checklist for News Conferences

- _ Coordinate news conference with public affairs staff
- _ Determine purpose of news conference
- _ Identify staff to make presentations/answer questions at news conference
- _ Prepare visual materials (i.e., exhibits) and handout materials (i.e., fact sheets)
- _ Prepare responses to "anticipated" questions from the media
- _ Coordinate a rehearsal of all presenters
- _ Determine date, time, location, and equipment needs of news conference
    - _ Is the location large enough to accommodate the media?
- _ Notify local media of news conference in advance of news conference
- _ Call the local media the day before the news conference as a reminder
- _ Conduct the news conference
    - _ Set up room with a speakers table, chairs for the audience
    - _ Have handout materials available when media arrive

Community Interviews

Regulatory Requirements

None.

Description of Activity

Community interviews are informal, face-to-face or telephone interviews held with local residents, elected officials, community groups, and other individuals to acquire information on citizen concerns and attitudes about a facility. The interviews may be conducted by facility staff, the permitting agency, or public interest groups as part of the community assessment. Chapter 2 provides more information on community assessments in the section titled "Assessing the Situation."

Community interviews can play an important role in the community assessment, which usually takes place at the beginning of the permitting process, or before major modifications and significant corrective actions. Community interviews will not be necessary in every community. For instance, in routine or non-controversial situations, there may be no need for community interviews. However, if a facility is controversial or has the potential to receive high levels of public interest, then EPA recommends a broad range of community interviews. Permitting situations that fall between the preceding cases may require some interviews, beginning with a survey of community representatives and group leaders (see "Assessing the Situation" in Chapter 2).

Community interviews allow agencies, facility owners, and public interest groups to tailor regulatory requirements and additional activities to fit the needs of particular communities. Information obtained through these interviews is typically used to assess the community's concerns and information needs and to prepare a **public participation plan**, which outlines a community-specific strategy for responding to the concerns identified in the interview process.

Level of Effort

Community interviews are a time-intensive activity because of the large amount of organization required and time needed for interviews. While level of effort will vary, interviewers should schedule at least one hour per interview for research and preparation, the interview itself, and follow-up activities. If time and/or resources are limited, interviewers may want to conduct interviews by phone and focus on community leaders.

How to Conduct the Activity

Permitting agencies, facility owners, and public interest groups who plan to conduct community interviews should follow the steps below, adjusting them as necessary to suit the situation at hand:

1. **Identify potential people to interview.** If a mailing list is not available, begin by reviewing available files and other documents (e.g., newspaper articles) to identify local residents, key state and local officials, and citizen organizations that have been involved with or expressed concern about the facility. Agency staff or other groups in the community (e.g., existing facility owners and operators, public interest organizations, civic groups, local government agencies) may also be able to suggest individuals or groups to interview. Develop a list of individuals and groups that provides the greatest variety of perspectives. Make sure to include individuals who tend to be less vocal to balance the views of those who are more outspoken. Your contact list may include:

   - state agency staff, such as officials from health, environmental, or natural resources departments;
   - local agency staff and elected officials, such as county health department officials, county commissioners, mayor or township administrator, and officials on environmental commissions, advisory committees, and planning boards;
   - representatives of citizens' groups organized to address issues at the facility or in the area;
   - non-affiliated area residents and individuals;
   - local business representatives (e.g., from the Chamber of Commerce or Council of Governments);
   - local civic groups, neighborhood associations, educational and religious organizations;
   - local chapters of public interest groups (e.g., environmental organizations); and
   - nearby landowners and businesses.

2. **Determine how many interviews to conduct.** Conduct interviews with the goal of obtaining a broad range of perspectives and gathering sufficient information to develop an effective public participation plan. However, the actual number of interviews is likely to depend on available time and resources as well as the community's level of interest and concern about the facility. It is generally desirable to conduct more extensive interviews in communities where the level of concern is high. Alternatively, where the level of interest is low or there has already been significant interaction with community, fewer interviews may be appropriate.

3. **Prepare for the interviews.** Before conducting the interviews, learn as much as possible about the community and community concerns

regarding the facility. Review any available news clippings, documents, letters, and other sources of information relevant to the facility. Determine whether the community has any particular language, geographic, or economic characteristics that should be addressed. Prepare a list of questions that can serve as a general guide when speaking with residents and local officials. Questions should be asked in a way that stimulates discussion on a variety of topics, including:

- General knowledge of the facility. Find out what sort of information the community has received about the facility and if what level of involvement the community has had with the facility.

- Specific concerns about the technical and regulatory aspects of activities at the facility. Determine what the community's concerns are and what types of information would be most appropriate to address these concerns.

- Recommended methods of communicating with the community and receiving community input. Determine which communications tools are likely to be most effective -- e.g., mailings, meetings, broadcast media -- and what public participation events could best serve the community. Learn about special information needs that the community may have (e.g., the level of literacy, the percentage of non-English speakers).

- The best public meeting facilities, most relied-upon media outlets, and the best times to schedule activities.

- Other groups or individuals to contact for more information.

4. **Arrange the interviews.** Telephone prospective interviewees and arrange a convenient time and place to meet. Ideally, the meeting place should promote candid discussions. While government and media representatives are likely to prefer meeting in their offices during business hours, local residents and community groups may be available only in non-business hours. Meetings at their homes may be most convenient.

During the interviews:

1. **Provide background information.** Briefly describe the permitting activity or corrective action at hand.

2. **Assure interviewees that their specific comments will remain confidential.** At the beginning of each interview, explain the purpose of the interviews -- to gather information to assess community concerns and develop an appropriate public participation strategy.

Explain that while the public participation plan will be part of the administrative record, the plan will not attribute specific statements or information to any individual. Ask interviewees if they would like their names, addresses, and phone numbers on the mailing list.

3. **If community members do not feel comfortable with interviewers from your organization, consider using a third-party.** Some citizens may not be entirely forthcoming with their concerns or issues if they are uncomfortable with the interview. If sufficient resources are available, inciter hiring a contractor to perform interviews. Some civic or community organizations may be willing to help in the interview process. If these options are not available, then consider distributing anonymous **surveys** or convening **focus groups**, where a number of citizens can give their input together.

4. **Identify other potential contacts**. During the discussions, ask for names and telephone numbers of other persons who are interested in activities at the facility.

5. **Gather information on past citizen participation activities** . Determine the interviewee's perceptions of past outreach activities by your organization.

6. **Identify citizens' concerns about the facility**. When identifying concerns, consider the following factors:

   - Threat to health -- Do community residents believe their health is or has been affected by activities at the facility?

   - Economic concerns -- How does the facility affect the local economy and the economic well-being of community residents?

   - Agency/Facility/Interest Group credibility -- Does the public have confidence in the capabilities of the agency? What are the public's opinions of the facility owner/operator and involved environmental/public interest organizations

   - Involvement -- What groups or organizations in the community have shown an interest in the facility? Is there a leader who has gained substantial local following? How have interested groups worked with the agency or facility in the past? Have community concerns been considered in the past?

   - Media -- Have events at the facility received substantial coverage by local, state, or national media? Do local residents believe that media coverage accurately reflects the nature and intensity of their concerns?

   - Number affected -- How many households or businesses perceive themselves as affected by the facility (adversely or

positively)?

7. **Assess how citizens would like to be involved in the RCRA permitting or corrective action process**. Briefly explain the RCRA public participation process and ask the interviewees how they would like to be involved and informed of progress made and future developments at the facility. Ask what is the best way to stay in contact with the interviewee. Ask the interviewee to recommend convenient locations for setting up the information repository or holding public meetings. Keep a list of those who wish to be kept informed.

When to Use

Community interviews should be conducted:

- As part of a community assessment by facility owners who are applying for a permit, seeking a major permit modification, or beginning significant corrective action.
- By the permitting agency to find out about community concerns at the outset of a major permitting or corrective action process.
- Before revising a public participation strategy, because months, or perhaps years, may have elapsed since the first round of interviews, and community concerns may have changed.

As the level of community concern increases, so does the need to conduct more extensive assessments. If there has been a lot of interaction with the community and interested parties, information on citizen concerns may be current and active. In such situations, it may be acceptable to conduct only a few informal discussions in person or by telephone with selected, informed individuals who clearly represent the community to verify, update, or round out the information already available.

Accompanying Activities

As stated above, community interviews are conducted to gather information to develop an appropriate **public participation plan** for the facility. A **mailing list** may or may not be in place at the time interviews are conducted. If there is one, it can be used to identify individuals to interview. If one has not yet been established, the interviews themselves can provide the basis for the list.

Advantages and Limitations

Community interviews can be a valuable source of opinions, expectations, and concerns regarding RCRA facilities and often provide insights and views that are not presented in the media. In addition, these interviews may lead to additional information sources. The one-on-one dialogue that takes place during community interviews provides the basis for building a good working relationship, based on mutual trust, between the community and other stakeholders. Therefore, although its primary purpose is to gather

information, the community interview also serves as an important public outreach technique.

The major disadvantages of community interviews are that they may be time-consuming and resource-intensive for your staff; they could cause unnecessary fear of the situation among the public; and, they are not very useful if you do not talk with the right people -- the people who have not identified themselves as well as the more vocal ones who have.

Checklist for Community Interviews

- ☐ Determine number of interviews to be conducted: _____
- ☐ Determine dates for interviews: _____
- ☐ Identify team to conduct interviews:

  _____

  _____

- ☐ Identify individuals to interview
  - ☐ Review facility background files for names of people who have expressed interest
  - ☐ Identify community leaders to contact
  - ☐ Identify city/state/county officials to contact
- ☐ Prepare interview questions
- ☐ Review background information available about the facility and community
- ☐ Set up interviews
  - ☐ Confirm interviews by mail or phone
- ☐ Conduct interviews
  - ☐ Ask for additional people to contact
  - ☐ Gather information using prepared interview questions
- ☐ Follow-Up
  - ☐ Follow-up interview with a thank you letter
  - ☐ Notify the interviewee when the public participation strategy is available in the repository

Focus Groups

Regulatory Requirements

None.

Description of Activity

Some organizations use focus groups as a way of gathering information on community opinion. The advertizing industry developed focus groups as an alternative to expensive market research (which relies heavily on polling). Focus groups are small discussion groups selected either to be random or to approximate the demographics of the community. The group is usually led by a trained moderator who draws out people's reactions to an issue.

Facility owners may want to consider focus groups as a complement to interviews during the community assessment or at important activities during the life of a facility. The permitting agency may want to consider focus groups to gauge public opinion before controversial permitting activities or corrective actions.

Level of Effort

Focus groups can be resource-intensive, depending on the number of groups you convene. This method will be more expensive if you need to provide for a moderator, meeting space, or transportation.

How to Conduct the Activity

To prepare for focus groups:

1. **Determine whether or not a focus group can help the process.** Community interviews serve much the same purpose as focus groups. Will gathering members of the community together provide more comfort? Will it be a more effective means of gauging public opinion?

2. **Select your focus groups.** Contact other stakeholders and community leaders to get input on who to include in your focus groups.

3. **Use community interview techniques to get input from the focus group.** You can follow the guidance in "Community Interviews" above in this Chapter to learn about the types of questions to ask your focus groups.

4. **Use the information in forming a public participation plan.**

When to Use

Facility owners may want to use focus groups as a complement to community interviews; permitting agencies may want to consider focus groups in situations where there is a high degree of public interest in a

permitting activity. Focus groups provide a quick means of feedback from a representative group and can be a good supplementary activity, especially if such group discussions will make some members of the public feel more comfortable.

Accompanying Activities

Use focus groups as a complement to **community interviews**. You may want to hold a **presentation** or provide the groups with information such as **fact sheets**.

Advantages and Limitations

Focus groups allow you to get an in-depth reaction to permitting issues. They can help to outline a public participation plan and give an indication of how the public will react to certain issues.

The reactions of a focus group cannot, in all cases, be counted on to represent the greater community. Some people may perceive focus groups as an effort to manipulate the public.

Checklist for Focus Groups

- ☐ Determine number of focus groups to be conducted: _____
- ☐ Determine dates for focus groups: _____
- ☐ Identify moderator to conduct focus groups:

  _____
- ☐ Identify individuals for focus groups
  - ☐ Review facility background files for names of people who have expressed interest
  - ☐ Identify community leaders to contact
  - ☐ Identify city/state/county officials to contact
- ☐ Prepare discussion questions
- ☐ Review background information available about the facility and community
- ☐ Set up focus groups
  - ☐ Confirm participation by mail or phone
- ☐ Conduct focus groups
  - ☐ Ask for additional people to contact
  - ☐ Gather information using prepared interview questions
- ☐ Follow-Up
  - ☐ Follow-up interview with a thank you letter
  - ☐ Notify the interviewee when the public participation plan is available

Door-to-Door Canvassing

Regulatory Requirements

None.

Description of Activity

Door-to-door canvassing is a way to collect and distribute information by calling on community members individually and directly. Public interest groups have long used such techniques, and they may also be useful for facility owners as a way to gauge public interest during the community assessment stage. The permitting agency may consider using this technique to interact with the community in situations where public interest is very high, such as emergency cleanups, or in other situations where direct contact with citizens is essential. See the section on "When to Use" below for more details.

During these interactions, canvassers can field questions about the permitting activity, discuss concerns, and provide fact sheets or other materials. Some citizens may want to find out more about the activity by signing up for mailing lists or by attending an upcoming event.

Level of Effort

Door-to-door canvassing is a very time-intensive activity because of the number of staff needed to conduct the canvassing and the amount of time you will need to plan for the canvassing. Canvassers should travel in pairs in areas where there may be a lot of contention or in high crime areas. Planning for the door-to-door canvassing will require at least a day. This includes identifying the area to be canvassed, determining the amount of staff needed, and notifying area residents. The amount of time spent canvassing will depend on the size of the area to be canvassed.

How to Conduct the Activity

A door-to-door canvass involves training staff to gather information, answer questions, and to communicate with a possibly irate or suspicious public.

Procedures to follow in preparing a door-to-door canvass include:

1. **Identify the area where canvassing is necessary or desirable.** Determine the area where special information must be given or collected. This area may range from just a few streets to several neighborhoods. Determine if there is a need for a translator or materials in languages other than English. Also determine when it is likely that people will be at home; the canvassing may have to be conducted in the evening.

2. **If time permits, notify residents** (e.g., by distributing a flyer) that canvassers will be calling door-to-door in the area. Tell residents what time the canvassers will be in the neighborhood and explain the purpose of the canvassing program. Advance notice will reduce the suspicions of residents and encourage their cooperation. Also, notify local officials so they are aware of the door-to-door canvassing.

3. **Provide canvassers with the information they will need** to respond to questions. Residents will want to know what is happening at the facility and may have questions about possible health effects associated with various activities. If appropriate, you should distinguish between the types of questions that a canvasser may answer (i.e., questions concerning the schedule of activity) and the types of questions that should be referred to technical staff (e.g., highly technical questions concerning hazardous waste or agency policies). Provide canvassers with fact sheets or other written materials for distribution.

4. **Canvass the designated area.** Note the name, address, and telephone number of residents requesting more information. Note also the names of those who were especially helpful in giving information. Be prepared to tell residents when they will next be contacted and how (i.e., by telephone, by letter, or in person). All canvassers should have an official badge to identify themselves to residents.

5. **Send a thank-you letter** after the canvass to all residents in the canvassed area. If possible, provide information concerning recent developments and any results or pertinent information gathered by the canvass. Respond to special requests for information either in the thank-you letter or by telephone.

When to Use

Door-to-door canvassing may be used:

- When there is a high level of concern about the site, but meetings cannot be scheduled;
- When there is a need to notify citizens about a certain event or an upcoming permitting issue;
- When you need to reach a specific group of people for a specific purpose, such as getting signatures to allow access to properties adjacent to the facility;
- When the community has a low literacy rate and written materials aren't useful;

- When the area consists of a population whose primary language is not English, but it is important to pass information to the area; and

- When there is an emergency situation that the community needs to know about.

Accompanying Activities

Telephone contacts and **community interviews** may help to identify appropriate areas for canvassing efforts. Canvassers should add to the **mailing list** names of individuals who either requested additional information or provided particularly useful information.

Advantages and Limitations

This activity involves face-to-face contact, thereby ensuring that citizens' questions can be directly and individually answered. Canvassing demonstrates a commitment to public participation, and is a very effective means of gathering accurate, detailed information, while determining the level of public concern.

This technique is very time-consuming and costly, even in a small area. Furthermore, trained people that can answer questions at the necessary level of detail are often not available for this activity. This activity is not recommended for the dissemination of information except in an emergency. This high level of direct contact can raise more concerns rather than allay them.

The safety and security of the canvassers also should be taken into account when planning this activity. Additional staff may be need so that people can work in teams to two or three; in extreme situations, security staff may be necessary .

Checklist for Door-to-Door Canvassing

- ___ Identify area where canvassing will be conducted
  - ___ Prepare maps for each team of canvassers
  - ___ Send a letter to residents announcing canvassing
    - ___ Prepare mailing list using the city directory (section listing residences by street address)
    - ___ Prepare letter; coordinate internal review
  - ___ Determine security needs of canvassing team
- ___ Prepare any information (i.e., fact sheets) that canvassing team may provide to interested residents
- ___ Identify staff to conduct canvassing and have official badges made to identify them
- ___ Brief staff on canvassing effort
  - ___ Provide staff with a copy of letter sent to residents
  - ___ Tell staff what kinds of questions they may answer and provide them with information (i.e., questions concerning the schedule of activity)
  - ___ Tell staff what kinds of questions they should refer to a specialist (i.e., technical questions)
  - ___ Provide staff with prepared maps
- ___ Canvass designated areas
  - ___ Note the name, address, and telephone number of residents requesting more information
- ___ Send thank you letter to all residents in the canvassed area

Public Comment Periods

Regulatory Requirements

Public comment periods are required whenever the permitting agency issues a draft permit or an intent to deny a permit (§ 124.10). Comment periods are also mandatory on requests for Class 2 and 3 permit modifications under § 270.42, for agency-initiated modifications under § 270.41, and during closure and post-closure for interim status facilities under §§ 265.112(d)(4) and 265.118(f).

Description of Activity

A public comment period is a designated time period in which citizens can formally review and comment on the agency's or facility's proposed course of action or decision. Comment periods for RCRA permits must be at least 45 days.

Level of Effort

There is no specific level of effort for a public comment period. Estimates of the time required to conduct activities associated with the public comment period (public notice, public hearing, etc.) are found elsewhere in this chapter. The time required to receive, organize, and determine how to respond to comments will vary depending on the number of comments received and the complexity of the proposed action (see the section on "Response to Comments" earlier in this chapter).

How to Conduct the Activity

Announce the public comment period in a local newspaper of general circulation and on local radio stations. Public notices must provide the beginning and ending dates of the public comment period and specify where interested parties should send their comments and/or requests for a public hearing. Refer to the section about "Public Notices" earlier in this chapter for further information.

When to Use

A minimum 45-day public comment period is required for RCRA permits, including modifications to permits initiated by the agency as well as Class 2 and 3 modifications requested by the facility.

Accompanying Activities

Public comment periods cannot begin until notice of the permitting activity is given. RCRA requires that the agency conduct a **public hearing** if requested by a member of the public during the public comment period. Announce the hearing through a public notice and through a fact sheet, if one is prepared in advance. Public comment periods cannot begin until notice is given.

Comments received during the public comment period must be discussed in a written **response to comments**.

Advantages and Limitations

Public comment periods allow citizens to comment on agency and facility proposals and to have their comments incorporated into the formal public record.

However, public comment periods provide only indirect communication between citizens and agency officials because, in some cases, the formal responses to the comments may not be prepared for some time. Also, in some cases, the agency may not individually respond to every comment. A public participation program should provide other activities that allow dialogue between agency officials and the community.

Checklist for Public Comment Periods

_ Determine dates of public comment period (minimum of 45 days)

Dates: _____

_ Determine contact person within the agency who will answer citizens' questions regarding the public comment period

_ Announce public comment period through a public notice

_ If requested by a member of the public during the comment period, schedule a public hearing

_ Document with a memo to the file any comments that were not received in written form

Unsolicited Information and Office Visits

Regulatory Requirements

None.

Description of Activity

EPA encourages permitting agencies, public interest groups, and facility owners/operators to seek input from interested citizens and other stakeholders. At times, this information may arrive in the form of phone calls, letters, and meetings. While this type of information is not always asked for, it can be helpful.

Citizens or stakeholders from other groups may want to visit the agency's office or the facility. In this situation, the visiting stakeholders will want to meet with the person who works most directly with their concerns.

Level of Effort

Depends entirely on the type of unsolicited information provided by the public. Office visits will also command varying amounts of time.

How to Conduct the Activity

Members of the public will come to the agency, the facility, or another organization with information and requests. Public outreach staff should be available for discussion and information when visitors come.

Unsolicited information can be very helpful. First, it can provide an idea of the level of public concern over a facility. Second, members of the public often provide information that is essential to making good technical, economic, and policy decisions. Local citizens often have the most knowledge and insight about the conditions of the land and the people surrounding a facility.

If interested people come to the office, they should be received by a staff member who can relate well with the public and knows the overall mission of your organization. If feasible, he or she should introduce the visitors to members of the staff who can discuss specific issues. Staff people should listen to the citizens' concerns and provide feedback where possible. They should be candid when they do not know the answer to a question. They should also be cordial, avoid jargon and overly technical language, and try to solve the visitor's problem. (See the section on "Informal Meetings With Other Stakeholders" in this Chapter for more information).

If citizens send a letter or call by phone, the receiving organization should respond as soon as possible. If the response will be delayed, a representative of the organization should write a letter or call to explain.

The receiving organization should consider all relevant comments as informal input into the permitting process and let citizens know how they can submit formal comments.

When to Use

Unsolicited information is a constant in community participation. You can improve (or maintain) the credibility of your organization by giving due weight to citizens' concerns and by replying promptly to citizen input.

Accompanying Activities

Fact sheets, **project reports**, and other mailings can answer questions or reply to citizen inquiries. Offer to put concerned citizens on the **mailing list**. Consider holding an **availability session**, **open house**, or **informal meetings** if you detect a high level of public interest.

Advantages and Limitations

A good outreach program can increase your organization's credibility. Unsolicited information can alert you to issues of high public concern and allow you to identify involved groups in the community. Visitors to your organization can get to know the staff, while the staff gains a better understanding of the visitors' concerns.

Unsolicited information is, at best, a supplement to more formal information-gathering. It may be misleading since it does not always reflect the overall level of public concern. Good handling of unsolicited information takes good communication and cooperation within your organization.

Checklist for Unsolicited Information and Office Visits

For office visits:

_ Appoint a member of your staff to act as a liaison for public visits

_ The liaison should answer questions and introduce stakeholders to members of your organization who are involved in the issue

_ Invite visitors to put their names on your mailing list

_ Follow up quickly on any questions that you could not answer during the visit

For phone calls and written requests:

_ Keep a log of calls and letters from other stakeholders

_ Respond quickly to questions; inform the questioner if your response will not be timely

Surveys and Telephone Polls

Regulatory Requirements

None.

Description of Activity

If public participation is to be a dialogue, citizens need ways to provide feedback to facilities, public interest organizations, and permitting agencies. Surveys and polls are designed to solicit specific types of feedback from a targeted audience, such as public opinion about a permitting activity, the effectiveness of public participation activities, or what could be done to improve distributed materials. Surveys may be either oral or written; used in person or by mail; and distributed either to specific segments of the community or to representative samples. We discuss telephone polls in this section, but you may want to consider door-to-door polling or other methods.

Facility owners may want to consider using surveys and polls during the community assessment to gauge public sentiment about constructing or expanding a facility, or as a complement to direct community interviews. The permitting agency can use surveys and polls in a similar fashion, especially during major projects and at facilities that raise controversy. The agency, public interest groups, and the facility owner may also want to use surveys and polls to find out if citizens are receiving enough information about the RCRA activity and are being reached by public notices or other outreach methods.

Level of Effort

On-paper surveys distributed at meetings or by mail are relatively easy and inexpensive, aside from postage. Surveys done in person or by telephone can be very time-consuming.

How to Conduct the Activity

To prepare for surveys or telephone polls:

1. **Specify the information that you need to gather.** Construct specific questions to include in the survey or poll. For written surveys, consider which questions should be multiple choice or "check one box" -- formats that people are more likely to answer. Ensure that oral questions are not too long or confusing and be wary of the factors that can bias your surveying method (e.g., the wording of the question).

   Survey questions do not have to be highly detailed in every case. You may use surveys to allow people to submit general impressions after a meeting or a hearing.

2. **Design the survey or poll.** For written surveys, you should leave plenty of room for people to write. Give clear instructions and explain how you will be using the information. Always include the name and number of a contact person. Provide multi-lingual surveys where appropriate. Follow these same guidelines for oral surveys and polls. For oral surveys, you may want to provide a business card to the interviewee when your discussion is over

3. **Distribute the surveys and questionnaires.** As we mentioned earlier, you may distribute written surveys in person or via mail. You may also leave them for people to pick up after a meeting; or you may decide to distribute them by hand to peoples' homes. If people will need to mail the survey, consider including pre-stamped, pre-addressed envelopes.

   If you are seeking out specific information, you may want to distribute the surveys to a representative sample of the community. In some cases, you may want to do a "blanket" distribution to all homes and businesses within a certain distance of the facility.

   If you choose to do an oral survey, follow the information in the section on "Community Interviews" earlier in this Chapter.

   For telephone polls, you will have to decide whom to call and whether you will address the poll to a random sample, a representative sample, or a targeted segment of the community. If you are attempting one of the latter two options, you may want to contact community leaders and local officials to determine the demographics of the area.

When to Use

Use surveys and telephone polls when:

- you are seeking specific information from a targeted community or audience; or
- you are trying to provide people with a means of giving anonymous feedback during the permitting process.

Accompanying Activities

Always include the name and number of a **contact person** on a survey or a questionnaire. Surveys and questionnaires can be useful for gathering general impressions about specific permitting activities or public participation events, such as **availability sessions** or **public hearings**. They may also complement **community interviews** by allowing people, who may have been uncomfortable or pressured during the interview, to submit anonymous thoughts and comments.

Advantages and Limitations

Written surveys and questionnaires are relatively inexpensive and simple ways to solicit information. They can provide feedback loops for many permitting activities and some people may be more comfortable with the

anonymity that written surveys can ensure. Oral surveys and polls allow you to interact directly with members of the public and to solicit their immediate feedback on permitting issues.

Surveys conducted in-person can be very time-consuming and expensive. Written surveys may not present viewpoints that are representative of the community because people who fill out the surveys tend to have stronger feelings in favor, or against, the proposed activity. Surveys conducted by mail have the additional weaknesses of undependable response rates and questionable response quality.

Checklist for Surveys and Telephone Polls

_ Determine what type of information is needed

_ Determine what format will work best for gathering the information

Written surveys:

_ Determine if you will need to provide the survey in a multilingual format or you will need to provide for other special communication needs in the community (e.g., persons who are illiterate)

_ Prepare interview questions

_ Design the survey sheet; leave adequate writing room and make sure the instructions are clear and easy to understand

_ Provide the name of a contact person on the survey

_ Decide how you will distribute the survey, based on the public participation plan, community interviews, and background information on the facility and the community

Telephone polls or an oral surveys:

_ Identify a team to conduct the survey or the telephone poll

_____

_____

_ Identify how you will target the polling group

_ Consult a polling firm or a consultant if you are conducting your survey with a representative sample

_ Determine if you need to conduct a multilingual poll or survey and whether there are other special communication needs in the community (e.g., persons who are hearing impaired)

_ Prepare the questions for the poll or survey

_ Write a script you can use to give background information to people before the questions

_ When you conduct the survey, provide the name of a contact person, either over the phone, or by handing out business cards in person

Contact Persons/Offices

Regulatory Requirements

EPA regulations require the permitting agency to designate a contact office in most public notices. This requirement applies to draft permits, notices of intent to deny a permit, and modifications initiated by the permitting agency (§§ 124.10(d) and 270.41), as well as to the notice of application submittal (§ 124.32(b)). In these cases, the permitting agency will also provide a contact for the permit applicant. When a permit applicant holds a pre-application meeting under § 124.31, the applicant must provide public notice that includes a contact person for the facility. Similarly, the facility must provide public notice, including a contact at the agency and the facility, when requesting a Class 2 or 3 permit modification (§ 270.42 (b) and (c)). Permitting agencies must also provide contacts and telephone numbers (for the facility and the agency) during the trial burn stage at permitted and interim status combustion facilities (§ 270.62(b) and (d); 270.66(d)(3) and (g)).

Description of Activity

The contact person is a designated staff member who is responsible for responding to questions and inquiries from the public and the media. Some organizations may want to consider distributing lists of contact persons who are responsible for answering questions in certain topic areas.

Level of Effort

The amount of time that the contact person spends responding to citizen concerns and questions will depend on the level of community interest in a facility's permit or corrective action activities. A contact person may spend a few hours a day responding to citizen inquiries if there is high to moderate interest in the facility's RCRA activities.

How to Conduct the Activity

For each permit or corrective action, designate a contact who will respond to citizens' requests for information, answer their questions, and address their concerns on any aspect of the permit or cleanup process. Although permitting agencies are only required to designate a contact office, specifying a person and keeping the same person as the contact throughout the process may engender more public trust and confidence.

When a contact person is assigned:

1. **Send out a news release** announcing the contact person to all local newspapers, radio stations, and television stations. Include the contact person's telephone number and mailing address in all news releases, fact sheets, and mailings. Include in publications a self-mailer, which can be a separate flyer or a designated cut-a-way section of the fact sheet that is addressed to the contact person and leaves room for interested people to request more information or

write their comments.

2. **Give the name, address, and phone number of the contact person to all involved staff in your organization and other stakeholders.** Let staff members know that the contact person may be approached for information and that your staff should coordinate the release of information with the contact person. Inform other stakeholders that the contact person will be available for questions and information-sharing.

3. **Keep a log book** of all citizen requests and comments received by the contact person, and how each one was handled. This will help to assure that incoming requests are not filed and forgotten. This log book also provides another record of issues and concerns.

When to Use

A contact person should be designated for every facility at the outset of the RCRA process.

Accompanying Activities

Designation of the contact person should be announced in **news releases** and **fact sheets**, and **public notices**. The contact person also should be responsible for making sure that the facility's **information repository**, if required, is kept up-to-date.

Advantages and Limitations

A contact person can assure citizens that your organization is actively listening to their concerns and can provide the community with consistent information from a reliable source.

The contact person may not have the authority to resolve all of the concerns raised by citizens and other stakeholders; his or her role may be limited to providing information and facilitating communication between your staff, citizens, and other stakeholders. If, for any reason, the identity of the contact person changes, it is important to inform the community, media contacts, and other stakeholders about this change quickly. You should designate a replacement as soon as possible.

Checklist for Contact Persons

_ Designate a contact person for the facility:

_____

_ Notify media of the name, mailing address, and phone number of the contact person

_ Inform your staff and other stakeholders who are involved with the facility

_ Have contact person maintain a log book of all stakeholder requests and comments received

Telephone Contacts

Regulatory Requirements

None.

Description of Activity

Telephone contacts can be used to gather information about the community and to update State and local officials and other interested parties on the status of permitting or corrective action activities. See the section on "Surveys and Telephone Polls" earlier in this Chapter for related activities.

Level of Effort

Telephone contacts can be a time-intensive activity, depending on the nature of the call. Allow several hours per call when gathering information.

How to Conduct the Activity

In making telephone contacts:

1. **Know exactly what information to request or give out.** Plan carefully what you want to say or what information you would like to obtain from these individuals. Refer to the section on "Community Interviews" earlier in this chapter for information on how to conduct these interviews.

2. **Conduct telephone calls and take notes for your files.**

When to Use

Telephone contacts may be used:

- In the early stages of the RCRA actions to identify key officials, citizens, and other stakeholders who have a high interest in the facility;
- To gather information when face-to-face community interviews are not possible;
- When new and time-sensitive material becomes available; and
- When there is a high level of community interest in the facility, and it is important to keep key players informed.

Accompanying Activities

Telephone contacts are usually made to arrange or conduct community interviews, develop **mailing lists** and arrange for other public participation activities such as **news briefings**, **informal meetings**, and **presentations**.

Advantages and

Telephone calls can be an inexpensive and expedient method of acquiring

Limitations

initial information about the facility. Once the initial information has been gathered, telephone contacts are a quick means of informing key people about facility activities and for monitoring any shifts in community concerns.

Residents initially may feel uncomfortable discussing their concerns and perceptions over the telephone with a stranger. Once residents have met your staff in person, however, they may be more open and willing to discuss their concerns during follow-up telephone calls.

Checklist for Telephone Contacts

Initial telephone contacts:

- ☐ Identify individuals to contact:
  - ☐ State officials
  - ☐ Local officials
  - ☐ Regulatory agency officials
  - ☐ Concerned citizens
  - ☐ Media
  - ☐ Environmental groups, civic organizations, public interest groups
- ☐ Prepare information to discuss on telephone
  - ☐ Prepare questions for individuals to answer
  - ☐ Prepare information that you can give them
- ☐ Keep a log book of information received/given

On-going contacts:

- ☐ Maintain up-to-date telephone contact list
- ☐ Prepare information to discuss on telephone before each set of calls

Telephone Hotlines

Regulatory Requirements

None.

Description of Activity

A hotline is a toll-free (or local) telephone number people can call to ask questions and obtain information promptly about RCRA activities. Some hotlines allow people to order documents.

Level of Effort

The amount of time spent on the telephone hotline responding to citizen concerns and questions will depend on the level of concern the community has regarding the facility's permit or corrective action activities. You may spend several hours a day responding to inquiries if there is high to moderate interest in the facility's RCRA activities.

How to Conduct the Activity

To install a telephone hotline, either as a semi-permanent fixture (available throughout the permit review or corrective action process) or as a temporary measure (installed at the time of major community feedback, such as the public comment period):

1. **Assign one or more staff members** to handle the hotline calls. Consider installing more than one line to minimize busy signals. If staff are not available throughout the day, install an answering machine directing people to leave their name, number, and brief statement of concern, and informing them that someone in your organization will return their call promptly. If a voice mail system is available, provide information on commonly requested information such as meeting dates and locations and the permit status. Check the answering machine for messages at least once a day. If the level of concern is high, check for messages more frequently.

2. **Announce the telephone hotline** in news releases to local newspapers, radio stations, and television stations, and in fact sheets, publications, and public notices.

3. **Keep a record of each question**, when it was received, from whom, and how and when it was answered. All questions and inquiries should be responded to promptly (within 24 hours) if an answer cannot be given immediately. Be diligent in following up requests for information and tracking down accurate, direct responses.

When to Use

A telephone hotline may be used:

- When community interest or concern is moderate to high;

- When emergencies or unexpected events occur, or when a situation is changing rapidly;
- When there is a high potential for complaints (e.g., about dust or noise);
- Where literacy rates are low and written information must be supplemented; and
- Where the community is isolated and has little opportunity for face-to-face contact with project staff (e.g., rural areas, areas far from Regional offices).

Accompanying Activities

The hotline can supplement all other public participation activities.

Advantages and Limitations

A hotline can provide interested people with a relatively quick means of expressing their concerns directly to your organization and getting their questions answered. This quick response can help reassure callers that their concerns are heard. A telephone hotline also can help monitor community concerns. A sudden increase in calls could indicate that additional public participation efforts may be warranted.

You must respond quickly to questions or concerns; otherwise callers may become frustrated. If the number of calls is large, responding quickly to each inquiry could prove burdensome to your staff. Furthermore, dialing a hotline number and receiving a recorded message could irritate or alienate some members of the public.

Checklist for Telephone Hotlines

- _ Determine need for telephone hotline
- _ Identify staff responsible for answering calls
  - _ Have staff maintain a log of all calls and responses
- _ Install telephone hotlines/answering machines
- _ Notify interested people about the hotline
  - _ Public notice
  - _ Fact sheet
  - _ Mailing to facility mailing list
- _ Coordinate staffing of hotline
- _ Follow-up on calls to hotline

On-Scene Information Offices

Regulatory Requirements

None.

Description of Activity

An on-scene information office is a trailer, small building, or office space on or near the facility site, depending on what is more convenient and accessible for the affected community. The office is staffed by a full-time or part-time person(s) who responds to inquiries and prepares information releases.

Level of Effort

An on-scene information office is a time-intensive activity. You may have staff in the office up to 40 hours a week. Short Cut: Hire a contractor to staff the office; however, always ensure that a representative is there for some specified period during the week.

How to Conduct the Activity

To provide an on-scene information office:

1. **Establish the office.** You may have to rent a trailer, arrange with the owner of the facility to designate space in the facility, or rent office space in a town to be used as an office and launching area. If you will be establishing the office off-site, then you should find an area in the vicinity of the facility or in the nearest town or village.

2. **Install a telephone** and an answering machine to respond to inquiries and publicize the number in local newspapers and your public participation publications.

3. **Assign someone to staff the office.** Establish **regular** hours, including some during the weekend and weekday evenings. Publicize the trailer's hours and the services it offers.

4. **Equip the office with the same materials normally contained in an information repository, if possible.** At a minimum, include key documents and summaries of other documents that are not available. Provide a copy machine so that the public can make copies of documents in the information repository.

When to Use

An on-scene information office may be used:

- When community interest or concern is high;

- During corrective actions;
- When cleanup involves complex technologies or processes;
- When the community perceives a high level of risk to health;
- When activities may disrupt the area surrounding the facility (e.g., traffic patterns); and
- When the area near the facility is densely populated.

Accompanying Activities

The on-scene staff person can conduct **meetings** and **question and answer sessions** to inform citizens about the status of the corrective actions or other facility operations. Staff may also prepare and distribute **fact sheets** and **newsletters** to local residents, conduct **facility tours**, and support the **telephone hotline**. With the **telephone contacts** they make, they can add to and update **mailing lists** and revise **public participation plans**. An on-scene information office may also be a good location for the **information repository**.

Individuals staffing an on-scene information office for an extended period of time will necessarily have a special role in the community. Involvement in other public participation activities may represent a large part of their function. In addition to distributing information to local residents, on-site staff may be responsible for maintaining data bases of residents' addresses, the status of access to property, and a daily log of inquiries. It is important that on-site staff monitor public perceptions and concerns daily. On-scene staff often can make useful recommendations regarding stakeholder concerns. Finally and perhaps most importantly, on-site staff members will frequently serve as a liaison with the public.

Advantages and Limitations

An on-scene information office can be an effective activity for ensuring that other stakeholders are adequately informed about permitting activities and that their concerns are addressed immediately.

An information office can be very expensive since it requires, at a minimum, a part-time staff person and a telephone. Hence, it should be used only when community concerns are currently high or may be high in the future.

Checklist for On-Scene Information Offices

- __ Determine need for an on-scene information office
- __ Identify staff to work in information office
- __ Rent a trailer or office space for the information office
- __ Equip the office with a telephone, office equipment (i.e., copier), and all materials contained in an information repository.
- __ Notify interested people of availability of on-scene information office
    - __ Public Notice
    - __ Fact sheet
    - __ Mailing to facility mailing list
- __ Maintain on-scene information office
    - __ Have staff conduct the following:
        - __ Maintain the mailing list
        - __ Review media coverage
        - __ Respond to calls from citizens and stakeholder groups

Question and Answer Sessions

Regulatory Requirements

None.

Description of Activity

A question and answer session makes knowledgeable staff available to stakeholders to discuss permitting and corrective action issues. Question and answer sessions typically accompany a presentation, briefing, or meeting. Anyone at the event who needs more information will have the opportunity to speak with officials after the event. These sessions can be informal or formal.

Level of Effort

Answering questions will add a small amount of staff time to other public participation activities.

How to Conduct the Activity

To conduct a question and answer session:

1. **Announce that someone will be available for questions after the event.** Pick an area where people can meet a knowledgeable staff person for questions and answers.

2. **Be responsive, candid, and clear.** Ensure that all questions are answered. If staff cannot answer the question on the spot, they should not be afraid to say "I don't know" and offer to answer the question after getting more information. The staffer should write down the question, discuss it with other staff, and respond -- as soon as possible -- by phone or letter. Try to avoid using jargon that people will not understand.

3. **Consider brainstorming ahead of time to develop potential questions and to prepare responses.**

When to Use

Question and answer sessions are appropriate whenever people at an event need more information or the presenting organization needs more feedback. Question and answer sessions are also appropriate when people may feel more comfortable asking questions in a one-on-one situation. If a particular issue, raised by one person at a meeting, is preventing other issues from making the floor at a meeting, you may want to offer to discuss the issue one-on-one after the meeting.

Accompanying Activities

Hold question and answer sessions after **exhibits**, **presentations**, **meetings**, **facility tours**, or on **observation decks**. Some events, such as **open**

houses, have built-in question and answer sessions. In responding to inquiries, you may want to provide written information, such as **fact sheets**, or refer the questioner to a **contact person**.

Advantages and Limitations

Question and answer sessions provide direct communication between your organization and citizens. They are a useful, easy, and inexpensive way of providing one-on-one explanations in an informal setting. One-on-one discussions may attract people who are intimidated from raising issues during a meeting. Such interactions may also increase public comfort and trust in your organization.

Citizens may not be pleased if you cannot answer a question on the spot; they will certainly not be pleased if your response is slow. Be sure to respond to all unanswered questions as soon as you can.

Checklist for Question and Answer Sessions

_ Brainstorm potential questions and prepare responses

_ If you are planning a Q&A session after a meeting or other event, let people know where it will be held by mentioning it during the meeting

_ Be candid and avoid jargon in your answers. If you cannot answer a question, take the questioner's phone number or address and respond to the question as soon as you can.

Information Tables

Regulatory Requirements

None.

Description of Activity

Information tables are simple public participation tools that you can use to interact with interested stakeholders. An information table consists of a table or booth set up at a meeting, hearing, or other event (e.g., a community fair or civic gathering). It is staffed by at least one member of your organization who is available to answer questions. Pamphlets, fact sheets, and brochures are available on the table, along with a sign-up sheet for interested people to add their names to the facility mailing list.

Level of Effort

This activity is time-intensive, with at least one staff person staying at the table during the entire event. The information table is less of a drain on other resources since the materials should already be available.

How to Conduct the Activity

To prepare for an information table:

1. **Learn from community interviews which local events are most frequented by citizens during the year.**

2. **Decide whether the table will be sufficient to address community concerns.** The information table may not be effective in highly-charged environments.

3. **Set up the table.** Include important fact sheets, answers to common questions, general descriptions of the RCRA program, contact names, and hotline numbers. Allow people to sign up for the facility mailing list. Use **exhibits** if appropriate.

When to Use

Use information tables when:

- You need to provide a feedback loop after a public event;
- The RCRA activity has raised significant public interest or technical issues may raise many questions among the public;
- You are gathering names for the facility mailing list;
- A local event, where tables are available, will attract a significant portion of the community.

Information tables may be useful in connection with a **public hearing** or

Accompanying Activities

meeting. EPA recommends using information tables as part of **availability sessions** and **open houses**. **Fact sheets**, **newsletters**, **project reports** and other information should be available at the table. People who come to the table should have the opportunity to sign up for the **mailing list**. **Exhibits** and diagrams can be helpful for explaining the process or technical issues. Provide the name of a **contact person** (or a list of contact people) for interested people to take with them. Information tables provide a good opportunity to distribute questionnaires and **surveys**.

Advantages and Limitations

An information table can provide a feedback loop that complements other events in the permitting process. Information tables at availability sessions and open houses can provide a comfortable way for people to approach project staff and ask questions. At county fairs or other events, they allow project staff to interact with the community and spread information about important permitting activities.

People who approach the information table may ask questions that staff cannot answer. To avoid any negative reactions, staff should record the question and contact the person with an answer by a certain date.

Checklist for Information Tables

(As appropriate):

- ☐ Determine a location for the information table
  - ☐ Facility name, location _____
  - ☐ Contact person at location _____
- ☐ Confirm availability of location for information tables
- ☐ Discuss guidelines for information tables with the event planner
- ☐ Assign staff to cover the information table
- ☐ Collect materials for the information table
  - ☐ Table and chairs
  - ☐ Table skirt
  - ☐ A sign that identifies your organization
  - ☐ Exhibits, time-lines, surveys
  - ☐ Mailing list sign-up sheet
  - ☐ Name tags for your staff
  - ☐ Pens and notepads
  - ☐ Fact sheets, reports, pamphlets, and other documents that people can take
  - ☐ Business cards with the name of a contact person at your organization
  - ☐ Reference documents for your use
- ☐ Keep a record of comments and questions for your files

Informal Meetings with Other Stakeholders

Regulatory Requirements

None. (This type of informal meeting is distinct from the pre-application meeting required under § 124.31 (and discussed under "Public Meetings" in this Chapter) which EPA has stated should be an informal discussion open to the public).

Description of Activity

Informal meetings are meetings your organization holds with individual stakeholder groups that have particular interest in a permitting activity. These meetings are held in an informal setting, such as a resident's home or a local meeting place. Informal meetings allow interested citizens and local officials to discuss issues and concerns. Staff responsible for the facility receive first-hand information from interested community members, special interest groups, and elected officials, while citizens have the opportunity to ask questions and explore topics of interest regarding the facility in question.

Public meetings, which are distinct from **public hearings**, are a special form of informal meetings where the entire community can participate. Public meetings allow all interested parties to discuss issues regarding the facility with each other as well as the regulatory agency. Public meetings can be especially useful for allowing discussion before a public hearing and can be scheduled immediately before the hearing. Comments made during a public meeting do not become part of the official administrative record as they do during a hearing. (See the sections on "Public Meetings" and "Public Hearings" in this Chapter for more details.)

Level of Effort

An informal meeting will take two to three days to plan and conduct. This includes about three hours to set up and schedule the meeting, five hours for preparation, four hours to conduct the meeting, and four hours to follow up on any issues raised during the meeting.

How to Conduct the Activity

To conduct informal meetings:

1. **Identify interested citizens and officials.** Contact each group and local agency that is directly affected by the facility, or contact individuals who have expressed concern regarding the facility. Interested citizen/public interest groups may also want to contact the agency or the facility to set up a meeting. Offer to discuss the permit or corrective action plans at a convenient time, taking into consideration the following elements that will affect levels of community interest and concern: for facilities at which emergency

actions are required, schedule the meeting after the agency has accurate information to share with the participants; for a corrective action, determine first when community concerns may be highest and schedule meetings accordingly. For instance, it may be appropriate to hold an informal meeting when the risk assessment report is released. Holding informal meetings early in the permit process can help prevent potentially volatile situations from developing by providing citizens with one-on-one attention.

2. **Limit attendance.** To increase effectiveness, restrict attendance to between five and 20 individuals or specify attendance by invitation only. The larger the group, the less likely it is that some people will candidly express their concerns. It is difficult to establish rapport with individuals in a large group. If a greater number of stakeholders are interested, you should schedule additional small meetings. If a greater number of participants appears than are expected at an informal meeting, divide the group into smaller groups to allow more one-on-one discussion to take place.

3. **Select a meeting date, time, and place convenient to attendants.** The meeting place should have chairs that can be arranged into a circle, or some other informal setting conducive to two-way communication. A private home, public library meeting room, community center, or church hall may be more likely to promote an exchange of ideas than a large or formal public hall. When scheduling the meeting, make sure that the date and time do not conflict with other public meetings that citizens may want to attend, such as town council meetings, or with holidays or other special occasions. Permitting agencies should be sure that the meeting location does not conflict with state "sunshine laws." In selecting a public meeting place, be attentive to the special needs of handicapped individuals (e.g., access ramps or elevators). Be aware that meetings will frequently have to be scheduled during evening hours to accommodate work schedules.

4. **Begin the meeting with a brief overview.** This short presentation should include a summary of the permit review schedule and how stakeholders can be involved in the decision. These opening remarks should be kept brief and informal (no more than a few minutes) to allow maximum opportunity for open discussion with meeting attenders. Cover whatever topics the public is interested in discussing, these may include:

   - Extent of the activity;
   - Safety and health implications;
   - Factors that might speed up or delay the regulatory and technical process; and

- How community concerns are considered in making decisions on permits and corrective actions.

5. **Identify the regulatory decision-makers** (major agencies and individuals responsible for enacting and enforcing RCRA regulations.) Citizens and other stakeholders will then know where to direct further questions or voice new ideas or suggestions.

6. **Gear the discussion to the audience.** Be sensitive to the level of familiarity that the citizens have with the more technical aspects of the activities discussed.

7. **Listen and take notes.** Find out what the meeting attendees want done. Some concerns may be addressed by making minor changes in a proposed action. Discuss the possibility for accommodating these concerns or explain the reasons why citizen requests appear to be unworkable or conflict with program or legal requirements.

8. **Promptly follow-up on any major concerns.** Stay in touch with the groups and contact any new groups that have formed, so that new or increasing concerns can be dealt with before problems develop.

9. **Write up brief minutes for your files.**

When to Use

Informal meetings can be used:

- When there is widely varying level of knowledge among community members;
- When the level of tension is high and large meetings may not be appropriate;
- When the community needs more personal contact to have trust in your organization or the process;
- When groups want to discuss specific issues in which the community as a whole isn't interested.

Accompanying Activities

Community interviews or calls to **telephone contacts** usually precede these meetings, since it is during these interviews that concerned citizens groups are identified and contacted. Possible meeting locations also can be identified during the community interviews.

Distributing **fact sheets** at these meetings also may be appropriate, depending on when they are held.

Advantages and

The primary benefit of informal meetings is that they allow two-way interaction between citizens, local officials, the permitting agency, and the

Limitations

facility. Not only will citizens be informed about the developments, but the facility owner/operator and officials responsible for the site can learn how citizens view the site.

Informal meetings also add a personal dimension to what might otherwise be treated as a purely technical problem. Informal meetings offer citizens, facility staff, and officials a chance to increase their familiarity with how the process works, increase awareness of each other's point of view, and actively promote public participation. Informal meetings also may diffuse any tension between stakeholders.

Some groups may perceive your efforts to restrict the number of attenders as a "divide and conquer" tactic to prevent large groups from exerting influence on potential actions and to exclude certain individuals or groups. One way to prevent this perception is to hold informal meetings with those organizations who express concern about being left out of the process.

Irate groups or individuals also may accuse your staff of telling different stories to different groups at these small meetings. You can avoid this criticism by inviting a cross-section of interests to each small meeting or by having a large public meeting. Alternatively, you can keep a written record of the informal discussions and make it available upon request or include it in the information repository. A record of discussions is required for any legally-required meetings held during the public comment period.

Checklist for Informal Meetings with Other Stakeholders

__ Determine purpose of meeting

__ Determine number of attenders: _____

__ Determine location(s) for meeting (complete for each available facility)

__ Facility name, location _____

__ Contact person at facility _____

__ Phone number _____

__ Occupancy size _____

__ Determine date, time of meeting:

Date:_____

Time:_____

__ Identify interested citizens and officials

__ Contact citizen groups, invite a representative to the meeting

__ Prepare meeting agenda

__ Overview of project

__ Identify decision-makers

__ Allow time for discussion, question/answers

__ Follow-up

Public Meetings

Regulatory Requirements

The pre-application meeting that a permit applicant is required to conduct under § 124.31 is a type of public meeting, though it need not be restricted to the type of meetings described in this section. In some cases, different meeting formats will fulfill the requirements (see "The Pre-Application Meeting" in Chapter 3). Permit holders are also required to hold public meetings when requesting a class 2 or 3 permit modification under § 270.42(b) or (c).

Description of Activity

Public meetings are not public hearings. **Public hearings** are regulatory requirements that provide a formal opportunity for the public to present comments and oral testimony on a proposed agency action. Public meetings, on the other hand, are less formal: anyone can attend, there are no formal time limits on statements, and the permitting agency and/or the facility usually answers questions. The purpose of the meeting is to share information and discuss issues, not to make decisions. Due to their openness and flexibility, public meetings are preferable to hearings as a forum for discussing complex or detailed issues.

Public meetings sometimes complement public hearings. Public meetings can be especially useful for allowing discussion before a public hearing and can be scheduled immediately before the hearing (**workshops**, see below, can also fulfill this need). Comments made during a public meeting do not become part of the official administrative record as they do during a hearing. Public meetings provide two-way communication, with community members asking questions and the permitting agency providing responses. Unlike the activity in the section above ("Informal Meetings with Other Stakeholders"), public meetings are open to everyone.

While public meetings are usually called and conducted by the permitting agency (e.g., before public hearings) or the facility (e.g., during permit modification procedures), it is common for civic, environmental, and community organizations to hold public meetings where ideas can be discussed freely.

EPA's regulations require several specific public meetings. Section 124.31 calls on prospective permit applicants to announce and hold an informal public meeting prior to submitting a permit application. The permitting agency is not required to attend the meeting. See Chapter 3 for more information about the pre-application meeting. Permittees are required to hold public meetings when requesting a class 2 or 3 modification under § 270.42.

Level of Effort

While a public meeting should require less planning than a public hearing, it may take several days to a week to arrange the location and logistics. See

the "Public Notice" section above in this chapter to determine the resources you will need to announce the meeting. Other activities include preparing and copying materials for distribution. You may be able to distribute some of the same materials at the meeting and the public hearing (if applicable).

How to Conduct the Activity

To hold a public meeting, you will follow many of the same steps as for a public hearing (see Chapter 3 for specific guidance regarding pre-application meetings under § 124.31):

1. **Anticipate the audience and the issues of concern.** Identify the audience's objectives, expectations, and desired results. With this information you will know what topics to spend time on and what materials and exhibits to provide. If a part of your audience does not speak English, arrange for a translator.

2. **Schedule the meeting location and time** so that citizens (particularly handicapped individuals) have easy access. Ensure the availability of sufficient seating, microphones, lighting, and recorders. Hold the meeting at a time and place that will accommodate the majority of concerned citizens.

3. **Announce the meeting** at least 30 days before the meeting date. Provide notice of the hearing in local newspapers, broadcast media, signs, and mailings to interested citizens (you can find requirements for pre-application meetings in § 124.31(d)). Choose communication methods that will give all segments of the community an equal opportunity to participate. Use multilingual notices where appropriate. Make follow-up phone calls to interested parties to ensure that the notice has been received. Provide the name of a contact person.

4. **Make relevant documents available for public review.** If you are a permittee requesting a class 2 or 3 permit modification, you must place a copy of the modification request and supporting documents in a location that is publicly accessible and in the vicinity of the facility (see § 270.42(b)(3) and (c)(3)). Announce the location in the public notice for the meeting. For other public meetings, you should consider making important documents available prior to the meeting.

5. **Provide an opportunity for people to submit written questions and comments.** Not all individuals will want, or be able, to attend the meeting. Announce in public notices and mailings that written comments and questions can be submitted to the contact person. You may want to raise some of these written comments and questions at the public meeting.

6. **Post a sign-up sheet** so that attendees can voluntarily provide their names and addresses. If you are a permit applicant holding a pre-application meeting under § 124.31, you can use this sheet to produce

and submit an attendee list as part of your part B application (as required under § 124.31© and § 270.14(b)(22)). The permitting agency will use the attendee list to help generate the facility mailing list.

7. **Take notes** about the major issues of concern and **prepare a summary of all oral and written comments.** If you are a permit applicant holding a pre-application meeting under § 124.31, you must submit a summary of the meeting as part of your part B permit application (as required under § 124.31© and § 270.14(b)(22)). For other public meetings, you should make a summary available for public review and announce where it is available.

When to Use

Some permitting agencies have had success in holding public meetings prior to a public hearing. Public hearings are often "staged" events with little opportunity for new input or discussion. Some participants have criticized them as opportunities for grandstanding. Public meetings, on the other hand, allow interested parties to ask questions and raise issues in an informal setting. A public meeting can provide a useful means of two-way communication at any significant stage during the permitting or corrective action process.

If you are a permit applicant required to hold a pre-application meeting under § 124.31, the public meeting format is one option you can use. Refer to the discussion in Chapter 3 for more information.

Accompanying Activities

Provide **public notice** of the meeting and designate a **contact person**. **Fact sheets** and **exhibits** can inform people about permitting issues at public meetings. You may also consider establishing an **information table** where people who may feel uneasy speaking during the meeting can ask questions and pick up materials. Another option is to make your staff available after in the meeting, in the same manner as an **availability session** or an **open house**. **Information repositories** can complement the meeting by making important documents available for public review.

Advantages and Limitations

A public meeting provides a forum where interested people can ask questions and discuss issues outside of the formality of a public hearing. They are flexible tools that are open to everyone.

Some citizens may be reluctant to speak up at public meetings. You can address this concern by providing one-on-one access to your staff via an information table or an open house, or by scheduling informal meetings. Public meetings, like public hearings, could become adversarial.

Checklist for Public Meetings

(As applicable):

__ Determine location for public meeting

- __ Facility name, location _____
- __ Contact person at location _____
- __ Phone number _____
- __ Occupancy size _____
- __ Handicap accessibility _____
- __ Features:
  - __ Restrooms
  - __ Public telephones
  - __ Adequate parking
  - __ Security

__ Determine date, time of public meeting:

Date: _____

Time: _____

__ Confirm availability at location (if location is not available, determine new location or new date)

__ Announce the public meeting. (Pre-application meetings under § 124.31 must be announced through a display advertizement in a newspaper of general circulation, over a broadcast medium, and through a sign posted on or near the site of the facility or proposed facility).

- __ Contact local officials
- __ Notify key agencies and other stakeholder groups

__ Provide an opportunity, in the notice, for people to submit written comments

__ Determine whether a translator is needed

__ Determine presentation requirements (depending upon the specific requirements of your presentation, some of these items may be optional)

- __ Electrical outlets
- __ Extension cords

Checklist for Public Meetings (continued)

- __ Accessible lighting control panel
- __ Podium
- __ Stage
- __ Table(s) and chairs for panel
- __ Table skirt
- __ Sign-up sheet for the mailing list. (If you are conducting a pre-application meeting under § 124.31, you are required to provide a sign-up sheet or another means for people to add their names to the facility mailing list. You must provide the sheet to the permitting agency as a component of your part B permit application).
- __ Water pitcher and glasses
- __ Sound system
- __ Microphones (stand, tabletop)
- __ Cables
- __ Speakers
- __ Technician/engineers available for hearing
- __ Visual aids
- __ Slides
- __ Slide projector
- __ Extra projector bulbs
- __ Flip chart
- __ Flip chart markers
- __ Overhead transparencies
- __ Overhead machine
- __ VCR and monitor
- __ Screen
- __ Table for projection equipment

Checklist for Public Meetings (continued)

- __ Security personnel (if necessary)
- __ Table for meeting recorder (who will produce a meeting transcript or summary)
- __ Registration table
- __ Registration cards
- __ Writing pens
- __ Signs
- __ Miscellaneous supplies:
- __ Scissors
- __ Tape (masking, transparent)
- __ Thumbtacks
- __ Public information materials (fact sheets, etc.)

__ Prepare meeting agenda. (Facility owners/operators conducting a pre-application meeting under § 124.31 should refer to chapter 3 of this manual for information on the subjects they should cover during the meeting).

__ Arrange contingency planning. Decide what to do if:
- C more people show up than capacity
- C equipment malfunctions

__ Prepare the meeting summary/transcript and make it available to the public. (Facility owners/operators conducting a pre-application meeting under § 124.31 must provide the summary to the permitting agency as a component of the part B application).

Public Hearings

Regulatory Requirements

Public hearings are required if requested (§ 124.11) by the public during the draft permit stage, during an agency-initiated modification under § 270.41, or a Class 3 permit modification under § 270.42(c)(6). The agency will also hold a public hearing at the draft permit stage when there is a high level of public interest (based on requests), or when the agency thinks that the hearing might clarify relevant issues (§ 124.12). The agency will also hold a hearing if these conditions apply during closure or post-closure at interim status facilities (§§ 265.112(d)(4) and 265.118(f)).

Description of Activity

Public hearings provide an opportunity for the public to provide formal comments and oral testimony on proposed agency actions. Occasionally the agency will present introductory information prior to receiving comments. All testimony received becomes part of the public record.

In contrast to a public hearing, a **public meeting** (see above in this Chapter) is intended to provide two-way discussion and is not always recorded for the public record.

Permittees and facility staff have no official role during a hearing. The hearing is a regulatory requirement of the permitting agency.

Level of Effort

Several days to a week may be required to arrange for a public hearing, including the location, hearing logistics, and agenda preparation. Other activities include preparing the notice for the hearing, conducting a dry-run of the hearing, and preparing and copying materials.

How to Conduct the Activity

To conduct public hearings:

1. **Anticipate the audience and the issues of concern.** Identify the audience's objectives, expectations, and desired results. With this information you can determine whether the hearing is likely to be confrontational, or if the audience will need more detailed information about a permit or corrective action. If a part of your audience does not speak English, arrange for a translator.

2. **Schedule the hearing location and time** so that citizens (particularly handicapped individuals) have easy access. Identify and follow any procedures established by the local and state governments for public hearings. Ensure the availability of sufficient seating, microphones, lighting, and recorders. Hold the hearing at a time and place that will accommodate the majority of concerned citizens.

3. **Arrange for a court reporter** to record and prepare a transcript of

the hearing.

4. **Announce the public hearing** at least 30 days before the hearing date. Provide notice of the hearing in local newspapers and mailings to interested citizens. Under § 124.10(b), you may combine the hearing notice with the draft permit notice. Make follow-up phone calls to interested parties to ensure that the notice has been received.

5. **Provide an opportunity for people to submit written comments.** Not all individuals will want to provide oral testimony. Publicize where written comments can be submitted and how they will be reviewed.

6. **Prepare a transcript of all oral and written comments.** Announce where the transcript will be available for public review.

The following are general tips on conducting public hearings:

Be clear and up front with meeting format and logistics. Public hearings are very limited in the amount of information that is exchanged and the extent to which responses are given. Participants should not expect the question and answer format found in public meetings.

Establish meeting format. Public hearings should be managed by a hearings officer or moderator, whose responsibility it is to ensure that all comments are taken for the public record.

- Establish a speakers list. A moderator should develop a list of speakers from the list of respondents to public notices (e.g., those responding to a notice saying, "those wishing to be placed on the list of commenters should contact ...") and/or by asking those wishing to speak to identify themselves on a sign-up list on the way into the hearing. While limiting commenters to a pre-developed list may be inappropriate, such lists serve as valuable management tools in bringing forward commenters in an orderly and expeditious manner.

- Establish time limits for commenters. A moderator should establish a set time limit for an individual to make comments. Typically the limit is five minutes or less. Those wishing to make more detailed comments should be encouraged to submit their comments in writing.

- Establish time limits (if any) for the hearing. Based on your speakers list, and assuming a limited speaking time for individual commenters, the moderator may establish time limits (if any) on the hearing. Most hearings last between two and five hours. However, for very controversial topics, public hearings have been known to extend over a period of days.

- Interacting with commenters. Because comments become part of the public record, the moderator should ask all commenters to give their

names and addresses. If there is doubt about spelling, the moderator should ask the commenters to spell names or street names. In cases where there may be litigation, it is common practice to further request that anyone legally representing any party as part of the permit process or decision identify that fact.

When giving the floor to a commenter, the moderator should also note the person's name, so that he/she can thank the commenters by name at the conclusion of the comment (e.g., "Thank you for those comments, Ms. Smith.").

- Speakers from the permitting agency. There are no set rules for who should participate or speak at a public hearing. In the spirit of the law, the participants from the agency should be those who will be most involved with making the actual decision -- that is, the permit writer, and senior staff who will weigh all information, including these public comments, prior to reaching a final decision. Speakers from the agency should be limited to explaining briefly the decision being made (e.g., "We are here to discuss a proposed modification to the facilities permit to conduct the following activities...").

When to Use

- When requested by a member of the public during a public comment period on a permit, closure, or corrective action. Once requested, hearings require a minimum 30-day advance notice.
- Public hearings are usually conducted during the public comment period following the issuance of a draft permit, major permit modification, or at the selection of a proposed corrective measure.
- Public hearings may be appropriate at other times during the process, especially if the level of community concern warrants a formal record of communication.

Accompanying Activities

Public notices distributed to the **mailing list** and published in local newspapers are used to announce hearings to the public. If a hearing is held to solicit comments on either a draft permit decision or proposed corrective measure, the agency must prepare a **response to comments**. The response to comments documents all submitted public comments and includes the agency's responses. An educational **workshop** or **public meeting** may be useful shortly before the public hearing to explain key issues of the proposed decision or corrective measure and respond to citizen concerns.

Advantages and Limitations

A hearing provides a record of communication so citizens can be sure that their concerns and ideas reach the permitting agency. Public hearings generally should not serve as the only forum for citizen input. They occur at the end of a process that should have provided earlier public access to information and opportunities for involvement. Earlier opportunities

should answer most questions and arguments that are based on curiosity, emotion, sensationalism, or a lack of knowledge about the situation, thereby freeing the hearing for factually-based questions. Meet citizens' needs for information before a formal hearing with techniques such as fact sheets, small-group meetings, and one-on-one briefings.

The formality of a public hearing often creates an atmosphere of "us versus them." There may be little opportunity to interact with citizens. This may be frustrating to some; however, informal gatherings and question and answer sessions are often effective ways to interact with the public on an interpersonal level. A variety of informal techniques, ranging from talking to citizens groups to holding workshops, are discussed throughout this chapter.

Public hearings can easily become adversarial. One way to avoid hostility or confrontation is to make sure the community has had an opportunity to express concerns in a less formal setting prior to the hearing. More frequent contact with concerned citizens before a formal public hearing will reduce the likelihood of a confrontation.

Checklist for Public Hearings

(As appropriate):

__ Determine location(s) for public hearing

- __ Facility name, location _____
- __ Contact person at facility _____
- __ Phone number _____
- __ Occupancy size _____
- __ Handicap accessibility _____
- __ Features:
  - __ Restrooms
  - __ Public telephones
  - __ Adequate parking
  - __ Security

__ Determine date, time of public hearing:

Date: _____

Time: _____

__ Confirm hearing facility availability (if facility not available, determine new facility or new hearing date)

__ Announce the public hearing through a public notice in at least one newspaper 30 days prior to the hearing

- __ Contact local officials
- __ Notify key agencies

__ Determine presentation requirements (depending upon the specific requirements of your presentation, some of these items may be optional)

- __ Electrical outlets
- __ Extension cords
- __ Accessible lighting control panel

_____

_____

_____

_____

__ Prepare opening comments for hearing officer

__ Arrange contingency planning, decide what to do if:
- C more people show up than capacity
- C the crowd becomes disruptive

__ Coordinate with public involvement coordinator on notification of the media

__ Set date and time for debriefing following the hearing

Availability Sessions/Open Houses

Regulatory Requirements

None. (In some cases, an availability session or an open house may fulfill the pre-application meeting requirement under § 124.31, as long as the meeting achieves the standards of that section. See "The Pre-Application Meeting" in Chapter 3 for more detail.)

Description of Activity

Availability sessions/open houses are informal meetings in a public location where people can talk to involved officials on a one-to-one basis. The meetings allow citizens to ask questions and express their concerns directly to project staff. This type of gathering is helpful in accommodating individual schedules.

Availability sessions and open houses can be set up to allow citizens to talk with representatives from all interested organizations. Citizens can find out more about all sides of a permitting issue through conversations with agency officials, facility staff, and representatives of involved interest groups and civic organizations.

Level of Effort

An availability session/open house may take two to three days to plan and conduct. Allow sufficient time to select a date, time, and location for the meeting, plan for the session, prepare supporting materials, and meet with and brief your staff who will attend the meeting. You should plan for about five hours for the actual session.

How to Conduct the Activity

To conduct an availability session/open house:

1. **Select a date, time, and location for the availability session/open house that encourages attendance.** Evening hours usually are preferable. The location should be in an easily accessible building familiar to residents (such as a public library, school, or local meeting room).

2. **Anticipate the number of attenders and plan accordingly.** If a large number of people is expected, consider the possibility of holding two availability session/open houses to enable staff to meet and talk with each attender. Alternatively, you can increase the number of staff or the length of the availability session/open house. As a general rule, planning for one staff member per 15-20 attenders should foster an informal atmosphere for conversation, and thereby avoid the situation where a staff member has to speak to a "crowd."

3. **Develop or gather together appropriate explanatory materials.** These materials may include poster boards, handouts, or fact sheets.

4. **Publicize the availability session/open house at least two weeks ahead of time, if possible.** Send announcements to newspapers, television and radio stations, citizens on the mailing list, and any interested community organizations that publish newsletters.

5. **Ensure that appropriate staff attend,** so that citizens can meet those who will be responsible for facility activities. The staff present should be able to answer both technical and policy questions.

6. **Meet with and brief staff and rehearse for the session.** Anticipate questions that may be asked during the session and prepare answers.

When to Use

An availability session/open house is most appropriate:

- When scheduling of meetings is difficult because of community members' schedules;
- When new information is available on several different technical or regulatory issues that would make explaining it in its entirety would be too long for a more formal meeting;
- When community members have widely varying interests or levels of knowledge;
- When an informal setting is appropriate to enhance your credibility with the community;
- When staff is available;
- When larger crowds will make it difficult for certain members of the public to raise questions; and
- In some cases, to fulfill the pre-application meeting requirements in § 124.31 (see “Regulatory Requirements” above in this section).

Accompanying Activities

Exhibits and **fact sheets** can provide background information that enables citizens to ask more informed questions about the facility during the availability session/open house.

Advantages and Limitations

The one-to-one conversations during an availability session/open house can help build trust and establish a rapport between citizens and project staff. An informal, neutral setting will keep officials and the public relaxed and make communications smoother. Citizens can find out more about all viewpoints concerning a permitting action if public interest groups, civic

organizations, agency officials, and facility staff are present at the session.

Planning and conducting an availability session/open house can require a significant amount of staff time. A low turnout may not justify the effort. Hence, community interest in the site should be significant before an availability session/open house is planned.

Checklist for Availability Sessions/Open Houses

(* If you are conducting this activity to fulfill the requirements of § 124.31, the activity must meet the standards of that section. See Chapter 3 for more information).

(As appropriate):

- __ Determine location(s) for meeting (complete for each available facility)
  - __ Facility name, location _____
  - __ Contact person at facility_____
  - __ Phone number_____
  - __ Occupancy size_____
  - __ Handicap accessibility_____
  - __ Features:
    - __ Restrooms
    - __ Public telephones
    - __ Adequate parking
- __ Determine date, time of meeting:

  Date: _____

  Time: _____
- __ Prepare draft notice (public notice, flier)
- __ Coordinate internal review of notice
- __ Prepare final notice
- __ Determine what officials will attend availability session/open house
- __ If applicable, coordinate with other organizations that will be available at the session
- __ Notify citizens of availability session/open house
  - __ Direct mailing to citizens on facility mailing list
  - __ Verify that mailing list is up-to-date
  - __ Request mailing labels
  - __ Public notice in local newspaper(s)
- __ Prepare handouts, other informational material for availability session/open house

Workshops

Regulatory Requirements

None.

Description of Activity

Workshops are seminars or gatherings of small groups of people (usually between 10 and 30), led by a small number of specialists with technical expertise in a specific area. In workshops, participants typically discuss hazardous waste issues where citizens comment on proposed response actions and receive information on the technical issues associated with the permitting process and the RCRA program in general. Experts may be invited to explain the problems associated with releases of hazardous substances and possible remedies for these problems. Workshops may help to improve public understanding of permit conditions or hazardous waste problems at a facility and to prevent or correct misconceptions. Workshops also may identify citizen concerns and encourage public input.

Level of Effort

A one-day workshop may take about three days to a week to plan and execute. Another day will probably be required to follow up on any issues that arise during the workshop.

How to Conduct the Activity

To conduct a workshop:

1. **Determine the focus of the workshop.** Decide what topic or topics will be covered in either one or more workshops. Suggested topics include: purpose of RCRA; description of the permit process or corrective action program; proposed remedies; risk assessment; identified health or environmental problems; and/or method and format for receiving citizen comments on the proposed or ongoing actions. Determine what staff will be needed at each workshop and whether any outside experts will be needed.

2. **Plan the workshop.** Decide ahead of time on a minimum and maximum number of participants. If there are too few, consider holding an informal meeting and postpone the workshop until additional interest develops. Identify a convenient location and time for the workshop, and set a date that does not conflict with other important meetings or interests (for example, town council meetings, high school sporting events).

3. **Announce the workshop** by publishing a notice well in advance (at least 3 weeks) in the local newspapers. Send a notice of workshops with mailings to all citizens on the facility mailing list and distribute posters around town. Send out invitations and registration forms to

concerned citizens. Provide for multiple registrations on each form to accommodate friends who also might be interested in the workshop. Emphasize that the number of participants is limited, and provide a deadline for registration.

When to Use

Workshops are appropriate:

- When the RCRA process needs to be explained to community members interested in participating in the process;
- When specific topics needs to be discussed in detail, especially health or risk assessment issues; and
- When technical material needs to be explained and feedback from the community is important to make sure that citizens understand the material.

Accompanying Activities

Workshops can be conducted before formal **public hearings** or during **public comment periods** to give citizens some ideas on developing and presenting testimony. **Fact sheets** and **exhibits** can complement the workshop.

Advantages and Limitations

Workshops provide more information to the public than is possible through fact sheets or other written materials. Workshops have proven successful in familiarizing citizens with key technical terms and concepts before a formal public meeting. Workshops also allow two-way communication, making them particularly good for reaching opinion leaders, interest group leaders, and the affected public.

If only a limited number are held, workshops can reach only a small segment of the affected population.

When planning a workshop, you should make sure that it is announced in local newspapers, to help ensure that it will be well-attended. In addition, it may be helpful to specifically invite all residents who have expressed an interest in the site.

Checklist for Workshops

(As appropriate):

- __ Determine purpose of workshop _____
  - __ Determine number of attenders _____
- __ Plan the workshop
  - __ Identify topics to be presented
  - __ Identify agency officials to present topics, handle registration
  - __ Prepare handouts, other informational materials
- __ Determine location(s) for workshop (complete for each available facility)
  - __ Facility name, location _____
  - __ Contact person at facility _____
  - __ Phone number _____
  - __ Occupancy size _____
  - __ Handicap accessibility _____
  - __ Features:
    - __ Restrooms
    - __ Public telephones
    - __ Adequate parking
- __ Determine date, time of workshop:

  Date: _____

  Time: _____
- __ Prepare draft notice announcing workshop (public notice, flier)
- __ Coordinate internal review of notice
- __ Prepare final notice

Checklist for Workshops (continued)

- ___ Notify citizens of workshop
  - ___ Direct mailing to citizens on facility mailing list
  - ___ Verify that mailing list is up-to-date
  - ___ Request mailing labels
  - ___ Public notice in local newspaper(s)
- ___ Determine presentation requirements
  - ___ Electrical outlets
  - ___ Extension cords
  - ___ Accessible lighting control panel
  - ___ Window covers
  - ___ Podium
  - ___ Stage
  - ___ Table(s) and chairs for panel
  - ___ Water pitcher and glasses
  - ___ Sound system
  - ___ Microphones (stand, tabletop, lavaliere)
  - ___ Cables
  - ___ Speakers
  - ___ Technician/engineers available for hearing
  - ___ Visual aids
  - ___ Slides
  - ___ Slide projector

Checklist for Workshops (continued)

- _ Extra projector bulbs
- _ Flip chart
- _ Flip chart markers
- _ Overhead transparencies
- _ Overhead machine
- _ VCR and monitor
- _ Screen
- _ Table for projection equipment
- _ Registration table
- _ Registration cards
- _ Writing pens
- _ Signs
- _ Miscellaneous supplies:
- _ Scissors
- _ Tape (masking, transparent)
- _ Thumbtacks
- _ Public information materials (fact sheets, etc.)

_ Arrange and conduct at least one rehearsal

Attending Other Stakeholder Meetings and Functions

Regulatory Requirements

None. (The permitting agency may need to attend public meetings held by the permittee under § 270.42 in order to respond to public comments on the modification request. Agencies may also want to attend the applicant's pre-application meeting held under § 124.31. See the section on the "Pre-Application meeting" in Chapter 3 for more detail.)

Description of Activity

Permitting agencies, facilities, local governments, environmental organizations, religious and civic groups may all hold meetings or other gatherings during the permitting process. Some may be required by regulation and others may be informational meetings or discussions of important issues. As an involved stakeholder, you can learn more about the views of other stakeholders by attending their meetings. You can join in important discussions and provide information. Some groups may invite you to give a **presentation** or a **briefing**.

Level of Effort

The time you commit to attending other stakeholder meetings or functions will depend on the level of your participation. Meetings can vary in length; your resource commitment will be more substantial if you agree to give a **briefing** or a **presentation** (see those sections of this chapter for more information). You will need a few hours to prepare notes for your file after the meeting.

How to Conduct the Activity

If you decide to attend a meeting, you may want to inform the host organization that you plan to attend the meeting. If you choose to identify yourself at the meeting, be prepared to answer questions. You may want to bring fact sheets or other information you can provide upon request. In any case, be prepared to listen to the discussion and prepare notes for your files.

The host organization may ask you to provide a **briefing** or a **presentation**. See those sections of this chapter for more information.

When to Use

You may want to attend other stakeholders' meetings when the meetings are open and you want to learn more about the views held by other stakeholders. In some cases, a group may invite your organization to attend a meeting to provide input or answer questions. In such cases, you should be prepared to answer questions or present the views of your organization.

If appropriate, you may want to make **fact sheets** available upon request at

Accompanying Activities

the meeting. Provide the name of a **contact person**. If you are representing the permitting agency, let participants know about how to put their names on the facility **mailing list**.

Advantages and Limitations

Attending meetings or functions held by other stakeholders can provide useful insight to other opinions and concerns. This information can help you plan other public participation events and complement data you gather from community interviews.

This activity should not be used in place of informal meetings or other activities that may be more appropriate. If your attendance has the potential to cause problems, make sure to contact the host before the meeting.

Citizen Advisory Groups

Regulatory Requirements

None.

Description of Activity

A Citizen Advisory Group (CAG) provides a public forum for representatives of diverse community interests to present and discuss their needs and concerns with government and/or the facility. Although CAGs may come in many different forms and have different responsibilities and roles, they are generally composed of a board of stakeholders that meets routinely to discuss issues involving a particular facility. The purpose of a CAG is usually to advise a facility owner/operator or the permitting agency on permitting or corrective action activities.

CAGs can be a good way to increase active community participation in environmental decision-making and provide a voice for affected community members and groups. They promote direct, two-way communication among the community, the permitting agency, and the facility.

The make-up and mission of a CAG may vary -- there is no set formula governing the make-up or responsibilities of the group. The best type of CAG to use will depend on the situation. For instance, a citizen organization may create a CAG of affected community members to provide an official voice from the community. Facility owner/operators may create a CAG of affected community members to provide informal or formal advice. A permitting agency may form a CAG that includes stakeholders from the facility, the community, and the agency.

In establishing a CAG, it is important to bear in mind that the size of a group can often have an impact on its effectiveness -- for example, too large of a group can inhibit how efficiently it can work and come to consensus on issues, and too small of a group may not be adequate to represent diverse community concerns.

Forming a CAG does not necessarily mean that there will be universal agreement about permitting or corrective action issues. Nor does having a CAG mean there will be no controversy during the process. However, when decisions made by the facility or the permitting agency differ from the stated preferences of a CAG, the facility or the agency should accept the responsibility of explaining its decision to CAG members.

RCRA regulations do not require the use of advisory groups; however, EPA regulations do contain standards for advisory groups if EPA decides to require them under 40 CFR. These standards are located in 40 CFR 25.7.

Although these standards may not apply to all types of advisory groups used in conjunction with RCRA permitting, they provide useful guidance for agencies, facilities, and public interest groups who may want to use advisory groups. A copy of the part 25 regulations is available Appendix F.

EPA's Office of Emergency and Remedial Response has issued guidance on the use of CAGs at Superfund sites (see Appendix E). Although there are many differences between the Superfund and RCRA programs (most notably that Superfund often deals with abandoned sites while RCRA typically deals with existing or potential facilities), a large part of the Superfund CAG guidance discusses CAG development, membership, and training that may be applicable to some RCRA CAGs. Superfund terminology and process aside, the guidance contains some very useful, concise advice on various aspects of CAGs.

Although CAGs are a useful tool in many situations, they may not always be appropriate. See the section "When to Use" below for a list of factors you should consider before forming a CAG.

Level of Effort

CAGs can be a time-consuming and expensive endeavor. Membership selection, meeting preparation and follow-up, information dissemination, and training all take a lot of resources. Unlike the Superfund program, agencies that implement RCRA cannot provide Technical Assistance Grants (TAGs) to help defray the costs of CAGs.

How to Conduct the Activity

See EPA's *Guidance for Community Advisory Groups at Superfund Sites* and 40 CFR § 25.7 (in Appendices E and F) for information on how to set up CAGs. Keep in mind that CAGs under the RCRA program will differ from CAGs under Superfund. You may want to obtain a copy of the reference list of public participation and risk communication literature (available through the RCRA Hotline or the RCRA Information Center in Docket Number F-95-PPCF-FFFFF) to look for additional information sources on this topic.

When to Use

A CAG can be formed at any point in the permitting or corrective action process, and may be most effective in the early stages. Generally, the earlier a CAG is formed, the more members can participate in and impact decision-making.

CAGs may not be appropriate in every situation. If you are considering use of a CAG, you should consider the following factors:

- the level of community interest and concern;
- community interest in forming a CAG;
- the existence of groups with competing agendas in the community;

- environmental justice issues or concerns regarding the facility;
- the history of community involvement with the facility, or with environmental issues in general; and
- the working relationship between the facility, the community, and the permitting agency.

Accompanying Activities

Depending on the make-up and the purpose of the CAG, you may want to provide **public notice**, hold a **public meeting**, and issue a **news release** before forming the CAG. The CAG may choose to provide public participation activities (such as **meetings**, **newsletters**, or **availability sessions**) as part of its mission.

Advantages and Limitations

CAGs can increase active community participation in environmental decision-making and provide a voice for affected community members and groups. They promote direct, two-way communication among the community, the permitting agency, and the facility and can highlight your organization's commitment to inclusive stakeholder input.

CAGs can be time- and resource-intensive. CAGs that do not accurately reflect or account for public concerns may lose support in the community. In addition, uncertainty about the group's charter may cause conflict and hard feelings. If you plan to use a CAG, the mission and responsibilities of the CAG must be made clear from the start. Finally, CAGs can spend so much time agreeing on procedures that they drive away people who are concerned with substance. The need for elaborate procedures can be sharply reduced if an advisory group agrees to work on a consensus basis rather than by majority vote.

APPENDICES

APPENDIX A -- LIST OF EPA CONTACTS

EPA Headquarters

401 M Street, SW
Washington, DC 20460

Directory Assistance	(202) 260-2090 (TDD 260-3658)

Region 9 (AZ, CA, HI, NV, AS, GU)	75 Hawthorne St. San Francisco, CA 94105 (415) 744-1305
Region 10 (AK, ID, OR, WA)	1200 Sixth Avenue Seattle, WA 98101 (206) 553-1200

organization, telephone number, and an explanation of what they need. Questions are usually answered within one business day.

Underground Storage Tank Docket

Telephone Number: 703 603-9231
Hours: Monday to Friday, 9:00 a.m. to 4:00 p.m. EST

Provides documents and regulatory information pertinent to RCRA's Subtitle I (the Underground Storage Tank program).

Superfund Docket

Telephone Number: 703 603-9232
Hours: Monday to Friday, 9:00 a.m. to 4:00 p.m. EST

Provides rulemaking material pertinent to the Superfund Program and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Hazardous Waste Ombudsman Program

Telephone Numbers: 800 262-7937, 202 260-9361
Contact: Robert Martin

Assists private citizens and organizations that have been unable to voice a complaint or resolve problems through normal channels in coping with the complexities of hazardous waste and Superfund legislation. Each region has an ombudsman representative. For more information, call the RCRA/Superfund/EPCRA Hotline or the contact cited above.

Small Business Ombudsman Hotline

Telephone Numbers: 800 368-5888, 703 305-5938
Hours: Monday to Friday, 8:30 a.m. to 5:00 p.m. EST

Helps small businesses comply with environmental laws and EPA regulations.

Pollution Prevention Information Clearinghouse (PPIC)

Telephone Number: 202 260-1023

A center for dissemination of pollution prevention information. PPIC's services include document distribution, access to a circulating and periodicals collection, and outreach.

Public Information Center (PIC)

Telephone Number: 202 260-2080

Hours: Monday to Friday, 8:00 a.m. to 5:30 p.m. EST for phone calls, 10:00 a.m. to 4:00 p.m. EST for walk-in visitors

Provides general, nontechnical environmental information through its brochures, booklets, and pamphlets.

EPA Headquarters Library

Reference Desk: 202 260-5921
Interlibrary Loan Desk: 202 260-5933

Hours: Monday to Friday, 9:00 a.m. to 5:00 p.m. EST for phone calls, 10:00 a.m. to 2:00 p.m. EST for walk-in visitors

The Headquarters Library is the reference library for the Agency. It offers a broad range of sources of environmental information including reports from various EPA offices and trade and environmental journals. The collection also features departments such as the "Water Collection," the "Hazardous Waste Collection," and "Infoterra," which accommodates foreign patrons' requests.

United States Environmental Protection Agency
EPA530-F-96-001
January 1996
Solid Waste and Emergency Response (5305W)

EPA How To Access the RCRA Information Center

Congress passed the Resource Conservation and Recovery Act (RCRA) in 1976 to create a framework for the proper management of hazardous and nonhazardous solid waste. The Act is continuously evolving as Congress amends it to reflect the nation's changing solid waste needs.

For each modification to the Act, EPA develops regulations that spell out how the statute's broad policies are to be carried out. The RCRA Information Center (RIC) was formed to house both documents used in writing these regulations as well as EPA publications produced for public guidance on solid waste issues.

The documents stored in the RIC are divided into two basic categories: (1) documents involved in various stages of rulemaking; and (2) general documents discussing the various aspects of recycling, treatment, and disposal of hazardous and solid waste.

Rulemaking Dockets

- Docket files generated from RCRA-related rulings. Each file is composed of two sections: (1) technical support documents that were used by EPA in the development of the particular rule; and (2) comments from companies, individuals, environmental organizations, and various levels of government.
- Reprints of *Federal Registers* containing RCRA-related issues.
- Administrative Records, which are rulemaking dockets that have undergone litigation.

General Documents/Collections

- *Catalog of Hazardous and Solid Waste Publications*, which lists the RIC's most popular documents. The catalog is updated periodically.
- Guidance documents, which provide directions for implementing the regulations for disposal and treatment of hazardous and solid wastes.
- Brochures, booklets, and executive summaries of reports concerning waste reduction and disposal issues surrounding solid and hazardous wastes.
- A historical collection of Office of Solid Waste documents.
- Selected Office of Solid Waste correspondence written by EPA officials in response to questions from organizations and individuals concerning hazardous and solid waste regulations.
- Health and Environmental Effects Profiles (HEEPs) and Health and Environmental Effects Documents (HEEDs).

Hours and Location

- The RIC is open to the public from 9:00 a.m. to 4:00 p.m., Monday through Friday.
- The RIC is located at:

  Crystal Gateway I, First Floor
  1235 Jefferson Davis Highway
  Arlington, VA

- It is recommended that visitors make an appointment so that the material they wish to view is ready when they arrive.
- Patrons may call for assistance at 703 603-9230, send a fax to 703 603-9234, or send an e-mail to rcra-docket@epamail.epa.gov.
- Patrons may write to the following address:

  RCRA Information Center (5305W)
  U.S. Environmental Protection Agency
  401 M Street, SW
  Washington, DC 20460

  (Please note that this address is for mailing purposes only.)

Photocopying and Microfilming

Many documents are available only in the original and, therefore, must be photocopied. Patrons are allowed 100 free photocopies. Thereafter they are charged 15 cents per page. When necessary, an invoice stating how many copies were made, the cost of the order, and where to send a check will be issued to the patron.

Documents also are available on microfilm. The RIC staff help patrons locate needed documents and operate the microfilm machines. The billing fee for printing microfilm documents is the same as for photocopying documents.

Patrons who are outside of the metropolitan Washington, DC, area can request documents by telephone. The photocopying and microfilming fee is the same as for walk-in patrons. If an invoice is necessary, RIC staff can mail one with the order.

Additional EPA Sources of Hazardous and Solid Waste Information

The RCRA/Superfund/EPCRA Hotline

Telephone Numbers: 800 424-9346
TDD: 800 553-7672 (hearing impaired)
For Washington, DC, and outside the United States: 703 412-9810
TDD: 703 412-3323 (hearing impaired)
Hours: Monday to Friday, 9:00 a.m. to 6:00 p.m. EST

The Hotline answers questions concerning technical aspects of RCRA. It also provides clarifications of sections of the *Code of Federal Regulations* that pertain to RCRA. The Hotline also takes requests and makes referrals for obtaining OSW publications.

OSW Methods Information Communication Exchange (MICE)

Telephone Number: 703 821-4690

A telephone service implemented by the EPA Office of Solid Waste to answer technical questions on test methods used on organic and inorganic chemicals. These tests are discussed in the EPA document *Test Methods for Evaluating Solid Waste: Physical/Chemical Methods* (Document Number: SW-846).

Patrons can call MICE 24 hours a day and are requested to leave a message stating their name,

APPENDIX D -- ENVIRONMENTAL JUSTICE PUBLIC PARTICIPATION CHECKLIST

Introduction:

The environmental justice movement has sparked a lot of discussion on ways to improve communications and working relations among agencies, industries, and communities. The InterAgency Working Group on Environmental Justice, led by EPA, developed a Public Participation Checklist that lays out ways to identify, inform, and involve stakeholders (e.g., environmental organizations, business and trade associations, civic/public interest groups, grassroots/community-based organizations, tribal governments, and industry). It reflects a combination of: guiding principles for setting up and conducting activities, such as public meetings; specific activities for ensuring widespread and meaningful involvement; and recommendations on how to effectively carry out those activities.

Although the checklist was initially developed in the context of environmental justice, to help federal agencies prepare for the first public meeting to discuss their EJ strategies, it embodies sound principles that apply to public participation for all communities.

Revised 1/13/95

ENVIRONMENTAL JUSTICE
PUBLIC PARTICIPATION CHECKLIST

1. Ensure that Agency's public participation policies are consistent with the requirements of the Freedom of Information Act, the Emergency Planning and Community Right to Know Act and the National Environmental Policy Act.

2. Obtain Senior Management Support to ensure that the Agency's policies and activities are modified to ensure early, effective and meaningful public participation, especially with regard to Environmental Justice stakeholders. Identify internal stakeholders and establish partnering relationships.

3. Use following Guiding Principles in setting up all public meetings:
   - Maintain honesty and integrity throughout the process.
   - Recognize community\indigenous knowledge.
   - Encourage active community participation.
   - Utilize cross-cultural formats and exchanges.

4. Identify external Environmental Justice stakeholders and provide opportunities to offer input into decisions that may impact their health, property values and lifestyles. Consider at a minimum individuals from the following organization as appropriate:

Environmental Organizations
Business and Trade Organizations
Civic / Public Interest Groups
Grassroots \ Community-based Organizations
Congress
Federal Agencies
Homeowner and Resident Organizations
International Organizations
Labor Unions
Local and State Government
Media \ Press
Indigenous People
Tribal Governments
Industry
White House
Religious Groups
Universities and Schools

5. Identify key individuals who can represent various stakeholder interests. Learn as much as

possible about stakeholders and their concerns through personal consultation, phone, or written contacts. Ensure that information gathering techniques include modifications for minority and low -income communities, for example, consider language \ cultural barriers, technical background, literacy, access to respondent, privacy issues and preferred types of communications.

6. Solicit stakeholder involvement early in the policymaking process, beginning in the planning and development stages and continuing through implementation and oversight.

7. Develop co-sponsoring/co-planning relationships with community organizations, providing resources for their needs.

8. Establish a central point of contact within the Federal agency to assist in information dissemination, resolve problems and to serve as a visible and accessible advocate of the public's right to know about issues that affect health or environment.

9. Regionalize materials to insure cultural sensitivity and relevance. Make information readily accessible (handicap access, Braille, etc.) and understandable. Unabridged documents should be placed in repositories. Executive summaries/fact sheets should be prepared in layman's language. Whenever practicable and appropriate, translate targeted documents for limited English-speaking populations.

10. Make information available in a timely manner. Environmental Justice stakeholders should be viewed as full partners and Agency customers. They should be provided with information at the same time it is submitted for formal review to state, tribal and/or Federal regulatory agencies.

11. Ensure that personnel at all levels in the Agency clearly understand policies for transmitting information to Environmental Justice stakeholders in a timely, accessible and understandable fashion.

12. Establish site-specific community advisory boards where there is sufficient and sustained interest. To determine whether there is sufficient and sustained interest, at a minimum, review correspondence files, review media coverage, conduct interviews with local community members and advertise in local newspapers. Ensure that the community representation includes all aspects and diversity of the population. Organize a member selection panel. Solicit nominations from the community. Consider providing administrative and technical support to the community advisory board.

13. Schedule meetings and/or public hearings to make them accessible and user-friendly for Environmental Justice stakeholders. Consider time frames that don't conflict with work schedules, rush hours, dinner hours and other community commitments that may decrease attendance. Consider locations and facilities that are local, convenient and which represent

neutral turf. Ensure that facility meets American with Disabilities Act Statements for equal access. Provide assistance for hearing impaired individuals. Whenever practical and appropriate provide translators for limited-English speaking communities. Advertise the meeting and its proposed agenda in a timely manner in the print and electronic media. Provide a phone number and/or address for communities to find out about pending meetings, issues, enter concerns or to seek participation or alter meeting agenda.

Create an atmosphere of equal participation (avoid a "panel of experts" or "head table"). A two day meeting is suggested with the first day reserved for community planning and education. Organize meetings to provide an open exchange of ideas and enough time to consider issues of community concern. Consider the use of a neutral facilitator who is sensitive and trained in environmental justice issues. Ensure that minutes of the meetings are publically available. Develop a mechanism to provide communities with feedback after meetings occur on actions being considered.

14. Consider other vehicles to increase participation of Environmental Justice stakeholders including:

Posters and Exhibits
Participation in Civic and Community Activities
Public Database and Bulletin Boards
Surveys
Telephone Hotlines
Training and Education Programs, Workshops and Materials

15. Be sure that trainers have a good understanding of the subject matter both technical and administrative. The trainers are the Ambassadors of this program. If they don't understand - no one will.

16. Diversity in the workplace: whenever practical be sure that those individuals that are the decision makers reflect the intent of the Executive Order and come from diverse backgrounds, especially those of a community the agency will have extensive interaction with.

17. After holding a public forum in a community establish a procedure to follow up with concrete actions to address the communities' concerns. This will help to establish credibility for your agency as having an active role in the federal government.

18. Promote interagency coordination to ensure that the most far reaching aspects of environmental justice are sufficiently addressed in a timely manner. Environmental problems do not occur along departmental lines. Therefore, solutions require many agencies and other stakeholders to work together efficiently and effectively.

19. Educate stakeholders about all aspects of environmental justice (functions, roles, jurisdiction, structure and enforcement).

20. Ensure that research projects identify environmental justice issues and needs in communities, and how to meet those needs through the responsible agencies.

21. Establish interagency working groups (at all levels) to address and coordinate issues of environmental justice.

22. Provide information to communities about the government's role as it pertains to short term and long term economic and environmental needs and health effects.

23. Train staff to support inter and intra agency coordination, and make them aware of the resources needed for such coordination.

25. Provide agency staff who are trained in cultural, linguistic and community outreach techniques.

26. Provide effective outreach, education and communications. Findings should be shared with community members with an emphasis on being sensitive and respectful to race, ethnicity, gender, language, and culture.

27. Design and implement education efforts tailored to specific communities and problems. Increase the involvement of ethnic caucuses, religious groups, the press, and legislative staff in resolution of Environmental Justice issues.

28. Assure active participation of affected communities in the decisionmaking process for outreach, education, training and communities programs -- including representation on advisory councils and review committees.

29. Encourage federal and state governments to "reinvent government" -- overhaul the bureaucratic in favor of community responsive.

30. Link environmental issues to local economic issues to increase level of interest.

31. Use local businesses for environmental cleanup or other related activities.

32. Utilize, as appropriate, historically Black Colleges and Universities (HBCU) and Minority

Institutes (MI), Hispanic Serving Colleges and Universities (HSCU) and Indian Centers to network and form community links that they can provide.

33. Utilize, as appropriate, local expertise for technical and science reviews.

34. Previous to conducting the first agency meeting, form an agenda with the assistance of community and agency representatives.

35. Provide "open microphone" format during meetings to allow community members to ask questions and identify issues from the community.

Guidance for Community Advisory Groups at Superfund Sites

Acknowledgments

The Community Advisory Group guidance is the product of the efforts of many people; individuals from the following groups have participated in its review and development: EPA Regional Offices, EPA OSWER Offices, OERR Environmental Justice Task Force, National Environmental Justice Advisory Committee, Association of State and Territorial Solid Waste Management Officials and EPA's Office of General Counsel. In particular, the Community Involvement Team (OERR), Linda Garczynski (OSWER), Hale Hawbecker (OGC), Jane Lemke (WI), Verne McFarland (R6), Marilu Martin (R5), Marcia Murphy (CA), Murray Newton (OERR), Charles Openchowski (OGC), Sonya Pennock (R8), and Suzanne Wells (OERR) each have made valuable contributions to the development and quality of this guidance.

— Diana Hammer (OERR), Project Manager

Notice

The policies set out in this memorandum are intended solely as guidance. They are not intended, nor can they be relied upon, to create any rights enforceable by any party in litigation with the United States. EPA officials may decide to follow the guidance provided in this memorandum, or to act at variance with the guidance, based on an analysis of specific site circumstances. The Agency also reserves the right to change this guidance at any time without public notice.

For More Information on CAGs

Contact your Regional Community Involvement Manager or a staff member of the Community Involvement and Outreach Center at EPA Headquarters. (See the list of contacts in Appendix E.)

Contents

1. Background

- **Environmental Justice Task Force**
- **Purpose of this Guidance**
- **Selecting Sites**

The United States Environmental Protection Agency (EPA) is committed to involving the public in the Superfund cleanup process. In fact, there are many examples throughout the Superfund program where community involvement has enhanced, rather than impeded the Superfund cleanup decision-making process. While recognizing that providing additional opportunities for community involvement may require additional time and slow the cleanup process down initially, EPA believes this is time well spent, and that early and effective community involvement will actually save time in the long run.

EPA is committed to early, direct, and meaningful public involvement and provides numerous opportunities for the public to participate in site cleanup decisions. One of these opportunities for community involvement, is the EPA's Technical Assistance Grants (TAGs) program. EPA awards TAGs to eligible community groups so they can hire their own, independent Technical Advisor, enabling community members to participate more effectively in the decision-making process at Superfund sites. For more information on the TAG program, see the "Superfund Technical Assistance Grants" quick reference fact sheet (EPA 540-K-93-001; PB93-963301).

Community Advisory Groups (CAGs) are another mechanism designed to enhance community involvement in the Superfund process. CAGs respond to a growing awareness within EPA and throughout the Federal government that particular populations who are at special risk from environmental threats—such as minority and low-income populations—may have been overlooked in past efforts to encourage public participation. CAGs are an effective mechanism to facilitate the participation of community members, particularly those from low-income and minority groups, in the decision-making process at Superfund sites.

1.1 Environmental Justice Task Force

The Office of Solid Waste and Emergency Response (OSWER) Environmental Justice (EJ) Task Force was established in 1993 to analyze environmental justice issues specific to waste programs and develop recommendations to address these issues. The EJ Task Force advised that the creation of Community Advisory Groups would enhance public involvement in the Superfund cleanup process. Specifically in its April 1994 report, titled OSWER Environmental Justice Task Force Draft Final Report (EPA 540-R-94-004), the Task Force recommended implementing a program involving CAGs at a minimum of ten sites nationwide by the end of FY94 and providing guidance to support the CAG activities.

1.2 Purpose of this Guidance

As lead Agency at a Superfund site, EPA has an important role to play in encouraging the use of Community Advisory Groups (see Section 10.3, under "Roles and Responsibilities"). This guidance document is designed to assist EPA staff [primarily Community Involvement Coordinators (CICs) and Site Managers, such as Remedial Project Managers, On-Scene Coordinators, and Site Assessment Managers] in working with CAGs at Superfund sites (this includes remedial and appropriate removal sites).

This guidance addresses the objectives, functions, membership, and scope of authority for CAGs. It emphasizes practical approaches and activities, and is designed to be flexible enough to meet the unique needs of individual local communities. The guidance is based on the Agency's experience in carrying out community involvement activities pursuant to the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), the Superfund Amendments and Reauthorization Act of 1986 (SARA), and policy documents issued by EPA and other Federal agencies. It also draws on concepts articulated in the President's Executive Order on Environmental Justice 12898, EPA/OSWER's Environmental Justice Task Force report, the "Restoration Advisory Board Implementation Guidelines" developed by the EPA and the Department of Defense (9/94), and the "Interim Guidance for Implementing Restoration Advisory Boards" drafted by the California Environmental Protection Agency (11/93).

This guidance provides a number of considerations to assist Community Involvement Coordinators (CICs) and Site Managers in working with a successful CAG. **CAGs need not conform to all aspects of this guidance.** Consequently, this guidance is intended to provide a starting point or frame of reference to help groups organize and begin meeting. A CAG's structure and operation, however, should reflect the unique needs of its community.

EPA will not establish or control CAGs; however, the Agency will assist interested communities in CAG activities. Further, EPA anticipates that the CAGs will serve primarily as a means to foster interaction among interested members of an affected community, to exchange facts and information, and to express individual views of CAG participants while attempting to provide, if possible, consensus recommendations from the CAG to EPA.

1.3 Selecting Sites

While EPA is initially focusing the CAG concept and guidance on Superfund sites with environmental justice concerns, the methods and principles are intended to be applied broadly and to include other Superfund sites as well. In some cases, the sites selected for a CAG may already have some form of community advisory group and EPA could help formalize the group, recognizing it as being representative of the community. In other cases, sites may be selected where a community advisory group doesn't yet exist, but where a CAG would be useful to encourage full community participation in site cleanup activities. See Section 2.2, "Determining the Need for a CAG" for more information on appropriate sites for a CAG.

2. Community Advisory Group (CAG) Development

- **CAG Scope of Authority**
- **Determining the Need for a CAG**
- **Preparation for the CAG Information Meeting**
- **CAG Information Meeting**

Community Advisory Groups are important tools for enhancing community involvement in the Superfund process. Through CAGs, EPA seeks to achieve direct, regular, and meaningful consultation with all interested parties throughout all stages of a response action.

2.1 CAG Scope of Authority

A CAG should serve as a public forum for representatives of diverse community interests to present and discuss their needs and concerns related to the Superfund decision-making process with appropriate Federal and State/Tribal/local governments. The CAG is designed as a mechanism for all affected and interested parties in a community to have a voice and actively participate in the Superfund process. However, it is important to remember that the CAG is not the only mechanism for community involvement at a site; as the lead Agency, EPA continues to have the obligation to inform and involve the entire community through regular as well as innovative community involvement activities.

EPA cannot, by law, abrogate its responsibility to make the final decisions at a site; however, by providing the perspective of the local community, the CAG can assist EPA in making better decisions. A CAG that is broadly representative of the affected community offers EPA a unique opportunity to hear—and seriously consider —community preferences for site cleanup and remediation. It is particularly important that in instances where an EPA decision and/or response differs from a stated CAG preference regarding site cleanup, EPA accepts the responsibility of explaining its decision and/or response to CAG members.

A CAG allows the Agency to exchange information with members of the affected community and encourages CAG members to discuss site issues and activities among themselves. The CAG also can provide a public service to the rest of the affected community by representing the community in discussions regarding the site and by relaying information from these discussions back to the rest of the community. CAGs thus can be a valuable tool for both the Agency and communities throughout the cleanup process.

2.2 Determining the Need for a CAG

The CIC should consult with other site team members (for example, the Site Manager and Attorney) in selecting an appropriate site for a CAG. The team may consider a number of factors during the selection process, including: Generally, what is the level of community interest and concern about the site?

- Might that level of community interest and concern warrant a CAG?
- Has the community expressed an interest in forming a CAG?
- Does a group similar to a CAG exist?
- Do groups with competing agendas exist at the site?
- Are there any environmental justice issues or concerns regarding the site?
- What is the history of community involvement at the site?
- What is the likelihood of long-term cleanup activity at the site?

Depending on the status of the cleanup process at the site, substantial information may exist about the community. For example, if the site is in the RI/FS phase, the Community Relations Plan, developed based on interviews with community members, is a good information source.

A community with a high level of interest and concern about site activities should be a strong candidate for a CAG. In addition, a site in the

early stages of a long-term cleanup without an existing community group may be a strong candidate site for an effective CAG. Communities at removal sites, particularly non-time critical removal sites, also may benefit from a CAG (keeping in mind, however, the time necessary to begin CAG operations when considering a CAG for removal sites).

If a group exists which is representative of the local community (for example, a local environmental group that has been active at the site or a TAG recipient group), a CAG may not be appropriate—if the existing group can fulfill the role of a CAG. If competing groups exist at a site, however, their disparate interests and agendas can undermine even the best efforts of agencies, elected officials, and concerned citizens to forge a CAG. This situation should be given serious consideration in making the decision to promote CAGs at such sites.

A CAG can be formed at any point in the cleanup process but may be most effective early in the cleanup process. Generally, the earlier a CAG is formed, the more CAG members can participate in and impact site activities and cleanup decisions.

2.3 Preparation for the CAG Information Meeting

The CAG Information Meeting is the setting for introducing the CAG concept to the community. Before the CAG Information Meeting, the CIC may begin the process of informing and educating the community about the purposes of the CAG and opportunities for membership and participation. This is especially important at Superfund sites where the community may have had relatively limited participation in the Superfund process. This section offers suggestions, concerns, and methods that EPA (in conjunction with others such as State/Tribal/local governments) may use to notify a community about the formation of a CAG. These are not the only options—techniques will necessarily vary from site to site and from community to community. In many instances, it may be useful to target multiple newspapers as well as alternative media (for example, public service announcements on the radio, public access channels on cable television, free circulation newspapers) to more effectively reach out to communities. Other outreach options include flyers, announcements in local churches, etc. Remember also, that another important and effective method to "spread the word" about the CAG is through the personal relationships that Agency representatives have established in the community. No matter what method or media is used, EPA (in conjunction with others such as State/Tribal/local governments) must provide the information in a manner readily understandable to community members.

2.3.1 Fact Sheet

EPA (in conjunction with others such as State/Tribal/local governments) may prepare and distribute a brief fact sheet describing the CAG prior to the CAG Information Meeting. A sample CAG fact sheet is included as Appendix A. In preparing the fact sheet, EPA may consult with the State/Tribal/local government. EPA may wish to expand existing networks used in distributing information about public involvement activities for the distribution of CAG-related fact sheets and other materials.

Community interviews conducted prior to development of the Community Relations Plan for the site, as well as the plan itself, are potential sources of information to identify effective methods for distributing the CAG fact sheet.

Depending on the status of the response action, the interviews and plan may not have been completed for all sites. If this is the case, EPA staff may conduct limited community interviews with local officials and community leaders, making special effort to contact those leaders with ties to the environmental justice and other site-related concerns of the community. For example, these sources could include churches and community organizations in minority and low-income neighborhoods. This will ensure that credible information sources identified by members of the community are used to supplement and reinforce direct mailing of the fact sheet. In addition, copies of the fact sheet should be available in the information repositories and at the CAG Information Meeting.

The fact sheet is designed to describe the purpose of the CAG and membership opportunities and delineate the role of CAG members. If a significant segment of the community is non-English speaking or visually impaired, EPA (in conjunction with others such as State/Tribal/local governments) should translate the fact sheet for distribution to these members of the community.

2.3.2 Public Notice

EPA (in conjunction with others such as State/Tribal/local governments) may prepare a public notice or display ad to advertise the CAG Information Meeting in general circulation newspapers serving the affected communities around the site. To ensure that all segments of the affected population are notified, notices in newspapers that serve low-income, minority, and non-English speaking audiences in the community also should be considered.

The notice should be published approximately two weeks in advance of the CAG Information Meeting and should include the following information:

- Time and location of the meeting;
- CAG purpose and membership opportunities;
- The roles and responsibilities of CAG members;
- A statement that the meeting is open for public attendance and participation;
- Topics for consideration at the CAG Information Meeting; and
- Name and phone number of contact person(s) to obtain more information.

The public notice should appear in a prominent section of the newspapers, where it is likely to be read by the majority of community members. A sample CAG public notice is included as Appendix B.

2.3.3 News Release

EPA personnel (in conjunction with others such as State/Tribal/local governments) may prepare and distribute to the local media a news release to explain the purpose of the CAG and announce the time and location of the initial information meeting. Depending on local media coverage of Superfund and other environmental issues related to the site, it may be appropriate to prepare a more extensive media packet of information to update the local media on public involvement activities and overall response plans and progress.

2.3.4 Agenda

EPA, in consultation with the State/Tribal/local governments and residents, may develop an initial agenda for the CAG Information Meeting. The agenda should reflect important

community concerns raised in relation to the Superfund response. Again, the results of community interviews conducted in the process of developing Community Relations Plans and other community involvement activities may provide a source of information and background on community concerns. Demonstrating an awareness of and sensitivity to concerns expressed by the community is an important element in maximizing the potential benefits of CAGs.

2.4 CAG Information Meeting

EPA may sponsor the CAG Information Meeting and may consult with the State/Tribal/local government in its preparation. EPA (in conjunction with others such as State/Tribal/local governments) should attempt to hold the CAG Information Meeting as early as possible in the cleanup process.

EPA personnel (and/or others such as State/Tribal/local governments) may facilitate the CAG Information Meeting; however, for this and subsequent meetings, it may be preferable to have someone from the community with facilitation experience or a professional meeting facilitator serve as facilitator. A neutral facilitator is particularly effective at sites where some controversy is anticipated. Facilitation may produce a better sense of fairness and independence, helping to ensure more productive discussions.

The Information Meeting should serve to introduce the CAG concept to the community. The following topics may be appropriate to discuss at the meeting:

- Purpose and overview of the CAG;
- Goal of representing diverse community interests;
- Interface between the CAG and other community involvement activities;
- Membership opportunities;
- Suggested member selection process and timetable;
- Examples of a CAG Mission Statement and operating procedures (including community leadership);
- Suggested member responsibilities;
- Overview of site cleanup plans and progress; and
- Open discussion/question and answer period.

The Information Meeting and subsequent CAG meetings should be held in a central location and at a convenient time for community members. In addition, EPA (and/or others such as State/Tribal/local governments) should consider requirements of the Americans with Disabilities Act (ADA) and the Rehabilitation Act of 1994 in choosing a location (for example, accessibility by wheelchairs and availability of signers and readers, as necessary, to assist hearing and visually impaired participants).

Resources permitting, EPA (and/or others such as the State/Tribal/local governments) may provide appropriate administrative and logistical support for arranging the meeting and documenting its proceedings. Preparation of a concise and easy-to-read summary of the meeting also should be considered. Such a summary will help facilitate effective communication with local community members. The summary should be translated for interested members of the community who are non-English speaking or visually impaired. The summary should be made available for public review in the information repositories and through other dissemination methods no later than one month

after the Information Meeting. Copies of the summary also may be mailed to all community members who attend the initial meeting and to those who are on mailing lists used for other community involvement activities related to the site.

3. CAG Startup

The time period between the CAG Information Meeting and the implementation of a fully functional CAG may vary from site to site. EPA should encourage CAGs to be in full operation within six months after the information meeting, in order to maximize their effectiveness in the Superfund cleanup decision-making process. There are several key activities that should be completed during this time period to ensure successful CAG operation. These activities are described in the following sections.

4. CAG Membership

- **Size of the CAG**
- **Membership Composition**
- **Roles and Responsibilities of CAG Members**
- **Membership Solicitation**
- **Membership Selection Models**

4.1 Size of the CAG

The number of members in the CAG may vary from site to site depending on the composition and needs of the affected community. The CAG should determine the size of its membership; when doing so, the CAG should consider the following factors:

- Diversity of the community;
- CAG workload; and
- Effective group discussion and decision-making (i.e., pros/cons of larger vs. smaller groups).

Federal Facility Environmental Restoration Advisory Boards, groups similar to CAGs, generally average around 20 members. While it often is difficult to ensure that everyone has an opportunity to participate and to achieve closure on discussions in larger groups, the CAG should be large enough to adequately reflect the diversity of community interests regarding site cleanup and reuse.

4.2 Membership Composition

To the extent possible, membership in the CAG should reflect the composition of the community near the site and the diversity of local interests, including the racial, ethnic, and economic diversity present in the community—the CAG should be as inclusive as possible. At least half of the members of the CAG should be local community members (sometimes referred to as "near neighbors").

CAG membership should be drawn from the following groups:

- Residents or owners of residential property near the site and those who may be affected directly by site releases;
- Those who potentially may be affected by releases from the site, even if they do not live or own property near the site;

- Local medical professionals practicing in the community;
- Native American tribes and communities;
- Representatives of minority and low-income groups;
- Citizens, environmental, or public interest group members living in the community;
- TAG recipients, if a TAG has been awarded at the site;
- Local government, including pertinent city or county governments, and governmental units that regulate land use in the vicinity of the site;
- Representatives of the local labor community;
- Facility owners and other significant PRPs;
- The local business community; and
- Other local, interested individuals.

Clearly, persons with an obvious conflict of interest at the site should not be members of the CAG, e.g., remedy vendors, lawyers involved in pending site litigation, non-local representatives of national groups, and others without a direct, personal interest in the site.

In order to prevent the PRP (or another interest group) from dominating CAG discussions, the community shall have the authority to limit the number of these representatives or designate them as ex-officio members.

4.3 Roles and Responsibilities of CAG Members

Generally, CAG members will be expected to participate in CAG meetings, provide data and information to EPA on site issues, and share information with their fellow community members. EPA (along with State/Tribal/local governments, as appropriate) should help the CAG clearly define and maintain these roles and responsibilities (see Section 10.2, under "Roles and Responsibilities").

4.4 Membership Solicitation

For the CAG concept to be successful, the membership of each CAG should reflect the diverse interests of the community in which the Superfund site is located. It is also important that each community have the lead role in determining the membership appropriate for its CAG. This will help encourage participation in and support for the CAG. EPA should not select or approve/disapprove individual CAG members but must certify that the CAG is representative of the diverse interests of the community.

EPA, in coordination with the State/Tribal/local governments, should inform the community about the purposes of the CAG and opportunities for membership and participation. This public outreach effort needs to be tailored to the individual community in which the CAG is to be formed. This is especially important at sites which are in the early stages of the Superfund cleanup process, sites at which opportunities for community participation have been limited, and/or sites where there has been relatively little community or media interest.

EPA (in coordination with others such as the State/Tribal/local governments) should make every effort to ensure that all individuals and groups representing community interests are informed about the CAG and the potential for membership so that each has the opportunity to participate in the CAG. For example, EPA

may begin the public outreach effort regarding CAG membership before the CAG Information Meeting by distributing the CAG fact sheet and publishing public notices and news releases.

Depending on the results of community-wide efforts to solicit nominations for CAG membership, it may be necessary to refine and further focus efforts for specific groups. These efforts may be reinforced with a letter to individuals and groups representing diverse community interests. A sample letter regarding CAG membership is included as Appendix C. CAG information also can be mailed to those expressing interest generally in the site and/or specifically in the CAG. CAG information also should be made available through the local information repositories. The information also may be reformatted and posted in other visible locations such as information kiosks and community centers.

If there is not enough community interest to form a CAG after all solicitation efforts have been exhausted, EPA (in conjunction with others such as State/Tribal/local governments) may issue a public notice through all available outlets to announce that efforts to form a CAG have been unsuccessful. A sample of such a public notice is included as Appendix D.

4.5 Membership Selection Models

The selection of CAG members should be accomplished in a fair and open manner in order to maintain the level of trust needed for successful CAG operation. The members of the CAG should reflect the composition of the community and represent the diversity of local interests. In designing the method for developing a CAG that is most appropriate for the affected community, it may be useful for EPA (in conjunction with others such as State/Tribal/local governments) to offer some type of facilitation.

The following Membership Selection models are examples that may be used and adapted to best meet the particular needs of a community. Of course, each community is unique and no one model will work in all instances; in fact, it may be appropriate to develop an entirely different model for selecting CAG members. Similarly, formal membership selection models, such as those described in this section, may not always be necessary. For example, selecting a group may be as simple as widely advertising the opportunity to join the CAG and then recognizing the CAG as consisting of the respondents. The key is that the CAG represent the interests of the community and that the CAG be able to function as a group. The exact selection process is secondary, as long as the process is fair and open.

4.5.1 Screening Panel Model

Under this model, EPA, consulting with and involving the State/Tribal/local government, could assist the community in organizing a short-term Screening Panel to review nominations for membership on the CAG prior to final member selection. After the opportunity to form a CAG has been announced, the local community should identify (using a fair and open manner) CAG members who represent the diverse interests of the community. The panel should, to the extent practical, reflect the diversity of interests in the community since the panel would be expected to choose CAG members who are equally representative. The panel may select a chairperson from among its members.

The Screening panel should consider establishing and publicizing the following:

- Procedures for nominating members for the CAG, including the way members of the community can nominate themselves to be CAG members (panel members also may nominate themselves to be CAG members.);
- The process for screening nominations and making recommendations for membership;
- The criteria to be used in screening nominations and determining membership recommendations; and
- A list of any recommended nominees for membership on the CAG.

The Screening Panel Chairperson may forward the panel's recommended list of nominees to the appropriate EPA Regional Administrator for review and comment (not for approval/disapproval of individuals) with regard to its ability to represent the interests of the community.

4.5.2 Existing Group Model

Under this model, an existing group in the community—such as a group with a history of involvement at the Superfund site—may be selected as the CAG for that community, if, in fact, it does represent the diverse interests in the community. If the group does not appear representative of the community, EPA may ask the group to expand its membership to include any community interests not represented.

4.5.3 Core Group Model

Under this model, EPA, consulting with and involving the State/Tribal/local governments, could select a Core Group that represents the diverse interests of the community. EPA (in conjunction with others such as State/Tribal/local governments) may remind the community that a person may nominate himself or herself through the application process. For example, members of the Core Group could include seven members representing the following interests: two local residents, local government, environmental, civic, labor, and business. The members of this Core Group then would select the remaining members of the CAG in a fair and open manner.

4.5.4 Self-Selecting Group Model

Under this model, after EPA (in conjunction with others such as State/Tribal/local governments) announces the opportunity to form a CAG, the local community identifies (in a fair and open manner) CAG members who they believe represent the diverse interests of their community. Realistically, it may take some communities a significant amount of time to fully select the CAG members.

4.5.5 Local Government Group Model

Under this model, the local government would select, in a fair and open manner, members of the community to serve on the CAG. This model may be appropriate at sites where a positive working relationship and established communication channels exist between the local government and the community.

5. CAG Member Training

Many of those selected as members of the CAG may require some initial training to enable them to perform their duties. EPA may work with the State/Tribal agencies, the local government(s), local universities, the PRP(s), and others, to provide training and prepare

briefing materials for CAG members. EPA also may work with these organizations and appropriate local groups to develop a method for quickly informing and educating new CAG members about cleanup issues, plans, and progress. Every effort should be made to tailor the training to the specific needs of the CAG members. For example, some CAG members may require more extensive training than others; similarly, some may need training materials in alternative formats, such as in a language other than English. It is extremely important for the success of the CAG process that all members have an adequate opportunity to understand the Superfund process and the cleanup issues related to their respective sites. It also is important that the CAG function as a group, meaning some CAGs may need training on how to function effectively as a group.

Training may be accomplished at regular CAG meetings and/or through activities such as the following:

- Formal training sessions;
- Briefing books, fact sheets, and maps; and
- Site tours.

Every effort should be made to provide CAG members with appropriate and necessary training, subject to available resources.

Technical staff from local, State/Tribal, and Federal agencies involved in site cleanup may attend CAG meetings. They may serve as technical resources and provide information about their respective areas of expertise to CAG members.

6. Administrative Support for the CAG

EPA, together with State/Tribal governments, the local government(s), local universities, the PRP(s), and others may assist the CAG with administrative support on issues relevant to the Superfund site cleanup and decision-making process.

Resources permitting, EPA also may expand existing site contractor support work assignments, for example, to provide administrative support and translate documents with EPA staff oversight.

Administrative support for the CAG may include the following:

- Arranging for meeting space in a central location;
- Preparing and distributing meeting notices and agenda;
- Taking notes during meetings and preparing meeting summaries;
- Duplicating site-related documents for CAG review;
- Duplicating and distributing CAG review comments, fact sheets, and other materials;
- Providing mailing services and postage;
- Preparing and placing public notices in local newspapers;
- Maintaining CAG mailing lists;
- Translating or interpreting outreach materials and CAG meetings in cases where there is a

significant non-English speaking portion of the community; and

- Facilitating CAG meetings and special-focus sessions, if requested by the CAG.

After CAG members have been selected, EPA, in coordination with the State/Tribal agencies and the local government, may assist the CAG in developing a news release or fact sheet announcing the startup of the CAG and providing the names of CAG members. The news release or fact sheet also can be used as a vehicle for publicly thanking all members of the community who expressed an interest in CAG participation, encouraging their continued involvement through attendance at CAG meetings, and announcing the first CAG meeting.

7. CAG Operations

- **Chairperson**
- **Mission Statement and Operating Procedures**
- **Meetings**

7.1 Chairperson

CAG members may select a Chairperson from within their ranks and determine an appropriate term of office. It may be useful to advise that the Chairperson be committed to the CAG and willing to serve for an extended period of time (e.g., two years) to ensure continuity. Members have the right and responsibility to replace the Chairperson as they believe necessary. The processes for selecting and dismissing a Chairperson should be detailed in the CAG's operating procedures.

7.2 Mission Statement and Operating Procedures

Each CAG should develop a Mission Statement describing the CAG's specific purpose, scope, goals, and objectives. The mission statement and subsequent CAG activities should focus on actions related to Superfund site issues consistent with the purpose of a CAG.

Each CAG should develop its own letterhead. Each CAG also should develop a set of procedures to guide day-to-day operations. Topics to be addressed in these operating procedures include the following:

- How to fill membership vacancies;
- How often to hold meetings;
- The process for reviewing and commenting on documents and other materials;
- How to notify the community of CAG meetings;
- How the public can participate in and pose questions during CAG meetings; and
- How to determine when the CAG has fulfilled its role and how it will disband.

7.3 Meetings

All CAG meetings should be open to the public. The meetings should be announced publicly (via display ads in newspapers, flyers, etc.) well enough in advance (e.g., two weeks) to encourage maximum participation of CAG and community members.

EPA personnel (and/or others such as State/Tribal/local governments) may facilitate CAG meetings, however, it may be preferable to use

someone from the community with facilitation experience or a professional meeting facilitator. A neutral facilitator is particularly effective at sites where some controversy is anticipated. Facilitation may produce a better sense of fairness and independence, helping to ensure more productive discussions. If a facilitator is regularly used during CAG meetings, it may be helpful to further clarify both the Chairperson's and facilitator's roles to avoid direct conflict between the facilitator and Chairperson.

The intent of the CAG is to ensure ongoing community involvement in Superfund response actions. As such, regular attendance at CAG meetings by all CAG members should be anticipated. Even though they are not CAG members, the EPA Site Manager and the CIC may attend meetings and encourage representatives of other pertinent Federal agencies and State/Tribal/local governments to attend meetings as well. Governmental attendees should not be so numerous, however, as to inhibit meeting discussions. Consistent attendance, however, can demonstrate commitment to meaningful public participation in the cleanup process.

7.3.1 Meeting Frequency

CAG meetings should be scheduled on a regular basis. CAG members should determine the frequency of CAG meetings based on the needs at their particular site. Meetings should be held often enough to allow the CAG to respond to site issues within specified timeframes and allow for timely communication of CAG actions and site activities to the rest of the community. Frequency of meetings should be covered in the CAG's operating procedures.

7.3.2 Location

The CAG meetings should be held in a location agreed upon by CAG members. It is useful to consider a location convenient to CAG members, as well as central enough to encourage attendance by other interested members of the community. Meeting spaces such as local libraries, high schools, and senior centers may be acceptable locations. The location should meet requirements of the Americans with Disabilities Act and the Rehabilitation Act of 1994 (for example, accessibility for those in wheelchairs).

7.3.3 Meeting Format

The format for CAG meetings may vary depending on the needs of the CAG. A basic meeting format might include:

- Review of "old" business;
- Status update by the project technical staff and CAG member discussion;
- Discussion and question/answer session involving members of the public in attendance;
- Summary and discussion of "action items" for the CAG; and
- Discussion of the next meeting's agenda.

Prior to announcing each meeting, CAG members may wish to agree upon the meeting's purpose, agenda, and format. If necessary, arrangements should be made to provide a translator or interpreter and/or facilitator. EPA (in conjunction with others such as State/Tribal/local governments) may assist the CAG in making appropriate arrangements.

7.3.4 Special-Focus Sessions

The CAG also may consider holding special-focus sessions from time to time. These meetings would focus on a single topic and provide an opportunity for the CAG to solicit input, discuss, or gather information on a specific issue

requiring attention. If an expert cannot attend a special-focus session—travel and attendance in person may not always be possible—it may be useful for the CAG to schedule a conference call with that expert to discuss a particular issue. EPA (in conjunction with others such as State/Tribal/local governments) may provide support for special-focus sessions on issues relevant to the Superfund site cleanup and decision-making process.

7.3.5 Meeting Documentation

The CAG should prepare a concise summary of each meeting, highlighting the topics discussed, agreements reached, and action items identified. EPA and others such as the State/Tribal/local governments may provide support for this effort. The CAG may want to consider preparing a summary, rather than a verbatim transcript, to facilitate effective communication with local communities. If a significant segment of the affected population is non-English-speaking or visually impaired, they also should translate the summary, as appropriate, for these members of the community.

The meeting summary should be available for public review in the information repositories and through other dissemination methods within one month of the meeting. Copies of the summary also may be mailed to all community members who attended the meeting and to those who are on the CAG mailing list. If the CAG mailing list is larger than EPA's site mailing list, EPA may expand its mailing list to include interested community members from the CAG list.

8. CAG Response to Requests for Comments

EPA (in conjunction with others such as State/Tribal/local governments) should make every effort to involve the CAG during the early stages of developing documents—for example, during the scoping stage.

When EPA offers CAG members the opportunity to review and comment on documents, it may be helpful for EPA's technical staff (and from other appropriate agencies) to conduct a brief walk-through of each document prior to the CAG members' review. This overview may include explaining the goals and significance of each document in the cleanup process.

EPA should consider making all documents available to the CAG for the same length of time as to other groups—such as the State/Tribal and peer review groups. The duration of comment periods for some Superfund site-related documents, such as the Remedial Investigation/Feasibility Study (RI/FS) and the Proposed Plan and Records of Decision (RODs), are already established. CAG members, however, may be asked to review and comment on a variety of documents and other information for which comment period durations have not been established. EPA should explain to the CAG that, in some cases, time allotted for review of these materials may have to be less than 30 days. In those cases, the CAG should be ready to complete its review and provide comments in the shorter time period.

The CAG may determine the most efficient way to respond to requests for review and comment on key documents. The CAG

should choose, on a case-by-case basis, the most appropriate mechanism to ensure that comments are provided within specified timeframes. One option available for the CAG to gather input from its constituents is by holding a special-focus meeting. To assist in the process, EPA (in conjunction with others such as State/Tribal/local governments) should prepare executive summaries in plain language describing the document and its key points.

9. EPA Response to Comments from the CAG

Since EPA representatives may attend CAG meetings regularly, EPA may have the opportunity to respond to many CAG comments on key documents and other issues in the context of meeting discussions. These responses should be documented as part of the interchange during the CAG meeting and, unless otherwise stated, should not be considered part of the formal Agency "Response to Comments" (as required under Sections 113 and 117 of CERCLA and 40 CFR 300 of the National Contingency Plan). EPA should recognize the nature of the comments (whether statements of individual preferences or statements supported by all CAG members), and give the comments corresponding weight for consideration. In cases where there are numerous comments to address in a meeting context, EPA may respond to them in writing.

10. Roles and Responsibilities

- **CAG Chairperson**
- **CAG Members**
- **EPA (as Lead Agency)**
- **State/Tribal Regulatory Agency**
- **CAG - TAG Interface**

EPA is committed to early, direct, and meaningful public involvement. Through CAGs, community members have a direct line of communication with EPA (as well as with the State/Tribal/local governments, depending on their level of involvement) and many opportunities for expressing their opinions. As a representative public forum, CAG members are able to voice their views on cleanup issues and play an important role in cleanup decisions. This is especially important before key points in the cleanup process. For example, CAG members may express preferences for the type of remedy, cleanup levels, future land use, and interaction with the regulatory agencies. Since the CAG, by definition, is intended to be representative of the affected community, the regulatory agencies will give substantial weight to the preferences expressed by CAG members. This is particularly important if the preferences reflect the position of most CAG members or represent a consensus from the CAG. EPA must not only listen to views expressed by CAG members but address their views when making site decisions.

EPA, the State/Tribal/local governments, the CAG Chairperson, and CAG members each have an important role to play in the development and operation of the CAG and in contributing to its effectiveness as a forum for meaningful public participation in Superfund response actions.

The following list, while not comprehensive, includes some of the key functions of each player.

10.1 CAG Chairperson

1. Prepare and distribute an agenda prior to each CAG meeting.
2. Ensure that CAG meetings are conducted in a manner that encourages open and constructive participation by all members and invites participation by other interested parties in the community.
3. Ensure that all pertinent community issues and concerns related to the Superfund site response are raised for consideration and discussion.
4. Attempt, whenever possible, to reach consensus among CAG members by providing official comments or stating positions on relevant issues and key documents.
5. Facilitate dissemination of information on key issues to the community.

10.2 CAG Members

1. Serve as a direct and reliable conduit for information flow to and from the community. CAG members have a responsibility to share information with other members of the affected community—the people they represent. Their names should be publicized widely within the local community to ensure that community members and interest groups have ready access to CAG members. If CAG members do not wish to have their phone numbers listed publicly, an alternative contact system should be explored to ensure that the community has access to CAG members.
2. Represent not only their own personal views, but also the views of other community members while serving on the CAG. CAG members should honestly and fairly present information they receive from members of the community; tentative conclusions should be identified properly as such.
3. Review information concerning site cleanup plans, including technical documents, proposed and final plans, status reports, and consultants' reports and provide comments and other input at CAG meetings and other special-focus meetings.
4. Play an important role at key points in the cleanup decision-making process by expressing individual community preferences on site issues.
5. Attempt, whenever possible, to achieve consensus with their fellow members before providing official comments or stating positions on relevant issues and key documents.
6. Assist the Chairperson in disseminating information on key issues to the community.
7. Attend all CAG meetings.
8. Be committed to the CAG and willing to serve for an extended period of time (e.g., two years). Terms may be staggered for continuity.
9. Serve voluntarily and without compensation.

10.3 EPA (as Lead Agency)

1. Provide information on the opportunity to form the CAG.

2. Attend CAG meetings to provide information and technical expertise on Superfund site cleanup.
3. Facilitate discussion of issues and concerns relative to Superfund actions.
4. Listen and respond to views expressed by CAG members, giving them substantial consideration when making site decisions, especially when views are those of most or all CAG members.
5. Work with others, as appropriate, to support and participate in training to be provided to CAG members.
6. Assist the CAG with administrative and logistical support and meeting facilities.

10.4 State/Tribal Regulatory Agency

1. Attend all CAG meetings.
2. Serve as an information referral and resource bank for the CAG on State- or Tribal-related issues.
3. Support training to be provided to CAG members.
4. If the lead agency, assume responsibilities under Section 10.3.

10.5 CAG - TAG Interface

TAG recipients can use their TAG funds to hire their own independent Technical Advisor to help them better understand and more effectively participate in the decision-making process at Superfund sites.

If a TAG has been awarded to a community group for work at this particular site (with the CAG), the Region should encourage a representative of the TAG group to be a member of the CAG. The Regions also should encourage the TAG and CAG to work together toward common goals with respect to site remediation.

If no TAG currently exists for this site, community members are still eligible and are encouraged to apply for a TAG. *Having a CAG at a site in no way precludes an eligible group at that same site from receiving a TAG.*

Points to Keep in Mind Regarding Community Advisory Groups

- Consult with and involve appropriate State and Tribal Governments.
- Consult with and involve appropriate local governments.
- Involve communities EARLY in the Superfund process.
- Maintain open communication channels.
- Share information.
- Be sincere.

11. Appendices

COMMUNITY ADVISORY GROUP (CAG) (*Name and Location of Site*)

The U.S. Environmental Protection Agency (EPA) believes it may be useful for the community (*communities*) of (*name of community or communities affected*) to establish a Community Advisory Group (CAG) to ensure that all segments of the community have an opportunity to participate in the decision-making process at (*name of the site*).

The Superfund program under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) covers the cleanup of sites involving the improper disposal of hazardous substances throughout the country. Community involvement is an important element of the Superfund process, and EPA encourages it. EPA's comprehensive Community Involvement Program for (*name of the site*) began in (*date*). (*Provide a brief description of accomplishments of the Community Involvement Program at this site, if possible.*)

EPA, in cooperation with (*name of the State/Tribal Regulatory Agency and any other parties to the cleanup agreement*), has begun work to cleanup (*name of the site*).

(*Provide a brief description of the site and the cleanup-related activities to date.*)

A Community Advisory Group (CAG) provides a setting in which representatives of the local community can get up-to-date information about the status of cleanup activities, as well as discuss community views and concerns about the cleanup process with EPA, the State/Tribal regulatory agency, and other parties involved in cleanup of the Superfund site. **The CAG is a public forum in which all affected and interested parties in a community can have a voice and actively participate in the Superfund process.**

Getting Involved. CAGs are made up of members of the community. CAG membership is voluntary and members should be willing to serve two-year terms. CAG members will meet regularly and review and comment on technical documents and plans related to the environmental studies and cleanup activities at (*name of site*). Members will help EPA and the community exchange information about site activities and community concerns. CAG members will meet with individuals and groups in the community to obtain their views and hear their concerns related to site cleanup. **All CAG meetings will be open to the public.** CAG members will be chosen from among nominations submitted by individuals and groups in the community. (*May provide more details about the specific membership selection model here.*) **The deadline for membership application is (*date*).**

For More Information Contact: (*local contact name, address, and telephone number*).

(*Name and Location of Site*)
Formation of Community Advisory Group

The U.S. Environmental Protection Agency (EPA) believes it may be useful for the community (*communities*) of (*name of community or communities affected*) to establish a Community Advisory Group (CAG) to ensure that all segments of the community have an opportunity to participate in the decision-making process at (*name of the site*).

The Superfund program involves cleaning up hazardous waste sites throughout the country. EPA encourages community involvement and considers it to be an important element of the Superfund process.

The CAG will provide a setting in which representatives of the local community can get up-to-date information about the status of cleanup activities, as well as discuss community views and concerns about the cleanup process with EPA, the State regulatory agency, and other parties involved in cleanup of the site. **The CAG will be a public forum in which all affected and interested parties in a community can have a voice and actively participate in the Superfund process.**

EPA will sponsor a meeting on (*date*) at (*time*) to discuss the purpose of the CAG, provide information on how CAG members should be chosen, and answer questions concerning cleanup plans and activities at the site. (*Provide a brief description of specific site-related issues to be discussed*.) The meeting will be held at (*meeting location address*).

The CAG will be made up of members of the community. CAG membership is voluntary and members serve without compensation. Members should be willing to serve two-year terms. The CAG will meet regularly to review and comment on technical documents and plans related to the environmental studies and cleanup activities at (name of site) and to relay community views and concerns related to the site. **All CAG meetings will be open to the public, and all members of the community are encouraged to participate.**

For more information about the CAG, contact: (*local contact name, address, and telephone number*).

APPENDIX C: Sample CAG Letter

Dear (*name of Community Member/Organization*):

The community (*communities*) of (*name of community or communities affected*) is establishing a Community Advisory Group (CAG) to ensure that all segments of the community have an opportunity to participate in the decision-making process at (*name of the site*).

The Superfund program involves cleaning up hazardous waste sites throughout the country. EPA encourages community involvement—an important element of the Superfund process.

The CAG will provide a setting in which representatives of the local community can get up-to-date information about the status of cleanup activities, as well as discuss community views and concerns about the cleanup process with EPA, the State/Tribal regulatory agency, and other parties involved in cleanup of the site.

The CAG will be made up of members of the community, and members should reflect the diverse interests in the community. CAG membership is voluntary and members serve without compensation. Members should be willing to serve two-year terms. The CAG will meet regularly to review and comment on technical documents and plans related to the environmental studies and cleanup activities at (*name of site*) and to relay information between EPA and the community about the ongoing activities at the site. They will be expected to meet often with individuals and groups in the community to obtain their views and hear their concerns related to site cleanup issues.

CAG membership offers an outstanding opportunity to represent the community and help ensure the most effective remediation of the (*name of site*).

If you have any questions about CAGs, please call _____ at _____.

Sincerely,

(name of EPA Regional CIC
and, if possible, a local community leader)

Enclosure

(*Name and Location of Site*) Insufficient Community Interest for Community Advisory Board (CAG)

The U.S. Environmental Protection Agency (EPA) believed it would be useful for the community (or communities) of (*name of community or communities affected*) to establish a Community Advisory Group (CAG) to ensure that all segments of the community have an opportunity to participate in the decision-making process at (*name of the site*).

The CAG would provide a setting in which representatives of the local community could get up-to-date information about the status of cleanup activities, as well as discuss community views and concerns about the cleanup process with EPA, the State/Tribal regulatory agency, and other parties involved in cleanup of the site. **The CAG would be a public forum in which all affected and interested parties in a community would have a voice and could participate actively in the Superfund process.**

Efforts to encourage members of the community to serve as CAG members began on (*date*). These efforts included direct communication with individuals and organizations in the community (*be specific in terms of the outreach effort*) as well as a public meeting in which the purpose of the CAG and the roles and responsibilities of CAG members were discussed.

Despite these efforts, members of the community have not expressed enough interest so far to ensure full participation by all segments of the community. Since these efforts to stimulate interest in a CAG in (*name of community*), have not been successful, EPA will not continue to encourage a CAG to form at (*name of site*). If in the future, community members express an interest in forming a CAG, EPA may reconsider this decision.

If You Have Any Questions Contact: (*local contact name, address, and telephone number*).

APPENDIX F -- PUBLIC PARTICIPATION REGULATIONS IN 40 CFR 25

PART 1—STATEMENT OF ORGANIZATION AND GENERAL INFORMATION

Subpart A—Introduction

Subpart B—Headquarters

Subpart C—Field Installations

AUTHORITY: 5 U.S.C. 552.

SOURCE: 50 FR 26721, June 28, 1985, unless otherwise noted.

Subpart A—Introduction

§ 1.1 Creation and authority.

Reorganization Plan 3 of 1970, established the U.S. Environmental Protection Agency (EPA) in the Executive branch as an independent Agency, effective December 2, 1970.

§ 1.3 Purpose and functions.

The U.S. Environmental Protection Agency permits coordinated and effective governmental action to assure the protection of the environment by abating and controlling pollution on a systematic basis. Reorganization Plan 3 of 1970 transferred to EPA a variety of research, monitoring, standard setting, and enforcement activities related to pollution abatement and control to provide for the treatment of the environment as a single interrelated system. Complementary to these activities are the Agency's coordination and support of research and antipollution activities carried out by State and local governments, private and public groups, individuals, and educational institutions. EPA reinforces efforts among other Federal agencies with respect to the impact of their operations on the environment.

§ 1.5 Organization and general information.

(a) The U.S. Environmental Protection Agency's basic organization consists of Headquarters and 10 Regional Offices. EPA Headquarters in Washington, DC maintains overall planning, coordination and control of EPA programs. Regional Administrators head the Regional Offices and are responsible directly to the Administrator for the execution of the Agency's programs within the boundaries of their Regions.

(b) EPA's Directives System contains definitive statements of EPA's organization, policies, procedures, assignments of responsibility, and delegations of authority. Copies are available for public inspection and copying at the Management and Organization Division, 401 M Street SW., Washington, DC 20460. Information can be obtained from the Office of Public Affairs at all Regional Offices.

(c) EPA conducts procurement pursuant to the Federal Property and Administrative Services Act, the Federal Procurement Regulations, and implementing EPA regulations.

§ 1.7 Location of principal offices.

(a) The EPA Headquarters is in Washington, DC. The mailing address is 401 M Street SW., Washington, DC 20460.

(b) The addresss of (and States served by) the EPA Regional Offices (see § 1.61) are:

(1) Region I, U.S. Environmental Protection Agency, room 2203, John F. Kennedy Federal Building, Boston, MA 02203. (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.)

(2) Region II, U.S. Environmental Protection Agency, Room 900, 26 Federal Plaza, New York, NY 10278. (New Jersey, New York, Puerto Rico, and the Virgin Islands.)

(3) Region III, U.S. Environmental Protection Agency, 841 Chestnut Street, Philadelphia, PA 19107. (Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and the District of Columbia.)

(4) Region IV, U.S. Environmental Protection Agency, 345 Courtland Street NE., Atlanta, GA 30365. (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.)

(5) Region V, U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, IL 60604. (Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin.)

(6) Region VI, U.S. Environmental Protection Agency, 1201 Elm Street, Dallas, TX 75270. (Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.)

(7) Region VII, U.S. Environmental Protection Agency, 726 Minnesota Avenue, Kansas City, KS 66101. (Iowa, Kansas, Missouri, and Nebraska.)

(8) Region VIII, U.S. Environmental Protection Agency, 999 18th street, One Denver Place, Denver, CO 80202. (Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.)

(9) Region IX, U.S. Environmental Protection Agency, 215 Fremont Street, San Francisco, CA 94105. (Arizona, California, Hawaii, Nevada, American Samoa, Trust Territories of the Pacific Islands, Guam, Wake Islands, and the Northern Marianas.)

(10) Region X, U.S. Environmental Protection Agency, 1200 Sixth Avenue, Seattle, WA 98101. (Alaska, Idaho, Oregon, and Washington.)

[50 FR 26721, June 28, 1985, as amended at 62 FR 1833, Jan. 14, 1997]

Subpart B—Headquarters

§ 1.21 General.

EPA Headquarters is comprised of:

(a) The Office of the Administrator;

(b) Two Associate Administrators and four staff offices which advise the Administrator on cross-cutting Agency headquarters and regional issues and conduct programs with respect to EPA's interface with other national and international governmental organizations;

(c) The Office of Inspector General;

(d) The Office of General Counsel; and

(e) Nine operational offices, each headed by an Assistant Administrator, responsible for carrying out EPA's major environmental and administrative programs.

§ 1.23 Office of the Administrator.

The Environmental Protection Agency is headed by an Administrator who is appointed by the President, by and with the consent of the Senate. The Administrator is responsible to the President for providing overall supervision to the Agency, and is assisted by a Deputy Administrator also appointed by the President, by and with the consent of the Senate. The Deputy Administrator assists the Administrator in the discharge of Agency duties and responsibilities and serves as Acting Administrator in the absence of the Administrator.

§ 1.25 Staff Offices.

(a) *Office of Administrative Law Judges.* The Office of Administrative Law Judges, under the supervision of the Chief Administrative Law Judge, is responsible for presiding over and conducting formal hearings, and issuance of initial decisions, if appropriate, in such proceedings. The Office provides supervision of the Administrative Law Judges, who operate as a component of the Office of Administrative Law Judges, in certain Agency Regional Offices. The Office provides the Agency Hearing Clerk.

(b) *Office of Civil Rights.* The Office of Civil Rights, under the supervision of a Director, serves as the principal adviser to the Administrator with respect to EPA's civil rights programs. The Office develops policies, procedures, and regulations to implement the Agency's civil rights responsibilities, and provides direction to Regional and field activities in the Office's area of responsibilities. The Office implements and monitors the Agency's equal employment opportunity program; provides advice and guidance to EPA program officials and Regional Administrators on EEO matters; serves as advocate for furthering career opportunities for minorities and women; and processes complaints of discrimination for Agency disposition. The office assures:

(1) Maximum participation of minority business enterprises under EPA contracts and grants;

(2) Equal employment opportunity under Agency service contracts, construction contracts, and grants;

(3) Compliance with the Davis-Bacon Act and related acts;

(4) Compliance with the provisions of laws affecting Agency programs requiring nondiscrimination on account of age and physical handicap and;

(5) Services or benefits are dispensed under any program or activity receiving Agency financial assistance on a nondiscrimination basis.

(c) *Science Advisory Board.* The Science Advisory Board, under the direction of a Director, provides expert and independent advice to the Administrator on the scientific and technical issues facing the Agency. The Office advises on broad, scientific, technical and policy matters; assesses the results of specific research efforts; assists in identifying emerging environmental problems; and advises the Administrator on the cohesiveness and currency of the Agency's scientific programs.

(d) *Office of Small and Disadvantaged Business Utilization.* The Office of Small and Disadvantaged Business Utilization, under the supervision of a Director, is responsible for developing policy and procedures implementing the Agency's small and disadvantaged business utilization responsibilities. The Office provides information and assistance to components of the Agency's field offices responsible for carrying out related activities. The Office develops and implements a program to provide the maximum utilization of women-owned business enterprises in all aspects of EPA contract

work; in collaboration with the Procurement and Contracts Management Division, develops programs to stimulate and improve involvement of small and minority business enterprises; and recommends the assignment of technical advisers to assist designated Procurement Center Representatives of the Small Business Administration in their duties. The Office represents EPA at hearings, interagency meetings, conferences and other appropriate forums on matters related to the advancement of these cited business enterprises in EPA's Federal Contracting Program.

(e)(1) *Environmental Appeals Board.* The Environmental Appeals Board is a permanent body with continuing functions composed of three Board Members designated by the Administrator. The Environmental Appeals Board shall decide each matter before it in accordance with applicable statutes and regulations. The Environmental Appeals Board shall decide each matter by majority vote. Two Board Members constitute a quorum, and if the absence or recusal of a Board Member so requires, the Board shall sit as a Board of two Members. In the case of a tie vote, the matter shall be referred to the Administrator to break the tie.

(2) *Functions.* The Environmental Appeals Board shall exercise any authority expressly delegated to it in this title. With respect to any matter for which authority has not been expressly delegated to the Environmental Appeals Board, the Environmental Appeals Board shall, at the Administrator's request, provide advice and consultation, make findings of fact and conclusions of law, prepare a recommended decision, or serve as the final decisionmaker, as the Administrator deems appropriate. In performing its functions, the Environmental Appeals Board may consult with any EPA employee concerning any matter governed by the rules set forth in this title, provided such consultation does not violate applicable ex parte rules in this title.

(3) *Qualifications.* Each member of the Environmental Appeals Board shall be a graduate of an accredited law school and a member in good standing of a recognized bar association of any state or the District of Columbia. Board Members shall not be employed by the Office of Enforcement, the Office of the General Counsel, a Regional Office, or any other office directly associated with matters that could come before the Environmental Appeals Board. A Board Member shall recuse himself or herself from deciding a particular case if that Board Member in previous employment performed prosecutorial or investigative functions with respect to the case, participated in the preparation or presentation of evidence in the case, or was otherwise personally involved in the case.

[50 FR 26721, June 28, 1985, as amended at 57 FR 5323, Feb. 13, 1992]

§ 1.27 Offices of the Associate Administrators.

(a) *Office of International Activities.* The Office of International Activities, under the supervision of an Associate Administrator, provides direction to and supervision of the activities, programs, and staff assigned to the Office of International Activities. All of the functions and responsibilities of the Associate Administrator are Agencywide, and apply to all international activities of the Agency. The Office develops policies and procedures for the direction of the Agency's international programs and activities, subject to U.S. foreign policy, and assures that adequate program, scientific, and legal inputs are provided. It conducts continuing evaluations of the Agency's international activities and makes appropriate recommendations to the Administrator. The Office advises the Administrator and principal Agency officials on the progress and effect of foreign and international programs and issues. The Office serves as the Administrator's representative in contacts with the Department of State and other Federal agencies concerned with international affairs. It negotiates arrangements or understandings relating to international cooperation with foreign organizations. The Office coordinates Agency international contacts and commitments; serves as the focal point for responding to requests for information relating to EPA international activities; and provides an initial point of contact for all foreign visitors. The Office maintains liaison with all relevant international organizations and provides representation where appropriate. It establishes Agency policy, and approves annual plans and modifications for travel abroad and attendance at international conferences and events. It provides administrative support for the general activities of the Executive Secretary of the U.S. side of the US–USSR/PRC agreements on environmental protection and of the U.S. Coordinator for the NATO Committee on the Challenges of Modern Society. The Office supervises these programs with respect to activities which are completely within the purview of EPA.

(b) *Office of Regional Operations.* The Office of Regional Operations, under the supervision of an Associate Administrator, reports directly to the Administrator and Deputy Administrator. The Office serves as the primary communications link between the Administrator/Deputy Administrator and the Regional Administrators. It provides a Headquarters focus for ensuring the involvement of Regions, or consideration of Regional views and needs, in all aspects of the Agency's work. The

Office is responsible for assuring Regional participation in Agency decision-making processes, assessing the impact of Headquarters actions on Regional operations, and acting as ombudsman to resolve Regional problems on behalf of the Administrator. The Associate Administrator coordinates Regional issues, organizes Regional Administrator meetings and work groups; and coordinates Regional responses to specific issues. In addition, the Office is responsible for working with the Regional Offices to further the consistent application of national program policies by reinforcing existing administrative, procedural, and program policy mechanisms as well as through initiation of reviews of significant Regional issues of interest to the Administrator. It continually monitors responsiveness and compliance with established policies and technical needs through formal and informal contact and free dialogue. The Office initiates and conducts on-site field visits to study, analyze, and resolve problems of Regional, sectional, and national scale.

§ 1.29 Office of Inspector General.

The Office of Inspector General assumes overall responsibility for audits and investigations relating to EPA programs and operations. The Office provides leadership and coordination and recommends policies for other Agency activities designed to promote economy and efficiency and to prevent and detect fraud and abuse is such programs and operations. The Office of the Inspector General informs the Administrator, Deputy Administrator, and Congress of serious problems, abuses and deficiencies relating to EPA programs and operations, and of the necessity for and progress of corrective action; and reviews existing and proposed legislation and regulations to assess the impact on the administration of EPA's programs and operations. The Office recommends policies for, and conducts or coordinates relationships between, the Agency and other Federal, State and local government agencies, and nongovernmental entities on all matters relating to the promotion of economy and efficiency in the administration of, or the prevention and detection of fraud and abuse in, programs and operations administered by the Agency.

§ 1.31 Office of General Counsel.

The Office of General Counsel is under the supervision of the General Counsel who serves as the primary legal adviser to the Administrator. The office provides legal services to all organizational elements of the Agency with respect to all Agency programs and activities and also provides legal opinions, legal counsel, and litigation support; and assists in the formulation and administration of the Agency's policies and programs as legal adviser.

§ 1.33 Office of Administration and Resources Management.

The Office of Administration and Resources Management is under the supervision of the Assistance Administrator for Administration and Resources Management who provides services to all of the programs and activities of the Agency, except as may be specifically noted. In addition, the Assistant Administrator has primary responsibility Agencywide for policy and procedures governing the functional areas outlined below. The major functions of the Office include resources management and systems (including budget and financial management), personnel services, occupational health and safety, administrative services, organization and management analysis and systems development, information management and services, automated data processing systems, procurement through contracts and grants, and human resources management. This Office is the primary point of contact and manages Agencywide internal controls, audit resolution and follow up, and government-wide management improvement initiatives. In the performance of the above functions and responsibilities, the Assistant Administrator for Administration and Resources Management represents the Administrator in communications with the Office of Management and Budget, Office of Personnel Management, General Accounting Office, General Services Administration, Department of the Treasury, and other Federal agencies prescribing requirements for the conduct of Government budget, fiscal management and administrative activities.

(a) *Office of Administration and Resources Management, Research Triangle Park, North Carolina, (RTP).* The Office of Administration and Resources Management (OARM), RTP, under the supervision of a Director, provides services to all of the programs and activities at RTP and certain financial and automated data processing services Agencywide. The major functions of the Office include personnel services, financial management, procurement through contracts, library and other information services, general services (including safety and security, property and supply, printing, distribution, facilities and other administrative services) and providing both local RTP and Agencywide automated data processing systems services. The Director, OARM, RTP, supervises the Office of Administration, Financial Management and Data Processing, RTP.

(b) *Office of Administration, Cincinnati, Ohio.* The Office of Administration at Cincinnati, Ohio, under the supervision of a Director, provides and administers personnel, procurement, safety and security, property and supply, printing, distribution, facilities, and other administrative service programs at Cincinnati and other specified geographic locations.

(c) *Office of the Comptroller.* The Office of the Comptroller, under the supervision of the Comptroller, is responsible for Agencywide budget, resources management and financial management functions, including program analysis and planning; budget formulation, preparation and execution; funding allotments and allocations; and developing and maintaining accounting systems, fiscal controls, and systems for payroll and disbursements. The Assistant Administrator's resource systems responsibilities are administered by this Office.

(d) *Office of Administration.* The Office of Administration, under the supervision of a Director, is responsible for the development and conduct of programs for personnel policies, procedures and operations; organization and management systems, control, and services; facilities, property and space management; personnel and property security; policies, procedures, and operations related to procurement through grants, contracts, and interagency agreements; and occupational health and safety.

(e) *Office of Information Resources Management.* The Office of Information Resources Management (OIRM), under the supervision of a Director, provides for an information resource management program (IRM) consistent with the provisions of Public Law 96–511. The Office establishes policy, goals and objectives for implementation of IRM; develops annual and long-range plans and budgets for IRM functions and activities; and promotes IRM concepts throughout the Agency. The Office coordinates IRM activities; plans, develops and operates information systems and services in support of the Agency's management and administrative functions, and other Agency programs and functions as required. The Office oversees the performance of these activities when carried out by other Agency components. The Office performs liaison for interagency sharing of information and coordinates IRM activities with OMB and GSA. The Office ensures compliance with requirements of Public Law 96–511 and other Federal laws, regulations, and guidelines relative to IRM; and chairs the Agency's IRM Steering Committee. The Office develops Agency policies and standards; and administers or oversees Agency programs for library systems and services, internal records management, and the automated collection, processing, storage, retrieval and transmission of data by or for Agency components and programs. The Office provides national program policy and technical guidance for: The acquisition of all information technology, systems and services by or for Agency components and programs, inculding those systems and services acquired by grantees and contractors using Agency funds; the operation of all Agency computers and telecommunications hardware and facilities; and the establishment and/or application of telecommunications and Federal information processing standards. The Office reviews and evaluates information systems and services, including office automation, which are operated by other Agency components; and sets standards for and approves the selection of Agency personnel who are responsible for the technical management of these activities. The Office coordinates its performance of these functions and activities with the Agency's information collection policies and budgets managed by the Office of Policy, Planning and Evaluation.

(f) *The Office of Human Resources Management.* The Office of Human Resources Management (OHRM), under the supervision of a Director, designs strategies, plans, and policies aimedat developing and training all employees, revitalizing EPA organizations, and matching the right people with the right jobs. The Office is responsible for developing and assuring implementation of policies and practices necessary for EPA to meet its present and future workforce needs. This includes consideration of the interrelationships between the environmental protection workforce needs of EPA and State governments. For Senior Executive Service (SES) personnel, SES candidates, Presidential Executive Interchange Participants, and Management Interns, OHRM establishes policies; assesses and projects Agency executive needs and workforce capabilities; creates, establishes, and implements training and development strategies and programs; provides the full range of personnel functions; supports the Performance Review Board (PRB) and the Executive Resources Board (ERB); and reassigns SES personnel with the concurrence of the ERB. For the areas of workforce management and employee and organizational development, OHRM develops strategies, plans, and policies; coordinates Agencywide implementation of those strategies, plans, and policies; and provides technical assistance to operating personnel offices and States. OHRM, in cooperation with the Office of the Comptroller, evaluates problems with previous workyear use, monitors current workyear utilization, and projects future workyear needs in coordination with the Agency's budget process. The Office is the lead office for coordination of human resources management with the Agency's Strategic Planning and Management System. The Office develops methodologies and procedures for evaluations of Agency human resources management activities; conducts evaluations of human resources management activities Agencywide; and carries out human resources management projects of special interest to Agency management. The Office coordinates its efforts with the Office of Administration (specifically the Personnel Management Division and the Management and Orga-

nization Division), the Office of the Comptroller, the Office of Information Resources Management, and the Office of Policy, Planning and Evaluation.

§ 1.35 Office of Enforcement and Compliance Monitoring.

The Office of Enforcement and Compliance Monitoring, under the supervision of the Assistant Administrator for Enforcement and Compliance Monitoring, serves as the principal adviser to the Administrator in matters concerning enforcement and compliance; and provides the principal direction and review of civil enforcement activities for air, water, waste, pesticides, toxics, and radiation. The Assistant Administrator reviews the efforts of each Assistant and Regional Administrator to assure that EPA develops and conducts a strong and consistent enforcement and compliance monitoring program. The Office manages the national criminal enforcement program; ensures coordination of media office administrative compliance programs, and civil and criminal enforcement activities; and provides technical expertise for enforcement activities.

§ 1.37 Office of External Affairs.

(a) *Office of Federal Activities.* The Office of Federal Activities is headed by a Director who reports to the Assistant Administrator for External Affairs and supervises all the functions of the Office. The Director acts as national program manager for five major programs that include:

(1) The review of other agency environmental impact statements and other major actions under the authority of Section 309 of the Clean Air Act;

(2) EPA compliance with the National Environmental Policy Act (NEPA) and related laws, directives, and Executive policies concerning special environmental areas and cultural resources;

(3) Compliance with Executive policy on American Indian affairs and the development of programs for environmental protection on Indian lands; and

(4) The development and oversight of national programs and internal policies, strategies, and procedures for implementing Executive Order 12088 and other administrative or statutory provisions concerning compliance with environmental requirements by Federal facilities. The Director chairs the Standing Committee on Implementation of Executive Order 12088. The Office serves as the Environmental Protection Agency's (EPA) principal point of contact and liaison with other Federal agencies and provides consultation and technical assistance to those agencies relating to EPA's areas of expertise and responsibility. The Office administers the filing and information system for all Federal Environmental Impact Statements under agreement with the Council on Environmental Quality (CEQ) and provides liaison with CEQ on this function and related matters of NEPA program administration. The Office provides a central point of information for EPA and the public on environmental impact assessment techniques and methodologies.

(b) *Office of Public Affairs.* The Office of Public Affairs is under the supervision of a Director who serves as chief spokesperson for the Agency and as a principal adviser, along with the Assistant Administrator for External Affairs, to the Adminstrator, Deputy Administrator, and Senior Management Officials, on public affairs aspects of the Agency's activities and programs. The Office of Public Affairs provides to the media adequate and timely information as well as responses to queries from the media on all EPA program activities. It assures that the policy of openness in all information matters, as enunciated by the Administrator, is honored in all respects. Develops publications to inform the general public of major EPA programs and activities; it also develops informational materials for internal EPA use in Headquarters and at the Regions, Labs and Field Offices. It maintains clearance systems and procedures for periodicals and nontechnical information developed by EPA for public distribution, and reviews all publications for public affairs interests. The Office of Public Affairs provides policy direction for, and coordination and oversight of EPA's community relations program. It provides a system for ensuring that EPA educates citizens and responds to their concerns about all environmental issues and assures that there are opportunities for public involvement in the resolution of problems. The Office supervises the production of audio-visual materials, including graphics, radio and video materials, for the general public and for internal audiences, in support of EPA policies and programs. The Office provides program direction and professional review of the performance of public affairs functions in the Regional Offices of EPA, as well as at laboratories and other field offices. The Office of Public Affairs is responsible for reviewing interagency agreements and Headquarters purchase request requisitions expected to result in contracts in the area of public information and community relations. It develops proposals and reviews Headquarters grant applications under consideration when public affairs goals are involved.

(c) *Office of Legislative Analysis.* The Office of Legislative Analysis, under the supervision of a Director who serves in the capacity of Legislative Counsel, is responsible for legislative drafting and liaison activities relating to the Agency's programs. It exercises responsibility for legislative drafting; reports to the Office of Management and Budget and congressional committees on proposed legislation and pending and enrolled bills, as re-

quired by OMB Circular No. A–19 and Bulletin No. 72–6; provides testimony on legislation and other matters before congressional committees; and reviews transcripts of legislative hearings. It maintains liaison with the Office of Congressional Liaison on all Agency activities of interest to the Congress. The Office works closely with the staffs of various Assistant Administrators, Associate Administrators, Regional Administrators, and Staff Office Directors in accordance with established Agency procedures, in the development of the Agency's legislative program. The Office assists the Assistant Administrator for External Affairs and the Agency's senior policy officials in guiding legislative initiatives through the legislative process. It advises the Assistant Administrator for Administration and Resources Management in matters pertaining to appropriations legislation. It works closely with the Office of Federal Activities to assure compliance with Agency procedures for the preparation of environmental impact statements, in relation to proposed legislation and reports on legislation. The Office coordinates with the Office of Management and Budget, other agencies, and congressional staff members on matters within its area of responsibility; and develops suggested State and local environmental legislative proposals, using inputs provided by other Agency components. The Legislative Reference Library provides legislative research services for the Agency. The Library secures and furnishes congressional materials to all EPA employees and, if available, to other Government agencies and private organizations; and it also provides the service of securing, upon request, EPA reports and materials for the Congress.

(d) *Office of Congressional Liaison.* The Office of Congressional Liaison is under the supervision of a Director who serves as the principal adviser to the Administrator with respect to congressional activities. All of the functions and responsibilities of the Director are Agencywide and apply to the provision of services with respect to all of the programs and activities of the Agency. The Office serves as the principal point of congressional contact with the Agency and maintains an effective liaison with the Congress on Agency activities of interest to the Congress and, as necessary, maintains liaison with Agency Regional and field officials, other Government agencies, and public and private groups having an interest in legislative matters affecting the Agency. It assures the provision of prompt response to the Congress on all inquiries relating to activities of the Agency; and monitors and coordinates the continuing operating contacts between the staff of the Office of the Comptroller and staff of the Appropriations Subcommittees of Congress.

(e) *Office of Community and Intergovernmental Relations.* The Office of Community and Intergovernmental Relations is under the supervision of a Director who serves as the principal point of contact with public interest groups representing general purpose State and local governments, and is the principal source of advice and information for the Administrator and the Assistant Administrator for External Affairs on intergovernmental relations. The Office maintains liaison on intergovernmental issues with the White House and Office of Management and Budget (OMB); identifies and seeks solutions to emerging intergovernmental issues; recommends and coordinates personal involvement by the Administrator and Deputy Administrator in relations with State, county, and local government officials; coordinates and assists Headquarters components in their handling of broad-gauged and issue-oriented intergovernmental problems. It works with the Regional Administrators and the Office of Regional Operations to encourage the adoption of improved methods for dealing effectively with State and local governments on specific EPA program initiatives; works with the Immediate Office of the Administrator, Office of Congressional Liaison, Office of Public Affairs, and the Regional Offices to develop and carry out a comprehensive liaison program; and tracks legislative initiatives which affect the Agency's intergovernmental relations. It advises and supports the Office Director in implementing the President's Environmental Youth Awards program.

[50 FR 26721, June 28, 1985, as amended at 52 FR 30359, Aug. 14, 1987]

§ 1.39 Office of Policy, Planning and Evaluation.

The Assistant Administrator for Policy, Planning and Evaluation services as principal adviser to the Administrator on Agency policy and planning issues and as such is responsible for supervision and management of the following: Policy analysis; standards and regulations; and management strategy and evaluation. The Assistant Administrator represents the Administrator with Congress and the Office of Management and Budget, and other Federal agencies prescribing requirements for conduct for Government management activities.

(a) *Office of Policy Analysis*. The Office of Policy Analysis is under the supervision of a Director who performs the following functions on an Agencywide basis: economic analysis of Agency programs, policies, standards, and regulations, including the estimation of abatement costs; research into developing new benefits models; benefit-cost analyses; impact assessments; intermediate and long-range strategic studies; consultation and analytical assistance in the areas described above to senior policy and program officials and other offices in the Agency; development and coordination

proposals for major new Agency initiatives; liaison with other agencies; universities, and interest groups on major policy issues and development of a coordinated Agency position; and development of integrated pollution control strategies for selected industrial and geographical areas.

(b) *Office of Standards and Regulations.* The Office of Standards and Regulations is under the supervision of a Director who is responsible for: involving the Office of Policy, Planning and Evaluation (OPPE) in regulatory review; conducting technical and statistical analyses of proposed standards, regulations and guidelines; serving as the Agency focal point for identifying, developing and implementing alternatives to conventional ''command and control'' regulations; conducting analyses of Agency activities related to chemical substances and providing mechanisms for establishing regulatory priorities and resolving scientific issues affecting rulemaking; ensuring Agency compliance with the Paperwork Reduction Act; evaluating and reviewing all Agency information collection requests and activities, and, in cooperation with the Office of Administration and Resources Management and the Office of Management Systems and Evaluation, evaluating Agency management and uses of data for decision-making.

(c) *Office of Management Systems and Evaluation.* The Office of Management Systems and Evaluation is under the supervision of a Director who directs and coordinates the development, implementation and administration of Agencywide systems for planning, tracking, and evaluating the accomplishments of Agency programs. In consultation with other offices, the Office develops a long-range policy framework for Agency goals, and objectives, identifies strategies for achieving goals, establishes timetables for objectives, and ensures that programs are evaluated against their accomplishments of goals.

§ 1.41 Office of Air and Radiation.

The Office of Air and Radiation is under supervision of the Assistant Administrator for Air and Radiation who serves as principal adviser to the Administrator in matters pertaining to air and radiation programs, and is responsible for the management of these EPA programs: Program policy development and evaluation; environmental and pollution sources' standards development; enforcement of standards; program policy guidance and overview, technical support or conduct of compliance activities and evaluation of Regional air and radiation program activities; development of programs for technical assistance and technology transfer; and selected demonstration programs.

(a) *Office of Mobile Sources.* The Office of Mobile Sources, under the supervision of a Director, is responsible for the mobile source air pollution control functions of the Office of Air and Radiation. The Office is responsible for: Characterizing emissions from mobile sources and related fuels; developing programs for their control, including assessment of the status of control technology and in-use vehicle emissions; for carrying out, in coordination with the Office of Enforcement and Compliance Monitoring as appropriate, a regulatory compliance program to ensure adherence of mobile sources to standards; and for fostering the development of State motor vehicles emission inspection and maintenance programs.

(b) *Office of Air Quality Planning and Standards.* The Office of Air Quality Planning and Standards, under the supervision of a Director, is responsible for the air quality planning and standards functions of the Office of Air and Radiation. The Director for Air Quality Planning and Standards is responsible for emission standards for new stationary sources, and emission standards for hazardous pollutants; for developing national programs, technical policies, regulations, guidelines, and criteria for air pollution control; for assessing the national air pollution control program and the success in achieving air quality goals; for providing assistance to the States, industry and other organizations through personnel training activities and technical information; for providing technical direction and support to Regional Offices and other organizations; for evaluating Regional programs with respect to State implementation plans and strategies, technical assistance, and resource requirements and allocations for air related programs; for developing and maintaining a national air programs data system, including air quality, emissions and other technical data; and for providing effective technology transfer through the translation of technological developments into improved control program procedures.

(c) *Office of Radiation Programs.* The Office of Radiation Programs, under the supervision of a Director, is responsible to the Assistant Administrator for Air and Radiation for the radiation activities of the Agency, including development of radiation protection criteria, standards, and policies; measurement and control of radiation exposure; and research requirements for radiation programs. The Office provides technical assistance to States through EPA Regional Offices and other agencies having radiation protection programs; establishes and directs a national surveillance and investigation program for measuring radiation levels in the environment; evaluates and assesses the impact of radiation on the general public and the environment; and maintains liaison with other public and private organizations involved in environmental radiation protection activities. The Office coordinates with and assists the Office of Enforcement and Compliance Monitoring in enforcement

activities where EPA has jurisdiction. The Office provides editorial policy and guidance, and assists in preparing publications.

§ 1.43 Office of Prevention, Pesticides and Toxic Substances.

The Assistant Administrator serves as the principal adviser to the Administrator in matters pertaining to assessment and regulation of pesticides and toxic substances and is responsible for managing the Agency's pesticides and toxic substances programs under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA); the Federal Food, Drug, and Cosmetic Act; the Toxic Substances Control Act (TSCA); and for promoting coordination of all Agency programs engaged in toxic substances activities. The Assistant Administrator has responsibility for establishing Agency strategies for implementation and integration of the pesticides and the toxic substances programs under applicable Federal statutes; developing and operating Agency programs and policies for assessment and control of pesticides and toxic substances; developing recommendations for Agency priorities for research, monitoring, regulatory, and information-gathering activities relating to pesticides and toxic substances; developing scientific, technical, economic, and social data bases for the conduct of hazard assessments and evaluations in support of toxic substances and pesticides activities; directing pesticides and toxic substances compliance programs; providing toxic substances and pesticides program guidance to EPA Regional Offices; and monitoring, evaluating, and assessing pesticides and toxic substances program operations in EPA Headquarters and Regional Offices.

(a) *Office of Pesticide Programs.* The Office of Pesticide Programs, under the management of a Director and Deputy Director are responsible to the Assistant Administrator for leadership of the overall pesticide activities of the Agency under the authority of the Federal Insecticide, Fungicide, and Rodenticide Act and several provisions of the Federal Food, Drug, and Cosmetic Act, including the development of strategic plans for the control of the national environmental pesticide situation. Such plans are implemented by the Office of Pesticide Programs, other EPA components, other Federal agencies, or by State, local, and private sectors. The Office is also responsible for establishment of tolerance levels for pesticide residues which occur in or on food; registration and reregistration of pesticides; special review of pesticides suspected of posing unreasonable risks to human health or the environment; monitoring of pesticide residue levels in food, humans, and nontarget fish and wildlife; preparation of pesticide registration guidelines; development of standards for the registration and reregistration of pesticide products; provision of program policy direction to technical and manpower training activities in the pesticides area; development of research needs and monitoring requirements for the pesticide program and related areas; review of impact statements dealing with pesticides; and carrying out of assigned international activities.

(b) *Office of Pollution Prevention and Toxics.* The Office of Pollution Prevention and Toxics (OPPT), under the management of a Director and Deputy Director is responsible to the Assistant Administrator for those activities of the Agency mandated by the Toxic Substances Control Act. The Director is responsible for developing and operating Agency programs and policies for new and existing chemicals. In each of these areas, the Director is responsible for information collection and coordination; data development; health, environmental and economic assessment; and negotiated or regulatory control actions. The Director provides operational guidance to EPA Regional Offices, reviews and evaluates toxic substances activities at EPA Headquarters and Regional Offices; coordinates TSCA activities with other EPA offices and Federal and State agencies, and conducts the export notification required by TSCA and provides information to importers. The Director is responsible for developing policies and procedures for the coordination and integration of Agency and Federal activities concerning toxic substances. The Director is also responsible for coordinating communication with the industrial community, environmental groups, and other interested parties on matters relating to the implementation of TSCA; providing technical support to international activities managed by the Office of International Activities; and managing the joint planning of toxic research and development under the auspices of the Pesticides/Toxic Substances Research Committee.

(c) *Office of Compliance Monitoring.* The Office of Compliance Monitoring, under the supervision of a Director, plans, directs, and coordinates the pesticides and toxic substances compliance programs of the Agency. More specifically, the Office provides a national pesticides and toxic substances compliance overview and program policy direction to the Regional Offices and the States, prepares guidance and policy on compliance issues, establishes compliance priorities, provides technical support for litigation activity, concurs on enforcement actions, maintains liaison with the National Enforcement Investigations Center, develops annual fiscal budgets for the national programs, and manages fiscal and personnel resources for the Headquarters programs. The Office directs and manages the Office of Prevention, Pesticides and Toxic Substances' laboratory data integrity program which conducts laboratory inspections and audits of testing data. The Office issues

civil administrative complaints and other administrative orders in cases of first impression, overriding national significance, or violations by any entity located in more than one Region. The office coordinates with the Office of General Counsel and the Office of Enforcement and Compliance Monitoring in an attorney-client relationship, with those Offices providing legal support for informal and formal administrative resolutions of violations; for conducting litigation; for interpreting statutes, regulations and other legal precedents covering EPA's activities; and for advising program managers on the legal implications of alternative courses of action. The Office of Compliance Monitoring coordinates with the Office of Pesticide Programs in the conduct of pesticide enforcement compliance and registration programs under the Federal Insecticide, Fungicide, and Rodenticide Act and participates in decisions involving the cancellation or suspension of registration. The Office establishes policy and operating procedures for pesticide compliance activities including sampling programs, export certification, monitoring programs to assure compliance with experimental use permits, pesticide use restrictions, and recordkeeping requirements, and determines when and whether compliance actions are appropriate. The Office establishes policy and guidance for the State cooperative enforcement agreement program and the applicator training and certification program. The Office of Compliance Monitoring also coordinates with the Office of Pollution Prevention and Toxics in the conduct of regulatory and compliance programs under the Toxic Substances Control Act and participates in regulation development for TSCA. The Office participates in the control of imminent hazards under TSCA, inspects facilities subject to TSCA regulation as a part of investigations which are national in scope or which require specialized expertise, and samples and analyzes chemicals to determine compliance with TSCA. The Office coordinates and provides guidance to other TSCA compliance activities, including the State cooperative enforcement agreement program and the preparation of administrative suits.

[50 FR 26721, June 28, 1985, as amended at 57 FR 28087, June 24, 1992]

§ 1.45 Office of Research and Development.

The Office of Research and Development is under the supervision of the Assistant Administrator for Research and Development who serves as the principal science adviser to the Administrator, and is responsible for the development, direction, and conduct of a national research, development and demonstration program in: Pollution sources, fate, and health and welfare effects; pollution prevention and control, and waste management and utilization technology; environmental sciences; and monitoring systems. The Office participates in the development of Agency policy, standards, and regulations and provides for dissemination of scientific and technical knowledge, including analytical methods, monitoring techniques, and modeling methodologies. The Office serves as coordinator for the Agency's policies and programs concerning carcinogenesis and related problems and assures appropriate quality control and standardization of analytical measurement and monitoring techniques utilized by the Agency. The Office exercises review and concurrence responsibilities on an Agencywide basis in all budgeting and planning actions involving monitoring which require Heardquarters approval.

(a) *Office of Acid Deposition, Environmental Monitoring and Quality Assurance.* The Office of Acid Deposition, Environmental Monitoring and Quality Assurance (OADEMQA), under the supervision of an Office Director, is responsible for planning, managing and evaluating a comprehensive program for:

(1) Monitoring the cause and effects of acid deposition;

(2) Research and development on the causes, effects and corrective steps for the acid deposition phenomenon;

(3) Research with respect to the transport and fate of pollutants which are released into the atmosphere;

(4) Development and demonstration of techniques and methods to measure exposure and to relate ambient concentrations to exposure by critical receptors;

(5) Research, development and demonstration of new monitoring methods, systems, techniques and equipment for detection, identification and characterization of pollutants at the source and in the ambient environment and for use as reference or standard monitoring methods;

(6) Establishment, direction and coordination of Agencywide Quality Assurance Program; and

(7) Development and provision of quality assurance methods, techniques and material including validation and standardization of analytical methods, sampling techniques, quality control methods, standard reference materials, and techniques for data collection, evaluation and interpretation. The Office identifies specific research, development, demonstration and service needs and priorities; establishes program policies and guidelines; develops program plans including objectives and estimates of resources required to accomplish objectives; administers the approved program and activities; assigns program responsibility and resources to the laboratories assigned by the Assistant Administrator; directs and supervises assigned laboratories in program administration; and con-

ducts reviews of program progress and takes action as necessary to assure timeliness, quality and responsiveness of outputs.

(b) *Office of Environmental Engineering and Technology Demonstration.* The Office of Environmental Engineering and Technology Demonstration (OEETD) under the supervision of a Director, is responsible for planning, managing, and evaluating a comprehensive program of research, development, and demonstration of cost effective methods and technologies to:

(1) Control Environmental impacts associated with the extraction, processing, conversion, and transportation of energy, minerals, and other resources, and with industrial processing and manufacturing facilities;

(2) Control environmental impacts of public sector activities including publicly-owned waste water and solid waste facilities;

(3) Control and manage hazardous waste generation, storage, treatment, and disposal;

(4) Provide innovative technologies for response actions under Superfund and technologies for control of emergency spills of oils and hazardous waste;

(5) Improve drinking water supply and system operations, including improved understanding of water supply technology and water supply criteria;

(6) Characterize, reduce, and mitigate indoor air pollutants including radon; and

(7) Characterize, reduce, and mitigate acid rain precursors from stationary sources. Development of engineering data needed by the Agency in reviewing premanufacturing notices relative to assessing potential release and exposure to chemicals, treatability by waste treatment systems, containment and control of genetically engineered organisms, and development of alternatives to mitigate the likelihood of release and exposure to existing chemicals. In carrying out these responsibilities, the Office develops program plans and manages the resources assigned to it; implements the approved programs and activities; assigns objectives and resources to the OEETD laboratories; conducts appropriate reviews to assure the quality, timeliness, and responsiveness of outputs; and conducts analyses of the relative environmental and socioeconomic impacts of engineering methods and control technologies and strategies. The Office of Environmental Engineering and Technology Demonstration is the focal point within the Office of Research and Development for providing liaison with the rest of the Agency and with the Department of Energy on issues associated with energy development. The Office is also the focal point within the Office of Research and Development for liaison with the rest of the Agency on issues related to engineering reseach and development and the control of pollution discharges.

(c) *Office of Environmental Processes and Effects Research.* The Office of Environmental Processes and Effects Research, under the supervision of the Director, is responsible for planning, managing, and evaluating a comprehensive research program to develop the scientific and technological methods and data necessary to understand ecological processes, and predict broad ecosystems impacts, and to manage the entry, movement, and fate of pollutants upon nonhuman organisms and ecosystems. The comprehensive program includes:

(1) The development of organism and ecosystem level effect data needed for the establishment of standards, criteria or guidelines for the protection of nonhuman components of the environment and ecosystems integrity and the prevention of harmful human exposure to pollutants;

(2) The development of methods to determine and predict the fate, transport, and environmental levels which may result in human exposure and exposure of nonhuman components of the environment, resulting from the discharge of pollutants, singly or in combination into the environment, including development of source criteria for protection of environmental quality;

(3) The development and demonstration of methods for the control or management of adverse environmental impacts from agriculture and other rural nonprofit sources;

(4) The development and demonstration of integrated pest management strategies for the management of agriculture and urban pests which utilize alternative biological, cultural and chemical controls;

(5) The development of a laboratory and fieldscale screening tests to provide data that can be used to predict the behavior of pollutants in terms of movement in the environmental, accumulation in the food chain, effects on organisms, and broad escosystem impacts;

(6) Coordination of interagency research activities associated with the health and environmental impacts of energy production and use; and

(7) development and demonstration of methods for restoring degraded ecosystem by means other than source control.

(d) *Office of Health Research.* The Office of Health Research under the supervision of a Director, is responsible for the management of planning, implementing, and evaluating a comprehensive, integrated human health research program which documents acute and chronic adverse effects to man from environmental exposure to pollutants and determines those exposures which have a potentially adverse effect on humans. This documentation is utilized by ORD for criteria development and scientific assessments in support of the Agency's regulating and standard-setting activities. To attain this objective, the program develops tests

systems and associated methods and protocols, such as predictive models to determine similarities and differences among test organisms and man; develops methodology and conducts laboratory and field research studies; and develops interagency programs which effectively use pollutants. The Office of Health Research is the Agency's focal point within the Office of Research and Development for providing liaison relative to human health effects and related human exposure issues (excluding issues related to the planning and implementation of research on the human health effects of energy pollutants that is conducted under the Interagency Energy/Environment Program). It responds with recognized authority to changing requirements of the Regions, program offices and other offices for priority technical assistance. In close coordination with Agency research and advisory committees, other agencies and offices, and interaction with academic and other independent scientific bodies, the Office develops health science policy for the Agency. Through these relationships and the scientific capabilities of its laboratories and Headquarters staffs, the Office provides a focal point for matters pertaining to the effects of human exposure to environmental pollutants.

(e) *Office of Health and Environmental Assessment (OHEA).* The Office of Health and Environmental Assessment, under the supervision of a Director, is the principal adviser on matters relating to the development of health criteria, health affects assessment and risk estimation, to the Assistant Administrator for Research and Development. The Director's Office: Develops recommendations on OHEA programs including the identification and development of alternative program goals, priorities, objectives and work plans; develops recommendations on overall office policies and means for their implementation; performs the critical path planning necessary to assure a timely production of OHEA information in response to program office needs; serves as an Agency health assessment advocate for issue resolution and regulatory review in the Agency Steering Committee, Science Advisory Board, and in cooperation with other Federal agencies and the scientific and technical community; and provides administrative support services to the components of OHEA. The Director's Office provides Headquarters coordination for the Environmental Criteria and Assessment Offices.

(f) *Office of Exploratory Research.* The Office of Exploratory Research (OER), under the supervision of a Director, is responsible for overall planning, administering, managing, and evaluating EPA's anticipatory and extramural grant research in response to Agency priorities, as articulated by Agency planning mechanisms and ORD's Research Committees. The Director advises the Assistance Administrator on the direction, scientific quality and effectiveness of ORD's long-term scientific review and evaluation; and research funding assistance efforts. The responsibilities of this office include: Administering ORD's scientific review of extramural requests for research funding assistance; developing research proposal solicitations; managing grant projects; and ensuring project quality and optimum dissemination of results. The OER is responsible for analyzing EPA's long-range environmental research concerns; forecasting emerging and potential environmental problems and manpower needs; identifying Federal workforce training programs to be used by State and local governments; assuring the participation of minority institutions in environmental research and development activities; and conducting special studies in response to high priority national environmental needs and problems. This office serves as an ORD focal point for university relations and other Federal research and development agencies related to EPA's extramural research program.

[50 FR 26721, June 28, 1985, as amended at 52 FR 30360, Aug. 14, 1987]

§ 1.47 Office of Solid Waste and Emergency Response.

The Office of Solid Waste and Emergency Response (OSWER), under the supervision of the Assistant Administrator for Solid Waste and Emergency Response, provides Agencywide policy, guidance, and direction for the Agency's solid and hazardous wastes and emergency response programs. This Office has primary responsibility for implementing the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA—''Superfund''). In addition to managing those programs, the Assistant Administrator serves as principal adviser to the Administrator in matters pertaining to them. The Assistant Administrator's responsibilities include: Program policy development and evaluation; development of appropriate hazardous waste standards and regulations; ensuring compliance with applicable laws and regulations; program policy guidance and overview, technical support, and evaluation of Regional solid and hazardous wastes and emergency response activities; development of programs for technical, programmatic, and compliance assistance to States and local governments; development of guidelines and standards for the land disposal of hazardous wastes; analyses of the recovery of useful energy from solid waste; development and implementation of a program to respond to uncontrolled hazardous waste sites and spills (including oil spills); long-term strategic planning and special studies; economic and long-term environmental

analyses; economic impact assessment of RCRA and CERCLA regulations; analyses of alternative technologies and trends; and cost-benefit analyses and development of OSWER environmental criteria.

(a) *Office of Waste Programs Enforcement.* The Office of Waste Programs Enforcement (OWPE), under the supervision of a Director, manages a national program of technical compliance and enforcement under CERCLA and RCRA. The Office provides guidance and support for the implementation of the CERCLA and RCRA compliance and enforcement programs. This includes the development of program strategies, long-term and yearly goals, and the formulation of budgets and plans to support implementation of strategies and goals. The Office provides program guidance through the development and issuance of policies, guidance and other documents and through training and technical assistance. The Office oversees and supports Regions and States in the implementation of the CERCLA and RCRA enforcement programs. The Office may assume responsibility for direct management of a limited number of CERCLA and RCRA enforcement actions which are multi-regional in nature or are cases of national significance. The Office serves as the national technical expert for all matters relating to CERCLA and RCRA compliance and enforcement. It represents the interest of the CERCLA and RCRA enforcement programs to other offices of the Agency. In coordination with the Office of External Affairs (OEA) and IO–OSWER, represents the program to external organizations, including the Office of Management and Budget (OMB), Congress, U.S. Department of Justice and other Federal agencies, the media, public interest and industry groups, State and local governments and their associations and the public.

(b) *Office of Solid Waste.* The Office of Solid Waste, under the supervision of a Director, is responsible for the solid and hazardous waste activities of the Agency. In particular, this Office is responsible for implementing the Resource Conservation and Recovery Act. The Office provides program policy direction to and evaluation of such activities throughout the Agency and establishes solid and hazardous wastes research requirements for EPA.

(c) *Office of Emergency and Remedial Response.* The Office of Emergency and Remedial Response, under the supervision of a Director, is responsible for the emergency and remedial response functions of the Agency (i.e., CERCLA). The Office is specifically responsible for:

(1) Developing national strategy, programs, technical policies, regulations, and guidelines for the control of abandoned hazardous waste sites, and response to and prevention of oil and hazardous substance spills;

(2) Providing direction, guidance, and support to the Environmental Response Teams and overseeing their activities;

(3) Providing direction, guidance, and support to the Agency's non-enforcement emergency and remedial response programs, including emergency and remedial responses to hazardous waste sites;

(4) Developing national accomplishment plans and resources;

(5) Scheduling the guidelines for program plans;

(6) Assisting in the training of personnel;

(7) Monitoring and evaluating the performance, progress, and fiscal status of the Regions in implementing emergency and remedial response program plans;

(8) Maintaining liaison with concerned public and private national organizations for emergency response;

(9) Supporting State emergency response programs; and

(10) Coordinating Office activities with other EPA programs.

(d) *Office of Underground Storage Tanks.* The Office of Underground Storage Tanks, under the supervision of a Director, is responsible for defining, planning, and implementing regulation of underground storage tanks containing petroleum, petroleum products, and chemical products. In particular, this Office is responsible for overseeing implementation of Subtitle I of the Resource Conservation and Recovery Act (RCRA), as amended. The Office develops and promulgates regulations and policies including notification, tank design and installation, corrective action, and State program approvals. It also plans for an oversees utilization of the Underground Storage Tank Trust Fund established by the Superfund Amendments and Reauthorization Act of 1986 (SARA).

[50 FR 26721, June 28, 1985, as amended at 52 FR 30360, Aug. 14, 1987]

§ 1.49 Office of Water.

The Office of Water, under the supervision of the Assistant Administrator for Water who serves as the principal adviser to the Administrator in matters pertaining to water programs, is responsible for management of EPA's water programs. Functions of the Office include program policy development and evaluation; environmental and pollution source standards development; program policy guidance and overview; technical support; and evaluation of Regional water activities; the conduct of compliance and permitting activities as they relate to drinking water and water programs; development of programs for technical assistance and technology transfer; development of selected demonstration programs; economic and long-term

environmental analysis; and marine and estuarine protection.

(a) *Office of Water Enforcement and Permits.* The Office of Water Enforcement and Permits, under the supervision of a Director, develops policies, strategies, procedures and guidance for EPA and State compliance monitoring, evaluation, and enforcement programs for the Clean Water Act and the Marine Protection Research and Sanctuaries Act. The Office also provides national program direction to the National Pollutant Discharge Elimination System permit program. The office has overview responsibilities and provides technical assistance to the regional activities in both enforcement and permitting programs.

(b) *Office of Water Regulations and Standards.* The Office of Water Regulations and Standards, under the supervision of a Director, is responsible for the Agency's water regulations and standards functions. The Office is responsible for developing an overall program strategy for the achievement of water pollution abatement in cooperation with other appropriate program offices. The Office assures the coordination of all national water-related activities within this water program strategy, and monitors national progress toward the achievement of water quality goals and is responsible for the development of effluent guidelines and water quality standards, and other pollutant standards, regulations, and guidelines within the program responsibilities of the Office. It exercises overall responsibility for the development of effective State and Regional water quality regulatory control programs. The Office is responsible for the development and maintenance of a centralized water programs data system including compatible water quality, discharger, and program data files utilizing, but not displacing, files developed and maintained by other program offices. It is responsible for developing national accomplishment plans and resource and schedule guidelines for monitoring and evaluating the performance, progress, and fiscal status of the organization in implementing program plans. The Office represents EPA in activities with other Federal agencies concerned with water quality regulations and standards.

(c) *Office of Municipal Pollution Control.* The Office of Municipal Pollution Control, under the supervision of a Director, is responsible for the Agency's water program operations functions. The Office is responsible for developing national strategies, program and policy recommendations, regulations and guidelines for municipal water pollution control; for providing technical direction and support to Regional Offices and other organizations; and for evaluating Regional and State programs with respect to municipal point source abatement and control, and manpower development for water-related activities. The Office assures that priority Headquarters and regional activities are planned and carried out in a coordinated and integrated fashion, including developing and implementing data submission systems.

(d) *Office of Drinking Water.* The Office of Drinking Water, under the supervision of a Director, is responsible for water supply activities of the Agency, including the development of an implementation strategy which provides the national policy direction and coordination for the program. This Office develops regulations and guidelines to protect drinking water quality and existing and future underground sources of drinking water, develops program policy and guidance for enforcement and compliance activities, and recommends policy for water supply protection activities. The office provides guidance and technical information to State agencies, local utilities, and Federal facilities through the Regional Offices on program planning and phasing; evaluates the national level of compliance with the regulations; plans and develops policy guidance for response to national, Regional, and local emergencies; reviews and evaluates, with Regional Offices, technical data for the designation of sole-source aquifers; designs a national program of public information; provides program policy direction for technical assistance and manpower training activities in the water supply area; identifies research needs and develops monitoring requirements for the national water supply program; develops national accomplishments' plans and resource schedule guidelines for monitoring and evaluating the program plans, and program performance, and fiscal status; develops program plans, and budget and program status reports for the water supply program; coordinates water supply activities with other Federal agencies as necessary; and serves as liaison with the National Drinking Water Advisory Council.

(e) *Office of Ground-Water Protection.* The Office of Ground-Water Protection, under the supervision of a Director, oversees implementation of the Agency's Ground-water Protection Strategy. This Office coordinates support of Headquarters and regional activities to develop stronger State government organizations and programs which foster ground-water protection. The Office directs and coordinates Agency analysis and approaches to unaddressed problems of ground-water contamination; is principally responsible for establishing and implementing a framework for decision-making at EPA on ground-water protection issues; and serves as the focus of internal EPA policy coordination for ground-water.

(f) *Office of Marine and Estuarine Protection.* The Office of Marine and Estuarine Protection, under the supervision of a Director, is responsible for the development of policies and strategies and implementation of a program to protect the ma-

rine/estuarine environment, including ocean dumping. The Office provides national direction for the Chesapeake Bay and other estuarine programs, and policy oversight of the Great Lakes Program.

(g) *Office of Wetlands Protection.* The Office of Wetlands Protection, under the supervision of a Director, administers the 404/Wetlands Program and develops policies, procedures, regulations, and strategies addressing the maintenance, enhancement, and protection of the Nations Wetlands. The Office coordinates Agency issues related to wetlands.

[50 FR 26721, June 28, 1985, as amended at 52 FR 30360, Aug. 14, 1987]

Subpart C—Field Installations

§ 1.61 Regional Offices.

Regional Administrators are responsible to the Administrator, within the boundaries of their Regions, for the execution of the Regional Programs of the Agency and such other responsibilities as may be assigned. They serve as the Administrator's prinicipal representatives in their Regions in contacts and relationships with Federal, State, interstate and local agencies, industry, academic institutions, and other public and private groups. Regional Administrators are responsible for:

(a) Accomplishing national program objectives within the Regions as established by the Administrator, Deputy Administrator, Assistant Administrators, Associate Administrators, and Heads of Headquarters Staff Offices;

(b) Developing, proposing, and implementing approved Regional programs for comprehensive and integrated environmental protection activities;

(c) Total resource management in their Regions within guidelines provided by Headquarters;

(d) Conducting effective Regional enforcement and compliance programs;

(e) Translating technical program direction and evaluation provided by the various Assistant Administrators, Associate Administrators and Heads of Headquarters Staff Offices, into effective operating programs at the Regional level, and assuring that such programs are executed efficiently;

(f) Exercising approval authority for proposed State standards and implementation plans; and

(g) Providing for overall and specific evaluations of Regional programs, both internal Agency and State activities.

PART 2—PUBLIC INFORMATION

Subpart A—Requests for Information

Subpart B—Confidentiality of Business Information

Subpart C—Testimony by Employees and Production of Documents in Civil Legal Proceedings Where the United States Is Not a Party

AUTHORITY: 5 U.S.C. 301, 552 (as amended), 553; secs. 114, 205, 208, 301, and 307, Clean Air Act, as amended (42 U.S.C. 7414, 7525, 7542, 7601, 7607); secs. 308, 501 and 509(a), Clean Water Act, as amended (33 U.S.C. 1318, 1361, 1369(a)); sec. 13, Noise Control Act of 1972 (42 U.S.C. 4912); secs. 1445 and 1450, Safe Drinking Water Act (42 U.S.C. 300j–4, 300j–9); secs. 2002, 3007, and 9005, Solid Waste Disposal Act, as amended (42 U.S.C. 6912, 6927, 6995); secs. 8(c), 11, and 14, Toxic Substances Control Act (15 U.S.C. 2607(c), 2610, 2613); secs. 10, 12, and 25, Federal Insecticide, Fungicide, and Rodenticide Act, as amended (7 U.S.C. 136h, 136j, 136w); sec. 408(f), Federal Food, Drug and Cosmetic Act, as amended (21 U.S.C. 346(f)); secs. 104(f) and 108, Marine Protection Research and Sanctuaries Act of 1972 (33 U.S.C. 1414(f), 1418); secs. 104 and 115, Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (42 U.S.C. 9604 and 9615); sec. 505, Motor Vehicle Information and Cost Savings Act, as amended (15 U.S.C. 2005).

SOURCE: 41 FR 36902, Sept. 1, 1976, unless otherwise noted.

Subpart A—Requests for Information

§ 2.100 Definitions.

For the purposes of this part:

(a) *EPA* means the United States Environmental Protection Agency.

(b) *EPA Record* or, simply *record* means any document, writing, photograph, sound or magnetic recording, drawing, or other similar thing by which information has been preserved, from which the information can be retrieved and copied, and over which EPA has possession or control. It may include copies of the records of other Federal agencies (see § 2.111(d)). The term includes informal writings (such as drafts and the like), and also includes information preserved in a form which must be translated or deciphered by machine in order to be intelligible to humans. The term includes documents and the like which were created or acquired by EPA, its predecessors, its officers, and its employees by use of Government funds or in the course of transacting official business. However, the term does not include materials which are the personal records of an EPA officer or employee. Nor does the term include materials published by non-Federal organizations which are readily available to the public, such as books, journals, and periodicals available through reference libraries, even if such materials are in EPA's possession.

(c) *Request* means a request to inspect or obtain a copy of one or more records.

(d) *Requestor* means any person who has submitted a request to EPA.

(e) The term *commercial use request* refers to a request from or on behalf of one who seeks information for a use or purpose that furthers the commercial, trade or profit interests of the requestor or the person on whose behalf the request is made. In determining whether a requestor properly belongs in this category, EPA must determine the use to which a requestor will put the documents requested. Moreover, where EPA has reasonable cause to doubt the use to which a requestor will put the records sought, or where that use is not clear from the request itself, EPA may seek additional clarification before assigning the request to a specific category.

(f) The term *non-commercial scientific institution* refers to an institution that is not operated on a *commercial* basis as that term is referenced in paragraph (e) of this section, and which is operated solely for the purpose of conducting scientific research the results of which are not intended to promote any particular product or industry.

(g) The term *educational institution* refers to a preschool, a public or private elementary or secondary school, an institution of graduate higher education, an institution of undergraduate higher education, an institution or professional education, and an institution of vocational education, which operates a program or programs of scholarly research.

(h) The term *representative of the news media* refers to any person actively gathering news for an entity that is organized and operated to publish or broadcast news to the public. The term *news* means information that is about current events or that would be of current interest to the public. Examples of news media entities include television or radio stations broadcasting to the public at large, and publishers of periodicals (but only in those instances when they can qualify as disseminators of *news*) who make their products available for purchase or subscription by the general public. These examples are not intended to be all-inclusive. Moreover, as traditional methods of news delivery evolve (e.g., electronic dissemination of newspapers through telecommunications services), such alternative media would be included in this category. In the case of *freelance* journalists, they may be regarded as working for a news organization if they can demonstrate a solid basis for expecting publication through that organization, even though not actually employed by it. A publication contract would be the clearest proof, but EPA may also look to the past publication record of a requestor in making this determination.

(i) The term *search* includes all time spent looking for material that is responsive to a request, including page-by-page or line-by-line identification of material within documents. Searching for material must be done in the most efficient and least expensive manner so as to minimize costs for both the EPA and the requestor. For example, EPA will not engage in line-by-line search when merely duplicating an entire document would prove the less expensive and quicker method of complying with a request. *Search* will be distinguished, moreover, from *review* of material in order to determine whether the material is exempt from disclosure (see paragraph (j) of this section). Searches may be done manually or by computer using existing programming.

(j) The term *review* refers to the process of examining documents located in response to a request that is for a commercial use (see paragraph (e) of this section) to determine whether any portion of any document located is permitted to be withheld. It also includes processing any documents for disclosure, e.g., doing all that is necessary to excise them and otherwise prepare them

for release. Review does not include time spent resolving legal or policy issues regarding the application of exemptions. (Documents must be reviewed in responding to all requests; however, review time may only be charged to Commercial Use Requesters.)

(k) The term *duplication* refers to the process of making a copy of a document necessary to respond to an FOIA request. Such copies can take the form of paper copy, microform, audio-visual materials, or machine readable documentation (e.g., magnetic tape or disk), among others. The copy provided must be in a form that is reasonably usable by requesters.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51658, Dec. 18, 1985; 53 FR 216, Jan. 5, 1988]

§ 2.101 Policy on disclosure of EPA records.

(a) EPA will make the fullest possible disclosure of records to the public, consistent with the rights of individuals to privacy, the rights of persons in business information entitled to confidential treatment, and the need for EPA to promote frank internal policy deliberations and to pursue its official activities without undue disruption.

(b) All EPA records shall be available to the public unless they are exempt from the disclosure requirements of 5 U.S.C 552.

(c) All nonexempt EPA records shall be available to the public upon request regardless of whether any justification or need for such records has been shown by the requestor.

(d) When documents responsive to a request are maintained for distribution by agencies operating statutory-based fee schedule programs, such as, but not limited to, the Government Printing Office or the National Technical Information Service, EPA will inform the requester of the steps necessary to obtain records from the sources.

[41 FR 36902, Sept. 1, 1976, as amended at 53 FR 216, Jan. 5, 1988]

§ 2.102 [Reserved]

§ 2.103 Partial disclosure of records.

If a requested record contains both exempt and nonexempt material, the nonexempt material shall be disclosed, after the exempt material has been deleted in accordance with § 2.119.

§ 2.104 Requests to which this subpart applies.

(a) This subpart applies to any written request (other than a request made by another Federal agency) received by any EPA office, whether or not the request cites the Freedom of Information Act, 5 U.S.C. 552. See §§ 2.107(a) and 2.112(b) regarding the treatment of requests which are directed by the requestor to offices other than those listed in § 2.106.

(b) Any written request to EPA for existing records prepared by EPA for routine public distribution, e.g., pamphlets, copies of speeches, press releases, and educational materials, shall be honored. No individual determination under § 2.111 is necessary in such cases, since preparation of the records for routine public distribution itself constitutes a determination that the records are available to the public.

§ 2.105 Existing records.

(a) The Freedom of Information Act, 5 U.S.C. 552, does not require the creation of new records in response to a request, nor does it require EPA to place a requestor's name on a distribution list for automatic receipt of certain kinds of records as they come into existence. The Act establishes requirements for disclosure of existing records.

(b) All existing EPA records are subject to routine destruction according to standard record retention schedules.

§ 2.106 Where requests for agency records shall be filed.

(a) A request for records may be filed with the EPA Freedom of Information Officer, A–101, 401 M Street, SW., Washington, DC 20460.

(b) Should the requestor have reason to believe that the records sought may be located in an EPA regional office, he may transmit his request to the appropriate regional Freedom of Information Office indicated below:

(1) Region I (Massachusetts, Connecticut, Maine, New Hampshire, Rhode Island, Vermont):

U.S. Environmental Protection Agency, Freedom of Information Officer, Room 2303, John F. Kennedy Federal Building, Boston, MA 02203.

(2) Region II (New Jersey, New York, Puerto Rico, Virgin Islands):

U.S. Environmental Protection Agency, Freedom of Information Officer, Room 1005, 26 Federal Plaza, New York, NY 10007.

(3) Region III (Delaware, Maryland, Pennsylvania, Virginia, West Virginia, District of Columbia):

U.S. Environmental Protection Agency, Freedom of Information Officer, 841 Chestnut Street, Philadelphia, PA 19107.

(4) Region IV (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee):

U.S. Environmental Protection Agency, Freedom of Information Officer, 345 Courtland Street, NE., Atlanta, GA 30365.

(5) Region V (Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin):

U.S. Environmental Protection Agency, Freedom of Information Officer, 77 West Jackson Boulevard, Chicago, IL 60604.

(6) Region VI (Arkansas, Louisiana, New Mexico, Oklahoma, Texas):

U.S. Environmental Protection Agency, Freedom of Information Officer (6M–MC), 1201 Elm Street, Dallas, TX 75270.

(7) Region VII (Iowa, Kansas, Missouri, Nebraska):

U.S. Environmental Protection Agency, Freedom of Information Officer, 726 Minnesota Avenue, Kansas City, KS 66101.

(8) Region VIII (Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming):

U.S. Environmental Protection Agency, Freedom of Information Officer, One Denver Place, 999 18th Street, Suite 1300, Denver, CO 80202–2413.

(9) Region IX (Arizona, California, Hawaii, Nevada, American Samoa, Guam, Trust Territory of Pacific Islands):

U.S. Environmental Protection Agency, Freedom of Information Officer, 215 Fremont Street, San Francisco, CA 94105.

(10) Region X (Alaska, Idaho, Oregon, Washington):

U.S. Environmental Protection Agency, Freedom of Information Officer, 1200 Sixth Avenue, Seattle, WA 98101.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985; 62 FR 1833, Jan. 14, 1997]

§ 2.107 Misdirected written requests; oral requests.

(a) EPA cannot assure that a timely or satisfactory response under this subpart will be given to written requests that are addressed to EPA offices, officers, or employees other than the Freedom of Information Officers listed in § 2.106. Any EPA officer or employee who receives a written request for inspection or disclosure of EPA records shall promptly forward a copy of the request to the appropriate Freedom of Information Officer, by the fastest practicable means, and shall, if appropriate, commence action under § 2.111. For purposes of § 2.112, the time allowed with respect to initial determinations shall be computed from the day on which the appropriate Freedom of Information Officer receives the request.

(b) While EPA officers and employees will attempt in good faith to comply with requests for inspection or disclosure of EPA records made orally, by telephone or otherwise, such oral requests are not required to be processed in accordance with this subpart.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985]

§ 2.108 Form of request.

A request shall be made in writing, shall reasonably describe the records sought in a way that will permit their identification and location, and should be addressed to one of the addresses set forth in § 2.106, but otherwise need not be in any particular form.

§ 2.109 Requests which do not reasonably describe records sought.

(a) If the description of the records sought in the request is not sufficient to allow EPA to identify and locate the requested records, the EPA office taking action under § 2.111 will notify the requestor (by telephone when practicable) that the request cannot be further processed until additional information is furnished.

(b) EPA will make every reasonable effort to assist in the identification and description of records sought and to assist the requestor in formulating his request. If a request is described in general terms (e.g., all records having to do with a certain area), the EPA office taking action under § 2.111 may communicate with the requestor (by telephone when practicable) with a view toward reducing the administrative burden of processing a broad request and minimizing the fees payable by the requestor. Such attempts will not be used as a means to discourage requests, but rather as a means to help identify with more specificity the records actually sought.

§ 2.110 Responsibilities of Freedom of Information Officers.

(a) Upon receipt of a written request, the Freedom of information Officer (whether at EPA Headquarters or at an EPA region) shall mark the request with the date of receipt, and shall attach to the request a control slip indicating the date of receipt, the date by which response is due, a unique Request Identification Number, and other pertinent administrative information. The request and control slip shall then be forwarded immediately to the EPA office believed to be responsible for maintaining the records requested. (If the records requested are believed to be located at two or more EPA offices, each such office shall be furnished a copy of the request and control slip, with instructions concerning which office shall serve as the lead office for coordinating the response.) The Freedom of Information Officer shall retain a file copy of the request and control slip, and shall monitor the handling of the request to ensure a timely response.

(b) The Freedom of Information Officer shall maintain a file concerning each request received, which shall contain a copy of the request, initial and appeal determinations, and other pertinent correspondence and records.

(c) The Freedom of Information officer shall collect and maintain the information necessary to compile the reports required by 5 U.S.C. 552(d).

§ 2.111 Action by office responsible for responding to request.

(a) Whenever an EPA office becomes aware that it is responsible for responding to a request, the office shall:

(1) Take action under § 2.109, if required, to obtain a better description of the records requested;

(2) Locate the records as promptly as possible, or determine that the records are not known to exist, or that they are located at another EPA office, or that they are located at another Federal agency and not possessed by EPA;

(3) When appropriate, take action under § 2.120(c) to obtain payment or assurance of payment;

(4) If any located records contain business information, as defined in § 2.201(c), comply with subpart B of this part;

(5) Determine which of the requested records legally must be withheld, and why (see § 2.119(b));

(6) Of the requested records which are exempt from mandatory disclosure but which legally may be disclosed (see § 2.119(a)), determine which records will be withheld, and why;

(7) Issue all initial determination within the allowed period (see § 2.112), specifying (individually or by category) which records will be disclosed and which will be withheld, and signed by a person authorized to issue the determination under § 2.113(b). Denials of requests shall comply with § 2.113; and

(8) Furnish the appropriate Freedom of Information Officer a copy of the determination. If the determination denied a request for one or more existing, located records, the responding office shall also furnish the Freedom of Information officer the name, address, and telephone number of the EPA employee(s) having custody of the records, and shall maintain the records in a manner permitting their prompt forwarding to the General Counsel upon request if an appeal from the initial denial is filed. See also § 2.204(f).

(b) If it appears that some or all of the requested records are not in the possession of the EPA office which has been assigned responsibility for responding to the request but may be in the possession of some other EPA office, the Freedom of Information officer who is monitoring the request shall be so informed immediately.

(c) In determining which records are responsive to a request, the EPA office responding shall ordinarily include those records within the Agency's possession as of the date of the Agency's receipt of the request.

(d) When a request for EPA records encompasses records of another Federal agency, the EPA office shall either: (1) Respond to the request after consulting with the originating agency when appropriate or; (2) promptly transfer responsibility for responding to the request to the originating agency provided that the other agency is subject to the FOIA. Whenever the EPA office refers a request to another agency, it shall notify the requestor of the referral.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985]

§ 2.112 Time allowed for issuance of initial determination.

(a) Except as otherwise provided in this section, not later than the tenth working day after the date of receipt by a Freedom of Information Office of a request for records, the EPA office responsible for responding to the request shall issue a written determination to the requestor stating which of the requested records will, and which will not, be released and the reason for any denial of a request. If the records are not known to exist or are not in EPA's possession, the EPA office shall so inform the requestor. To the extent requested records which are in EPA's possession are published by the Federal government, the response may inform the requestor that the records are available for inspection and where copies can be obtained.

(b) The period of 10 working days shall be measured from the date the request is first received and logged in by the Headquarters or regional Freedom of Information Office.

(c) There shall be excluded from the period of 10 working days (or any extension thereof) any time which elapses between the date that a requestor is notified by EPA under § 2.109 that his request does not reasonably identify the records sought, and the date that the requestor furnishes a reasonable identification.

(d) There shall be excluded from the period of 10 working days (or any extension thereof) any time which elapses between the date that a requestor is notified by EPA under § 2.120 that prepayment or assurance of payment of fees is required, and the date that the requestor pays (or makes suitable arrangements to pay) such charges.

(e) The EPA office taking action under § 2.111, after notifying the appropriate Freedom of Information Office, may extend the basic 10-day period established under subsection (a) of this section by a period not to exceed 10 additional working days, by furnishing written notice to the requestor within

the basic 10-day period stating the reasons for such extension and the date by which the office expects to be able to issue a determination. The period may be so extended only when absolutely necessary, only for the period required, and only when one or more of the following unusual circumstances require the extension:

(1) There is a need to search for and collect the requested records from field facilities or other establishments that are separate from the office processing the request:

(2) There is a need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records which are demanded in a single request; or

(3) There is a need for consultation, which shall be conducted with all practicable speed, with another agency having a substantial interest in the determination of the request or among two or more components of EPA.

(f) Failure of EPA to issue a determination within the 10-day period or any authorized extension shall constitute final agency action which authorizes the requestor to commence an action in an appropriate Federal district court to obtain the records.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985]

§ 2.113 Initial denials of requests.

(a) An initial denial of a request may be issued only for the following reasons:

(1) A statutory provision, provision of this part, or court order requires that the information not be disclosed;

(2) The record is exempt from mandatory disclosure under 5 U.S.C. 552(b) and EPA has decided that the public interest would not be served by disclosure; or

(3) Section 2.204(d)(1) requires initial denial because a third person must be consulted in connection with a business confidentiality claim.

(b) The Deputy Administrator, Assistant Administrators, Regional Administrators, the General Counsel, the Inspector General, Associate Administrators, and heads of headquarters staff offices are delegated the authority to issue initial determinations This authority may be redelegated; *Provided*, That the authority to issue initial denials of requests for existing, located records (other than denials based solely on § 2.204(d)(1)) may be redelegated only to persons occupying positions not lower than division director or equivalent.

(c) [Reserved]

(d)(1) Each initial determination to deny a request shall be written, signed, and dated, and, except as provided in paragraph (d)(2), shall contain a reference to the Request Identification Number, shall identify the records that are being withheld (individually, or, if the denial covers a large number of similar records, by described category), and shall state the basis for denial for each record or category of records being withheld.

(2) No initial determination shall reveal the existence or nonexistence of records if identifying the mere fact of the existence or nonexistence of those records would reveal confidential business information, confidential personal information or classified national security information. Instead of identifying the existence or nonexistence of the records, the initial determination shall state that the request is denied because either the records do not exist or they are exempt from mandatory disclosure under the applicable provision of 5 U.S.C. 552(b). No such determination shall be made without the concurrence of the General Counsel or his designee. The General Counsel has designated the Contracts and Information Law Branch to act on these requests for concurrence. See § 2.121 for guidance on initial determinations denying, in limited circumstances, the existence of certain law enforcement records or information.

(e) If the decision to deny a request is made by an authorized EPA employee other than the person signing the determination letter, that other person's identity and position shall be stated in the determination letter.

(f) Each initial determination which denies, in whole or in part, a request for one or more existing, located EPA records (including determinations described in § 2.113(d)(2) of this section) shall state that the requester may appeal the initial denial by sending a written appeal to the address shown in § 2.106(a) within 30 days after receipt of the determination. An initial determination which only denies the existence of records, however, will not include a notice of appeal rights.

(g) A determination shall be deemed issued on the date the determination letter is placed in EPA mailing channels for first class mailing to the requestor, delivered to the U.S. Postal Service for mailing, or personally delivered to the requestor, whichever date first occurs.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985; 53 FR 216, Jan. 5, 1988]

§ 2.114 Appeals from initial denials; manner of making.

(a) Any person whose request for one or more existing, located EPA records has been denied in whole or in part by an initial determination may appeal that denial by addressing a written appeal to the address shown in § 2.106(a).

(b) An appeal should be mailed no later than 30 calendar days after the date the requestor received

the initial determination on the request. An untimely appeal may be treated either as a timely appeal or as a new request, at the option of the Freedom of Information Officer.

(c) The appeal letter shall contain a reference to the Request Identification Number (RIN), the date of the initial determination, and the name and address of the person who issued the initial denial. The appeal letter shall also indicate which of the records to which access was denied are the subjects of the appeal.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985]

§ 2.115 Appeal determinations; by whom made.

(a) The General Counsel shall make one of the following legal determinations in connection with every appeal from the initial denial of a request for an existing, located record:

(1) The record must be disclosed;

(2) The record must not be disclosed, because a statute or a provision of this part so requires; or

(3) The record is exempt from mandatory disclosure but legally may be disclosed as a matter of Agency discretion.

(b) Whenever the General Counsel has determined under paragraph (a)(3) of this section that a record is exempt from mandatory disclosure but legally may be disclosed, and the record has not been disclosed by EPA under 5 U.S.C. 552, the matter shall be referred to the Assistant Administrator for External Affairs. If the Assistant Administant Administrator determines that the public interest would not be served by disclosure, a determination denying the appeal shall be issued by the General Counsel. If the Assistant Administrator determines that the public interest would be served by disclosure, the record shall be disclosed unless the Administrator (upon a review of the matter requested by the appropriate Assistant Administrator, Associate Administrator, Regional Administrator, the General Counsel, or the head of a headquarters staff office) determines that the public interest would not be served by disclosure, in which case the General Counsel shall issue a determination denying the appeal. This review by the Assistant Administrator for External Affairs shall not apply to appeals from initial determinations by the Office of Inspector General to deny requests.

(c) The General Counsel may delegate his authority under paragraph (a) of this section to a Regional Counsel, or to any other attorney employed on a full-time basis by EPA, in connection with any category of appeals or any individual appeal.

(d) The Assistant Administrator for External Affairs may delegate the authority under paragraph (b) of this section to the Deputy Assistant Administrator for External Affairs.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51659, Dec. 18, 1985]

§ 2.116 Contents of determination denying appeal.

(a) Except as provided in paragraph (b) of this section, each determination denying an appeal from an initial denial shall be in writing, shall state which of the exemptions in 5 U.S.C. 552(b) apply to each requested existing record, and shall state the reason(s) for denial of the appeal. A denial determination shall also state the name and position of each EPA officer or employee who directed that the appeal be denied. Such a determination shall further state that the person whose request was denied may obtain de novo judicial review of the denial by complaint filed with the district court of the United States in the district in which the complainant resides, or has his principal place of business, or in which the Agency records are situated, or in the District of Columbia, pursuant to 5 U.S.C. 552(a)(4).

(b) No determination denying an appeal shall reveal the existence or nonexistence of records if identifying the mere fact of the existence or nonexistence of those records would reveal confidential business information, confidential personal information or classified national security information. Instead of identifying the existence or nonexistence of the records, the determination shall state that the appeal is denied because either the records do not exist or they are exempt from mandatory disclosure under the applicable provision of 5 U.S.C. 552(b).

[53 FR 217, Jan. 5, 1988]

§ 2.117 Time allowed for issuance of appeal determination.

(a) Except as otherwise provided in this section, not later than the twentieth working day after the date of receipt by the Freedom of Information Officer at EPA Headquarters of an appeal from an initial denial of a request for records, the General Counsel shall issue a written determination stating which of the requested records (as to which an appeal was made) shall be disclosed and which shall not be disclosed.

(b) The period of 20 working days shall be measured from the date an appeal is first received by the Freedom of Information Officer at EPA Headquarters, except as otherwise provided in § 2.205(a).

(c) The Office of General Counsel, after notifying the Freedom of Information Officer at EPA Headquarters, may extend the basic 20-day period established under subsection (a) of this section by

a period not to exceed 10 additional working days, by furnishing written notice to the requestor within the basic 20-day period stating the reasons for such extension and the date by which the office expects to be able to issue a determination. The period may be so extended only when absolutely necessary, only for the period required, and only when one or more of the following unusual circumstances require the extension:

(1) There is a need to search for and collect the records from field facilities or other establishments that are separate from the office processing the appeal;

(2) There is a need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records which are demanded in a single request; or

(3) There is a need for consultation, which shall be conducted with all practicable speed, with another agency having a substantial interest in the determination of the request or among two or more components of EPA.

(d) No extension of the 20-day period shall be issued under subsection (c) of this section which would cause the total of all such extensions and of any extensions issued under § 2.112(e) to exceed 10 working days.

§ 2.118 Exemption categories.

(a) 5 U.S.C. 552(b) establishes nine exclusive categories of matters which are exempt from the mandatory disclosure requirements of 5 U.S.C. 552(a). No request under 5 U.S.C. 552 for an existing, located record in EPA's possession shall be denied by any EPA office or employee unless the record contains (or its disclosure would reveal) matters that are—

(1) Specifically authorized under criteria established by an Executive Order to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such Executive Order;

(2) Related solely to the internal personnel rules and practices of an agency;

(3) Specifically exempted from disclosure by statute (other than 5 U.S.C. 552(b)): *Provided*, That such statute:

(i) Requires that the matters be withheld from the public in such a manner as to leave no discretion on the issue, or

(ii) Establishes particular criteria for withholding or refers to particular types of matters to be withheld;

(4) Trade secrets and commercial or financial information obtained from a person and privileged or confidential (see subpart B);

(5) Interagency or intra-agency memorandums or letters which would not be available by law to a party other than an agency in litigation with the agency;

(6) Personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;

(7)(i) Records or information compiled for law enforcement purposes, but only to the extent that the production of such law enforcement records or information:

(A) Could reasonably be expected to interfere with enforcement proceedings;

(B) Would deprive a person of a right to a fair trial or an impartial adjudication;

(C) Could reasonably be expected to constitute an unwarranted invasion of personal privacy;

(D) Could reasonably be expected to disclose the identity of a confidential source, including a State, local, or foreign agency or authority or any private institution which furnished information on a confidential basis, and, in the case of a record or information compiled by a criminal law enforcement authority in the course of a criminal investigation, or by an agency conducting a lawful national security intelligence investigation, information furnished by a confidential source;

(E) Would disclose techniques and procedures for law enforcement investigations or prosecutions, or would disclose guidelines for law enforcement investigations or prosecutions if such disclosure could reasonably be expected to risk circumvention of the law; or

(F) Could reasonably be expected to endanger the life or physical safety of any individual.

(ii) [Reserved]

(8) Contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of finanical institutions; or

(9) Geological and geophysical information and data, including maps, concerning wells.

(b) The fact that the applicability of an exemption permits the withholding of a requested record (or portion thereof) does not necessarily mean that the record must or should be withheld. See § 2.119.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40000, Sept. 8, 1978; 53 FR 217, Jan. 5, 1988]

§ 2.119 Discretionary release of exempt documents.

(a) An EPA office may, in its discretion, release requested records despite the applicability of one or more of the exemptions listed in § 2.118 (a)(2), (a)(5), or (a)(7). Disclosure of such records is encouraged if no important purpose would be served by withholding the records.

(b) As a matter of policy, EPA will not release a requested record if EPA has determined that one

or more of the exemptions listed in § 2.118(a)(1), (3), (4), (6), (8), or (9), applies to the record, except when ordered to do so by a Federal court or in exceptional circumstances under appropriate restrictions with the approval of the Office of General Counsel or a Regional Counsel.

§ 2.120 Fees; payment; waiver.

(a) *Fee schedule.* Requesters shall be charged the full allowable direct costs incurred by the Agency in responding to a FOIA request. However, if EPA uses a contractor to search for, reproduce or disseminate records responsive to a request, the cost to the requester shall not exceed the cost of the Agency itself performing the service.

(1) There are four categories of requests. Fees for each of the categories will be charged as follows:

(i) Commercial use requests. If the request seeks disclosure of records for a commercial use, the requester shall be charged for the time spent searching for the requested record, reviewing the record to determine whether it should be disclosed and for the cost of each page of duplication. Commercial use requesters should note that EPA also may charge fees to them for time spent searching for and/or reviewing records, even if EPA fails to locate the records or if the records located are determined to be exempt from disclosure.

(ii) Requests from an educational or non-commercial scientific institution whose purpose is scholarly or scientific research, involving a request which is not for a commercial use and seeks disclosure of records. In the case of such a request, the requester shall be charged only for the duplication cost of the records, except that the first 100 pages of duplication shall be furnished without charge.

(iii) Requests from a representative of the news media, involving a request which is not for a commercial use and seeks disclosure of records. In the case of such a request, the requester shall be charged only for the duplication cost of the records, except that the first 100 pages of duplication shall be furnished without charge.

(iv) All other requests. If the request seeks disclosure of records other than as described in paragraphs (a)(1)(i), (ii), and (iii) of this section, the requester shall be charged the full cost of search and duplication. However, the first two hours of search time (or its cost equivalent) and the first 100 pages of duplication (or their cost equivalent) shall be furnished without charge. Requesters in the ''all other requests'' category should note that EPA also may charge fees to them for time spent searching for records, even if EPA fails to locate the records or if the records located are determined to be exempt from disclosure.

(2) The determination of a requester's fee category will be based on the following:

(i) Commercial use requesters: The use to which the requester will put the documents requested;

(ii) Educational and non-commercial scientific institution requestors: Identity of the requester and the use to which the requestor will put the documents requested;

(iii) Representatives of the news media requesters: The identity of the requester and the use to which the requestor will put the documents requested.

(3) Fees will be charged to requesters, as appropriate, for search, duplication and review of requested records in accordance with the following schedule:

(i) Manual search for records.

(A) EPA Employees: For each ½ hour or portion thereof:

(*1*) GS–8 and below: $4.00.

(*2*) GS–9 and above: $10.00.

(B) Contractor employees: The requestor will be charged for actual charges up to but not exceeding the rate which would have been charged had EPA employees conducted the search.

(ii) Computer search for records charges will consist of:

(A) EPA employee operators: For each ½ hour or portion thereof:

(*1*) GS–8 and below: $4.00.

(*2*) GS–9 and above: $10.00, plus.

(B) Contractor operators: Requestors will be charged for the actual charges up to but not exceeding the rate which would have been charged had EPA employees conducted the search (see paragraph (a)(3)(i)(A) of this section), plus.

(C) Actual computer resource usage charges for this search.

(iii) Review of records. For each ½ hour or portion thereof (EPA employees):

(A) GS–8 and below: $4.00.

(B) GS–9 and above: $10.00.

(iv) Duplication or reproduction of records.

(A) Duplication or reproduction of documents by EPA employees (paper copy of paper original): $.15 per page.

(B) Computer printouts (other than those calculated in a direct-cost billing—see paragraph (a)(3)(ii) of this section ''Computer search for records'') $.15 per page.

(C) Other methods of duplication or reproduction, including, but not limited to, duplication of photographs, microfilm and magnetic tape, will be charged at the actual direct cost to EPA.

(4) Other charges.

(i) Other charges incurred in responding to a request including but not limited to, special handling or transportation of records, will be charged at the actual direct cost to EPA.

(ii) Certification or authentication of records: $25.00 per certification or authentication.

(5) No charge shall be made—

(i) For the cost of preparing or reviewing letters of response to a request or appeal;

(ii) For time spent resolving legal or policy issues concerning the application of exemptions;

(iii) For search time and the first 100 pages of duplication for requests described in § 2.120(a)(1)(ii) and (iii) of this section;

(iv) For the first two hours of search time (or its cost equivalent) and for the first 100 pages of duplication for requests described in § 2.120(a)(1)(iv) of this section;

(v) If the total fee in connection with a request is less than $25.00, or if the costs of collecting the fee would otherwise exceed the amount of the fee. However, when EPA reasonably believes that a requester or group of requesters is attempting to break a request down into a series of requests for the purpose of avoiding the assessment of fees, EPA will aggregate such requests to determine the total fee, and will charge accordingly;

(vi) For responding to a request by an individual for one copy of a record retrievable by the requesting individual's name or personal identifier from a Privacy Act system of records;

(vii) For furnishing records requested by either House of Congress, or by a duly authorized committee or subcommittee of Congress, unless the records are requested for the benefit of an individual Member of Congress or for a constituent;

(viii) For furnishing records requested by and for the official use of other Federal agencies; or

(ix) For furnishing records needed by an EPA contractor, subcontractor, or grantee to perform the work required by the EPA contract or grant.

(b) *Method of payment.* All fee payments shall be in the form of a check or money order payable to the ''U.S. Environmental Protection Agency'' and shall be sent (accompanied by a reference to the pertinent Request Identification Number(s)) to the appropriate Headquarters or Regional Office lock box address:

(1) EPA—Washington Headquarters, P.O. Box 360277M, Pittsburgh, PA 15251;

(2) EPA—Region 1, P.O. Box 360197M, Pittsburgh, PA 15251;

(3) EPA—Region 2, P.O. Box 360188M, Pittsburgh, PA 15251;

(4) EPA—Region 3, P.O. Box 360515M, Pittsburgh, PA 15251;

(5) EPA—Region 4, P.O. Box 100142, Atlanta, GA. 30384;

(6) EPA—Region 5, P.O. Box 70753, Chicago, IL 60673;

(7) EPA—Region 6, P.O. Box 360582M, Pittsburgh, PA 15251;

(8) EPA—Region 7, P.O. Box 360748M, Pittsburgh, PA 15251;

(9) EPA—Region 8, P.O. Box 360859M, Pittsburgh, PA 15251;

(10) EPA—Region 9, P.O. Box 360863M, Pittsburgh, PA 15251;

(11) EPA—Region 10, P.O. Box 360903M, Pittsburgh, PA 15251;

Under the Debt Collection Act of 1982 (Pub. L. 97–365), payment (except for prepayment) shall be due within thirty (30) calendar days after the date of billing. If payment is not received at the end of thirty calendar days, interest and a late payment handling charge will be assessed. In addition, under this Act, a penalty charge will be applied on any principal amount not paid within ninety (90) calendar days after the due date for payment. By the authority of the Debt Collection Act of 1982, delinquent amounts due may be collected through administrative offset or referred to private collection agencies. Information related to delinquent accounts may also be reported to the appropriate credit agencies.

(c) *Assurance of payment.* (1) If an EPA office estimates that the fees for processing a request (or aggregated requests as described in § 2.120(a)(5)(vi) of this section) will exceed $25.00, that office need not search for, duplicate or disclose records in response to the request(s) until the requester assures payment of the total amount of fees estimated to become due under this section. In such cases, the EPA office will promptly inform the requester (by telephone it practicable) of the need to make assurance of payment.

(2) An EPA office may not require a requester to make an advance payment, i.e. payment before work is commenced or continued on a request, unless:

(i) A requester has previously failed to pay a fee charged in a timely fashion (i.e., within 30 days after the date of the billing), or

(ii) The EPA office estimates or determines that the allowable charges that a requester may be required to pay are likely to exceed $250.00. Then the EPA office will notify the requester of the likely cost and obtain satisfactory assurance of full payment where the requester has a history of prompt payment of FOIA fees, or require an advance payment of an amount up to the full estimated charges in the case of requesters with no history of payment. If such advance payment is not received within 30 days after EPA's billing, the request will not be processed and the request will be closed. See also § 2.112(d).

(d) *Reduction or waiver of fee.* (1) The fee chargeable under this section shall be reduced or waived by EPA if the Agency determines that disclosure of the information:

(i) Is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government; and

(ii) Is not primarily in the commercial interest of the requestor.

(2) Both of these requirements must be satisfied before fees properly assessable can be waived or reduced.

(3) The Agency will employ the following four factors in determining whether the first requirement has been met:

(i) The subject of the request: Whether the subject of the requested records concerns ''the operations or activities of the government'';

(ii) The informative value of the information to be disclosed: Whether the disclosure is ''likely to contribute to an understanding of government operations or activities'';

(iii) The contribution to an understanding of the subject by the general public likely to result from disclosure: Whether disclosure of the requested information will contribute to ''public understanding''; and

(iv) The significance of the contribution to public understanding: Whether disclosure is likely to contribute ''significantly'' to public understanding of government operations or activities.

(4) The Agency will employ the following factors in determining whether the second requirement has been met:

(i) The existence and magnitude of a commercial interest: Whether the requester has a commercial interest that would be furthered by the requested disclosure; and, if so

(ii) The primary interest in disclosure: Whether the magnitude of the identified commercial interest of the requester is sufficiently large, in comparison with the public interest in disclosure, that disclosure is ''primarily in the commercial interest of the requester.''

(5) In all cases, the burden shall be on the requester to present information in support of a request for a waiver of fees. A request for reduction or waiver of fees should include:

(i) A clear statement of the requester's interest in the requested documents;

(ii) The use proposed for the documents and whether the requester will derive income or other benefit from such use;

(iii) A statement of how the public will benefit from such use and from the release of the requested documents; and

(iv) If specialized use of the documents or information is contemplated, a statement of the requester's qualifications that are relevant to the specialized use.

(6) A request for reduction or waiver of fees shall be addressed to the appropriate Freedom of Information Officer. The requester shall be informed in writing of the Agency's decision whether to grant or deny the fee waiver or fee reduction request. This decision may be appealed by letter addressed to the EPA Freedom of Information Officer. The General Counsel shall decide such appeals. The General Counsel may redelegate this authority only to the Deputy General Counsel or the Associate General Counsel for Grants, Contracts and General Law.

(e) The Financial Management Office shall maintain a record of all fees charged requesters for searching for, reviewing and reproducing requested records under this section. If after the end of 60 calendar days from the date on which request for payment was made the requester has not submitted payment to the appropriate EPA billing address (as listed in § 2.120(b)), the Financial Management Division shall place the requester's name on a delinquent list which is sent to the EPA Freedom of Information Officer. If a requester whose name appears on the delinquent list makes a request under this part, the EPA Freedom of Information Officer shall inform the requester that EPA will not process the request until the requester submits payment of the overdue fee from the earlier request. Any request made by an individual who specifies an affiliation with or representation of a corporation, association, law firm, or other organization shall be deemed to be a request by the corporation, association, law firm, or other organization. If an organization placed on the delinquent list can show that the person who made the request for which payment was overdue did not make the request on behalf of the organization the organization will be removed from the delinquent list but the name of the individual shall remain on the list. A requester shall not be placed on the delinquent list if a request for a reduction or for a waiver is pending under paragraph (d) of this section.

[53 FR 217, Jan. 5, 1988]

§ 2.121 Exclusions.

(a) Whenever a request is made which involves access to records described in § 2.118(a)(7)(i)(A), and

(1) The investigation or proceeding involves a possible violation of criminal law; and

(2) There is reason to believe that the subject of the investigation or proceeding is not aware of its pendency, and disclosure of the existence of such records could reasonably be expected to interfere with enforcement proceedings, EPA shall, during only such time as the circumstances continue, treat the records as not subject to the requirements of 5 U.S.C. 552 and this subpart.

(b) Whenever informant records maintained by the Agency under an informant's name or personal identifier are requested by a third party according

to the informant's name or personal identifier and the informant's status as an informant has not been officially confirmed, EPA shall treat the records as not subject to the requirements of 5 U.S.C. 552 and this subpart.

(c) No determination relying on this section shall be issued without the concurrence of the General Counsel or his designee. The General Counsel has designated the Contracts and Information Law Branch to act on these requests for concurrence.

(d) An initial determination which only relies on this section will not include notice of appeal rights.

[53 FR 219, Jan. 5, 1988]

Subpart B—Confidentiality of Business Information

§ 2.201 Definitions.

For the purposes of this subpart:

(a) *Person* means an individual, partnership, corporation, association, or other public or private organization or legal entity, including Federal, State or local governmental bodies and agencies and their employees.

(b) *Business* means any person engaged in a business, trade, employment, calling or profession, whether or not all or any part of the net earnings derived from such engagement by such person inure (or may lawfully inure) to the benefit of any private shareholder or individual.

(c) *Business information* (sometimes referred to simply as *information*) means any information which pertains to the interests of any business, which was developed or acquired by that business, and (except where the context otherwise requires) which is possessed by EPA in recorded form.

(d) *Affected business* means, with reference to an item of business information, a business which has asserted (and not waived or withdrawn) a business confidentiality claim covering the information, or a business which could be expected to make such a claim if it were aware that disclosure of the information to the public was proposed.

(e) *Reasons of business confidentiality* include the concept of trade secrecy and other related legal concepts which give (or may give) a business the right to preserve the confidentiality of business information and to limit its use or disclosure by others in order that the business may obtain or retain business advantages it derives from its rights in the information. The definition is meant to encompass any concept which authorizes a Federal agency to withhold business information under 5 U.S.C. 552(b)(4), as well as any concept which requires EPA to withhold information from the public for the benefit of a business under 18 U.S.C. 1905 or any of the various statutes cited in § 2.301 through § 2.309.

(f) [Reserved]

(g) Information which is *available to the public* is information in EPA's possession which EPA will furnish to any member of the public upon request and which EPA may make public, release or otherwise make available to any person whether or not its disclosure has been requested.

(h) *Business confidentiality claim* (or, simply, *claim*) means a claim or allegation that business information is entitled to confidential treatment for reasons of business confidentiality, or a request for a determination that such information is entitled to such treatment.

(i) *Voluntarily submitted information* means business information in EPA's possession—

(1) The submission of which EPA had no statutory or contractual authority to require; and

(2) The submission of which was not prescribed by statute or regulation as a condition of obtaining some benefit (or avoiding some disadvantage) under a regulatory program of general applicability, including such regulatory programs as permit, licensing, registration, or certification programs, but excluding programs concerned solely or primarily with the award or administration by EPA of contracts or grants.

(j) *Recorded* means written or otherwise registered in some form for preserving information, including such forms as drawings, photographs, videotape, sound recordings, punched cards, and computer tape or disk.

(k) [Reserved]

(l) *Administrator, Regional Administrator, General Counsel, Regional Counsel, and Freedom of Information Officer* mean the EPA officers or employees occupying the positions so titled.

(m) *EPA office* means any organizational element of EPA, at any level or location. (The terms *EPA office* and *EPA legal office* are used in this subpart for the sake of brevity and ease of reference. When this subpart requires that an action be taken by an *EPA office* or by an *EPA legal office,* it is the responsibility of the officer or employee in charge of that office to take the action or ensure that it is taken.)

(n) *EPA legal office* means the EPA General Counsel and any EPA office over which the General Counsel exercises supervisory authority, including the various Offices of Regional Counsel. (See paragraph (m) of this section.)

(o) A *working day* is any day on which Federal government offices are open for normal business. Saturdays, Sundays, and official Federal holidays are not working days; all other days are.

§ 2.202 Applicability of subpart; priority where provisions conflict; records containing more than one kind of information.

(a) Sections 2.201 through 2.215 establish basic rules governing business confidentiality claims, the handling by EPA of business information which is or may be entitled to confidential treatment, and determinations by EPA of whether information is entitled to confidential treatment for reasons of business confidentiality.

(b) Various statutes (other than 5 U.S.C. 552) under which EPA operates contain special provisions concerning the entitlement to confidential treatment of information gathered under such statutes. Sections 2.301 through 2.311 prescribe rules for treatment of certain categories of business information obtained under the various statutory provisions. Paragraph (b) of each of those sections should be consulted to determine whether any of those sections applies to the particular information in question.

(c) The basic rules of §§ 2.201 through 2.215 govern except to the extent that they are modified or supplanted by the special rules of §§ 2.301 through 2.311. In the event of a conflict between the provisions of the basic rules and those of a special rule which is applicable to the particular information in question, the provision of the special rule shall govern.

(d) If two or more of the sections containing special rules apply to the particular information in question, and the applicable sections prescribe conflicting special rules for the treatment of the information, the rule which provides greater or wider availability to the public of the information shall govern.

(e) For most purposes, a document or other record may usefully be treated as a single unit of *information*, even though in fact the document or record is comprised of a collection of individual items of information. However, in applying the provisions of this subpart, it will often be necessary to separate the individual items of information into two or more categories, and to afford different treatment to the information in each such category. The need for differentiation of this type may arise, e.g., because a business confidentiality claim covers only a portion of a record, or because only a portion of the record is eligible for confidential treatment. EPA offices taking action under this subpart must be alert to this problem.

(f) In taking actions under this subpart, EPA offices should consider whether it is possible to obtain the affected business's consent to disclosure of useful portions of records while protecting the information which is or may be entitled to confidentiality (e.g., by withholding such portions of a record as would identify a business, or by disclosing data in the form of industry-wide aggregates, multi-year averages or totals, or some similar form).

(g) This subpart does not apply to questions concerning entitlement to confidential treatment or information which concerns an individual solely in his personal, as opposed to business, capacity.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40000, Sept. 8, 1978; 50 FR 51661, Dec. 18, 1985]

§ 2.203 Notice to be included in EPA requests, demands, and forms; method of asserting business confidentiality claim; effect of failure to assert claim at time of submission.

(a) *Notice to be included in certain requests and demands for information, and in certain forms.* Whenever an EPA office makes a written request or demand that a business furnish information which, in the office's opinion, is likely to be regarded by the business as entitled to confidential treatment under this subpart, or whenever an EPA office prescribes a form for use by businesses in furnishing such information, the request, demand, or form shall include or enclose a notice which—

(1) States that the business may, if it desires, assert a business confidentiality claim covering part or all of the information, in the manner described by paragraph (b) of this section, and that information covered by such a claim will be disclosed by EPA only to the extent, and by means of the procedures, set forth in this subpart;

(2) States that if no such claim accompanies the information when it is received by EPA, it may be made available to the public by EPA without further notice to the business; and

(3) Furnishes a citation of the location of this subpart in the Code of Federal Regulations and the FEDERAL REGISTER.

(b) *Method and time of asserting business confidentiality claim.* A business which is submitting information to EPA may assert a business confidentiality claim covering the information by placing on (or attaching to) the information, at the time it is submitted to EPA, a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as *trade secret, proprietary,* or *company confidential.* Allegedly confidential portions of otherwise non-confidential documents should be clearly identified by the business, and may be submitted separately to facilitate identification and handling by EPA. If the business desires confidential treatment only until a certain date or until the occurrence of a certain event, the notice should so state.

(c) *Effect of failure to assert claim at time of submission of information.* If information was submitted by a business to EPA on or after October

1, 1976, in response to an EPA request or demand (or on an EPA-prescribed form) which contained the substance of the notice required by paragraph (a) of this section, and if no business confidentiality claim accompanied the information when it was received by EPA, the inquiry to the business normally required by § 2.204(c)(2) need not be made. If a claim covering the information is received after the information itself is received, EPA will make such efforts as are administratively practicable to associate the late claim with copies of the previously-submitted information in EPA files (see § 2.204(c)(1)). However, EPA cannot assure that such efforts will be effective, in light of the possibility of prior disclosure or widespread prior dissemination of the information.

§ 2.204 Initial action by EPA office.

(a) *Situations requiring action.* This section prescribes procedures to be used by EPA offices in making initial determinations of whether business information is entitled to confidential treatment for reasons of business confidentiality. Action shall be taken under this section whenever an EPA office:

(1) Learns that it is responsible for responding to a request under 5 U.S.C. 552 for the release of business information; in such a case, the office shall issue an initial determination within the period specified in § 2.112;

(2) Desires to determine whether business information in its possession is entitled to confidential treatment, even though no request for release of the information has been received; or

(3) Determines that it is likely that EPA eventually will be requested to disclose the information at some future date and thus will have to determine whether the information is entitled to confidential treatment. In such a case this section's procedures should be initiated at the earliest practicable time, in order to increase the time available for preparation and submission of comments and for issuance of determinations, and to make easier the task of meeting response deadlines if a request for release of the information is later received under 5 U.S.C. 552.

(b) *Previous confidentiality determination.* The EPA office shall first ascertain whether there has been a previous determination, issued by a Federal court or by an EPA legal office acting under this subpart, holding that the information in question is entitled to confidential treatment for reasons of business confidentiality.

(1) If such a determination holds that the information is entitled to confidential treatment, the EPA Office shall furnish any person whose request for the information is pending under 5 U.S.C. 552 an initial determination (see § 2.111 and § 2.113) that the information has previously been determined to be entitled to confidential treatment, and that the request is therefore denied. The office shall furnish such person the appropriate case citation or EPA determination. If the EPA office believes that a previous determination which was issued by an EPA legal office may be improper or no longer valid, the office shall so inform the EPA legal office, which shall consider taking action under § 2.205(h).

(2) With respect to all information not known to be covered by such a previous determination, the EPA office shall take action under paragraph (c) of this section.

(c) *Determining existence of business confidentiality claims.* (1) Whenever action under this paragraph is required by paragraph (b)(2) of this section, the EPA office shall examine the information and the office's records to determine which businesses, if any, are affected businesses (see § 2.201(d)), and to determine which businesses if any, have asserted business confidentiality claims which remain applicable to the information. If any business is found to have asserted an applicable claim, the office shall take action under paragraph (d) of this section with respect to each such claim.

(2)(i) If the examination conducted under paragraph (c)(1) of this section discloses the existence of any business which, although it has not asserted a claim, might be expected to assert a claim if it knew EPA proposed to disclose the information, the EPA office shall contact a responsible official of each such business to learn whether the business asserts a claim covering the information. However, no such inquiry need be made to any business—

(A) Which failed to assert a claim covering the information when responding to an EPA request or demand, or supplying information on an EPA form, which contained the substance of the statements prescribed by § 2.203(a);

(B) Which otherwise failed to assert a claim covering the information after being informed by EPA that such failure could result in disclosure of the information to the public; or

(C) Which has otherwise waived or withdrawn a claim covering the information.

(ii) If a request for release of the information under 5 U.S.C. 552 is pending at the time inquiry is made under this paragraph (c)(2), the inquiry shall be made by telephone or equally prompt means, and the responsible official contacted shall be informed that any claim the business wishes to assert must be brought to the EPA office's attention no later than the close of business on the third working day after such inquiry.

(iii) A record shall be kept of the results of any inquiry under this paragraph (c)(2). If any business makes a claim covering the information, the EPA office shall take further action under paragraph (d) of this section.

(3) If, after the examination under paragraph (c)(1) of this section, and after any inquiry made under paragraph (c)(2) of this section, the EPA office knows of no claim covering the information and the time for response to any inquiry has passed, the information shall be treated for purposes of this subpart as not entitled to confidential treatment.

(d) *Preliminary determination.* Whenever action under this paragraph is required by paragraph (c)(1) or (2) of this section on any business's claim, the EPA Office shall make a determination with respect to each such claim. Each determination shall be made after consideration of the provisions of § 2.203, the applicable substantive criteria in § 2.208 or elsewhere in this subpart, and any previously-issued determinations under this subpart which are applicable.

(1) If, in connection with any business's claim, the office determines that the information may be entitled to confidential treatment, the office shall—

(i) Furnish the notice of opportunity to submit comments prescribed by paragraph (e) of this section to each business which is known to have asserted an applicable claim and which has not previously been furnished such notice with regard to the information in question;

(ii) Furnish, to any person whose request for release of the information is pending under 5 U.S.C. 552, a determination (in accordance with § 2.113) that the information may be entitled to confidential treatment under this subpart and 5 U.S.C. 552(b)(4), that further inquiry by EPA pursuant to this subpart is required before a final determination on the request can be issued, that the person's request is therefore initially denied, and that after further inquiry a final determination will be issued by an EPA legal office; and

(iii) Refer the matter to the appropriate EPA legal office, furnishing the information required by paragraph (f) of this section after the time has elapsed for receipt of comments from the affected business.

(2) If, in connection with all applicable claims, the office determines that the information clearly is not entitled to confidential treatment, the office shall take the actions required by § 2.205(f). However, if a business has previously been furnished notice under § 2.205(f) with respect to the same information, no further notice need be furnished to that business. A copy of each notice furnished to a business under this paragraph (d)(2) and § 2.205(f) shall be forwarded promptly to the appropriate EPA legal office.

(e) *Notice to affected businesses; opportunity to comment.* (1) Whenever required by paragraph (d)(1) of this section, the EPA office shall promptly furnish each business a written notice stating that EPA is determining under this subpart whether the information is entitled to confidential treatment, and affording the business an opportunity to comment. The notice shall be furnished by certified mail (return receipt requested), by personal delivery, or by other means which allows verification of the fact and date of receipt. The notice shall state the address of the office to which the business's comments shall be addressed (the EPA office furnishing the notice, unless the General Counsel has directed otherwise), the time allowed for comments, and the method for requesting a time extension under § 2.205(b)(2). The notice shall further state that EPA will construe a business's failure to furnish timely comments as a waiver of the business's claim.

(2) If action under this section is occasioned by a request for the information under 5 U.S.C. 552, the period for comments shall be 15 working days after the date of the business's receipt of the written notice. In other cases, the EPA office shall establish a reasonable period for comments (not less than 15 working days after the business's receipt of the written notice). The time period for comments shall be considered met if the business's comments are postmarked or hand delivered to the office designated in the notice by the date specified. In all cases, the notice shall call the business's attention to the provisions of § 2.205(b).

(3) At or about the time the written notice is furnished, the EPA office shall orally inform a responsible representative of the business (by telephone or otherwise) that the business should expect to receive the written notice, and shall request the business to contact the EPA office if the written notice has not been received within a few days, so that EPA may furnish a duplicate notice.

(4) The written notice required by paragraph (e)(1) of this section shall invite the business's comments on the following points (subject to paragraph (e)(5) of this section):

(i) The portions of the information which are alleged to be entitled to confidential treatment;

(ii) The period of time for which confidential treatment is desired by the business (e.g., until a certain date, until the occurrence of a specified event, or permanently);

(iii) The purpose for which the information was furnished to EPA and the approximate date of submission, if known;

(iv) Whether a business confidentiality claim accompanied the information when it was received by EPA;

(v) Measures taken by the business to guard against undesired disclosure of the information to others;

(vi) The extent to which the information has been disclosed to others, and the precautions taken in connection therewith;

(vii) Pertinent confidentiality determinations, if any, by EPA or other Federal agencies, and a copy of any such determination, or reference to it, if available;

(viii) Whether the business asserts that disclosure of the information would be likely to result in substantial harmful effects on the business' competitive position, and if so, what those harmful effects would be, why they should be viewed as substantial, and an explanation of the causal relationship between disclosure and such harmful effects; and

(ix) Whether the business asserts that the information is voluntarily submitted information as defined in § 2.201(i), and if so, whether and why disclosure of the information would tend to lessen the availability to EPA of similar information in the future.

(5) To the extent that the EPA office already possesses the relevant facts, the notice need not solicit responses to the matters addressed in paragraphs (e)(4) (i) through (ix) of this section, although the notice shall request confirmation of EPA's understanding of such facts where appropriate.

(6) The notice shall refer to § 2.205(c) and shall include the statement prescribed by § 2.203(a).

(f) *Materials to be furnished to EPA legal office.* When a matter is referred to an EPA legal office under paragraph (d)(1) of this section, the EPA office taking action under this section shall forward promptly to the EPA legal office the following items:

(1) A copy of the information in question, or (where the quantity or form of the information makes forwarding a copy of the information impractical) representative samples, a description of the information, or both;

(2) A description of the circumstances and date of EPA's acquisition of the information;

(3) The name, address, and telephone number of the EPA employee(s) most familiar with the information;

(4) The name, address and telephone number of each business which asserts an applicable business confidentiality claim;

(5) A copy of each applicable claim (or the record of the assertion of the claim), and a description of when and how each claim was asserted;

(6) Comments concerning each business's compliance or noncompliance with applicable requirements of § 2.203;

(7) A copy of any request for release of the information pending under 5 U.S.C. 552;

(8) A copy of the business's comments on whether the information is entitled to confidential treatment;

(9) The office's comments concerning the appropriate substantive criteria under this subpart, and information the office possesses concerning the information's entitlement to confidential treatment; and

(10) Copies of other correspondence or memoranda which pertain to the matter.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40000, Sept. 8, 1978; 50 FR 51661, Dec. 18, 1985]

§ 2.205 Final confidentiality determination by EPA legal office.

(a) *Role of EPA legal office.* (1) The appropriate EPA legal office (see paragraph (i) of this section) is responsible for making the final administrative determination of whether or not business information covered by a business confidentiality claim is entitled to confidential treatment under this subpart.

(2) When a request for release of the information under 5 U.S.C. 552 is pending, the EPA legal office's determination shall serve as the final determination on appeal from an initial denial of the request.

(i) If the initial denial was issued under § 2.204(b)(1), a final determination by the EPA legal office is necessary only if the requestor has actually filed an appeal.

(ii) If the initial denial was issued under § 2.204(d)(1), however, the EPA legal office shall issue a final determination in every case, unless the request has been withdrawn. (Initial denials under § 2.204(d)(1) are of a procedural nature, to allow further inquiry into the merits of the matter, and a requestor is entitled to a decision on the merits.) If an appeal from such a denial has not been received by the EPA Freedom of Information Officer on the tenth working day after issuance of the denial, the matter shall be handled as if an appeal had been received on that day, for purposes of establishing a schedule for issuance of an appeal decision under § 2.117 of this part.

(b) *Comment period; extensions; untimeliness as waiver of claim.* (1) Each business which has been furnished the notice and opportunity to comment prescribed by § 2.204(d)(1) and § 2.204(e) shall furnish its comments to the office specified in the notice in time to be postmarked or hand delivered to that office not later than the date specified in the notice (or the date established in lieu thereof under this section).

(2) The period for submission of comments may be extended if, before the comments are due, a request for an extension of the comment period is made by the business and approved by the EPA legal office. Except in extraordinary circumstances, the EPA legal office will not approve

such an extension without the consent of any person whose request for release of the information under 5 U.S.C. 552 is pending.

(3) The period for submission of comments by a business may be shortened in the manner described in paragraph (g) of this section.

(4) If a business's comments have not been received by the specified EPA office by the date they are due (including any approved extension), that office shall promptly inquire whether the business has complied with paragraph (b)(1) of this section. If the business has complied with paragraph (b)(1) but the comments have been lost in transmission, duplicate comments shall be requested.

(c) *Confidential treatment of comments from business.* If information submitted to EPA by a business as part of its comments under this section pertains to the business's claim, is not otherwise possessed by EPA, and is marked when received in accordance with § 2.203(b), it will be regarded by EPA as entitled to confidential treatment and will not be disclosed by EPA without the business's consent, unless its disclosure is duly ordered by a Federal court, notwithstanding other provisions of this subpart to the contrary.

(d) *Types of final determinations; matters to be considered.* (1) If the EPA legal office finds that a business has failed to furnish comments under paragraph (b) of this section by the specified due date, it shall determine that the business has waived its claim. If, after application of the preceding sentence, no claim applies to the information, the office shall determine that the information is not entitled to confidential treatment under this subpart and, subject to § 2.210, is available to the public.

(2) In all other cases, the EPA legal office shall consider each business's claim and comments, the various provisions of this subpart, any previously-issued determinations under this subpart which are pertinent, the materials furnished it under § 2.204(f), and such other materials as it finds appropriate. With respect to each claim, the office shall determine whether or not the information is entitled to confidential treatment for the benefit of the business that asserted the claim, and the period of any such entitlement (e.g., until a certain date, until the occurrence of a specified event, or permanently), and shall take further action under paragraph (e) or (f) of this section, as appropriate.

(3) Whenever the claims of two or more businesses apply to the same information, the EPA legal office shall take action appropriate under the particular circumstances to protect the interests of all persons concerned (including any person whose request for the information is pending under 5 U.S.C. 552).

(e) *Determination that information is entitled to confidential treatment.* If the EPA legal office determines that the information is entitled to confidential treatment for the full period requested by the business which made the claim, EPA shall maintain the information in confidence for such period, subject to paragraph (h) of this section, § 2.209, and the other provisions of this subpart which authorize disclosure in specified circumstances, and the office shall so inform the business. If any person's request for the release of the information is then pending under 5 U.S.C. 552, the EPA legal office shall issue a final determination denying that request.

(f) *Determination that information is not entitled to confidential treatment; notice; waiting period; release of information.* (1) Notice of denial (or partial denial) of a business confidentiality claim, in the form prescribed by paragraph (f)(2) of this section, shall be furnished—

(i) By the EPA office taking action under § 2.204, to each business on behalf of which a claim has been made, whenever § 2.204(d)(2) requires such notice; and

(ii) By the EPA legal office taking action under this section, to each business which has asserted a claim applicable to the information and which has furnished timely comments under paragraph (b) of this section, whenever the EPA legal office determines that the information is not entitled to confidential treatment under this subpart for the benefit of the business, or determines that the period of any entitlement to confidential treatment is shorter than that requested by the business.

(2) The notice prescribed by paragraph (f)(1) of this section shall be written, and shall be furnished by certified mail (return receipt requested), by personal delivery, or by other means which allows verification of the fact of receipt and the date of receipt. The notice shall state the basis for the determination, that it constitutes final agency action concerning the business confidentiality claim, and that such final agency action may be subject to judicial review under Chapter 7 of Title 5, United States Code. With respect to EPA's implementation of the determination, the notice shall state that (subject to § 2.210) EPA will make the information available to the public on the tenth working day after the date of the business's receipt of the written notice (or on such later date as is established in lieu thereof by the EPA legal office under paragraph (f)(3) of this section), unless the EPA legal office has first been notified of the business's commencement of an action in a Federal court to obtain judicial review of the determination, and to obtain preliminary injunctive relief against disclosure. The notice shall further state that if such an action is timely commenced,

EPA may nonetheless make the information available to the public (in the absence of an order by the court to the contrary), once the court has denied a motion for a preliminary injunction in the action or has otherwise upheld the EPA determination, or whenever it appears to the EPA legal office, after reasonable notice to the business, that the business is not taking appropriate measures to obtain a speedy resolution of the action. If the information has been found to be temporarily entitled to confidential treatment, the notice shall further state that the information will not be disclosed prior to the end of the period of such temporary entitlement to confidential treatment.

(3) The period established in a notice under paragraph (f)(2) of this section for commencement of an action to obtain judicial review may be extended if, before the expiration of such period, a request for an extension is made by the business and approved by the EPA legal office. Except in extraordinary circumstances, the EPA legal office will not approve such an extension without the consent of any person whose request for release of the information under 5 U.S.C. 552 is pending.

(4) After the expiration of any period of temporary entitlement to confidential treatment, a determination under this paragraph (f) shall be implemented by the EPA legal office by making the information available to the public (in the absence of a court order prohibiting disclosure) whenever—

(i) The period provided for commencement by a business of an action to obtain judicial review of the determination has expired without notice to the EPA legal office of commencement of such an action;

(ii) The court, in a timely-commenced action, has denied the business' motion for a preliminary injunction, or has otherwise upheld the EPA determination; or

(iii) The EPA legal office, after reasonable notice has been provided to the business, finds that the business is not taking appropriate measures to obtain a speedy resolution of the timely-commenced action.

(5) Any person whose request for release of the information under 5 U.S.C. 552 is pending at the time notice is given under paragraph (f)(2) of this section shall be furnished a determination under 5 U.S.C. 552 stating the circumstances under which the information will be released.

(g) *Emergency situations.* If the General Counsel finds that disclosure of information covered by a claim would be helpful in alleviating a situation posing an imminent and substantial danger to public health or safety, he may prescribe and make known to interested persons such shorter comment period (paragraph (b) of this section), post-determination waiting period (paragraph (f) of this section), or both, as he finds necessary under the circumstances.

(h) *Modification of prior determinations.* A determination that information is entitled to confidential treatment for the benefit of a business, made under this subpart by an EPA legal office, shall continue in effect in accordance with its terms until an EPA legal office taking action under this section, or under § 2.206 or § 2.207, issues a final determination stating that the earlier determination no longer describes correctly the information's entitlement to confidential treatment because of change in the applicable law, newly-discovered or changed facts, or because the earlier determination was clearly erroneous. If an EPA legal office tentatively concludes that such an earlier determination is of questionable validity, it shall so inform the business, and shall afford the business an opportunity to furnish comments on pertinent issues in the manner described by § 2.204(e) and paragraph (b) of this section. If, after consideration of any timely comments submitted by the business, the EPA legal office makes a revised final determination that the information is not entitled to confidential treatment, or that the period of entitlement to such treatment will end sooner than it would have ended under the earlier determination, the office will follow the procedure described in paragraph (f) of this section. Determinations under this section may be made only by, or with the concurrence of, the General Counsel.

(i) *Delegation and redelegation of authority.* Unless the General Counsel otherwise directs, or this subpart otherwise specifically provides, determinations and actions required by this subpart to be made or taken by an EPA legal office shall be made or taken by the appropriate Regional counsel whenever the EPA office taking action under § 2.204 or § 2.206(b) is under the supervision of a Regional Administrator, and by the General Counsel in all other cases. The General Counsel may redelegate any or all of his authority under this subpart to any attorney employed by EPA on a full-time basis under the General Counsel's supervision. A Regional Counsel may redelegate any or all of his authority under this subpart to any attorney employed by EPA on a full-time basis under the Regional counsel's supervision.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51661, Dec. 18, 1985]

§ 2.206 Advance confidentiality determinations.

(a) An advance determination under this section may be issued by an EPA legal office if—

(1) EPA has requested or demanded that a business furnish business information to EPA;

(2) The business asserts that the information, if submitted, would constitute voluntarily submitted information under § 2.201(i);

(3) The business will voluntarily submit the information for use by EPA only if EPA first determines that the information is entitled to confidential treatment under this subpart; and

(4) The EPA office which desires submission of the information has requested that the EPA legal office issue a determination under this section.

(b) The EPA office requesting an advance determination under this section shall—

(1) Arrange to have the business furnish directly to the EPA legal office a copy of the information (or, where feasible, a description of the nature of the information sufficient to allow a determination to be made), as well as the business's comments concerning the matters addressed in § 2.204(e)(4), excluding, however, matters addressed in § 2.204 (e)(4)(iii) and (e)(4)(iv); and

(2) Furnish to the EPA legal office the materials referred to in § 2.204(f) (3), (7), (8), and (9).

(c) In making a determination under this section, the EPA legal office shall first determine whether or not the information would constitute voluntarily submitted information under § 2.201(i). If the information would constitute voluntarily submitted information, the legal office shall further determine whether the information is entitled to confidential treatment.

(d) If the EPA legal office determines that the information would not constitute voluntarily submitted information, or determines that it would constitute voluntarily submitted information but would not be entitled to confidential treatment, it shall so inform the business and the EPA office which requested the determination, stating the basis of the determination, and shall return to the business all copies of the information which it may have received from the business (except that if a request under 5 U.S.C. 552 for release of the information is received while the EPA legal office is in possession of the information, the legal office shall retain a copy of the information, but shall not disclose it unless ordered by a Federal court to do so). The legal office shall not disclose the information to any other EPA office or employee and shall not use the information for any purpose except the determination under this section, unless otherwise directed by a Federal court.

(e) If the EPA legal office determines that the information would constitute voluntarily submitted information and that it is entitled to confidential treatment, it shall so inform the EPA office which requested the determination and the business which submitted it, and shall forward the information to the EPA office which requested the determination.

§ 2.207 Class determinations.

(a) The General Counsel may make and issue a class determination under this section if he finds that—

(1) EPA possesses, or is obtaining, related items of business information;

(2) One or more characteristics common to all such items of information will necessarily result in identical treatment for each such item under one or more of the provisions in this subpart, and that it is therefore proper to treat all such items as a class for one or more purposes under this subpart; and

(3) A class determination would serve a useful purpose.

(b) A class determination shall clearly identify the class of information to which it pertains.

(c) A class determination may state that all of the information in the class—

(1) Is, or is not, voluntarily submitted information under § 2.201(i);

(2) Is, or is not, governed by a particular section of this subpart, or by a particular set of substantive criteria under this subpart;

(3) Fails to satisfy one or more of the applicable substantive criteria, and is therefore ineligible for confidential treatment;

(4) Satisfies one or more of the applicable substantive criteria; or

(5) Satisfies one or more of the applicable substantive criteria during a certain period, but will be ineligible for confidential treatment thereafter.

(d) The purpose of a class determination is simply to make known the Agency's position regarding the manner in which information within the class will be treated under one or more of the provisions of this subpart. Accordingly, the notice of opportunity to submit comments referred to in § 2.204(d)(1)(ii) and § 2.205(b), and the list of materials required to be furnished to the EPA legal office under § 2.204(d)(1)(iii), may be modified to reflect the fact that the class determination has made unnecessary the submission of materials pertinent to one or more issues. Moreover, in appropriate cases, action based on the class determination may be taken under § 2.204(b)(1), § 2.204(d), § 2.205(d), or § 2.206. However, the existence of a class determination shall not, of itself, affect any right a business may have to receive any notice under § 2.204(d)(2) or § 2.205(f).

§ 2.208 Substantive criteria for use in confidentiality determinations.

Determinations issued under §§ 2.204 through 2.207 shall hold that business information is entitled to confidential treatment for the benefit of a particular business if—

(a) The business has asserted a business confidentiality claim which has not expired by its terms, nor been waived nor withdrawn;

(b) The business has satisfactorily shown that it has taken reasonable measures to protect the confidentiality of the information, and that it intends to continue to take such measures;

(c) The information is not, and has not been, reasonably obtainable without the business's consent by other persons (other than governmental bodies) by use of legitimate means (other than discovery based on a showing of special need in a judicial or quasi-judicial proceeding);

(d) No statute specifically requires disclosure of the information; and

(e) Either—

(1) The business has satisfactorily shown that disclosure of the information is likely to cause substantial harm to the business's competitive position; or

(2) The information is voluntarily submitted information (see § 2.201(i)), and its disclosure would be likely to impair the Government's ability to obtain necessary information in the future.

§ 2.209 Disclosure in special circumstances.

(a) *General.* Information which, under this subpart, is not available to the public may nonetheless be disclosed to the persons, and in the circumstances, described by paragraphs (b) through (g) of this section. (This section shall not be construed to restrict the disclosure of information which has been determined to be available to the public. However, business information for which a claim of confidentiality has been asserted shall be treated as being entitled to confidential treatment until there has been a determination in accordance with the procedures of this subpart that the information is not entitled to confidential treatment.)

(b) *Disclosure to Congress or the Comptroller General.* (1) Upon receipt of a written request by the Speaker of the House, President of the Senate, chairman of a committee or subcommittee, or the Comptroller General, as appropriate, EPA will disclose business information to either House of Congress, to a committee or subcommittee of Congress, or to the Comptroller General, unless a statute forbids such disclosure.

(2) If the request is for business information claimed as confidential or determined to be confidential, the EPA office processing the request shall provide notice to each affected business of the type of information disclosed and to whom it is disclosed. Notice shall be given at least ten days prior to disclosure, except where it is not possible to provide notice ten days in advance of any date established by the requesting body for responding to the request. Where ten days advance notice cannot be given, as much advance notice as possible shall be provided. Where notice cannot be given before the date established by the requesting body for responding to the request, notice shall be given as promptly after disclosure as possible. Such notice may be given by notice published in the FEDERAL REGISTER or by letter sent by certified mail, return receipt requested, or telegram. However, if the requesting body asks in writing that no notice under this subsection be given, EPA will give no notice.

(3) At the time EPA discloses the business information, EPA will inform the requesting body of any unresolved business confidentiality claim known to cover the information and of any determination under this subpart that the information is entitled to confidential treatment.

(c) *Disclosure to other Federal agencies.* EPA may disclose business information to another Federal agency if—

(1) EPA receives a written request for disclosures of the information from a duly authorized officer or employee of the other agency or on the initiative of EPA when such disclosure is necessary to enable the other agency to carry out a function on behalf of EPA;

(2) The request, if any, sets forth the official purpose for which the information is needed;

(3) When the information has been claimed as confidential or has been determined to be confidential, the responsible EPA office provides notice to each affected business of the type of information to be disclosed and to whom it is to be disclosed. At the discretion of the office, such notice may be given by notice published in the FEDERAL REGISTER at least 10 days prior to disclosure, or by letter sent by certified mail return receipt requested or telegram either of which must be received by the affected business at least 10 days prior to disclosure. However, no notice shall be required when EPA furnishes business information to another Federal agency to perform a function on behalf of EPA, including but not limited to—

(i) Disclosure to the Department of Justice for purposes of investigation or prosecution of civil or criminal violations of Federal law related to EPA activities;

(ii) Disclosure to the Department of Justice for purposes of representing EPA in any matter; or

(iii) Disclosure to any Federal agency for purposes of performing an EPA statutory function under an interagency agreement.

(4) EPA notifies the other agency of any unresolved business confidentiality claim covering the information and of any determination under this

subpart that the information is entitled to confidential treatment, and that further disclosure of the information may be a violation of 18 U.S.C. 1905; and

(5) The other agency agrees in writing not to disclose further any information designated as confidential unless—

(i) The other agency has statutory authority both to compel production of the information and to make the proposed disclosure, and the other agency has, prior to disclosure of the information to anyone other than its officers and employees, furnished to each affected business at least the same notice to which the affected business would be entitled under this subpart;

(ii) The other agency has obtained the consent of each affected business to the proposed disclosure; or

(iii) The other agency has obtained a written statement from the EPA General Counsel or an EPA Regional Counsel that disclosure of the information would be proper under this subpart.

(d) *Court-ordered disclosure.* EPA may disclose any business information in any manner and to the extent ordered by a Federal court. Where possible, and when not in violation of a specific directive from the court, the EPA office disclosing information claimed as confidential or determined to be confidential shall provide as much advance notice as possible to each affected business of the type of information to be disclosed and to whom it is to be disclosed, unless the affected business has actual notice of the court order. At the discretion of the office, subject to any restrictions by the court, such notice may be given by notice in the FEDERAL REGISTER, letter sent by certified mail return receipt requested, or telegram.

(e) *Disclosure within EPA.* An EPA office, officer, or employee may disclose any business information to another EPA office, officer, or employee with an official need for the information.

(f) *Disclosure with consent of business.* EPA may disclose any business information to any person if EPA has obtained the prior consent of each affected business to such disclosure.

(g) *Record of disclosures to be maintained.* Each EPA office which discloses information to Congress, a committee or subcommittee of Congress, the Comptroller General, or another Federal agency under the authority of paragraph (b) or (c) of this section, shall maintain a record of the fact of such disclosure for a period of not less than 36 months after such disclosure. Such a record, which may be in the form of a log, shall show the name of the affected businesses, the date of disclosure, the person or body to whom disclosure was made, and a description of the information disclosed.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40000, Sept. 8, 1978; 50 FR 51661, Dec. 18, 1985]

§ 2.210 Nondisclosure for reasons other than business confidentiality or where disclosure is prohibited by other statute.

(a) Information which is not entitled to confidential treatment under this subpart shall be made available to the public (using the procedures set forth in §§ 2.204 and 2.205) if its release is requested under 5 U.S.C. 552, unless EPA determines (under subpart A of this part) that, for reasons other than reasons of business confidentiality, the information is exempt from mandatory disclosure and cannot or should not be made available to the public. Any such determination under subpart A shall be coordinated with actions taken under this subpart for the purpose of avoiding delay in responding to requests under 5 U.S.C. 552.

(b) Notwithstanding any other provision of this subpart, if any statute not cited in this subpart appears to require EPA to give confidential treatment to any business information for reasons of business confidentiality, the matter shall be referred promptly to an EPA legal office for resolution. Pending resolution, such information shall be treated as if it were entitled to confidential treatment.

§ 2.211 Safeguarding of business information; penalty for wrongful disclosure.

(a) No EPA officer or employee may disclose, or use for his or her private gain or advantage, any business information which came into his or her possession, or to which he or she gained access, by virtue of his or her official position or employment, except as authorized by this subpart.

(b) Each EPA officer or employee who has custody or possession of business information shall take appropriate measures to properly safeguard such information and to protect against its improper disclosure.

(c) Violation of paragraph (a) or (b) of this section shall constitute grounds for dismissal, suspension, fine, or other adverse personnel action. Willful violation of paragraph (a) of this section may result in criminal prosecution under 18 U.S.C. 1905 or other applicable statute.

(d) Each contractor or subcontractor with the United States Government, and each employee of such contractor or subcontractor, who is furnished business information by EPA under §§ 2.301(h), § 2.302(h), 2.304(h), 2.305(h), 2.306(j), 2.307(h), 2.308(i), or 2.310(h) shall use or disclose that information only as permitted by the contract or subcontract under which the information was furnished. Contractors or subcontractors shall take steps to properly safeguard business information including following any security procedures for handling and safeguarding business information

which are contained in any manuals, procedures, regulations, or guidelines provided by EPA. Any violation of this paragraph shall constitute grounds for suspension or debarment of the contractor or subcontractor in question. A willful violation of this paragraph may result in criminal prosecution.

[41 FR 36902, Sept. 1, 1976, as amended at 50 FR 51662, Dec. 18, 1985; 58 FR 461, Jan. 5, 1993]

§ 2.212 Establishment of control offices for categories of business information.

(a) The Administrator, by order, may establish one or more mutually exclusive categories of business information, and may designate for each such category an EPA office (hereinafter referred to as a *control office*) which shall have responsibility for taking actions (other than actions required to be taken by an EPA legal office) with respect to all information within such category.

(b) If a control office has been assigned responsibility for a category of business information, no other EPA office, officer, or employee may make available to the public (or otherwise disclose to persons other than EPA officers and employees) any information in that category without first obtaining the concurrence of the control office. Requests under 5 U.S.C. 552 for release of such information shall be referred to the control office.

(c) A control office shall take the actions and make the determinations required by § 2.204 with respect to all information in any category for which the control office has been assigned responsibility.

(d) A control office shall maintain a record of the following, with respect to items of business information in categories for which it has been assigned responsibility:

(1) Business confidentiality claims;

(2) Comments submitted in support of claims;

(3) Waivers and withdrawals of claims;

(4) Actions and determinations by EPA under this subpart;

(5) Actions by Federal courts; and

(6) Related information concerning business confidentiality.

§ 2.213 Designation by business of addressee for notices and inquiries.

(a) A business which wishes to designate a person or office as the proper addressee of communications from EPA to the business under this subpart may do so by furnishing in writing to the Freedom of Information Officer (A–101), Environmental Protection Agency, 401 M St. SW., Washington, DC 20460, the following information: The name and address of the business making the designation; the name, address, and telephone number of the designated person or office; and a request that EPA inquiries and communications (oral and written) under this subpart, including inquiries and notices which require reply within deadlines if the business is to avoid waiver of its rights under this subpart, be furnished to the designee pursuant to this section. Only one person or office may serve at any one time as a business's designee under this subpart.

(b) If a business has named a designee under this section, the following EPA inquiries and notices to the business shall be addressed to the designee:

(1) Inquiries concerning a business's desire to assert a business confidentiality claim, under § 2.204(c)(2)(i)(A);

(2) Notices affording opportunity to substantiate confidentiality claims, under § 2.204(d)(1) and § 2.204(e);

(3) Inquires concerning comments, under § 2.205(b)(4);

(4) Notices of denial of confidential treatment and proposed disclosure of information, under § 2.205(f);

(5) Notices concerning shortened comment and/or waiting periods under § 2.205(g);

(6) Notices concerning modifications or overrulings of prior determinations, under § 2.205(h);

(7) Notices to affected businesses under §§ 2.301(g) and 2.301(h) and analogous provisions in §§ 2.302, 2.303, 2.304, 2.305, 2.306, 2.307, and 2.308; and

(8) Notices to affected businesses under § 2.209.

(c) The Freedom of Information Officer shall, as quickly as possible, notify all EPA offices that may possess information submitted by the business to EPA, the Regional Freedom of Information Offices, the Office of General Counsel, and the offices of Regional Counsel of any designation received under this section. Businesses making designations under this section should bear in mind that several working days may be required for dissemination of this information within EPA and that some EPA offices may not receive notice of such designations.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40001, Sept. 8, 1978]

§ 2.214 Defense of Freedom of Information Act suits; participation by affected business.

(a) In making final confidentiality determinations under this subpart, the EPA legal office relies to a large extent upon the information furnished by the affected business to substantiate its claim of confidentiality. The EPA legal office may be unable to verify the accuracy of much of the information submitted by the affected business.

(b) If the EPA legal office makes a final confidentiality determination under this subpart that

certain business information is entitled to confidential treatment, and EPA is sued by a requester under the Freedom of Information Act for disclosure of that information, EPA will:

(1) Notify each affected business of the suit within 10 days after service of the complaint upon EPA;

(2) Where necessary to preparation of EPA's defense, call upon each affected business to furnish assistance; and

(3) Not oppose a motion by any affected business to intervene as a party to the suit under rule 24(b) of the Federal Rules of Civil Procedure.

(c) EPA will defend its final confidentiality determination, but EPA expects the affected business to cooperate to the fullest extent possible in this defense.

[43 FR 40001, Sept. 8, 1978]

§ 2.215 Confidentiality agreements.

(a) No EPA officer, employee, contractor, or subcontractor shall enter into any agreement with any affected business to keep business information confidential unless such agreement is consistent with this subpart. No EPA officer, employee, contractor, or subcontractor shall promise any affected business that business information will be kept confidential unless the promise is consistent with this subpart.

(b) If an EPA office has requested information from a State, local, or Federal agency and the agency refuses to furnish the information to EPA because the information is or may constitute confidential business information, the EPA office may enter into an agreement with the agency to keep the information confidential, notwithstanding the provisions of this subpart. However, no such agreement shall be made unless the General Counsel determines that the agreement is necessary and proper.

(c) To determine that an agreement proposed under paragraph (b) of this section is necessary, the General Counsel must find:

(1) The EPA office requesting the information needs the information to perform its functions;

(2) The agency will not furnish the information to EPA without an agreement by EPA to keep the information confidential; and

(3) Either:

(i) EPA has no statutory power to compel submission of the information directly from the affected business, or

(ii) While EPA has statutory power to compel submission of the information directly from the affected business, compelling submission of the information directly from the business would—

(A) Require time in excess of that available to the EPA office to perform its necessary work with the information,

(B) Duplicate information already collected by the other agency and overly burden the affected business, or

(C) Overly burden the resources of EPA.

(d) To determine that an agreement proposed under paragraph (b) of this section is proper, the General Counsel must find that the agreement states—

(1) The purpose for which the information is required by EPA;

(2) The conditions under which the agency will furnish the information to EPA;

(3) The information subject to the agreement;

(4) That the agreement does not cover information acquired by EPA from another source;

(5) The manner in which EPA will treat the information; and

(6) That EPA will treat the information in accordance with the agreement subject to an order of a Federal court to disclose the information.

(e) EPA will treat any information acquired pursuant to an agreement under paragraph (b) of this section in accordance with the procedures of this subpart except where the agreement specifies otherwise.

[43 FR 40001, Sept. 8, 1978]

§§ 2.216–2.300 [Reserved]

§ 2.301 Special rules governing certain information obtained under the Clean Air Act.

(a) *Definitions.* For the purpose of this section:

(1) *Act* means the Clean Air Act, as amended, 42 U.S.C. 7401 *et seq.*

(2)(i) *Emission data* means, with reference to any source of emission of any substance into the air—

(A) Information necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of any emission which has been emitted by the source (or of any pollutant resulting from any emission by the source), or any combination of the foregoing;

(B) Information necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of the emissions which, under an applicable standard or limitation, the source was authorized to emit (including, to the extent necessary for such purposes, a description of the manner or rate of operation of the source); and

(C) A general description of the location and/or nature of the source to the extent necessary to identify the source and to distinguish it from other sources (including, to the extent necessary for such purposes, a description of the device, installation, or operation constituting the source).

(ii) Notwithstanding paragraph (a)(2)(i) of this section, the following information shall be considered to be *emission data* only to the extent necessary to allow EPA to disclose publicly that a source is (or is not) in compliance with an applicable standard or limitation, or to allow EPA to demonstrate the feasibility, practicability, or attainability (or lack thereof) of an existing or proposed standard or limitation:

(A) Information concerning research, or the results of research, on any project, method, device or installation (or any component thereof) which was produced, developed, installed, and used only for research purposes; and

(B) Information concerning any product, method, device, or installation (or any component thereof) designed and intended to be marketed or used commercially but not yet so marketed or used.

(3) *Standard or limitation* means any emission standard or limitation established or publicly proposed pursuant to the Act or pursuant to any regulation under the Act.

(4) *Proceeding* means any rulemaking, adjudication, or licensing conducted by EPA under the Act or under regulations which implement the Act, except for determinations under this subpart.

(5) *Manufacturer* has the meaning given it in section 216(1) of the Act, 42 U.S.C. 7550(1).

(b) *Applicability.* (1) This section applies to business information which was—

(i) Provided or obtained under section 114 of the Act, 42 U.S.C. 7414, by the owner or operator of any stationary source, for the purpose (A) of developing or assisting in the development of any implementation plan under section 110 or 111(d) of the Act, 42 U.S.C. 7410, 7411(d), any standard of performance under section 111 of the Act, 42 U.S.C. 7411, or any emission standard under section 112 of the Act, 42 U.S.C. 7412, (B) of determining whether any person is in violation of any such standard or any requirement of such a plan, or (C) of carrying out any provision of the Act (except a provision of Part II of the Act with respect to a manufacturer of new motor vehicles or new motor vehicle engines);

(ii) Provided or obtained under section 208 of the Act, 42 U.S.C. 7542, for the purpose of enabling the Administrator to determine whether a manufacturer has acted or is acting in compliance with the Act and regulations under the Act, or provided or obtained under section 206(c) of the Act, 42 U.S.C. 7525(c); or

(iii) Provided in response to a subpoena for the production of papers, books, or documents issued under the authority of section 307(a) of the Act, 42 U.S.C. 7607(a).

(2) Information will be considered to have been provided or obtained under section 114 of the Act if it was provided in response to a request by EPA made for any of the purposes stated in section 114, or if its submission could have been required under section 114, regardless of whether section 114 was cited as the authority for any request for the information, whether an order to provide the information was issued under section 113(a) of the Act, 42 U.S.C. 7413(a), whether an action was brought under section 113(b) of the Act, 42 U.S.C. 7413(b), or whether the information was provided directly to EPA or through some third person.

(3) Information will be considered to have been provided or obtained under section 208 of the Act if it was provided in response to a request by EPA made for any of the purposes stated in section 208, or if its submission could have been required under section 208, regardless of whether section 208 was cited as the authority for any request for the information, whether an action was brought under section 204 of the Act, 42 U.S.C. 7523, or whether the information was provided directly to EPA or through some third person.

(4) Information will be considered to have been provided or obtained under section 206(c) of the Act if it was provided in response to a request by EPA made for any of the purposes stated in section 206(c), or if its submission could have been required under section 206(c) regardless of whether section 206(c) was cited as authority for any request for the information, whether an action was brought under section 204 of the Act, 42 U.S.C. 7523, or whether the information was provided directly to EPA or through some third person.

(5) Information will be considered to have been provided or obtained under section 307(a) of the Act if it was provided in response to a subpoena issued under section 307(a), or if its production could have been required by subpoena under section 307(a), regardless of whether section 307(a) was cited as the authority for any request for the information, whether a subpoena was issued by EPA, whether a court issued an order under section 307(a), or whether the information was provided directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207, § 2.209 and §§ 2.211 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies to information to which this section applies, except that information which is emission data, a standard or limitation, or is collected pursuant to section 211(b)(2)(A) of the Act is not eligible for confidential treatment. No information to which this section applies is voluntarily submitted information.

(f) *Availability of information not entitled to confidential treatment.* Section 2.210 does not apply to information to which this section applies. Emission data, standards or limitations, and any other information provided under section 114 or 208 of the Act which is determined under this subpart not to be entitled to confidential treatment, shall be available to the public notwithstanding any other provision of this part. Emission data and standards or limitations provided in response to a subpoena issued under section 307(a) of the Act shall be available to the public notwithstanding any other provision of this part. Information (other than emission data and standards or limitations) provided in response to a subpoena issued under section 307(a) of the Act, which is determined under this subpart not to be entitled to confidential treatment, shall be available to the public, unless EPA determines that the information is exempt from mandatory disclosure under 5 U.S.C. 552(b) for reasons other than reasons of business confidentiality and cannot or should not be made available to the public.

(g) *Disclosure of information relevant to a proceeding.* (1) Under sections 114, 208 and 307 of the Act, any information to which this section applies may be released by EPA because of the relevance of the information to a proceeding, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Release of information because of its relevance to a proceeding shall be made only in accordance with this paragraph (g).

(2) In connection with any proceeding other than a proceeding involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, information to which this section applies which may be entitled to confidential treatment may be made available to the public under this paragraph (g)(2). No information shall be made available to the public under this paragraph (g)(2) until any affected business has been informed that EPA is considering making the information available to the public under this paragraph (g)(2) in connection with an identified proceeding, and has afforded the business a reasonable period for comment (such notice and opportunity to comment may be afforded in connection with the notice prescribed by § 2.204(d)(1) and § 2.204(e)). Information may be made available to the public under this paragraph (g)(2) only if, after consideration of any timely comments submitted by the business, the General Counsel determines that the information is relevant to the subject of the proceeding and the EPA office conducting the proceeding determines that the public interest would be served by making the information available to the public. Any affected business shall be given at least 5 days' notice by the General Counsel prior to making the information available to the public.

(3) In connection with any proceeding involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, information to which this section applies which may be entitled to confidential treatment may be made available to the public, or to one or more parties of record to the proceeding, upon EPA's initiative, under this paragraph (g)(3). An EPA office proposing disclosure of information under this paragraph (g)(3), shall so notify the presiding officer in writing. Upon receipt of such a notification, the presiding officer shall notify each affected business that disclosure under this paragraph (g)(3) has been proposed, and shall afford each such business a period for comment found by the presiding officer to be reasonable under the circumstances. Information may be disclosed under this paragraph (g)(3) only if, after consideration of any timely comments submitted by the business, the EPA office determines in writing that, for reasons directly associated with the conduct of the proceeding, the contemplated disclosure would serve the public interest, and the presiding officer determines in writing that the information is relevant to a matter in controversy in the proceeding. The presiding officer may condition disclosure of the information to a party of record on the making of such protective arrangements and commitments as he finds to be warranted. Disclosure to one or more parties of record, under protective arrangements or commitments, shall not, of itself, affect the eligibility of information for confidential treatment under the other provisions of this subpart. Any affected business shall be given at least 5 days notice by the presiding officer prior to making the information available to the public or to one or more of the parties of record to the proceeding.

(4) In connection with any proceeding involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, information to which this section applies may be made available to one or more parties of record to the proceeding, upon request of a party, under this paragraph (g)(4). A party of record seeking disclosure of information shall direct his request to the presiding officer. Upon receipt of such a request, the presiding officer shall notify each affected business that disclosure under this paragraph (g)(4) has been requested, and shall afford each such business a period for comment found by the presiding officer to be reasonable under the circumstances. Information may be disclosed to a party of record under this paragraph (g)(4) only if, after consideration of any timely comments submitted by the business, the presiding officer determines in writing that (i) the party of record has satisfactorily shown that with respect to a significant matter which is in

controversy in the proceeding, the party's ability to participate effectively in the proceeding will be significantly impaired unless the information is disclosed to him, and (ii) any harm to an affected business that would result from the disclosure is likely to be outweighed by the benefit to the proceeding and to the public interest that would result from the disclosure. The presiding officer may condition disclosure of the information to a party of record on the making of such protective arrangements and commitments as he finds to be warranted. Disclosure to one or more parties of record, under protective arrangements or commitments, shall not, of itself, affect the eligibility of information to confidential treatment under the other provisions of this subpart. Any affected business shall be given at least 5 days notice by the presiding officer prior to making the information available to one or more of the parties of record to the proceeding.

(h) *Disclosure to authorized representatives.* (1) Under sections 114, 208 and 307(a) of the Act, EPA possesses authority to disclose to any authorized representative of the United States any information to which this section applies, notwithstanding the fact that the information might otherwise be entitled to confidential treatment under this subpart. Such authority may be exercised only in accordance with paragraph (h) (2) or (3) of this section.

(2)(i) A person under contract or subcontract to the United States government to perform work in support of EPA in connection with the Act or regulations which implement the Act may be considered an authorized representative of the United States for purposes of this paragraph (h). For purposes of this section, the term ''contract'' includes grants and cooperative agreements under the Environmental Programs Assistance Act of 1984 (Pub. L. 98–313), and the term ''contractor'' includes grantees and cooperators under the Environmental Programs Assistance Act of 1984. Subject to the limitations in this paragraph (h)(2), information to which this section applies may be disclosed:

(A) To a contractor or subcontractor with EPA, if the EPA program office managing the contract first determines in writing that such disclosure is necessary in order that the contractor or subcontractor may carry out the work required by the contract or subcontract; or

(B) To a contractor or subcontractor with an agency other than EPA, if the EPA program office which provides the information to that agency, contractor, or subcontractor first determines in writing, in consultation with the General Counsel, that such disclosure is necessary in order that the contractor or subcontractor may carry out the work required by the contract or subcontract.

(ii) No information shall be disclosed under this paragraph (h)(2), unless this contract or subcontract in question provides:

(A) That the contractor or subcontractor and the contractor's or subcontractor's employees shall use the information only for the purpose of carrying out the work required by the contract or subcontract, shall refrain from disclosing the information to anyone other than EPA without the prior written approval of each affected business or of an EPA legal office and shall return to EPA all copies of the information (and any abstracts or extracts therefrom) upon request by the EPA program office, whenever the information is no longer required by the contractor or subcontractor for the performance of the work required under the contract or subcontract, or upon completion of the contract or subcontract (where the information was provided to the contractor or subcontractor by an agency other than EPA, the contractor may disclose or return the information to that agency);

(B) That the contractor or subcontractor shall obtain a written agreement to honor such terms of the contract or subcontract from each of the contractor's or subcontractor's employees who will have access to the information, before such employee is allowed such access; and

(C) That the contractor or subcontractor acknowledges and agrees that the contract or subcontract provisions concerning the use and disclosure of business information are included for the benefit of, and shall be enforceable by, both the United States government and any affected business having an interest in information concerning it supplied to the contractor or subcontractor by the United States government under the contract or subcontract.

(iii) No information shall be disclosed under this paragraph (h)(2) until each affected business has been furnished notice of the contemplated disclosure by the EPA program office and has been afforded a period found reasonable by that office (not less than 5 working days) to submit its comments. Such notice shall include a description of the information to be disclosed, the identity of the contractor or subcontractor, the contract or subcontract number, if any, and the purposes to be served by the disclosure.

(iv) The EPA program office shall prepare a record of each disclosure under this paragraph (h)(2), showing the contractor or subcontractor, the contract or subcontract number, the information disclosed, the date(s) of disclosure, and each affected business. The EPA program office shall maintain the record of disclosure and the determination of necessity prepared under paragraph (h)(2)(i) of this section for a period of not less than 36 months after the date of the disclosure.

(3) A state or local governmental agency which has duties or responsibilities under the Act, or under regulations which implement the Act, may be considered an authorized representative of the United States for purposes of this paragraph (h). Information to which this section applies may be furnished to such an agency at the agency's written request, but only if—

(i) The agency has first furnished to the EPA office having custody of the information a written opinion from the agency's chief legal officer or counsel stating that under applicable state or local law the agency has the authority to compel a business which possesses such information to disclose it to the agency, or

(ii) Each affected business is informed of those disclosures under this paragraph (h)(3) which pertain to it, and the agency has shown to the satisfaction of an EPA legal office that the agency's use and disclosure of such information will be governed by state or local law and procedures which will provide adequate protection to the interests of affected businesses.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40002, Sept. 8, 1978; 43 FR 42251, Sept. 20, 1978; 50 FR 51662, Dec. 18, 1985; 58 FR 461, Jan. 5, 1993; 58 FR 5061, Jan 19, 1993; 58 FR 7189, Feb. 5, 1993]

§ 2.302 Special rules governing certain information obtained under the Clean Water Act.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Clean Water Act, as amended, 33 U.S.C. 1251 *et seq.*

(2)(i) *Effluent data* means, with reference to any source of discharge of any pollutant (as that term is defined in section 502(6) of the Act, 33 U.S.C. 1362 (6))—

(A) Information necessary to determine the identity, amount, frequency, concentration, temperature, or other characteristics (to the extent related to water quality) of any pollutant which has been discharged by the source (or of any pollutant resulting from any discharge from the source), or any combination of the foregoing;

(B) Information necessary to determine the identity, amount, frequency, concentration, temperature, or other characteristics (to the extent related to water quality) of the pollutants which, under an applicable standard or limitation, the source was authorized to discharge (including, to the extent necessary for such purpose, a description of the manner or rate of operation of the source); and

(C) A general description of the location and/or nature of the source to the extent necessary to identify the source and to distinguish it from other sources (including, to the extent necessary for such purposes, a description of the device, installation, or operation constituting the source).

(ii) Notwithstanding paragraph (a)(2)(i) of this section, the following information shall be considered to be *effluent data* only to the extent necessary to allow EPA to disclose publicly that a source is (or is not) in compliance with an applicable standard or limitation, or to allow EPA to demonstrate the feasibility, practicability, or attainability (or lack thereof) of an existing or proposed standard or limitation:

(A) Information concerning research, or the results of research, on any product, method, device, or installation (or any component thereof) which was produced, developed, installed, and used only for research purposes; and

(B) Information concerning any product, method, device, or installation (or any component thereof) designed and intended to be marketed or used commercially but not yet so marketed or used.

(3) *Standard or limitation* means any prohibition, any effluent limitation, or any toxic, pretreatment or new source performance standard established or publicly proposed pursuant to the Act or pursuant to regulations under the Act, including limitations or prohibitions in a permit issued or proposed by EPA or by a State under section 402 of the Act, 33 U.S.C. 1342.

(4) *Proceeding* means any rulemaking, adjudication, or licensing conducted by EPA under the Act or under regulations which implement the Act, except for determinations under this part.

(b) *Applicability.* (1) This section applies only to business information—

(i) Provided to or obtained by EPA under section 308 of the Act, 33 U.S.C. 1318, by or from the owner or operator of any point source, for the purpose of carrying out the objective of the Act (including but not limited to developing or assisting in the development of any standard or limitation under the Act, or determining whether any person is in violation of any such standard or limitation); or

(ii) Provided to or obtained by EPA under section 509(a) of the Act, 33 U.S.C. 1369(a).

(2) Information will be considered to have been provided or obtained under section 308 of the Act if it was provided in response to a request by EPA made for any of the purposes stated in section 308, or if its submission could have been required under section 308, regardless of whether section 308 was cited as the authority for any request for the information, whether an order to provide the information was issued under section 309(a)(3) of the Act, 33 U.S.C. 1319(a)(3), whether a civil action was brought under section 309(b) of the Act, 33 U.S.C. 1319(b), and whether the information

was provided directly to EPA or through some third person.

(3) Information will be considered to have been provided or obtained under section 509(a) of the Act if it was provided in response to a subpoena issued under section 509(a), or if its production could have been required by subpoena under section 509(a), regardless of whether section 509(a) was cited as the authority for any request for the information, whether a subpoena was issued by EPA, whether a court issued an order under section 307(a), or whether the information was provided directly to EPA or through some third person.

(4) This section specifically does not apply to information obtained under section 310(d) or 312(g)(3) of the Act, 33 U.S.C. 1320(d), 1322(g)(3).

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207, 2.209, 2.211 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies to information to which this section applies, except that information which is effluent data or a standard or limitation is not eligible for confidential treatment. No information to which this section applies is voluntarily submitted information.

(f) *Availability of information not entitled to confidential treatment.* Section 2.210 does not apply to information to which this section applies. Effluent data, standards or limitations, and any other information provided or obtained under section 308 of the Act which is determined under this subpart not to be entitled to confidential treatment, shall be available to the public notwithstanding any other provision of this part. Effluent data and standards or limitations provided in response to a subpoena issued under section 509(a) of the Act shall be available to the public notwithstanding any other provision of this part. Information (other than effluent data and standards or limitations) provided in response to a subpoena issued under section 509(a) of the Act, which is determined under this subpart not to be entitled to confidential treatment, shall be available to the public, unless EPA determines that the information is exempt from mandatory disclosure under 5 U.S.C. 552(b) for reasons other than reasons of business confidentiality and cannot or should not be made available to the public.

(g) *Disclosure of information relevant to a proceeding.* (1) Under sections 308 and 509(a) of the Act, any information to which this section applies may be released by EPA because of the relevance of the information to a proceeding, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Release of information to which this section applies because of its relevance to a proceeding shall be made only in accordance with this paragraph (g).

(2)–(4) The provisions of § 2.301(g) (2), (3), and (4) are incorporated by reference as paragraphs (g) (2), (3), and (4), respectively of this section.

(h) *Disclosure to authorized representatives.* (1) Under sections 308 and 509(a) of the Act, EPA possesses authority to disclose to any authorized representative of the United States any information to which this section applies, notwithstanding the fact that the information might otherwise be entitled to confidential treatment under this subpart. Such authority may be exercised only in accordance with paragraph (h)(2) or (h)(3) of this section.

(2)–(3) The provisions of § 2.301(h) (2) and (3) are incorporated by reference as paragraphs (h) (2) and (3), respectively, of this section.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40003, Sept. 8, 1978]

§ 2.303 Special rules governing certain information obtained under the Noise Control Act of 1972.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Noise Control Act of 1972, 42 U.S.C. 4901 *et seq.*

(2) *Manufacturer* has the meaning given it in 42 U.S.C. 4902(6).

(3) *Product* has the meaning given it in 42 U.S.C. 4902(3).

(4) *Proceeding* means any rulemaking, adjudication, or licensing conducted by EPA under the Act or under regulations which implement the Act, except for determinations under this subpart.

(b) *Applicability.* This section applies only to information provided to or obtained by EPA under section 13 of the Act, 42 U.S.C. 4912, by or from any manufacturer of any product to which regulations under section 6 or 8 of the Act (42 U.S.C. 4905, 4907) apply. Information will be deemed to have been provided or obtained under section 13 of the Act, if it was provided in response to a request by EPA made for the purpose of enabling EPA to determine whether the manufacturer has acted or is acting in compliance with the Act, or if its submission could have been required under section 13 of the Act, regardless of whether section 13 was cited as authority for the request, whether an order to provide such information was issued under section 11(d) of the Act, 42 U.S.C. 4910(d), and whether the information was provided directly to EPA by the manufacturer or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207 and 2.209 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies; however, no information to which this section applies is voluntarily submitted information.

(f) [Reserved]

(g) *Disclosure of information relevant to a proceeding.* (1) Under section 13 of the Act, any information to which this section applies may be released by EPA because of its relevance to a matter in controversy in a proceeding, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Release of information because of its relevance to a proceeding shall be made only in accordance with this paragraph (g).

(2)–(4) The provisions of § 2.301(g) (2), (3), and (4) are incorporated by reference as paragraphs (g) (2), (3), and (4), respectively, of this section.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40003, Sept. 8, 1978]

§ 2.304 Special rules governing certain information obtained under the Safe Drinking Water Act.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Safe Drinking Water Act, 42 U.S.C. 300f *et seq.*

(2) *Contaminant* means any physical, chemical, biological, or radiological substance or matter in water.

(3) *Proceeding* means any rulemaking, adjudication, or licensing process conducted by EPA under the Act or under regulations which implement the Act, except for any determination under this part.

(b) *Applicability.* (1) This section applies only to information—

(i) Which was provided to or obtained by EPA pursuant to a requirement of a regulation which was issued by EPA under the Act for the purpose of—

(A) Assisting the Administrator in establishing regulations under the Act;

(B) Determining whether the person providing the information has acted or is acting in compliance with the Act; or

(C) Administering any program of financial assistance under the Act; and

(ii) Which was provided by a person—

(A) Who is a supplier of water, as defined in section 1401(5) of the Act, 42 U.S.C. 300f(5);

(B) Who is or may be subject to a primary drinking water regulation under section 1412 of the Act, 42 U.S.C. 300g–1;

(C) Who is or may be subject to an applicable underground injection control program, as defined in section 1422(d) of the Act, 42 U.S.C.300h–1(d);

(D) Who is or may be subject to the permit requirements of section 1424(b) of the Act, 42 U.S.C. 300h–3(b);

(E) Who is or may be subject to an order issued under section 1441(c) of the Act, 42 U.S.C. 300j(c); or

(F) Who is a grantee, as defined in section 1445(e) of the Act, 42 U.S.C. 300j–4(e).

(2) This section applies to any information which is described by paragraph (b)(1) of this section if it was provided in response to a request by EPA or its authorized representative (or by a State agency administering any program under the Act) made for any purpose stated in paragraph (b)(1) of this section, or if its submission could have been required under section 1445 of the Act, 42 U.S.C. 300j–4, regardless of whether such section was cited in any request for the information, or whether the information was provided directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207, 2.209, and 2.211 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies to information to which this section applies, except that information which deals with the existence, absence, or level of contaminants in drinking water is not eligible for confidential treatment. No information to which this section applies is voluntarily submitted information.

(f) *Nondisclosure for reasons other than business confidentiality or where disclosure is prohibited by other statute.* Section 2.210 applies to information to which this section applies, except that information which deals with the existence, absence, or level of contaminants in drinking water shall be available to the public notwithstanding any other provision of this part.

(g) *Disclosure of information relevant to a proceeding.* (1) Under section 1445(d) of the Act, any information to which this section applies may be released by EPA because of the relevance of the information to a proceeding, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Release of information to which this section applies because of its relevance to a proceeding shall be made only in accordance with this paragraph (g).

(2)–(4) The provisions of § 2.301(g) (2), (3), (4) are incorporated by reference as paragraphs (g) (2), (3), and (4), respectively, of this section.

(h) *Disclosure to authorized representatives.* (1) Under section 1445(d) of the Act, EPA possesses authority to disclose to any authorized representative of the United States any information to which this section applies, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Such authority may be exercised only in accordance with paragraph (h)(2) or (h)(3) of this section.

(2)–(3) The provisions of § 2.301(h) (2) and (3) are incorporated by reference as paragraphs (h) (2) and (3), respectively, of this section.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40003, Sept. 8, 1978]

§ 2.305 Special rules governing certain information obtained under the Solid Waste Disposal Act, as amended.

(a) *Definitions.* For purposes of this section:

(1) *Act* means the Solid Waste Disposal Act, as amended, including amendments made by the Resource Conservation and Recovery Act of 1976, as amended, 42 U.S.C. 6901 *et seq.*

(2) *Person* has the meaning given it in section 1004(15) of the Act, 42 U.S.C. 6903(15).

(3) *Hazardous waste* has the meaning given it in section 1004(5) of the Act, 42 U.S.C. 6903(5).

(4) *Proceeding* means any rulemaking, adjudication, or licensing conducted by EPA under the Act or under regulations which implement the Act including the issuance of administrative orders and the approval or disapproval of plans (e.g. closure plans) submitted by persons subject to regulation under the Act, but not including determinations under this subpart.

(b) *Applicability.* This section applies to information provided to or obtained by EPA under section 3001(b)(3)(B), 3007, or 9005 of the Act, 42 U.S.C 6921(b)(3)(B), 6927, or 6995. Information will be considered to have been provided or obtained under sections 3001(b)(3)(B), 3007, or 9005 of the Act if it was provided in response to a request from EDA made for any of the purposes stated in the Act or if its submission could have been required under those provisions of the Act regardless of whether a specific section was cited as the authority for any request for the information or whether the information was provide directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207 and 2.209 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies; however, no information to which this section applies is voluntarily submitted information.

(f) [Reserved]

(g) *Disclosure of information relevant in a proceeding.* (1) Under sections 3007(b) and 9005(b) of the Act (42 U.S.C. 6927(b) and 6995(b)), any information to which this section applies may be disclosed by EPA because of the relevance of the information in a proceeding under the Act, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Disclosure of information to which this section applies because of its relevance in a proceeding shall be made only in accordance with this paragraph (g).

(2)–(4) The provisions of § 2.301(g) (2), (3), and (4) are incorporated by reference as paragraphs (g) (2), (3), and (4), respectively, of this section.

(h) *Disclosure to authorized representatives.* (1) Under sections 3001(b)(3)(B), 3007(b), and 9005(b) of the Act (42 U.S.C. 6921(b)(3)(B), 6927(b), and 6995(b)), EPA possesses authority to disclose to any authorized representative of the United States any information to which this section applies, notwithstanding the fact that the information might otherwise be entitled to confidential treatment under this subpart. Such authority may be exercised only in accordance with paragraph (h)(2) or (h)(3) of this section.

(2)–(3) The provisions of § 2.301(h) (2) and (3) are incorporated by reference as paragraphs (h) (2) and (3), respectively, of this section.

(4) At the time any information is furnished to a contractor, subcontractor, or state or local government agency under this paragraph (h), the EPA office furnishing the information to the contractor, subcontractor, or state or local government agency shall notify the contractor, subcontractor, or state or local government agency that the information may be entitled to confidential treatment and that any knowing and willful disclosure of the information may subject the contractor, subcontractor, or state or local government agency and its employees to penalties in section 3001(b)(3)(B), 3007(b)(2), or 9005(b)(1) of the Act (42 U.S.C. 6921(b)(3)(B), 6927(b), or 6995(b)).

[43 FR 40003, Sept. 8, 1978, as amended at 50 FR 51662, Dec. 18, 1985]

§ 2.306 Special rules governing certain information obtained under the Toxic Substances Control Act.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Toxic Substances Control Act, 15 U.S.C. 2601 *et seq.*

(2) *Chemical substance* has the meaning given it in section 3(2) of the Act, 15 U.S.C. 2602(2).

(3)(i) *Health and safety data* means the information described in paragraphs (a)(3)(i) (A), (B), and (C) of this section with respect to any chemical substance or mixture offered for commercial distribution (including for test marketing purposes and for use in research and development), any chemical substance included on the inventory of chemical substances under section 8 of the Act (15 U.S.C. 2607), or any chemical substance or mixture for which testing is required under section 4 of the Act (15 U.S.C. 2603) or for which notification is required under section 5 of the Act (15 U.S.C. 2604).

(A) Any study of any effect of a chemical substance or mixture on health, on the environment, or on both, including underlying data and epidemiological studies; studies of occupational exposure to a chemical substance or mixture; and toxicological, clinical, and ecological studies of a chemical substance or mixture;

(B) Any test performed under the Act; and

(C) Any data reported to, or otherwise obtained by, EPA from a study described in paragraph (a)(3)(i)(A) of this section or a test described in paragraph (a)(3)(i)(B) of this section.

(ii) Notwithstanding paragraph (a)(3)(i) of this section, no information shall be considered to be *health and safety data* if disclosure of the information would—

(A) In the case of a chemical substance or mixture, disclose processes used in the manufacturing or processing the chemical substance or mixture or,

(B) In the case of a mixture, disclose the portion of the mixture comprised by any of the chemical substances in the mixture.

(4) [Reserved]

(5) *Mixture* has the meaning given it in section 3(8) of the Act, 15 U.S.C. 2602(8).

(6) *Proceeding* means any rulemaking, adjudication, or licensing conducted by EPA under the Act or under regulations which implement the Act, except for determinations under this subpart.

(b) *Applicability.* This section applies to all information submitted to EPA for the purpose of satisfying some requirement or condition of the Act or of regulations which implement the Act, including information originally submitted to EPA for some other purpose and either relied upon to avoid some requirement or condition of the Act or incorporated into a submission in order to satisfy some requirement or condition of the Act or of regulations which implement the Act. Information will be considered to have been provided under the Act if the information could have been obtained under authority of the Act, whether the Act was cited as authority or not, and whether the information was provided directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.203, 2.206, 2.207, and 2.210 through 2.215 apply without change to information to which this section applies.

(d) *Initial action by EPA office.* Section 2.204 applies to information to which this section applies, except that the provisions of paragraph (e)(3) of this section regarding the time allowed for seeking judicial review shall be reflected in any notice furnished to a business under § 2.204(d)(2).

(e) *Final confidentiality determination by EPA legal office.* Section 2.205 applies to information to which this section applies, except that—

(1) Notwithstanding § 2.205(i), the General Counsel (or his designee), rather than the regional counsel, shall make the determinations and take the actions required by § 2.205;

(2) In addition to the statement prescribed by the second sentence of § 2.205(f)(2), the notice of denial of a business confidentiality claim shall state that under section 20(a) of the Act, 15 U.S.C. 2619, the business may commence an action in an appropriate Federal district court to prevent disclosure.

(3) The following sentence is substituted for the third sentence of § 2.205(f)(2): ''With respect to EPA's implementation of the determination, the notice shall state that (subject to § 2.210) EPA will make the information available to the public on the thirty-first (31st) calendar day after the date of the business' receipt of the written notice (or on such later date as is established in lieu thereof under paragraph (f)(3) of this section), unless the EPA legal office has first been notified of the business' commencement of an action in a Federal court to obtain judicial review of the determination and to obtain preliminary injunctive relief against disclosure.''; and

(4) Notwithstanding § 2.205(g), the 31 calendar day period prescribed by § 2.205(f)(2), as modified by paragraph (e)(3) of this section, shall not be shortened without the consent of the business.

(f) [Reserved]

(g) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies, except that health and safety data are not eligible for confidential treatment. No information to which this section applies is voluntarily submitted information.

(h) *Disclosure in special circumstances.* Section 2.209 applies to information to which this section applies, except that the following two additional provisions apply to § 2.209(c):

(1) The official purpose for which the information is needed must be in connection with the

agency's duties under any law for protection of health or the environment or for specific law enforcement purposes; and

(2) EPA notifies the other agency that the information was acquired under authority of the Act and that any knowing disclosure of the information may subject the officers and employees of the other agency to the penalties in section 14(d) of the Act (15 U.S.C. 2613(d)).

(i) *Disclosure of information relevant in a proceeding.* (1) Under section 14(a)(4) of the Act (15 U.S.C. 2613(a)(4)), any information to which this section applies may be disclosed by EPA when the information is relevant in a proceeding under the Act, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. However, any such disclosure shall be made in a manner that preserves the confidentiality of the information to the extent practicable without impairing the proceeding. Disclosure of information to which this section applies because of its relevance in a proceeding shall be made only in accordance with this paragraph (i).

(2)–(4) The provisions of § 2.301(g) (2), (3), and (4) are incorporated by reference as paragraphs (i) (2), (3), and (4), respectively, of this section.

(j) *Disclosure of information to contractors and subcontractors.* (1) Under section 14(a)(2) of the Act (15 U.S.C. 2613(a)(2)), any information to which this section applies may be disclosed by EPA to a contractor or subcontractor of the United States performing work under the Act, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Subject to the limitations in this paragraph (j), information to which this section applies may be disclosed:

(i) To a contractor or subcontractor with EPA, if the EPA program office managing the contract first determines in writing that such disclosure is necessary for the satisfactory performance by the contractor or subcontractor of the contract or subcontract; or

(ii) To a contractor or subcontractor with an agency other than EPA, if the EPA program office which provides the information to that agency, contractor, or subcontractor first determines in writing, in consultation with the General Counsel, that such disclosure is necessary for the satisfactory performance by the contractor or subcontractor of the contract or subcontract.

(2)–(4) The provisions of § 2.301(h)(2) (ii), (iii), and (iv) are incorporated by reference as paragraphs (j) (2), (3), and (4), respectively, of this section.

(5) At the time any information is furnished to a contractor or subcontractor under this paragraph (j), the EPA office furnishing the information to the contractor or subcontractor shall notify the contractor or subcontractor that the information was acquired under authority of the Act and that any knowing disclosure of the information may subject the contractor or subcontractor and its employees to the penalties in section 14(d) of the Act (15 U.S.C. 2613(d)).

(k) *Disclosure of information when necessary to protect health or the environment against an unreasonable risk of injury.* (1) Under section 14(a)(3) of the Act (15 U.S.C 2613(a)(3)), any information to which this section applies may be disclosed by EPA when disclosure is necessary to protect health or the environment against an unreasonable risk of injury to health or the environment. However, any disclosure shall be made in a manner that preserves the confidentiality of the information to the extent not inconsistent with protecting health or the environment against the unreasonable risk of injury. Disclosure of information to which this section applies because of the need to protect health or the environment against an unreasonable risk of injury shall be made only in accordance with this paragraph (k).

(2) If any EPA office determines that there is an unreasonable risk of injury to health or the environment and that to protect health or the environment against the unreasonable risk of injury it is necessary to disclose information to which this section applies that otherwise might be entitled to confidential treatment under this subpart, the EPA office shall notify the General Counsel in writing of the nature of the unreasonable risk of injury, the extent of the disclosure proposed, how the proposed disclosure will serve to protect health or the environment against the unreasonable risk of injury, and the proposed date of disclosure. Such notification shall be made as soon as practicable after discovery of the unreasonable risk of injury. If the EPA office determines that the risk of injury is so imminent that it is impracticable to furnish written notification to the General Counsel, the EPA office shall notify the General Counsel orally.

(3) Upon receipt of notification under paragraph (k)(2) of this section, the General Counsel shall make a determination in writing whether disclosure of information to which this section applies that otherwise might be entitled to confidential treatment is necessary to protect health or the environment against an unreasonable risk of injury. The General Counsel shall also determine the extent of disclosure necessary to protect against the unreasonable risk of injury as well as when the disclosure must be made to protect against the unreasonable risk of injury.

(4) If the General Counsel determines that disclosure of information to which this section applies that otherwise might be entitled to confidential treatment is necessary to protect health or the environment against an unreasonable risk of injury, the General Counsel shall furnish notice to each affected business of the contemplated disclosure and of the General Counsel's determination. Such notice shall be made in writing by certified mail, return receipt requested, at least 15 days before the disclosure is to be made. The notice shall state the date upon which disclosure will be made. However, if the General Counsel determines that the risk of injury is so imminent that it is impracticable to furnish such notice 15 days before the proposed date of disclosure, the General Counsel may provide notice by means that will provide receipt of the notice by the affected business at least 24 hours before the disclosure is to be made. This may be done by telegram, telephone, or other reasonably rapid means.

[43 FR 40003, Sept. 8, 1978, as amended at 44 FR 17674, Mar. 23, 1979; 58 FR 462, Jan. 5, 1993]

§ 2.307 Special rules governing certain information obtained under the Federal Insecticide, Fungicide and Rodenticide Act.

(a) *Definitions.* For the purposes of this section;

(1) *Act* means the Federal Insecticide, Fungicide and Rodenticide Act, as amended, 7 U.S.C. 136 *et seq., and its predecessor, 7 U.S.C. 135 et seq.*

(2) *Applicant* means any person who has submitted to EPA (or to a predecessor agency with responsibility for administering the Act) a registration statement or application for registration under the Act of a pesticide or of an establishment.

(3) *Registrant* means any person who has obtained registration under the Act of a pesticide or of an establishment.

(b) *Applicability.* This section applies to all information submitted to EPA by an applicant or registrant for the purpose of satisfying some requirement or condition of the Act or of regulations which implement the Act, including information originally submitted to EPA for some other purpose but incorporated by the applicant or registrant into a submission in order to satisfy some requirement or condition of the Act or of regulations which implement the Act. This section does not apply to information supplied to EPA by a petitioner in support of a petition for a tolerance under 21 U.S.C. 346a(d), unless the information is also described by the first sentence of this paragraph.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.203, 2.206, 2.207, and 2.210 through 2.215 apply without change to information to which this section applies.

(d) *Initial action by EPA office.* Section 2.204 applies to information to which this section applies, except that the provisions of paragraph (e) of this section regarding the time allowed for seeking judicial review shall be reflected in any notice furnished to a business under § 2.204(d)(2).

(e) *Final confidentiality determination by EPA legal office.* Section 2.205 applies to information to which this section applies, except that—

(1) Notwithstanding § 2.205(i), the General Counsel (or his designee), rather than the Regional Counsel, shall make the determinations and take the actions required by § 2.205;

(2) In addition to the statement prescribed by the second sentence of § 2.205(f)(2), the notice of denial of a business confidentiality claim shall state that under section 10(c) of the Act, 7 U.S.C. 136h(c), the business may commence an action in an appropriate Federal district court for a declaratory judgment;

(3) The following sentence is substituted for the third sentence of § 2.205(f)(2): ''With respect to EPA's implementation of the determination, the notice shall state that (subject to § 2.210) EPA will make the information available to the public on the thirty-first (31st) calendar day after the date of the business's receipt of the written notice (or on such later date as is established in lieu thereof under paragraph (f)(3) of this section), unless the EPA legal office has first been notified of the business's commencement of an action in a Federal court to obtain judicial review of the determination or to obtain a declaratory judgment under section 10(c) of the Act and to obtain preliminary injunctive relief against disclosure.''; and

(4) Notwithstanding § 2.205(g), the 31 calendar day period prescribed by § 2.205(f)(2), as modified by paragraph (e)(3) of this section, shall not be shortened without the consent of the business.

(f) [Reserved]

(g) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies; however, no information to which this section applies is voluntarily submitted information.

(h) *Disclosure in special circumstances.* (1) Section 2.209 applies without change to information to which this section applies. In addition, under section 12(a)(2)(D) of the Act, 7 U.S.C. 136j(a)(2)(D), EPA possesses authority to disclose any information to which this section applies to physicians, pharmacists, and other qualified persons needing such information for the performance of their duties, notwithstanding the fact that the information might otherwise be entitled to confidential treatment under this subpart. Such authority under section 12(a)(2)(D) of the Act may be exercised only in accordance with paragraph (h)(2) or (h)(3) of this section.

(2) Information to which this section applies may be disclosed (notwithstanding the fact that it might otherwise be entitled to confidential treatment under this subpart) to physicians, pharmacists, hospitals, veterinarians, law enforcement personnel, or governmental agencies with responsibilities for protection of public health, and to employees of any such persons or agencies, or to other qualified persons, when and to the extent that disclosure is necessary in order to treat illness or injury or to prevent imminent harm to persons, property, or the environment, in the opinion of the Administrator or his designee.

(3) Information to which this section applies may be disclosed (notwithstanding the fact that it otherwise might be entitled to confidential treatment under this subpart) to a person under contract to EPA to perform work for EPA in connection with the Act or regulations which implement the Act, if the EPA program office managing the contract first determines in writing that such disclosure is necessary in order that the contractor may carry out the work required by the contract. Any such disclosure to a contractor shall be made only in accordance with the procedure and requirements of § 2.301(h)(2) (ii) through (iv).

(4) Information to which this section applies, and which relates to formulas of products, may be disclosed at any public hearing or in findings of fact issued by the Administrator, to the extent and in the manner authorized by the Administrator or his designee.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40005, Sept. 8, 1978]

§ 2.308 Special rules governing certain information obtained under the Federal Food, Drug and Cosmetic Act.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Federal Food, Drug and Cosmetic Act, as amended, 21 U.S.C. 301 *et seq.*

(2) *Petition* means a petition for the issuance of a regulation establishing a tolerance for a pesticide chemical or exempting the pesticide chemical from the necessity of a tolerance, pursuant to section 408(d) of the Act, 21 U.S.C. 346a(d).

(3) *Petitioner* means a person who has submitted a petition to EPA (or to a predecessor agency).

(b) *Applicability.* (1) This section applies only to business information submitted to EPA (or to an advisory committee established under the Act) by a petitioner, solely in support of a petition which has not been acted on by the publication by EPA of a regulation establishing a tolerance for a pesticide chemical or exempting the pesticide chemical from the necessity of a tolerance, as provided in section 408(d) (2) or (3) of the Act, 21 U.S.C. 346a(d) (2) or (3).

(2) Section 2.307, rather than this section, applies to information described by the first sentence of § 2.307(b) (material incorporated into submissions in order to satisfy the requirements of the Federal Insecticide, Fungicide and Rodenticide Act, as amended), even though such information was originally submitted by a petitioner in support of a petition.

(3) This section does not apply to information gathered by EPA under a proceeding initiated by EPA to establish a tolerance under section 408(e) of the Act, 21 U.S.C. 346a(e).

(c) *Basic rules which apply without change.* Sections 2.201, 2.202, 2.206, 2.207, and 2.210 through 2.215 apply without change to information to which this section applies.

(d) *Effect of submission of information without claim.* Section 2.203 (a) and (b) apply without change to information to which this section applies. Section 2.203(c), however, does not apply to information to which this section applies. A petitioner's failure to assert a claim when initially submitting a petition shall not constitute a waiver of any claim the petitioner may have.

(e) *Initial action by EPA office.* Section 2.204 applies to information to which this section applies, except that—

(1) Unless the EPA office has on file a written waiver of a petitioner's claim, a petitioner shall be regarded as an affected business, a petition shall be treated as if it were covered by a business confidentiality claim, and an EPA office acting under § 2.204(d) shall determine that the information in the petition is or may be entitled to confidential treatment and shall take action in accordance with § 2.204(d)(1);

(2) In addition to other required provisions of any notice furnished to a petitioner under § 2.204(e), such notice shall state that—

(i) Section 408(f) of the Act, 21 U.S.C. 346a(f), affords absolute confidentiality to information to which this section applies, but after publication by EPA of a regulation establishing a tolerance (or exempting the pesticide chemical from the necessity of a tolerance) neither the Act nor this section affords any protection to the information;

(ii) Information submitted in support of a petition which is also incorporated into a submission in order to satisfy a requirement or condition of the Federal Insecticide, Fungicide and Rodenticide Act, as amended, 7 U.S.C. 136 et seq., is regarded by EPA as being governed, with respect to business confidentiality, by § 2.307 rather than by this section;

(iii) Although it appears that this section may apply to the information at this time, EPA is presently engaged in determining whether for any reason the information is entitled to confidential treatment or will be entitled to such treatment if and

when this section no longer applies to the information; and

(iv) Information determined by EPA to be covered by this section will not be disclosed for as long as this section continues to apply, but will be made available to the public thereafter (subject to § 2.210) unless the business furnishes timely comments in response to the notice.

(f) *Final confidentiality determination by EPA legal office.* Section 2.205 applies to information to which this section applies, except that—

(1) Notwithstanding § 2.205(i), the General Counsel or his designee, rather than the Regional counsel, shall in all cases make the determinations and take the actions required by § 2.205;

(2) In addition to the circumstances mentioned in § 2.205(f)(1), notice in the form prescribed by § 2.205(f)(2) shall be furnished to each affected business whenever information is found to be entitled to confidential treatment under section 408(f) of the Act but not otherwise entitled to confidential treatment. With respect to such cases, the following sentences shall be substituted for the third sentence of § 2.205(f)(2): ''With respect to EPA's implementation of the determination, the notice shall state that (subject to § 2.210) EPA will make the information available to the public on the thirty-first (31st) calendar day after the business's receipt of the written notice (or on such later date as is established in lieu thereof under paragraph (f)(3) of this section), unless the EPA legal office has first been notified of the business's commencement of an action in a Federal court to obtain judicial review of the determination and to obtain preliminary injunctive relief against disclosure; provided, that the information will not be made available to the public for so long as it is entitled to confidential treatment under section 408(f) of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. 346a(f).''; and

(3) Notwithstanding § 2.205(g), the 31 calendar day period prescribed by § 2.205(f)(2), as modified by paragraph (f)(2) of this section, shall not be shortened without the consent of the business.

(g) [Reserved]

(h) *Substantive criteria for use in confidentiality determinations.* Section 2.208 does not apply to information to which this section applies. Such information shall be determined to be entitled to confidential treatment for so long as this section continues to apply to it.

(i) *Disclosure in special circumstances.* (1) Section 2.209 applies to information to which this section applies. In addition, under Section 408(f) of the Act, 21 U.S.C. 346a(f), EPA is authorized to disclose the information to other persons. Such authority under section 408(f) of the Act may be exercised only in accordance with paragraph (i)(2) or (i)(3) of this section.

(2) Information to which this section applies may be disclosed (notwithstanding the fact that it otherwise might be entitled to confidential treatment under this subpart) to a person under contract to EPA to perform work for EPA in connection with the Act, with the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, or regulations which implement either such Act, if the EPA program office managing the contract first determines in writing that such disclosure is necessary in order that the contractor may carry out the work required by the contract. Any such disclosure to a contractor shall be made only in accordance with the procedures and requirements of § 2.301(h)(2) (ii) through (iv).

(3) Information to which this section applies may be disclosed by EPA to an advisory committee in accordance with section 408(d) of the Act, 21 U.S.C. 346a(d).

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40005, Sept. 8, 1978]

§ 2.309 Special rules governing certain information obtained under the Marine Protection, Research and Sanctuaries Act of 1972.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Marine Protection, Research and Sanctuaries Act of 1972, 33 U.S.C. 1401 *et seq.*

(2) *Permit* means any permit applied for or granted under the Act.

(3) *Application* means an application for a permit.

(b) *Applicability.* This section applies to all information provided to or obtained by EPA as a part of any application or in connection with any permit.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207 and 2.209 through 2.215 apply without change to information to which this section applies.

(d) *Substantive criteria for use in confidentiality determinations.* Section 2.208 does not apply to information to which this section applies. Pursuant to section 104(f) of the Act, 33 U.S.C. 1414(f), no information to which this section applies is eligible for confidential treatment.

[41 FR 36902, Sept. 1, 1976, as amended at 43 FR 40005, Sept. 8, 1978]

§ 2.310 Special rules governing certain information obtained under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended.

(a) *Definitions.* For purposes of this section:

(1) *Act* means the Comprehensive Environmental Response, Compensation, and Liability Act

of 1980, as amended, including amendments made by the Superfund Amendments and Reauthorization Act of 1986, 42 U.S.C. 9601, et seq.

(2) *Person* has the meaning given it in section 101(21) of the Act, 42 U.S.C. 9601(21).

(3) *Facility* has the meaning given it in section 101(9) of the Act, 42 U.S.C. 9601(9).

(4) *Hazardous substance* has the meaning given it in section 101(14) of the Act, 42 U.S.C. 9601(14).

(5) *Release* has the meaning given it in section 101(22) of the Act, 42 U.S.C. 9601(22).

(6) *Proceeding* means any rulemaking or adjudication conducted by EPA under the Act or under regulations which implement the Act (including the issuance of administrative orders under section 106 of the Act and cost recovery pre-litigation settlement negotiations under sections 107 or 122 of the Act), any cost recovery litigation under section 107 of the Act, or any administrative determination made under section 104 of the Act, but not including determinations under this subpart.

(b) *Applicability.* This section applies only to information provided to or obtained by EPA under section 104 of the Act, 42 U.S.C. 9604, by or from any person who stores, treats, or disposes of hazardous wastes; or where necessary to ascertain facts not available at the facility where such hazardous substances are located, by or from any person who generates, transports, or otherwise handles or has handled hazardous substances, or by or from any person who performs or supports removal or remedial actions pursuant to section 104(a) of the Act. Information will be considered to have been provided or obtained under section 104 of the Act if it was provided in response to a request from EPA or a representative of EPA made for any of the purposes stated in section 104, if it was provided pursuant to the terms of a contract, grant or other agreement to perform work pursuant to section 104, or if its submission could have been required under section 104, regardless of whether section 104 was cited as authority for any request for the information or whether the information was provided directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207 and §§ 2.209 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies; however, no information to which this section applies is voluntarily submitted information.

(f) [Reserved]

(g)(1) Under section 104(e)(7)(A) of the Act (42 U.S.C. 9604(e)(7)(A)) any information to which this section applies may be disclosed by EPA because of the relevance of the information in a proceeding under the Act, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Disclosure of information to which this section applies because of its relevance in a proceeding shall be made only in accordance with this paragraph (g).

(2) The provisions of § 2.301(g)(2) are to be used as paragraph (g)(2) of this section.

(3) In connection with any proceeding involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, except with respect to litigation conducted by a Federal court, information to which this section applies which may be entitled to confidential treatment may be made available to the public, or to one or more parties of record to the proceeding, upon EPA's initiative, under this paragraph (g)(3). An EPA office proposing disclosure of information under this paragraph (g)(3) shall so notify the presiding officer in writing. Upon receipt of such a notification, the presiding officer shall notify each affected business that disclosure under this paragraph (g)(3) has been proposed, and shall afford each such business a period for comment found by the presiding officer to be reasonable under the circumstances. Information may be disclosed under this paragraph (g)(3) only if, after consideration of any timely comments submitted by the business, the EPA office determines in writing that, for reasons directly associated with the conduct of the proceeding, the contemplated disclosure would serve the public interest, and the presiding officer determines in writing that the information is relevant to a matter in controversy in the proceeding. The presiding officer may condition disclosure of the information to a party of record on the making of such protective arrangements and commitments as he finds to be warranted. Disclosure to one or more parties of record, under protective arrangements or commitments, shall not, of itself, affect the eligibility of information for confidential treatment under the other provisions of this subpart. Any affected business shall be given at least 5 days notice by the presiding officer prior to making the information available to the public or to one or more of the parties of record to the proceeding.

(4) In connection with any proceeding involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, except with respect to litigation conducted by a Federal court, information to which this section applies which may be entitled to confidential treatment may be made available to one or more parties of record to the proceeding, upon request of a party, under this paragraph (g)(4). A party of record seeking disclosure of information shall direct his request to the

presiding officer. Upon receipt of such a request, the presiding officer shall notify each affected business that disclosure under this paragraph (g)(4) has been requested, and shall afford each such business a period for comment found by the presiding officer to be reasonable under the circumstances. Information may be disclosed to a party of record under this paragraph (g)(4) only if, after consideration of any timely comments submitted by the business, the presiding officer determines in writing that:

(i) The party of record has satisfactorily shown that with respect to a significant matter which is in controversy in the proceeding, the party's ability to participate effectively in the proceeding will be significantly impaired unless the information is disclosed to him; and

(ii) Any harm to an affected business that would result from the disclosure is likely to be outweighed by the benefit to the proceeding and the public interest that would result from the disclosure.

The presiding officer may condition disclosure of the information to a party of record on the making of such protective arrangements and commitments as he finds to be warranted. Disclosure to one or more parties of record, under protective arrangements or commitments, shall not, of itself, affect the eligibility of information for confidential treatment under the other provisions of this subpart. Any affected business shall be given at least 5 days notice by the presiding officer prior to making the information available to one or more of the parties of record to the proceeding.

(5) In connection with cost recovery pre-litigation settlement negotiations under sections 107 or 122 of the Act (42 U.S.C. 9607, 9622), any information to which this section applies that may be entitled to confidential treatment may be made available to potentially responsible parties pursuant to a contractual agreement to protect the information.

(6) In connection with any cost recovery proceeding under section 107 of the Act involving a decision by a presiding officer after an evidentiary or adjudicatory hearing, any information to which this section applies that may be entitled to confidential treatment may be made available to one or more parties of record to the proceeding, upon EPA's initiative, under this paragraph (g)(6). Such disclosure must be made pursuant to a stipulation and protective order signed by all parties to whom disclosure is made and by the presiding officer.

(h) *Disclosure to authorized representatives.* (1) Under section 104(e)(7) of the Act (42 U.S.C. 9604(e)(7)), EPA possesses authority to disclose to any authorized representative of the Untied States any information to which this section applies, notwithstanding the fact that the information might otherwise be entitled to confidential treatment under this subpart. Such authority may be exercised only in accordance with paragraph (h)(2) or (h)(3) of this section.

(2) The provisions of § 2.301(h)(2) are to be used as paragraph (h)(2) of this section.

(3) The provisions of § 2.301(h)(3) are to be used as paragraph (h)(3) of this section.

(4) At the time any information is furnished to a contractor, subcontractor, or state or local government under this paragraph (h), the EPA office furnishing the information to the contractor, subcontractor, or state or local government agency shall notify the contractor, subcontractor, or state or local government agency that the information may be entitled to confidential treatment and that any knowing and willful disclosure of the information may subject the contractor, subcontractor, or state or local government agency and its employees to penalties in section 104(e)(7)(B) of the Act (42 U.S.C. 9604(e)(7)(B)).

[50 FR 51663, Dec. 18, 1985, as amended at 58 FR 462, Jan. 5, 1993]

§ 2.311 Special rules governing certain information obtained under the Motor Vehicle Information and Cost Savings Act.

(a) *Definitions.* For the purposes of this section:

(1) *Act* means the Motor Vehicle Information and Cost Savings Act, as amended, 15 U.S.C. 1901 *et seq.*

(2) *Average fuel economy* has the meaning given it in section 501(4) of the Act, 15 U.S.C. 2001(4).

(3) *Fuel economy* has the meaning given it in section 501(6) of the Act, 15 U.S.C. 2001(6).

(4) *Fuel economy data* means any measurement or calculation of fuel economy for any model type and average fuel economy of a manufacturer under section 503(d) of the Act, 15 U.S.C. 2003(d).

(5) *Manufacturer* has the meaning given it in section 501(9) of the Act, 15 U.S.C. 2001(9).

(6) *Model type* has the meaning given it in section 501(11) of the Act, 15 U.S.C. 2001(11).

(b) *Applicability.* This section applies only to information provided to or obtained by EPA under Title V, Part A of the Act, 15 U.S.C. 2001 through 2012. Information will be considered to have been provided or obtained under Title V, Part A of the Act if it was provided in response to a request from EPA made for any purpose stated in Title V, Part A, or if its submission could have been required under Title V Part A, regardless of whether Title V Part A was cited as the authority for any request for information or whether the information was provided directly to EPA or through some third person.

(c) *Basic rules which apply without change.* Sections 2.201 through 2.207 and §§ 2.209 through 2.215 apply without change to information to which this section applies.

(d) [Reserved]

(e) *Substantive criteria for use in confidentiality determinations.* Section 2.208 applies without change to information to which this section applies, except that information this is fuel economy data is not eligible for confidential treatment. No information to which this section applies is voluntarily submitted information.

(f) [Reserved]

(g) *Disclosure of information relevant to a proceeding.* (1) Under section 505(d)(1) of the Act, any information to which this section applies may be released by EPA because of the relevance of the information to a proceeding under Title V, Part A of the Act, notwithstanding the fact that the information otherwise might be entitled to confidential treatment under this subpart. Release of information to which this section applies because of its relevance to a proceeding shall be made only in accordance with this paragraph (g).

(2) The provisions of § 2.301(g)(2) are to be used as paragraph (g)(2) of this section.

(3) The provisions of § 2.301(g)(3) are to be used as paragraph (g)(3) of this section.

(4) The provisions of § 2.301(g)(4) are to be used as paragraph (g)(3) of this section.

[50 FR 51663, Dec. 18, 1985]

Subpart C—Testimony by Employees and Production of Documents in Civil Legal Proceedings Where the United States Is Not a Party

AUTHORITY: 5 U.S.C. 301; Reorganization Plan No. 3 of 1970, 5 U.S.C. App.; 33 U.S.C. 361(a); 42 U.S.C. 300j–9; 42 U.S.C. 6911a, 42 U.S.C. 7601(a).

SOURCE: 50 FR 32387, Aug. 9, 1985, unless otherwise noted.

§ 2.401 Scope and purpose.

This subpart sets forth procedures to be followed when an EPA employee is requested or subpoenaed to provide testimony concerning information acquired in the course of performing official duties or because of the employee's official status. (In such cases, employees must state for the record that their testimony does not necessarily represent the official position of EPA. If they are called to state the official position of EPA, they should ascertain that position before appearing.) These procedures also apply to subpoenas *duces tecum* for any document in the possession of EPA and to requests for certification of copies of documents.

(a) These procedures apply to:

(1) State court proceedings (including grand jury proceedings);

(2) Federal civil proceedings, except where the United States, EPA or another Federal agency is a party; and

(3) State and local legislative and administrative proceedings.

(b) These procedures do not apply:

(1) To matters which are not related to EPA;

(2) To Congressional requests or subpoenas for testimony or documents;

(3) Where employees provide expert witness services as approved outside activities in accordance with 40 CFR part 3, subpart E (in such cases, employees must state for the record that the testimony represents their own views and does not necessarily represent the official position of EPA);

(4) Where employees voluntarily testify as private citizens with respect to environmental matters (in such cases, employees must state for the record that the testimony represents their own views and does not necessarily represent the official position of EPA).

(c) The purpose of this subpart is to ensure that employees' official time is used only for official purposes, to maintain the impartiality of EPA among private litigants, to ensure that public funds are not used for private purposes and to establish procedures for approving testimony or production of documents when clearly in the interests of EPA.

§ 2.402 Policy on presentation of testimony and production of documents.

(a) With the approval of the cognizant Assistant Administrator, Office Director, Staff Office Director or Regional Administrator or his designee, EPA employees (as defined in 40 CFR 3.102 (a) and (b)) may testify at the request of another Federal agency, or, where it is in the interests of EPA, at the request of a State or local government or State legislative committee.

(b) Except as permitted by paragraph (a) of this section, no EPA employee may provide testimony or produce documents in any proceeding to which this subpart applies concerning information acquired in the course of performing official duties or because of the employee's official relationship with EPA, unless authorized by the General Counsel or his designee under §§ 2.403 through 2.406.

§ 2.403 Procedures when voluntary testimony is requested.

A request for testimony by an EPA employee under § 2.402(b) must be in writing and must state the nature of the requested testimony and the reasons why the testimony would be in the interests

of EPA. Such requests are immediately sent to the General Counsel or his designee (or, in the case of employees in the Office of Inspector General, the Inspector General or his designee) with the recommendations of the employee's supervisors. The General Counsel or his designee, in consultation with the appropriate Assistant Administrator, Regional Administrator, or Staff Office Director (or, in the case of employees in the Office of Inspector General, the Inspector General or his designee), determines whether compliance with the request would clearly be in the interests of EPA and responds as soon as practicable.

§ 2.404 Procedures when an employee is subpoenaed.

(a) Copies of subpoenas must immediately be sent to the General Counsel or his designee with the recommendations of the employee's supervisors. The General Counsel or his designee, in consultation with the appropriate Assistant Administrator, Regional Administrator or Staff Office Director, determines whether compliance with the subpoena would clearly be in the interests of EPA and responds as soon as practicable.

(b) If the General Counsel or his designee denies approval to comply with the subpoena, or if he has not acted by the return date, the employee must appear at the stated time and place (unless advised by the General Counsel or his designee that the subpoena was not validly issued or served or that the subpoena has been withdrawn), produce a copy of these regulations and respectfully refuse to provide any testimony or produce any documents. *United States ex rel. Touhy* v. *Ragen*, 340 U.S. 462 (1951).

(c) Where employees in the Office of Inspector General are subpoenaed, the Inspector General or his designee makes the determination under paragraphs (a) and (b) of this section in consultation with the General Counsel.

(d) The General Counsel will request the assistance of the Department of Justice or a U.S. Attorney where necessary to represent the interests of the Agency and the employee.

§ 2.405 Subpoenas duces tecum.

Subpoenas *duces tecum* for documents or other materials are treated the same as subpoenas for testimony. Unless the General Counsel or his designee, in consultation with the appropriate Assistant Administrator, Regional Administrator or Staff Office Director (or, as to employees in the Office of Inspector General, the Inspector General) determines that compliance with the subpoena is clearly in the interests of EPA, the employee must appear at the stated time and place (unless advised by the General Counsel or his designee that the subpoena was not validly issued or served or that the subpoena has been withdrawn) and respectfully refuse to produce the subpoenaed materials. However, where a subpoena *duces tecum* is essentially a written request for documents, the requested documents will be provided or denied in accordance with subparts A and B of this part where approval to respond to the subpoena has not been granted.

§ 2.406 Requests for authenticated copies of EPA documents.

Requests for authenticated copies of EPA documents for purposes of admissibility under 28 U.S.C. 1733 and Rule 44 of the Federal Rules of Civil Procedure will be granted for documents which would otherwise be released pursuant to subpart A. For purposes of Rule 44 the *person having legal custody of the record* is the cognizant Assistant Administrator, Regional Administrator, Staff Office Director or Office Director or his designee. The advice of the Office of General Counsel should be obtained concerning the proper form of authentication.

PART 3—EMPLOYEE RESPONSIBILITIES AND CONDUCT

Sec.

AUTHORITY: 5 U.S.C. 7301 and 18 U.S.C. 208(b)(2).

SOURCE: 61 FR 40503, Aug. 2, 1996, unless otherwise noted.

§ 3.100 Cross-reference to employee ethical conduct standards and financial disclosure regulations.

Employees of the Environmental Protection Agency (EPA) should refer to the Standards of Ethical Conduct for Employees of the Executive Branch at 5 CFR part 2635, the EPA regulations at 5 CFR part 6401 that supplement those standards, and the Executive Branch financial disclosure regulations at 5 CFR part 2634.

§ 3.101 Waiver of certain financial interests.

(a) The prohibition of 18 U.S.C. 208(a) may be waived by general regulation. Financial interests derived from the following have been determined to be too remote or too inconsequential to affect the integrity of employee's services, and employees may participate in matters affecting them:

(1) Mutual funds (including tax-exempt bond funds), except those which concentrate their investments in particular industries;

(2) Life insurance, variable annuity, or guaranteed investment contracts issued by insurance companies;

(3) Deposits in a bank, savings and loan association, credit union, or similar financial institution;

(4) Real property used solely as the personal residence of an employee;

(5) Bonds or other securities issued by the U.S. Government or its agencies.

(b) This provision will be superseded when the Office of Government Ethics publishes its Executive Branch-wide exemptions and EPA will publish a document in the FEDERAL REGISTER revoking it at that time.

PART 4—UNIFORM RELOCATION ASSISTANCE AND REAL PROPERTY ACQUISITION FOR FEDERAL AND FEDERALLY ASSISTED PROGRAMS

AUTHORITY: Section 213, Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended by the Surface Transportation and Uniform Relocation Assistance Act of 1987, Title IV of Pub. L. 100–17, 101 Stat. 246–256 (42 U.S.C. 4601 note).

§ 4.1 Uniform relocation assistance and real property acquisition.

Effective April 2, 1989, regulations and procedures for complying with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Pub. L. 91–646, 84 Stat. 1894, 42 U.S.C. 4601), as amended by the Surface Transportation and Uniform Relocation Assistance Act of 1987 (Pub. L. 100–17, 101 Stat. 246–255, 42 U.S.C. 4601 note) are set forth in 49 CFR part 24.

[52 FR 48023, Dec. 17, 1987 and 54 FR 8912, Mar. 2, 1989]

PART 5—TUITION FEES FOR DIRECT TRAINING

Sec.

AUTHORITY: Title V, 65 Stat. 290 (31 U.S.C. 483a).

SOURCE: 38 FR 32806, Nov. 28, 1973, unless otherwise noted.

§ 5.1 Establishment of fees.

The Environmental Protection Agency shall charge the revised schedule of tuition fees for all persons attending EPA direct training courses which commence on or after January 1, 1974.

§ 5.2 Definitions.

Direct Training means all technical and managerial training conducted directly by EPA for personnel of State and local governmental agencies, other Federal agencies, private industries, universities, and other non-EPA agencies and organizations.

Registration office means any of the several offices in EPA which have been designated to receive applications for attendance at direct training courses. (See § 5.4 for a listing of such courses.)

§ 5.3 Schedule of fees.

Tuition fees for direct training will be established within the range of $15 to $70 per training day depending upon whether the course is predominantly a laboratory, lecture, or survey course, or a course with other similar variables. Each cognitive program and regional office will announce the tuition fee at the time the date for offering the course is announced. As a transition easement, tuition fees for all State and local government employees are established at a maximum of $25 per training day regardless of type of course until July 1, 1974. After that date they are to pay the full fee. Charges for field courses taught by EPA instructors are for actual expenses on a per course basis. Complete tuition fee schedules may be obtained from the registration offices listed in § 5.4. Tuition fees will be subject to change either upward or downward, based on actual experience under the system.

§ 5.4 Registration offices.

Direct training programs are offered by both EPA national program offices and regional EPA offices. Listed in this section are the EPA national program offices and regional offices to which applications are to be sent. The proper registration office may be determined from the specific course announcement.

NATIONAL PROGRAM OFFICES

AIR PROGRAM

Direct Training Registration Office, Office of Air Programs, Research Triangle Park, NC 27717.

WASTE WATER TREATMENT PROGRAM

Direct Training Registration Office, National Training Center, Robert A. Taft Sanitary Engineering Center, Environmental Protection Agency, 4676 Columbia Parkway, Cincinnati, OH 45226.

WATER SUPPLY TREATMENT PROGRAM

Direct Training Registration Office, Environmental Protection Agency, 4676 Columbia Parkway, Cincinnati, OH 45226.

SOLID WASTES MANAGEMENT PROGRAM

U.S. Environmental Protection Agency, Office of Solid Waste Management Programs, Washington, DC 20460.

RADIATION PROGRAM

U.S. Environmental Protection Agency, Office of Radiation Programs, Washington, DC 20460.

PESTICIDES PROGRAM

U.S. Environmental Protection Agency, Office of Pesticides Programs, Washington, DC 20460.

REGIONAL EPA OFFICES

EPA, Regional Manpower Office, Region I, JFK Federal Building—Room 2303, Boston, MA 02203.

EPA, Regional Manpower Office, Region II, 26 Federal Plaza, Room 845D, New York, NY 10007.

EPA, Regional Manpower Office, Region III, Sixth and Walnut Streets, Philadelphia, PA 19106

EPA, Regional Manpower Office, Region IV, 1421 Peachtree Street, NE., 4th floor, Atlanta, GA 30309.

EPA, Regional Manpower Office, Region V, 1 North Wacker Drive, Chicago, IL 60606.

EPA, Regional Manpower Office, Region VI, 1600 Patterson, Suite 1100, Dallas, TX 75201.

EPA, Regional Manpower Office, Region VII, Room 249, 1735 Baltimore Avenue, Kansas City, MO 64108.

EPA, Regional Manpower Office, Region VIII, Suite 900, 1860 Lincoln Street, Denver, CO 80203.

EPA, Regional Manpower Office, Region IX, 100 California Street, San Francisco, CA 94111.

EPA, Regional Manpower Office, Region X, 1200 Sixth Avenue, Seattle, WA 98101.

§ 5.5 Procedure for payment.

Applications for direct training courses shall be completed and submitted in accordance with the instructions issued by the respective national program and/or regional offices. Fee payment in the amount indicated by the course announcement shall accompany completed applications (except in the case of waiver requests as described in § 5.75).

§ 5.6

All applications for field courses will be submitted in a timely manner by the sponsoring agency. Expenses will be noted and charges assessed the sponsoring agency after the course is conducted. The charge will be payable upon submission. All applicants shall make payment by check, payable to the U.S. Environmental Protection Agency, except applicants from Federal, State, and local agencies may send a purchase order of other acceptable financial commitment. Such financial commitment statements shall include information as to the agency and account number to be charged and other necessary information for billing purposes.

§ 5.6 Refunds.

An applicant may withdraw his application and receive full reimbursement of his fee provided that he notifies the appropriate registration office in writing no later than 10 days before commencement of the course for which he has registered.

§ 5.7 Waiver of fee.

Waivers of the full tuition fee may be granted on a limited basis. Each waiver request must be justified and considered by cognitive EPA units on: (a) Severity of the pollution problem in the area in which the applicant employee is working; (b) bona-fide administrative or legal constraints of the applicant agency to pay the reduced fee; (c) service, resulting from the training that will be provided as a benefit to the Federal Government. No waivers will be granted for field courses. Waivers are provided as a transitional easement for exceptional cases and will not be granted after July 1, 1975.

§ 5.8 Appeal of waiver denial.

Waiver denials may be appealed to the Office of Education and Manpower Planning, Washington, DC 20460, to adjudicate and expedite agency review. Appeal submissions should include copies of original application and justification for waiver, EPA registration office denial correspondence, and other pertinent information supporting the request for waiver.

PART 6—PROCEDURES FOR IMPLEMENTING THE REQUIREMENTS OF THE COUNCIL ON ENVIRONMENTAL QUALITY ON THE NATIONAL ENVIRONMENTAL POLICY ACT

Subpart A—General

Subpart B—Content of EISs

Subpart C—Coordination With Other Environmental Review and Consultation Requirements

Subpart D—Public and Other Federal Agency Involvement

Subpart E—Environmental Review Procedures for Wastewater Treatment Construction Grants Program

Subpart F—Environmental Review Procedures for the New Source NPDES Program

Subpart G—Environmental Review Procedures for Office of Research and Development Projects

Subpart H—Environmental Review Procedures for Solid Waste Demonstration Projects

Subpart I—Environmental Review Procedures for EPA Facility Support Activities

Subpart J—Assessing the Environmental Effects Abroad of EPA Actions

AUTHORITY: 42 U.S.C. 4321 *et seq.*, 7401-7671q; 40 CFR part 1500.

SOURCE: 44 FR 64177, Nov. 6, 1979, unless otherwise noted.

EDITORIAL NOTE: Nomenclature changes affecting part 6 appear at 50 FR 26315, June 25, 1985.

Subpart A—General

§ 6.100 Purpose and policy.

(a) The National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 *et seq.*, as implemented by Executive Orders 11514 and 11991 and the Council on Environmental Quality (CEQ) Regulations of November 29, 1978 (43 FR 55978) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects of proposed actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible. The Environmental Protection Agency (EPA) shall integrate these NEPA factors as early in the Agency planning processes as possible. The environmental review process shall be the focal point to assure NEPA considerations are taken into account. To the extent applicable, EPA shall prepare environmental impact statements (EISs) on those major actions determined to have significant impact on the quality of the human environment. This part takes into account the EIS exemptions set forth under section 511(c)(1) of the Clean Water Act (Pub. L. 92–500) and section 7(c)(1) of the Energy Supply and Environmental Coordination Act of 1974 (Pub. L. 93–319).

(b) This part establishes EPA policy and procedures for the identification and analysis of the environmental impacts of EPA-related activities and the preparation and processing of EISs.

§ 6.101 Definitions.

(a) *Terminology.* All terminology used in this part will be consistent with the terms as defined in 40 CFR part 1508 (the CEQ Regulations). Any qualifications will be provided in the definitions set forth in each subpart of this regulation.

(b) The term *CEQ Regulations* means the regulations issued by the Council on Environmental Quality on November 29, 1978 (see 43 FR 55978), which implement Executive Order 11991. The CEQ Regulations will often be referred to throughout this regulation by reference to 40 CFR part 1500 *et al.*

(c) The term *environmental review* means the process whereby an evaluation is undertaken by EPA to determine whether a proposed Agency action may have a significant impact on the environment and therefore require the preparation of the EIS.

(d) The term *environmental information document* means any written analysis prepared by an applicant, grantee or contractor describing the environmental impacts of a proposed action. This document will be of sufficient scope to enable the responsible official to prepare an environmental assessment as described in the remaining subparts of this regulation.

(e) The term *grant* as used in this part means an award of funds or other assistance by a written grant agreement or cooperative agreement under 40 CFR chapter I, subpart B.

§ 6.102 Applicability.

(a) *Administrative actions covered.* This part applies to the activities of EPA in accordance with the outline of the subparts set forth below. Each subpart describes the detailed environmental review procedures required for each action.

(1) Subpart A sets forth an overview of the regulation. Section 6.102(b) describes the requirements for EPA legislative proposals.

(2) Subpart B describes the requirements for the content of an EIS prepared pursuant to subparts E, F, G, H, and I.

(3) Subpart C describes the requirements for coordination of all environmental laws during the environmental review undertaken pursuant to subparts E, F, G, H, and I.

(4) Subpart D describes the public information requirements which must be undertaken in conjunction with the environmental review requirements under subparts E, F, G, H, and I.

(5) Subpart E describes the environmental review requirements for the wastewater treatment construction grants program under Title II of the Clean Water Act.

(6) Subpart F describes the environmental review requirements for new source National Pollutant Discharge Elimination System (NPDES) permits under section 402 of the Clean Water Act.

(7) Subpart G describes the environmental review requirements for research and development programs undertaken by the Agency.

(8) Subpart H describes the environmental review requirements for solid waste demonstration projects undertaken by the Agency.

(9) Subpart I describes the environmental review requirements for construction of special purpose facilities and facility renovations by the Agency.

(b) *Legislative proposals.* As required by the CEQ Regulations, legislative EISs are required for any legislative proposal developed by EPA which significantly affects the quality of the human environment. A preliminary draft EIS shall be prepared by the responsible EPA office concurrently with the development of the legislative proposal and contain information required under subpart B. The EIS shall be processed in accordance with the requirements set forth under 40 CFR 1506.8.

(c) *Application to ongoing activities*—(1) *General.* The effective date for these regulations is December 5, 1979. These regulations do not apply to an EIS or supplement to that EIS if the draft EIS was filed with the Office of External Affairs, (OEA) before July 30, 1979. No completed environmental documents need be redone by reason of these regulations.

(2) With regard to activities under subpart E, these regulations shall apply to all EPA environmental review procedures effective December 15, 1979. However, for facility plans begun before December 15, 1979, the responsible official shall impose no new requirements on the grantee. Such grantees shall comply with requirements applicable before the effective date of this regulation. Notwithstanding the above, this regulation shall apply to any facility plan submitted to EPA after September 30, 1980.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982]

§ 6.103 Responsibilities.

(a) *General responsibilities.* (1) The responsible official's duties include:

(i) Requiring applicants, contractors, and grantees to submit environmental information documents and related documents and assuring that environmental reviews are conducted on proposed EPA projects at the earliest possible point in EPA's decision-making process. In this regard, the responsible official shall assure the early involvement and availability of information for private applicants and other non-Federal entities requiring EPA approvals.

(ii) When required, assuring that adequate draft EISs are prepared and distributed at the earliest possible point in EPA's decision-making process, their internal and external review is coordinated, and final EISs are prepared and distributed.

(iii) When an EIS is not prepared, assuring documentation of the decision to grant a categorical exclusion, or assuring that findings of no significant impact (FNSIs) and environmental assessments are prepared and distributed for those actions requiring them.

(iv) Consulting with appropriate officials responsible for other environmental laws set forth in subpart C.

(v) Consulting with the Office of External Affairs (OEA) on actions involving unresolved conflicts concerning this part or other Federal agencies.

(vi) When required, assuring that public participation requirements are met.

(2) *Office of External Affairs duties include:* (i) Supporting the Administrator in providing EPA policy guidance and assuring that EPA offices establish and maintain adequate administrative procedures to comply with this part.

(ii) Monitoring the overall timeliness and quality of the EPA effort to comply with this part.

(iii) Providing assistance to responsible officials as required, i.e., preparing guidelines describing the scope of environmental information required by private applicants relating to their proposed actions.

(iv) Coordinating the training of personnel involved in the review and preparation of EISs and other associated documents.

(v) Acting as EPA liaison with the Council on Environmental Quality and other Federal and State entities on matters of EPA policy and administrative mechanisms to facilitate external review of EISs, to determine lead agency and to improve the uniformity of the NEPA procedures of Federal agencies.

(vi) Advising the Administrator and Deputy Administrator on projects which involve more than one EPA office, are highly controversial, are nationally significant, or *pioneer* EPA policy, when these projects have had or should have an EIS prepared on them.

(vii) Carrying out administrative duties relating to maintaining status of EISs within EPA, i.e., publication of notices of intent in the FEDERAL REGISTER and making available to the public status reports on EISs and other elements of the environmental review process.

(3) *Office of an Assistant Administrator duties include:* (i) Providing specific policy guidance to their respective offices and assuring that those offices establish and maintain adequate administrative procedures to comply with this part.

(ii) Monitoring the overall timeliness and quality of their respective office's efforts to comply with this part.

(iii) Acting as liaison between their offices and the OEA and between their offices and other Assistant Administrators or Regional Administrators on matters of agencywide policy and procedures.

(iv) Advising the Administrator and Deputy Administrator through the OEA on projects or activities within their respective areas of responsibilities which involve more than one EPA office, are highly controversial, are nationally significant, or *pioneer* EPA policy, when these projects will have or should have an EIS prepared on them.

(v) Pursuant to § 6.102(b) of this subpart, preparing legislative EISs as appropriate on EPA legislative initiatives.

(4) The Office of Policy, Planning, and Evaluation duties include: responsibilities for coordinating the preparation of EISs required on EPA legislative proposals in accordance with § 6.102(b).

(b) *Responsibilities for subpart E*—(1) *Responsible official.* The responsible official for EPA actions covered by this subpart is the Regional Administrator.

(2) *Assistant Administrator.* The responsibilities of the Assistant Administrator, as described in § 6.103(a)(3), shall be assumed by the Assistant Administrator for Water for EPA actions covered by this subpart.

(c) *Responsibilities for subpart F*—(1) *Responsible official.* The responsible official for activities covered by this subpart is the Regional Administrator.

(2) *Assistant Administrator.* The responsibilities of the Assistant Administrator, as described in § 6.103(a)(3), shall be assumed by the Assistant Administrator for Enforcement and Compliance Monitoring for EPA actions covered by this subpart.

(d) *Responsibilities for subpart G.* The Assistant Administrator for Research and Development will be the responsible official for activities covered by this subpart.

(e) *Responsibilities for subpart H.* The Assistant Administrator for Solid Waste and Emergency Response will be the responsible official for activities covered by this subpart.

(f) *Responsibilities for subpart I.* The responsible official for new construction and modification of special purpose facilities is as follows:

(1) The Chief, Facilities Engineering and Real Estate Branch, Facilities and Support Services Division, Office of the Assistant Administrator for Administration and Resource Management (OARM) shall be the responsible official on all new construction of special purpose facilities and on all new modification projects for which the Facilities Engineering and Real Estate Branch has received a funding allowance and for all other field components not covered elsewhere in paragraph (f) of this section.

(2) The Regional Administrator shall be the responsible official on all improvement and modification projects for which the regional office has received the funding allowance.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982; 50 FR 26315, June 25, 1985; 51 FR 32609, Sept. 12, 1986]

§ 6.104 Early involvement of private parties.

As required by 40 CFR 1501.2(d) and § 6.103(a)(3)(v) of this regulation, responsible officials must ensure early involvement of private applicants or other non-Federal entities in the environmental review process related to EPA grant and permit actions set forth under subparts E, F, G, and H. The responsible official in conjunction with OEA shall:

(a) Prepare where practicable, generic guidelines describing the scope and level of environmental information required from applicants as a basis for evaluating their proposed actions, and make these guidelines available upon request.

(b) Provide such guidance on a project-by-project basis to any applicant seeking assistance.

(c) Upon receipt of an application for agency approval, or notification that an application will be filed, consult as required with other appropriate parties to initiate and coordinate the necessary environmental analyses.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982]

§ 6.105 Synopsis of environmental review procedures.

(a) *Responsible official.* The responsible official shall utilize a systematic, interdisciplinary approach to integrate natural and social sciences as well as environmental design arts in planning programs and making decisions which are subject to environmental review. The respective staffs may be supplemented by professionals from other agencies (see 40 CFR 1501.6) or consultants whenever in-house capabilities are insufficiently interdisciplinary.

(b) *Environmental information documents (EID).* Environmental information documents (EIDs) must be prepared by applicants, grantees, or permittees and submitted to EPA as required in subparts E, F, G, H, and I. EIDs will be of sufficient scope to enable the responsible official to prepare an environmental assessment as described under § 6.105(d) of this part and subparts E through I. EIDs will not have to be prepared for actions where a categorical exclusion has been granted.

(c) *Environmental reviews.* Environmental reviews shall be conducted on the EPA activities outlined in § 6.102 of this part and set forth under subparts E, F, G, H and I. This process shall consist of a study of the action to identify and evaluate the related environmental impacts. The process shall include a review of any related environmental information document to determine whether any significant impacts are anticipated and whether any changes can be made in the proposed

action to eliminate significant adverse impacts; when an EIS is required, EPA has overall responsibility for this review, although grantees, applicants, permittees or contractors will contribute to the review through submission of environmental information documents.

(d) *Environmental assessments.* Environmental assessments (i.e., concise public documents for which EPA is responsible) are prepared to provide sufficient data and analysis to determine whether an EIS or finding of no significant impact is required. Where EPA determines that a categorical exclusion is appropriate or an EIS will be prepared, there is no need to prepare a formal environmental assessment.

(e) *Notice of intent and EISs.* When the environmental review indicates that a significant environmental impact may occur and significant adverse impacts can not be eliminated by making changes in the project, a notice of intent to prepare an EIS shall be published in the FEDERAL REGISTER, scoping shall be undertaken in accordance with 40 CFR 1501.7, and a draft EIS shall be prepared and distributed. After external coordination and evaluation of the comments received, a final EIS shall be prepared and disseminated. The final EIS shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(f) *Finding of no significant impact* (FNSI). When the environmental review indicates no significant impacts are anticipated or when the project is altered to eliminate any significant adverse impacts, a FNSI shall be issued and made available to the public. The environmental assessment shall be included as a part of the FNSI. The FNSI shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(g) *Record of decision.* At the time of its decision on any action for which a final EIS has been prepared, the responsible official shall prepare a concise public record of the decision. The record of decision shall describe those mitigation measures to be undertaken which will make the selected alternative environmentally acceptable. Where the final EIS recommends the alternative which is ultimately chosen by the responsible official, the record of decision may be extracted from the executive summary to the final EIS.

(h) *Monitoring.* The responsible official shall provide for monitoring to assure that decisions on any action where a final EIS has been prepared are properly implemented. Appropriate mitigation measures shall be included in actions undertaken by EPA.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26315, June 25, 1985; 51 FR 32610, Sept. 12, 1986]

§ 6.106 Deviations.

(a) *General.* The Assistant Administrator, OEA, is authorized to approve deviations from these regulations. Deviation approvals shall be made in writing by the Assistant Administrator, OEA.

(b) *Requirements.* (1) Where emergency circumstances make it necessary to take an action with significant environmental impact without observing the substantive provisions of these regulations or the CEQ Regulations, the responsible official shall notify the Assistant Administrator, OEA, before taking such action. The responsible official shall consider to the extent possible alternative arrangements; such arrangements will be limited to actions necessary to control the immediate impacts of the emergency; other actions remain subject to the environmental review process. The Assistant Administrator, OEA, after consulting CEQ, will inform the responsible official, as expeditiously as possible of the disposition of his request.

(2) Where circumstances make it necessary to take action without observing procedural provisions of these regulations, the responsible official shall notify the Assistant Administrator, OEA, before taking such action. If the Assistant Administrator, OEA, determines such a deviation would be in the best interest of the Government, he shall inform the responsible official, as soon as possible, of his approval.

(3) The Assistant Administrator, OEA, shall coordinate his action on a deviation under § 6.106(b)(1) or (2) of this part with the Director, Grants Administration Division, Office of Planning and Management, for any required grant-related deviation under 40 CFR 30.1000, as well as the appropriate Assistant Administrator.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982]

§ 6.107 Categorical exclusions.

(a) *General.* Categories of actions which do not individually, cumulatively over time, or in conjunction with other Federal, State, local, or private actions have a significant effect on the quality of the human environment and which have been identified as having no such effect based on the requirements in § 6.505, may be exempted from the substantive environmental review requirements of this part. Environmental information documents and environmental assessments or environmental impact statements will not be required for excluded actions.

(b) *Determination.* The responsible official shall determine whether an action is eligible for a categorical exclusion as established by general criteria in § 6.107 (d) and (e) and any applicable criteria in program specific subparts of part 6 of this title. A determination shall be made as early as

possible following the receipt of an application. The responsible official shall document the decision to issue or deny an exclusion as soon as practicable following review in accordance with § 6.400(f). For qualified actions, the documentation shall include the application, a brief description of the proposed action, and a brief statement of how the action meets the criteria for a categorical exclusion without violating criteria for not granting an exclusion.

(c) *Revocation.* The responsible official shall revoke a categorical exclusion and shall require a full environmental review if, subsequent to the granting of an exclusion, the responsible official determines that: (1) The proposed action no longer meets the requirements for a categorical exclusion due to changes in the proposed action; or (2) determines from new evidence that serious local or environmental issues exist; or (3) that Federal, State, local, or tribal laws are being or may be violated.

(d) *General categories of actions eligible for exclusion.* Actions consistent with any of the following categories are eligible for a categorical exclusion:

(1) Actions which are solely directed toward minor rehabilitation of existing facilities, functional replacement of equipment, or towards the construction of new ancillary facilities adjacent or appurtenant to existing facilities;

(2) Other actions specifically allowed in program specific subparts of this regulation; or

(3) Other actions developed in accordance with paragraph (f) of this section.

(e) *General criteria for not granting a categorical exclusion.* (1) The full environmental review procedures of this part must be followed if undertaking an action consistent with allowable categories in paragraph (d) of this section may involve serious local or environmental issues, or meets any of the criteria listed below:

(i) The action is known or expected to have a significant effect on the quality of the human environment, either individually, cumulatively over time, or in conjunction with other federal, State, local, tribal or private actions;

(ii) The action is known or expected to directly or indirectly affect:

(A) Cultural resource areas such as archaeological and historic sites in accordance with § 6.301,

(B) Endangered or threatened species and their critical habitats in accordance with § 6.302 or State lists,

(C) Environmentally important natural resource areas such as floodplains, wetlands, important farmlands, aquifer recharge zones in accordance with § 6.302, or

(D) Other resource areas identified in supplemental guidance issued by the OEA;

(iii) The action is known or expected not to be cost-effective or to cause significant public controversy; or

(iv) Appropriate specialized program specific criteria for not granting an exclusion found in other subparts of this regulation are applicable to the action.

(2) Notwithstanding the provisions of paragraph (d) of this section, if any of the conditions cited in paragraph (e)(1) of this section exist, the responsible official shall ensure:

(i) That a categorical exclusion is not granted or, if previously granted, that it is revoked according to paragraph (c) of this section;

(ii) That an adequate EID is prepared; and

(iii) That either an environmental assessment and FNSI or a notice of intent for an EIS and ROD is prepared and issued.

(f) *Developing new categories of excluded actions.* The responsible official, or other interested parties, may request that a new general or specialized program specific category of excluded actions be created, or that an existing category be amended or deleted. The request shall be in writing to the Assistant Administrator, OEA, and shall contain adequate information to support the request. Proposed new categories shall be developed by OEA and published in the FEDERAL REGISTER as a proposed rule, amending paragraph (d) of this section when the proposed new category applies to all eligible programs or, amending appropriate paragraphs in other subparts of this part when the proposed new category applies to one specific program. The publication shall include a thirty (30) day public comment period. In addition to criteria for specific programs listed in other subparts of this part, the following general criteria shall be considered in evaluating proposals for new categories:

(1) Any action taken seldom results in the effects identified in general or specialized program specific criteria identified through the application of criteria for not granting a categorical exclusion;

(2) Based upon previous environmental reviews, actions consistent with the proposed category have not required the preparation of an EIS; and

(3) Whether information adequate to determine if a potential action is consistent with the proposed category will normally be available when needed.

[50 FR 26315, June 25, 1985, as amended at 51 FR 32610, Sept. 12, 1986]

§ 6.108 Criteria for initiating an EIS.

The responsible official shall assure that an EIS will be prepared and issued for actions under subparts E, G, H, and I when it is determined that any of the following conditions exist:

(a) The Federal action may significantly affect the pattern and type of land use (industrial, com-

mercial, agricultural, recreational, residential) or growth and distribution of population;

(b) The effects resulting from any structure or facility constructed or operated under the proposed action may conflict with local, regional or State land use plans or policies;

(c) The proposed action may have significant adverse effects on wetlands, including indirect and cumulative effects, or any major part of a structure or facility constructed or operated under the proposed action may be located in wetlands;

(d) The proposed action may significantly affect threatened and endangered species or their habitats identified in the Department of the Interior's list, in accordance with § 6.302, or a State's list, or a structure or a facility constructed or operated under the proposed action may be located in the habitat;

(e) Implementation of the proposed action or plan may directly cause or induce changes that significantly:

(1) Displace population;

(2) Alter the character of existing residential areas;

(3) Adversely affect a floodplain; or

(4) Adversely affect significant amounts of important farmlands as defined in requirements in § 6.302(c), or agricultural operations on this land.

(f) The proposed action may, directly, indirectly or cumulatively have significant adverse effect on parklands, preserves, other public lands or areas of recognized scenic, recreational, archaeological, or historic value; or

(g) The Federal action may directly or through induced development have a significant adverse effect upon local ambient air quality, local ambient noise levels, surface water or groundwater quality or quantity, water supply, fish, shellfish, wildlife, and their natural habitats.

[50 FR 26315, June 25, 1985, as amended at 51 FR 32611, Sept. 12, 1986]

Subpart B—Content of EISs

§ 6.200 The environmental impact statement.

Preparers of EISs must conform with the requirements of 40 CFR part 1502 in writing EISs.

§ 6.201 Format.

The format used for EISs shall encourage good analysis and clear presentation of alternatives, including the proposed action, and their environmental, economic and social impacts. The following standard format for EISs should be used unless the responsible official determines that there is a compelling reason to do otherwise:

(a) Cover sheet;

(b) Executive Summary;

(c) Table of contents;

(d) Purpose of and need for action;

(e) Alternatives including proposed action;

(f) Affected environment;

(g) Environmental consequences of the alternatives;

(h) Coordination (includes list of agencies, organizations, and persons to whom copies of the EIS are sent);

(i) List of preparers;

(j) Index (commensurate with complexity of EIS);

(k) Appendices.

§ 6.202 Executive summary.

The executive summary shall describe in sufficient detail (10–15 pages) the critical facets of the EIS so that the reader can become familiar with the proposed project or action and its net effects. The executive summary shall focus on:

(a) The existing problem;

(b) A brief description of each alternative evaluated (including the preferred and no action alternatives) along with a listing of the environmental impacts, possible mitigation measures relating to each alternative, and any areas of controversy (including issues raised by governmental agencies and the public); and

(c) Any major conclusions.

A comprehensive summary may be prepared in instances where the EIS is unusually long in nature. In accordance with 40 CFR 1502.19, the comprehensive summary may be circulated in lieu of the EIS; however, both documents shall be distributed to any Federal, State and local agencies who have EIS review responsibilities and also shall be made available to other interested parties upon request.

§ 6.203 Body of EISs.

(a) *Purpose and need.* The EIS shall clearly specify the underlying purpose and need to which EPA is responding. If the action is a request for a permit or a grant, the EIS shall clearly specify the goals and objectives of the applicant.

(b) *Alternatives including the proposed action.* In addition to 40 CFR 1502.14, the EIS shall discuss:

(1) *Alternatives considered by the applicant.* This section shall include a *balanced* description of each alternative considered by the applicant. These discussions shall include size and location of facilities, land requirements, operation and maintenance requirements, auxiliary structures such as pipelines or transmission lines, and construction schedules. The alternative of no action shall be discussed and the applicant's preferred alternative(s) shall be identified. For alternatives which were eliminated from detailed study, a brief

discussion of the reasons for their having been eliminated shall be included.

(2) *Alternatives available to EPA.* EPA alternatives to be discussed shall include: (i) Taking an action; or (ii) taking an action on a modified or alternative project, including an action not considered by the applicant; and (iii) denying the action.

(3) *Alternatives available to other permitting agencies.* When preparing a joint EIS, and if applicable, the alternatives available to other Federal and/or State agencies shall be discussed.

(4) *Identifying preferred alternative.* In the final EIS, the responsible official shall signify the preferred alternative.

(c) *Affected environment and environmental consequences of the alternatives.* The affected environment on which the evaluation of each alternative shall be based includes, for example, hydrology, geology, air quality, noise, biology, socioeconomics, energy, land use, and archeology and historic subjects. The discussion shall be structured so as to present the total impacts of each alternative for easy comparison among all alternatives by the reader. The effects of a ''no action'' alternative should be included to facilitate reader comparison of the beneficial and adverse impacts of other alternatives to the applicant doing nothing. A description of the environmental setting shall be included in the ''no action'' alternative for the purpose of providing needed background information. The amount of detail in describing the affected environment shall be commensurate with the complexity of the situation and the importance of the anticipated impacts.

(d) *Coordination.* The EIS shall include:

(1) The objections and suggestions made by local, State, and Federal agencies before and during the EIS review process must be given full consideration, along with the issues of public concern expressed by individual citizens and interested environmental groups. The EIS must include discussions of any such comments concerning our actions, and the author of each comment should be identified. If a comment has resulted in a change in the project or the EIS, the impact statement should explain the reason.

(2) Public participation through public hearings or scoping meetings shall also be included. If a public hearing has been held prior to the publication of the EIS, a summary of the transcript should be included in this section. For the public hearing which shall be held after the publication of the draft EIS, the date, time, place, and purpose shall be included here.

(3) In the final EIS, a summary of the coordination process and EPA responses to comments on the draft EIS shall be included.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26316, June 25, 1985]

§ 6.204 Incorporation by reference.

In addition to 40 CFR 1502.21, material incorporated into an EIS by reference shall be organized to the extent possible into a Supplemental Information Document and be made available for review upon request. No material may be incorporated by reference unless it is reasonably available for inspection by potentially interested persons within the period allowed for comment.

§ 6.205 List of preparers.

When the EIS is prepared by contract, either under direct contract to EPA or through an applicant's or grantee's contractor, the responsible official must independently evaluate the EIS prior to its approval and take responsibility for its scope and contents. The EPA officials who undertake this evaluation shall also be described under the list of preparers.

Subpart C—Coordination With Other Environmental Review and Consultation Requirements

§ 6.300 General.

Various Federal laws and executive orders address specific environmental concerns. The responsible official shall integrate to the greatest practicable extent the applicable procedures in this subpart during the implementation of the environmental review process under Subparts E through I. This subpart presents the central requirements of these laws and executive orders. It refers to the pertinent authority and regulations or guidance that contain the procedures. These laws and executive orders establish review procedures independent of NEPA requirements. The responsible official shall be familiar with any other EPA or appropriate agency procedures implementing these laws and executive orders.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26316, June 25, 1985]

§ 6.301 Landmarks, historical, and archeological sites.

EPA is subject to the requirements of the Historic Sites Act of 1935, 16 U.S.C. 461 *et seq.*, the National Historic Preservation Act of 1966, as amended, 16 U.S.C. 470 *et seq.*, the Archaeological and Historic Preservation Act of 1974, 16 U.S.C. 469 *et seq.*, and Executive Order 11593, entitled ''Protection and Enhancement of the Cultural Environment.'' These statutes, regulations and executive orders establish review procedures independent of NEPA requirements.

(a) *National natural landmarks.* Under the Historic Sites Act of 1935, the Secretary of the Inte-

rior is authorized to designate areas as national natural landmarks for listing on the National Registry of Natural Landmarks. In conducting an environmental review of a proposed EPA action, the responsible official shall consider the existence and location of natural landmarks using information provided by the National Park Service pursuant to 36 CFR 62.6(d) to avoid undesirable impacts upon such landmarks.

(b) *Historic, architectural, archeological, and cultural sites.* Under section 106 of the National Historic Preservation Act and Executive Order 11593, if an EPA undertaking affects any property with historic, architectural, archeological or cultural value that is listed on or eligible for listing on the National Register of Historic Places, the responsible official shall comply with the procedures for consultation and comment promulgated by the Advisory Council on Historic Preservation in 36 CFR part 800. The responsible official must identify properties affected by the undertaking that are potentially eligible for listing on the National Register and shall request a determination of eligibility from the Keeper of the National Register, Department of the Interior, under the procedures in 36 CFR part 63.

(c) *Historic, prehistoric and archeological data.* Under the Archeological and Historic Preservation Act, if an EPA activity may cause irreparable loss or destruction of significant scientific, prehistoric, historic or archeological data, the responsible official or the Secretary of the Interior is authorized to undertake data recovery and preservation activities. Data recovery and preservation activities shall be conducted in accordance with implementing procedures promulgated by the Secretary of the Interior. The National Park Service has published technical standards and guidelines regarding archeological preservation activities and methods at 48 FR 44716 (September 29, 1983).

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26316, June 25, 1985]

§ 6.302 Wetlands, floodplains, important farmlands, coastal zones, wild and scenic rivers, fish and wildlife, and endangered species.

The following procedures shall apply to EPA administrative actions in programs to which the pertinent statute or executive order applies.

(a) *Wetlands protection.* Executive Order 11990, Protection of Wetlands, requires Federal agencies conducting certain activities to avoid, to the extent possible, the adverse impacts associated with the destruction or loss of wetlands and to avoid support of new construction in wetlands if a practicable alternative exists. EPA's Statement of Procedures on Floodplain Management and Wetlands Protection (dated January 5, 1979, incorporated as appendix A hereto) requires EPA programs to determine if proposed actions will be in or will affect wetlands. If so, the responsible official shall prepare a floodplains/wetlands assessment, which will be part of the environmental assessment or environmental impact statement. The responsible official shall either avoid adverse impacts or minimize them if no practicable alternative to the action exists.

(b) *Floodplain management.* Executive Order 11988, Floodplain Management, requires Federal agencies to evaluate the potential effects of actions they may take in a floodplain to avoid, to the extent possible, adverse effects associated with direct and indirect development of a floodplain. EPA's Statement of Procedures on Floodplain Management and Wetlands Protection (dated January 5, 1979, incorporated as appendix A hereto), requires EPA programs to determine whether an action will be located in or will affect a floodplain. If so, the responsible official shall prepare a floodplain/wetlands assessment. The assessment will become part of the environmental assessment or environmental impact statement. The responsible official shall either avoid adverse impacts or minimize them if no practicable alternative exists.

(c) *Important farmlands.* It is EPA's policy as stated in the EPA Policy To Protect Environmentally Significant Agricultural Lands, dated September 8, 1978, to consider the protection of the Nation's significant/important agricultural lands from irreversible conversion to uses which result in its loss as an environmental or essential food production resource. In addition the Farmland Protection Policy Act, (FPPA) 7 U.S.C. 4201 *et seq.*, requires federal agencies to use criteria developed by the Soil Conservation Service, U.S. Department of Agriculture, to:

(1) Identify and take into account the adverse effects of their programs on the preservation of farmlands from conversion to other uses; (2) consider alternative actions, as appropriate, that could lessen such adverse impacts; and (3) assure that their programs, to the extent possible, are compatible with State and local government and private programs and policies to protect farmlands. If an EPA action may adversely impact farmlands which are classified prime, unique or of State and local importance as defined in the Act, the responsible official shall in all cases apply the evaluative criteria promulgated by the U.S. Department of Agriculture at 7 CFR part 658. If categories of important farmlands, which include those defined in both the FPPA and the EPA policy, are identified in the project study area, both direct and indirect effects of the undertaking on the remaining farms and farm support services within the project area and immediate environs shall be evaluated. Ad-

verse effects shall be avoided or mitigated to the extent possible.

(d) *Coastal zone management.* The Coastal Zone Management Act, 16 U.S.C. 1451 *et seq.,* requires that all Federal activities in coastal areas be consistent with approved State Coastal Zone Management Programs, to the maximum extent possible. If an EPA action may affect a coastal zone area, the responsible official shall assess the impact of the action on the coastal zone. If the action significantly affects the coastal zone area and the State has an approved coastal zone management program, a consistency determination shall be sought in accordance with procedures promulgated by the Office of Coastal Zone Management in 15 CFR part 930.

(e) *Wild and scenic rivers.* (1) The Wild and Scenic Rivers Act, 16 U.S.C. 1274 *et seq.,* establishes requirements applicable to water resource projects affecting wild, scenic or recreational rivers within the National Wild and Scenic Rivers system as well as rivers designated on the National Rivers Inventory to be studied for inclusion in the national system. Under the Act, a federal agency may not assist, through grant, loan, license or otherwise, the construction of a water resources project that would have a direct and adverse effect on the values for which a river in the National System or study river on the National Rivers Inventory was established, as determined by the Secretary of the Interior for rivers under the jurisdiction of the Department of the Interior and by the Secretary of Agriculture for rivers under the jurisdiction of the Department of Agriculture. Nothing contained in the foregoing sentence, however, shall:

(i) Preclude licensing of, or assistance to, developments below or above a wild, scenic or recreational river area or on any stream tributary thereto which will not invade the area or unreasonably diminish the scenic, recreational, and fish and wildlife values present in the area on October 2, 1968; or

(ii) Preclude licensing of, or assistance to, developments below or above a study river or any stream tributary thereto which will not invade the area or diminish the scenic, recreational and fish and wildlife values present in the area on October 2, 1968.

(2) The responsible official shall:

(i) Determine whether there are any wild, scenic or study rivers on the National Rivers Inventory or in the planning area, and

(ii) Not recommend authorization of any water resources project that would have a direct and adverse effect on the values for which such river was established, as determined by the administering Secretary in request of appropriations to begin construction of any such project, whether heretofore or hereafter authorized, without advising the administering Secretary, in writing of this intention at least sixty days in advance, and without specifically reporting to the Congress in writing at the time the recommendation or request is made in what respect construction of such project would be in conflict with the purposes of the Wild and Scenic Rivers Act and would affect the component and the values to be protected by the Responsible Official under the Act.

(3) Applicable consultation requirements are found in section 7 of the Act. The Department of Agriculture has promulgated implementing procedures, under section 7 at 36 CFR part 297, which apply to water resource projects located within, above, below or outside a wild and scenic river or study river under the Department's jurisdiction.

(f) *Barrier islands.* The Coastal Barrier Resources Act, 16 U.S.C. 3501 *et seq.,* generally prohibits new federal expenditures or financial assistance for any purpose within the Coastal Barrier Resources System on or after October 18, 1982. Specified exceptions to this prohibition are allowed only after consultation with the Secretary of the Interior. The responsible official shall ensure that consultation is carried out with the Secretary of the Interior before making available new expenditures or financial assistance for activities within areas covered by the Coastal Barriers Resources Act in accord with the U.S. Fish and Wildlife Service published guidelines defining new expenditures and financial assistance, and describing procedures for consultation at 48 FR 45664 (October 6, 1983).

(g) *Fish and wildlife protection.* The Fish and Wildlife Coordination Act, 16 U.S.C. 661 *et seq.,* requires Federal agencies involved in actions that will result in the control or structural modification of any natural stream or body of water for any purpose, to take action to protect the fish and wildlife resources which may be affected by the action. The responsible official shall consult with the Fish and Wildlife Service and the appropriate State agency to ascertain the means and measures necessary to mitigate, prevent and compensate for project-related losses of wildlife resources and to enhance the resources. Reports and recommendations of wildlife agencies should be incorporated into the environmental assessment or environmental impact statement. Consultation procedures are detailed in 16 U.S.C. 662.

(h) *Endangered species protection.* Under the Endangered Species Act, 16 U.S.C. 1531 *et seq.,* Federal agencies are prohibited from jeopardizing threatened or endangered species or adversely modifying habitats essential to their survival. The responsible official shall identify all designated endangered or threatened species or their habitat that may be affected by an EPA action. If listed spe-

cies or their habitat may be affected, formal consultation must be undertaken with the Fish and Wildlife Service or the National Marine Fisheries Service, as appropriate. If the consultation reveals that the EPA activity may jeopardize a listed species or habitat, mitigation measures should be considered. Applicable consultation procedures are found in 50 CFR part 402.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26316, June 25, 1985]

§ 6.303 Air quality.

(a) The Clean Air Act, as amended in 1990, 42 U.S.C. 7476(c), requires Federal actions to conform to any State implementation plan approved or promulgated under section 110 of the Act. For EPA actions, the applicable conformity requirements specified in 40 CFR part 51, subpart W, 40 CFR part 93, subpart B, and the applicable State implementation plan must be met.

(b) In addition, with regard to wastewater treatment works subject to review under Subpart E of this part, the responsible official shall consider the air pollution control requirements specified in section 316(b) of the Clean Air Act, 42 U.S.C. 7616, and Agency implementation procedures.

(c)–(g) [Reserved]

[58 FR 63247, Nov. 30, 1993]

Subpart D—Public and Other Federal Agency Involvement

§ 6.400 Public involvement.

(a) *General.* EPA shall make diligent efforts to involve the public in the environmental review process consistent with program regulations and EPA policies on public participation. The responsibile official shall ensure that public notice is provided for in accordance with 40 CFR 1506.6(b) and shall ensure that public involvement is carried

out in accordance with EPA Public Participation Regulations, 40 CFR part 25, and other applicable EPA public participation procedures.

(b) *Publication of notices of intent.* As soon as practicable after his decision to prepare an EIS and before the scoping process, the responsible official shall send the notice of intent to interested and affected members of the public and shall request the OEA to publish the notice of intent in the FEDERAL REGISTER. The responsible official shall send to OEA the signed original notice of intent for FEDERAL REGISTER publication purposes. The scoping process should be initiated as soon as practicable in accordance with the requirements of 40 CFR 1501.7. Participants in the scoping process shall be kept informed of substantial changes which evolve during the EIS drafting process.

(c) *Public meetings or hearings.* Public meetings or hearings shall be conducted consistent with Agency program requirements. There shall be a presumption that a scoping meeting will be conducted whenever a notice of intent has been published. The responsible official shall conduct a public hearing on a draft EIS. The responsible official shall ensure that the draft EIS is made available to the public at least 30 days in advance of the hearing.

(d) *Findings of no significant impact (FNSI).* The responsible official shall allow for sufficient public review of a FNSI before it becomes effective. The FNSI and attendant publication must state that interested persons disagreeing with the decision may submit comments to EPA. The responsible official shall not take administrative action on the project for at least thirty (30) calendar days after release of the FNSI and may allow more time for response. The responsible official shall consider, fully, comments submitted on the FNSI before taking administrative action. The FNSI shall be made available to the public in accordance with the requirements and all appropriate recommendations contained in § 1506.6 of this title.

(e) *Record of Decision (ROD).* The responsible official shall disseminate the ROD to those parties which commented on the draft or final EIS.

(f) *Categorical exclusions.* (1) For categorical exclusion determinations under subpart E (Wastewater Treatment Construction Grants Program), an applicant who files for and receives a determination of categorical exclusion under § 6.107(a), or has one rescinded under § 6.107(c), shall publish a notice indicating the determination of eligibility or rescission in a local newspaper of community-wide circulation and indicate the availability of the supporting documentation for public inspection. The responsible official shall, concurrent with the publication of the notice, make the documentation as outlined in § 6.107(b) available to the public and distribute the notice of the determination to all known interested parties.

(2) For categorical exclusion determinations under other subparts of this regulation, no public notice need be issued; however, information regarding these determinations may be obtained by contacting the U.S. Environmental Protection Agency's Office of Research Program Management for ORD actions, or the Office of Federal Activities for other program actions.

[44 FR 64177, Nov. 6, 1979, as amended at 51 FR 32611, Sept. 12, 1986; 56 FR 20543, May 6, 1991]

§ 6.401 Official filing requirements.

(a) *General.* OEA is responsible for the conduct of the official filing system for EISs. This system was established as a central repository for all EISs which serves not only as means of advising the public of the availability of each EIS but provides a uniform method for the computation of minimum time periods for the review of EISs. OEA publishes a weekly notice in the FEDERAL REGISTER listing all EISs received during a given week. The 45-day and 30-day review periods for draft and final EISs, respectively, are computed from the Friday following a given reporting week. Pursuant to 40 CFR 1506.9, responsible officials shall comply with the guidelines established by OEA on the conduct of the filing system.

(b) *Minimum time periods.* No decision on EPA actions shall be made until the later of the following dates:

(1) Ninety (90) days after the date established in § 6.401(a) of this part from which the draft EIS review time period is computed.

(2) Thirty (30) days after the date established in § 6.401(a) of this part from which the final EIS review time period is computed.

(c) *Filing of EISs.* All EISs, including supplements, must be officially filed with OEA. Responsible officials shall transmit each EIS in five (5) copies to the Director, Office of Environmental Review, EIS Filing Section (A–104). OEA will provide CEQ with one copy of each EIS filed. No EIS will be officially filed by OER unless the EIS has been made available to the public. OEA will not accept unbound copies of EISs for filing.

(d) *Extensions or waivers.* The responsible official may independently extend review periods. In such cases, the responsible official shall notify OEA as soon as possible so that adequate notice may be published in the weekly FEDERAL REGISTER report. OEA upon a showing of compelling reasons of national policy may reduce the prescribed review periods. Also, OEA upon a showing by any other Federal agency of compelling reasons of national policy may extend prescribed review periods, but only after consultation with the responsible official. If the responsible official does

not concur with the extension of time, OEA may not extend a prescribed review period more than 30 days beyond the minimum prescribed review period.

(e) *Rescission of filed EISs.* The responsible official shall file EISs with OEA at the same time they are transmitted to commenting agencies and made available to the public. The responsible official is required to reproduce an adequate supply of EISs to satisfy these distribution requirements prior to filing an EIS. If the EIS is not made available, OEA will consider retraction of the EIS or revision of the prescribed review periods based on the circumstances.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982]

§ 6.402 Availability of documents.

(a) *General.* The responsible official will ensure sufficient copies of the EIS are distributed to interested and affected members of the public and are made available for further public distribution. EISs, comments received, and any underlying documents should be available to the public pursuant to the provisions of the Freedom of Information Act (5 U.S.C. 552(b)), without regard to the exclusion for interagency memoranda where such memoranda transmit comments of Federal agencies on the environmental impact of the proposed actions. To the extent practicable, materials made available to the public shall be provided without charge; otherwise, a fee may be imposed which is not more than the actual cost of reproducing copies required to be sent to another Federal agency.

(b) *Public information.* Lists of all notices, determinations and other reports/documentation, related to these notices and determinations, involving CEs, EAs, FNSIs, notices of intent, EISs, and RODs prepared by EPA shall be available for public inspection and maintained by the responsible official as a monthly status report. OEA shall maintain a comprehensive list of notices of intent and draft and final EISs provided by all responsible officials for public inspection including publication in the FEDERAL REGISTER. In addition, OEA will make copies of all EPA-prepared EISs available for public inspection; the responsible official shall do the same for any EIS he/she undertakes.

[44 FR 64177, Nov. 6, 1979, as amended at 51 FR 32611, Sept. 12, 1986]

§ 6.403 The commenting process.

(a) *Inviting comments.* After preparing a draft EIS and before preparing a final EIS, the responsible official shall obtain the comments of Federal agencies, other governmental entities and the public in accordance with 40 CFR 1503.1.

(b) *Response to comments.* The responsible official shall respond to comments in the final EIS in accordance with 40 CFR 1503.4.

§ 6.404 Supplements.

(a) *General.* The responsible official shall consider preparing supplements to draft and final EISs in accordance with 40 CFR 1502.9(c). A supplement shall be prepared, circulated and filed in the same fashion (exclusive of scoping) as draft and final EISs.

(b) *Alternative procedures.* In the case where the responsible official wants to deviate from existing procedures, OEA shall be consulted. OEA shall consult with CEQ on any alternative arrangements.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9829, Mar. 8, 1982]

Subpart E—Environmental Review Procedures for Wastewater Treatment Construction Grants Program

SOURCE: 50 FR 26317, June 25, 1985, unless otherwise noted.

§ 6.500 Purpose.

This subpart amplifies the procedures described in subparts A through D with detailed environmental review procedures for the Municipal Wastewater Treatment Works Construction Grants Program under Title II of the Clean Water Act.

§ 6.501 Definitions.

(a) *Step 1 facilities planning* means preparation of a plan for facilities as described in 40 CFR part 35, subpart E or I.

(b) *Step 2* means a project to prepare design drawings and specifications as described in 40 CFR part 35, subpart E or I.

(c) *Step 3* means a project to build a publicly owned treatment works as described in 40 CFR part 35, subpart E or I.

(d) *Step 2+3* means a project which combines preparation of design drawings and specifications as described in § 6.501(b) and building as described in § 6.501(c).

(e) *Applicant* means any individual, agency, or entity which has filed an application for grant assistance under 40 CFR part 35, subpart E or I.

(f) *Grantee* means any individual, agency, or entity which has been awarded wastewater treatment construction grant assistance under 40 CFR part 35, subpart E or I.

(g) *Responsible Official* means a Federal or State official authorized to fulfill the requirements of this subpart. The responsible federal official is

the EPA Regional Administrator and the responsible State official is as defined in a delegation agreement under 205(g) of the Clean Water Act. The responsibilities of the State official are subject to the limitations in § 6.514 of this subpart.

(h) *Approval of the facilities plan* means approval of the facilities plan for a proposed wastewater treatment works pursuant to 40 CFR part 35, subpart E or I.

§ 6.502 Applicability and limitations.

(a) *Applicability.* This subpart applies to the following actions:

(1) Approval of a facilities plan or an amendment to the plan;

(2) Award of grant assistance for a project where signficant change has occurred in the project or its impact since prior compliance with this part; and

(3) Approval of preliminary Step 3 work prior to the award of grant assistance pursuant to 40 CFR part 35, subpart E or I.

(b) *Limitations.* (1) Except as provided in § 6.504(c), all recipients of Step 1 grant assistance must comply with the requirements, steps, and procedures described in this subpart.

(2) As specified in 40 CFR 35.2113, projects that have not received Step 1 grant assistance must comply with the requirements of this subpart prior to submission of an application for Step 3 or Step 2+3 grant assistance.

(3) Except as otherwise provided in § 6.507, no step 3 or 2+3 grant assistance may be awarded for the construction of any component/portion of a proposed wastewater treatment system(s) until the responsible official has:

(i) Completed the environmental review for all complete wastewater treatment system alternatives under consideration for the facilities planning area, or any larger study area identified for the purposes of conducting an adequate environmental review as required under this subpart; and

(ii) Recorded the selection of the preferred alternative(s) in the appropriate decision document (ROD for EISs, FNSI for environmental assessments, or written determination for categorical exclusions).

(4) In accord with § 6.302(f), on or after October 18, 1982, no new expenditures or financial assistance involving the construction grants program can be made within the Coastal Barrier Resource System, or for projects outside the system which would have the effect of encouraging development in the system, other than specified exceptions made by the EPA after consultation with the Secretary of the Interior.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32611, Sept. 12, 1986]

§ 6.503 Overview of the environmental review process.

The process for conducting an environmental review of wastewater treatment construction grant projects includes the following steps:

(a) *Consultation.* The Step 1 grantee or the potential Step 3 or Step 2+3 applicant is encouraged to consult with the State and EPA early in project formulation or the facilities planning stage to determine whether a project is eligible for a categorical exclusion from the remaining substantive environmental review requirements of this part (§ 6.505), to determine alternatives to the proposed project for evaluation, to identify potential environmental issues and opportunities for public recreation and open space, and to determine the potential need for partitioning the environmental review process and/or the need for an Environmental Impact Statement (EIS).

(b) *Determining categorical exclusion eligibility.* At the request of a potential Step 3 or Step 2+3 grant applicant, or a Step 1 facilities planning grantee, the responsible official will determine if a project is eligible for a categorical exclusion in accordance with § 6.505. A Step 1 facilities planning grantee awarded a Step 1 grant on or before December 29, 1981 may request a categorical exclusion at any time during Step 1 facilities planning. A potential Step 3 or Step 2+3 grant applicant may request a categorical exclusion at any time before the submission of a Step 3 or Step 2+3 grant application.

(c) *Documenting environmental information.* If the project is determined to be ineligible for a categorical exclusion, or if no request for a categorical exclusion is made, the potential Step 3 or Step 2+3 applicant or the Step 1 grantee subsequently prepares an Environmental Information Document (EID) (§ 6.506) for the project.

(d) *Preparing environmental assessments.* Except as provided in § 6.506(c)(4) and following a review of the EID by EPA or by a State with delegated authority, EPA prepares an environmental assessment (§ 6.506), or a State with delegated authority (§ 6.514) prepares a preliminary environmental assessment. EPA reviews and finalizes any preliminary assessments. EPA subsequently:

(1) Prepares and issues a Finding of No Significant Impact (FNSI) (§ 6.508); or

(2) Prepares and issues a Notice of Intent to prepare an original or supplemental EIS (§ 6.510) and Record of Decision (ROD) (§ 6.511).

(e) *Monitoring.* The construction and post-construction operation and maintenance of the facilities are monitored (§6.512) to ensure implementation of mitigation measures (§ 6.511) identified in the FNSI or ROD.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32611, Sept. 12, 1986]

§ 6.504 Consultation during the facilities planning process.

(a) *General.* Consistent with 40 CFR 1501.2 and 35.2030(c), the responsible official shall initiate the environmental review process early to identify environmental effects, avoid delays, and resolve conflicts. The environmental review process should be integrated throughout the facilities planning process. Two processes for consultation are described in this section to meet this objective. The first addresses projects awarded Step 1 grant assistance on or before December 29, 1981. The second applies to projects not receiving grant assistance for facilities planning on or before December 29, 1981 and, therefore, subject to the regulations implementing the Municipal Wastewater Treatment Construction Grant Amendments of 1981 (40 CFR part 35, subpart I).

(b) *Projects receiving Step 1 grant assistance on or before December 29, 1981.* (1) During facilities planning, the grantee shall evaluate project alternatives and the existence of environmentally important resource areas including those identified in § 6.108 and § 6.509 of this subpart, and potential for open space and recreation opportunities in the facilities planning area. This evaluation is intended to be brief and concise and should draw on existing information from EPA, State agencies, regional planning agencies, areawide water quality management agencies, and the Step 1 grantee. The Step 1 grantee should submit this information to EPA or a delegated State at the earliest possible time during facilities planning to allow EPA to determine if the action is eligible for a categorical exclusion. The evaluation and any additional analysis deemed necessary by the responsible official may be used by EPA to determine whether the action is eligible for a categorical exclusion from the substantive environmental review requirements of this part. If a categorical exclusion is granted, the grantee will not be required to prepare a formal EID nor will the responsible official be required to prepare an environmental assessment under NEPA. If an action is not granted a categorical exclusion, this evaluation may be used to determine the scope of the EID required of the grantee. This information can also be used to make an early determination of the need for partitioning the environmental review or for an EIS. Whenever possible, the Step 1 grantee should discuss this initial evaluation with both the delegated State and EPA.

(2) A review of environmental information developed by the grantee should be conducted by the responsible official whenever meetings are held to assess the progress of facilities plan development. These meetings should be held after completion of the majority of the EID document and before a preferred alternative is selected. Since any required EIS must be completed before the approval of a facilities plan, a decision whether to prepare an EIS is encouraged early during the facilities planning process. These meetings may assist in this early determination. EPA should inform interested parties of the following:

(i) The preliminary nature of the Agency's position on preparing an EIS;

(ii) The relationship between the facilities planning and environmental review processes;

(iii) The desirability of public input; and

(iv) A contact person for further information.

(c) *Projects not receiving grant assistance for Step 1 facilities planning on or before December 29, 1981.* Potential Step 3 or Step 2+3 grant applicants should, in accordance with § 35.2030(c), consult with EPA and the State early in the facilities planning process to determine the appropriateness of a categorical exclusion, the scope of an EID, or the appropriateness of the early preparation of an environmental assessment or an EIS. The consultation would be most useful during the evaluation of project alternatives prior to the selection of a preferred alternative to assist in resolving any identified environmental problems.

§ 6.505 Categorical exclusions.

(a) *General.* At the request of an existing Step 1 facilities planning grantee or of a potential Step 3 or Step 2+3 grant applicant, the responsible official, as provided for in §§ 6.107(b), 6.400(f) and 6.504(a), shall determine from existing information and document whether an action is consistent with the categories eligible for exclusion from NEPA review identified in § 6.107(d) or § 6.505(b) and not inconsistent with the criteria in § 6.107(e) or § 6.505(c).

(b) *Specialized categories of actions eligible for exclusion.* For this subpart, eligible actions consist of any of the categories in § 6.107(d), or:

(1) Actions for which the facilities planning is consistent with the category listed in § 6.107(d)(1) which do not affect the degree of treatment or capacity of the existing facility including, but not limited to, infiltration and inflow corrections, grant-eligible replacement of existing mechanical equipment or structures, and the construction of small structures on existing sites;

(2) Actions in sewered communities of less than 10,000 persons which are for minor upgrading and minor expansion of existing treatment works. This category does not include actions that directly or indirectly involve the extension of new collection systems funded with federal or other sources of funds;

(3) Actions in unsewered communities of less than 10,000 persons where on-site technologies are proposed; or

(4) Other actions are developed in accordance with § 6.107(f).

(c) *Specialized Criteria for not granting a categorical exclusion.* (1) The full environmental review procedures of this part must be followed if undertaking an action consistent with the categories described in paragraph (b) of this section meets any of the criteria listed in § 6.107(e) or when:

(i) The facilities to be provided will (A) create a new, or (B) relocate an existing, discharge to surface or ground waters;

(ii) The facilities will result in substantial increases in the volume of discharge or the loading of pollutants from an existing source or from new facilities to receiving waters; or

(iii) The facilities would provide capacity to serve a population 30% greater than the existing population.

(d) *Proceeding with grant awards.* (1) After a categorical exclusion on a proposed treatment works has been granted, and notices published in accordance with § 6.400(f), grant awards may proceed without being subject to any further environmental review requirements under this part, unless the responsible official later determines that the project, or the conditions at the time the categorical determination was made, have changed significantly since the independent EPA review of information submitted by the grantee in support of the exclusion.

(2) For all categorical exclusion determinations:

(i) That are five or more years old on projects awaiting Step 2+3 or Step 3 grant funding, the responsible official shall re-evaluate the project, environmental conditions and public views and, prior to grant award, either:

(A) *Reaffirm*—issue a public notice reaffirming EPA's decision to proceed with the project without need for any further environmental review;

(B) *Supplement*—update the information in the decision document on the categorically excluded project and prepare, issue, and distribute a revised notice in accordance with § 6.107(f); or

(C) *Reassess*—revoke the categorical exclusion in accordance with § 6.107(c) and require a complete environmental review to determine the need for an EIS in accordance with § 6.506, followed by preparation, issuance and distribution of an EA/FNSI or EIS/ROD.

(ii) That are made on projects that have been awarded a Step 2+3 grant, the responsible official shall, at the time of plans and specifications review under § 35.2202(b) of this title, assess whether the environmental conditions or the project's anticipated impact on the environment have changed and, prior to plans and specifications approval, advise the Regional Administrator if additional environmental review is necessary.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32611, Sept. 12, 1986]

§ 6.506 Environmental review process.

(a) *Review of completed facilities plans.* The responsible official shall ensure a review of the completed facilities plan with particular attention to the EID and its utilization in the development of alternatives and the selection of a preferred alternative. An adequate EID shall be an integral part of any facilities plan submitted to EPA or to a State. The EID shall be of sufficient scope to enable the responsible official to make determinations on requests for partitioning the environmental review process in accordance with § 6.507 and for preparing environmental assessments in accordance with § 6.506(b).

(b) *Environmental assessment.* The environmental assessment process shall cover all potentially significant environmental impacts. The responsible official shall prepare a preliminary environmental assessment on which to base a recommendation to finalize and issue the environmental assessment/FNSI. For those States delegated environmental review responsibilities under § 6.514, the State responsible official shall prepare the preliminary environmental assessment in sufficient detail to serve as an adequate basis for EPA's independent NEPA review and decision to finalize and issue an environmental assessment/FNSI or to prepare and issue a notice of intent for an EIS/ROD. The EPA also may require submission of supplementary information before the facilities plan is approved if needed for its independent review of the State's preliminary assessment for compliance with environmental review requirements. Substantial requests for supplementary information by EPA, including the review of the facilities plan, shall be made in writing. Each of the following subjects outlined below, and requirements of subpart C of this part, shall be reviewed by the responsible official to identify potentially significant environmental concerns and their associated potential impacts, and the responsible official shall furthermore address these concerns and impacts in the environmental assessment:

(1) *Description of the existing environment.* For the delineated facilities planning area, the existing environmental conditions relevant to the analysis of alternatives, or to determining the environmental impacts of the proposed action, shall be considered.

(2) *Description of the future environment without the project.* The relevant future environmental conditions shall be described. The no action alternative should be discussed.

(3) *Purpose and need.* This should include a summary discussion and demonstration of the need, or absence of need, for wastewater treatment in the facilities planning area, with particular emphasis on existing public health or water quality problems and their severity and extent.

(4) *Documentation.* Citations to information used to describe the existing environment and to assess future environmental impacts should be clearly referenced and documented. These sources should include, as appropriate but not limited to, local, tribal, regional, State, and federal agencies as well as public and private organizations and institutions with responsibility or interest in the types of conditions listed in § 6.509 and in subpart C of this part.

(5) *Analysis of alternatives.* This discussion shall include a comparative analysis of feasible alternatives, including the no action alternative, throughout the study area. The alternatives shall be screened with respect to capital and operating costs; direct, indirect, and cumulative environmental effects; physical, legal, or institutional constraints; and compliance with regulatory requirements. Special attention should given to: the environmental consequences of long-term, irreversible, and induced impacts; and for projects initiated after September 30, 1978, that grant applicants have satisfactorily demonstrated analysis of potential recreation and open-space opportunities in the planning of the proposed treatment works. The reasons for rejecting any alternatives shall be presented in addition to any significant environmental benefits precluded by rejection of an alternative. The analysis should consider when relevant to the project:

(i) Flow and waste reduction measures, including infiltration/inflow reduction and pretreatment requirements;

(ii) Appropriate water conservation measures;

(iii) Alternative locations, capacities, and construction phasing of facilities;

(iv) Alternative waste management techniques, including pretreatment, treatment and discharge, wasterwater reuse, land application, and individual systems;

(v) Alternative methods for management of sludge, other residual materials, including utilization options such as land application, composting, and conversion of sludge for marketing as a soil conditioner or fertilizer;

(vi) Improving effluent quality through more efficient operation and maintenance;

(vii) Appropriate energy reduction measures; and

(viii) Multiple use including recreation, other open space, and environmental education.

(6) *Evaluating environmental consequences of proposed action.* A full range of relevant impacts of the proposed action shall be discussed, including measures to mitigate adverse impacts, any irreversible or irretrievable commitments of resources to the project and the relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity. Any specific requirements, including grant conditions and areawide waste treatment management plan requirements, should be identified and referenced. In addition to these items, the responsible official may require that other analyses and data in accordance with subpart C which are needed to satisfy environmental review requirements be included with the facilities plan. Such requirements should be discussed whenever meetings are held with Step 1 grantees or potential Step 3 or Step 2 + 3 applicants.

(7) *Minimizing adverse effects of the proposed action.* (i) Structural and nonstructural measures, directly or indirectly related to the facilities plan, to mitigate or eliminate adverse effects on the human and natural environments, shall be identified during the environmental review. Among other measures, structual provisions include changes in facility design, size, and location; nonstructural provisions include staging facilities, monitoring and enforcement of environmental regulations, and local commitments to develop and enforce land use regulations.

(ii) The EPA shall not accept a facilities plan, nor award grant assistance for its implementation, if the applicant/grantee has not made, or agreed to make, changes in the project, in accordance with determinations made in a FNSI based on its supporting environmental assessment or the ROD for a EIS. The EPA shall condition a grant, or seek other ways, to ensure that the grantee will comply with such environmental review determinations.

(c) *FNSI/EIS determination.* The responsible official shall apply the criteria under § 6.509 to the following:

(1) A complete facilities plan;

(2) The EID;

(3) The preliminary environmental assessment; and

(4) Other documentation, deemed necessary by the responsible official adequate to make an EIS determination by EPA. Where EPA determines that an EIS is to be prepared, there is no need to prepare a formal environmental assessment. If EPA or the State identifies deficiencies in the EID, preliminary environmental assessment, or other supporting documentation, necessary corrections shall be made to this documentation before the conditions of the Step 1 grant are considered satisfied or before the Step 3 or Step 2+3 application is considered complete. The responsible official's determination to issue a FNSI or to prepare an EIS shall constitute final Agency action, and shall not be subject to administrative review under 40 CFR part 30, subpart L.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32612, Sept. 12, 1986]

§ 6.507 Partitioning the environmental review process.

(a) *Purpose.* Under certain circumstances the building of a component/portion of a wastewater treatment system may be justified in advance of completing all NEPA requirements for the remainder of the system(s). When there are overriding considerations of cost or impaired program effectiveness, the responsible official may award a construction grant, or approve procurement by other than EPA funds, for a discrete component of a complete wastewater treatment system(s). The process of partitioning the environmental review for the discrete component shall comply with the criteria and procedures described in paragraph (b) of this section. In addition, all reasonable alternatives for the overall wastewater treatment works system(s) of which the component is a part shall have been previously identified, and each part of the environmental review for the remainder of the overall facilities system(s) in the planning area in accordance with § 6.502(b)(3) shall comply with all requirements under § 6.506.

(b) *Criteria for partitioning.* (1) Projects may be partitioned under the following circumstances:

(i) To overcome impaired program effectiveness, the project component, in addition to meeting the criteria listed in paragraph (b)(2) of this section, must immediately remedy a severe public health, water quality or other environmental problem; or

(ii) To significantly reduce direct costs on EPA projects, or other related public works projects, the project component (such as major pieces of equipment, portions of conveyances or small structures) in addition to meeting the criteria listed in paragraph (b)(2) of this section, must achieve a cost savings to the federal government and/or to the grantee's or potential grantee's overall costs incurred in procuring the wastewater treatment component(s) and/or the installation of other related public works projects funded in coordination with other federal, State, tribal or local agencies.

(2) The project component also must:

(i) Not foreclose any reasonable alternatives identified for the overall wastewater treatment works system(s);

(ii) Not cause significant adverse direct or indirect environmental impacts including those which cannot be acceptably mitigated without completing the entire wastewater treatment system of which the component is a part; and

(iii) Not be highly controversial.

(c) *Requests for partitioning.* The applicant's or State's request for partitioning must contain the following:

(1) A description of the discrete component proposed for construction before completing the environmental review of the entire facilities plan;

(2) How the component meets the above criteria;

(3) The environmental information required by § 6.506 of this subpart for the component; and

(4) Any preliminary information that may be important to EPA in an EIS determination for the entire facilities plan (§ 6.509).

(d) *Approval of requests for partitioning.* The responsible official shall:

(1) Review the request for partitioning against all requirements of this subpart;

(2) If approvable, prepare and issue a FNSI in accordance with § 6.508;

(3) Include a grant condition prohibiting the building of additional or different components of the entire facilities system(s) in the planning area as described in § 6.502(b)(3)(i).

[50 FR 26317, June 25, 1985, as amended at 51 FR 32612, Sept. 12, 1986]

§ 6.508 Finding of No Significant Impact (FNSI) determination.

(a) *Criteria for producing and distributing FNSIs.* If, after completion of the environmental review, EPA determines that an EIS will not be required, the responsible official shall issue a FNSI in accordance with §§ 6.105(f) and 6.400(d). The FNSI will be based on EPA's independent review of the preliminary environmental assessment and any other environmental information deemed necessary by the responsible official consistent with the requirements of § 6.506(c). Following the Agency's independent review, the environmental assessment will be finalized and either be incorporated into, or attached to, the FNSI. The FNSI shall list all mitigation measures as defined in § 1508.20 of this title, and specifically identify those mitigation measures necessary to make the recommended alternative environmentally acceptable.

(b) *Proceeding with grant awards.* (1) Once an environmental assessment has been prepared and the issued FNSI becomes effective for the treatment works within the study area, grant awards may proceed without preparation of additional FNSIs, unless the responsible official later determines that the project or environmental conditions have changed significantly from that which underwent environmental review.

(2) For all environmental assessment/FNSI determinations:

(i) That are five or more years old on projects awaiting Step 2+3 or Step 3 grant funding, the responsible official shall re-evaluate the project, environmental conditions and public views and, prior to grant award, either:

(A) *Reaffirm*—issue a public notice reaffirming EPA's decision to proceed with the project without revising the environmental assessment;

(B) *Supplement*—update information and prepare, issue and distribute a revised EA/FNSI in accordance with §§ 6.105(f) and 6.400(d); or

(C) *Reassess*—withdraw the FNSI and publish a notice of intent to produce an EIS followed by the preparation, issuance and distribution of the EIS/ROD.

(ii) That are made on projects that have been awarded a Step 2+3 grant, the responsible official shall, at the time of plans and specifications review under § 35.2202(b) of this title, assess whether the environmental conditions or the project's anticipated impact on the environment have changed and, prior to plans and specifications approval, advise the Regional Administrator if additional environmental review is necessary.

[51 FR 32612, Sept. 12, 1986]

§ 6.509 Criteria for initiating Environmental Impact Statements (EIS).

(a) *Conditions requiring EISs.* (1) The responsible official shall assure that an EIS will be prepared and issued when it is determined that the treatment works or collector system will cause any of the conditions under § 6.108 to exist, or when

(2) The treated effluent is being discharged into a body of water where the present classification is too lenient or is being challenged as too low to protect present or recent uses, and the effluent will not be of sufficient quality or quantity to meet the requirements of these uses.

(b) *Other conditions.* The responsible official shall also consider preparing an EIS if: The project is highly controversial; the project in conjunction with related Federal, State, local or tribal resource projects produces significant cumulative impacts; or if it is determined that the treatment works may violate federal, State, local or tribal laws or requirements imposed for the protection of the environment.

§ 6.510 Environmental Impact Statement (EIS) preparation.

(a) *Steps in preparing EISs.* In addition to the requirements specified in subparts A, B, C, and D of this part, the responsible official will conduct the following activities:

(1) *Notice of intent.* If a determination is made that an EIS will be required, the responsible official shall prepare and distribute a notice of intent as required in § 6.105(e) of this part.

(2) *Scoping.* As soon as possible, after the publication of the notice of intent, the responsible official will convene a meeting of affected federal, State and local agencies, or affected Indian tribes, the grantee and other interested parties to determine the scope of the EIS. A notice of this scoping meeting must be made in accordance with § 6.400(a) and 40 CFR 1506.6(b). As part of the scoping meeting EPA, in cooperation with any delegated State, will as a minimum:

(i) Determine the significance of issues for and the scope of those significant issues to be analyzed in depth, in the EIS;

(ii) Identify the preliminary range of alternatives to be considered;

(iii) Identify potential cooperating agencies and determine the information or analyses that may be needed from cooperating agencies or other parties;

(iv) Discuss the method for EIS preparation and the public participation strategy;

(v) Identify consultation requirements of other environmental laws, in accordance with subpart C; and

(vi) Determine the relationship between the EIS and the completion of the facilities plan and any necessary coordination arrangements between the preparers of both documents.

(3) *Identifying and evaluating alternatives.* Immediately following the scoping process, the responsible official shall commence the identification and evaluation of all potentially viable alternatives to adequately address the range of issues identified in the scoping process. Additional issues may be addressed, or others eliminated, during this process and the reasons documented as part of the EIS.

(b) *Methods for preparing EISs.* After EPA determines the need for an EIS, it shall select one of the following methods for its preparation:

(1) Directly by EPA's own staff;

(2) By EPA contracting directly with a qualified consulting firm;

(3) By utilizing a third party method, whereby the responsible official enters into ''third party agreements'' for the applicant to engage and pay for the services of a third party contractor to prepare the EIS. Such agreement shall not be initiated unless both the applicant and the responsible official agree to its creation. A third party agreement will be established prior to the applicant's EID and eliminate the need for that document. In proceeding under the third party agreement, the responsible official shall carry out the following practices:

(i) In consultation with the applicant, choose the third party contractor and manage that contract;

(ii) Select the consultant based on ability and an absence of conflict of interest. Third party contractors will be required to execute a disclosure statement prepared by the responsible official signifying they have no financial or other conflicting interest in the outcome of the project; and

(iii) Specify the information to be developed and supervise the gathering, analysis and presentation of the information. The responsible official shall have sole authority for approval and modi-

fication of the statements, analyses, and conclusions included in the third party EIS; or

(4) By utilizing a joint EPA/State process on projects within States which have requirements and procedures comparable to NEPA, whereby the EPA and the State agree to prepare a single EIS document to fulfill both federal and State requirements. Both EPA and the State shall sign a Memorandum of Agreement which includes the responsibilities and procedures to be used by both parties for the preparation of the EIS as provided for in 40 CFR 1506.2(c).

§ 6.511 Record of Decision (ROD) for EISs and identification of mitigation measures.

(a) *Record of Decision.* After a final EIS has been issued, the responsible official shall prepare and issue a ROD in accordance with 40 CFR 1505.2 prior to, or in conjunction with, the approval of the facilities plan. The ROD shall include identification of mitigation measures derived from the EIS process including grant conditions which are necessary to minimize the adverse impacts of the selected alternative.

(b) *Specific mitigation measures.* Prior to the approval of a facilities plan, the responsible official must ensure that effective mitigation measures identified in the ROD will be implemented by the grantee. This should be done by revising the facilities plan, initiating other steps to mitigate adverse effects, or including conditions in grants requiring actions to minimize effects. Care should be exercised if a condition is to be imposed in a grant document to assure that the applicant possesses the authority to fulfill the conditions.

(c) *Proceeding with grant awards.* (1) Once the ROD has been prepared on the selected, or preferred, alternative(s) for the treatment works described within the EIS, grant awards may proceed without the preparation of supplemental EISs unless the responsible official later determines that the project or the environmental conditions described within the current EIS have changed significantly from the previous environmental review in accordance with § 1502.9(c) of this title.

(2) For all EIS/ROD determinations:

(i) That are five or more years old on projects awaiting Step 2+3 or Step 3 grant funding, the responsible official shall re-evaluate the project, environmental conditions and public views and, prior to grant award, either:

(A) *Reaffirm*—issue a public notice reaffirming EPA's decision to proceed with the project, and documenting that no additional significant impacts were identified during the re-evaluation which would require supplementing the EIS; or

(B) *Supplement*—conduct additional studies and prepare, issue and distribute a supplemental EIS in accordance with § 6.404 and document the original, or any revised, decision in an addendum to the ROD.

(ii) That are made on projects that have been awarded a Step 2+3 grant, the responsible official shall, at the time of plans and specifications review under § 35.2202(b) of this title, assess whether the environmental conditions or the project's anticipated impact on the environment have changed, and prior to plans and specifications approval, advise the Regional Administrator if additional environmental review is necessary.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32613, Sept. 12, 1986]

§ 6.512 Monitoring for compliance.

(a) *General.* The responsible official shall ensure adequate monitoring of mitigation measures and other grant conditions identified in the FNSI, or ROD.

(b) *Enforcement.* If the grantee fails to comply with grant conditions, the responsible official may consider applying any of the sanctions specified in 40 CFR 30.900.

§ 6.513 Public participation.

(a) *General.* Consistent with public participation regulations in part 25 of this title, and subpart D of this part, it is EPA policy that certain public participation steps be achieved before the State and EPA complete the environmental review process. As a minimum, all potential applicants that do not qualify for a categorical exclusion shall conduct the following steps in accordance with procedures specified in part 25 of this title:

(1) One public meeting when alternatives have been developed, but before an alternative has been selected, to discuss all alternatives under consideration and the reasons for rejection of others; and

(2) One public hearing prior to formal adoption of a facilities plan to discuss the proposed facilities plan and any needed mitigation measures.

(b) *Coordination.* Public participation activities undertaken in connection with the environmental review process should be coordinated with any other applicable public participation program wherever possible.

(c) *Scope.* The requirements of 40 CFR 6.400 shall be fulfilled, and consistent with 40 CFR 1506.6, the responsible official may institute such additional NEPA-related public participation procedures as are deemed necessary during the environmental review process.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32613, Sept. 12, 1986]

§ 6.514 Delegation to States.

(a) *General.* Authority delegated to the State under section 205(g) of the Clean Water Act to review a facilities plan may include all EPA activities under this part except for the following:

(1) Determinations of whether or not a project qualifies for a categorical exclusion;

(2) Determinations to partition the environmental review process;

(3) Finalizing the scope of an EID when required to adequately conclude an independent review of a preliminary environmental assessment;

(4) Finalizing the scope of an environmental assessment, and finalization, approval and issuance of a final environmental assessment;

(5) Determination to issue, and issuance of, a FNSI based on a completed (§ 6.508) or partitioned (§ 6.507(d)(2)) environmental review;

(6) Determination to issue, and issuance of, a notice of intent for preparing an EIS;

(7) Preparation of EISs under § 6.510(b) (1) and (2), final decisions required for preparing an EIS under § 6.510(b)(3), finalizing the agreement to prepare an EIS under § 6.510(b)(4), finalizing the scope of an EIS, and issuance of draft, final and supplemental EISs;

(8) Preparation and issuance of the ROD based on an EIS;

(9) Final decisions under other applicable laws described in subpart C of this part;

(10) Determination following re-evaluations of projects awaiting grant funding in the case of Step 3 projects whose existing evaluations and/or decision documents are five or more years old, or determinations following re-evaluations on projects submitted for plans and specifications review and approval in the case of awarded Step 2+3 projects where the EPA Regional Administrator has been advised that additional environmental review is necessary, in accordance with § 6.505(d)(2), § 6.508(b)(2) or § 6.511(c)(2); and

(11) Maintenance of official EPA monthly status reports as required under § 6.402(b).

(b) *Elimination of duplication.* The responsible official shall assure that maximum efforts are undertaken to minimize duplication within the limits described under paragraph (a) of this section. In carrying out requirements under this subpart, maximum consideration shall be given to eliminating duplication in accordance with § 1506.2 of this title. Where there are State or local procedures comparable to NEPA, EPA should enter into memoranda of understanding with these States concerning workload distribution and responsibilities not specifically reserved to EPA in paragraph (a) of this section for implementing the environmental review and facilities planning process.

[50 FR 26317, June 25, 1985, as amended at 51 FR 32613, Sept. 12, 1986]

Subpart F—Environmental Review Procedures for the New Source NPDES Program

§ 6.600 Purpose.

(a) *General.* This subpart provides procedures for carrying out the environmental review process for the issuance of new source National Pollutant Discharge Elimination System (NPDES) discharge permits authorized under section 306, section 402, and section 511(c)(1) of the Clean Water Act.

(b) *Permit regulations.* All references in this subpart to the *permit regulations* shall mean parts 122 and 124 of title 40 of the CFR relating to the NPDES program.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9831, Mar. 8, 1982]

§ 6.601 Definitions.

(a) The term *administrative action* for the sake of this subpart means the issuance by EPA of an NPDES permit to discharge as a new source, pursuant to 40 CFR 124.15.

(b) The term *applicant* for the sake of this subpart means any person who applies to EPA for the issuance of an NPDES permit to discharge as a new source.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9831, Mar. 8, 1982]

§ 6.602 Applicability.

(a) *General.* The procedures set forth under subparts A, B, C and D, and this subpart shall apply to the issuance of new source NPDES permits, except for the issuance of a new source NPDES permit from any State which has an approved NPDES program in accordance with section 402(b) of the Clean Water Act.

(b) *New Source Determination.* An NPDES permittee must be determined a *new source* before these procedures apply. New source determinations will be undertaken pursuant to the provisions of the permit regulations under § 122.29(a) and (b) of this chapter and § 122.53(h).

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9831, Mar. 8, 1982; 51 FR 32613, Sept. 12, 1986]

§ 6.603 Limitations on actions during environmental review process.

The processing and review of an applicant's NPDES permit application shall proceed concurrently with the procedures within this subpart. Actions undertaken by the applicant or EPA shall be performed consistent with the requirements of § 122.29(c) of this chapter.

[47 FR 9831, Mar. 8, 1982, as amended at 51 FR 32613, Sept. 12, 1986]

§ 6.604 Environmental review process.

(a) *New source.* If EPA's initial determination under § 6.602(b) is that the facility is a new source, the responsible official shall evaluate any environmental information to determine if any significant impacts are anticipated and an EIS is necessary. If the permit applicant requests, the responsible official shall establish time limits for the completion of the environmental review process consistent with 40 CFR 1501.8.

(b) *Information needs.* Information necessary for a proper environmental review shall be provided by the permit applicant in an environmental information document. The responsible official shall consult with the applicant to determine the scope of an environmental information document. In doing this the responsible official shall consider the size of the new source and the extent to which the applicant is capable of providing the required information. The responsible official shall not require the applicant to gather data or perform analyses which unnecessarily duplicate either existing data or the results of existing analyses available to EPA. The responsible official shall keep requests for data to the minimum consistent with his responsibilities under NEPA.

(c) *Environmental assessment.* The responsible official shall prepare a written environmental assessment based on an environmental review of either the environmental information document and/or any other available environmental information.

(d) *EIS determination.* (1) When the environmental review indicates that a significant environmental impact may occur and that the significant adverse impacts cannot be eliminated by making changes in the proposed new source project, a notice of intent shall be issued, and a draft EIS prepared and distributed. When the environmental review indicates no significant impacts are anticipated or when the proposed project is changed to eliminate the significant adverse impacts, a FNSI shall be issued which lists any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(2) The FNSI together with the environmental assessment that supports the finding shall be distributed in accordance with § 6.400(d) of this regulation.

(e) *Lead agency.* (1) If the environmental review reveals that the preparation of an EIS is required, the responsible official shall determine if other Federal agencies are involved with the project. The responsible official shall contact all other involved agencies and together the agencies shall decide the lead agency based on the criteria set forth in 40 CFR 1501.5.

(2) If, after the meeting of involved agencies, EPA has been determined to be the lead agency, the responsible official may request that other involved agencies be cooperating agencies. Cooperating agencies shall be chosen and shall be involved in the EIS preparation process in the manner prescribed in the 40 CFR 1501.6(a). If EPA has been determined to be a cooperating agency, the responsible official shall be involved in assisting in the preparation of the EIS in the manner prescribed in 40 CFR 1501.6(b).

(f) *Notice of intent.* (1) If EPA is the lead agency for the preparation of an EIS, the responsible official shall arrange through OER for the publication of the notice of intent in the FEDERAL REGISTER, distribute the notice of intent and arrange and conduct a scoping meeting as outlined in 40 CFR 1501.7.

(2) If the responsible official and the permit applicant agree to a third party method of EIS preparation, pursuant to § 6.604(g)(3) of this part, the responsible official shall insure that a notice of intent is published and that a scoping meeting is held before the third party contractor begins work which may influence the scope of the EIS.

(g) *EIS method.* EPA shall prepare EISs by one of the following means:

(1) Directly by its own staff;

(2) By contracting directly with a qualified consulting firm; or

(3) By utilizing a third party method, whereby the responsible official enters into a *third party agreement* for the applicant to engage and pay for the services of a third party contractor to prepare the EIS. Such an agreement shall not be initiated unless both the applicant and the responsible official agree to its creation. A third party agreement will be established prior to the applicant's environmental information document and eliminate the need for that document. In proceeding under the third party agreement, the responsible official shall carry out the following practices:

(i) In consultation with the applicant, choose the third party contractor and manage that contract.

(ii) Select the consultant based on his ability and an absence of conflict of interest. Third party contractors will be required to execute a disclosure statement prepared by the responsible official signifying they have no financial or other conflicting interest in the outcome of the project.

(iii) Specify the information to be developed and supervise the gathering, analysis and presentation of the information. The responsible official shall have sole authority for approval and modification of the statements, analyses, and conclusions included in the third party EIS.

(h) *Documents for the administrative record.* Pursuant to 40 CFR 124.9(b)(6) and 124.18(b)(5) any environmental assessment, FNSI EIS, or supplement to an EIS shall be made a part of the administrative record related to permit issuance.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9831, Mar. 8, 1982]

§ 6.605 Criteria for preparing EISs.

(a) *General guidelines.* (1) When determining the significance of a proposed new source's impact, the responsible official shall consider both its short term and long term effects as well as its direct and indirect effects and beneficial and adverse environmental impacts as defined in 40 CFR 1508.8.

(2) If EPA is proposing to issue a number of new source NPDES permits during a limited time span and in the same general geographic area, the responsible official shall examine the possibility of tiering EISs. If the permits are minor and environmentally insignificant when considered separately, the responsible official may determine that the cumulative impact of the issuance of all these permits may have a significant environmental effect and require an EIS for the area. Each separate decision to issue an NPDES permit shall then be based on the information in this areawide EIS. Site specific EISs may be required in certain circumstances in addition to the areawide EIS.

(b) *Specific criteria.* An EIS will be prepared when:

(1) The new source will induce or accelerate significant changes in industrial, commercial, agricultural, or residential land use concentrations or distributions which have the potential for significant environmental effects. Factors that should be considered in determining if these changes are environmentally significant include but are not limited to: The nature and extent of the vacant land subject to increased development pressure as a result of the new source; the increases in population or population density which may be induced and the ramifications of such changes; the nature of land use regulations in the affected area and their potential effects on development and the environment; and the changes in the availability or demand for energy and the resulting environmental consequences.

(2) The new source will directly, or through induced development, have significant adverse effect upon local ambient air quality, local ambient noise levels, floodplains, surface or groundwater quality or quantity, fish, wildlife, and their natural habitats.

(3) Any major part of the new source will have significant adverse effect on the habitat of threatened or endangered species on the Department of the Interior's or a State's lists of threatened and endangered species.

(4) The environmental impact of the issuance of a new source NPDES permit will have significant direct and adverse effect on a property listed in or eligible for listing in the National Register of Historic Places.

(5) Any major part of the source will have significant adverse effects on parklands, wetlands, wild and scenic rivers, reservoirs or other important bodies of water, navigation projects, or agricultural lands.

§ 6.606 Record of decision.

(a) *General.* At the time of permit award, the responsible official shall prepare a record of decision in those cases where a final EIS was issued in accordance with 40 CFR 1505.2 and pursuant to the provisions of the permit regulations under 40 CFR 124.15 and 124.18(b)(5). The record of decision shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(b) *Mitigation measures.* The mitigation measures derived from the EIS process shall be incorporated as conditions of the permit; ancillary agreements shall not be used to require mitigation.

[44 FR 64177, Nov. 6, 1979, as amended at 47 FR 9831, Mar. 8, 1982]

§ 6.607 Monitoring.

In accordance with 40 CFR 1505.3 and pursuant to 40 CFR 122.66(c) and 122.10 the responsible official shall ensure that there is adequate monitoring of compliance with all NEPA related requirements contained in the permit.

[47 FR 9831, Mar. 8, 1982]

Subpart G—Environmental Review Procedures for Office of Research and Development Projects

SOURCE: 56 FR 20543, May 6, 1991, unless otherwise noted.

§ 6.700 Purpose.

(a) This subpart amplifies the requirements described in subparts A through D by providing specific environmental review procedures for activities undertaken or funded by the Office of Research and Development (ORD).

(b) The ORD Program provides scientific support for setting environmental standards as well as the technology needed to prevent, monitor and control pollution. Intramural research is conducted at EPA laboratories and field stations throughout the United States. Extramural research is implemented through grants, cooperative agreements, and contracts. The majority of ORD's research is conducted within the confines of laboratories. Outdoor research includes monitoring, sampling, and environmental stress and ecological effects studies.

§ 6.701

§ 6.701 Definition.

The term *appropriate program* official means the official at each decision level within ORD to whom the Assistant Administrator has delegated responsibility for carrying out the environmental review process.

§ 6.702 Applicability.

The requirements of this subpart apply to administrative actions undertaken to approve intramural and extramural projects under the purview of ORD.

§ 6.703 General.

(a) *Environmental information.* (1) For intramural research projects, information necessary to perform the environmental review shall be obtained by the appropriate program official.

(2) For extramural research projects, environmental information documents shall be submitted to EPA by applicants to facilitate the Agency's environmental review process. Guidance on environmental information documents shall be included in all assistance application kits and in contract proposal instructions. If there is a question concerning the preparation of an environmental information document, the applicant should consult with the project officer or contract officer for guidance.

(b) *Environmental review.* The diagram in figure 1 represents the various stages of the environmental review process to be undertaken for ORD projects.

(1) For intramural research projects, an environmental review will be performed for each laboratory's projects at the start of the planning year. The review will be conducted before projects are incorporated into the ORD program planning system. Projects added at a later date and, therefore, not identified at the start of the planning year, or any redirection of a project that could have significant environmental effects, also will be subjected to an environmental review. This review will be performed in accordance with the process set forth in this subpart and depicted in figure 1.

(2) For extramural research projects, the environmental review shall be conducted before an initial or continuing award is made. The appropriate program official will perform the environmental review in accordance with the process set forth in this subpart and depicted in figure 1. EPA form 5300–23 will be used to document categorical exclusion determinations or, with appropriate supporting analysis, as the environmental assessment (EA). The completed form 5300–23 and any finding of no significant impact (FNSI) or environmental impact statement (EIS) will be submitted with the proposal package to the appropriate EPA assistance or contract office.

(c) *Agency coordination.* In order to avoid duplication of effort and ensure consistency throughout the Agency, environmental reviews of ORD projects will be coordinated, as appropriate and feasible, with reviews performed by other program offices. Technical support documents prepared for reviews in other EPA programs may be adopted for use in ORD's environmental reviews and supplemented, as appropriate.

§ 6.704 Categorical exclusions.

(a) At the beginning of the environmental review process (see Figure 1), the appropriate program official shall determine whether an ORD project can be categorically excluded from the substantive requirements of a NEPA review. This determination shall be based on general criteria in § 6.107(d) and specialized categories of ORD actions eligible for exclusion in § 6.704(b). If the appropriate program official determines that an ORD project is consistent with the general criteria and any of the specialized categories of eligible activities, and does not satisfy the criteria in § 6.107(e) for not granting a categorical exclusion, then this finding shall be documented and no further action shall be required. A categorical exclusion shall be revoked by the appropriate program official if it is determined that the project meets the criteria for revocation in § 6.107(c). Projects that fail to qualify for categorical exclusion or for which categorical exclusion has been revoked must undergo full environmental review in accordance with § 6.705 and § 6.706.

(b) The following specialized categories of ORD actions are eligible for categorical exclusion from a detailed NEPA review:

(1) Library or literature searches and studies;

(2) Computer studies and activities;

(3) Monitoring and sample collection wherein no significant alteration of existing ambient conditions occurs;

(4) Projects conducted completely within a contained facility, such as a laboratory or other enclosed building, where methods are employed for appropriate disposal of laboratory wastes and safeguards exist against hazardous, toxic, and radioactive materials entering the environment. Laboratory directors or other appropriate officials must certify and provide documentation that the laboratory follows good laboratory practices and adheres to applicable federal statutes, regulations and guidelines.

§ 6.705 Environmental assessment and finding of no significant impact.

(a) When a project does not meet any of the criteria for categorical exclusion, the appropriate program official shall undertake an environmental assessment in accordance with 40 CFR 1508.9 in

order to determine whether an EIS is required or if a FNSI can be made. ORD projects which normally result in the preparation of an EA include the following:

(1) Initial field demonstration of a new technology;

(2) Field trials of a new product or new uses of an existing technology;

(3) Alteration of a local habitat by physical or chemical means.

(b) If the environmental assessment reveals that the research is not anticipated to have a significant impact on the environment, the appropriate program official shall prepare a FNSI in accordance with § 6.105(f). Pursuant to § 6.400(d), no administrative action will be taken on a project until the prescribed 30-day comment period for a FNSI has elapsed and the Agency has fully considered all comments.

(c) On actions involving potentially significant impacts on the environment, a FNSI may be prepared if changes have been made in the proposed action to eliminate any significant impacts. These changes must be documented in the proposal and in the FNSI.

(d) If the environmental assessment reveals that the research may have a significant impact on the environment, an EIS must be prepared. The appropriate program official may make a determination that an EIS is necessary without preparing a formal environmental assessment. This determination may be made by applying the criteria for preparation of an EIS in § 6.706.

§ 6.706 Environmental impact statement.

(a) *Criteria for preparation.* In performing the environmental review, the appropriate program official shall assure that an EIS is prepared when any of the conditions under § 6.108 (a) through (g) exist or when:

(1) The proposed action may significantly affect the environment through the release of radioactive, hazardous or toxic substances;

(2) The proposed action, through the release of an organism or organisms, may involve environmental effects which are significant;

(3) The proposed action involves effects upon the environment which are likely to be highly controversial;

(4) The proposed action involves environmental effects which may accumulate over time or combine with effects of other actions to create impacts which are significant;

(5) The proposed action involves uncertain environmental effects or highly unique environmental risks which may be significant.

(b) *ORD actions which may require preparation of an EIS.* There are no ORD actions which normally require the preparation of an EIS. However, each ORD project will be evaluated using the EIS criteria as stated in § 6.706(a) to determine whether an EIS must be prepared.

(c) *Notice of intent.* (1) If the environmental review reveals that a proposed action may have a significant effect on the environment and this effect cannot be eliminated by redirection of the research or other means, the appropriate program official shall issue a notice of intent to prepare an EIS pursuant to § 6.400(b).

(2) As soon as possible after release of the notice of intent, the appropriate program official shall ensure that a draft EIS is prepared in accordance with subpart B and that the public is involved in accordance with subpart D.

(3) Draft and final EISs shall be sent to the Assistant Administrator for ORD for approval.

(4) Pursuant to § 6.401(b), a decision on whether to undertake or fund a project must be made in conformance with the time frames indicated.

(d) *Record of decision.* Before the project is undertaken or funded, the appropriate program official shall prepare, in accordance with § 6.105 (g) and (h), a record of decision in any case where a final EIS has been issued.

§ 6.706

Insert/illustration(s) 0 908

Subpart H—Environmental Review Procedures for Solid Waste Demonstration Projects

§ 6.800 Purpose.

This subpart amplifies the procedures described in subparts A through D by providing more specific environmental review procedures for demonstration projects undertaken by the Office of Solid Waste and Emergency Response.

[44 FR 64177, Nov. 6, 1979, as amended at 51 FR 32613, Sept. 12, 1986]

§ 6.801 Applicability.

The requirements of this subpart apply to solid waste demonstration projects for resource recovery systems and improved solid waste disposal facilities undertaken pursuant to section 8006 of the Resource Conservation and Recovery Act of 1976.

§ 6.802 Criteria for preparing EISs.

The responsible official shall assure that an EIS will be prepared when it is determined that any of the conditions in § 6.108 exist.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26323, June 25, 1985]

§ 6.803 Environmental review process.

(a) *Environmental information.* (1) Environmental information documents shall be submitted to EPA by grant applicants or contractors. If there is a question concerning the need for a document, the potential contractor or grantee should consult with the appropriate project officer for the grant or contract.

(2) The environmental information document shall contain the same sections specified for EIS's in subpart B. Guidance alerting potential grantees and contractors of the environmental information documents shall be included in all grant application kits, attached to letters concerning the submission of unsolicited proposals, and included with all requests for proposal.

(b) *Environmental review.* An environmental review will be conducted before a grant or contract award is made. This review will include the preparation of an environmental assessment by the responsible official; the appropriate Regional Administrator's input will include his recommendations on the need for an EIS.

(c) *Notice of intent and EIS.* Based on the environmental review if the criteria in § 6.802 of this part apply, the responsible official will assure that a notice of intent and a draft EIS are prepared. The responsible official may request the appropriate Regional Administrator to assist him in the preparation and distribution of the environmental documents.

(d) *Finding of no significant impact.* If the environmental review indicated no significant environmental impacts, the responsible official will assure that a FNSI is prepared which lists any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(e) *Timing of action.* Pursuant to § 6.401(b), in no case shall a contract or grant be awarded until the prescribed 30-day review period for a final EIS has elapsed. Similarly, no action shall be taken until the 30-day comment period for a FNSI is completed.

§ 6.804 Record of decision.

The responsible official shall prepare a record of decision in any case where final EIS has been issued in accordance with 40 CFR 1505.2. It shall be prepared at the time of contract or grant award. The record of decision shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

Subpart I—Environmental Review Procedures for EPA Facility Support Activities

§ 6.900 Purpose.

This subpart amplifies the general requirements described in subparts A through D by providing environmental procedures for the preparation of EISs on construction and renovation of special purpose facilities.

§ 6.901 Definitions.

(a) The term *special purpose facility* means a building or space, including land incidental to its use, which is wholly or predominantly utilized for the special purpose of an agency and not generally suitable for other uses, as determined by the General Services Administration.

(b) The term *program of requirements* means a comprehensive document (booklet) describing program activities to be accomplished in the new special purpose facility or improvement. It includes architectural, mechanical, structural, and space requirements.

(c) The term *scope of work* means a document similar in content to the program of requirements but substantially abbreviated. It is usually prepared for small-scale projects.

§ 6.902 Applicability.

(a) *Actions covered.* These procedures apply to all new special purpose facility construction, activities related to this construction (e.g., site acquisition and clearing), and any improvements or modifications to facilities having potential environmental effects external to the facility, including

new construction and improvements undertaken and funded by the Facilities Engineering and Real Estate Branch, Facilities and Support Services Division, Office of the Assistant Administrator for Administration and Resource Management; or by a regional office .

(b) *Actions excluded.* This subpart does not apply to those activities of the Facilities Engineering and Real Estate Branch, Facilities and Support Services Division, for which the branch does not have full fiscal responsibility for the entire project. This includes pilot plant construction, land acquisition, site clearing and access road construction where the Facilities Engineering and Real Estate Branch's activity is only supporting a project financed by a program office. Responsibility for considering the environmental impacts of such projects rests with the office managing and funding the entire project. Other subparts of this regulation apply depending on the nature of the project.

[44 FR 64177, Nov. 6, 1979, as amended at 51 FR 32613, Sept. 12, 1986]

§ 6.903 Criteria for preparing EISs.

(a) *Preliminary information.* The responsible official shall request an environmental information document from a construction contractor or consulting architect/engineer employed by EPA if he is involved in the planning, construction or modification of special purpose facilities when his activities have potential environmental effects external to the facility. Such modifications include but are not limited to facility additions, changes in central heating systems or wastewater treatment systems, and land clearing for access roads and parking lots.

(b) *EIS preparation criteria.* The responsible official shall conduct an environmental review of all actions involving construction of special purpose facilities and improvements to these facilities. The responsible official shall assure that an EIS will be prepared when it is determined that any of the conditions in § 6.108 of this part exist.

[44 FR 64177, Nov. 6, 1979, as amended at 50 FR 26323, June 25, 1985]

§ 6.904 Environmental review process.

(a) *Environmental review.* (1) An environmental review shall be conducted when the program of requirements or scope of work has been completed for the construction, improvements, or modification of special purpose facilities. For special purpose facility construction, the Chief, Facilities Engineering and Real Estate Branch, shall request the assistance of the appropriate program office and Regional Administrator in the review. For modifications and improvement, the appropriate responsible official shall request assistance in making the review from other cognizant EPA offices.

(2) Any environmental information documents requested shall contain the same sections listed for EISs in subpart B. Contractors and consultants shall be notified in contractual documents when an environmental information document must be prepared.

(b) *Notice of intent, EIS, and FNSI.* The responsible official shall decide at the completion of the Environmental review whether there may be any significant environmental impacts. If there could be significant environmental impacts, a notice of intent and an EIS shall be prepared according to the procedures under subparts A, B, C and D. If there are not any significant environmental impacts, a FNSI shall be prepared according to the procedures in subparts A and D. The FNSI shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

(c) *Timing of action.* Pursuant to § 6.401(b), in no case shall a contract be awarded or construction activities begun until the prescribed 30-day wait period for a final EIS has elapsed. Similarly, under § 6.400(d), no action shall be taken until the 30-day comment period for FNSIs is completed.

§ 6.905 Record of decision.

At the time of contract award, the responsible official shall prepare a record of decision in those cases where a final EIS has been issued in accordance with 40 CFR 1505.2. The record of decision shall list any mitigation measures necessary to make the recommended alternative environmentally acceptable.

Subpart J—Assessing the Environmental Effects Abroad of EPA Actions

AUTHORITY: Executive Order 12114, 42 U.S.C. 4321, note.

SOURCE: 46 FR 3364, Jan. 14, 1981, unless otherwise noted.

§ 6.1001 Purpose and policy.

(a) *Purpose.* On January 4, 1979, the President signed Executive Order 12114 entitled ''Environmental Effects Abroad of Major Federal Actions.'' The purpose of this Executive Order is to enable responsible Federal officials in carrying out or approving major Federal actions which affect foreign nations or the global commons to be informed of pertinent environmental considerations and to consider fully the environmental impacts of the actions undertaken. While based on independent authority, this Order furthers the purpose of the Na-

tional Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*) and the Marine Protection Research and Sanctuaries Act (MPRSA) (33 U.S.C. 1401 *et seq.*). It should be noted, however, that in fulfilling its responsibilities under Executive Order 12114, EPA shall be guided by CEQ regulations only to the extent that they are made expressly applicable by this subpart. The procedures set forth below reflect EPA's duties and responsibilities as required under the Executive Order and satisfy the requirement for issuance of procedures under section 2–1 of the Executive Order.

(b) *Policy.* It shall be the policy of this Agency to carry out the purpose and requirements of the Executive Order to the fullest extent possible. EPA, within the realm of its expertise, shall work with the Department of State and the Council on Environmental Quality to provide information to other Federal agencies and foreign nations to heighten awareness of and interest in the environment. EPA shall further cooperate to the extent possible with Federal agencies to lend special expertise and assistance in the preparation of required environmental documents under the Executive Order. EPA shall perform environmental reviews of activities significantly affecting the global commons and foreign nations as required under Executive Order 12114 and as set forth under these procedures.

§ 6.1002 Applicability.

(a) Administrative actions requiring environmental review. The environmental review requirements apply to the activities of EPA as set forth below:

(1) Major research or demonstration projects which affect the global commons or a foreign nation.

(2) Ocean dumping activities carried out under section 102 of the MPRSA which affect the related environment.

(3) Major permitting or licensing by EPA of facilities which affect the global commons or the environment of a foreign nation. This may include such actions as the issuance by EPA of hazardous waste treatment, storage, or disposal facility permits pursuant to section 3005 of the Resource Conservation and Recovery Act (42 U.S.C. 6925), NPDES permits pursuant to section 402 of the Clean Water Act (33 U.S.C. 1342), and prevention of significant deterioration approvals pursuant to Part C of the Clean Air Act (42 U.S.C. 7470 *et seq.*).

(4) Wastewater Treatment Construction Grants Program under section 201 of the Clean Water Act when activities addressed in the facility plan would have environmental effects abroad.

(5) Other EPA activities as determined by OER and OIA (see § 6.1007(c)).

§ 6.1003 Definitions.

As used in this subpart, *environment* means the natural and physical environment and excludes social, economic and other environments; *global commons* is that area (land, air, water) outside the jurisdiction of any nation; and *responsible official* is either the EPA Assistant Administrator or Regional Administrator as appropriate for the particular EPA program. Also, an action *significantly* affects the environment if it does *significant* harm to the environment even though on balance the action may be beneficial to the environment. To the extent applicable, the responsible official shall address the considerations set forth in the CEQ Regulations under 40 CFR 1508.27 in determining significant effect.

§ 6.1004 Environmental review and assessment requirements.

(a) *Research and demonstration projects.* The appropriate Assistant Administrator is responsible for performing the necessary degree of environmental review on research and demonstration projects undertaken by EPA. If the research or demonstration project affects the environment of the global commons, the applicant shall prepare an environmental analysis. This will assist the responsible official in determining whether an EIS is necessary. If it is determined that the action significantly affects the environment of the global commons, then an EIS shall be prepared. If the undertaking significantly affects a foreign nation EPA shall prepare a unilateral, bilateral or multilateral environmental study. EPA shall afford the affected foreign nation or international body or organization an opportunity to participate in this study. This environmental study shall discuss the need for the action, analyze the environmental impact of the various alternatives considered and list the agencies and other parties consulted.

(b) *Ocean dumping activities.* (1) The Assistant Administrator for Water and Waste Management shall ensure the preparation of appropriate environmental documents relating to ocean dumping activities in the global commons under section 102 of the MPRSA. For ocean dumping site designations prescribed pursuant to section 102(c) of the MPRSA and 40 CFR part 228, EPA shall prepare an environmental impact statement consistent with the requirements of EPA's Procedures for the Voluntary Preparation of Environmental Impact Statements dated October 21, 1974 (see 39 FR 37419). Also EPA shall prepare an environmental impact statement for the establishment or revision of criteria under section 102(a) of MPRSA.

(2) For individual permits issued by EPA under section 102(b) an environmental assessment shall be made by EPA. Pursuant to 40 CFR part 221, the permit applicant shall submit with the application an environmental analysis which includes a discussion of the need for the action, an outline of alternatives, and an analysis of the environmental impact of the proposed action and alternatives consistent with the EPA criteria established under section 102(a) of MPRSA. The information submitted under 40 CFR part 221 shall be sufficient to satisfy the environmental assessment requirement.

(c) *EPA permitting and licensing activities.* The appropriate Regional Administrator is responsible for conducting concise environmental reviews with regard to permits issued under section 3005 of the Resource Conservation and Recovery Act (RCRA permits), section 402 of the Clean Water Act (NPDES permits), and section 165 of the Clean Air Act (PSD permits), for such actions undertaken by EPA which affect the global commons or foreign nations. The information submitted by applicants for such permits or approvals under the applicable consolidated permit regulations (40 CFR parts 122 and 124) and Prevention of Significant Deterioration (PSD) regulations (40 CFR part 52) shall satisfy the environmental document requirement under section 2–4(b) of Executive Order 12114. Compliance with applicable requirements in part 124 of the consolidated permit regulations (40 CFR part 124) shall be sufficient to satisfy the requirements to conduct a concise environmental review for permits subject to this paragraph.

(d) *Wastewater treatment facility planning.* 40 CFR 6.506 details the environmental review process for the facilities planning process under the wastewater treatment works construction grants program. For the purpose of these regulations, the facility plan shall also include a concise environmental review of those activities that would have environmental effects abroad. This shall apply only to the Step 1 grants awarded after January 14, 1981, but on or before December 29, 1981, and facilities plans developed after December 29, 1981. Where water quality impacts identified in a facility plan are the subject or water quality agreements with Canada or Mexico, nothing in these regulations shall impose on the facility planning process coordination and consultation requirements in addition to those required by such agreements.

(e) *Review by other Federal agencies and other appropriate officials.* The responsible officials shall consult with other Federal agencies with relevant expertise during the preparation of the environmental document. As soon as feasible after preparation of the environmental document, the responsible official shall make the document available to the Council on Environmental Quality, Department of State, and other appropriate officials. The responsible official with assistance from OIA shall work with the Department of State to establish procedures for communicating with and making documents available to foreign nations and international organizations.

[46 FR 3364, Jan. 14, 1981, as amended at 50 FR 26323, June 25, 1985]

§ 6.1005 Lead or cooperating agency.

(a) *Lead Agency.* Section 3–3 of Executive Order 12114 requires the creation of a lead agency whenever an action involves more than one federal agency. In implementing section 3–3, EPA shall, to the fullest extent possible, follow the guidance for the selection of a lead agency contained in 40 CFR 1501.5 of the CEQ regulations.

(b) *Cooperating Agency.* Under section 2–4(d) of the Executive Order, Federal agencies with special expertise are encouraged to provide appropriate resources to the agency preparing environmental documents in order to avoid duplication of resources. In working with a lead agency, EPA shall to the fullest extent possible serve as a cooperating agency in accordance with 40 CFR 1501.6. When other program commitments preclude the degree of involvement requested by the lead agency, the responsible EPA official shall so inform the lead agency in writing.

§ 6.1006 Exemptions and considerations.

Under section 2–5 (b) and (c) of the Executive Order, Federal agencies may provide for modifications in the contents, timing and availability of documents or exemptions from certain requirements for the environmental review and assessment. The responsible official, in consultation with the Director, Office of Environmental Review (OER), and the Director, Office of International Activities (OIA), may approve modifications for situations described in section 2–5(b). The responsible official, in consultation with the Director, OER and Director OIA, shall obtain exemptions from the Administrator for situations described in section 2–5(c). The Department of State and the Council on Environmental Quality shall be consulted as soon as possible on the utilization of such exemptions.

§ 6.1007 Implementation.

(a) *Oversight.* OER is responsible for overseeing the implementation of these procedures and shall consult with OIA wherever appropriate. OIA shall be utilized for making formal contacts with the Department of State. OER shall assist the responsible officials in carrying out their responsibilities under these procedures.

(b) *Information exchange.* OER with the aid of OIA, shall assist the Department of State and the Council on Environmental Quality in developing the informational exchange on environmental review activities with foreign nations.

(c) *Unidentified activities.* The responsible official shall consult with OER and OIA to establish the type of environmental review or document appropriate for any new EPA activities or requirements imposed upon EPA by statute, international agreement or other agreements.

APPENDIX A—STATEMENT OF PROCEDURES ON FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION

Contents:

Section 1 General

a. Executive Order 11988 entitled ''Floodplain Management'' dated May 24, 1977, requires Federal agencies to evaluate the potential effects of actions it may take in a floodplain to avoid adversely impacting floodplains wherever possible, to ensure that its planning programs and budget requests reflect consideration of flood hazards and floodplain management, including the restoration and preservation of such land areas as natural undeveloped floodplains, and to prescribe procedures to implement the policies and procedures of this Executive Order. Guidance for implementation of the Executive Order has been provided by the U.S. Water Resources Council in its Floodplain Management Guidelines dated February 10, 1978 (see 40 FR 6030).

b. Executive Order 11990 entitled ''Protection of Wetlands'', dated May 24, 1977, requires Federal agencies to take action to avoid adversely impacting wetlands wherever possible, to minimize wetlands destruction and to preserve the values of wetlands, and to prescribe procedures to implement the policies and procedures of this Executive Order.

c. It is the intent of these Executive Orders that, wherever possible, Federal agencies implement the floodplains/wetlands requirements through existing procedures, such as those internal procedures established to implement the National Environmental Policy Act (NEPA) and OMB A–95 review procedures. In those instances where the environmental impacts of a proposed action are not significant enough to require an environmental impact statement (EIS) pursuant to section 102(2)(C) of NEPA, or where programs are not subject to the requirements of NEPA, alternative but equivalent floodplain/wetlands evaluation and notice procedures must be established.

Section 2 Purpose

a. The purpose of this Statement of Procedures is to set forth Agency policy and guidance for carrying out the provisions of Executive Orders 11988 and 11990.

b. EPA program offices shall amend existing regulations and procedures to incorporate the policies and procedures set forth in this Statement of Procedures.

c. To the extent possible, EPA shall accommodate the requirements of Executive Orders 11988 and 11990 through the Agency NEPA procedures contained in 40 CFR part 6.

Section 3 Policy

a. The Agency shall avoid wherever possible the long and short term impacts associated with the destruction of wetlands and the occupancy and modification of floodplains and wetlands, and avoid direct and indirect support of floodplain and wetlands development wherever there is a practicable alternative.

b. The Agency shall incorporate floodplain management goals and wetlands protection considerations into its planning, regulatory, and decisionmaking processes. It shall also promote the preservation and restoration of floodplains so that their natural and beneficial values can be realized. To the extent possible EPA shall:

(1) Reduce the hazard and risk of flood loss and wherever it is possible to avoid direct or indirect adverse impact on floodplains;

(2) Where there is no practical alternative to locating in a floodplain, minimize the impact of floods on human safety, health, and welfare, as well as the natural environment;

(3) Restore and preserve natural and beneficial values served by floodplains;

(4) Require the construction of EPA structures and facilities to be in accordance with the standards and criteria, of the regulations promulgated pursuant to the National Flood Insurance Program;

(5) Identify floodplains which require restoration and preservation and recommend management programs necessary to protect these floodplains and to include such considerations as part of on-going planning programs; and

(6) Provide the public with early and continuing information concerning floodplain management and with opportunities for participating in decision making including the (evaluation of) tradeoffs among competing alternatives.

c. The Agency shall incorporate wetlands protection considerations into its planning, regulatory, and decisionmaking processes. It shall minimize the destruction, loss, or degradation of wetlands and preserve and enhance the natural and beneficial values of wetlands. Agency activities shall continue to be carried out consistent with the Administrator's Decision Statement No. 4 dated February 21, 1973 entitled ''EPA Policy to Protect the Nation's Wetlands.''

Section 4 Definitions

a. *Base Flood* means that flood which has a one percent chance of occurrence in any given year (also known as a 100-year flood). This term is used in the National Flood Insurance Program (NFIP) to indicate the minimum level of flooding to be used by a community in its floodplain management regulations.

b. *Base Floodplain* means the land area covered by a 100-year flood (one percent chance floodplain). Also see definition of floodplain.

c. *Flood or Flooding* means a general and temporary condition of partial or complete inundation of normally dry land areas from the overflow of inland and/or tidal

waters, and/or the unusual and rapid accumulation or runoff of surface waters from any source, or flooding from any other source.

d. *Floodplain* means the lowland and relatively flat areas adjoining inland and coastal waters and other floodprone areas such as offshore islands, including at a minimum, that area subject to a one percent or greater chance of flooding in any given year. The base floodplain shall be used to designate the 100-year floodplain (one percent chance floodplain). The critical action floodplain is defined as the 500-year floodplain (0.2 percent chance floodplain).

e. *Floodproofing* means modification of individual structures and facilities, their sites, and their contents to protect against structural failure, to keep water out or to reduce effects of water entry.

f. *Minimize* means to reduce to the smallest possible amount or degree.

g. *Practicable* means capable of being done within existing constraints. The test of what is practicable depends upon the situation and includes consideration of the pertinent factors such as environment, community welfare, cost, or technology.

h. *Preserve* means to prevent modification to the natural floodplain environment or to maintain it as closely as possible to its natural state.

i. *Restore* means to re-establish a setting or environment in which the natural functions of the floodplain can again operate.

j. *Wetlands* means those areas that are inundated by surface or ground water with a frequency sufficient to support and under normal circumstances does or would support a prevalence of vegetative or aquatic life that requires saturated or seasonally saturated soil conditions for growth and reproduction. Wetlands generally include swamps, marshes, bogs, and similar areas such as sloughs, potholes, wet meadows, river overflows, mud flats, and natural ponds.

Section 5 Applicability

a. The Executive Orders apply to activities of Federal agencies pertaining to (1) acquiring, managing, and disposing of Federal lands and facilities, (2) providing Federally undertaken, financed, or assisted construction and improvements, and (3) conducting Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulating, and licensing activities.

b. These procedures shall apply to EPA's programs as follows: (1) All Agency actions involving construction of facilities or management of lands or property. This will require amendment of the EPA Facilities Management Manual (October 1973 and revisions thereafter).

(2) All Agency actions where the NEPA process applies. This would include the programs under sections 306/402 of the Clean Water Act pertaining to new source permitting and section 201 of the Clean Water Act pertaining to wastewater treatment construction grants.

(3) All agency actions where there is sufficient independent statutory authority to carry out the floodplain/wetlands procedures.

(4) In program areas where there is no EIS requirement nor clear statutory authority for EPA to require procedural implementation, EPA shall continue to provide leadership and offer guidance so that the value of floodplain management and wetlands protection can be understood and carried out to the maximum extent practicable in these programs.

c. These procedures shall not apply to any permitting or source review programs of EPA once such authority has been transferred or delegated to a State. However, EPA shall, to the extent possible, require States to provide equivalent effort to assure support for the objectives of these procedures as part of the state assumption process.

Section 6 Requirements

a. Floodplain/Wetlands review of proposed Agency actions.

(1) *Floodplain/Wetlands Determination*—Before undertaking an Agency action, each program office must determine whether or not the action will be located in or affect a floodplain or wetlands. The Agency shall utilize maps prepared by the Federal Insurance Administration of the Federal Emergency Management Agency (Flood Insurance Rate Maps or Flood Hazard Boundary Maps), Fish and Wildlife Service (National Wetlands Inventory Maps), and other appropriate agencies to determine whether a proposed action is located in or will likely affect a floodplain or wetlands. If there is no floodplain/wetlands impact identified, the action may proceed without further consideration of the remaining procedures set forth below.

(2) *Early Public Notice*—When it is apparent that a proposed or potential agency action is likely to impact a floodplain or wetlands, the public should be informed through appropriate public notice procedures.

(3) *Floodplain/Wetlands Assessment*—If the Agency determines a proposed action is located in or affects a floodplain or wetlands, a floodplain/wetlands assessment shall be undertaken. For those actions where an environmental assessment (EA) or environmental impact statement (EIS) is prepared pursuant to 40 CFR part 6, the floodplain/wetlands assessment shall be prepared concurrently with these analyses and shall be included in the EA or EIS. In all other cases, a *floodplain/wetlands assessment* shall be prepared. Assessments shall consist of a description of the proposed action, a discussion of its effect on the floodplain/wetlands, and shall also describe the alternatives considered.

(4) *Public Review of Assessments*—For proposed actions impacting floodplain/wetlands where an EA or EIS is prepared, the opportunity for public review will be provided through the EIS provisions contained in 40 CFR parts 6, 25, or 35, where appropriate. In other cases, an equivalent public notice of the floodplain/wetlands assessment shall be made consistent with the public involvement requirements of the applicable program.

(5) *Minimize, Restore or Preserve*—If there is no practicable alternative to locating in or affecting the floodplain or wetlands, the Agency shall act to minimize potential harm to the floodplain or wetlands. The Agency shall also act to restore and preserve the natural and beneficial values of floodplains and wetlands as part of the analysis of all alternatives under consideration.

(6) *Agency Decision*—After consideration of alternative actions, as they have been modified in the preceding analysis, the Agency shall select the desired alternative. For all Agency actions proposed to be in or affecting a floodplain/wetlands, the Agency shall provide further public notice announcing this decision. This decision shall be accompanied by a Statement of Findings, not to exceed three pages. This Statement shall include: (i) The reasons why the proposed action must be located in or affect the floodplain or wetlands; (ii) a description of significant

facts considered in making the decision to locate in or affect the floodplain or wetlands including alternative sites and actions; (iii) a statement indicating whether the proposed action conforms to applicable State or local floodplain protection standards; (iv) a description of the steps taken to design or modify the proposed action to minimize potential harm to or within the floodplain or wetlands; and (v) a statement indicating how the proposed action affects the natural or beneficial values of the floodplain or wetlands. If the provisions of 40 CFR part 6 apply, the Statement of Findings may be incorporated in the final EIS or in the environmental assessment. In other cases, notice should be placed in the FEDERAL REGISTER or other local medium and copies sent to Federal, State, and local agencies and other entities which submitted comments or are otherwise concerned with the floodplain/wetlands assessment. For floodplain actions subject to Office of Management and Budget (OMB) Circular A–95, the Agency shall send the Statement of Findings to State and areawide A–95 clearinghouse in the geographic area affected. At least 15 working days shall be allowed for public and interagency review of the Statement of Findings.

(7) *Authorizations/Appropriations*—Any requests for new authorizations or appropriations transmitted to OMB shall include, a floodplain/wetlands assessment and, for floodplain impacting actions, a Statement of Findings, if a proposed action will be located in a floodplain or wetlands.

b. *Lead agency concept.* To the maximum extent possible, the Agency shall relay on the lead agency concept to carry out the provisions set forth in section 6.a of this appendix. Therefore, when EPA and another Federal agency have related actions, EPA shall work with the other agency to identify which agency shall take the lead in satisfying these procedural requirements and thereby avoid duplication of efforts.

c. *Additional floodplain management provisions relating to Federal property and facilities.*

(1) *Construction Activities*—EPA controlled structures and facilities must be constructed in accordance with existing criteria and standards set forth under the NFIP and must include mitigation of adverse impacts wherever feasible. Deviation from these requirements may occur only to the extent NFIP standards are demonstrated as inappropriate for a given structure or facility.

(2) *Flood Protection Measures*—If newly constructed structures or facilities are to be located in a floodplain, accepted floodproofing and other flood protection measures shall be undertaken. To achieve flood protection, EPA shall, wherever practicable, elevate structures above the base flood level rather than filling land.

(3) *Restoration and Preservation*—As part of any EPA plan or action, the potential for restoring and preserving floodplains and wetlands so that their natural and beneficial values can be realized must be considered and incorporated into the plan or action wherever feasible.

(4) *Property Used by Public*—If property used by the public has suffered damage or is located in an identified flood hazard area, EPA shall provide on structures, and other places where appropriate, conspicuous indicators of past and probable flood height to enhance public knowledge of flood hazards.

(5) *Transfer of EPA Property*—When property in flood plains is proposed for lease, easement, right-of-way, or disposal to non-Federal public or private parties, EPA shall reference in the conveyance those uses that are restricted under Federal, State and local floodplain regulations and attach other restrictions to uses of the property as may be deemed appropriate. Notwithstanding, EPA shall consider withholding such properties from conveyance.

Section 7 Implementation

a. Pursuant to section 2, the EPA program offices shall amend existing regulations, procedures, and guidance, as appropriate, to incorporate the policies and procedures set forth in this Statement of Procedures. Such amendments shall be made within six months of the date of these Procedures.

b. The Office of External Affairs (OEA) is responsible for the oversight of the implementation of this Statement of Procedures and shall be given advanced opportunity to review amendments to regulations, procedures, and guidance. OEA shall coordinate efforts with the program offices to develop necessary manuals and more specialized supplementary guidance to carry out this Statement of Procedures.

[44 FR 64177, Nov. 6, 1976, as amended at 50 FR 26323, June 25, 1985]

PART 7—NONDISCRIMINATION IN PROGRAMS RECEIVING FEDERAL ASSISTANCE FROM THE ENVIRONMENTAL PROTECTION AGENCY

Subpart A—General

Sec.

Subpart B—Discrimination Prohibited on the Basis of Race, Color, National Origin or Sex

Subpart C—Discrimination Prohibited on the Basis of Handicap

Subpart D—Requirements for Applicants and Recipients

Subpart E—Agency Compliance Procedures

AUTHORITY: 42 U.S.C. 2000d to 2000d–4; 29 U.S.C. 794; 33 U.S.C. 1251 nt.

SOURCE: 49 FR 1659, Jan. 12, 1984, unless otherwise noted.

Subpart A—General

§ 7.10 Purpose of this part.

This part implements: Title VI of the Civil Rights Act of 1964, as amended; section 504 of the Rehabilitation Act of 1973, as amended; and section 13 of the Federal Water Pollution Control Act Amendments of 1972, Public Law 92–500, (collectively, the Acts).

§ 7.15 Applicability.

This part applies to all applicants for, and recipients of, EPA assistance in the operation of programs or activities receiving such assistance beginning February 13, 1984. New construction (§ 7.70) for which design was initiated prior to February 13, 1984, shall comply with the accessibility requirements in the Department of Health, Education and Welfare (now the Department of Health and Human Services) nondiscrimination regulation, 45 CFR 84.23, issued June 3, 1977, or with equivalent standards that ensure the facility is readily accessible to and usable by handicapped persons. Such assistance includes but is not limited to that which is listed in the *Catalogue of Federal Domestic Assistance* under the 66.000 series. It supersedes the provisions of former 40 CFR parts 7 and 12.

§ 7.20 Responsible agency officers.

(a) The EPA Office of Civil Rights (OCR) is responsible for developing and administering EPA's compliance programs under the Acts.

(b) EPA's Project Officers will, to the extent possible, be available to explain to each recipient its obligations under this part and to provide recipients with technical assistance or guidance upon request.

§ 7.25 Definitions.

As used in this part:

Administrator means the Administrator of EPA. It includes any other agency official authorized to act on his or her behalf, unless explicity stated otherwise.

Alcohol abuse means any misuse of alcohol which demonstrably interferes with a person's health, interpersonal relations or working ability.

Applicant means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance (see definition for *EPA assistance*).

Assistant Attorney General is the head of the Civil Rights Division, U.S. Department of Justice.

Award Official means the EPA official with the authority to approve and execute assistance agreements and to take other assistance related actions

authorized by this part and by other EPA regulations or delegation of authority.

Drug abuse means:

(a) The use of any drug or substance listed by the Department of Justice in 21 CFR 1308.11, under authority of the Controlled Substances Act, 21 U.S.C. 801, as a controlled substance unavailable for prescription because:

(1) The drug or substance has a high potential for abuse,

(2) The drug or other substance has no currently accepted medical use in treatment in the United States, or

(3) There is a lack of accepted safety for use of the drug or other substance under medical supervision.

NOTE: Examples of drugs under paragraph (a)(1) of this section include certain opiates and opiate derivatives (*e.g.,* heroin) and hallucinogenic substances (*e.g.,* marijuana, mescaline, peyote) and depressants (*e.g.,* methaqualone). Examples of (a)(2) include opium, coca leaves, methadone, amphetamines and barbiturates.

(b) The misuse of any drug or substance listed by the Department of Justice in 21 CFR 1308.12–1308.15 under authority of the Controlled Substances Act as a controlled substance available for prescription.

EPA means the United States Environmental Protection Agency.

EPA assistance means any grant or cooperative agreement, loan, contract (other than a procurement contract or a contract of insurance or guaranty), or any other arrangement by which EPA provides or otherwise makes available assistance in the form of:

(1) Funds;

(2) Services of personnel; or

(3) Real or personal property or any interest in or use of such property, including:

(i) Transfers or leases of such property for less than fair market value or for reduced consideration; and

(ii) Proceeds from a subsequent transfer or lease of such property if EPA's share of its fair market value is not returned to EPA.

Facility means all, or any part of, or any interests in structures, equipment, roads, walks, parking lots, or other real or personal property.

Handicapped person:

(a) *Handicapped person* means any person who (1) has a physical or mental impairment which substantially limits one or more major life activities, (2) has a record of such an impairment, or (3) is regarded as having such an impairment. For purposes of employment, the term *handicapped person* does not include any person who is an alcoholic or drug abuser whose current use of alcohol or drugs prevents such individual from performing the duties of the job in question or whose employment, by reason of such current drug or alcohol abuse, would constitute a direct threat to property or the safety of others.

(b) As used in this paragraph, the phrase:

(1) *Physical or mental impairment* means (i) any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: Neurological; musculoskeletal; special sense organs; respiratory, including speech organs; cardiovascular; reproductive; digestive; genito-urinary; hemic and lymphatic; skin; and endocrine; and (ii) any mental or psychological disorder, such as mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities.

(2) *Major life activities* means functions such as caring for one's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.

(3) *Has a record of such an impairment* means has a history of, or has been misclassified as having, a mental or physical impairment that substantially limits one or more major life activities.

(4) *Is regarded as having an impairment* means:

(i) Has a physical or mental impairment that does not substantially limit major life activities but that is treated by a recipient as constituting such a limitation;

(ii) Has a physical or mental impairment that substantially limits major life activities only as a result of the attitudes of others toward such impairment; or

(iii) Has none of the impairments defined above but is treated by a recipient as having such an impairment.

Office of Civil Rights or OCR means the Director of the Office of Civil Rights, EPA Headquarters or his/her designated representative.

Project Officer means the EPA official designated in the assistance agreement (as defined in *EPA assistance*) as EPA's program contact with the recipient; Project Officers are responsible for monitoring the project.

Qualified handicapped person means:

(a) With respect to employment: A handicapped person who, with reasonable accommodation, can perform the essential functions of the job in question.

(b) With respect to services: A handicapped person who meets the essential eligibility requirements for the receipt of such services.

Racial classifications: [1]

[1] Additional subcategories based on national origin or primary language spoken may be used where appropriate on either a national or a regional basis. Subparagraphs (a) through (e) are in conformity with Directive 15 of the Office of Federal Statistical Policy and Standards, whose function is now in the Office of Information and Regulatory Affairs, Office of Management and Budget. Should

(a) *American Indian or Alaskan native.* A person having origins in any of the original peoples of North America, and who maintains cultural identification through tribal affiliation or community recognition.

(b) *Asian or Pacific Islander.* A person having origins in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands. This area includes, for example, China, Japan, Korea, the Philippine Islands, and Samoa.

(c) *Black and not of Hispanic origin.* A person having origins in any of the black racial groups of Africa.

(d) *Hispanic.* A person of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish culture or origin, regardless or race.

(e) *White, not of Hispanic origin.* A person having origins in any of the original peoples of Europe, North Africa, or the Middle East.

Recipient means, for the purposes of this regulation, any state or its political subdivision, any instrumentality of a state or its political subdivision, any public or private agency, institution, organization, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance.

Section 13 refers to section 13 of the Federal Water Pollution Control Act Amendments of 1972.

United States includes the states of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, Wake Island, the Canal Zone, and all other territories and possessions of the United States; the term *State* includes any one of the foregoing.

Subpart B—Discrimination Prohibited on the Basis of Race, Color, National Origin or Sex

§ 7.30 General prohibition.

No person shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving EPA assistance on the basis of race, color, national origin, or on the basis of sex in any program or activity receiving EPA assistance under the Federal Water Pollution Control Act, as amended, including the Environmental Financing Act of 1972.

---

that office, or any successor office, change or otherwise amend the categories listed in Directive 15, the categories in this paragraph shall be interpreted to conform with any such changes or amendments.

§ 7.35 Specific prohibitions.

(a) As to any program or activity receiving EPA assistance, a recipient shall not directly or through contractual, licensing, or other arrangements on the basis of race, color, national origin or, if applicable, sex:

(1) Deny a person any service, aid or other benefit of the program;

(2) Provide a person any service, aid or other benefit that is different, or is provided differently from that provided to others under the program;

(3) Restrict a person in any way in the enjoyment of any advantage or privilege enjoyed by others receiving any service, aid, or benefit provided by the program;

(4) Subject a person to segregation in any manner or separate treatment in any way related to receiving services or benefits under the program;

(5) Deny a person or any group of persons the opportunity to participate as members of any planning or advisory body which is an integral part of the program, such as a local sanitation board or sewer authority;

(6) Discriminate in employment on the basis of sex in any program subject to section 13, or on the basis of race, color, or national origin in any program whose purpose is to create employment; or, by means of employment discrimination, deny intended beneficiaries the benefits of the EPA assistance program, or subject the beneficiaries to prohibited discrimination.

(7) In administering a program or activity receiving Federal financial assistance in which the recipient has previously discriminated on the basis of race, color, sex, or national origin, the recipient shall take affirmative action to provide remedies to those who have been injured by the discrimination.

(b) A recipient shall not use criteria or methods of administering its program which have the effect of subjecting individuals to discrimination because of their race, color, national origin, or sex, or have the effect of defeating or substantially impairing accomplishment of the objectives of the program with respect to individuals of a particular race, color, national origin, or sex.

(c) A recipient shall not choose a site or location of a facility that has the purpose or effect of excluding individuals from, denying them the benefits of, or subjecting them to discrimination under any program to which this part applies on the grounds of race, color, or national origin or sex; or with the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of this subpart.

(d) The specific prohibitions of discrimination enumerated above do not limit the general prohibition of § 7.30.

Subpart C—Discrimination Prohibited on the Basis of Handicap

§ 7.45 General prohibition.

No qualified handicapped person shall solely on the basis of handicap be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any program or activity receiving EPA assistance.

§ 7.50 Specific prohibitions against discrimination.

(a) A recipient, in providing any aid, benefit or service under any program or activity receiving EPA assistance shall not, on the basis of handicap, directly or through contractual, licensing, or other arrangement:

(1) Deny a qualified handicapped person any service, aid or other benefit of a federally assisted program;

(2) Provide different or separate aids, benefits, or services to handicapped persons or to any class of handicapped persons than is provided to others unless the action is necessary to provide qualified handicapped persons with aids, benefits, or services that are as effective as those provided to others;

(3) Aid or perpetuate discrimination against a qualified handicapped person by providing significant assistance to an entity that discriminates on the basis of handicap in providing aids, benefits, or services to beneficiaries of the recipient's program;

(4) Deny a qualified handicapped person the opportunity to participate as a member of planning or advisory boards; or

(5) Limit a qualified handicapped person in any other way in the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others receiving an aid, benefit or service from the program.

(b) A recipient may not, in determining the site or location of a facility, make selections: (1) That have the effect of excluding handicapped persons from, denying them the benefits of, or otherwise subjecting them to discrimination under any program or activity that receives or benefits from EPA assistance or (2) that have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the program or activity receiving EPA assistance with respect to handicapped persons.

(c) A recipient shall not use criteria or methods of administering any program or activity receiving EPA assistance which have the effect of subjecting individuals to discrimination because of their handicap, or have the effect of defeating or substantially impairing accomplishment of the objectives of such program or activity with respect to handicapped persons.

(d) Recipients shall take appropriate steps to ensure that communications with their applicants, employees, and beneficiaries are available to persons with impaired vision and hearing.

(e) The exclusion of non-handicapped persons or specified classes of handicapped persons from programs limited by Federal statute or Executive Order to handicapped persons or a different class of handicapped persons is not prohibited by this subpart.

§ 7.55 Separate or different programs.

Recipients shall not deny a qualified handicapped person an opportunity equal to that afforded others to participate in or benefit from the aid, benefit, or service in the program receiving EPA assistance. Recipients shall administer programs in the most integrated setting appropriate to the needs of qualified handicapped persons.

§ 7.60 Prohibitions and requirements relating to employment.

(a) No qualified handicapped person shall, on the basis of handicap, be subjected to discrimination in employment under any program or activity that receives or benefits from Federal assistance.

(b) A recipient shall make all decisions concerning employment under any program or activity to which this part applies in a manner which ensures that discrimination on the basis of handicap does not occur, and shall not limit, segregate, or classify applicants or employees in any way that adversely affects their opportunities or status because of handicap.

(c) The prohibition against discrimination in employment applies to the following activities:

(1) Recruitment, advertising, and the processing of applications for employment;

(2) Hiring, upgrading, promotion, award of tenure, demotion, transfer, layoff, termination, right of return from layoff, and rehiring;

(3) Rates of pay or any other form of compensation and changes in compensation;

(4) Job assignments, job classifications, organizational structures, position descriptions, lines of progression, and seniority lists;

(5) Leaves of absence, sick leave, or any other leave;

(6) Fringe benefits available by virtue of employment, whether or not administered by the recipient;

(7) Selection and financial support for training, including apprenticeship, professional meetings, conferences, and other related activities, and selection for leaves of absence to pursue training;

(8) Employer sponsored activities, including social or recreational programs; or

(9) Any other term, condition, or privilege of employment.

(d) A recipient shall not participate in a contractual or other relationship that has the effect of subjecting qualified handicapped applicants or employees to discrimination prohibited by this subpart. The relationships referred to in this paragraph include relationships with employment and referral agencies, with labor unions, with organizations providing or administering fringe benefits to employees of the recipient, and with organizations providing training and apprenticeship programs.

(e) A recipient shall make reasonable accommodation to the known physical or mental limitations of an otherwise qualified handicapped applicant or employee unless the recipient can demonstrate that the accommodation would impose an undue hardship on the operation of its program.

(f) A recipient shall not use employment tests or criteria that discriminate against handicapped persons and shall ensure that employment tests are adapted for use by persons who have handicaps that impair sensory, manual, or speaking skills.

(g) A recipient shall not conduct a preemployment medical examination or make a preemployment inquiry as to whether an applicant is a handicapped person or as to the nature or severity of a handicap except as permitted by the Department of Justice in 28 CFR 42.513.

§ 7.65 Accessibility.

(a) *General.* A recipient shall operate each program or activity receiving EPA assistance so that such program or activity, when viewed in its entirety, is readily accessible to and usable by handicapped persons. This paragraph does not:

(1) Necessarily require a recipient to make each of its existing facilities or every part of an existing facility accessible to and usable by handicapped persons.

(2) Require a recipient to take any action that the recipient can demonstrate would result in a fundamental alteration in the nature of its program or activity or in undue financial and administrative burdens. If an action would result in such an alternation or such financial and administrative burdens, the recipient shall be required to take any other action that would not result in such an alteration or financial and administrative burdens but would nevertheless ensure that handicapped persons receive the benefits and services of the program or activity receiving EPA assistance.

(b) *Methods of making existing programs accessible.* A recipient may comply with the accessibility requirements of this section by making structural changes, redesigning equipment, reassigning services to accessible buildings, assigning aides to beneficiaries, or any other means that make its program or activity accessible to handicapped persons. In choosing among alternatives, a recipient must give priority to methods that offer program benefits to handicapped persons in the most integrated setting appropriate.

(c) *Deadlines.* (1) Except where structural changes in facilities are necessary, recipients must adhere to the provisions of this section within 60 days after the effective date of this part.

(2) Recipients having an existing facility which does require alterations in order to make a program or activity accessible must prepare a transition plan in accordance with § 7.75 within six months from the effective date of this part. The recipient must complete the changes as soon as possible, but not later than three years from date of award.

(d) *Notice of accessibility.* The recipient must make sure that interested persons, including those with impaired vision or hearing, can find out about the existence and location of the assisted program services, activities, and facilities that are accessible to and usable by handicapped persons.

(e) *Structural and financial feasibility.* This section does not require structural alterations to existing facilities if making such alterations would not be structurally or financially feasible. An alteration is not structurally feasible when it has little likelihood of being accomplished without removing or altering a load-bearing structural member. Financial feasibility shall take into account the degree to which the alteration work is to be assisted by EPA assistance, the cost limitations of the program under which such assistance is provided, and the relative cost of accomplishing such alterations in manners consistent and inconsistent with accessibility.

§ 7.70 New construction.

(a) *General.* New facilities shall be designed and constructed to be readily accessible to and usable by handicapped persons. Alterations to existing facilities shall, to the maximum extent feasible, be designed and constructed to be readily accessible to and usable by handicapped persons.

(b) *Conformance with Uniform Federal Accessibility Standards.* (1) Effective as of January 18, 1991, design, construction, or alteration of buildings in conformance with sections 3-8 of the Uniform Federal Accessibility Standards (USAF) (appendix A to 41 CFR subpart 101–19.6) shall be deemed to comply with the requirements of this section with respect to those buildings. Departures from particular technical and scoping requirements of UFAS by the use of other methods are permitted where substantially equivalent or greater access to and usability of the building is provided.

(2) For purposes of this section, section 4.1.6(1)(g) of UFAS shall be interpreted to exempt from the requirements of UFAS only mechanical

rooms and other spaces that, because of their intended use, will not require accessibility to the public or beneficiaries or result in the employment or residence therein of persons with physical handicaps.

(3) This section does not require recipients to make building alterations that have little likelihood of being accomplished without removing or altering a load-bearing structural member.

[49 FR 1659, Jan. 12, 1984, as amended at 55 FR 52138, 52142, Dec. 19, 1990]

§ 7.75 Transition plan.

If structural changes to facilities are necessary to make the program accessible to handicapped persons, a recipient must prepare a transition plan.

(a) *Requirements.* The transition plan must set forth the steps needed to complete the structural changes required and must be developed with the assistance of interested persons, including handicapped persons or organizations representing handicapped persons. At a minimum, the transition plan must:

(1) Identify the physical obstacles in the recipient's facilities that limit handicapped persons' access to its program or activity,

(2) Describe in detail what the recipient will do to make the facilities accessible,

(3) Specify the schedule for the steps needed to achieve full program accessibility, and include a year-by-year timetable if the process will take more than one year,

(4) Indicate the person responsible for carrying out the plan.

(b) *Availability.* Recipients shall make available a copy of the transition plan to the OCR upon request and to the public for inspection at either the site of the project or at the recipient's main office.

Subpart D—Requirements for Applicants and Recipients

§ 7.80 Applicants.

(a) *Assurances*—(1) *General.* Applicants for EPA assistance shall submit an assurance with their applications stating that, with respect to their programs or activities that receive EPA assistance, they will comply with the requirements of this part. Applicants must also submit any other information that the OCR determines is necessary for preaward review. The applicant's acceptance of EPA assistance is an acceptance of the obligation of this assurance and this part.

(2) *Duration of assurance*—(i) *Real property.* When EPA awards assistance in the form of real property, or assistance to acquire real property, or structures on the property, the assurance will obligate the recipient, or transferee, during the period the real property or structures are used for the purpose for which EPA assistance is extended, or for another purpose in which similar services or benefits are provided. The transfer instrument shall contain a covenant running with the land which assures nondiscrimination. Where applicable, the covenant shall also retain a right of reverter which will permit EPA to recover the property if the covenant is ever broken.

(ii) *Personal property.* When EPA provides assistance in the form of personal property, the assurance will obligate the recipient for so long as it continues to own or possess the property.

(iii) *Other forms of assistance.* In all other cases, the assurance will obligate the recipient for as long as EPA assistance is extended.

(b) *Wastewater treatment project.* EPA Form 4700–4 shall also be submitted with applications for assistance under Title II of the Federal Water Pollution Control Act.

(c) *Compliance information.* Each applicant for EPA assistance shall submit regarding the program or activity that would receive EPA assistance:

(1) Notice of any lawsuit pending against the applicant alleging discrimination on the basis of race, color, sex, handicap, or national origin;

(2) A brief description of any applications pending to other federal agencies for assistance, and of Federal assistance being provided at the time of the application; and

(3) A statement describing any civil rights compliance reviews regarding the applicant conducted during the two-year period before the application, and information concerning the agency or organization performing the reviews.

(Approved by the Office of Management and Budget under control number 2000–0006)

§ 7.85 Recipients.

(a) *Compliance information.* Each recipient shall collect, maintain, and on request of the OCR, provide the following information to show compliance with this part:

(1) A brief description of any lawsuits pending against the recipient that allege discrimination which this part prohibits;

(2) Racial/ethnic, national origin, sex and handicap data, or EPA Form 4700–4 information submitted with its application;

(3) A log of discrimination complaints which identifies the complaint, the date it was filed, the date the recipient's investigation was completed, the disposition, and the date of disposition; and

(4) Reports of any compliance reviews conducted by any other agencies.

(b) *Additional compliance information.* If necessary, the OCR may require recipients to submit data and information specific to certain programs to determine compliance where there is reason to

believe that discrimination may exist in a program or activity receiving EPA assistance or to investigate a complaint alleging discrimination in a program or activity receiving EPA assistance. Requests shall be limited to data and information which is relevant to determining compliance and shall be accompanied by a written statement summarizing the complaint or setting forth the basis for the belief that discrimination may exist.

(c) *Self-evaluation.* Each recipient must conduct a self-evaluation of its administrative policies and practices, to consider whether such policies and practices may involve handicap discrimination prohibited by this part. When conducting the self-evaluation, the recipient shall consult with interested and involved persons including handicapped persons or organizations representing handicapped persons. The evaluation shall be completed within 18 months after the effective date of this part.

(d) Preparing compliance information. In preparing compliance information, a recipient must:

(1) [Reserved]

(2) Use the racial classifications set forth in § 7.25 in determining categories of race, color or national origin.

(e) *Maintaining compliance information.* Recipients must keep records for paragraphs (a) and (b) of this section for three (3) years after completing the project. When any complaint or other action for alleged failure to comply with this part is brought before the three-year period ends, the recipient shall keep records until the complaint is resolved.

(f) Accessibility to compliance information. A recipient shall:

(1) Give the OCR access during normal business hours to its books, records, accounts and other sources of information, including its facilities, as may be pertinent to ascertain compliance with this part;

(2) Make compliance information available to the public upon request; and

(3) Assist in obtaining other required information that is in the possession of other agencies, institutions, or persons not under the recipient's control. If such party refuses to release that information, the recipient shall inform the OCR and explain its efforts to obtain the information.

(g) *Coordination of compliance effort.* If the recipient employs fifteen (15) or more employees, it shall designate at least one person to coordinate its efforts to comply with its obligations under this part.

(Approved by the Office of Management and Budget under control number 2000–0006)

§ 7.90 Grievance procedures.

(a) *Requirements.* Each recipient shall adopt grievance procedures that assure the prompt and fair resolution of complaints which allege violation of this part.

(b) *Exception.* Recipients with fewer than fifteen (15) full-time employees need not comply with this section unless the OCR finds a violation of this part or determines that creating a grievance procedure will not significantly impair the recipient's ability to provide benefits or services.

§ 7.95 Notice of nondiscrimination.

(a) *Requirements.* A recipient shall provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, or handicap in a program or activity receiving EPA assistance or, in programs covered by section 13, on the basis of sex. Methods of notice must accommodate those with impaired vision or hearing. At a minimum, this notice must be posted in a prominent place in the recipient's offices or facilities. Methods of notice may also include publishing in newspapers and magazines, and placing notices in recipient's internal publications or on recipient's printed letterhead. Where appropriate, such notice must be in a language or languages other than English. The notice must identify the responsible employee designated in accordance with § 7.85.

(b) *Deadline.* Recipients of assistance must provide initial notice by thirty (30) calendar days after award and continuing notice for the duration of EPA assistance.

§ 7.100 Intimidation and retaliation prohibited.

No applicant, recipient, nor other person shall intimidate, threaten, coerce, or discriminate against any individual or group, either:

(a) For the purpose of interfering with any right or privilege guaranteed by the Acts or this part, or

(b) Because the individual has filed a complaint or has testified, assisted or participated in any way in an investigation, proceeding or hearing under this part, or has opposed any practice made unlawful by this regulation.

Subpart E—Agency Compliance Procedures

§ 7.105 General policy.

EPA's Administrator, Director of the Office of Civil Rights, Project Officers and other responsible officials shall seek the cooperation of applicants and recipients in securing compliance with this part, and are available to provide help.

§ 7.110 Preaward compliance.

(a) *Review of compliance information.* Within EPA's application processing period, the OCR will

determine whether the applicant is in compliance with this part and inform the Award Official. This determination will be based on the submissions required by § 7.80 and any other information EPA receives during this time (including complaints) or has on file about the applicant. When the OCR cannot make a determination on the basis of this information, additional information will be requested from the applicant, local government officials, or interested persons or organizations, including handicapped persons or organizations representing such persons. The OCR may also conduct an on-site review only when it has reason to believe discrimination may be occurring in a program or activity which is the subject of the application.

(b) *Voluntary compliance.* If the review indicates noncompliance, an applicant may agree in writing to take the steps the OCR recommends to come into compliance with this part. The OCR must approve the written agreement before any award is made.

(c) *Refusal to comply.* If the applicant refuses to enter into such an agreement, the OCR shall follow the procedure established by paragraph (b) of § 7.130.

§ 7.115 Postaward compliance.

(a) *Periodic review.* The OCR may periodically conduct compliance reviews of any recipient's programs or activities receiving EPA assistance, including the request of data and information, and may conduct on-site reviews when it has reason to believe that discrimination may be occurring in such programs or activities.

(b) *Notice of review.* After selecting a recipient for review or initiating a complaint investigation in accordance with § 7.120, the OCR will inform the recipient of:

(1) The nature of and schedule for review, or investigation; and

(2) Its opportunity, before the determination in paragraph (d) of this section is made, to make a written submission responding to, rebutting, or denying the allegations raised in the review or complaint.

(c) *Postreview notice.* (1) Within 180 calendar days from the start of the compliance review or complaint investigation, the OCR will notify the recipient in writing by certified mail, return receipt requested, of:

(i) Preliminary findings;

(ii) Recommendations, if any, for achieving voluntary compliance; and

(iii) Recipient's right to engage in voluntary compliance negotiations where appropriate.

(2) The OCR will notify the Award Official and the Assistant Attorney General for Civil Rights of the preliminary findings of noncompliance.

(d) *Formal determination of noncompliance.* After receiving the notice of the preliminary finding of noncompliance in paragraph (c) of this section, the recipient may:

(1) Agree to the OCR's recommendations, or

(2) Submit a written response sufficient to demonstrate that the preliminary findings are incorrect, or that compliance may be achieved through steps other than those recommended by OCR.

If the recipient does not take one of these actions within fifty (50) calendar days after receiving this preliminary notice, the OCR shall, within fourteen (14) calendar days, send a formal written determination of noncompliance to the recipient and copies to the Award Official and Assistant Attorney General.

(e) *Voluntary compliance time limits.* The recipient will have ten (10) calendar days from receipt of the formal determination of noncompliance in which to come into voluntary compliance. If the recipient fails to meet this deadline, the OCR must start proceedings under paragraph (b) of § 7.130.

(f) *Form of voluntary compliance agreements.* All agreements to come into voluntary compliance must:

(1) Be in writing;

(2) Set forth the specific steps the recipient has agreed to take, and

(3) Be signed by the Director, OCR or his/her designee and an official with authority to legally bind the recipient.

§ 7.120 Complaint investigations.

The OCR shall promptly investigate all complaints filed under this section unless the complainant and the party complained against agree to a delay pending settlement negotiations.

(a) *Who may file a complaint.* A person who believes that he or she or a specific class of persons has been discriminated against in violation of this part may file a complaint. The complaint may be filed by an authorized representative. A complaint alleging employment discrimination must identify at least one individual aggrieved by such discrimination. Complaints solely alleging employment discrimination against an individual on the basis of race, color, national origin, sex or religion shall be processed under the procedures for complaints of employment discrimination filed against recipients of federal assistance (see 28 CFR part 42, subpart H and 29 CFR part 1691). Complainants are encouraged but not required to make use of any grievance procedure established under § 7.90 before filing a complaint. Filing a complaint through a grievance procedure does not extend the 180 day calendar requirement of paragraph (b)(2 of this section.

(b) *Where, when and how to file complaint.* The complainant may file a complaint at any EPA of-

fice. The complaint may be referred to the region in which the alleged discriminatory acts occurred.

(1) The complaint must be in writing and it must describe the alleged discriminatory acts which violate this part.

(2) The complaint must be filed within 180 calendar days of the alleged discriminatory acts, unless the OCR waives the time limit for good cause. The filing of a grievance with the recipient does not satisfy the requirement that complaints must be filed within 180 days of the alleged discriminatory acts.

(c) *Notification.* The OCR will notify the complainant and the recipient of the agency's receipt of the complaint within five (5) calendar days.

(d) *Complaint processing procedures.* After acknowledging receipt of a complaint, the OCR will immediately initiate complaint processing procedures.

(1) *Preliminary investigation* (i) Within twenty (20) calendar days of acknowledgment of the complaint, the OCR will review the complaint for acceptance, rejection, or referral to the appropriate Federal agency.

(ii) If the complaint is accepted, the OCR will notify the complainant and the Award Official. The OCR will also notify the applicant or recipient complained against of the allegations and give the applicant or recipient opportunity to make a written submission responding to, rebutting, or denying the allegations raised in the complaint.

(iii) The party complained against may send the OCR a response to the notice of complaint within thirty (30) calendar days of receiving it.

(2) *Informal resolution.* (i) OCR shall attempt to resolve complaints informally whenever possible. When a complaint cannot be resolved informally, OCR shall follow the procedures established by paragraphs (c) through (e) of § 7.115.

(e) *Confidentiality.* EPA agrees to keep the complainant's identity confidential except to the extent necessary to carry out the purposes of this part, including the conduct of any investigation, hearing, or judicial proceeding arising thereunder. Ordinarily in complaints of employment discrimination, the name of the complainant will be given to the recipient with the notice of complaint.

(f) [Reserved]

(g) *Dismissal of complaint.* If OCR's investigation reveals no violation of this part, the Director, OCR, will dismiss the complaint and notify the complainant and recipient.

§ 7.125 Coordination with other agencies.

If, in the conduct of a compliance review or an investigation, it becomes evident that another agency has jurisdiction over the subject matter, OCR will cooperate with that agency during the continuation of the review of investigation. EPA will:

(a) Coordinate its efforts with the other agency, and

(b) Ensure that one of the agencies is designated the lead agency for this purpose. When an agency other than EPA serves as the lead agency, any action taken, requirement imposed, or determination made by the lead agency, other than a final determination to terminate funds, shall have the same effect as though such action had been taken by EPA.

§ 7.130 Actions available to EPA to obtain compliance.

(a) General. If compliance with this part cannot be assured by informal means, EPA may terminate or refuse to award or to continue assistance. EPA may also use any other means authorized by law to get compliance, including a referral of the matter to the Department of Justice.

(b) Procedure to deny, annul, suspend or terminate EPA assistance.

(1) *OCR finding.* If OCR determines that an applicant or recipient is not in compliance with this part, and if compliance cannot be achieved voluntarily, OCR shall make a finding of noncompliance. The OCR will notify the applicant or recipient (by registered mail, return receipt requested) of the finding, the action proposed to be taken, and the opportunity for an evidentiary hearing.

(2) *Hearing.* (i) Within 30 days of receipt of the above notice, the applicant or recipient shall file a written answer, under oath or affirmation, and may request a hearing.

(ii) The answer and request for a hearing shall be sent by registered mail, return receipt requested, to the Chief Administrative Law Judge (ALJ) (A–110), United States Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460. Upon receipt of a request for a hearing, the ALJ will send the applicant or recipient a copy of the ALJ's procedures. If the recipient does not request a hearing, it shall be deemed to have waived its right to a hearing, and the OCR finding shall be deemed to be the ALJ's determination.

(3) *Final decision and disposition.* (i) The applicant or recipient may, within 30 days of receipt of the ALJ's determination, file with the Administrator its exceptions to that determination. When such exceptions are filed, the Administrator may, within 45 days after the ALJ's determination, serve to the applicant or recipient, a notice that he/she will review the determination. In the absence of either exceptions or notice of review, the ALJ's determination shall constitute the Administrator's final decision.

(ii) If the Administrator reviews the ALJ's determination, all parties shall be given reasonable opportunity to file written statements. A copy of the Administrator's decision will be sent to the applicant or recipient.

(iii) If the Administrator's decision is to deny an application, or annul, suspend or terminate EPA assistance, that decision becomes effective thirty (30) days from the date on which the Administrator submits a full written report of the circumstances and grounds for such action to the Committees of the House and Senate having legislative jurisdiction over the program or activity involved. The decision of the Administrator shall not be subject to further administrative appeal under EPA's General Regulation for Assistance Programs (40 CFR part 30, subpart L).

(4) *Scope of decision.* The denial, annulment, termination or suspension shall be limited to the particular applicant or recipient who was found to have discriminated, and shall be limited in its effect to the particular program or the part of it in which the discrimination was found.

§ 7.135 Procedure for regaining eligibility.

(a) *Requirements.* An applicant or recipient whose assistance has been denied, annulled, terminated, or suspended under this part regains eligibility as soon as it:

(1) Provides reasonable assurance that it is complying and will comply with this part in the future, and

(2) Satisfies the terms and conditions for regaining eligibility that are specified in the denial, annulment, termination or suspension order.

(b) *Procedure.* The applicant or recipient must submit a written request to restore eligibility to the OCR declaring that it has met the requirements set forth in paragraph (a) of this section. Upon determining that these requirements have been met, the OCR must notify the Award Official, and the applicant or recipient that eligibility has been restored.

(c) Rights on denial of restoration of eligibility. If the OCR denies a request to restore eligibility, the applicant or recipient may file a written request for a hearing before the EPA Chief Administrative Law Judge in accordance with paragraph (c) § 7.130, listing the reasons it believes the OCR was in error.

APPENDIX A TO PART 7—EPA ASSISTANCE PROGRAMS AS LISTED IN THE ''CATALOG OF FEDERAL DOMESTIC ASSISTANCE''

1. Assistance provided by the Office of Air, Noise and Radiation under the Clean Air Act of 1977, as amended; Pub. L. 95–95, 42 U.S.C. 7401 *et seq.* (ANR 66.001)

2. Assistance provided by the Office of Air, Noise and Radiation under the Clean Air Act of 1977, as amended; Pub. L. 95–95, 42 U.S.C. 7401 *et seq.* (ANR 66.003)

3. Assistance provided by the Office of Water under the Clean Water Act of 1977, as amended; sections 101(e), 109(b), 201–05, 207, 208(d), 210–12, 215–19, 304(d)(3), 313, 501, 502, 511 and 516(b); Pub. L. 97–117; Pub. L. 95–217; Pub. L. 96–483; 33 U.S.C. 1251 *et seq.* (OW 66.418)

4. Assistance provided by the Office of Water under the Clean Water Act of 1977, as amended; section 106; Pub. L. 95–217; 33 U.S.C. 1251 *et seq.* (OW 66.419)

5. Assistance provided by the Office of Water under the Clean Water Act of 1977, as amended; Pub. L. 95–217; 33 U.S.C. 1251 *et seq.* (OW 66.426)

6. Assistance provided by the Office of Water under the Public Health Service Act, as amended by the Safe Drinking Water Act, Pub. L. 93–523; as amended by Pub. L. 93–190; Pub. L. 96–63; and Pub. L. 93–502. (OW 66.432)

7. Assistance provided by the Office of Water under the Safe Drinking Water Act, Pub. L. 93–523, as amended by Pub. L. 96–63, Pub. L. 95–190, and Pub. L. 96–502. (OW 66.433)

8. Assistance provided by the Office of Water under the Clean Water Act of 1977, section 205(g), as amended by Pub. L. 95–217 and the Federal Water Pollution Control Act, as amended; Pub. L. 97–117; 33 U.S.C. 1251 *et seq.* (OW 66.438)

9. Assistance provided by the Office of Water under the Resource Conservation and Recovery Act of 1976; as amended by the Solid Waste Disposal Act; Pub. L. 94–580; section 3011, 42 U.S.C. 6931, 6947, 6948–49. (OW 66.802).

10. Assistance provided by the Office of Research and Development under the Clean Air Act of 1977, as amended; Pub. L. 95–95; 42 U.S.C. *et seq.*; Clean Water Act of 1977, as amended; Pub. L. 95–217; 33 U.S.C. 1251 *et seq.*, section 8001 of the Solid Water Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976; Pub. L. 94–580; 42 U.S.C. 6901, Public Health Service Act as amended by the Safe Drinking Water Act as amended by Pub. L. 95–190; Federal Insecticide, Fungicide and Rodenticide Act; Pub. L. 95–516; 7 U.S.C. 136 *et seq.*, as amended by Pub. L.'s 94–140 and 95–396; Toxic Substances Control Act; 15 U.S.C. 2609; Pub. L. 94–469. (ORD 66.500)

11. Assistance provided by the Office of Research and Development under the Clean Air Act of 1977, as amended; Pub. L. 95–95; 42 U.S.C. 7401 *et seq.* (ORD 66.501)

12. Assistance provided by the Office of Research and Development under the Federal Insecticide, Fungicide and Rodenticide Act, Pub. L. 95–516, 7 U.S.C. 136 *et seq.*, as amended by Pub. L.'s 94–140 and 95–396. (ORD 66.502)

13. Assistance provided by the Office of Research and Development under the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976; 42 U.S.C. 6901, Pub. L. 94–580, section 8001. (ORD 66.504)

14. Assistance provided by the Office of Research and Development under the Clean Water Act of 1977, as amended; Pub. L. 95–217; 33 U.S.C. 1251 *et seq.* (ORD 66.505)

15. Assistance provided by the Office of Research and Development under the Public Health Service Act as

amended by the Safe Drinking Water Act, as amended by Pub. L. 95–190 (ORD 66.506)

16. Assistance provided by the Office of Research and Development under the Toxic Substances Control Act; Pub. L. 94–469; 15 U.S.C. 2609; section 10. (ORD 66.507)

17. Assistance provided by the Office of Administration, including but not limited to: Clean Air Act of 1977, as amended, Pub. L. 95–95; 42 U.S.C. 7401 *et seq.,* Clean Water Act of 1977, as amended; Pub. L. 95–217; 33 U.S.C. 1251 *et seq.;* Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976; 42 U.S.C. 6901; Pub. L. 94–580; Federal Insecticide, Fungicide and Rodenticide Act; Pub. L. 92–516; 7 U.S.C. 136 *et seq.* as amended by Pub. L.'s 94–140 and 95–396; Public Health Service Act, as amended by the Safe Drinking Water Act, as amended by Pub. L. 95–190. (OA 66.600)

18. Assistance provided by the Office of Administration under the Clean Water Act of 1977, as amended; Pub. L. 95–217; section 213; 33 U.S.C. 1251 *et seq.* (OA 66.603)

19. Assistance provided by the Office of Enforcement Counsel under the Federal Insecticide and Rodenticide Act, as amended; Pub. L. 92–516; 7 U.S.C. 136 *et seq.*, as amended by Pub. L. 94–140, section 23(a) and Pub. L. 95–396. (OA 66.700)

20. Assistance provided by the Office of Solid Waste and Emergency Response under the Comprehensive Environmental Responses, Compensation and Liability Act of 1980; Pub. L. 96–510, section 3012, 42 U.S.C. 9601, *et seq.* (OSW—number not to be assigned since Office of Management and Budget does not catalog one-year programs.)

21. Assistance provided by the Office of Water under the Clean Water Act as amended; Pub. L. 97–117, 33 U.S.C. 1313. (OW—66.454)

PART 8—ENVIRONMENTAL IMPACT ASSESSMENT OF NONGOVERNMENTAL ACTIVITIES IN ANTARCTICA

Sec.

AUTHORITY: 16 U.S.C. 2401 *et seq.,* as amended, 16 U.S.C. 2403a.

SOURCE: 62 FR 23545, Apr. 30, 1997, unless otherwise noted.

§ 8.1 Purpose.

(a) This part is issued pursuant to the Antarctic Science, Tourism, and Conservation Act of 1996. As provided in that Act, this part implements the requirements of Article 8 and Annex I to the Protocol on Environmental Protection to the Antarctic Treaty of 1959 and provides for:

(1) the environmental impact assessment of nongovernmental activities, including tourism, for which the United States is required to give advance notice under paragraph 5 of Article VII of the Antarctic Treaty of 1959; and

(2) coordination of the review of information regarding environmental impact assessment received by the United States from other Parties under the Protocol.

(b) The procedures in this part are designed to: Ensure that nongovernmental operators identify and assess the potential impacts of their proposed activities, including tourism, on the Antarctic environment; that operators consider these impacts in deciding whether or how to proceed with proposed activities; and that operators provide environmental documentation pursuant to the Act and Annex I of the Protocol. These procedures are consistent with and implement the environmental impact assessment provisions of Article 8 and Annex I to the Protocol on Environmental Protection to the Antarctic Treaty.

§ 8.2 Applicability and effect.

(a) This part is intended to ensure that potential environmental effects of nongovernmental activities undertaken in Antarctica are appropriately identified and considered by the operator during the planning process and that to the extent practicable, appropriate environmental safeguards which would mitigate or prevent adverse impacts on the Antarctic environment are identified by the operator.

(b) The requirements set forth in this part apply to nongovernmental activities for which the United States is required to give advance notice under paragraph 5 of Article VII of the Antarctic Treaty of 1959: All nongovernmental expeditions to and within Antarctica organized in or proceeding from its territory.

(c) This part does not apply to activities undertaken in the Antarctic Treaty area that are governed by the Convention on the Conservation of Antarctic Marine Living Resources or the Convention for the Conservation of Antarctic Seals. Persons traveling to Antarctica are subject to the requirements of the Marine Mammal Protection Act, 16 U.S.C. 1371 *et seq.*

(d) This part is effective on April 30, 1997. This part will expire upon the earlier of the end of the 1998–99 austral summer season or upon issuance of a final regulation.

§ 8.3 Definitions.

As used in this part:

Act means 16 U.S.C. 2401 *et seq.,* Public Law 104–227, the Antarctic Science, Tourism, and Conservation Act of 1996.

Annex I refers to Annex I, Environmental Impact Assessment, of the Protocol.

Antarctica means the Antarctic Treaty area; i.e., the area south of 60 degrees south latitude.

Antarctic environment means the natural and physical environment of Antarctica and its dependent and associated ecosystems, but excludes social, economic, and other environments.

Antarctic Treaty area means the area south of 60 degrees south latitude.

Antarctic Treaty Consultative Meeting (ATCM) means a meeting of the Parties to the Antarctic Treaty, held pursuant to Article IX(1) of the Treaty.

Comprehensive Environmental Evaluation (CEE) means a study of the reasonably foreseeable potential effects of a proposed activity on the Antarctic environment, prepared in accordance with the provisions of this part and includes all comments received thereon. (See: 40 CFR 8.8.)

Environmental document or environmental documentation (Document) means a preliminary environmental review memorandum, an initial environmental evaluation, or a comprehensive environmental evaluation.

Environmental impact assessment (EIA) means the environmental review process required by the provisions of this part and by Annex I of the Protocol, and includes preparation by the operator and

U.S. government review of an environmental document, and public access to and circulation of environmental documents to other Parties and the Committee on Environmental Protection as required by Annex I of the Protocol.

EPA means the Environmental Protection Agency.

Expedition means any activity undertaken by one or more nongovernmental persons organized within or proceeding from the United States to or within the Antarctic Treaty area for which advance notification is required under Paragraph 5 of Article VII of the Treaty.

Impact means impact on the Antarctic environment and dependent and associated ecosystems.

Initial Environmental Evaluation (IEE) means a study of the reasonably foreseeable potential effects of a proposed activity on the Antarctic environment prepared in accordance with 40 CFR 8.7.

Operator or operators means any person or persons organizing a nongovernmental expedition to or within Antarctica.

Person has the meaning given that term in section 1 of title 1, United States Code, and includes any person subject to the jurisdiction of the United States except that the term does not include any department, agency, or other instrumentality of the Federal Government.

Preliminary environmental review means the environmental review described under that term in 40 CFR 8.6.

Preliminary Environmental Review Memorandum (PERM) means the documentation supporting the conclusion of the preliminary environmental review that the impact of a proposed activity will be less than minor or transitory on the Antarctic environment.

Protocol means the Protocol on Environmental Protection to the Antarctic Treaty, done at Madrid, October 4, 1991, and all annexes thereto which are in force for the United States.

This part means 40 CFR part 8.

§ 8.4 Preparation of environmental documents, generally.

(a) *Basic information requirements.* In addition to the information required pursuant to other sections of this part, all environmental documents shall contain the following:

(1) The name, mailing address, and phone number of the operator;

(2) The anticipated date(s) of departure of each expedition to Antarctica;

(3) An estimate of the number of persons in each expedition;

(4) The means of conveyance of expedition(s) to and within Antarctica;

(5) Estimated length of stay of each expedition in Antarctica;

(6) Information on proposed landing sites in Antarctica; and

(7) Information concerning training of staff, supervision of expedition members, and what other measures, if any, that will be taken to avoid or minimize possible environmental impacts.

(b) *Preparation of an environmental document.* Unless an operator determines and documents that a proposed activity will have less than a minor or transitory impact on the Antarctic environment, the operator will prepare an IEE or CEE in accordance with this part. In making the determination what level of environmental documentation is appropriate, the operator should consider, as applicable, whether and to what degree the proposed activity:

(1) Has the potential to adversely affect the Antarctic environment;

(2) May adversely affect climate or weather patterns;

(3) May adversely affect air or water quality;

(4) May affect atmospheric, terrestrial (including aquatic), glacial, or marine environments;

(5) May detrimentally affect the distribution, abundance, or productivity of species, or populations of species of fauna and flora;

(6) May further jeopardize endangered or threatened species or populations of such species;

(7) May degrade, or pose substantial risk to, areas of biological, scientific, historic, aesthetic, or wilderness significance;

(8) Has highly uncertain environmental effects, or involves unique or unknown environmental risks; or

(9) Together with other activities, the effects of any one of which is individually insignificant, may have at least minor or transitory cumulative environmental effects.

(c) *Type of environmental document.* The type of environmental document required under this part depends upon the nature and intensity of the environmental impacts that could result from the activity under consideration. A PERM must be prepared by the operator to document the conclusion of the operator's preliminary environmental review that the impact of a proposed activity on the Antarctic environment will be less than minor or transitory. (See: 40 CFR 8.6.) An IEE must be prepared by the operator for proposed activities which may have at least (but no more than) a minor or transitory impact on the Antarctic environment. (See: 40 CFR 8.7.) A CEE must be prepared by the operator if an IEE indicates, or if it is otherwise determined, that a proposed activity is likely to have more than a minor or transitory impact on the Antarctic environment (See: 40 CFR 8.8.)

(d) *Incorporation of information and consolidation of environmental documentation* (1) An operator may incorporate material into an environmental document by referring to it in the document when the effect will be to reduce paperwork without impeding the review of the environmental document by EPA and other Federal agencies. The incorporated material shall be cited and its content briefly described. No material may be incorporated by referring to it in the document unless it is reasonably available to the EPA.

(2) Provided that environmental documentation complies with all applicable provisions of Annex I to the Protocol and this part and is appropriate in light of the specific circumstances of the operator's proposed expedition or expeditions, an operator may include more than one proposed expedition within one environmental document and one environmental document may also be used to address expeditions being carried out by more than one operator provided that the environmental document indicates the names of each operator for which the environmental documentation is being submitted pursuant to obligations under this part.

§ 8.5 Submission of environmental documents.

(a) An operator shall submit environmental documentation to the EPA for review. The EPA, in consultation with other interested federal agencies, will carry out a review to determine if the submitted environmental documentation meets the requirements of Article 8 and Annex I of the Protocol and the provisions of this part. The EPA will provide its comments, if any, on the environmental documentation to the operator and will consult with the operator regarding any suggested revisions. If EPA has no comments, or if the documentation is satisfactorily revised in response to EPA's comments, and the operator does not receive a notice from EPA that the environmental documentation does not meet the requirements of Article 8 and Annex I of the Protocol and the provisions of this part, the operator will have no further obligations pursuant to the applicable requirements of this part provided that any appropriate measures, which may include monitoring, are put in place to assess and verify the impact of the activity. Alternatively, following final response from the operator, the EPA, in consultation with other federal agencies and with the concurrence of the National Science Foundation, will inform the operator that EPA finds that the environmental documentation does not meet the requirements of Article 8 and Annex I of the Protocol and the provisions of this part. If the operator then proceeds with the expedition without fulfilling the requirements of this part, the operator is subject to enforcement proceedings pursuant to sections 7, 8, and 9 of the Antarctic Conservation Act, as amended by the Act; 16 U.S.C. 2407, 2408, 2409, and 45 CFR part 672.

(b) The EPA may waive or modify deadlines pursuant to this part where EPA determines an operator is acting in good faith and that circumstances outside the control of the operator created delays, provided that the environmental documentation fully meets deadlines under the Protocol.

§ 8.6 Preliminary environmental review.

(a) Unless an operator has determined to prepare an IEE or CEE, the operator shall conduct a preliminary environmental review that assesses the potential direct and reasonably foreseeable indirect impacts on the Antarctic environment of the proposed expedition. A Preliminary Environmental Review Memorandum (PERM) shall contain sufficient detail to assess whether the proposed activity may have less than a minor or transitory impact, and shall be submitted to the EPA for review no less than 180 days before the proposed departure of the expedition. The EPA, in consultation with other interested federal agencies, will review the PERM to determine if it is sufficient to demonstrate that the activity will have less than a minor or transitory impact or whether additional environmental documentation, i.e., an IEE or CEE, is required to meet the obligations of Article 8 and Annex I of the Protocol. The EPA will provide its comments to the operator within fifteen (15) days of receipt of the PERM, and the operator shall have seventy-five (75) days to prepare a revised PERM or an IEE, if necessary. Following the final response from the operator, EPA may make a finding that the environmental documentation submitted does not meet the requirements of Article 8 and Annex I of the Protocol and the provisions of this part. This finding will be made with the concurrence of the National Science Foundation. If EPA does not provide such notice within thirty (30) days, the operator will be deemed to have met the requirements of this part provided that any required procedures, which may include appropriate monitoring, are put in place to assess and verify the impact of the activity.

(b) If EPA recommends an IEE and one is prepared and submitted within the seventy-five (75) day response period, it will be reviewed under the time frames set out for an IEE in 40 CFR 8.7. If EPA recommends a CEE and one is prepared, it will be reviewed under the time frames set out for a CEE in 40 CFR 8.8.

§ 8.7 Initial environmental evaluation.

(a) *Submission of IEE to the EPA.* Unless a PERM has been submitted pursuant to 40 CFR 8.6

which meets the environmental documentation requirements under Article 8 and Annex I to the Protocol and the provisions of this part or a CEE is being prepared, an IEE shall be submitted by the operator to the EPA no fewer than ninety (90) days before the proposed departure of the expedition.

(b) *Contents*. An IEE shall contain sufficient detail to assess whether a proposed activity may have more than a minor or transitory impact on the Antarctic environment and shall include the following information:

(1) A description of the proposed activity, including its purpose, location, duration, and intensity; and

(2) Consideration of alternatives to the proposed activity and any impacts that the proposed activity may have on the Antarctic environment, including consideration of cumulative impacts in light of existing and known proposed activities.

(c) *Further environmental review*. (1) The EPA, in consultation with other interested federal agencies, will review an IEE to determine whether the IEE meets the requirements under Annex I to the Protocol and the provisions of this part. The EPA will provide its comments to the operator within thirty (30) days of receipt of the IEE, and the operator will have forty-five (45) days to prepare a revised IEE, if necessary. Following the final response from the operator, EPA may make a finding that the documentation submitted does not meet the requirements of Article 8 and Annex I of the Protocol and the provisions of this part. This finding will be made with the concurrence of the National Science Foundation. If such a notice is required, EPA will provide it within fifteen (15) days of receiving the final IEE from the operator or, if the operator does not provide a final IEE, within sixty (60) days following EPA's comments on the original IEE. If EPA does not provide notice within these time limits, the operator will be deemed to have met the requirements of this part provided that any required procedures, which may include appropriate monitoring, are put in place to assess and verify the impact of the activity.

(2) If a CEE is required, the operator must adhere to the time limits applicable to such documentation. (See: 40 CFR 8.8.) In this event EPA, at the operator's request, will consult with the operator regarding possible changes in the proposed activity which would allow preparation of an IEE.

§ 8.8 Comprehensive environmental evaluation.

(a) *Preparation of a CEE*. Unless a PERM or an IEE has been submitted and determined to meet the environmental documentation requirements of this part, the operator shall prepare a CEE. A CEE shall contain sufficient information to enable informed consideration of the reasonably foreseeable potential environmental effects of a proposed activity and possible alternatives to that proposed activity. A CEE shall include the following:

(1) A description of the proposed activity, including its purpose, location, duration and intensity, and possible alternatives to the activity, including the alternative of not proceeding, and the consequences of those alternatives;

(2) A description of the initial environmental reference state with which predicted changes are to be compared and a prediction of the future environmental reference state in the absence of the proposed activity;

(3) A description of the methods and data used to forecast the impacts of the proposed activity;

(4) Estimation of the nature, extent, duration and intensity of the likely direct impacts of the proposed activity;

(5) A consideration of possible indirect or second order impacts from the proposed activity;

(6) A consideration of cumulative impacts of the proposed activity in light of existing activities and other known planned activities;

(7) Identification of measures, including monitoring programs, that could be taken to minimize or mitigate impacts of the proposed activity and to detect unforeseen impacts and that could provide early warning of any adverse effects of the activity as well as to deal promptly and effectively with accidents;

(8) Identification of unavoidable impacts of the proposed activity;

(9) Consideration of the effects of the proposed activity on the conduct of scientific research and on other existing uses and values;

(10) An identification of gaps in knowledge and uncertainties encountered in compiling the information required under this section;

(11) A non-technical summary of the information provided under this section; and

(12) The name and address of the person or organization which prepared the CEE and the address to which comments thereon should be directed.

(b) *Submission of Draft CEE to the EPA and Circulation to Other Parties*. (1) For the 1998–1999 season, any operator who plans a nongovernmental expedition which would require a CEE must submit a draft of the CEE by December 1, 1997. Within fifteen (15) days of receipt of the draft CEE, EPA will: send it to the Department of State which will circulate it to all Parties to the Protocol and forward it to the Committee for Environmental Protection established by the Protocol, and publish notice of receipt of the CEE and request for comments on the CEE in the FEDERAL REGISTER, and will provide copies to any person

upon request. The EPA will accept public comments on the CEE for a period of ninety (90) days following notice in the FEDERAL REGISTER. The EPA, in consultation with other interested federal agencies, will evaluate the CEE to determine if the CEE meets the requirements under Article 8 and Annex I to the Protocol and the provisions of this part and will transmit its comments to the operator within 120 days following publication in the FEDERAL REGISTER of the notice of availability of the CEE.

(2) The operator shall send a final CEE to EPA at least seventy-five (75) days before commencement of the proposed activity in the Antarctic Treaty area. The CEE must include (or summarize) any comments on the draft CEE received from EPA, the public, and the Parties, including comments offered at the XXII Antarctic Treaty Consultative Meeting in 1998. Following the final response from the operator, the EPA will inform the operator if EPA, with the concurrence of the National Science Foundation, makes the finding that the environmental documentation submitted does not meet the requirements of Article 8 and Annex I of the Protocol and the provisions of this part. This notification will occur within fifteen (15) days of submittal of the final CEE by the operator if the final CEE is submitted by the operator within the time limits set out in this section. If no final CEE is submitted or the operator fails to meet these time limits, EPA will provide such notification sixty (60) days prior to departure of the expedition. If EPA does not provide such notice, the operator will be deemed to have met the requirements of this part provided that procedures, which include appropriate monitoring, are put in place to assess and verify the impact of the activity. The EPA will transmit the CEE, along with a notice of any decisions by the operator relating thereto, to the Department of State which shall circulate it to all Parties no later than sixty (60) days before commencement of the proposed activity in the Antarctic Treaty area. The EPA will also publish a notice of availability of the final CEE in the FEDERAL REGISTER.

(3) No final decision shall be taken to proceed with any activity for which a CEE is prepared unless there has been an opportunity for consideration of the draft CEE by the Antarctic Treaty Consultative Meeting on the advice of the Committee for Environmental Protection, provided that no expedition need be delayed through the operation of paragraph 5 of Article 3 to Annex I of the Protocol for longer than 15 months from the date of circulation of the draft CEE.

(c) *Decisions based on CEE*. The decision to proceed, based on environmental documentation that meets the requirements under Article 8 and Annex I to the Protocol and the provisions of this part, rests with the operator. Any decision by an operator on whether to proceed with or modify a proposed activity for which a CEE was required shall be based on the CEE and other relevant considerations.

§ 8.9 Measures to assess and verify environmental impacts.

(a) The operator shall conduct appropriate monitoring of key environmental indicators as proposed in the CEE to assess and verify the potential environmental impacts of activities which are the subject of a CEE. The operator may also need to carry out monitoring in order to assess and verify the impact of an activity for which an IEE has been prepared.

(b) All proposed activities for which an IEE or CEE has been prepared shall include procedures designed to provide a regular and verifiable record of the impacts of these activities, in order, *inter alia*, to:

(1) Enable assessments to be made of the extent to which such impacts are consistent with the Protocol; and

(2) Provide information useful for minimizing and mitigating those impacts, and, where appropriate, information on the need for suspension, cancellation, or modification of the activity.

§ 8.10 Cases of emergency.

This part shall not apply to activities taken in cases of emergency relating to the safety of human life or of ships, aircraft, equipment and facilities of high value, or the protection of the environment, which require an activity to be undertaken without completion of the procedures set out in this part. Notice of any such activities which would have otherwise required the preparation of a CEE shall be provided within fifteen (15) days to the Department of State, as provided below, for circulation to all Parties to the Protocol and to the Committee on Environmental Protection, and a full explanation of the activities carried out shall be provided within forty-five (45) days of those activities. Notification shall be provided to: The Director, The Office of Oceans Affairs, OES/OA, Room 5805, Department of State, 2201 C Street, NW, Washington, DC 20520–7818.

§ 8.11 Prohibited acts, enforcement and penalties.

(a) It shall be unlawful for any operator to violate this part.

(b) An operator who violates any of this part is subject to enforcement, which may include civil and criminal enforcement proceedings, and penalties, pursuant to sections 7, 8, and 9 of the Antarctic Conservation Act, as amended by the Act;

16 U.S.C. 2407, 2408, 2409, and 45 CFR part 672.

§ 8.12 Coordination of reviews from other Parties.

(a) Upon receipt of a draft CEE from another Party, the Department of State shall publish notice in the FEDERAL REGISTER and shall circulate a copy of the CEE to all interested federal agencies. The Department of State shall coordinate responses from federal agencies to the CEE and shall transmit the coordinated response to the Party which has circulated the CEE. The Department of State shall make a copy of the CEE available upon request to the public.

(b) Upon receipt of the annual list of IEEs from another Party prepared in accordance with Article 2 of Annex I and any decisions taken in consequence thereof, the Department of State shall circulate a copy to all interested federal agencies. The Department of State shall make a copy of the list of IEEs prepared in accordance with Article 2 and any decisions taken in consequence thereof available upon request to the public.

(c) Upon receipt of a description of appropriate national procedures for environmental impact statements from another Party, the Department of State shall circulate a copy to all interested federal agencies. The Department of State shall make a copy of these descriptions available upon request to the public.

(d) Upon receipt from another Party of significant information obtained, and any action taken in consequence therefrom from procedures put in place with regard to monitoring pursuant to Articles 2(2) and 5 of Annex I to the Protocol, the Department of State shall circulate a copy to all interested federal agencies. The Department of State shall make a copy of this information available upon request to the public.

(e) Upon receipt from another Party of a final CEE, the Department of State shall circulate a copy to all interested federal agencies. The Department of State shall make a copy available upon request to the public.

PART 9—OMB APPROVALS UNDER THE PAPERWORK REDUCTION ACT

AUTHORITY: 7 U.S.C. 135 *et seq.*, 136–136y; 15 U.S.C. 2001, 2003, 2005, 2006, 2601–2671; 21 U.S.C. 331j, 346a, 348; 31 U.S.C. 9701; 33 U.S.C. 1251 *et seq.*, 1311, 1313d, 1314, 1318, 1321, 1326, 1330, 1342, 1344, 1345 (d) and (e), 1361; E.O. 11735, 38 FR 21243, 3 CFR, 1971–1975 Comp. p. 973; 42 U.S.C. 241, 242b, 243, 246, 300f, 300g, 300g–1, 300g–2, 300g–3, 300g–4, 300g–5, 300g–6, 300j–1, 300j–2, 300j–3, 300j–4, 300j–9, 1857 *et seq.*, 6901–6992k, 7401–7671q, 7542, 9601–9657, 11023, 11048.

§ 9.1 OMB approvals under the Paperwork Reduction Act.

This part consolidates the display of control numbers assigned to collections of information in certain EPA regulations by the Office of Management and Budget (OMB) under the Paperwork Reduction Act (PRA). This part fulfills the requirements of section 3507(f) of the PRA.

PART 10—ADMINISTRATIVE CLAIMS UNDER FEDERAL TORT CLAIMS ACT

Subpart A—General

Sec.

Subpart B—Procedures

AUTHORITY: Sec. 1, 80 Stat. 306; 28 U.S.C. 2672; 28 CFR Part 14.

SOURCE: 38 FR 16868, June 27, 1973, unless otherwise noted.

Subpart A—General

§ 10.1 Scope of regulations.

The regulations in this part apply only to claims asserted under the Federal Tort Claims Act, as amended, 28 U.S.C. 2671–2680, for money damages against the United States because of damage to or loss of property or personal injury or death, caused by the negligent or wrongful act or omission of any employee of the Environmental Protection Agency (EPA) while acting within the scope of his/her employment.

[51 FR 25832, July 16, 1986]

Subpart B—Procedures

§ 10.2 Administrative claim; when presented; place of filing.

(a) For purpose of the regulations in this part, a claim shall be deemed to have been presented when the Environmental Protection Agency receives, at a place designated in paragraph (c) of this section, an executed Standard Form 95 or other written notification of an incident accompanied by a claim for money damages in a sum certain for damage to or loss of property, for personal injury, or for death, alleged to have occurred by reason of the incident. A claim which should have been presented to EPA, but which was mistakenly addressed to or filed with another Federal agency, shall be deemed to be presented to EPA as of the date that the claim is received by EPA. A claim mistakenly addressed to or filed with EPA shall forthwith be transferred to the appropriate Federal agency, if ascertainable, or returned to the claimant.

(b) A claim presented in compliance with paragraph (a) of this section may be amended by the claimant at any time prior to final action by the Administrator, or his designee, or prior to the exercise of the claimant's option to bring suit under 28 U.S.C. 2675(a). Amendments shall be submitted in writing and signed by the claimant or his duly authorized agent or legal representative. Upon the timely filing of an amendment to a pending claim, EPA shall have 6 months in which to make a final disposition of the claim as amended and the claimant's option under 28 U.S.C. 2675(a) shall not accrue until 6 months after the filing of an amendment.

(c) Forms may be obtained and claims may be filed with the EPA office having jurisdiction over the employee involved in the accident or incident, or with the EPA Claims Officer, Office of General Counsel (LE–132G), 401 M Street SW., Washington, DC 20460.

[38 FR 16868, June 27, 1973, as amended at 51 FR 25832, July 16, 1986]

§ 10.3 Administrative claims; who may file.

(a) A claim for injury to or loss of property may be presented by the owner of the property interest which is the subject of the claim, his duly authorized agent, or his legal representative.

(b) A claim for personal injury may be presented by the injured person, his duly authorized agent, or his legal representative.

(c) A claim based on death may be presented by the executor or administrator of the decedent's estate or by any other person legally entitled to assert such a claim under applicable State law.

(d) A claim for loss wholly compensated by an insurer with the rights of a subrogee may be presented by the insurer. A claim for loss partially compensated by an insurer with the rights of a subrogee may be presented by the insurer or the insured individually as their respective interests appear, or jointly. Whenever an insurer presents a claim asserting the rights of a subrogee, he shall present with his claim appropriate evidence that he has the rights of a subrogee.

(e) A claim presented by an agent or legal representative shall be presented in the name of the claimant, be signed by the agent or legal representative, show the title or legal capacity of the person signing, and be accompanied by evidence of his authority to present a claim on behalf of the claimant as agent, executor, administrator, parent, guardian, or other representative.

§ 10.4 Evidence to be submitted.

(a) *Death.* In support of a claim based on death, the claimant may be required to submit the following evidence or information:

(1) An authenticated death certificate or other competent evidence showing cause of death, date of death, and age of the decedent.

(2) Decedent's employment or occupation at time of death, including his monthly or yearly salary or earnings (if any), and the duration of his last employment or occupation.

(3) Full names, addresses, birth dates, kinship, and marital status of the decedent's survivors, including identification of those survivors who were dependent for support upon the decedent at the time of his death.

(4) Degree of support afforded by the decendent to each survivor dependent upon him for support at the time of his death.

(5) Decedent's general physical and mental condition before death.

(6) Itemized bills for medical and burial expenses incurred by reason of the incident causing death, or itemized receipts of payments for such expenses.

(7) If damages for pain and suffering prior to death are claimed, a physician's detailed statement specifying the injuries suffered, duration of pain and suffering, any drugs administered for pain and the decedent's physical condition in the interval between injury and death.

(8) Any other evidence or information which may have a bearing on either the responsibility of the United States for the death or the damages claimed.

(b) *Personal Injury.* In support of a claim for personal injury, including pain and suffering, the claimant may be required to submit the following evidence or information:

(1) A written report by his attending physician or dentist setting forth the nature and extent of the injury, nature and extent of treatment, any degree of temporary or permanent disability, the prognosis, period of hospitalization, and any diminished earning capacity. In addition, the claimant may be required to submit to a physical or mental examination by a physician employed or designated by EPA. A copy of the report of the examining physician shall be made available to the claimant upon the claimant's written request provided that the claimant has, upon request, furnished the report referred to in the first sentence of this subparagraph and has made or agrees in writing to make available to EPA any other physician's reports previously or thereafter made of the physical or mental condition which is the subject matter of his claim.

(2) Itemized bills for medical, dental, hospital and related expenses incurred, or itemized receipts of payment for such expenses.

(3) If the prognosis reveals the necessity for future treatment, a statement of expected duration of and expenses for such treatment.

(4) If a claim is made for loss of time from employment, a written statement from his employer showing actual time lost from employment, whether he is a full or part-time employee, and wages or salary actually lost.

(5) If a claim is made for loss of income and the claimant is self-employed, documentary evidence showing the amount of earnings actually lost.

(6) Any other evidence or information which may have a bearing on the responsibility of the United States for either the personal injury or the damages claimed.

(c) *Property Damage.* In support of a claim for damage to or loss of property, real or personal, the claimant may be required to submit the following evidence or information:

(1) Proof of ownership.

(2) A detailed statement of the amount claimed with respect to each item of property.

(3) An itemized receipt of payment for necessary repairs or itemized written estimates of the cost of such repairs.

(4) A statement listing date of purchase, purchase price, market value of the property as of date of damage, and salvage value, where repair is not economical.

(5) Any other evidence or information which may have a bearing on the responsibility of the United States either for the injury to or loss of property or for the damage claimed.

(d) *Time limit.* All evidence required to be submitted by this section shall be furnished by the claimant within a reasonable time. Failure of a claimant to furnish evidence necessary to a determination of his claim within three months after a request therefor has been mailed to his last known address may be deemed an abandonment of the claim. The claim may be thereupon disallowed.

§ 10.5 Investigation, examination, and determination of claims.

The EPA Claims Officer adjusts, determines, compromises and settles all administrative tort claims filed with EPA. In carrying out these functions, the EPA Claims Officer makes such investigations as are necessary for a determination of the validity of the claim. The decision of the EPA Claims Officer is a final agency decision of purposes of 28 U.S.C. 2675.

[51 FR 25832, July 16, 1986]

§ 10.6 Final denial of claim.

(a) Final denial of an administrative claim shall be in writing and sent to the claimant, his attorney, or legal representative by certified or registered mail. The notification of final denial may include a statement of the reasons for the denial and shall include a statement that, if the claimant is dissatisfied with EPA's action, he may file suit in an appropriate U.S. District Court not later than 6 months after the date of mailing of the notification.

(b) Prior to the commencement of suit and prior to the expiration of the 6-month period after the date of mailing by certified or registered mail of notice of final denial of the claim as provided in 28 U.S.C. 2401(b), a claimant, his duly authorized agent, or legal representative, may file a written request with the EPA for reconsideration of a final denial of a claim under paragraph (a) of this section. Upon the timely filing of a request for reconsideration, EPA shall have 6 months from the date of filing in which to make a final disposition of the claim and the claimant's option under 28 U.S.C. 2675(a) to bring suit shall not accrue until 6 months after the filing of a request for reconsideration. Final action on a request for reconsideration shall be effected in accordance with the provisions of paragraph (a) of this section.

§ 10.7 Payment of approved claim.

(a) Upon allowance of his claim, claimant or his duly authorized agent shall sign the voucher for payment, Standard Form 1145, before payment is made.

(b) When the claimant is represented by an attorney, the voucher for payment (SF 1145) shall designate both the claimant and his attorney as ''payees.'' The check shall be delivered to the attorney whose address shall appear on the voucher.

(c) No attorney shall charge fees in excess of 25 percent of a judgment or settlement after litigation, or in excess of 20 percent of administrative settlements (28 U.S.C. 2678).

§ 10.8 Release.

Acceptance by the claimant, his agent or legal representative of any award, compromise or settlement made hereunder, shall be final and conclusive on the claimant, his agent or legal representative and any other person on whose behalf or for whose benefit the claim has been presented, and shall constitute a complete release of all claims against either the United States or any employee of the Government arising out of the same subject matter.

§ 10.9 Penalties.

A person who files a false claim or makes a false or fraudulent statement in a claim against the United States may be liable to a fine of not more than $10,000 or to imprisonment of not more than 5 years, or both (18 U.S.C. 287,1001), and, in addition, to a forfeiture of $2,000 and a penalty of double the loss or damage sustained by the United States (31 U.S.C. 3729).

[38 FR 16868, June 27, 1973, as amended at 51 FR 25832, July 16, 1986]

§ 10.10 Limitation on Environmental Protection Agency's authority.

(a) An award, compromise or settlement of a claim hereunder in excess of $25,000 shall be effected only with the prior written approval of the Attorney General or his designee. For the purposes of this paragraph, a principal claim and any derivative or subrogated claim shall be treated as a single claim.

(b) An administrative claim may be adjusted, determined, compromised or settled hereunder only after consultation with the Department of Justice when, in the opinion of the Environmental Protection Agency:

(1) A new precedent or a new point of law is involved; or

(2) A question of policy is or may be involved; or

(3) The United States is or may be entitled to indemnity or contribution from a third party and the Agency is unable to adjust the third party claim; or

(4) The compromise of a particular claim, as a practical matter, will or may control the disposition of a related claim in which the amount to be paid may exceed $25,000.

(c) An administrative claim may be adjusted, determined, compromised, or settled by EPA hereunder only after consultation with the Department of Justice when EPA is informed or is otherwise aware that the United States or an employee, agent, or cost-plus contractor of the United States is involved in litigation based on a claim arising out of the same incident or transaction.

§ 10.11 Relationship to other agency regulations.

The regulations in this part supplement the Attorney General's regulations in part 14 of Chapter 1 of title 28, CFR, as amended. Those regulations, including subsequent amendments thereto, and the regulations in this part apply to the consideration by the Environmental Protection Agency of administrative claims under the Federal Tort Claims Act.

[38 FR 16868, June 27, 1973, as amended at 51 FR 25832, July 16, 1986]

PART 11—SECURITY CLASSIFICATION REGULATIONS PURSUANT TO EXECUTIVE ORDER 11652

Sec.

AUTHORITY: Executive Order 11652 (37 FR 5209, March 10, 1972) and the National Security Directive of May 17, 1972 (37 FR 10053, May 19, 1972).

SOURCE: 37 FR 23541, Nov. 4, 1972, unless otherwise noted.

§ 11.1 Purpose.

These regulations establish policy and procedures governing the classification and declassification of national security information. They apply also to information or material designated under the Atomic Energy Act of 1954, as amended, as ''Restricted Data,'' or ''Formerly Restricted Data'' which, additionally, is subject to the provisions of the Act and regulations of the Atomic Energy Commission.

§ 11.2 Background.

While the Environmental Protection Agency does not have the authority to originally classify information or material in the interest of the national security, it may under certain circumstances downgrade or declassify previously classified material or generate documents incorporating classified information properly originated by other agencies of the Federal Government which must be safeguarded. Agency policy and procedures must conform to applicable provisions of Executive Order 11652, and the National Security Council Directive of May 17, 1972, governing the safeguarding of national security information.

§ 11.3 Responsibilities.

(a) Classification and Declassification Committee: This committee, appointed by the Administrator, has the authority to act on all suggestions and complaints with respect to EPA's administration of this order. It shall establish procedures to review and act within 30 days upon all applications and appeals regarding requests for declassification. The Administrator, acting through the committee, shall be authorized to overrule previous determinations in whole or in part when, in its judgment, continued protection is no longer required. If the committee determines that continued classification is required under section 5(B) of Executive Order 11652, it shall promptly so notify the requester and advise him that he may appeal the denial to the Interagency Classification Review Committee.

(b) Director, Security and Inspection Division, Office of Administration: The Director, Security and Inspection Division, is responsible for the overall management and direction of a program designed to assure the proper handling and protection of classified information, and that classified information in the Agency's possession bears the appropriate classification markings. He also will assure that the program operates in accordance with the policy established herein, and will serve as Secretary of the Classification and Declassification Committee.

(c) Assistant Administrators, Regional Administrators, Heads of Staff Offices, Directors of National Environmental Research Centers are responsible for designating an official within their respective areas who shall be responsible for:

(1) Serving as that area's liaison with the Director, Security and Inspection Division, for questions or suggestions concerning security classification matters.

(2) Reviewing and approving, as the representative of the contracting offices, the DD Form 254, Contract Security Classification Specification, issued to contractors.

(d) Employees; (1) Those employees generating documents incorporating classified information properly originated by other agencies of the Federal Government are responsible for assuring that the documents are marked in a manner consistent with security classification assignments.

(2) Those employees preparing information for public release are responsible for assuring that such information is reviewed to eliminate classified information.

(3) All employees are responsible for bringing to the attention of the Director, Security and Inspection Division, any security classification problems needing resolution.

§ 11.4 Definitions.

(a) *Classified information.* Official information which has been assigned a security classification category in the interest of the national defense or foreign relations of the United States.

(b) *Classified material.* Any document, apparatus, model, film, recording, or any other physical object from which classified information can be derived by study, analysis, observation, or use of the material involved.

(c) *Marking.* The act of physically indicating the classification assignment on classified material.

(d) *National security information.* As used in this order this term is synonymous with ''classified information.'' It is any information which must be protected against unauthorized disclosure

in the interest of the national defense or foreign relations of the United States.

(e) *Security classification assignment.* The prescription of a specific security classification for a particular area or item of information. The information involved constitutes the sole basis for determining the degree of classification assigned.

(f) *Security classification category.* The specific degree of classification (Top Secret, Secret or Confidential) assigned to classified information to indicate the degree of protection required.

(1) *Top Secret.* Top Secret refers to national security information or material which requires the highest degree of protection. The test for assigning Top Secret classification shall be whether its unauthorized disclosure could reasonably be expected to cause exceptionally grave damage to the national security. Examples of ''exceptionally grave damage'' include armed hostilities against the United States or its allies; disruption of foreign relations vitally affecting the national security; the compromise of vital national defense plans or complex cryptologic and communications intelligence systems; the revelation of sensitive intelligence operations; and the disclosure of scientific or technological developments vital to national security. This classification shall be used with the utmost restraint.

(2) *Secret.* Secret refers to that national security information or material which requires a substantial degree of protection. The test for assigning Secret classification shall be whether its unauthorized disclosure could reasonably be expected to cause serious damage to the national security. Examples of ''serious damage'' include disruption of foreign relations significantly affecting the national security; significant impairment of a program or policy directly related to the national security; revelation of significant military plans or intelligence operations; and compromise of scientific or technological developments relating to national security. The classification Secret shall be sparingly used.

(3) *Confidential.* Confidential refers to that national security information or material which requires protection. The test for assigning Confidential classification shall be whether its unauthorized disclosure could reasonably be expected to cause damage to the national security.

§ 11.5 Procedures.

(a) *General.* Agency instructions on access, marking, safekeeping, accountability, transmission, disposition, and destruction of classification information and material will be found in the EPA Security Manual for Safeguarding Classified Material. These instructions shall conform with the National Security Council Directive of May 17, 1972, governing the classification, downgrading, declassification, and safeguarding of National Security Information.

(b) *Classification.* (1) When information or material is originated within EPA and it is believed to require classification, the person or persons responsible for its origination shall protect it in the manner prescribed for protection of classified information. The information will then be transmitted under appropriate safeguards to the Director, Security and Inspection Division, who will forward it to the department having primary interest in it with a request that a classification determination be made.

(2) A holder of information or material which incorporates classified information properly originated by other agencies of the Federal Government shall observe and respect the classification assigned by the originator.

(3) If a holder believes there is unnecessary classification, that the assigned classification is improper, or that the document is subject to declassification, he shall so advise the Director, Security and Inspection Division, who will be responsible for obtaining a resolution.

(c) *Downgrading and declassification.* Classified information and material officially transferred to the Agency during its establishment, pursuant to Reorganization Plan No. 3 of 1970, shall be declassified in accordance with procedures set forth below. Also, the same procedures will apply to the declassification of any information in the Agency's possession which originated in departments or agencies which no longer exist, except that no declassification will occur in such cases until other departments having an interest in the subject matter have been consulted. Other classified information in the Agency's possession may be downgraded or declassified by the official authorizing its classification, by a successor in capacity, or by a supervisory official of either.

(1) *General Declassification Schedule*—(i) *Top Secret.* Information or material originally classified Top Secret shall become automatically downgraded to Secret at the end of the second full calendar year following the year in which it was originated, downgraded to Confidential at the end of the fourth full calendar year following the year in which it was originated, and declassified at the end of the 10th full calendar year following the year in which it was originated.

(ii) *Secret.* Information and material originally classified Secret shall become automatically downgraded to Confidential at the end of the second full calendar year following the year in which it was originated, and declassified at the end of the eighth full calendar year following the year in which it was originated.

(iii) *Confidential.* Information and material originally classified Confidential shall become

automatically declassified at the end of the sixth full calendar year following the year in which it was originated.

(2) *Exemption from the General Declassification Schedule.* Information or material classified before June 1, 1972, assigned to Group 4 under Executive Order No. 10501, as amended, shall be subject to the General Declassification Schedule. All other information or material classified before June 1, 1972, whether or not assigned to Groups 1, 2, or 3, of Executive Order No. 10501, as amended, shall be excluded from the General Declassification Schedule. However, at any time after the expiration of 10 years after the date of origin it shall be subject to a mandatory classification review and disposition in accordance with the following criteria and conditions:

(i) It shall be declassified unless it falls within one of the following criteria:

(*a*) Classified information or material furnished by foreign governments or international organizations and held by the United States on the understanding that it be kept in confidence.

(*b*) Classified information or material specifically covered by statute, or pertaining to cryptography, or disclosing intelligence sources or methods.

(*c*) Classified information or material disclosing a system, plan, installation, project, or specific foreign relations matter, the continuing protection of which is essential to the national security.

(*d*) Classified information or material the disclosure of which would place a person in immediate jeopardy.

(ii) *Mandatory review of exempted material.* All classified information and material originated after June 1, 1972, which is exempted under any of the above criteria shall be subject to a classification review by the originating department at any time after the expiration of 10 years from the date of origin provided:

(*a*) A department or member of the public requests a review;

(*b*) The request describes the document or record with sufficient particularity to enable the department to identify it; and

(*c*) The record can be obtained with a reasonable amount of effort.

(*d*) Information or material which no longer qualifies for exemption under any of the above criteria shall be declassified. Information or material which continues to qualify under any of the above criteria shall be so marked, and, unless impossible, a date for automatic declassification shall be set.

(iii) All requests for ''mandatory review'' shall be directed to:

Director, Security and Inspection Division, Environmental Protection Agency, Washington, DC 20460.

The Director, Security and Inspection Division shall promptly notify the action office of the request, and the action office shall immediately acknowledge receipt of the request in writing.

(iv) *Burden of proof for administrative determinations.* The burden of proof is on the originating Agency to show that continued classification is warranted within the terms of this paragraph (c)(2).

(v) *Availability of declassified material.* Upon a determination under paragraph (ii) of this paragraph (c)(2), that the requested material no longer warrants classification, it shall be declassified and made promptly available to the requester, if not otherwise exempt from disclosure under section 552(b) of Title 5 U.S.C. (Freedom of Information Act) or other provision of law.

(vi) *Classification review requests.* As required by paragraph (ii) of this paragraph (c)(2) of this order, a request for classification review must describe the document with sufficient particularity to enable the Department or Agency to identify it and obtain it with a reasonable amount of effort. Whenever a request is deficient in its description of the record sought, the requester should be asked to provide additional identifying information whenever possible. Before denying a request on the ground that it is unduly burdensome, the requester should be asked to limit his request to records that are reasonably obtainable. If nonetheless the requester does not describe the records sought with sufficient particularity, or the record requested cannot be obtained with a reasonable amount of effort, the requester shall be notified of the reasons why no action will be taken and of his right to appeal such decision.

§ 11.6 Access by historical researchers and former Government officials.

(a) Access to classified information or material may be granted to historical researchers or to persons who formerly occupied policymaking positions to which they were appointed by the President: *Provided, however,* That in each case the head of the originating Department shall:

(1) Determine that access is clearly consistent with the interests of the national security; and

(2) Take appropriate steps to assure that classified information or material is not published or otherwise compromised.

(b) Access granted a person by reason of his having previously occupied a policymaking position shall be limited to those papers which the former official originated, reviewed, signed, or received while in public office, except as related to the ''Declassification of Presidential Papers,'' which shall be treated as follows:

(1) *Declassification of Presidential Papers.* The Archivist of the United States shall have authority

to review and declassify information and material which has been classified by a President, his White House Staff or special committee or commission appointed by him and which the Archivist has in his custody at any archival depository, including a Presidential library. Such declassification shall only be undertaken in accord with:

(i) The terms of the donor's deed of gift;

(ii) Consultations with the Departments having a primary subject-matter interest; and

(iii) The provisions of § 11.5(c).

PART 12—NONDISCRIMINATION ON THE BASIS OF HANDICAP IN PROGRAMS OR ACTIVITIES CONDUCTED BY THE ENVIRONMENTAL PROTECTION AGENCY

AUTHORITY: 29 U.S.C. 794.

SOURCE: 52 FR 30606, Aug. 14, 1987, unless otherwise noted.

§ 12.101 Purpose.

The purpose of this part is to effectuate section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978, which amended section 504 of the Rehabilitation Act of 1973 to prohibit discrimination on the basis of handicap in programs or activities conducted by Executive agencies or the U.S. Postal Service. Section 504 regulations applicable to recipients of financial assistance from the Environmental Protection Agency (EPA) may be found at 40 CFR part 7 (1986).

§ 12.102 Application.

This part applies to all programs or activities conducted by the agency, except for programs or activities conducted outside the United States that do not involve individuals with handicaps in the United States.

§ 12.103 Definitions.

For purposes of this part, the term—

Agency means Environmental Protection Agency.

Assistant Attorney General means the Assistant Attorney General, Civil Rights Division, U.S. Department of Justice.

Auxiliary aids means services or devices that enable persons with impaired sensory, manual, or speaking skills to have an equal opportunity to participate in, and enjoy the benefits of, programs or activities conducted by the agency. For example, auxiliary aids useful for persons with impaired vision include readers, Brailled materials, audio recordings, and other similar services and devices. Auxiliary aids useful for persons with impaired hearing include telephone handset amplifiers, telephones compatible with hearing aids, telecommunication devices for deaf persons (TDD's), interpreters, notetakers, written materials, and other similar services and devices.

Complete complaint means a written statement that contains the complainant's name and address and describes the agency's alleged discriminatory action in sufficient detail to inform the agency of the nature and date of the alleged violation of section 504. It shall be signed by the complainant or by someone authorized to do so on his or her behalf. Complaints filed on behalf of classes or third parties shall describe or identify (by name, if possible) the alleged victims of discrimination.

Facility means all or any portion of buildings, structures, equipment, roads, walks, parking lots, rolling stock or other conveyances, or other real or personal property.

Individual with handicaps means any person who has a physical or mental impairment that substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment. As used in this definition, the phrase:

(1) *Physical or mental impairment* includes—

(i) Any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following body systems: Neurological; musculoskeletal; special sense organs; respiratory, including speech organs; cardiovascular; reproductive, digestive, genitourinary; hemic and lymphatic; skin, and endocrine; or

(ii) Any mental or psychological disorder, such as mental retardation, organic brain syndrome, emotional or mental illness, and specific learning disabilities. The term *physical or mental impairment* includes, but is not limited to, such diseases and conditions as orthopedic, visual, speech, and hearing impairments, cerebral palsy, epilepsy, muscular dystrophy, multiple sclerosis, cancer, heart disease, diabetes, mental retardation, emotional illness, and drug addiction and alcoholism.

(2) *Major life activities* includes functions such as caring for one's self, performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working.

(3) *Has a record of such an impairment* means has a history of, or has been misclassified as having, a mental or physical impairment that substantially limits one or more major life activities.

(4) *Is regarded as having an impairment* means—

(i) Has a physical or mental impairment that does not substantially limit major life activities but is treated by the agency as constituting such a limitation;

(ii) Has a physical or mental impairment that substantially limits major life activities only as a result of the attitudes of others toward such impairment; or

(iii) Has none of the impairments defined in subparagraph (1) of this definition but is treated by the agency as having such an impairment.

Qualified individual with handicaps means—

(1) With respect to any agency program or activity under which a person is required to perform services or to achieve a level of accomplishment, an individual with handicaps who meets the essential eligibility requirements and who can achieve the purpose of the program or activity, without modifications in the program or activity that the agency can demonstrate would result in a fundamental alteration in its nature; or

(2) With respect to any other program or activity an individual with handicaps who meets the essential eligibility requirements for participation in, or receipt of benefits from, that program or activity.

(3) *Qualified handicapped person* as that term is defined for purposes of employment in 29 CFR 1613.702(f), which is made applicable to this part by § 12.140.

Section 504 means section 504 of the Rehabilitation Act of 1973 (Pub. L. 93–112, 87 Stat. 394 (29 U.S.C. 794)), as amended by the Rehabilitation Act Amendments of 1974 (Pub. L. 93–516, 88 Stat. 1617); and the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978 (Pub. L. 95–602, 92 Stat. 2955); and the Rehabilitation Act Amendments of 1986 (Pub. L. 99–506, 100 Stat. 1810). As used in this part, section 504 applies only to programs or activities conducted by Executive agencies and not to federally assisted programs.

§§ 12.104—12.109 [Reserved]

§ 12.110 Self-evaluation.

(a) The agency shall, by November 13, 1987, begin a nationwide evaluation, of its current policies and practices, and the effects thereof, that do not or may not meet the requirements of this part. The agency shall provide an opportunity to interested persons, including individuals with handicaps or organizations representing individuals with handicaps to, participate in the self-evaluation process by submitting comments (both oral and written).

(b) The evaluation shall be concluded by September 14, 1988, with a written report submitted to the Administrator that states the findings of the self-evaluation, any remedial action taken, and recommendations, if any, for further remedial action.

(c) The Administrator shall, within 60 days of the receipt of the report of the evaluation and recommendations, direct that certain remedial actions be taken as he/she deems appropriate.

(d) The agency shall, for at least three years following completion of the evaluation required under paragraph (b) of this section, maintain on file and make available for public inspection:

(1) A list of the interested persons consulted;

(2) A description of the areas examined and any problems identified; and

(3) A description of any modifications made.

§ 12.111 Notice.

The agency shall make available to employees, unions representing employees, applicants, participants, beneficiaries, and other interested persons such information regarding the provisions of this part and its applicability to the programs or activities conducted by the agency, and make such information available to them in such manner as the agency head finds necessary to apprise such persons of the protections against discrimination assured them by section 504 and this regulation.

§§ 12.112—12.129 [Reserved]

§ 12.130 General prohibitions against discrimination.

(a) No qualified individual with handicaps shall, on the basis of handicap, be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any program or activity conducted by the agency.

(b) (1) The agency, in providing any aid, benefit, or service, may not, directly or through contractual, licensing, or other arrangements, on the basis of handicap—

(i) Deny a qualified individual with handicaps the opportunity to participate in or benefit from the aid, benefit, or service;

(ii) Afford a qualified individual with handicaps an opportunity to participate in or benefit from the aid, benefit, or service that is not equal to that afforded others;

(iii) Provide a qualified individual with handicaps with an aid, benefit, or service that is not as effective in affording equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement as that provided to others;

(iv) Provide different or separate aid, benefits, or services to individuals with handicaps or to any class of individuals with handicaps than is pro-

vided to others unless such action is necessary to provide qualified individuals with handicaps with aid, benefits, or services that are as effective as those provided to others;

(v) Deny a qualified individual with handicaps the opportunity to participate as a member of planning or advisory boards; or

(vi) Otherwise limit a qualified individual with handicaps in the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others receiving the aid, benefit, or service.

(2) The agency may not deny a qualified individual with handicaps the opportunity to participate in programs or activities that are not separate or different, despite the existence of permissibly separate or different programs or activities.

(3) The agency may not, directly or through contractual or other arrangements, utilize criteria or methods of administration the purpose or effect of which would—

(i) Subject qualified individuals with handicaps to discrimination on the basis of handicap; or

(ii) Defeat or substantially impair accomplishment of individuals with handicaps.

(4) The agency may not, in determining the site or location of a facility, make selections the purpose or effect of which would—

(i) Exclude individuals with handicaps from, deny them the benefits of, or otherwise subject them to discrimination under any program or activity conducted by the agency; or

(ii) Defeat or substantially impair the accomplishment of the objectives of a program or activity with respect to individuals with handicaps.

(5) The agency, in the selection of procurement contractors, may not use criteria that subject qualified individuals with handicaps to discrimination on the basis of handicap.

(6) The agency may not administer a licensing or certification program in a manner that subjects qualified individuals with handicaps to discrimination on the basis of handicap, nor may the agency establish requirements for the programs or activities of licensees or certified entities that subject qualified individuals with handicaps to discrimination on the basis of handicap. However, the program or activities of entities that are licensed or certified by the agency are not, themselves, covered by this part.

(c) The exclusion of nonhandicapped persons from the benefits of a program limited by Federal statute or Executive order to individuals with handicaps or the exclusion of a specific class of individuals with handicaps from a program limited by Federal statute or Executive order to a different class of individuals with handicaps is not prohibited by this part.

(d) The agency shall administer programs and activities in the most integrated setting appropriate to the needs of qualified individuals with handicaps.

§§ 12.131—12.139 [Reserved]

§ 12.140 Employment.

No qualified individual with handicaps shall, on the basis of handicap, be subjected to discrimination in employment under any program or activity conducted by the agency. The definitions, requirements, and procedures of section 501 of the Rehabilitation Act of 1973 (29 U.S.C. 791), as established by the Equal Employment Opportunity Commission in 29 CFR part 1613, shall apply to employment in federally conducted programs or activities.

§§ 12.141—12.148 [Reserved]

§ 12.149 Program accessibility: Discrimination prohibited.

Except as otherwise provided in § 12.150, no qualified individual with handicaps shall, because the agency's facilities are inaccessible to or unusable by individuals with handicaps, be denied the benefits of, be excluded from participation in, or otherwise be subjected to discrimination under any program or activity conducted by the agency.

§ 12.150 Program accessibility: Existing facilities.

(a) *General.* The agency shall operate each program or activity so that the program or activity, when viewed in its entirety, is readily accessible to and usable by individuals with handicaps. This paragraph does not—

(1) Necessarily require the agency to make each of its existing facilities accessible to and usable by individuals with handicaps; or

(2) Require the agency to take any action that it can demonstrate would result in a fundamental alteration in the nature of a program or activity or in undue financial and administrative burdens. In those circumstances where agency personnel believe that the proposed action would fundamentally alter the program or activity or would result in undue financial and administrative burdens, the agency has the burden of proving that compliance with § 12.150(a) would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the agency head or designee after considering all agency resources available for use in the funding and operation of the conducted program or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, the agency shall take any other action that would not result in such an alteration or

such burdens but would nevertheless ensure that individuals with handicaps receive the benefits and services of the program or activity.

(b) *Methods.* The agency may comply with the requirements of this section through such means as redesign of equipment, reassignment of services to accessible buildings, assignment of aides to beneficiaries, home visits, delivery of services at alternate accessible sites, alteration of existing facilities and construction of new facilities, use of accessible rolling stock, or any other methods that result in making its programs or activities readily accessible to and usable by individuals with handicaps. The agency is not required to make structural changes in existing facilities where other methods are effective in achieving compliance with this section. The agency, in making alterations to existing buildings, shall meet accessibility requirements to the extent compelled by the Architectural Barriers Act of 1968, as amended (42 U.S.C. 4151–4157), and any regulations implementing it. In choosing among available methods for meeting the requirements of this section, the agency shall give priority to those methods that offer programs and activities to qualified individuals with handicaps in the most integrated setting appropriate.

(c) *Time period for compliance.* The agency shall comply with the obligations established under this section by November 13, 1987, except that where structural changes in facilities are undertaken, such changes shall be made by September 14, 1990, but in any event as expeditiously as possible.

(d) *Transition plan.* In the event that structural changes to facilities will be undertaken to achieve program accessibility, the agency shall develop, by March 14, 1988, a transition plan setting forth the steps necessary to complete such changes. The agency shall provide an opportunity to interested persons, including individuals with handicaps or organizations representing individuals with handicaps to participate in the development of the transition plan by submitting comments (both oral and written). A copy of the transition plan shall be made available for public inspection. The plan shall, at a minimum—

(1) Identify physical obstacles in the agency's facilities that limit the accessibility of its programs or activities to individuals with handicaps;

(2) Describe in detail the methods that will be used to make the facilities accessible;

(3) Specify the schedule for taking the steps necessary to achieve compliance with this section and, if the time period of the transition plan is longer than one year, identify steps that will be taken during each year of the transition period; and

(4) Indicate the official responsible for implementation of the plan.

§ 12.151 Program accessibility: New construction and alterations.

Each building or part of a building that is constructed or altered by, on behalf of, or for the use of the agency shall be designed, constructed, or altered so as to be readily accessible to and usable by individuals with handicaps. The definitions, requirements, and standards of the Architectural Barriers Act (42 U.S.C. 4151–4157), as established in 41 CFR 101–19.600 to 101–19.607, apply to buildings covered by this section.

§§ 12.152—12.159 [Reserved]

§ 12.160 Communications.

(a) The agency shall take appropriate steps to ensure effective communication with applicants, participants, personnel of other Federal entities, and members of the public.

(1) The agency shall furnish appropriate auxiliary aids where necessary to afford an individual with handicaps an equal opportunity to participate in, and enjoy the benefits of, a program or activity conducted by the agency.

(i) In determining what type of auxiliary aid is necessary, the agency shall give primary consideration to the requests of the individuals with handicaps.

(ii) The agency need not provide individually prescribed devices, readers for personal use or study, or other devices of a personal nature.

(2) Where the agency communicates with applicants and beneficiaries by telephone, telecommunication devices for deaf persons (TDD's) or equally effective telecommunication systems shall be used.

(b) The agency shall ensure that interested persons, including persons with impaired vision or hearing, can obtain information as to the existence and location of accessible services, activities, and facilities.

(c) The agency shall provide signage at a primary entrance to each of its inaccessible facilities, directing users to a location at which they can obtain information about accessible facilities. The international symbol for accessibility shall be used at each primary entrance of an accessible facility.

(d) This section does not require the agency to take any action that it can demonstrate would result in a fundamental alteration in the nature of a program or activity or in undue financial and administrative burdens. In those circumstances where agency personnel believe that the proposed action would fundamentally alter the program or activity or would result in undue financial and administrative burdens, the agency has the burden of proving that compliance with § 12.160 would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the agency head or designee after consid-

ering all agency resources available for use in the funding and operation of the conducted program or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action required to comply with this section would result in such an alteration or such burdens, the agency shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that, to the maximum extent possible, individuals with handicaps receive the benefits and services of the program or activity.

§§ 12.161—12.169 [Reserved]

§ 12.170 Compliance procedures.

(a) Except as provided in paragraph (b) of this section, this section applies to all allegations of discrimination on the basis of handicap in programs or activities conducted by the agency.

(b) The agency shall process complaints alleging violations of section 504 with respect to employment according to the procedures established by the Equal Employment Opportunity Commission in 29 CFR part 1613 pursuant to section 501 of the Rehabilitation Act of 1973 (29 U.S.C. 791).

(c) Responsibility for coordinating implementation of this section shall be vested in the Director of the Office of Civil Rights, EPA or his/her designate.

(d) The complainant may file a complete complaint at any EPA office. All complete complaints must be filed within 180 days of the alleged act of discrimination. The agency may extend this time period for good cause. The agency shall accept and investigate all complete complaints for which it has jurisdiction.

(e) If the agency receives a complaint over which it does not have jurisdiction, it shall promptly notify the complainant and shall make reasonable efforts to refer the complaint to the appropriate Government entity.

(f) The agency shall notify the Architectural and Transportation Barriers Compliance Board upon receipt of any complaint alleging that a building of facility that is subject to the Architectural Barriers Act of 1968, as amended (42 U.S.C. 4151–4157), is not readily accessible to and usable by individuals with handicaps.

(g) Within 180 days of the receipt of a complete complaint for which it has jurisdiction, the agency shall notify the complainant of the results of the investigation in a letter containing—

(1) Findings of fact and conclusions of law;

(2) A description of a remedy for each violation found; and

(3) A notice of the right to appeal.

(h) Appeals of the findings of fact and conclusions of law or remedies must be filed by the complainant within 90 days of receipt from the agency of the letter required by paragraph (g) of this section. The agency may extend this time for good cause.

(i) Timely appeals shall be accepted and processed by the Administrator or a designee.

(j) The Administrator or a designee shall notify the complainant of the results of the appeal within 60 days of the receipt of the request. If the Administrator or designee determines that additional information is needed from the complainant, he or she shall have 60 days from the date of receipt of the additional information to make his or her determination on the appeal.

(k) The time limits cited in paragraphs (g) and (j) of this section above may be extended with the permission of the Assistant Attorney General.

(l) The agency may delegate its authority for conducting complaint investigations to other Federal agencies, except that the authority for making the final determination may not be delegated to another agency.

§§ 12.171—12.999 [Reserved]

PART 13—CLAIMS COLLECTION STANDARDS

Subpart A—General

Subpart B—Collection

Subpart C—Administrative Offset

Subpart D—Compromise of Debts

Subpart E—Suspension of Collection Action

Subpart F—Termination of Debts

Subpart G—Referrals

Subpart H—Referral of Debts to IRS for Tax Refund Offset

AUTHORITY:5 U.S.C. 552a, 5512, and 5514; 31 U.S.C. 3711 *et seq.* and 3720A; 4 CFR parts 101–10.

SOURCE: 53 FR 37270, Sept. 23, 1988, unless otherwise noted.

Subpart A—General

§ 13.1 Purpose and scope.

This regulation prescribes standards and procedures for the Environmental Protection Agency's (EPA's) collection and disposal of debts. These standards and procedures are applicable to all debts for which a statute, regulation or contract does not prescribe different standards or procedures. This regulation covers EPA's collection, compromise, suspension, termination, and referral of debts.

§ 13.2 Definitions.

(a) *Debt* means an amount owed to the United States from sources which include loans insured or guaranteed by the United States and all other amounts due the United States from fees, grants, contracts, leases, rents, royalties, services, sales of real or personal property, overpayments, fines, penalties, damages, interest, forfeitures (except those arising under the Uniform Code of Military Justice), and all other similar sources. As used in this regulation, the terms *debt* and *claim* are synonymous.

(b) *Delinquent debt* means any debt which has not been paid by the date specified by the Government for payment or which has not been satisfied in accordance with a repayment agreement.

(c) *Debtor* means an individual, organization, association, corporation, or a State or local government indebted to the United States or a person or entity with legal responsibility for assuming the debtor's obligation.

(d) *Agency* means the United States Environmental Protection Agency.

(e) *Administrator* means the Administrator of EPA or an EPA employee or official designated to act on the Administrator's behalf.

(f) *Administrative offset* means the withholding of money payable by the United States to, or held by the United States for, a person to satisfy a debt the person owes the Government.

(g) *Creditor agency* means the Federal agency to which the debt is —wed.

(h) *Disposable pay* means that part of current basic pay, special pay, incentive pay, retired pay, retainer pay, or in the case of an employee not entitled to basic pay, other authorized pay remaining after the deduction of any amount described in 5 CFR 581.105 (b) through (f). These deductions include, but are not limited to: Social security

withholdings; Federal, State and local tax withholdings; health insurance premiums; retirement contributions; and life insurance premiums.

(i) *Employee* means a current employee of the Federal Government including a current member of the Armed Forces.

(j) *Person* means an individual, firm, partnership, corporation, association and, except for purposes of administrative offsets under subpart C and interest, penalty and administrative costs under subpart B of this regulation, includes State and local governments and Indian tribes and components of tribal governments.

(k) *Employee salary offset* means the administrative collection of a debt by deductions at one or more officially established pay intervals from the current pay account of an employee without the employee's consent.

(l) *Waiver* means the cancellation, remission, forgiveness or non-recovery of a debt or debt-related charge as permitted or required by law.

§ 13.3 Interagency claims.

This regulation does not apply to debts owed EPA by other Federal agencies. Such debts will be resolved by negotiation between the agencies or by referral to the General Accounting Office (GAO).

§ 13.4 Other remedies.

(a) This regulation does not supersede or require omission or duplication of administrative proceedings required by contract, statute, regulation or other Agency procedures, *e.g.*, resolution of audit findings under grants or contracts, informal grant appeals, formal appeals, or review under a procurement contract.

(b) The remedies and sanctions available to the Agency under this regulation for collecting debts are not intended to be exclusive. The Agency may impose, where authorized, other appropriate sanctions upon a debtor for inexcusable, prolonged or repeated failure to pay a debt. For example, the Agency may stop doing business with a grantee, contractor, borrower or lender; convert the method of payment under a grant or contract from an advance payment to a reimbursement method; or revoke a grantee's or contractor's letter-of-credit.

§ 13.5 Claims involving criminal activities or misconduct.

(a) The Administrator will refer cases of suspected criminal activity or misconduct to the EPA Office of Inspector General. That office has the responsibility for investigating or referring the matter, where appropriate, to the Department of Justice (DOJ), and/or returning it to the Administrator for further actions. Examples of activities which should be referred are matters involving fraud, anti-trust violations, embezzlement, theft, false claims or misuse of Government money or property.

(b) The Administrator will not administratively compromise, terminate, suspend or otherwise dispose of debts involving criminal activity or misconduct without the approval of DOJ.

§ 13.6 Subdivision of claims not authorized.

A claim will not be subdivided to avoid the $20,000 limit on the Agency's authority to compromise, suspend, or terminate a debt. A debtor's liability arising from a particular transaction or contract is a single claim.

§ 13.7 Omission not a defense.

Failure by the Administrator to comply with any provision of this regulation is not available to a debtor as a defense against payment of a debt.

Subpart B—Collection

§ 13.8 Collection rule.

(a) The Administrator takes action to collect all debts owed the United States arising out of EPA activities and to reduce debt delinquencies. Collection actions may include sending written demands to the debtor's last known address. Written demand may be preceded by other appropriate action, including immediate referral to DOJ for litigation, when such action is necessary to protect the Government's interest. The Administrator may contact the debtor by telephone, in person and/or in writing to demand prompt payment, to discuss the debtor's position regarding the existence, amount or repayment of the debt, to inform the debtor of its rights (*e.g.*, to apply for waiver of the indebtedness or to have an administrative review) and of the basis for the debt and the consequences of nonpayment or delay in payment.

(b) The Administrator maintains an administrative file for each debt and/or debtor which documents the basis for the debt, all administrative collection actions regarding the debt (including communications to and from the debtor) and its final disposition. Information from a debt file relating to an individual may be disclosed only for purposes which are consistent with this regulation, the Privacy Act of 1974 and other applicable law.

§ 13.9 Initial notice.

(a) When the Administrator determines that a debt is owed EPA, he provides a written initial notice to the debtor. Unless otherwise provided by agreement, contract or order, the initial notice informs the debtor:

(1) Of the amount, nature and basis of the debt;

(2) That payment is due immediately upon receipt of the notice;

(3) That the debt is considered delinquent if it is not paid within 30 days of the date mailed or hand-delivered;

(4) That interest charges and, except for State and local governments and Indian tribes, penalty charges and administrative costs may be assessed against a delinquent debt;

(5) Of any rights available to the debtor to dispute the validity of the debt or to have recovery of the debt waived (citing the available review or waiver authority, the conditions for review or waiver, and the effects of the review or waiver request on the collection of the debt), and of the possibility of assessment of interest, penalty and administrative costs; and

(6) The address, telephone number and name of the person available to discuss the debt.

(b) EPA will respond promptly to communications from the debtor. Response generally will be within 20 days of receipt of communication from the debtor.

(c) Subsequent demand letters also will advise the debtor of any interest, penalty or administrative costs which have been assessed and will advise the debtor that the debt may be referred to a credit reporting agency (see § 13.14), a collection agency (see § 13.13) or to DOJ (see § 13.33) if it is not paid.

§ 13.10 Aggressive collection actions; documentation.

(a) EPA takes actions and effective follow-up on a timely basis to collect all claims of the United States for money and property arising out of EPA's activities. EPA cooperates with other Federal agencies in their debt collection activities.

(b) All administrative collection actions are documented in the claim file, and the bases for any compromise, termination or suspension of collection actions is set out in detail. This documentation, including the Claims Collection Litigation Report required § 13.33, is retained in the appropriate debt file.

§ 13.11 Interest, penalty and administrative costs.

(a) *Interest.* EPA will assess interest on all delinquent debts unless prohibited by statute, regulation or contract.

(1) Interest begins to accrue on all debts from the date of the initial notice to the debtor. EPA will not recover interest where the debt is paid within 30 days of the date of the notice. EPA will assess an annual rate of interest that is equal to the rate of the current value of funds to the United States Treasury (*i.e.*, the Treasury tax and loan account rate) as prescribed and published by the Secretary of the Treasury in the FEDERAL REGISTER and the Treasury Fiscal Requirements Manual Bulletins, unless a different rate is necessary to protect the interest of the Government. EPA will notify the debtor of the basis for its finding that a different rate is necessary to protect the interest of the Government.

(2) The Administrator may extend the 30-day period for payment where he determines that such action is in the best interest of the Government. A decision to extend or not to extend the payment period is final and is not subject to further review.

(3) The rate of interest, as initially assessed, remains fixed for the duration of the indebtedness. If a debtor defaults on a repayment agreement, interest may be set at the Treasury rate in effect on the date a new agreement is executed.

(4) Interest will not be assessed on interest charges, administrative costs or later payment penalties. However, where a debtor defaults on a previous repayment agreement and interest, administrative costs and penalties charges have been waived under the defaulted agreement, these charges can be reinstated and added to the debt principal under any new agreement and interest charged on the entire amount of the debt.

(b) *Administrative costs of collecting overdue debts.* The costs of the Agency's administrative handling of overdue debts, based on either actual or average cost incurred, will be charged on all debts except those owed by State and local governments and Indian tribes. These costs include both direct and indirect costs. Administrative costs will be assessed monthly throughout the period the debt is overdue except as provided by § 13.12.

(c) *Penalties.* As provided by 31 U.S.C. 3717(e)(2), a penalty charge will be assessed on all debts, except those owned by State and local governments and Indian tribes, more than 90 days delinquent. The penalty charge will be at a rate not to exceed 6% per annum and will be assessed monthly.

(d) *Allocation of payments.* A partial payment by a debtor will be applied first to outstanding administrative costs, second to penalty assessments, third to accrued interest and then to the outstanding debt principal.

(e) *Waiver*. (1) The Administrator may (without regard to the amount of the debt) waive collection of all or part of accrued interest, penalty or administrative costs, where he determines that—

(i) Waiver is justified under the criteria of § 13.25;

(ii) The debt or the charges resulted from the Agency's error, action or inaction, and without fault by the debtor; or

(iii) Collection of these charges would be against equity and good conscience or not in the best interest of the United States.

(2) A decision to waive interest, penalty charges or administrative costs may be made at any time prior to payment of a debt. However, where these charges have been collected prior to the waiver decision, they will not be refunded. The Administrator's decision to waive or not waive collection of these charges is a final agency action.

§ 13.12 Interest and charges pending waiver or review.

Interest, penalty charges and administrative costs will continue to accrue on a debt during administrative appeal, either formal or informal, and during waiver consideration by the Agency; *except*, that interest, penalty charges and administrative costs will not be assessed where a statute or a regulation specifically prohibits collection of the debt during the period of the administrative appeal or the Agency review.

§ 13.13 Contracting for collection services.

EPA will use private collection services where it determines that their use is in the best interest of the Government. Where EPA determines that there is a need to contract for collection services it will—

(a) Retain sole authority to resolve any dispute by the debtor of the validity of the debt, to compromise the debt, to suspend or terminate collection action, to refer the debt to DOJ for litigation, and to take any other action under this part which does not result in full collection of the debt;

(b) Require the contractor to comply with the Privacy Act of 1974, as amended, to the extent specified in 5 U.S.C. 552a(m), with applicable Federal and State laws pertaining to debt collection practices (*e.g.,* the Fair Debt Collection Practices Act (15 U.S.C. 1692 *et seq.*)), and with applicable regulations of the Internal Revenue Service;

(c) Require the contractor to account accurately and fully for all amounts collected; and

(d) Require the contractor to provide to EPA, upon request, all data and reports contained in its files relating to its collection actions on a debt.

§ 13.14 Use of credit reporting agencies.

EPA reports delinquent debts to appropriate credit reporting agencies.

(a) EPA provides the following information to the reporting agencies:

(1) A statement that the claim is valid and is overdue;

(2) The name, address, taxpayer identification number and any other information necessary to establish the identity of the debtor;

(3) The amount, status and history of the debt; and

(4) The program or pertinent activity under which the debt arose.

(b) Before disclosing debt information, EPA will:

(1) Take reasonable action to locate the debtor if a current address is not available; and

(2) If a current address is available, notify the debtor by certified mail, return receipt requested, that:

(i) The designated EPA official has reviewed the claim and has determined that it is valid and overdue;

(ii) That within 60 days EPA intends to disclose to a credit reporting agency the information authorized for disclosure by this subsection; and

(iii) The debtor can request a complete explanation of the claim, can dispute the information in EPA's records concerning the claim, and can file for an administrative review, waiver or reconsideration of the claim, where applicable.

(c) Before information is submitted to a credit reporting agency, EPA will provide a written statement to the reporting agency that all required actions have been taken. Additionally, EPA will, thereafter, ensure that the credit reporting agency is promptly informed of any substantive change in the conditions or amounts of the debt, and promptly verify or correct information relevant to the claim.

(d) If a debtor disputes the validity of the debt, the credit reporting agency will refer the matter to the appropriate EPA official. The credit reporting agency will exclude the debt from its reports until EPA certifies in writing that the debt is valid.

§ 13.15 Taxpayer information.

(a) The Administrator may obtain a debtor's current mailing address from the Internal Revenue Service.

(b) Addresses obtained from the Internal Revenue Service will be used by the Agency, its officers, employees, agents or contractors and other Federal agencies only to collect or dispose of debts, and may be disclosed to credit reporting agencies only for the purpose of their use in preparing a commercial credit report on the taxpayer for use by EPA.

§ 13.16 Liquidation of collateral.

Where the Administrator holds a security instrument with a power of sale or has physical possession of collateral, he may liquidate the security or collateral and apply the proceeds to the overdue debt. EPA will exercise this right where the debtor fails to pay within a reasonable time after demand, unless the cost of disposing of the collateral is disproportionate to its value or special circumstances

require judicial foreclosure. However, collection from other businesses, including liquidation of security or collateral, is not a prerequisite to requiring payment by a surety or insurance company unless expressly required by contract or statute. The Administrator will give the debtor reasonable notice of the sale and an accounting of any surplus proceeds and will comply with any other requirements of law or contract.

§ 13.17 Suspension or revocation of license or eligibility.

When collecting statutory penalties, forfeitures, or debts for purposes of enforcement or compelling compliance, the Administrator may suspend or revoke licenses or other privileges for any inexcusable, prolonged or repeated failure of a debtor to pay a claim. Additionally, the Administrator may suspend or disqualify any contractor, lender, broker, borrower, grantee or other debtor from doing business with EPA or engaging in programs EPA sponsors or funds if a debtor fails to pay its debts to the Government within a reasonable time. Debtors will be notified before such action is taken and applicable suspension or debarment procedures will be used. The Administrator will report the failure of any surety to honor its obligations to the Treasury Department for action under 6 U.S.C. 11.

§ 13.18 Installment payments.

(a) Whenever, feasible, and except as otherwise provided by law, debts owed to the United States, together with interest, penalty and administrative costs, as required by § 13.11, will be collected in a single payment. However, where the Administrator determines that a debtor is financially unable to pay the indebtedness in a single payment or that an alternative payment mechanism is in the best interest of the United States, the Administrator may approve repayment of the debt in installments. The debtor has the burden of establishing that it is financially unable to pay the debt in a single payment or that an alternative payment mechanism is warranted. If the Administrator agrees to accept payment by installments, the Administrator may require a debtor to execute a written agreement which specifies all the terms of the repayment arrangement and which contains a provision accelerating the debt in the event of default. The size and frequency of installment payments will bear a reasonable relation to the size of the debt and the debtor's ability to pay. The installment payments will be sufficient in size and frequency to liquidate the debt in not more than 3 years, unless the Administrator determines that a longer period is required. Installment payments of less than $50 per month generally will not be accepted, but may be accepted where the debtor's financial or other circumstances justify. If the debt is unsecured, the Administrator may require the debtor to execute a confess-judgment note with a tax carry-forward and a tax carry-back provision. Where the Administrator secures a confess-judgment note, the Administrator will provide the debtor a written explanation of the consequences of the debtor's signing the note.

(b) If a debtor owes more than one debt and designates how a voluntary installment payment is to be applied among the debts, that designation will be approved if the Administrator determines that the designation is in the best interest of the United States. If the debtor does not designate how the payment is to be applied, the Administrator will apply the payment to the various debts in accordance with the best interest of the United States, paying special attention to applicable statutes of limitations.

§ 13.19 Analysis of costs; automation; prevention of overpayments, delinquencies or defaults.

(a) The Administrator may periodically compare EPA's costs in handling debts with the amounts it collects,

(b) The Administrator may periodically consider the need, feasibility, and cost effectiveness of automated debt collection operations.

(c) The Administrator may establish internal controls to identify the causes of overpayments and delinquencies and may issue procedures to prevent future occurrences of the identified problems.

Subpart C—Administrative Offset

§ 13.20 Administrative offset of general debts.

This subpart provides for EPA's collection of debts by administrative offset under section 5 of the Debt Collection Act of 1982 (31 U.S.C. 3716), other statutory authorities and the common law. It does not apply to offsets against employee salaries covered by §§ 13.21, 13.22 and 13.23 of this subpart. EPA will collect debts by administrative offsets where it determines that such collections are feasible and are not otherwise prohibited by statute or contract.

EPA will decide, on a case-by-case basis, whether collection by administrative offset is feasible and that its use furthers and protects the interest of the United States.

(a) *Standards.* (1) The Administrator collects debts by administrative offset if—

(i) The debt is certain in amount;

(ii) Efforts to obtain direct payment from the debtor have been, or would most likely be, unsuc-

cessful or the Administrator and the debtor agree to the offset;

(iii) Offset is not expressly or implicitly prohibited by statute, regulation or contract;

(iv) Offset is cost-effective or has significant deterrent value;

(v) Offset does not substantially impair or defeat program objectives; and

(vi) Offset is best suited to further and protect the Government's interest.

(2) The Administrator may, in determining the method and amount of the offset, consider the financial impact on the debtor.

(b) *Interagency offset.* The Administrator may offset a debt owed to another Federal agency from amounts due or payable by EPA to the debtor, or may request another Federal agency to offset a debt owed to EPA. The Administrator may request the Internal Revenue Service to offset an overdue debt from a Federal income tax refund due a debtor where reasonable attempts to obtain payment have failed. Interagency offsets from employee salaries will be made in accordance with the procedures contained in §§ 13.22 and 13.23.

(c) *Multiple debts.* Where moneys are available for offset against multiple debts of a debtor, it will be applied in accordance with the best interest of the Government as determined by the Administrator on a case-by-case basis.

(d) *Statutory bar to offset.* Administrative offset will not be made more than 10 years after the Government's right to collect the debt first accrued, unless facts material to the Government's right to collect the debt were not known and could not have been known through the exercise of reasonable care by the officer responsible for discovering or collecting the debt. For purposes of offset, the right to collect a debt accrues when the appropriate EPA official determines that a debt exists (e.g., contracting officer, grant award official, etc.), when it is affirmed by an administrative appeal or a court having jurisdiction, or when a debtor defaults on a payment agreement, whichever is latest. An offset occurs when money payable to the debtor is first withheld or when EPA requests offset from money held by another agency.

(e) *Pre-offset notice.* Before initiating offset, the Administrator sends the debtor written notice of:

(1) The basis for and the amount of the debt as well as the Agency's intention to collect the debt by offset if payment or satisfactory response has not been received within 30 days of the notice;

(2) The debtor's right to submit an alternative repayment schedule, to inspect and copy agency records pertaining to the debt, to request review of the determination of indebtedness or to apply for waiver under any available statute or regulation; and

(3) Applicable interest, penalty charges and administrative costs.

(f) *Alternative repayment.* The Administrator may, at the Administrator's discretion, enter into a repayment agreement with the debtor in lieu of offset. In deciding whether to accept payment of the debt by an alternative repayment agreement, the Administrator may consider such factors as the amount of the debt, the length of the proposed repayment period, whether the debtor is willing to sign a confess-judgment note, past Agency dealings with the debtor, documentation submitted by the debtor indicating that an offset will cause undue financial hardship, and the debtor's financial ability to adhere to the terms of a repayment agreement. The Administrator may require financial documentation from the debtor before considering the repayment arrangement.

(g) *Review of administrative determination.* (1) A debt will not be offset while a debtor is seeking either formal or informal review of the validity of the debt under this section or under another statute, regulation or contract. However, interest, penalty and administrative costs will continue to accrue during this period, unless otherwise waived by the Administrator. The Administrator may initiate offset as soon as practical after completion of review or after a debtor waives the opportunity to request review.

(2) The Administrator may administratively offset a debt prior to the completion of a formal or informal review where the determines that:

(i) Failure to take the offset would substantially prejudice EPA's ability to collect the debt; and

(ii) The time before the first offset is to be made does not reasonably permit the completion of the review procedures. (Offsets taken prior to completion of the review process will be followed promptly by the completion of the process. Amounts recovered by offset but later found not to be owed will be refunded promptly.)

(3) The debtor must provide a written request for review of the decision to offset the debt no later than 15 days after the date of the notice of the offset unless a different time is specifically prescribed. The debtor's request must state the basis for the request for review.

(4) The Administrator may grant an extension of time for filing a request for review if the debtor shows good cause for the late filing. A debtor who fails timely to file or to request an extension waives the right to review.

(5) The Administrator will issue, no later than 60 days after the filing of the request, a written final decision based on the evidence, record and applicable law.

§ 13.21 Employee salary offset—general.

(a) *Purpose.* This section establishes EPA's policies and procedures for recovery of debts owed to the United States by installment collection from the current pay account of an employee.

(b) *Scope.* The provisions of this section apply to collection by salary offset under 5 U.S.C. 5514 of debts owed EPA and debts owed to other Federal agencies by EPA employees. This section does not apply to debts owed EPA arising from travel advances under 5 U.S.C. 5705, employee training expenses under 5 U.S.C. 4108 and to other debts where collection by salary offset is explicitly provided for or prohibited by another statute.

(c) *References.* The following statutes and regulations apply to EPA's recovery of debts due the United States by salary offset:

(1) 5 U.S.C. 5514, as amended, governing the installment collection of debts;

(2) 31 U.S.C. 3716, governing the liquidation of debts by administrative offset;

(3) 5 CFR part 550, subpart K, setting forth the minimum requirements for executive agency regulations on salary offset; and

(4) 4 CFR parts 101–105, the Federal Claims Collection Standards.

§ 13.22 Salary offset when EPA is the creditor agency.

(a) *Entitlement to notice, hearing, written response and decision.* (1) Prior to initiating collection action through salary offset, EPA will first provide the employee with the opportunity to pay in full the amount owed, unless such notification will compromise the Government's ultimate ability to collect the debt.

(2) Except as provided in paragraph (b) of this section, each employee from whom the Agency proposes to collect a debt by salary offset under this section is entitled to receive a written notice as described in paragraph (c) of this section.

(3) Each employee owing a debt to the United States which will be collected by salary offset is entitled to request a hearing on the debt. This request must be filed as prescribed in paragraph (d) of this section. The Agency will make appropriate hearing arrangements which are consistent with law and regulations. Where a hearing is held, the employee is entitled to a written decision on the following issues:

(i) The determination of the Agency concerning the existence or amount of the debt; and

(ii) The repayment schedule, if it was not established by written agreement between the employee and the Agency.

(b) *Exceptions to entitlement to notice, hearing, written response and final decision.* The procedural requirements of paragraph (a) of this section are not applicable to any adjustment of pay arising out of an employee's election of coverage or a change in coverage under a Federal benefits program (such as health insurance) requiring periodic deductions from pay, if the amount to be recovered was accumulated over four pay periods or less. However, if the amount to be recovered was accumulated over more than four pay periods the full procedures prescribed under paragraph (d) of this section will be extended to the employee.

(c) *Notification before deductions begin.* Except as provided in paragraph (b) of this section, deductions will not be made unless the employee is first provided with a minimum of 30 calendar days written notice. Notice will be sent by certified mail (return receipt requested), and must include the following:

(1) The Agency's determination that a debt is owed, including the origin, nature, and amount of the debt;

(2) The Agency's intention to collect the debt by means of deductions from the employee's current disposable pay account;

(3) The amount, frequency, proposed beginning date and duration of the intended deductions. (The proposed beginning date for salary offset cannot be earlier than 30 days after the date of notice, unless this would compromise the Government's ultimate ability to resolve the debt);

(4) An explanation of the requirements concerning interest, penalty and administrative costs;

(5) The employee's right to inspect and copy all records relating to the debt or to request and receive a copy of such records;

(6) If not previously provided, the employee's right to enter into a written agreement for a repayment schedule differing from that proposed by the Agency where the terms of the proposed repayment schedule are acceptable to the Agency. (Such an agreement must be in writing and signed by both the employee and the appropriate EPA official and will be included in the employee's personnel file and documented in the EPA payroll system);

(7) The right to a hearing conducted by a hearing official not under the control of the Administrator, if a request is filed;

(8) The method and time for requesting a hearing;

(9) That the filing of a request for hearing within 15 days of receipt of the original notification will stay the assessment of interest, penalty and administrative costs and the commencement of collection proceedings;

(10) That a final decision on the hearing (if requested) will be issued at the earliest practical date, but no later than 60 days after the filing of

the request, unless the employee requests and the hearing official grants a delay in the proceedings;

(11) That knowingly false or frivolous statements, representations or evidence may subject the employee to—

(i) Disciplinary procedures under 5 U.S.C. chapter 75 or any other applicable statutes or regulations;

(ii) Criminal penalties under 18 U.S.C. 286, 287, 1001 and 1002 or other applicable statutory authority; or

(iii) Penalties under the False Claims Act, 31 U.S.C. 3729–3731, or any other applicable statutory authority;

(12) Any other rights and remedies available under statutes or regulations governing the program for which the collection is being made; and

(13) That amounts paid or deducted for the debt, except administrative costs and penalty charges where the entire debt is not waived or terminated, which are later waived or found not owed to the United States will be promptly refunded to the employee.

(d) *Request for hearing.* An employee may request a hearing by filing a written request directly with the Director, Financial Management Division (PM–226F), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460. The request must state the bases upon which the employee disputes the proposed collection of the debt. The request must be signed by the employee and be received by EPA within 15 days of the employee's receipt of the notification of proposed deductions. The employee should submit in writing all facts, evidence and witnesses which support his/her position to the Director, Financial Management Division, within 15 days of the date of the request for a hearing. The Director, Financial Management Division, will arrange for the services of a hearing official not under the control of the Administrator and will provide the hearing official with all documents relating to the claim.

(e) *Requests for hearing made after time expires.* Late requests for a hearing may be accepted if the employee can show that the delay in filing the request for a hearing was due to circumstances beyond the employee's control.

(f) *Form of hearing, written response and final decision.* (1) Normally, a hearing will consist of the hearing official making a decision based upon a review of the claims file and any materials submitted by the debtor. However, in instances where the hearing official determines that the validity of the debt turns on an issue of veracity or credibility which cannot be resolved through review of documentary evidence, the hearing official at his discretion may afford the debtor an opportunity for an oral hearing. Such oral hearings will consist of an informal conference before a hearing official in which the employee and the Agency will be given the opportunity to present evidence, witnesses and argument. If desired, the employee may be represented by an individual of his/her choice. The Agency shall maintain a summary record of oral hearings provided under these procedures.

(2) Written decisions provided after a request for hearing will, at a minimum, state the facts evidencing the nature and origin of the alleged debt; and the hearing official's analysis, findings and conclusions.

(3) The decision of the hearing official is final and binding on the parties.

(g) *Request for waiver.* In certain instances, an employee may have a statutory right to request a waiver of overpayment of pay or allowances, e.g., 5 U.S.C. 5584 or 5 U.S.C. 5724(i). When an employee requests waiver consideration under a right authorized by statute, further collection on the debt will be suspended until a final administrative decision is made on the waiver request. However, where it appears that the Government's ability to recover the debt may be adversely affected because of the employee's resignation, termination or other action, suspension of recovery is not required. During the period of the suspension, interest, penalty charges and administrative costs will not be assessed against the debt. The Agency will not duplicate, for purposes of salary offset, any of the procedures already provided the debtor under a request for waiver.

(h) *Method and source of collection.* A debt will be collected in a lump-sum or by installment deductions at established pay intervals from an employee's current pay account, unless the employee and the Agency agree to alternative arrangements for payment. The alternative payment schedule must be in writing, signed by both the employee and the Administrator and will be documented in the Agency's files.

(i) *Limitation on amount of deduction.* The size and frequency of installment deductions generally will bear a reasonable relation to the size of the debt and the employee's ability to pay. However, the amount deducted for any period may not exceed 15 percent of the disposable pay from which the deduction is made, unless the employee has agreed in writing to the deduction of a greater amount. If possible, the installment payments will be in amounts sufficient to liquidate the debt in three years or less. Installment payments of less than $25 normally will be accepted only in the most unusual circumstances.

(j) *Duration of deduction.* If the employee is financially unable to pay a debt in a lump-sum or the amount of the debt exceeds 15 percent of disposable pay, collection will be made in installments. Installment deductions will be made over

the period of active duty or employment except as provided in paragraph (a)(1) of this section.

(k) *When deductions may begin.* (1) Deductions to liquidate an employee's debt will begin on the date stated in the Agency's notice of intention to collect from the employee's current pay unless the debt has been repaid or the employee has filed a timely request for hearing on issues for which a hearing is appropriate.

(2) If the employee has filed a timely request for hearing with the Agency, deductions will begin after the hearing official has provided the employee with a final written decision indicating the amount owed the Government. Following the decision by the hearing official, the employee will be given 30 days to repay the amount owed prior to collection through salary offset, unless otherwise provided by the hearing official.

(l) *Liquidation from final check.* If the employee retires, resigns, or the period of employment ends before collection of the debt is completed, the remainder of the debt will be offset from subsequent payments of any nature due the employee (e.g., final salary payment, lump-sum leave, etc.).

(m) *Recovery from other payments due a separated employee.* If the debt cannot be liquidated by offset from any final payment due the employee on the date of separation, EPA will liquidate the debt, where appropriate, by administrative offset from later payments of any kind due the former employee (*e.g.*, retirement pay). Such administrative offset will be taken in accordance with the procedures set forth in § 13.20.

(n) *Employees who transfer to another Federal agency.* If an EPA employee transfers to another Federal agency prior to repaying a debt owed to EPA, the following action will be taken:

(1) The appropriate debt-claim form specified by the Office of Personnel Management (OPM) will be completed and certified to the new paying office by EPA. EPA will certify: That the employee owes a debt; the amount and the basis for the debt; the date on which payment is due; the date the Government's rights to collect the debt first accrued; and that EPA's regulations implementing 5 U.S.C. 5514 have been approved by OPM.

(2) The new paying agency will be advised of the amount which has already been collected, the number of installments and the commencement date for the first installment, if other than the next officially established pay period. EPA will also identify to the new paying agency the actions it has taken and the dates of such actions.

(3) EPA will place or will arrange to have placed in the employee's official personnel file the information required by paragraphs (n) (1) and (2) of this section.

(4) Upon receipt of the official personnel file from EPA, the new paying agency will resume collection from the employee's current pay account and will notify both the employee and EPA of the resumption.

(o) *Interest, penalty and administrative cost.* EPA will assess interest and administrative costs on debts collected under these procedures. The following guidelines apply to the assessment of these costs on debts collected by salary offset:

(1) A processing and handling charge will be assessed on debts collected through salary offset under this section. Where offset begun prior to the employee's receipt of the 30-day written notice of the proposed offset, processing and handling costs will only be assessed after the expiration of the 30-day notice period and after the completion of any hearing requested under paragraph (d) of this section or waiver consideration under paragraph (g) of this section.

(2) Interest will be assessed on all debts not collected within 30 days of either the date of the notice where the employee has not requested a hearing within the allotted time, completion of a hearing pursuant to paragraph (d) of this section, or completion of waiver consideration under paragraph (g) of this section, whichever is later. Interest will continue to accrue during the period of the recovery.

(3) Deductions by salary offset normally begin prior to the time for assessment of a penalty. Therefore, a penalty charge will not be assessed unless deductions occur more than 120 days from the date of notice to the debtor and penalty assessments have not been suspended because of waiver consideration by EPA.

(p) *Non-waiver of right by payment.* An employee's payment under protest of all or any portion of a debt does not waive any rights which the employee may have under either these procedures or any other provision of law.

(q) *Refunds.* EPA will promptly refund to the employee amounts paid or deducted pursuant to this section, the recovery of which is subsequently waived or otherwise found not owing to the United States. Refunds do not bear interest unless specifically authorized by law.

(r) *Time limit for commencing recovery by salary setoff.* EPA will not initiate salary offset to collect a debt more than 10 years after the Government's right to collect the debt first accrued, unless facts material to the right to collect the debt were not known and could not have been known through the exercise of reasonable care by the Government official responsible for discovering and collecting such debts.

§ 13.23 Salary offset when EPA is not the creditor agency.

The requirements below apply when EPA has been requested to collect a debt owed by an EPA employee to another Federal agency.

(a) *Format for the request for recovery.* (1) The creditor agency must complete fully the appropriate claim form specified by OPM.

(2) The creditor agency must certify to EPA on the debt claim form: The fact that the employee owes a debt; the date that the debt first accrued; and that the creditor agency's regulations implementing 5 U.S.C. 5514 have been approved by OPM and send it to the Director, Financial Management Division (PM–226F), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

(3) If the collection is to be made in installments, the creditor agency must also advise EPA of the number of installments to be collected, the amount of each installment, and the commencement date of the first installment, if a date other than the next established pay period.

(4) Unless the employee has consented in writing to the salary deductions or signed a statement acknowledging receipt of the required procedures and this information is attached to the claim form, the creditor agency must indicate the actions it took under its procedures for salary offset and the dates of such actions.

(b) *Processing of the claim by EPA*—(1) *Incomplete claims.* If EPA receives an improperly completed claim form, the claim form and all accompanying material will be returned to the requesting (creditor) agency with notice that OPM procedures must be followed and a properly completed claim form must be received before any salary offset can be taken. The notice should identify specifically what is needed from the requesting agency for the claim to be processed.

(2) *Complete claims.* If the claim procedures in paragraph (a) of this section have been properly completed, deduction will begin on the next established pay period. EPA will not review the merits of the creditor agency's determinations with respect to the amount or validity of the debt as stated in the debt claim form. EPA will not assess a handling or any other related charge to cover the cost of its processing the claim.

(c) *Employees separating from EPA before a debt to another agency is collected*—(1) *Employees separating from Government service.* If an employee begins separation action before EPA collects the total debt due the creditor agency, the following actions will be taken:

(i) To the extent possible, the balance owed the creditor agency will be liquidated from subsequent payments of any nature due the employee from EPA in accordance with § 13.22(1);

(ii) If the total amount of the debt cannot be recovered, EPA will certify to the creditor agency and the employee the total amount of EPA's collection; and

(iii) If EPA is aware that the employee is entitled to payments from the Civil Service Retirement and Disability Fund or other similar payments, it will forward a copy of the claim form to the agency responsible for making such payments as notice that a debt is outstanding. EPA will also send a copy of the claim form to the creditor agency so that it can file a certified claim against the payments.

(2) *Employees who transfer to another Federal agency.* If an EPA employee transfers to another Federal agency before EPA collects the total amount due the creditor agency, the following actions will be taken:

(i) EPA will certify the total amount of the collection made on the debt; and

(ii) The employee's official personnel folder will be sent to the new paying agency. (It is the responsibility of the creditor agency to ensure that the collection is resumed by the new paying agency.)

Subpart D—Compromise of Debts

§ 13.24 General.

EPA may compromise claims for money or property where the claim, exclusive of interest, penalty and administrative costs, does not exceed $20,000. Where the claim exceeds $20,000, the authority to accept the compromise rests solely with DOJ. The Administrator may reject an offer of compromise in any amount. Where the claim exceeds $20,000 and EPA recommends acceptance of a compromise offer, it will refer the claim with its recommendation to DOJ for approval. The referral will be in the form of the Claims Collection Litigation Report (CCLR) and will outline the basis for EPA's recommendation. EPA refers compromise offers for claims in excess of $100,000 to the Commercial Litigation Branch, Civil Division, Department of Justice, Washington, DC 20530, unless otherwise provided by Department of Justice delegations or procedures. EPA refers offers of compromise for claims of $20,000 to $100,000 to the United States Attorney in whose judicial district the debtor can be found. If the Administrator has a debtor's firm written offer for compromise which is substantial in amount but the Administrator is uncertain as to whether the offer should be accepted, he may refer the offer and the supporting data to DOJ or GAO for action.

§ 13.25 Standards for compromise.

(a) EPA may compromise a claim pursuant to this section if EPA cannot collect the full amount

because the debtor does not have the financial ability to pay the full amount of the debt within a reasonable time, or the debtor refuses to pay the claim in full and the Government does not have the ability to enforce collection in full within a reasonable time by enforced collection proceedings. In evaluating the acceptability of the offer, the Administrator may consider, among other factors, the following:

(1) *Individual debtors.* (i) Age and health of the debtor;

(ii) Present and potential income;

(iii) Inheritance prospects;

(iv) The possibility that assets have been concealed or improperly transferred by the debtor;

(v) The availability of assets or income which may be realized by enforced collection proceedings; or

(vi) The applicable exemptions available to the debtor under State and Federal law in determining the Government's ability to enforce collection.

(2) *Municipal and quasi-municipal debtors.* (i) The size of the municipality or quasi-municipal entity;

(ii) The availability of current and future resources sufficient to pay the debt (*e.g.,* bonding authority, rate adjustment authority, or taxing authority); or

(iii) The ratio of liabilities (both short and long term) to assets.

(3) *Commercial debtors.* (i) Ratio of assets to liabilities;

(ii) Prospects of future income or losses; or

(iii) The availability of assets or income which may be realized by enforced collection proceedings.

(b) EPA may compromise a claim, or recommend acceptance of a compromise to DOJ, where there is substantial doubt concerning the Government's ability to prove its case in court for the full amount of the claim, either because of the legal issues involved or a bona fide dispute as to the facts. The amount accepted in compromise in such cases will fairly reflect the probability of prevailing on the legal issues involved, considering fully the availability of witnesses and other evidentiary data required to support the Government's claim. In determining the litigative risks involved, EPA will give proportionate weight to the likely amount of court costs and attorney fees the Government may incur if it is unsuccessful in litigation.

(c) EPA may compromise a claim, or recommend acceptance of a compromise to DOJ, if the cost of collection does not justify the enforced collection of the full amount of the debt. The amount accepted in compromise in such cases may reflect an appropriate discount for the administrative and litigative costs of collection, taking into consideration the time it will take to effect collection. Costs of collection may be a substantial factor in the settlement of small claims, but normally will not carry great weight in the settlement of large claims. In determining whether the cost of collection justifies enforced collection of the full amount, EPA may consider the positive effect that enforced collection of the claim may have on the collection of other similar claims.

(d) Statutory penalties, forfeitures or debts established as an aid to enforcement and to compel compliance may be compromised where the Administrator determines that the Agency's enforcement policy, in terms of deterrence and securing compliance (both present and future), will be adequately served by accepting the offer.

§ 13.26 Payment of compromised claims.

The Administrator normally will not approve a debtor's request to pay a compromised claim in installments. However, where the Administrator determines that payment of a compromise by installments is necessary to effect collection, a debtor's request to pay in installments may be approved. Normally, where installment repayment is approved, the debtor will be required to execute a confess-judgment agreement which accelerates payment of the balance due upon default.

§ 13.27 Joint and several liability.

When two or more debtors are jointly and severally liable, collection action will not be withheld against one debtor until the other or others pay their proportionate share. The amount of a compromise with one debtor is not precedent in determining compromises from other debtors who have been determined to be jointly and severally liable on the claim.

§ 13.28 Execution of releases.

Upon receipt of full payment of a claim or the amount compromised, EPA will prepare and execute a release on behalf of the United States. The release will include a provision which voids the release if it was procured by fraud, misrepresentation, a false claim or by mutual mistake of fact.

Subpart E—Suspension of Collection Action

§ 13.29 Suspension—general.

The Administrator may suspend the Agency's collection actions on a debt where the outstanding debt principal does not exceed $20,000, the Government cannot presently collect or enforce collection of any significant sum from the debtor, the prospects of future collection justify retention of

the debt for periodic review and there is no risk of expiration of the statute of limitations during the period of suspension. Additionally, the Administrator may waive the assessment of interest, penalty charges and administrative costs during the period of the suspension. Suspension will be for an established time period and generally will be reviewed at least every six months to ensure the continued propriety of the suspension. DOJ approval is required to suspend debts exceeding $20,000. Unless otherwise provided by DOJ delegations or procedures, the Administrator refers requests for suspension of debts of $20,000 to $100,000 to the United States Attorney in whose district the debtor resides. Debts exceeding $100,000 are referred to the Commercial Litigation Branch, Civil Division, Department of Justice, for approval.

§ 13.30 Standards for suspension.

(a) *Inability to locate debtor.* The Administrator may suspend collection on a debt where he determines that the debtor cannot be located presently but that there is a reasonable belief that the debtor can be located in the future.

(b) *Financial condition of debtor.* The Administrator may suspend collection action on a claim when the debtor owns no substantial equity in real or personal property and is unable to make payment on the claim or effect a compromise but the debtor's future financial prospects justify retention of the claim for periodic review, provided that:

(1) The applicable statute of limitations will not expire during the period of the suspension, can be tolled or has started running anew;

(2) Future collection can be effected by offset, notwithstanding the 10-year statute of limitations for administrative offsets; or

(3) The debtor agrees to pay interest on the debt and suspension is likely to enhance the debtor's ability to fully pay the principal amount of the debt with interest at a later date.

(c) *Request for waiver or administrative review—mandatory.* The Administrator will suspend collection activity where a statute provides for mandatory waiver consideration or administrative review prior to agency collection of a debt. The Administrator will suspend EPA's collection actions during the period provided for the debtor to request review or waiver and during the period of the Agency's evaluation of the request.

(d) *Request for waiver or administrative review—permissive.* The Administrator may suspend collection activities on debts of $20,000 or less during the pendency of a permissive waiver or administrative review where he determines that:

(1) There is a reasonable possibility that waiver will be granted and the debtor may be found not owing the debt (in whole or in part);

(2) The Government's interest is protected, if suspension is granted, by the reasonable assurance that the debt can be recovered if the debtor does not prevail; or

(3) Collection of the debt will cause undue hardship to the debtor.

(e) *Refund barred by statute or regulation.* The Administrator will ordinarily suspend collection action during the pendency of his consideration of a waiver request or administrative review where statute and regulation preclude refund of amounts collected by the Agency should the debtor prevail. The Administrator may decline to suspend collection where he determines that the request for waiver or administrative review is frivolous or was made primarily to delay collection.

Subpart F—Termination of Debts

§ 13.31 Termination—general.

The Administrator may terminate collection actions and write-off debts, including accrued interest, penalty and administrative costs, where the debt principal does not exceed $20,000. If the debt exceeds $20,000, EPA obtains the approval of DOJ in order to terminate further collection actions. Unless otherwise provided for by DOJ regulations or procedures, requests to terminate collection on debts in excess of $100,000 are referred to the Commercial Litigation Branch, Civil Division, Department of Justice, for approval. Debts in excess of $20,000 but $100,000 or less are referred to the United States Attorney in whose judicial district the debtor can be found.

§ 13.32 Standards for termination.

A debt may be terminated where the Administrator determines that:

(a) The Government cannot collect or enforce collection of any significant sum from the debtor, having due regard for available judicial remedies, the debtor's ability to pay, and the exemptions available to the debtor under State and Federal law;

(b) The debtor cannot be located, there is no security remaining to be liquidated, the applicable statute of limitations has expired, and the prospects of collecting by offset are too remote to justify retention of the claim;

(c) The cost of further collection action is likely to exceed the amount recoverable;

(d) The claim is determined to be legally without merit; or

(e) The evidence necessary to prove the claim cannot be produced or the necessary witnesses are unavailable and efforts to induce voluntary payment have failed.

Subpart G—Referrals

§ 13.33 Referrals to the Department of Justice.

(a) *Prompt referral.* The Administrator refers to DOJ for litigation all claims on which aggressive collection actions have been taken but which could not be collected, compromised, suspended or terminated. Referrals are made as early as possible, consistent with aggressive agency collection action, and within the period for bringing a timely suit against the debtor.

(1) Unless otherwise provided by DOJ regulations or procedures, EPA refers for litigation debts of more than $100,000 to the Commercial Litigation Branch, Civil Division, Department of Justice, Washington, DC 20530.

(2) Unless otherwise provided by DOJ regulations or procedures, EPA refers for litigation debts of $100,000 or less to the United States Attorney in whose judicial district the debtor can be found.

(b) *Claims Collection Litigation Report (CCLR).* Unless an exception has been granted by DOJ, the CCLR is used for referrals of all administratively uncollectible claims to DOJ and is used to refer all offers of compromise.

Supbart H—Referral of Debts to IRS for Tax Refund Offset

Source: 59 FR 651, Jan. 5, 1994, unless otherwise noted.

§ 13.34 Purpose.

This subpart establishes procedures for the Environmental Protection Agency (EPA) to refer past-due debts to the Internal Revenue Service (IRS) for offset against the income tax refunds of persons owing debts to EPA. It specifies the Agency procedures and the rights of the debtor applicable to claims for the payment of debts owed to EPA.

§ 13.35 Applicability and scope.

(a) This subpart implements 31 U.S.C. 3720A, which authorizes the IRS to reduce a tax refund by the amount of a past-due legally enforceable debt owed to the United States.

(b) For purposes of this section, a past-due legally enforceable debt referable to the IRS is a debt which is owed to the United States and:

(1) Except in the case of a judgment debt, has been delinquent for at least three months but has not been delinquent for more than ten years at the time the offset is made;

(2) Cannot be currently collected pursuant to the salary offset provisions of 5 U.S.C. 5514(a)(1);

(3) Is ineligible for administrative offset under 31 U.S.C. 3716(a) by reason of 31 U.S.C. 3716(c)(2) or cannot be collected by administrative offset under 31 U.S.C. 3716(a) by the Agency against amounts payable to or on behalf of the debtor by or on behalf of the Agency;

(4) With respect to which EPA has given the taxpayer at least 60 days from the date of notification to present evidence that all or part of the debt is not past-due or not legally enforceable, has considered evidence presented by such taxpayer, if any, and has determined that an amount of such debt is past-due and legally enforceable;

(5) Has been disclosed by EPA to a consumer reporting agency as authorized by 31 U.S.C. 3711(f), unless a consumer reporting agency would be prohibited from using such information by 15 U.S.C. 1681c, or unless the amount of the debt does not exceed $100.00;

(6) With respect to which EPA has notified or has made a reasonable attempt to notify the taxpayer that the debt is past-due and, unless repaid within 60 days thereafter, the debt will be referred to the IRS for offset against any overpayment of tax;

(7) Is at least $25.00; and

(8) All other requirements of 31 U.S.C. 3720A and the Department of the Treasury regulations at 26 CFR 301.6402–6 relating to the eligibility of a debt for tax return offset have been satisfied.

§ 13.36 Administrative charges.

In accordance with § 13.11, all administrative charges incurred in connection with the referral of a debt to the IRS shall be assessed on the debt and thus increase the amount of the offset.

§ 13.37 Notice requirement before offset.

A request for reduction of an IRS tax refund will be made only after EPA makes a determination that an amount is owed and past-due and provides the debtor with 60 days written notice. EPA's notice of intention to collect by IRS tax refund offset (Notice of Intent) will state:

(a) The amount of the debt;

(b) That unless the debt is repaid within 60 days from the date of EPA's Notice of Intent, EPA intends to collect the debt by requesting the IRS to reduce any amounts payable to the debtor as refunds of Federal taxes paid by an amount equal to the amount of the debt and all accumulated interest and other charges;

(c) That the debtor has a right to present evidence that all or part of the debt is not past-due or not legally enforceable; and

(d) A mailing address for forwarding any written correspondence and a contact name and phone number for any questions.

§ 13.38 Review within the Agency.

(a) *Notification by debtor.* A debtor who receives a Notice of Intent has the right to present evidence that all or part of the debt is not past-due or not legally enforceable. To exercise this right, the debtor must:

(1) Send a written request for a review of the evidence to the address provided in the notice;

(2) State in the request the amount disputed and the reasons why the debtor believes that the debt is not past-due or is not legally enforceable; and

(3) Include in the request any documents which the debtor wishes to be considered or state that additional information will be submitted within the remainder of the 60-day period.

(b) *Submission of evidence.* The debtor may submit evidence showing that all or part of the debt is not past-due or not legally enforceable along with the notification required by paragraph (a) of this section. Failure to submit the notification and evidence within 60 days will result in an automatic referral of the debt to the IRS without further action by EPA.

(c) *Review of the evidence.* EPA will consider all available evidence related to the debt. Within 30 days, if feasible, EPA will notify the debtor whether EPA has sustained, amended, or cancelled its determination that the debt is past-due and legally enforceable.

§ 13.39 Agency determination.

(a) Following review of the evidence, EPA will issue a written decision.

(b) If EPA either sustains or amends its determination, it shall notify the debtor of its intent to refer the debt to the IRS for offset against the debtor's Federal income tax refund. If EPA cancels its original determination, the debt will not be referred to IRS.

§ 13.40 Stay of offset.

If the debtor timely notifies the EPA that he or she is exercising the right described in § 13.38(a) and timely submits evidence in accordance with § 13.38(b), any notice to the IRS will be stayed until the issuance of a written decision which sustains or amends its original determination.

PART 14—EMPLOYEE PERSONAL PROPERTY CLAIMS

Sec.

AUTHORITY: Military Personnel and Civilian Employees' Claims Act of 1964, as amended (31 U.S.C. 3721).

SOURCE: 51 FR 24146, July 2, 1986, unless otherwise noted.

§ 14.1 Scope and purpose.

This part prescribes regulations for the Military Personnel and Civilian Employees' Claims Act of 1964 (the Act), 31 U.S.C. 3721. The Act allows the Administrator of the U.S. Environmental Protection Agency (EPA) to settle and pay claims of EPA employees for damage to or loss of their personal property which was incident to service. A claim under the Act is allowed only where the claim is substantiated and the Administrator determines that possession of the property was reasonable or proper under the circumstances existing at the time and place of the loss and no part of the loss was caused by any negligent or wrongful act or omission of the employee or his/her agent.

§ 14.2 Definitions.

As used in this part:

(a) *EPA Claims Officer* is the Agency official delegated the responsibility by the Administrator to carry out the provisions of the Act.

(b) *Claim* means a demand for payment by an employee or his/her representative for the value or the repair cost of an item of personal property damaged, lost or destroyed as an incident to government service.

(c) *Employee* means a person appointed to a position with EPA.

(d) *Settle* means the act of considering, ascertaining, adjusting, determining or otherwise resolving a claim.

(e) *Accrual date* means the date of the incident causing the loss or damage or the date on which the loss or damage should have been discovered by the employee through the exercise of reasonable care.

(f) *Depreciation* is the reduction in value of an item caused by the elapse of time between the date of acquisition and the date of loss or damage.

§ 14.3 Incident to service.

In order for a claim to be allowed under this part, the EPA Claims Officer must determine that the item of personal property, at the time of damage or loss, was used by the employee as an incident to government service. An item is incident to service when possession of the item by the employee had substantial relationship to the employee's performance of duty. Whether an item is incident to service is determined by the facts of each claim. The employee has the burden of showing that the item was incident to his/her governmental service.

§ 14.4 Reasonable and proper.

EPA does not insure its employees from every loss or damage to personal property they may sustain. In order for a claim to be allowed, the item must not only have been incident to service, it must also have been reasonable and proper for the employee to possess the item at the time and place of its loss or damage. Generally, the possession of an item is reasonable and proper when the item is of a type and quantity which EPA reasonably expected its employees to possess at the time and place of the loss or damage. Consequently, items which are exceptionally expensive, excessive quantities of otherwise allowable items, personal items which are used in place of items usually provided to employees by EPA or items which are primarily of aesthetic value are not considered reasonable or proper items and are unallowable.

§ 14.5 Who may file a claim.

A claim may be filed by an employee or by his/her authorized agent or legal representative. If a claim is otherwise allowable under this part, a claim can be filed by a surviving spouse, child, parent, brother or sister of a deceased employee.

§ 14.6 Time limits for filing a claim.

A claim under this part is considered by the EPA Claims Officer only if it is in writing and received within two years after the claim accrues. The EPA Claims Officer may consider a claim not filed within this period when the claim accrued during a period of armed conflict and the requirements of 31 U.S.C. 3721(g) are met.

§ 14.7 Where to file a claim.

An employee or his/her representative may file a claim with his/her Administrative Office or the Safety Office for the facility. The employee should complete and submit to the Administrative Office or the Safety Office a completed EPA Form 3370–

1, ''Employee Claim for Loss of or Damage to Personal Property.'' That Office then forwards the form and any other relevant information to the EPA Claims Officer, Office of General Counsel (LE–132G), 401 M Street SW., Washington, DC 20460.

§ 14.8 Investigation of claims.

The EPA Claims Officer investigates claims filed under this part. The EPA Claims Officer may request additional documentation from an employee (e.g., repair estimates and receipts), interview witnesses, and conduct any further investigation he believes is warranted by the facts of the claim.

§ 14.9 Approval and payment of claims.

(a) EPA's approval and payment of a claim is limited by the Act to $25,000. The EPA Claims Officer considers, adjusts, determines, compromises and settles all claims filed under this part. The decision of the EPA Claims Officer is final unless reconsideration under § 14.10 is granted.

(b) The EPA Claims Officer will approve and pay claims filed for a deceased employee by persons specified in § 14.5 in the following order:

(1) The spouse's claim.
(2) A child's claim.
(3) A parent's claim.
(4) A brother's or sister's claim.

§ 14.10 Procedures for reconsideration.

The EPA Claims Officer, at his discretion, may reconsider a decision when the employee establishes that an error was made in the computation of the award or that evidence or material facts were unavailable to the employee at the time of the filing of the claim and the failure to provide the information was not the result of the employee's lack of care. An employee seeking reconsideration of a decision must file, within 30 days of the date of the decision, a written request with the EPA Claims Officer for reconsideration. The request for reconsideration must specify, where applicable, the error, the evidence or material facts not previously considered by the EPA Claims Officer and the reason why the employee believes that the evidence or facts previously were not available.

§ 14.11 Principal types of allowable claims.

(a) *General*. A claim under this part is allowed for tangible personal property of a type and quantity that was reasonable and proper for the employee to possess under the circumstances at the time of the loss or damage. In evaluating whether a claim is allowable, the EPA Claims Officer may consider such factors as: The employee's use of the item; whether EPA generally is aware that such items are used by its employees; or whether the loss was caused by a failure of EPA to provide adequate protection against the loss.

(b) *Examples of claims which are allowable*. Claims which are ordinarily allowed include loss or damage which occurred:

(1) In a place officially designated for storage of property such as a warehouse, office, garage, or other storage place;

(2) In a marine, rail, aircraft, or other common disaster or natural disaster such as a fire, flood, or hurricane;

(3) When the personal property was subjected to an extraordinary risk in the employee's performance of duty, such as in connection with an emergency situation, a civil disturbance, common or natural disaster, or during efforts to save government property or human life;

(4) When the property was used for the benefit of the government at the specific direction of a supervisor;

(5) When the property was money or other valuables deposited with an authorized government agent for safekeeping; and

(6) When the property was a vehicle which was subjected to an extraordinary risk in the employee's performance of duty and the use of the vehicle was at the specific direction of the employee's supervisor.

(c) *Claims for articles of clothing*. Claims for loss or damage to clothing and accessories worn by an employee may be allowed where:

(1) The damage or loss occurred during the employee's performance of official duty in an unusual or extraordinary risk situation;

(2) The loss or damage occurred during the employee's response to an emergency situation, to a natural disaster such as fire, flood, hurricane, or to a man-made disaster such as a chemical spill;

(3) The loss or damage was caused by faulty or defective equipment or furniture maintained by EPA; or

(4) The item was stolen even though the employee took reasonable precautions to protect the item from theft.

(d) *Claims for loss or damage to household items*. (1) Claims for damages to household goods may be allowed where:

(i) The loss or damages occurred while the goods were being shipped pursuant to an EPA authorized change in duty station;

(ii) The employee filed a claim for the damages with the appropriate carrier; and

(iii) The employee substantiates that he/she has suffered a loss in excess of the amount paid by the carrier.

(2) Where a carrier has refused to make an award to an employee because of his/her failure to comply with the carrier's claims procedures, any award by EPA will be reduced by the maximum amount payable for the item by the carrier under its contract of shipment. Where an employee fails to notify the carrier of damages or loss, either at the time of delivery of the household goods or within a reasonable time after discovery, any award by EPA will be reduced by the amount of the carrier's maximum contractual liability for the damage or loss. The employee has the burden of proving his/her entitlement to reimbursement from EPA for amounts in excess of that allowed by the carrier.

§ 14.12 Principal types of unallowable claims.

Claims that ordinarily will not be allowed include:

(a) Loss or damage totaling less than $25;

(b) Money or currency, except when deposited with an authorized government agency for safekeeping;

(c) Loss or damage to an item of extraordinary value or to an antique where the item was shipped with household goods, unless the employee filed a valid appraisal or authentication with the carrier prior to shipment of the item;

(d) Loss of bankbooks, checks, notes, stock certifications, money orders, or travelers checks;

(e) Property owned by the United States unless the employee is financially responsible for it to another government agency;

(f) Claims for loss or damage to a bicycle or a private motor vehicle, unless allowable under § 14.11(b)(6);

(g) Losses of insurers or subrogees;

(h) Losses recoverable from insurers or carriers;

(i) Losses recovered or recoverable pursuant to contract;

(j) Claims for damage or loss caused, in whole or in part, by the negligent or wrongful acts of the employee or his/her agent;

(k) Property used for personal business or profit;

(l) Theft from the possession of the employee unless the employee took reasonable precautions to protect the item from theft;

(m) Property acquired, possessed or transported in violation of law or regulations;

(n) Unserviceable property; or

(o) Damage or loss to an item during shipment of household goods where the damage or loss was caused by the employee's negligence in packing the item.

§ 14.13 Items fraudulently claimed.

Where the EPA Claims Officer determines that an employee has intentionally misrepresented the cost, condition, cost of repair or a material fact concerning a claim, he/she may, at his discretion, deny the entire amount claimed for the item. Further, where the EPA Claims Officer determines that the employee intentionally has materially misrepresented the costs, conditions or nature of repairs of the claim, he will refer it to appropriate officials (e.g., Inspector General, the employee's supervisor, etc.) for action.

§ 14.14 Computation of award.

(a) The amount awarded on any item may not exceed its adjusted cost. Adjusted cost is either the purchase price of the item or its value at the time of acquisition, less appropriate depreciation. The amount normally payable for property damaged beyond economical repair is its depreciated value immediately before the loss or damage, less any salvage value. If the cost of repair is less than the depreciated value, it will be considered to be economically repairable and only the cost of repair will be allowable.

(b) Notwithstanding a contract to the contrary, the representative of an employee is limited by 31 U.S.C. 3721(i) to receipt of not more than 10 percent of the amount of an award under this part for services related to the claim. A person violating this paragraph is subject to a fine of not more than $1,000. 31 U.S.C. 3721(i).

PART 16—IMPLEMENTATION OF PRIVACY ACT OF 1974

Sec.

AUTHORITY: 5 U.S.C. 552a.

SOURCE: 40 FR 53582, Nov. 19, 1975, unless otherwise noted.

§ 16.1 Purpose and scope.

(a) This part sets forth the Environmental Protection Agency procedures under the Privacy Act of 1974 as required by 5 U.S.C. 552a(f).

(b) These procedures describe how an individual may request notification of whether EPA maintains a record pertaining to him or her in any of its systems of records, request access to the record or to an accounting of its disclosure, request that the record be amended or corrected, and appeal an initial adverse determination concerning any such request.

(c) These procedures apply only to requests by individuals and only to records maintained by EPA, excluding those systems specifically exempt under §§ 16.13 and 16.14 and those determined as government-wide and published by the Civil Service Commission in 5 CFR parts 293 and 297.

§ 16.2 Definitions.

As used in this part:

(a) The terms *individual, maintain, record, system of records,* and *routine use* shall have the meaning given them by 5 U.S.C. 552a (a)(2), (a)(3), (a)(4), (a)(5) and (a)(7), respectively.

(b) *EPA* means the Environmental Protection Agency.

(c) *Working days* means calendar days excluding Saturdays, Sundays, and legal public holidays.

§ 16.3 Procedures for requests pertaining to individual records in a record system.

Any individual who wishes to have EPA inform him or her whether a system of records maintained by EPA contains any record pertaining to him or her which is retrieved by name or personal identifier, or who wishes to request access to any such record, shall submit a written request in accordance with the instructions set forth in EPA's annual notice of systems for that system of records. This request shall include:

(a) The name of the individual making the request;

(b) The name of the system of records (as set forth in the EPA notice of systems) to which the request relates;

(c) Any other information which the system notice indicates should be included; and

(d) If the request is for access, a statement as to whether a personal inspection or a copy by mail is desired.

§ 16.4 Times, places, and requirements for identification of individuals making requests.

(a) If an individual submitting a request for access under § 16.3 has asked that EPA authorize a personal inspection of records, and EPA has granted the request, he or she may present himself or herself at the time and place specified in EPA's response or arrange another time with the appropriate agency official.

(b) Prior to inspection of records, an individual shall present sufficient identification (e.g., driver's license, employee identification card, social security card, credit card) to establish that he or she is the individual to whom the records pertain. An individual who is unable to provide such identification shall complete and sign, in the presence of an agency official, a statement declaring his or her identity and stipulating that he or she understands it is a misdemeanor punishable by fine up to $5,000 to knowingly and willfully seek or obtain access to records about another individual under false pretenses.

(c) If an individual, having requested personal inspection of his or her records, wishes to have another person accompany him or her during inspection, he or she shall submit a written statement authorizing disclosure in the presence of the other person(s).

(d) An individual who has made a personal inspection of records may then request copies of those records. Such requests may be granted, but fees may be charged in accordance with § 16.11.

(e) If an individual submitting a request under § 16.3 wishes to have copies furnished by mail, he or she must include with the request sufficient

data to allow EPA to verify his or her identity. Should sensitivity of the records warrant it, EPA may require a requester to submit a signed and notarized statement indicating that he or she is the individual to whom the records pertain and that he or she understands it is a misdemeanor punishable by fine up to $5,000 to knowingly and willfully seek or obtain access to records about another individual under false pretenses. Such mail requests may be granted, but fees may be charged in accordance with § 16.11.

(f) No verification of identity will be required where the records sought are publicly available under the Freedom of Information Act, as EPA procedures under 40 CFR part 2 will then apply.

§ 16.5 Disclosure of requested information to individuals.

(a) Each request received will be acted upon promptly.

(b) Within 10 working days of receipt of a request, the system manager shall acknowledge the request. Whenever practicable, the acknowledgment will indicate whether or not access will be granted and, if so, when and where. When access is to be granted, it shall be provided within 30 working days of first receipt. If the agency is unable to meet this deadline, the records system manager shall so inform the requester stating reasons for the delay and an estimate of when access will be granted.

(c) If a request pursuant to § 16.3 for access to a record is in a system of records which is exempted, the records system manager will determine whether the information will nonetheless be made available. If the determination is to deny access, the reason for denial and the appeal procedure will be given to the requester.

(d) Any person whose request is initially denied may appeal that denial to the Privacy Act Officer, who shall make an appeal determination within 10 working days.

(e) If the appeal under paragraph (d) of this section is denied, the requester may bring a civil action under 5 U.S.C. 552a(g) to seek review of the denial.

§ 16.6 Special procedures: Medical records.

Should EPA receive a request for access to medical records (including psychological records) disclosure of which the system manager determines would be harmful to the individual to whom they relate, EPA may refuse to disclose the records directly to the individual and instead offer to transmit them to a physician designated by the individual.

§ 16.7 Request for correction or amendment of record.

(a) An individual may request correction or amendment of any record pertaining to him or her in a system of records maintained by EPA by submitting to the system manager, in writing, the following:

(1) The name of the individual making the request;

(2) The name of the system, as described in the notice of systems;

(3) A description of the nature and substance of the correction or amendment request; and

(4) Any additional information specified in the system notice.

(b) Any person submitting a request under this section shall include sufficient information in support of that request to allow EPA to apply the standards set forth in 5 U.S.C. 552a (e)(1) and (e)(5).

(c) Any person whose request is denied may appeal that denial to the Privacy Act Officer.

(d) In the event that appeal is denied, the requester may bring a civil action to seek review of the denial, under 5 U.S.C. 552a(g).

§ 16.8 Initial determination on request for correction or amendment of record.

(a) Within 10 working days of receipt of a request for amendment or correction, the system manager shall acknowledge the request, and promptly either:

(1) Make any correction, deletion, or addition which the requester believes should be made; or

(2) Inform the requester of his or her refusal to correct or amend the record, the reason for refusal, and the procedures for appeal.

(b) If the system manager is unable to comply with the preceding paragraphs within 30 working days of his or her receipt of a request, he or she will inform the requester of that fact, the reasons, and an estimate of when a determination will be reached.

(c) In conducting the review of the request, the system manager will be guided by the requirements of 5 U.S.C. 552a (e)(1) and (e)(5).

(d) If the system manager determines to grant all or any portion of the request, he or she will:

(1) Advise the individual of that determination;

(2) Make the correction or amendment; and

(3) So inform any person or agency outside EPA to whom the record has been disclosed, and, where an accounting of that disclosure is maintained in accordance with 5 U.S.C. 552a(c), note the occurrence and substance of the correction or amendment in the accounting.

(e) If the system manager determines not to grant all or any portion of a request for correction or amendment, he or she will:

(1) Comply with paragraph (d)(3) of this section (if necessary);

(2) Advise the individual of the determination and its basis;

(3) Inform the individual that an appeal may be made; and

(4) Describe the procedures for making the appeal.

(f) If EPA receives from another Federal agency a notice of correction or amendment of information furnished by that agency and contained in one of EPA's systems of records, the system manager shall advise the individual and make the correction as if EPA had originally made the correction or amendment.

§ 16.9 Appeal of initial adverse agency determination on request for correction or amendment.

(a) Any individual whose request for correction or amendment is initially denied by EPA and who wishes to appeal may do so by letter to the Privacy Act Officer. The appeal shall contain a description of the initial request sufficient to identify it.

(b) The Privacy Act Officer shall make a final determination not later than 30 working days from the date on which the individual requests the review, unless, for good cause shown, the Privacy Act Officer extends the 30-day period and notifies the requester. Such extension will be utilized only in exceptional circumstances.

(c) In conducting the review of an appeal, the Privacy Act Officer will be guided by the requirements of 5 U.S.C. 552a (e)(1) and (e)(5).

(d) If the Privacy Act Officer determines to grant all or any portion of an appeal he or she shall so inform the requester and EPA shall make the correction or amendment and comply with § 16.8(d)(3).

(e) If the Privacy Act Officer determines not to grant all or any portion of an appeal he or she shall inform the requester:

(1) Of the determination and its basis;

(2) Of the requester's right to file a concise statement of reasons for disagreeing with EPA's decision;

(3) Of the procedures for filing such statement of disagreement;

(4) That such statements of disagreements will be made available in subsequent disclosures of the record, together with an agency statement (if deemed appropriate) summarizing its refusal;

(5) That prior recipients of the disputed record will be provided with statements as in paragraph (e)(4) of this section, to the extent that an accounting of disclosures is maintained under 5 U.S.C. 552a(c); and

(6) Of the requester's right to seek judicial review under 5 U.S.C. 552a(g).

§ 16.10 Disclosure of record to person other than the individual to whom it pertains.

EPA shall not disclose any record which is contained in a system of records it maintains except pursuant to a written request by, or with the written consent of, the individual to whom the record pertains, unless the disclosure is authorized by one or more of the provisions of 5 U.S.C. 552a(b).

§ 16.11 Fees.

No fees shall be charged for providing the first copy of a record or any portion to an individual to whom the record pertains. The fee schedule for reproducing other records is the same as that set forth in 40 CFR 2.120.

§ 16.12 Penalties.

The Act provides, in pertinent part:

''Any person who knowingly and willfully requests or obtains any record concerning an individual from an agency under false pretenses shall be guilty of a misdemeanor and fined not more than $5,000.'' (5 U.S.C. 552a(i)(3).)

§ 16.13 General exemptions.

(a) *Systems of records affected.*

¶EPA–4 OIG Criminal Investigative Index and Files—EPA/OIG.

¶EPA–17 NEIC Criminal Investigative Index and Files—EPA/NEIC/OCI.

(b) *Authority.* Under 5 U.S.C. 552a(j)(2), the head of any agency may by rule exempt any system of records within the agency from certain provisions of the Privacy Act of 1974, if the system of records is maintained by an agency or component thereof which performs as its principal function any activity pertaining to the enforcement of criminal laws and which consists of:

(1) Information compiled for the purpose of identifying individual criminal offenders and alleged offenders and consisting only of identifying data and notations of arrests, the nature and disposition of criminal charges, sentencing, confinement, release, and parole and probation status;

(2) Information compiled for the purpose of a criminal investigation, including reports of informants and investigators, and associated with an identifiable individual; or

(3) Reports identifiable to an individual compiled at any stage of the process of enforcement of the criminal laws from arrest or indictment through release from supervision.

(c) *Scope of exemption.* (1) The EPA–4 system of records identified in § 16.13(a) is maintained by the Office of Investigations of the Office of Inspector General (OIG), a component of EPA which performs as its principal function activities pertaining to the enforcement of criminal laws. Authority for the criminal law enforcement activities of the OIG's Office of Investigations is the Inspector General Act of 1978, 5 U.S.C. app.

(2) The EPA–17 system of records identified in § 16.13(a) is maintained by the Office of Criminal Investigations (OCI) of the National Enforcement Investigations Center (NEIC), a component of EPA which performs as its principal function activities pertaining to the enforcement of criminal laws. Authority for the criminal law enforcement activities of the NEIC's Office of Criminal Investigations is 28 U.S.C. 533, with appointment letter from Benjamin Civiletti, Attorney General, to Douglas Costle, Administrator, EPA, dated January 16, 1981.

(3) The systems of records identified in § 16.13(a) are exempted from the following provisions of the Privacy Act of 1974: 5 U.S.C. 552a(c)(3) and (4); (d); (e)(1), (2), (3), (4)(G), (H), and (I), (5), and (8); (f); and (g).

(4) To the extent that the exemption claimed under 5 U.S.C. 552a(j)(2) is held to be invalid for the systems of records identified in § 16.13(a), then an exemption under 5 U.S.C. 552a(k)(2) is claimed for these systems of records.

(d) *Reasons for exemption.* The systems of records identified in § 16.13(a) are exempted from the above provisions of the Privacy Act of 1974 for the following reasons:

(1) 5 U.S.C. 552a(c)(3) requires an agency to make the accounting of each disclosure of records available to the individual named in the record at his request. These accountings must state the date, nature, and purpose of each disclosure of a record and the name and address of the recipient. Accounting for each disclosure would alert the subjects of an investigation to the existence of the investigation and the fact that they are subjects of the investigation. The release of such information to the subjects of an investigation would provide them with significant information concerning the nature of the investigation, and could seriously impede or compromise the investigation, endanger the physical safety of confidential sources, witnesses, law enforcement personnel and their families, and lead to the improper influencing of witnesses, the destruction of evidence, or the fabrication of testimony.

(2) 5 U.S.C. 552a(c)(4) requires an agency to inform any person or other agency about any correction or notation of dispute made by the agency in accordance with subsection (d) of the Act. Since EPA is claiming that these systems of records are exempt from subsection (d) of the Act, concerning access to records, this section is inapplicable and is exempted to the extent that these systems of records are exempted from subsection (d) of the Act.

(3) 5 U.S.C. 552a(d) requires an agency to permit an individual to gain access to records pertaining to him, to request amendment to such records, to request a review of an agency decision not to amend such records, and to contest the information contained in such records. Granting access to records in these systems of records could inform the subject of an investigation of an actual or potential criminal violation of the existence of that investigation, of the nature and scope of the information and evidence obtained as to his activities, of the identity of confidential sources, witnesses, and law enforcement personnel, and could provide information to enable the subject to avoid detection or apprehension. Granting access to such information could seriously impede or compromise an investigation, endanger the physical safety of confidential sources, witnesses, law enforcement personnel and their families, lead to the improper influencing of witnesses, the destruction of evidence, or the fabrication of testimony, and disclose investigative techniques and procedures. In addition, granting access to such information could disclose classified, security-sensitive, or confidential business information and could constitute an unwarranted invasion of the personal privacy of others.

(4) 5 U.S.C. 552a(e)(1) requires each agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required by statute or by executive order of the President. The application of this provision could impair investigations and law enforcement, because it is not always possible to detect the relevance or necessity of specific information in the early stages of an investigation. Relevance and necessity are often questions of judgment and timing, and it is only after the information is evaluated that the relevance and necessity of such information can be established. In addition, during the course of the investigation, the investigator may obtain information which is incidental to the main purpose of the investigation but which may relate to matters under the investigative jurisdiction of another agency. Such information cannot readily be segregated. Furthermore, during the course of the investigation, the investigator may obtain information concerning the violation of laws other than those which are within the scope of his jurisdiction. In the interest of effective law enforcement, the EPA investigators should retain this information, since it can aid in establishing patterns of

criminal activity and can provide valuable leads for other law enforcement agencies.

(5) 5 U.S.C. 552a(e)(2) requires an agency to collect information to the greatest extent practicable directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under Federal programs. The application of this provision could impair investigations and law enforcement by alerting the subject of an investigation of the existence of the investigation, enabling the subject to avoid detection or apprehension, to influence witnesses improperly, to destroy evidence, or to fabricate testimony. Moreover, in certain circumstances the subject of an investigation cannot be required to provide information to investigators, and information must be collected from other sources. Furthermore, it is often necessary to collect information from sources other than the subject of the investigation to verify the accuracy of the evidence collected.

(6) 5 U.S.C. 552a(e)(3) requires an agency to inform each person whom it asks to supply information, on a form that can be retained by the person, of the authority under which the information is sought and whether disclosure is mandatory or voluntary; of the principal purposes for which the information is intended to be used; of the routine uses which may be made of the information; and of the effects on the person, if any, of not providing all or any part of the requested information. The application of this provision could provide the subject of an investigation with substantial information about the nature of that investigation, which could interfere with the investigation. Moreover, providing such a notice to the subject of an investigation could seriously impede or compromise on undercover investigation by revealing its existence and could endanger the physical safety of confidential sources, witnesses, and investigators by revealing their identities.

(7) 5 U.S.C. 552a(e)(4)(G) and (H) require an agency to publish a FEDERAL REGISTER notice concerning its procedures for notifying an individual at his request if the system of records contains a record pertaining to him, how he can gain access to such a record, and how he can contest its content. Since EPA is claiming that these systems of records are exempt from subsection (f) of the Act, concerning agency rules, and subsection (d) of the Act, concerning access to records, these requirements are inapplicable and are exempted to the extent that these systems of records are exempted from subsections (f) and (d) of the Act. Although EPA is claiming exemption from these requirements, EPA has published such a notice concerning its notification, access, and contest procedures because, under certain circumstances, EPA might decide it is appropriate for an individual to have access to all or a portion of his records in these systems of records.

(8) 5 U.S.C. 552a(e)(4)(I) requires an agency to publish a FEDERAL REGISTER notice concerning the categories of sources of records in the system of records. Exemption from this provision is necessary to protect the confidentiality of the sources of information, to protect the privacy and physical safety of confidential sources and witnesses, and to avoid the disclosure of investigative techniques and procedures. Although EPA is claiming exemption from this requirement, EPA has published such a notice in broad generic terms in the belief that this is all subsection (e)(4)(I) of the Act requires.

(9) 5 U.S.C. 552a(e)(5) requires an agency to maintain its records with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in making any determination about the individual. Since the Act defines *maintain* to include the collection of information, complying with this provision would prevent the collection of any data not shown to be accurate, relevant, timely, and complete at the moment it is collected. In collecting information for criminal law enforcement purposes, it is not possible to determine in advance what information is accurate, relevant, timely, and complete. Facts are first gathered and then placed into a logical order to prove or disprove objectively the criminal behavior of an individual. Material which may seem unrelated, irrelevant, or incomplete when collected may take on added meaning or significance as the investigation progresses. The restrictions of this provision could interfere with the preparation of a complete investigative report, thereby impeding effective law enforcement.

(10) 5 U.S.C. 552a(e)(8) requires an agency to make reasonable efforts to serve notice on an individual when any record on such individual is made available to any person under compulsory legal process when such process becomes a matter of public record. Complying with this provision could prematurely reveal an ongoing criminal investigation to the subject of the investigation.

(11) 5 U.S.C. 552a(f)(1) requires an agency to promulgate rules which shall establish procedures whereby on an individual can be notified in response to his request if any system of records named by the individual contains a record pertaining to him. The application of this provision could impede or compromise an investigation or prosecution if the subject of an investigation was able to use such rules to learn of the existence of an investigation before it could be completed. In addition, mere notice of the fact of an investigation could inform the subject or others that their activities are under or may become the subject of an in-

vestigation and could enable the subjects to avoid detection or apprehension, to influence witnesses improperly, to destroy evidence, or to fabricate testimony. Since EPA is claiming that these systems of records are exempt from subsection (d) of the Act, concerning access to records, the requirements of subsections (f)(2) through (5) of the Act, concerning agency rules for obtaining access to such records, are inapplicable and are exempted to the extent that these systems of records are exempted from subsection (d) of the Act. Although EPA is claiming exemption from the requirements of subsection (f) of the Act, EPA has promulgated rules which establish Agency procedures because, under certain circumstances, it might be appropriate for an individual to have access to all or a portion of his records in these systems of records. These procedures are described elsewhere in this part.

(12) 5 U.S.C. 552a(g) provides for civil remedies if an agency fails to comply with the requirements concerning access to records under subsections (d)(1) and (3) of the Act; maintenance of records under subsection (e)(5) of the Act; and any other provision of the Act, or any rule promulgated thereunder, in such a way as to have an adverse effect on an individual. Since EPA is claiming that these systems of records are exempt from subsections (c)(3) and (4), (d), (e)(1), (2), (3), (4)(G), (H), and (I), (5), and (8), and (f) of the Act, the provisions of subsection (g) of the Act are inapplicable and are exempted to the extent that these systems of records are exempted from those subsections of the Act.

(e) *Exempt records provided by another agency.* Individuals may not have access to records maintained by the EPA if such records were provided by another agency which has determined by regulation that such records are subject to general exemption under 5 U.S.C. 552a(j). If an individual requests access to such exempt records, EPA will consult with the source agency.

(f) *Exempt records included in a nonexempt system of records.* All records obtained from a system of records which has been determined by regulation to be subject to general exemption under 5 U.S.C. 552a(j) retain their exempt status even if such records are also included in a system of records for which a general exemption has not been claimed.

[51 FR 24146, July 2, 1986]

§ 16.14 Specific exemptions.

(a) *Exemptions under 5 U.S.C. 552a(k)(2)*—(1) *Systems of records affected.*

¶EPA–2 General Personnel Records—EPA.

¶EPA–4 OIG Criminal Investigative Index and Files—EPA/OIG.

¶EPA–5 OIG Personnel Security Files—EPA/OIG.

¶EPA–17 NEIC Criminal Investigative Index and Files— EPA/NEIC/OCI.

¶EPA–30 OIG Hotline Allegation System—EPA/OIG.

(2) *Authority.* Under 5 U.S.C. 552a(k)(2), the head of any agency may by rule exempt any system of records within the agency from certain provisions of the Privacy Act of 1974, if the system of records is investigatory material compiled for law enforcement purposes, other than material within the scope of subsection (j)(2).

(3) *Scope of exemption.* (i) The systems of records identified in § 16.14(a)(1) are exempted from the following provisions of the Privacy Act of 1974, subject to the limitations set forth in 5 U.S.C. 552a(k)(2): 5 U.S.C. 552a (c)(3); (d); (e)(1), (4)(G), (H), and (I); and (f).

(ii) An individual is *denied any right, privilege, or benefit that he would otherwise be entitled by Federal law, or for which he would otherwise be eligible, as a result of the maintenance of such material,* only if the Agency actually uses the material in denying or proposing to deny such right, privilege, or benefit.

(iii) To the extent that records contained in the systems of records identified in § 16.14(a)(1) are maintained by the Office of Investigations of the OIG or by the Office of Criminal Investigations of the NEIC, components of EPA which perform as their principal function activities pertaining to the enforcement of criminal laws, then an exemption under 5 U.S.C. 552a(j)(2) is claimed for these records.

(4) *Reasons for exemption.* The systems of records identified in § 16.14(a)(1) are exempted from the above provisions of the Privacy Act of 1974 for the following reasons:

(i) 5 U.S.C. 552a(c)(3) requires an agency to make the accounting of each disclosure of records available to the individual named in the record at his request. These accountings must state the date, nature, and purpose of each disclosure of a record and the name and address of the recipient. Accounting for each disclosure would alert the subjects of an investigation to the existence of the investigation and the fact that they are subjects of the investigation. The release of such information to the subjects of an investigation would provide them with significant information concerning the nature of the investigation, and could seriously impede or compromise the investigation, endanger the physical safety of confidential sources, witnesses, law enforcement personnel and their families, and lead to the improper influencing of witnesses, the destruction of evidence, or the fabrication of testimony.

(ii) 5 U.S.C. 552a(d) requires an agency to permit an individual to gain access to records pertaining to him, to request amendment to such records, to request a review of an agency decision not to

amend such records, and to contest the information contained in such records. Granting access to records in these systems of records could inform the subject of an investigation of an actual or potential criminal violation of the existence of that investigation, of the nature and scope of the information and evidence obtained as to his activities, of the identity of confidential sources, witnesses, and law enforcement personnel, and could provide information to enable the subject to avoid detection or apprehension. Granting access to such information could seriously impede or compromise an investigation, endanger the physical safety of confidential sources, witnesses, law enforcement personnel and their families, lead to the improper influencing of witnesses, the destruction of evidence, or the fabrication of testimony, and disclose investigative techniques and procedures. In addition, granting access to such information could disclose classified, security-sensitive, or confidential business information and could constitute an unwarranted invasion of the personal privacy of others.

(iii) 5 U.S.C. 552a(e)(1) requires each agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required by statute or by executive order of the President. The application of this provision could impair investigations and law enforcement, because it is not always possible to detect the relevance or necessity of specific information in the early stages of an investigation. Relevance and necessity are often questions of judgment and timing, and it is only after the information is evaluated that the relevance and necessity of such information can be established. In addition, during the course of the investigation, the investigator may obtain information which is incidental to the main purpose of the investigation but which may relate to matters under the investigative jurisdiction of another agency. Such information cannot readily be segregated. Furthermore, during the course of the investigation, the investigator may obtain information concerning the violation of laws other than those which are within the scope of his jurisdiction. In the interest of effective law enforcement, EPA investigators should retain this information, since it can aid in establishing patterns of criminal activity and can provide valuable leads for other law enforcement agencies.

(iv) 5 U.S.C. 552a(e)(4)(G) and (H) require an agency to publish a FEDERAL REGISTER notice concerning its procedures for notifying an individual at his request if the system of records contains a record pertaining to him, how he can gain access to such a record, and how he can contest its content. Since EPA is claiming that these systems of records are exempt from subsection (f) of the Act, concerning agency rules, and subsection (d) of the Act, concerning access to records, these requirements are inapplicable and are exempted to the extent that these systems of records are exempted from subsections (f) and (d) of the Act. Although EPA is claiming exemption from these requirements, EPA has published such a notice concerning its notification, access, and contest procedures because, under certain circumstances, EPA might decide it is appropriate for an individual to have access to all or a portion of his records in these systems of records.

(v) 5 U.S.C. 552a(e)(4)(I) requires an agency to publish a FEDERAL REGISTER notice concerning the categories of sources of records in the system of records. Exemption from this provision is necessary to protect the confidentiality of the sources of information, to protect the privacy and physical safety of confidential sources and witnesses, and to avoid the disclosure of investigative techniques and procedures. Although EPA is claiming exemption from this requirement, EPA has published such a notice in broad generic terms in the belief that this is all subsection (e)(4)(I) of the Act requires.

(vi) 5 U.S.C. 552a(f)(1) requires an agency to promulgate rules which shall establish procedures whereby an individual can be notified in response to his request if any system of records named by the individual contains a record pertaining to him. The application of this provision could impede or compromise an investigation or prosecution if the subject of an investigation was able to use such rules to learn of the existence of an investigation before it could be completed. In addition, mere notice of the fact of an investigation could inform the subject or others that their activities are under or may become the subject of an investigation and could enable the subjects to avoid detection or apprehension, to influence witnesses improperly, to destroy evidence, or to fabricate testimony. Since EPA is claiming that these systems of records are exempt from subsection (d) of the Act, concerning access to records, the requirements of subsections (f)(2) through (5) of the Act, concerning agency rules for obtaining access to such records, are inapplicable and are exempted to the extent that these systems of records are exempted from subsection (d) of the Act. Although EPA is claiming exemption from the requirements of subsection (f), EPA has promulgated rules which establish Agency procedures because, under certain circumstances, it might be appropriate for an individual to have access to all or a portion of his records in these systems of records. These procedures are described elsewhere in this part.

(b) *Exemption under 5 U.S.C. 552a(k)(5)*—(1) *Systems of records affected.*

¶EPA–2 General Personnel Records—EPA.

¶EPA–4 OIG Criminal Investigative Index and Files—EPA/OIG.

¶EPA–5 OIG Personnel Security Files—EPA/OIG.

(2) *Authority.* Under 5 U.S.C. 552a(k)(5), the head of any agency may by rule exempt any system of records within the agency from certain provisions of the Privacy Act of 1974, if the system of records is investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, Federal contracts, or access to classified information, but only to the extent that the disclosure of such material would reveal the identity of a source who furnished information to the Government under an express promise that the identity of the source would be held in confidence, or, prior to September 27, 1975, under an implied promise that the identity would be held in confidence.

(3) *Scope of exemption.* (i) The systems of records identified in § 16.14(b)(1) are exempted from the following provisions of the Privacy Act of 1974, subject to the limitations of 5 U.S.C. 552a(k)(5): 5 U.S.C. 552a (c)(3); (d); (e)(1), (4)(H) and (I); and (f)(2) through (5).

(ii) To the extent that records contained in the systems of records identified in § 16.14(b)(1) reveal a violation or potential violation of law, then an exemption under 5 U.S.C. 552a(k)(2) is also claimed for these records.

(4) *Reasons for exemption.* The systems of records identified in § 16.14(b)(1) are exempted from the above provisions of the Privacy Act of 1974 for the following reasons:

(i) 5 U.S.C. 552a(c)(3) requires an agency to make the accounting of each disclosure of records available to the individual named in the record at his request. These accountings must state the date, nature, and purpose of each disclosure of a record and the name and address of the recipient. Making such an accounting could cause the identity of a confidential source to be revealed, endangering the physical safety of the confidential source, and could impair the future ability of the EPA to compile investigatory material for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, Federal contracts, or access to classified information.

(ii) 5 U.S.C. 552a(d) requires an agency to permit an individual to gain access to records pertaining to him, to request amendment to such records, to request a review of an agency decision not to amend such records, and to contest the information contained in such records. Granting such access could cause the identity of a confidential source to be revealed, endangering the physical safety of the confidential source, and could impair the future ability of the EPA to compile investigatory material for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment, Federal contracts, or access to classified information.

(iii) 5 U.S.C. 552a(e)(1) requires each agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required by statute or by executive order of the President. The application of this provision could impair investigations, because it is not always possible to detect the relevance or necessity of specific information in the early stages of an investigation. Relevance and necessity are often questions of judgment and timing, and it is only after the information is evaluated that the relevance and necessity of such information can be established.

(iv) 5 U.S.C. 552a(e)(4)(H) requires an agency to publish a FEDERAL REGISTER notice concerning its procedures for notifying an individual at his request how he can gain access to any record pertaining to him and how he can contest its content. Since EPA is claiming that these systems of records are exempt from subsections (f)(2) through (5) of the Act, concerning agency rules, and subsection (b) of the Act, concerning access to records, these requirements are inapplicable and are exempted to the extent that these systems of records are exempted from subsections (f)(2) through (5) and (d) of the Act. Although EPA is claiming exemption from these requirements, EPA has published such a notice concerning its access and contest procedures because, under certain circumstances, EPA might decide it is appropriate for an individual to have access to all or a portion of his records in these systems of records.

(v) 5 U.S.C. 552a(e)(4)(I) requires an agency to publish a FEDERAL REGISTER notice concerning the categories of sources of records in the system of records. Exemption from this provision is necessary to protect the confidentiality of the sources of information, to protect the privacy and physical safety of confidential sources, and to avoid the disclosure of investigative techniques and procedures. Although EPA is claiming exemption from this requirement, EPA has published such a notice in broad generic terms in the belief that this is all subsection (e)(4)(I) of the Act requires.

(vi) 5 U.S.C. 552a(f)(2) through (5) require an agency to promulgate rules for obtaining access to records. Since EPA is claiming that these systems of records are exempt from subsection (d) of the Act, concerning access to records, the requirements of subsections (f)(2) through (5) of the Act, concerning agency rules for obtaining access to such records, are inapplicable and are exempted to the extent that this system of records is exempted from subsection (d) of the Act. Although EPA is claiming exemption from the requirements of subsections (f)(2) through (5) of the Act, EPA has promulgated rules which establish Agency proce-

dures because, under certain circumstances, it might be appropriate for an individual to have access to all or a portion of his records in this system of records. These procedures are described elsewhere in this part.

(c) *Exemption under 5 U.S.C. 552a(k)(1)*—(1) *System of records affected.*

¶EPA–5 OIG Personnel Security Files—EPA/OIG.

(2) *Authority.* Under 5 U.S.C. 552a(k)(1), the head of any agency may by rule exempt any system of records within the agency from certain provisions of the Privacy Act of 1974, if the system of records is subject to the provisions of 5 U.S.C. 552(b)(1). A system of records is subject to the provisions of 5 U.S.C. 552(b)(1) if it contains records that are specifically authorized under criteria established by an Executive order to be kept secret in the interest of national defense or foreign policy and are in fact properly classified pursuant to such Executive order. Executive Order 12356 establishes criteria for classifying records which are to be kept secret in the interest of national defense or foreign policy.

(3) *Scope of exemption.* To the extent that the system of records identified in § 16.14(c)(1) contains records provided by other Federal agencies that are specifically authorized under criteria established by Executive Order 12356 to be kept secret in the interest of national defense or foreign policy and are in fact properly classified by other Federal agencies pursuant to that Executive order, the system of records is exempted from the following provisions of the Privacy Act of 1974: 5 U.S.C. 552a (c)(3); (d); (e)(1), (4)(G), (H), and (I); and (f).

(4) *Reasons for exemption.* The system of records identified in § 16.14(c)(1) is exempted from the above provisions of the Privacy Act of 1974 for the following reasons:

(i) 5 U.S.C. 552a(c)(3) requires an agency to make the accounting of each disclosure of records available to the individual named in the record at his request. These accountings must state the date, nature, and purpose of each disclosure of a record and the name and address of the recipient. Making such an accounting could result in the release of properly classified information, which would compromise the national defense or disrupt foreign policy.

(ii) 5 U.S.C. 552a(d) requires an agency to permit an individual to gain access to records pertaining to him, to request amendment to such records, to request a review of an agency decision not to amend such records, and to contest the information contained in such records. Granting such access could cause the release of properly classified information, which would compromise the national defense or disrupt foreign policy.

(iii) 5 U.S.C. 552a(e)(1) requires each agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required by statute or by executive order of the President. The application of this provision could impair personnel security investigations which use properly classified information, because it is not always possible to know the relevance or necessity of specific information in the early stages of an investigation. Relevance and necessity are often questions of judgment and timing, and it is only after the information is evaluated that the relevance and necessity of such information can be established.

(iv) 5 U.S.C. 552a(e)(4)(G) and (H) require an agency to publish a FEDERAL REGISTER notice concerning its procedures for notifying an individual at his request if the system of records contains a record pertaining to him, how he can gain access to such a record, and how he can contest its content. Since EPA is claiming that this system of records is exempt from subsection (f) of the Act, concerning agency rules, and subsection (d) of the Act, concerning access to records, these requirements are inapplicable and are exempted to the extent that this system of records is exempted from subsections (f) and (d) of the Act. Although EPA is claiming exemption from these requirements, EPA has published such a notice concerning its notification, access, and contest procedures because, under certain circumstances, EPA might decide it is appropriate for an individual to have access to all or a portion of his records in this system of records.

(v) 5 U.S.C. 552a(e)(4)(I) requires an agency to publish a FEDERAL REGISTER notice concerning the categories of sources of records in the system of records. Exemption from this provision is necessary to prevent the release of properly classified information, which would compromise the national defense or disrupt foreign policy. Although EPA is claiming exemption from this requirement, EPA has published such a notice in broad generic terms in the belief that this is all subsection (e)(4)(I) of the Act requires.

(vi) 5 U.S.C. 552(a)(f)(1) requires an agency to promulgate rules which shall establish procedures whereby an individual can be notified in response to his request if any system of records named by the individual contains a record pertaining to him. The application of this provision could result in the release of properly classified information, which would compromise the national defense or disrupt foreign policy. Since EPA is claiming that this system of records is exempt from subsection (d) of the Act, concerning access to records, the requirements of subsections (f)(2) through (5) of the Act, concerning agency rules for obtaining access to such records, are inapplicable and are ex-

empted to the extent that this system of records is exempted from subsection (d) of the Act. Although EPA is claiming exemption from the requirements of subsection (f) of the Act, EPA has promulgated rules which establish Agency procedures because, under certain circumstances, it might be appropriate for an individual to have access to all or a portion of his records in this system of records. These procedures are described elsewhere in this part.

(d) *Exempt records provided by another agency.* Individuals may not have access to records maintained by the EPA if such records were provided by another agency which has determined by regulation that such records are subject to general exemption under 5 U.S.C. 552a(j) or specific exemption under 5 U.S.C. 552a(k). If an individual requests access to such exempt records, EPA will consult with the source agency.

(e) *Exempt records included in a nonexempt system of records.* All records obtained from a system of records which has been determined by regulation to be subject to specific exemption under 5 U.S.C. 552a(k) retain their exempt status even if such records are also included in a system of records for which a specific exemption has not been claimed.

[51 FR 24147, July 2, 1986, as amended at 59 FR 17485, Apr. 13, 1994]

PART 17—IMPLEMENTATION OF THE EQUAL ACCESS TO JUSTICE ACT IN EPA ADMINISTRATIVE PROCEEDINGS

Subpart A—General Provisions

Subpart B—Information Required From Applicants

Subpart C—Procedures for Considering Applications

AUTHORITY: Section 504, Title 5 U.S.C., as amended by sec. 203(a)(1), Equal Access to Justice Act (Title 2 of Pub. L. 96–481, 94 Stat. 2323).

SOURCE: 48 FR 39936, Sept. 2, 1983, unless otherwise noted.

Subpart A—General Provisions

§ 17.1 Purpose of these rules.

These rules are adopted by EPA pursuant to section 504 of title 5 U.S.C., as added by section 203(a)(1) of the Equal Access to Justice Act, Public Law No. 96–481. Under the Act, an eligible party may receive an award for attorney's fees and other expenses when it prevails over EPA in an adversary adjudication before EPA unless EPA's position as a party to the proceeding was substantially justified or special circumstances make an award unjust. The purpose of these rules is to establish procedures for the submission and consideration of applications for awards against EPA when the underlying decision is not reviewed by a court.

§ 17.2 Definitions.

As used in this part:

(a) *The Act* means section 504 of title 5 U.S.C., as amended by section 203(a)(1) of the Equal Access to Justice Act, Public Law No. 96–481.

(b) *Administrator* means the Administrator of the Environmental Protection Agency.

(c) *Adversary adjudication* means an adjudication required by statute to be held pursuant to 5 U.S.C. 554 in which the position of the United States is represented by counsel or otherwise, but excludes an adjudication for the purpose of granting or renewing a license.

(d) *EPA* means the Environmental Protection Agency, an Agency of the United States.

(e) *Presiding officer* means the official, without regard to whether he is designated as an administrative law judge or a hearing officer or examiner, who presides at the adversary adjudication.

(f) *Proceeding* means an adversary adjudication as defined in § 17.2(b).

§ 17.3 Proceedings covered.

(a) These rules apply to adversary adjudications required by statute to be conducted by EPA under 5 U.S.C. 554. To the extent that they are adversary adjudications, the proceedings conducted by EPA to which these rules apply include:

(1) A hearing to consider the assessment of a noncompliance penalty under section 120 of the Clean Air Act as amended (42 U.S.C. 7420);

(2) A hearing to consider the termination of an individual National Pollution Discharge Elimination System permit under section 402 of the Clean Water Act as amended (33 U.S.C. 1342);

(3) A hearing to consider the assessment of any civil penalty under section 16(a) of the Toxic Substances Control Act (15 U.S.C. 2615(a));

(4) A hearing to consider ordering a manufacturer of hazardous chemical substances or mixtures to take actions under section 6(b) of the Toxic Substances Control Act (15 U.S.C. 2605(b)), to decrease the unreasonable risk posed by a chemical substance or mixture;

(5) A hearing to consider the assessment of any civil penalty under section 14(a) of the Federal Insecticide, Fungicide, and Rodenticide Act as amended (7 U.S.C. 1361);

(6) A hearing to consider suspension of a registrant for failure to take appropriate steps in the development of registration data under section 3(c)(2)(B) of the Federal Insecticide, Fungicide and Rodenticide Act as amended (7 U.S.C. 136a);

(7) A hearing to consider the suspension or cancellation of a registration under section 6 of the Federal Insecticide, Fungicide, and Rodenticide Act as amended (7 U.S.C. 136d);

(8) A hearing to consider the assessment of any civil penalty or the revocation or suspension of

any permit under section 105(a) or 105(f) of the Marine Protection, Research, and Sanctuaries Act as amended (33 U.S.C. 1415(a), 33 U.S.C. 1415(f));

(9) A hearing to consider the issuance of a compliance order or the assessment of any civil penalty conducted under section 3008 of the Resource Conservation and Recovery Act as amended (42 U.S.C. 6928);

(10) A hearing to consider the issuance of a compliance order under section 11(d) of the Noise Control Act as amended (42 U.S.C. 4910(d)).

(b) If a proceeding includes both matters covered by the Act and matters specifically excluded from coverage, any award made will include only fees and expenses related to covered issues.

§ 17.4 Applicability to EPA proceedings.

The Act applies to an adversary adjudication pending before EPA at any time between October 1, 1981 and September 30, 1984. This includes proceedings begun before October 1, 1981 if final EPA action has not been taken before that date, and proceedings pending on September 30, 1984.

§ 17.5 Eligibility of applicants.

(a) To be eligible for an award of attorney's fees and other expenses under the Act, the applicant must be a prevailing party in the adversary adjudication for which it seeks an award. The term *party* is defined in 5 U.S.C. 551(3). The applicant must show that it meets all conditions of eligibility set out in this subpart and in subpart B.

(b) The types of eligible applicants are as follows:

(1) An individual with a net worth of not more than $1 million;

(2) The sole owner of an unincorporated business which has a net worth of not more than $5 million and not more than 500 employees;

(3) A charitable or other tax-exempt organization described in section 501(c)(3) of the Internal Revenue Code (26 U.S.C. 501(c)(3)) with not more than 500 employees;

(4) A cooperative association as defined in section 15(a) of the Agricultural Marketing Act (12 U.S.C. 114j(a)) with not more than 500 employees; and

(5) Any other partnership, corporation, association, or public or private organization with a net worth of not more than $5 million and not more than 500 employees.

(c) For the purpose of eligibility, the net worth and number of employees of an applicant shall be determined as of the date of adversary adjudication was initiated.

(d) An applicant who owns an unincorporated business will be considered as an *individual* rather than a *sole owner of an unincorporated business* if the issues on which the applicant prevails are related primarily to personal interests rather than to business interest.

(e) The employees of an applicant include all persons who regularly perform services for remuneration for the applicant under the applicant's direction and control. Part-time employees shall be included.

(f) The net worth and number of employees of the applicant and all of its affiliates shall be aggregated to determine eligibility. An individual or group of individuals, corporation, or other entity that directly or indirectly controls or owns a majority of the voting shares of another business' board of directors, trustees, or other persons exercising similar functions, shall be considered an affiliate of that business for purposes of this part. In addition, the Presiding Officer may determine that financial relationships of the applicant other than those described in this paragraph constitute special circumstances that would make an award unjust.

(g) An applicant is not eligible if it has participated in the proceeding on behalf of other persons or entities that are ineligible.

§ 17.6 Standards for awards.

(a) A prevailing applicant may receive an award for fees and expenses incurred in connection with a proceeding unless the position of the EPA as a party to the proceeding was substantially justified or unless special circumstances make the award sought unjust. No presumption arises that the agency's position was not substantially justified simply because the agency did not prevail.

(b) An award shall be reduced or denied if the applicant has unduly or unreasonably protracted the proceeding.

§ 17.7 Allowable fees and other expenses.

(a) The following fees and other expenses are allowable under the Act:

(1) Reasonable expenses of expert witnesses;

(2) The reasonable cost of any study, analysis, engineering report, test, or project which EPA finds necessary for the preparation of the party's case;

(3) Reasonable attorney or agent fees;

(b) The amount of fees awarded will be based upon the prevailing market rates for the kind and quality of services furnished, except that:

(1) Compensation for an expert witness will not exceed $24.09 per hour; and

(2) Attorney or agent fees will not be in excess of $75 per hour.

(c) In determining the reasonableness of the fee sought, the Presiding Officer shall consider the following:

(1) The prevailing rate for similar services in the community in which the attorney, agent, or witness ordinarily performs services;

(2) The time actually spent in the representation of the applicant;

(3) The difficulty or complexity of the issues raised by the application;

(4) Any necessary and reasonable expenses incurred;

(5) Such other factors as may bear on the value of the services performed.

§ 17.8 Delegation of authority.

The Administrator delegates to the Environmental Appeals Board authority to take final action relating to the Equal Access to Justice Act. The Environmental Appeals Board is described at 40 CFR 1.25(e). This delegation does not preclude the Environmental Appeals Board from referring any matter related to the Equal Access to Justice Act to the Administrator when the Environmental Appeals Board deems it appropriate to do so. When an appeal or motion is referred to the Administrator by the Environmental Appeals Board, all parties shall be so notified and the rules in this part referring to the Environmental Appeals Board shall be interpreted as referring to the Administrator.

[57 FR 5323, Feb 13, 1992]

Subpart B—Information Required From Applicants

§ 17.11 Contents of application.

(a) An application for award of fees and expenses under the Act shall identify the applicant and the proceeding for which an award is sought. The application shall show that the applicant has prevailed and identify the position of EPA in the proceeding that the applicant alleges was not substantially justified.

(b) The application shall include a statement that the applicant's net worth as of the time the proceeding was initiated did not exceed $1 million if the applicant is an individual (other than a sole owner of an unincorporated business seeking an award in that capacity) or $5 million in the case of all other applicants. An applicant may omit this statement if:

(1) It attaches a copy of a ruling by the Internal Revenue Service that it qualifies as an organization described in section 501(c)(3) of the Internal Revenue Code of 1954 (26 U.S.C. 501(c)(3)) and is exempt from taxation under section 501(a) of the Code or, in the case of such an organization not required to obtain a ruling from the Internal Revenue Service on its exempt status, a statement that describes the basis for the applicant's belief that it qualifies under section 501(c)(3) of the Code; or

(2) It states that it is a cooperative association as defined in section 15(a) of the Agricultural Marketing Act (12 U.S.C. 114j(a)).

(c) If the applicant is a partnership, corporation, association, or organization, or a sole owner of an unincorporated business, the application shall state that the applicant did not have more than 500 employees at the time the proceeding was initiated, giving the number of its employees and describing briefly the type and purpose of its organization or business.

(d) The application shall itemize the amount of fees and expenses sought.

(e) The application may include any other matters that the applicant believes should be considered in determining whether and in what amount an award should be made.

(f) The application shall be signed by the applicant with respect to the eligibility of the applicant and by the attorney of the applicant with respect to fees and expenses sought. The application shall contain or be accompanied by a written verification under oath or affirmation or under penalty of perjury that the information provided in the application and all accompanying material is true and complete to the best of the signer's information and belief.

(Approved by the Office of Management and Budget under control number 2000–0403)

§ 17.12 Net worth exhibit.

(a) Each applicant except a qualified tax exempt organization or a qualified cooperative must submit with its application a detailed exhibit showing its net worth at the time the proceeding was initiated. If any individual, corporation, or other entity directly or indirectly controls or owns a majority of the voting shares or other interest of the applicant, or if the applicant directly or indirectly owns or controls a majority of the voting shares or other interest of any corporation or other entity, the exhibit must include a showing of the net worth of all such affiliates or of the applicant including the affiliates. The exhibit may be in any form that provides full disclosure of assets and liabilities of the applicant and any affiliates and is sufficient to determine whether the applicant qualifies under the standards of 5 U.S.C. 504(b)(1)(B)(i). The Presiding Officer may require an applicant to file additional information to determine the applicant's eligibility for an award.

(b) The net worth exhibit shall describe any transfers of assets from, or obligations incurred by, the applicant or any affiliate occurring in the one-year period prior to the date on which the proceeding was initiated that reduced the net worth of the applicant and its affiliates below the applicable

net worth ceiling. If there were no such transactions, the applicant shall so state.

(c) The net worth exhibit shall be included in the public record of the proceeding.

(Approved by the Office of Management and Budget under control number 2000–0430)

§ 17.13 Documentation of fees and expenses.

(a) The application shall be accompanied by full documentation of fees and expenses, including the cost of any study, engineering report, test, or project, for which an award is sought.

(b) The documentation shall include an affidavit from any attorney, agent, or expert witness representing or appearing in behalf of the party stating the actual time expended and the rate at which fees and other expenses were computed and describing the specific services performed.

(1) The affidavit shall itemize in detail the services performed by the date, number of hours per date, and the services performed during those hours. In order to establish the hourly rate, the affidavit shall state the hourly rate which is billed and paid by the majority of clients during the relevant time periods.

(2) If no hourly rate is paid by the majority of clients because, for instance, the attorney or agent represents most clients on a contingency basis, the attorney or agent shall provide affidavits from two attorneys or agents with similar experience, who perform similar work, stating the hourly rate which they bill and are paid by the majority of their clients during a comparable time period.

(c) The documentation shall also include a description of any expenses for which reimbursement is sought and a statement of the amounts paid and payable by the applicant or by any other person or entity for the services provided.

(d) The Presiding Officer may require the applicant to provide vouchers, receipts, or other substantiation for any expenses claimed.

(Approved by the Office of Management and Budget under control number 2000–0430)

§ 17.14 Time for submission of application.

(a) An application must be filed no later than 30 days after final disposition of the proceeding. If agency review or reconsideration is sought or taken of a decision in which an applicant believes it has prevailed, action on the award of fees shall be stayed pending final agency disposition of the underlying controversy.

(b) Final disposition means the later of: (1) The date on which the Agency decision becomes final, either through disposition by the Environmental Appeals Board of a pending appeal or through an initial decision becoming final due to lack of an appeal or (2) the date of final resolution of the proceeding, such as settlement or voluntary dismissal, which is not subject to a petition for rehearing or reconsideration.

(c) If judicial review is sought or taken of the final agency disposition of the underlying controversy, then agency proceedings for the award of fees will be stayed pending completion of judicial review. If, upon completion of review, the court decides what fees to award, if any, then EPA shall have no authority to award fees.

[48 FR 39936, Sept. 2, 1983, as amended at 57 FR 5323, Feb. 13, 1992]

Subpart C—Procedures for Considering Applications

§ 17.21 Filing and service of documents

An application for an award and any other pleading or document related to the application shall be filed and served on all parties to the proceeding in the same manner as other pleadings in the proceeding.

§ 17.22 Answer to application.

(a) Within 30 calendar days after service of the application, EPA counsel shall file an answer.

(b) If EPA counsel and the applicant believe that they can reach a settlement concerning the award, EPA counsel may file a statement of intent to negotiate. The filing of such a statement shall extend the time for filing an answer an additional 30 days.

(c) The answer shall explain in detail any objections to the award requested and identify the facts relied on to support the objection. If the answer is based on any alleged facts not already reflected in the record of the proceeding, EPA counsel shall include with the answer either a supporting affidavit or affidavits or request for further proceedings under § 17.25.

§ 17.23 Comments by other parties.

Any party to a proceeding other than the applicant and EPA counsel may file comments on an application within 30 calendar days after it is served or on an answer within 15 calendar days after it is served.

§ 17.24 Settlement.

A prevailing party and EPA counsel may agree on a proposed settlement of an award before final action on the application, either in connection with a settlement of the underlying proceeding or after the underlying proceeding has been concluded. If the party and EPA counsel agree on a proposed settlement of an award before an application has

been filed, the application shall be filed with the proposed settlement.

§ 17.25 Extensions of time and further proceedings.

(a) The Presiding Officer may, on motion and for good cause shown, grant extensions of time, other than for filing an application for fees and expenses, after final disposition in the adversary adjudication.

(b) Ordinarily, the determination of an award will be made on the basis of the written record of the underlying proceeding and the filings required or permitted by the foregoing sections of these rules. However, the adjudicative officer may *sua sponte* or on motion of any party to the proceedings require or permit further filings or other action, such as an informal conference, oral argument, additional written submissions, or an evidentiary hearing. Such further action shall be allowed only when necessary for full and fair resolution of the issues arising from the application and shall take place as promptly as possible. A motion for further filings or other action shall specifically identify the information sought on the disputed issues and shall explain why the further filings or other action is necessary to resolve the issues.

(c) In the event that an evidentiary hearing is required or permitted by the adjudicative officer, such hearing and any related filings or other action required or permitted shall be conducted pursuant to the procedural rules governing the underlying adversary adjudication.

§ 17.26 Decision on application.

The Presiding Officer shall issue a recommended decision on the application which shall include proposed written findings and conclusions on such of the following as are relevant to the decision: (a) The applicant's status as a prevailing party; (b) the applicant's qualification as a ''party'' under 5 U.S.C. 504(b)(1)(B); (c) whether EPA's position as a party to the proceeding was substantially justified; (d) whether the special cirumstances make an award unjust; (e) whether the applicant during the course of the proceedings engaged in conduct that unduly and unreasonably protracted the final resolution of the matter in controversy; and (f) the amounts, if any, awarded for fees and other expenses, explaining any difference between the amount requested and the amount awarded.

§ 17.27 Agency review.

The recommended decision of the Presiding Officer will be reviewed by EPA in accordance with EPA's procedures for the type of substantive proceeding involved.

§ 17.28 Judicial review.

Judicial review of final EPA decisions on awards may be sought as provided in 5 U.S.C. 504(c)(2).

§ 17.29 Payment of award.

An applicant seeking payment of an award shall submit a copy of the final decision granting the award to the Office of Financial Management for Processing. A statement that review of the underlying decision is not being sought in the United States courts or that the process for seeking review of the award has been completed must also be included.

PART 19—ADJUSTMENT OF CIVIL MONETARY PENALTIES FOR INFLATION

Sec.
19.1 Applicability.
19.2 Effective date.
19.3 [Reserved]
19.4 Penalty Adjustment and Table.

AUTHORITY: Pub. L. 101–410, 104 Stat. 890, 28 U.S.C. 2461 note; Pub. L. 104–134, 110 Stat. 1321, 31 U.S.C. 3701 note.

SOURCE: 61 FR 69364, Dec. 31, 1996, unless otherwise noted.

§ 19.1 Applicability.

This part applies to each statutory provision under the laws administered by the Environmental Protection Agency concerning the maximum civil monetary penalty which may be assessed in either civil judicial or administrative proceedings.

§ 19.2 Effective date.

The increased penalty amounts set forth in this part apply to all violations under the applicable statutes and regulations which occur after January 30, 1997; except for violations subject to penalty under 42 U.S.C. 4852d(b)(5) and 42 U.S.C. 4910(a)(2), which are subject to the new penalty amounts for any violations after July 28, 1997.

[62 FR 35039, June 27, 1997]

EFFECTIVE DATE NOTE: At 62 FR 35039, June 27, 1997, § 19.2 was revised, effective July 28, 1997.

§ 19.3 [Reserved]

§ 19.4 Penalty Adjustment and Table.

The adjusted statutory penalty provisions and their maximum applicable amounts are set out in Table 1. The last column in the table provides the newly effective maximum penalty amounts.

TABLE 1 OF SECTION 19.4—CIVIL MONETARY PENALTY INFLATION ADJUSTMENTS

U.S. Code citation	Civil monetary penalty description	New maximum penalty amount
7 U.S.C. 1361.(a)(1)	FEDERAL INSECTICIDE, FUNGICIDE, . RODENTICIDE ACT CIVIL PENALTY—GENERAL—COMMERCIAL APPLICATORS, ETC.	$5,500
7 U.S.C. 1361.(a)(2)	FEDERAL INSECTICIDE, FUNGICIDE, & RODENTICIDE ACT CIVIL PENALTY—PRIVATE APPLICATORS—FIRST AND SUBSEQUENT OFFENSES OR VIOLATIONS.	$550/$1,000
15 U.S.C. 2615(a)	TOXIC SUBSTANCES CONTROL ACT CIVIL PENALTY	$27,500

EFFECTIVE DATE NOTE: At 62 FR 35039, June 27, 1997, table 1 of § 19.4 was amended by adding two entries, effective July 28, 1997.

PART 20—CERTIFICATION OF FACILITIES

AUTHORITY: Secs. 301, 704, 80 Stat. 379, 83 Stat. 667; 5 U.S.C. 301, 26 U.S.C. 169.

SOURCE: 36 FR 22382, Nov. 25, 1971, unless otherwise noted.

§ 20.1 Applicability.

The regulations of this part apply to certifications by the Administrator of water or air pollution control facilities for purposes of section 169 of the Internal Revenue Code of 1954, as amended, 26 U.S.C. 169, as to which the amortization period began after December 31, 1975. Certification of air or water pollution control facilities as to which the amortization period began before January 1, 1976, will continue to be governed by Environmental Protection Agency regulations published November 25, 1971, at 36 FR 22382. Applicable regulations of the Department of Treasury are at 26 CFR 1.169 *et seq.*

[43 FR 1340, Jan. 9, 1978]

§ 20.2 Definitions.

As used in this part, the following terms shall have the meaning indicated below:

(a) *Act* means, when used in connection with water pollution control facilities, the Federal Water Pollution Control Act, as amended (33 U.S.C. 1251 *et seq.*) or, when used in connection with air pollution control facilities, the Clean Air Act, as amended (42 U.S.C. 1857 *et seq.*).

(b) *State certifying authority* means:

(1) For water pollution control facilities, the State pollution control agency as defined in section 502 of the Act.

(2) For air pollution control facilities, the air pollution control agency designated pursuant to section 302(b)(1) of the Act; or

(3) For both air and water pollution control facilities, any interstate agency authorized to act in place of the certifying agency of a State.

(c) *Applicant* means any person who files an application with the Administrator for certification that a facility is in compliance with the applicable regulations of Federal agencies and in furtherance of the general policies of the United States for cooperation with the States in the prevention and abatement of water or air pollution under the Act.

(d) *Administrator* means the Administrator, Environmental Protection Agency.

(e) *Regional Administrator* means the Regional designee appointed by the Administrator to certify facilities under this part.

(f) *Facility* means property comprising any new identifiable treatment facility which removes, alters, disposes of, stores, or prevents the creation of pollutants, contaminants, wastes, or heat.

(g) *State* means the States, the District of Columbia, the Commonwealth of Puerto Rico, the Canal Zone, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

[36 FR 22382, Nov. 25, 1971, as amended at 43 FR 1340, Jan. 9, 1978]

§ 20.3 General provisions.

(a) An applicant shall file an application in accordance with this part for each separate facility for which certification is sought; *Provided,* That one application shall suffice in the case of substantially identical facilities which the applicant has installed or plans to install in connection with substantially identical properties; *Provided further,* That an application may incorporate by reference material contained in an application previously submitted by the applicant under this part and pertaining to substantially identical facilities.

(b) The applicant shall, at the time of application to the State certifying authority, submit an application in the form prescribed by the Administrator to the Regional Administrator for the region in which the facility is located.

(c) Applications will be considered complete and will be processed when the Regional Administrator receives the completed State certification.

(d) Applications may be filed prior or subsequent to the commencement of construction, acquisition, installation, or operation of the facility.

(e) An amendment to an application shall be submitted in the same manner as the original application and shall be considered a part of the original application.

(f) If the facility is certified by the Regional Administrator, notice of certification will be issued to the Secretary of the Treasury or his delegate, and a copy of the notice shall be forwarded to the applicant and to the State certifying authority. If the facility is denied certification, the Regional Administrator will advise the applicant and State certifying authority in writing of the reasons therefor.

(g) No certification will be made by the Regional Administrator for any facility prior to the

time it is placed in operation and the application, or amended application, in connection with such facility so states.

(h) An applicant may appeal any decision of the Regional Administrator which:

(1) Denies certification;

(2) Disapproves the applicant's suggested method of allocating costs pursuant to § 20.8(e); or

(3) Revokes a certification pursuant to § 20.10.

Any such appeal may be taken by filing with the Administrator within 30 days from the date of the decision of the Regional Administrator a written statement of objections to the decision appealed from. Within 60 days after receipt of such appeal the Administrator shall affirm, modify, or revoke the decision of the Regional Administrator, stating in writing his reasons therefor.

[36 FR 22382, Nov. 25, 1971, as amended at 43 FR 1340, Jan. 9, 1978]

§ 20.4 Notice of intent to certify.

(a) On the basis of applications submitted prior to the construction, reconstruction, erection, acquisition, or operation of a facility, the Regional Administrator may notify applicants that such facility will be certified if:

(1) The Regional Administrator determines that such facility, if constructed, reconstructed, erected, acquired, installed, and operated in accordance with such application will be in compliance with requirements identified in § 20.8; and if

(2) The application is accompanied by a statement from the State certifying authority that such facility, if constructed, reconstructed, acquired, erected, installed, and operated in accordance with such application, will be in conformity with the State program or requirements for abatement or control of water or air pollution.

(b) Notice of actions taken under this section will be given to the appropriate State certifying authority.

§ 20.5 Applications.

Applications for certification under this part shall be submitted in such manner as the Administrator may prescribe, shall be signed by the applicant or agent thereof, and shall include the following information:

(a) Name, address, and Internal Revenue Service identifying number of the applicant;

(b) Type and narrative description of the new identifiable facility for which certification is (or will be) sought, including a copy of schematic or engineering drawings, and a description of the function and operation of such facility;

(c) Address (or proposed address) of facility location;

(d) A general description of the operation in connection with which the facility is (or will be) used and a description of the specific process or processes resulting in discharges or emissions which are (or will be) controlled or prevented by the facility.

(e) If the facility is (or will be) used in connection with more than one plant or other property, one or more of which were not in operation before January 1, 1976, a description of the operations of the facility in respect to each plant or other property, including a reasonable allocation of the costs of the facility among the plants being serviced, and a description of the reasoning and accounting method or methods used to arrive at these allocations.

(f) A description of the effect of the facility in terms of type and quantity of pollutants, contaminants, wastes, or heat, removed, altered, stored, disposed of, or prevented by the facility.

(g) If the facility performs a function other than removal, alteration, storage, prevention, or disposal of pollutants, contaminants, wastes, or heat, a description of all functions performed by the facility, including a reasonable identification of the costs of the facility allocable to removal, alteration, storage, prevention, or disposal of pollutants, contaminants, wastes, or heat and a description of the reasoning and accounting method or methods used to arrive at the allocation.

(h) Date when such construction, reconstruction, or erection will be completed or when such facility was (or will be) acquired;

(i) Date when such facility is placed (or is intended to be placed) in operation;

(j) Identification of the applicable State and local water or air pollution control requirements and standards, if any;

(k) Expected useful life of facility;

(l) Cost of construction, acquisition, installation, operation, and maintenance of the facility;

(m) Estimated profits reasonably expected to be derived through the recovery of wastes or otherwise in the operation of the facility over the period referred to in paragraph (a)(6) of 26 CFR 1.169–2;

(n) The percentage (if any, and if the taxpayer claims that the percentage is 5 percent or less) by which the facility (1) increases the output or capacity, (2) extends the useful life, or (3) reduces the total operating costs of the operating unit of the plant or other property most directly associated with the pollution control facility and a description of the reasoning and accounting method or methods used to arrive at this percentage.

(o) Such other information as the Administrator deems necessary for certification.

[36 FR 22382, Nov. 25, 1971, as amended at 43 FR 1340, Jan. 9, 1978]

§ 20.6 State certification.

The State certification shall be by the State certifying authority having jurisdiction with respect to the facility in accordance with 26 U.S.C. 169(d)(1)(A) and (d)(2). The certification shall state that the facility described in the application has been constructed, reconstructed, erected, or acquired in conformity with the State program or requirements for abatement or control of water or air pollution. It shall be executed by an agent or officer authorized to act on behalf of the State certifying authority.

§ 20.7 General policies.

(a) The general policies of the United States for cooperation with the States in the prevention and abatement of water pollution are: To enhance the quality and value of our water resources; to eliminate or reduce the pollution of the nation's waters and tributaries thereof; to improve the sanitary condition of surface and underground waters; and to conserve such waters for public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, and agricultural, industrial, and other legitimate uses.

(b) The general policy of the United States for cooperation with the States in the prevention and abatement of air pollution is to cooperate with and to assist the States and local governments in protecting and enhancing the quality of the Nation's air resources by the prevention and abatement of conditions which cause or contribute to air pollution which endangers the public health or welfare.

§ 20.8 Requirements for certification.

(a) Subject to § 20.9, the Regional Administrator will certify a facility if he makes the following determinations:

(1) It has been certified by the State certifying authority.

(2) That the facility: (i) Removes, alters, disposes of, stores, or prevents the creation of pollutants, contaminants, wastes, or heat, which, but for the facility, would be released into the environment;

(ii) Does not by a factor or more than 5 percent: (A) Increase the output or capacity, (B) extend the useful life, or (C) reduce the total operating costs of the operating unit (of the plant or other property) most directly associated with the pollution control facility; and

(iii) Does not significantly alter the nature of the manufacturing or production process or facility.

(3) The applicant is in compliance with all regulations of Federal agencies applicable to use of the facility, including conditions specified in any NPDES permit issued to the applicant under section 402 of the Act.

(4) The facility furthers the general policies of the United States and the States in the prevention and abatement of pollution.

(5) The applicant has complied with all the other requirements of this part and has submitted all requested information.

(b) In determining whether use of a facility furthers the general policies of the United States and the States in the prevention and abatement of water pollution, the Regional Administrator shall consider whether such facility is consistent with the following, insofar as they are applicable to the waters which will be affected by the facility:

(1) All applicable water quality standards, including water quality criteria and plans of implementation and enforcement established pursuant to section 303 of the Act or State laws or regulations;

(2) Decisions issued pursuant to section 310 of the Act;

(3) Water pollution control programs required pursuant to any one or more of the following sections of the Act: Section 306, section 307, section 311, section 318, or section 405; or in order to be consistent with a plan under section 208.

(c) In determining whether use of a facility furthers the general policies of the United States and the States in the prevention and abatement of air pollution, the Regional Administrator shall consider whether such facility is consistent with and meets the following requirements, insofar as they are applicable to the air which will be affected by the facility;

(1) Plans for the implementation, maintenance, and enforcement of ambient air quality standards adopted or promulgated pursuant to section 110 of the Act;

(2) Recommendations issued pursuant to sections 103(e) and 115 of the Act which are applicable to facilities of the same type and located in the area to which the recommendations are directed;

(3) Local government requirements for control of air pollution, including emission standards;

(4) Standards promulgated by the Administrator pursuant to the Act.

(d) A facility that removes elements or compounds from fuels that would be released as pollutants when such fuels are burned is eligible for certification if the facility is—

(1) Used in connection with a plant or other property in operation before January 1, 1976 (whether located and used at a particular plant or as a centralized facility for one or more plants), and

(2) Is otherwise eligible for certification.

(e) Where a facility is used in connection with more than one plant or other property, one or more of which were not in operation before January 1, 1976, or where a facility will perform a

function other than the removal, alteration, storage, disposal, or prevention of pollutants, contaminants, wastes, or heat, the Regional Administrator will so indicate on the notice of certification and will approve or disapprove the applicant's suggested method of allocating costs. If the Regional Administrator disapproves the applicant's suggested method, he shall identify the proportion of costs allocable to each such plant, or to the removal, alteration, storage, disposal, or prevention of pollutants, contaminants, wastes, or heat.

[36 FR 22382, Nov. 25, 1971, as amended at 43 FR 1341, Jan. 9, 1978]

§ 20.9 Cost recovery.

Where it appears that, by reason of estimated profits to be derived through the recovery of wastes, through separate charges for use of the facility in question, or otherwise in the operation of such facility, all or a portion of its costs may be recovered over the period referred to in paragraph (a)(6) of 26 CFR 1.169–2, the Regional Administrator shall so signify in the notice of certification. Determinations as to the meaning of the term *estimated profits* and as to the percentage of the cost of a certified facility which will be recovered over such period shall be made by the Secretary of the Treasury, or his delegate: *Provided,* That in no event shall estimated profits be deemed to arise from the use or reuse by the applicant of recovered waste.

§ 20.10 Revocation.

Certification hereunder may be revoked by the Regional Administrator on 30 days written notice to the applicant, served by certified mail, whenever the Regional Administrator shall determine that the facility in question is no longer being operated consistent with the § 20.8(b) and (c) criteria in effect at the time the facility was placed in service. Within such 30-day period, the applicant may submit to the Regional Administrator such evidence, data or other written materials as the applicant may deem appropriate to show why the certification hereunder should not be revoked. Notification of a revocation under this section shall be given to the Secretary of the Treasury or his delegate. See 26 CFR 1.169–4(b)(1).

APPENDIX A—GUIDELINES FOR CERTIFICATION

1. General.
2. Air Pollution Control Facilities.
a. Pollution control or treatment facilities normally eligible for certification.
b. Air pollution control facility boundaries.
c. Examples of eligibility limits.
d. Replacement of manufacturing process by another nonpolluting process.
3. Water Pollution Control Facilities.
a. Pollution control or treatment facilities normally eligible for certification.
b. Examples of eligibility limits.
4. Multiple-purpose facilities.
5. Facilities serving both old and new plants.
6. State certification.
7. Dispersal of pollutants.
8. Profit-making facilities.
9. Multiple applications.

1. *General.* Section 2112 of the Tax Reform Act of 1976 (Pub. L. 94–455, October 4, 1976) amended section 169 of the Internal Revenue Code of 1954, ''Amortization of Pollution Control Facilities.'' The amendment made permanent the rapid amortization provisions of section 704 of the Tax Reform Act of 1969 (Pub. L. 91–172, December 30, 1969) and redefined eligibility limits to allow certification of facilities which prevent the creation or emission of pollutants.

The law defines a *certified pollution control facility* as *a new identifiable treatment facility* which is:

(a) Used in connection with a plant or other property in operation before January 1, 1976, to abate or control air or water pollution by removing, altering, disposing of, storing, or preventing the creation or emission of pollutants, contaminants, wastes, or heat;

(b) Constructed, reconstructed, erected or (if purchased) first placed in service by the taxpayer after December 31, 1975;

(c) Not to *significantly* increase the output or capacity, extend the useful life, alter the nature of the manufacturing or production process or facility or reduce the total operating costs of the operating unit of the plant or other property most directly associated with the pollution control facility (as suggested by the legislative history, EPA regulations define the term *significant* as any increase, reduction or extension greater than 5%); and

(d) Certified by both State and Federal authorities, as provided in section 169(d)(1) (A) and (B) of the Internal Revenue Code.

If the facility is a building, the statute requires that it be exclusively devoted to pollution control. Most questions as to whether a facility is a *building* and, if so, whether it is *exclusively* devoted to pollution control are resolved by § 1.169–2(b)(2) of the Treasury Department regulations.

Since a treatment facility is eligible only if it furthers the general policies of the United States under the Clean Air Act and the Clean Water Act, a facility will be certified only if its purpose is to improve the quality of the air or water outside the plant. Facilities to protect the health or safety of employees inside the plant are not eligible.

Facilities installed before January 1, 1976, in plants placed in operation after December 31, 1968, are ineligible for certification under the statute. 26 U.S.C. 169.

2. *Air pollution control facilities.*

a. *Pollution control or treatment facilities normally eligible for certification.* The following devices are illustrative of facilities for removal, alteration, disposal, storage or preventing the creation or emission of air pollution:

(1) Inertial separators (cyclones, etc.).
(2) Wet collection devices (scrubbers).
(3) Electrostatic precipitators.
(4) Cloth filter collectors (baghouses).
(5) Director fired afterburners.

(6) Catalytic afterburners.
(7) Gas absorption equipment.
(8) Vapor condensers.
(9) Vapor recovery systems.
(10) Floating roofs for storage tanks.
(11) Fuel cleaning equipment.
(12) Combinations of the above.

(b) *Air Pollution control facility boundaries.* Most facilities are systems consisting of several parts. A facility need not start at the point where the gaseous effluent leaves the last unit of the processing equipment, nor will it always extend to the point where the effluent is emitted to the atmosphere or existing stack, breeching, ductwork or vent. It includes all the auxiliary equipment used to operate the control system, such as fans, blowers, ductwork, valves, dampers and electrical equipment. It also includes all equipment used to handle, store, transport or dispose of the collected pollutants.

(c) *Examples of eligibility limits.* The amortization deduction is limited to new identifiable treatment facilities which remove, alter, destroy, dispose of, store, or prevent the creation or emission of pollutants, contaminants or wastes. It is not available for all expenditures for air pollution control and is limited to devices which are installed for the purpose of pollution control and which actually remove, alter, destroy, dispose of, store or prevent the creation or emission of pollutants by removing potential pollutants at any stage of the production process.

(1) *Boiler modifications or replacements.* Modifications of boilers to accommodate *cleaner* fuels are not eligible for rapid amortization: e.g., removal of stokers from a coal-fired boiler and the addition of gas or oil burners. The purpose of the burners is to produce heat, and they are not identifiable as treatment facilities nor do they prevent the creation or emission of pollutants by removing potential pollutants. A new gas or oil-fired boiler that replaces a coal-fired boiler would also be ineligible for certification.

(2) *Fuel processing.* Eligible air pollution control facilities include preprocessing equipment which removes potential air pollutants from fuels before they are burned. A desulfurization facility would thus be eligible provided it is used in connection with the plant where the desulfurized coal will be burned or is used as a centralized facility for one or more plants. However, fluidized bed facilities would generally not be eligible for rapid amortization. Such facilities would almost certainly increase output or capacity, reduce total operating costs, or extend the useful life of the plant or other property by more than 5%, since the boiler itself would be the operating unit of the plant most closely associated with the pollution control facility. Where the Regional Office and the taxpayer disagree as to the applicability of the 5% rule, the Regional office should nonetheless certify the facility if it is otherwise eligible and leave the ultimate determination to the Treasury Department. The certification should alert Treasury to the possibility that the facility is ineligible for rapid amortization.

(3) *Incinerators.* The addition of an afterburner, secondary combustion chamber or particulate collector would be eligible as would any device added to effect more efficient combustion.

(4) *Collection devices used to collect products or process material.* In some manufacturing operations, devices are used to collect product or process material, as in the case of the manufacture of carbon black. The baghouse would be eligible for certification, but the certification should notify the Treasury Department of the profitable waste recovery involved. (See paragraph 8 below.)

(5) *Intermittent control systems.* Measuring devices which inform the taxpayer that ambient air quality standards are being exceeded are not eligible for certification since they do not physically remove, alter, destroy, dispose of, store or prevent the creation or emission of pollutants, but merely act as a signal to curtail operations. Of course, measuring devices used in connection with an eligible pollution control facility would be eligible.

d. *Replacement of manufacturing process by another, nonpolluting process.* An installation does not qualify for certification where it uses a process known to be *cleaner* than an alternative, but which does not actually remove, alter, destroy, dispose of, store or prevent the creation or emission of pollutants by removing potential pollutants at any stage in the production process. For example, a minimally polluting electric induction furnace to melt cast iron which replaces, or is installed instead of, a heavily polluting iron cupola furnace would be ineligible for this reason and because it is not an identifiable treatment facility. However, if the replacement equipment has an air pollution control device added to it, the control device would be eligible even though the process equipment would not. For example, where a primary copper smelting reverberatory furnace is replaced by a flash smelting furnace, followed by the installation of a contact sulfuric acid plant, the acid plant would qualify since it is a control device not necessary to the production process. The flash smelting furnace would not qualify because its purpose is to produce copper matte.

3. *Water Pollution Control Facilities.*

a. *Pollution control or treatment facilities normally eligible for certification.* The following types of equipment are illustrative of facilities to remove, alter, destroy, store or prevent the creation of water pollution:

(1) Pretreatment facilities which neutralize or stabilize industrial or sanitary wastes, or both, from a point immediately preceding the point of such treatment to the point of disposal to, and acceptance by, a publicly-owned treatment works. The necessary pumping and transmitting facilities are also eligible.

(2) Treatment facilities which neutralize or stabilize industrial or sanitary wastes, or both, to comply with Federal, State or local effluent or water quality standards, from a point immediately preceding the point of such treatment to the point of disposal, including necessary pumping and transmitting facilities, including those for recycle or segregation of wastewater.

(3) Ancillary devices and facilities such as lagoons, ponds and structures for storage, recycle, segregation or treatment, or any combination of these, of wastewaters or wastes from a plant or other property.

(4) Devices, equipment or facilities constructed or installed for the primary purpose of recovering a by-product of the operation (saleable or otherwise) previously lost either to the atmosphere or to the waste effluent. Examples are:

(A) A facility to concentrate and recover vaporous by-products from a process stream for reuse as raw feedstock or for resale, unless the estimated profits from resale exceed the cost of the facility (see paragraph 8 below).

(B) A facility to concentrate or remove *gunk* or similar *tars* or polymerized tar-like materials from the process waste effluent previously discharged in the plant effluents. Removal may occur at any stage of the production process.

(C) A device used to extract or remove insoluble constitutents from a solid or liquid by use of a selective solvent; an open or closed tank or vessel in which such extraction or removal occurs; a diffusion battery of tanks or vessels for countercurrent decantation, extraction, or leaching, etc.

(D) A skimmer or similar device for removing grease, oils and fat-like materials from the process or effluent stream.

(b) *Examples of eligibility limits.*

(1) In-plant process changes which may result in the reduction or elimination of pollution but which do not themselves remove, alter, destroy, dispose of, store or prevent the creation of pollutants by removing potential pollutants at some point in the process stream are not eligible for certification.

(2) A device, piece of equipment or facility is not eligible if it is associated with or included in a stream for subsurface injection of untreated or inadequately treated industrial or sanitary waste.

4. *Multiple-purpose facilities.* A facility can qualify for rapid amortization if it serves a function other than the abatement of pollution (unless it is a building). Otherwise, the effect might be to discourage installation of sensible pollution abatement facilities in favor of less efficient single-function facilities.

The regulations require applicants to state what percentage of the cost of a facility is properly allocable to its abatement function and to justify the allocation. The Regional Office will review these allocations, and the certification will inform the Treasury Department if the allocation appears to be incorrect. Although not generally necessary or desireable, site inspections may be appropriate in cases involving large sums of money or unusual types of equipment.

5. *Facilities serving both old and new plants.* The statute provides that pollution control facilities must be used in connection with a plant or other property in operation before January 1, 1976. When a facility is used in connection with both pre-1976 and newer property, it may qualify for rapid amortization to the extent it is used in connection with pre-1976 property.

Again, the applicant will submit a theory of allocation for review by the Regional Office. The usual method of allocation is to compare the effluent capacity of the pre-1976 plant to the treatment capacity of the control facility. For example, if the old plant has a capacity of 80 units of effluent (but an average output of 60 units), the new plant has a capacity of 40 units (but an average output of 20 units), and the control facility has a capacity of 150 units, then $^{80}/_{150}$ of the cost of the control facility would be eligible for rapid amortization.

If a taxpayer presents a seemingly reasonable method of allocation different from the foregoing, Regional Office personnel should consult with the Office of Air Quality Planning and Standards or the Office of Water Planning and Standards, and with the Office of General Counsel.

6. *State certification.* To qualify for rapid amortization under section 169, a facility must first be certified by the State as having been installed ''in conformity with the State program or requirements for abatement or control of water or atmospheric pollution or contamination.'' Significantly, the statute does not say that the State must require that a facility be installed. If use of a facility will not actually contravene a State requirement, the State may certify. However, since State certification is a prerequisite to EPA certification, EPA may not certify if the State has denied certification for whatever reason.

It should be noted that certification of a facility does not constitute the personal warranty of the certifying official that the conditions of the statute have been met. EPA certification is binding on the Government only to the extent the submitted facts are accurate and complete.

7. *Dispersal of pollutants.* Section 169 applies to facilities which remove, alter, destroy, dispose of, store or prevent the creation or emission of pollutants—including heat. Facilities which merely disperse pollutants (such as tall stacks) do not qualify. However, there is no way to *dispose of* heat other than by transferring B.t.u.'s to the environment. A cooling tower is therefore eligible for certification provided it is used in connection with a pre-1976 plant. A cooling pond or an addition to an outfall structure which results in a decrease in the amount by which the temperature of the receiving water is raised and which meets applicable State standards is likewise eligible.

8. *Profit-making facilities.* The statute denies rapid amortization where the cost of pollution control facilities will be recovered from profits derived through the recovery or wastes *or otherwise.*

If a facility recovers marketable wastes, estimated profits on which are not sufficient to recover the entire cost of the facility, the amortization basis of the facility will be reduced in accordance with Treasury Department regulations. The responsibility of the Regional Offices is merely to identify for the Treasury Department those cases in which estimated profits will arise. The Treasury Department will determine the amount of such profits and the extent to which they can be expected to result in cost recovery, but the EPA certification should inform the Treasury whether cost recovery is possible.

The phrase *or otherwise* also includes situations where the taxpayer is in the business of renting the facility for a fee or charging for the treatment of waste. In such cases, the facility may theoretically qualify for EPA certification. The decision as to the extent of its profitability is for the Treasury Department. Situations may also arise where use of a facility is furnished at no additional charge to a number of users, or to the public, as part of a package of other services. In such cases, no profits will be deemed to arise from operation of the facility unless the other services included in the package are merely ancillary to use of the facility. Of course, the cost recovery provision does not apply where a taxpayer merely recovers the cost of a facility through general revenues; otherwise no profitable firm would ever be eligible for rapid amortization.

It should be noted that § 20.9 of the EPA regulation is not meant to affect general principles of Federal income tax law. An individual other than the title holder of a piece of property may be entitled to take depreciation deductions on it if the arrangements by which such individual has use of the property may, for all practical purposes, be viewed as a purchase. In any such case, the facility could qualify for full rapid amortization, notwithstanding the fact that the title holder charges a separate fee for the use of the facility, so long as the taxpayer—in such a case, the user—does not charge a separate fee for use of the facility.

9. *Multiple applications.* Under EPA regulations, a multiple application may be submitted by a taxpayer who applies for certification of substantially identical pollution abatement facilities used in connection with substantially

identical properties. It is not contemplated that the multiple application option will be used with respect to facilities in different States, since each such facility would require a separate application for certification to the State involved. EPA regulations also permit an applicant to incorporate by reference in an application material contained in an application previously filed. The purpose of this provision is to avoid the burden of furnishing detailed information (which may in some cases include portions of catalogs or process flow diagrams) which the certifying official has previously received. Accordingly, material filed with a Regional Office of EPA may be incorporated by reference only in an application subsequently filed with the same Regional Office.

[47 FR 38319, Aug. 31, 1982]

PART 21—SMALL BUSINESS

AUTHORITY: 15 U.S.C. 636, as amended by Pub. L. 92–500.

SOURCE: 42 FR 8083, Feb. 8, 1977, unless otherwise noted.

§ 21.1 Scope.

This part establishes procedures for the issuance by EPA of the statements, referred to in section 7(g) of the Small Business Act and section 8 of the Federal Water Pollution Control Act Amendments of 1972, to the effect that additions to or alterations in the equipment, facilities (including the construction of pretreatment facilities and interceptor sewers), or methods of operations of small business concerns are necessary and adequate to comply with requirements established under the Federal Water Pollution Control Act, 33 U.S.C. 1151, *et seq.*

§ 21.2 Definitions.

(a) *Small business concern* means a concern defined by section 2[3] of the Small Business Act, 15 U.S.C. 632, 13 CFR part 121, and regulations of the Small Business Administration promulgated thereunder.

(b) For purposes of paragraph 7(g)(2) of the Small Business Act, *necessary and adequate* refers to additions, alterations, or methods of operation in the absence of which a small business concern could not comply with one or more applicable standards. This can be determined with reference to design specifications provided by manufacturers, suppliers, or consulting engineers; including, without limitations, additions, alterations, or methods of operation the design specifications of which will provide a measure of treatment or abatement of pollution in excess of that required by the applicable standard.

(c) *Applicable Standard* means any requirement, not subject to an exception under § 21.6, relating to the quality of water containing or potentially containing pollutants, if such requirement is imposed by:

(1) The Act;

(2) EPA regulations promulgated thereunder or permits issued by EPA or a State thereunder;

(3) Regulations by any other Federal Agency promulgated thereunder;

(4) Any State standard or requirement as applicable under section 510 of the Act;

(5) Any requirements necessary to comply with an areawide management plan approved pursuant to section 208(b) of the Act;

(6) Any requirements necessary to comply with a facilities plan developed under section 201 of the Act (see 35 CFR, subpart E);

(7) Any State regulations or laws controlling the disposal of aqueous pollutants that may affect groundwater.

(d) *Regional Administrator* means the Regional Administrator of EPA for the region including the State in which the facility or method of operation is located, or his designee.

(e) *Act* means the Federal Water Pollution Control Act, 33 U.S.C. 1151, *et seq.*

(f) *Pollutant* means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. For the purposes of this section, the term also means sewage from vessels within the meaning of section 312 of the Act.

(g) *Permit* means any permit issued by either EPA or a State under the authority of section 402 of the Act; or by the Corps of Engineers under section 404 of the Act.

(h) *State* means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

Comment: As the SBA does not extend its programs to the Canal Zone, the listing of the Canal Zone as a State for the purposes of meeting a requirement imposed by section 311 or 312 of the Act is not effective in this regulation.

(i) *Statement* means a written approval by EPA, or if appropriate, a State, of the application.

(j) *Facility* means any building, structure, installation or vessel, or portion thereof.

(k) *Construction* means the erection, building, acquisition, alteration, remodeling, modification, improvement, or extension of any facility; *Provided,* That it does not mean preparation or undertaking of: Plans to determine feasibility; engineering, architectural, legal, fiscal, or economic investigations or studies; surveys, designs, plans, writings, drawings, specifications or procedures.

Comment: This provision would not later preclude SBA financial assistance being utilized for any planning or design effort conducted previous to construction.

(l) The term *additions and alterations* means the act of undertaking construction of any facility.

(m) The term *methods of operation* means the installation, emplacement, or introduction of materials, including those involved in construction, to achieve a process or procedure to control: Surface water pollution from non-point sources—that is, agricultural, forest practices, mining, construction; ground or surface water pollution from well, subsurface, or surface disposal operations; activities resulting in salt water intrusion; or changes in the movement, flow, or circulation of navigable or ground waters.

(n) The term *vessel* means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on the navigable waters of the United States other than a vessel owned or operated by the United States or a State or a political subdivision thereof, or a foreign nation; and is used for commercial purposes by a small business concern.

(o) *EPA* means the Environmental Protection Agency.

(p) *SBA* means the Small Business Administration.

(q) *Areawide agency* means an areawide management agency designated under section 208(c)(1) of the Act.

(r) *Lateral sewer* means a sewer which connects the collector sewer to the interceptor sewer.

(s) *Interceptor sewer* means a sewer whose primary purpose is to transport wastewaters from collector sewers to a treatment facility.

§ 21.3 Submission of applications.

(a) Applications for the statement described in § 21.5 of this part shall be made to the EPA Regional Office for the region covering the State in which the additions, alterations, or methods of operation covered by the application are located. A listing of EPA Regional Offices, with their mailing addresses, and setting forth the States within each region is as follows:

Region	Address	State
I	Regional Administrator, region I, EPA, John F. Kennedy Federal Bldg., room 2303, Boston, MA 02203.	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.
II	Regional Administrator, region II, EPA, 26 Federal Plaza, room 908, New York, NY 10007.	New Jersey, New York, Virgin Islands, and Puerto Rico.
III	Regional Administrator, region III, EPA, Curtis Bldg., 6th and Walnut Sts., Philadelphia, PA 19106.	Delaware, District of Columbia, Pennsylvania, Maryland, Virginia, and West Virginia.
IV	Regional Administrator, region IV, EPA, 345 Courtland St. NE., Atlanta, GA 30308.	Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.
V	Regional Administrator, region V, EPA, 77 West Jackson Boulevard, Chicago, IL 60604.	Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.
VI	Regional Administrator, region VI, EPA, 1201 Elm St., 27th floor, First International Bldg., 70 Dallas, TX 75201.	Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.
VII	Regional Administrator, region VII, EPA, 1735 Baltimore Ave., Kansas City, MO 64108.	Iowa, Kansas, Missouri, and Nebraska.
VIII	Regional Administrator, region VIII, EPA, 1860 Lincoln St., Suite 900, Denver, CO 80203.	Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.
IX	Regional Administrator, region IX, EPA, 100 California St., San Francisco, CA 94111.	Arizona, California, Hawaii, Nevada, Guam, American Samoa, and Trust Territory of the Pacific Islands.
X	Regional Administrator, region X, EPA, 1200 6th Ave., Seattle, WA 98101.	Alaska, Idaho, Oregon, and Washington.

(b) An application described in paragraph (1) of § 21.3(c) may be submitted directly to the appropriate State, where a State has assumed responsibility for issuing the statement. Information on whether EPA has retained responsibility for certification or whether it has been assumed by the State may be obtained from either the appropriate Regional Administrator or the State Water Pollution Control Authority in which the facility is located.

(c) An application need be in no particular form, but it must be in writing and must include the following:

(1) Name of applicant (including business name, if different) and mailing address. Address of the affected facility or operation, if different, should also be included.

(2) Signature of the owner, partner, or principal executive officer requesting the statement.

(3) The Standard Industrial Classification number for the business for which an application is being submitted. Such SIC number shall be obtained from the Standard Industrial Classification Manual, 1972 edition. If the applicant does not know the SIC for the business, a brief description of the type of business activity being conducted should be provided.

(4) A description of the process or activity generating the pollution to be abated by the additions,

alterations, or methods of operation covered by the application, accompanied by a schematic diagram of the major equipment and process, where practicable.

(5) A specific description of the additions, alterations, or methods of operation covered by the application. Where appropriate, such description will include a summary of the facility construction to be undertaken; a listing of the major equipment to be purchased or utilized in the operation of the facility; the purchase of any land or easements necessary to the operation of the facility; and any other items that the applicant deems pertinent. Any information that the applicant considers to be a trade secret shall be identified as such.

(6) A declaration of the requirement, or requirements, for compliance with which the alterations, additions, or methods of operation are claimed to be necessary and adequate.

(i) If the requirement results from a permit issued by EPA or a State under section 402 of the Act, the permit number shall be included.

(ii) If the requirement results from a permit issued by EPA or a State for a publicly-owned treatment works, the municipal permit number shall be included along with a written declaration from the authorized agent for the publicly owned treatment works that received the permit detailing the specific pretreatment requirements being placed upon the applicant.

(iii) If the requirement initiates from a plan to include the applicant's effluent in an existing municipal sewer system through the construction of lateral or interceptor sewers, a written declaration from the authorized agent for the publicly owned treatment works shall be included noting that the sewer construction is consistent with the integrity of the system; will not result in the capacity of the publicly owned treatment works being exceeded; and where applicable, is consistent with a facilities plan developed under section 201 of the Act (see 35 CFR part 917).

(iv) If the requirement results from a State order, regulation, or other enforceable authority controlling pollution from a vessel as provided by section 312(f)(3) of the Act, a written declaration from the authorized agent of the State specifying the control measures being required of the applicant shall be included.

(v) If the requirement is a result of a permit issued by the Corps of Engineers related to permits for dredged or fill material as provided by section 404 of the Act, a copy of the permit as issued shall be included.

(vi) If the requirement results from a standard of performance for control of sewage from vessels as promulgated by the Coast Guard under section 312(b) of the Act, the vessel registration number or documentation number shall be included.

(vii) If the requirement results from a plan to control or prevent the discharge or spill of pollutants as identified in section 311 of the Act, the title and date of that plan shall be included.

(viii) If the requirement is the result of an order by a State or an areawide management agency controlling the disposal of aqueous pollutants so as to protect groundwater, a copy of the order as issued shall be included.

(7) Additionally, if the applicant has received from a State Water Pollution Control Agency a permit issued by the State within the preceding two years, and if such permit was not issued under the authorities of section 402 of the Act, and where the permit directly relates to abatement of the discharge for which a statement is sought, a copy of that permit shall also be included.

Comment: Some States under State permit programs, separate and distinct from the NPDES permit program under the Act, conduct an engineering review of the facilities or equipment that would be used to control pollution. The results of such a review would be materially helpful in determining the necessity and adequacy of any alterations or additions.

(8) Any written information from a manufacturer, supplier, or consulting engineer, or similar independent source, concerning the design capabilities of the additions or alterations covered by the application, including any warranty limitations or certifications obtained from or provided by such sources which would bear upon these design or performance capabilities. The Regional Administrator may waive the requirement for this paragraph if it appears that there is no independent source for the information described herein; as, for example, when the applicant has designed and constructed the additions or alterations with in-house capability.

(9) An estimated schedule for the construction or implementation of the alterations, additions, or methods of operation.

(10) An estimated cost of the alterations, additions, or methods of operation, and where practicable, the individual costs of major elements of the construction to be undertaken.

(11) Information on previously received loan assistance under this section for the facility or method of operation, including a description and dates of the activity funded.

(d) A separate application must be submitted for every addition, alteration, or method of operation that is at a separate geographical location from the initial application.

Comment: As an example, a chain has four dry cleaning establishments scattered through a community. A separate application would have to be filed for each.

(e) No statement shall be approved for any application that has not included the information or

declaration requirements imposed by paragraph (c)(6) of § 21.3.

(f) All applications are to be submitted in duplicate.

(g) All applications are subject to the provisions of 18 U.S.C. 1001 regarding prosecution for the making of false statements or the concealing of material facts.

(h) Instructional guidelines to assist in the submission of applications for EPA certification are available from EPA or a certifying State.

[42 FR 8083, Feb. 8, 1977, as amended at 62 FR 1833, Jan. 14, 1997]

§ 21.4 Review of application.

(a) The Regional Administrator or his designee will conduct a review of the application. This review will consist of a general assessment of the adequacy of the proposed alterations, additions, or methods of operation. The review will corroborate that the proposed alterations, additions, or methods of operation are required by an applicable standard. The review will identify any proposed alterations, additions, or methods of operation that are not required by an applicable standard, or that are extraneous to the achievement of an applicable standard.

(b) The assessment of adequacy will be conducted to ensure that the proposed additions, alterations, or methods of operation are sufficient to meet one or more applicable standards whether alone or in conjunction with other plans. The assessment will not generally examine whether other alternatives exist or would be more meritorious from a cost-effective, efficiency, or technological standpoint.

(c) An application which proposes additions, alterations, or methods of operation whose design, in anticipation of a future requirement, will achieve a level of performance above the requirements imposed by a presently applicable standard shall be reviewed and approved by EPA or a State without prejudice. The amount of financial assistance for such an application will be determined by SBA.

(d) The Regional Administrator shall retain one copy of the application and a summary of the action taken on it. Upon completion of his review, the Regional Administrator shall return the original application along with any other supporting documents or information provided to the applicant along with a copy to the appropriate SBA district office for processing.

§ 21.5 Issuance of statements.

(a) Upon application by a small business concern pursuant to § 21.3 the Regional Administrator will, if he finds that the additions, alterations, or methods of operation covered by the application are adequate and necessary to comply with an applicable standard, issue a written statement to the applicant to that effect, within 45 working days following receipt of the application, or within 45 working days following receipt of all information required to be submitted pursuant to § 21.3(c), whichever is later. Such a written statement shall be classified as a full approval. If an application is deficient in any respect, with regard to the specifications for submission listed in § 21.3(c), the Regional Administrator shall promptly, but in no event later than 30 working days following receipt of the application, notify the applicant of such deficiency.

(b) (1) If an application contains proposed alterations, additions, or methods of operation that are adequate and necessary to comply with an applicable standard but also contains proposed alterations, additions, or methods of operation that are not necessary to comply with an applicable standard, the Regional Administrator shall conditionally approve the application within the time limit specified in paragraph (a) of this section, and shall also identify in the approval those alterations, additions, or methods of operation that he determines are not necessary.

(2) Conditional approvals as contained in a statement will satisfy the requirements for approval by EPA for those alterations, additions, or methods of operation determined to be necessary and adequate. Such conditional approvals may be submitted to SBA in satisfaction of the requirements of section 7(g)(2)(B) of the Small Business Act.

(3) Conditional approvals will not satisfy the requirements for approval by EPA for those alterations, additions, or methods of operation included in the application that are determined not to be necessary. Unnecessary alterations, additions, or methods of operation are those which are extraneous to the achievement of an applicable standard.

(4) Conditional approvals may be appealed to the Deputy Administrator by an applicant in accordance with the procedures identified in § 21.8.

(c) If the Regional Administrator determines that the additions, alterations, or methods of operation covered by an application are not necessary and adequate to comply with an applicable standard, he shall disapprove the application and shall so advise the applicant of such determination within the time limit specified in paragraph (a) of this section, and shall state in writing the reasons for his determination.

(d) Any application shall be disapproved if the Regional Administrator determines that the proposed addition, alteration, or method of operation would result in the violation of any other requirement of this Act, or of any other Federal or State

law or regulation with respect to the protection of the environment.

(e) An applicant need not demonstrate that its facility or method of operation will meet all applicable requirements established under the Act. The applicant need only demonstrate that the additions, alterations, or methods of operation will assist in ensuring compliance with one or more of the applicable standards for which financial assistance is being requested.

Comment: As an example, a small business has two discharge pipes—one for process water, the other for cooling water. The application for loan assistance is to control pollution from the process water discharge. However, EPA or a State may review the applicant's situation and identify for SBA that the applicant is subject to other requirements for which the applicant has not sought assistance.

(f) An application should not include major alternative designs significantly differing in scope, concept, or capability. It is expected that the applicant at the time of submission will have selected the most appropriate or suitable design for the addition, alteration, or method of operation.

(g) EPA will not provide assistance in the form of engineering, design, planning or other technical services to any applicant in the preparation of his application.

(h) An applicant may be issued a certification for additions, alterations, or methods of operation constructed or undertaken before loan assistance was applied for by the applicant. Any such applications would be reviewed by SBA for eligibility under SBA criteria, including refinancing and loan exposure.

§ 21.6 Exclusions.

(a) Statements shall not be issued for applications in the following areas:

(1) *Local requirements.* Applications for statements for additions, alterations, or methods of operation that result from requirements imposed by municipalities, counties or other forms of local or regional authorities and governments, except for areawide management agencies designated and approved under section 208 of the Act, shall not be approved; except for those requirements resulting from the application of pretreatment requirements under section 307(b) of the Act; or those resulting from an approved project for facilities plans, and developed under section 201 of the Act. (See 35 CFR, subpart E); or under a delegation of authority under the Act.

(2) *Cost recovery and user charges.* Applications for statements involving a request for financial assistance in meeting revenue and service charges imposed upon a small business by a municipality conforming to regulations governing a user charge or capital cost system under section 204(b)(2) of the Act (see 35 CFR 925–11 and 925–12) shall not be approved.

(3) *New facility sewer construction.* Applications for statements involving projects that involve the construction of a lateral, collection, or interceptor sewer, at a facility that was not in existence on October 18, 1972, shall not be approved. Applications for additions, alterations, or methods of operation for new facilities that do not involve sewer construction are not affected by this preclusion. Further, if an applicant is compelled to move as a result of a relocation requirement but operated at the facility prior to October 18, 1972, the cost of construction for a lateral, collection, or interceptor sewer can be approved for the new, relocated site. For the purpose of this exclusion lateral, collection, or interceptor sewer is determined as any sewer transporting waste from a facility or site to any publicly owned sewer.

(4) Other non-water related pollution abatement additions, alterations, or methods of operation which are not integral to meeting the requirements of the Act, although they may be achieving the requirements of another Federal or State law or regulation.

Comment: An example would be where stack emission controls were required on equipment that operated the water pollution control facility. This emission control equipment as an integral part of the water pollution control systems would be approvable. However, emission control equipment for a general purpose incinerator that only incidentally burned sewage sludge would not be approvable. The general purpose incinerator might also receive loan assistance but under separate procedures than those set out for water pollution control.

(5) *Privately owned treatment facility service or user costs.* Applications for statements involving financial assistance in meeting user cost or fee schedules related to participating in a privately owned treatment facility not under the ownership or control of the applicant shall not be approved.

(6) *Operation and maintenance charges.* Applications for statements containing a request for financial assistance in meeting the operations and maintenance costs of operating the applicant's additions, alterations, or methods of operation shall not be approved for any elements relating to such areas of cost.

(7) *Evidence of financial responsibility.* Applications for statements containing a request for financial assistance in meeting any requirements relating to evidence of financial responsibility as provided in section 311(p) of the Act shall not be approved.

§ 21.7 [Reserved]

Comment: Applications for a statement resulting from a requirement to control pollution from non-point sources

as identified in section 304(e)(2)(A–F) of the Act and described in § 21.2(m) will not presently be issued a statement under § 21.5 unless the requirement is established through a permit under section 402. There is no requirement under the current Act that the Federal government control pollution from such sources, and the nature and scope of State or areawide management agency proposals or programs to control such sources cannot be determined at this time. As State and areawide plans for control of nonpoint sources being prepared under section 208 of the Act, will not be completed for several years, this section is being reserved pending a future determination on the eligibility of applications relating to non-profit sources to receive a statement under this part.

§ 21.8 Resubmission of application.

(a) A small business concern whose application is disapproved may submit an amended or corrected application to the Regional Administrator at any time. The applicant shall provide the date of any previous application.

§ 21.9 Appeals.

(a) An applicant aggrieved by a determination of a Regional Administrator under § 21.5 may appeal in writing to the Deputy Administrator of the Environmental Protection Agency, within 30 days of the date of the determination from which an appeal is taken; *Provided,* That the Deputy Administrator may, on good cause shown, accept an appeal at a later time.

(b) The applicant in requesting such an appeal shall submit to the Deputy Administrator a copy of the complete application as reviewed by the Regional Administrator.

(c) The applicant should also provide information as to why it believes the determination made by the Regional Administrator to be in error.

(d) The Deputy Administrator shall act upon such appeal within 60 days of receipt of any complete application for a review of the determination.

(e) Where a State has been delegated certification authority, the procedure for appeals shall be established in the State submission required in § 21.12.

§ 21.10 Utilization of the statement.

(a) Statements issued by the Regional Administrator will be mailed to the small business applicant and to the district office of the Small Business Administration serving the geographic area where the business is located. It is the responsibility of the applicant to also forward the statement to SBA as part of the application for a loan.

(b) Any statement or determination issued under § 21.5 shall not be altered, modified, changed, or destroyed by any applicant in the course of providing such statement to SBA. To do so can result in the revocation of any approval contained in the statement and subject the applicant to the penalties provided in 18 U.S.C. 1001.

(c) If an application for which a statement is issued under § 21.5 is substantively changed in scope, concept, design, or capability prior to the approval by SBA of the financial assistance requested, the statement as issued shall be revoked. The applicant must resubmit a revised application under § 21.3 and a new review must be conducted. Failure to meet the requirements of this paragraph could subject the applicant to the penalties specified in 18 U.S.C. 1001 and 18 U.S.C. 286. A substantive change is one which materially affects the performance or capability of the proposed addition, alteration, or method of operation.

(d) An agency, Regional Administrator, or State issuing a statement under § 21.5 shall retain a complete copy of the application for a period of five years after the date of issuance of the statement. The application shall be made available upon request for inspection or use at any time by any agency of the Federal Government.

(e) No application for a statement or for financial assistance under this section or statement issued under this section shall constitute or be construed as suspending, modifying, revising, abrogating or otherwise changing the requirements imposed on the applicant by the terms, conditions, limitations or schedules of compliance contained in an applicable standard, permit, or other provision established or authorized under the Act or any State or local statute, ordinance or code.

(f) No statement as issued and reviewed shall be construed as a waiver to the applicants fulfilling the requirements of any State or local law, statute, ordinance, or code (including building, health, or zoning codes).

(g) An amended application need not be submitted if the facility, property, or operation for which the statement is issued is sold, leased, rented, or transferred by the applicant to another party prior to approval by SBA of the financial assistance: *Provided,* That there is or will be no substantive change in the scope, concept, design, capability, or conduct of the facility or operation.

Comment: However, eligibility for financial assistance would be reexamined by SBA with regard to any such sale, lease, rental or transfer.

(h) The Regional Administrator may include in any statement a date of expiration, after which date the approval by the Regional Administrator contained in the statement shall no longer apply. The date of expiration shall not become effective if the applicant has submitted the statement to the SBA, prior to the date of expiration, as part of the application for financial assistance.

§ 21.11 Public participation.

(a) Applications shall not generally be subject to public notice, public comment, or public hearings. Applications during the period of review as stated in § 21.5, or during the period of appeal as provided in § 21.8, shall be available for public inspection. Approved applications as provided in § 21.10(d) shall be available for public inspection at all times during the five year period.

(b) The Regional Administrator, if he believes that the addition, alteration, or method of operation may adversely and significantly affect an interest of the public, shall provide for a public notice and/or public hearing on the application. The public notice and/or public hearing shall be conducted in accordance with the procedures specified for a permit under 40 CFR 125.32 and 125.34(b).

(c) Where the applicant is able to demonstrate to the satisfaction of the Regional Administrator that disclosure of certain information or parts thereof as provided in § 21.3(c)(5) would result in the divulging of methods or processes entitled to protection as trade secrets, the Regional Administrator shall treat the information or the particular part as confidential in accordance with the purposes of section 1905 of Title 18 of the United States Code and not release it to any unauthorized person. *Provided, however,* That if access to such information is subsequently requested by any person, there will be compliance with the procedures specified in 40 CFR part 2. Such information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out the Act or when relevant in any proceeding under the Act.

§ 21.12 State issued statements.

(a) Any State after the effective date of these regulations may submit to the Regional Administrator for his approval an application to conduct a program for issuing statements under this section.

(1) A State submission shall specify the organizational, legal, financial, and administrative resources and procedures that it believes will enable it to conduct the program.

(2) The State program shall constitute an equivalent effort to that required of EPA under this section.

(3) The State organization responsible for conducting the program should be the State water pollution control agency, as defined in section 502 of the Act.

(4) The State submission shall propose a procedure for adjudicating applicant appeals as provided under § 21.9.

(5) The State submission shall identify any existing or potential conflicts of interest on the part of any personnel who will or may review or approve applications.

(i) A conflict of interest shall exist where the reviewing official is the spouse of or dependent (as defined in the Tax Code, 26 U.S.C. 152) of an owner, partner, or principal officer of the small business, or where he has or is receiving from the small business concern applicant 10 percent of gross personal income for a calendar year, except that it shall mean 50 percent gross personal income for a calendar year if the recipient is over 60 years of age and is receiving such portion pursuant to retirement, pension, or similar arrangements.

(ii) If the State is unable to provide alternative parties to review or approve any application subject to conflict of interest, the Regional Administrator shall review and approve the application.

(b) The Regional Administrator, within 60 days after such application, shall approve any State program that conforms to the requirements of this section. Any such approval shall be after sufficient notice has been provided to the Regional Director of SBA.

(c) If the Regional Administrator disapproves the application, he shall notify the State, in writing, of any deficiency in its application. A State may resubmit an amended application at any later time.

(d) Upon approval of a State submission, EPA will suspend all review of applications and issuance of statements for small businesses in that State, pending transferral. *Provided, however,* That in the event of a State conflict of interest as identified in § 21.12(a)(4) of this section, EPA shall review the application and issue the statement.

(e) Any applications shall, if received by an EPA Regional Office, be forwarded promptly to the appropriate State for action pursuant to section 7(g)(2) of the Small Business Act and these regulations.

(f) (1) EPA will generally not review or approve individual statements issued by a State. However, SBA, upon receipt and review of a State approved statement may request the Regional Administrator of EPA to review the statement. The Regional Administrator, upon such request can further approve or disapprove the State issued statement, in accordance with the requirements of § 21.5.

(2) The Regional Administrator will periodically review State program performance. In the event of State program deficiencies the Regional Administrator will notify the State of such deficiencies.

(3) During that period that any State's program is classified as deficient, statements issued by a State shall also be sent to the Regional Administrator for review. The Regional Administrator shall notify the State, the applicant, and the SBA of any determination subsequently made, in accordance with § 21.5, on any such statement.

(i) If within 60 days after notice of such deficiencies has been provided, the State has not taken corrective efforts, and if the deficiencies significantly affect the conduct of the program, the Regional Administrator, after sufficient notice has been provided to the Regional Director of SBA, shall withdraw the approval of the State program.

(ii) Any State whose program is withdrawn and whose deficiencies have been corrected may later reapply as provided in § 21.12(a).

(g) Funds appropriated under section 106 of the Act may be utilized by a State agency authorized to receive such funds in conducting this program.

§ 21.13 Effect of certification upon authority to enforce applicable standards.

The certification by EPA or a State for SBA Loan purposes in no way constitutes a determination by EPA or the State that the facilities certified (a) will be constructed within the time specified by an applicable standard or (b) will be constructed and installed in accordance with the plans and specifications submitted in the application, will be operated and maintained properly, or will be applied to process wastes which are the same as described in the application. The certification in no way constitutes a waiver by EPA or a State of its authority to take appropriate enforcement action against the owner or operator of such facilities for violations of an applicable standard.

PART 22—CONSOLIDATED RULES OF PRACTICE GOVERNING THE ADMINISTRATIVE ASSESSMENT OF CIVIL PENALTIES AND THE REVOCATION OR SUSPENSION OF PERMITS

Subpart A—General

Subpart B—Parties and Appearances

Subpart C—Prehearing Procedures

Subpart D—Hearing Procedure

Subpart E—Initial Decision and Motion to Reopen a Hearing

Subpart F—Appeals and Administrative Review

Subpart G—Final Order on Appeal

Subpart H—Supplemental Rules

AUTHORITY: 15 U.S.C. 2615; 42 U.S.C. 7413(d), 7524(c), 7545(d), 7547(d), 7601 and 7607(a); 7 U.S.C. 136(l) and (m); 33 U.S.C. 1319, 1415 and 1418; 42 U.S.C. 6912, 6928 and 6991(e); 42 U.S.C. 9609; 42 U.S.C. 11045.

SOURCE: 45 FR 24363, Apr. 9, 1980, unless otherwise noted.

Subpart A—General

§ 22.01 Scope of these rules.

(a) These rules of practice govern all adjudicatory proceedings for:

(1) The assessment of any civil penalty conducted under section 14(a) of the Federal Insecticide, Fungicide and Rodenticide Act as amended (7 U.S.C. 1361(a));

(2) The assessment of any administrative penalty under sections 113(d)(1), 205(c), 211(d) and 213(d) of the Clean Air Act, as amended (CAA) (42 U.S.C. 7413(d)(1), 7524(c), 7545(d) and 7547(d)).

(3) The assessment of any civil penalty or for the revocation or suspension of any permit conducted under section 105 (a) and (f) of the Marine Protection, Research, and Sanctuaries Act as amended (33 U.S.C. 1415(a));

(4) The issuance of a compliance order or the issuance of a corrective action order, the suspension or revocation of authority to operate pursuant to section 3005(e) of the Solid Waste Disposal Act, or the assessment of any civil penalty under sections 3008, 9006 and 11005 of the Solid Waste Disposal Act, as amended (42 U.S.C. 6928, 6991(e) and 6992(d)), except as provided in 40 CFR parts 24 and 124.

(5) The assessment of any civil penalty conducted under section 16(a) of the Toxic Substances Control Act (15 U.S.C. 2615(a));

(6) The assessment of any Class II penalty under section 309(g) of the Clean Water Act (33 U.S.C. 1319(g));

(7) The assessment of any administrative penalty under section 109 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (42 U.S.C. 9609);

(8) The assessment of any administrative penalty under section 325 of the Emergency Planning and Community Right-To-Know Act of 1986 (EPCRA) (42 U.S.C. 11045).

(9) The assessment of any civil penalty conducted under section 1414(g)(3)(B) of the Safe Drinking Water Act as amended (42 U.S.C. 300g–3(g)(3)(B)).

(b) The Supplemental rules of practice set forth in subpart H establish rules governing those aspects of the proceeding in question which are not covered in subparts A through G, and also specify procedures which supersede any conflicting procedures set forth in those subparts.

(c) Questions arising at any stage of the proceeding which are not addressed in these rules or in the relevant supplementary procedures shall be resolved at the discretion of the Administrator, Regional Administrator, or Presiding Officer, as appropriate.

[45 FR 24363, Apr. 9, 1980, as amended at 52 FR 30673, Aug. 17, 1987; 53 FR 12263, Apr. 13, 1988; 54 FR 12371, Mar. 24, 1989; 54 FR 21176, May 16, 1989; 56 FR 3757, Jan. 30, 1991; 57 FR 4318, Feb. 4, 1992]

§ 22.02 Use of number and gender.

As used in these rules of practice, words in the singular also include the plural and words in the masculine gender also include the feminine and vice versa, as the case may require.

§ 22.03 Definitions.

(a) The following definitions apply to part 22:

Act means the particular statute authorizing the institution of the proceeding at issue.

Administrative Law Judge means an Administrative Law Judge appointed under 5 U.S.C. 3105 (see also Pub. L. 95–251, 92 Stat. 183).

Administrator means the Administrator of the U.S. Environmental Protection Agency or his delegate.

Agency means the United States Environmental Protection Agency.

Complainant means any person authorized to issue a complaint on behalf of the Agency to persons alleged to be in violation of the Act. The complainant shall not be a member of the Environmental Appeals Board, the Regional Judicial Officer, or any other person who will participate or advise in the decision.

Complaint means a written communication, alleging one or more violations of specific provisions of the Act, or regulations or a permit promulgated thereunder, issued by the complainant to a person under §§ 22.13 and 22.14.

Consent Agreement means any written document, signed by the parties, containing stipulations or conclusions of fact or law and a proposed penalty or proposed revocation or suspension acceptable to both complainant and respondent.

Environmental Appeals Board means the Board within the Agency described in § 1.25 of this title, located at U.S. Environmental Protection Agency, A–110, 401 M St. SW., Washington, DC 20460.

Final Order means (a) an order issued by the Administrator after an appeal of an initial decision, accelerated decision, decision to dismiss, or default order, disposing of a matter in controversy between the parties, or (b) an initial decision which becomes a final order under § 22.27(c).

Hearing means a hearing on the record open to the public and conducted under these rules of practice.

Hearing Clerk means the Hearing Clerk, A–110, U.S. Environmental Protection Agency, 401 M St. SW., Washington, DC 20460.

Initial Decision means the decision issued by the Presiding Officer based upon the record of the proceedings out of which it arises.

Party means any person that participates in a hearing as complainant, respondent, or intervenor.

Permit means a permit issued under section 102 of the Marine Protection, Research, and Sanctuaries Act.

Person includes any individual, partnership, association, corporation, and any trustee, assignee, receiver or legal successor thereof; any organized group of persons whether incorporated or not; and any officer, employee, agent, department, agency or instrumentality of the Federal Government, of

any State or local unit of government, or of any foreign government.

Presiding Officer means the Administrative Law Judge designated by the Chief Administrative Law Judge to serve as Presiding Officer, unless otherwise specified by any supplemental rules.

Regional Administrator means the Administrator of any Regional Office of the Agency or any officer or employee thereof to whom his authority is duly delegated. Where the Regional Administrator has authorized the Regional Judicial Officer to act, the term *Regional Administrator* shall include the Regional Judicial Officer. In a case where the complainant is the Assistant Administrator for Enforcement or his delegate, the term *Regional Administrator* as used in these rules shall mean the Administrator.

Regional Hearing Clerk means an individual duly authorized by the Regional Administrator to serve as hearing clerk for a given region. Correspondence may be addressed to the Regional Hearing Clerk, U.S. Environmental Protection Agency (address of Regional Office—see appendix). In a case where the complainant is the Assistant Administrator for Enforcement or his delegate, the term *Regional Hearing Clerk* as used in these rules shall mean the Hearing Clerk.

Regional Judicial Officer means a person designated by the Regional Administrator under § 22.04(b) to serve as a Regional Judicial Officer.

Respondent means any person proceeded against in the complaint.

(b) Terms defined in the Act and not defined in these rules of practice are used consistent with the meanings given in the Act.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5323, Feb. 13, 1992]

§ 22.04 Powers and duties of the Environmental Appeals Board, the Regional Administrator, the Regional Judicial Officer, and the Presiding Officer; disqualification.

(a) *Environmental Appeals Board.* The Administrator delegates authority under the Act to the Environmental Appeals Board to perform the functions assigned to it in these rules of practice. An appeal or motion under this part directed to the Administrator, rather than to the Environmental Appeals Board, will not be considered. This delegation of authority to the Environmental Appeals Board does not preclude the Environmental Appeals Board from referring any case or motion governed by this part to the Administrator when the Environmental Appeals Board, in its direction, deems it appropriate to do so. When an appeal or motion is referred to the Administrator, all parties shall be so notified and the rules in this part referring to the Environmental Appeals Board shall be interpreted as referring to the Administrator. If a case or motion is referred to the Administrator by the Environmental Appeals Board, the Administrator may consult with any EPA employee concerning the matter, provided such consultation does not violate the ex parte rules set forth in § 22.08.

(b) *Regional Administrator.* The Regional Administrator shall exercise all powers and duties as prescribed or delegated under the Act and these rules of practice.

(1) *Delegation to Regional Judicial Officer.* One or more Regional Judicial Officers may be designated by the Regional Administrator to perform, within the region of their designation, the functions described below. The Regional Administrator may delegate his or her authority to a Regional Judicial Officer to act in a given proceeding. This delegation will not prevent the Regional Judicial Officer from referring any motion or case to the Regional Administrator. The Regional Judicial Officer shall exercise all powers and duties prescribed or delegated under the Act or these rules of practice.

(2) *Qualifications of Regional Judicial Officer.* A Regional Judicial Officer shall be an attorney who is a permanent or temporary employee of the Agency or some other Federal agency and who may perform other duties within the Agency. A Regional Judicial Officer shall not be employed by the Region's Enforcement Division or by the Regional Division directly associated with the type of violation at issue in the proceeding. A Regional Judicial Officer shall not have performed prosecutorial or investigative functions in connection with any hearing in which he serves as a Regional Judicial Officer or with any factually related hearing.

(c) *Presiding Officer.* The Presiding Officer shall conduct a fair and impartial proceeding, assure that the facts are fully elicited, adjudicate all issues, and avoid delay. The Presiding Officer shall have authority to:

(1) Conduct administrative hearings under these rules of practice;

(2) Rule upon motions, requests, and offers of proof, dispose of procedural requests, and issue all necessary orders;

(3) Administer oaths and affirmations and take affidavits;

(4) Examine witnesses and receive documentary or other evidence;

(5) For good cause, upon motion or sua sponte, order a party, or an officer or agent thereof, to produce testimony, documents, or other nonprivileged evidence, and failing the production thereof without good cause being shown, draw adverse inferences against that party;

(6) Admit or exclude evidence;

(7) Hear and decide questions of facts, law, or discretion;

(8) Require parties to attend conferences for the settlement or simplification of the issues, or the expedition of the proceedings;

(9) Issue subpoenas authorized by the Act; and

(10) Do all other acts and take all measures necessary for the maintenance of order and for the efficient, fair and impartial adjudication of issues arising in proceedings governed by these rules.

(d) *Disqualification; withdrawal.* (1) The Administrator, the Regional Administrator, the members of the Environmental Appeals Board, the Regional Judicial Officer, or the Presiding Officer may not perform functions provided for in these rules of practice regarding any matter in which they (i) have a financial interest or (ii) have any relationship with a party or with the subject matter which would make it inappropriate for them to act. Any party may at any time by motion made to the Regional Administrator request that the Regional Judicial Officer be disqualified from the proceeding. Any party may at any time by motion to the Administrator request that the Regional Administrator, a member of the Environmental Appeals Board, or the Presiding Officer be disqualified or request that the Administrator disqualify himself or herself from the proceeding. The Administrator, the Regional Administrator, a member of the Environmental Appeals Board, the Regional Judicial Officer, or the Presiding Officer may at any time withdraw from any proceeding in which they deem themselves disqualified or unable to act for any reason.

(2) If the Administrator, the Regional Administrator, the Regional Judicial Officer, or the Presiding Officer is disqualified or withdraws from the proceeding, a qualified individual who has none of the infirmities listed in paragraph (d)(1) of this section shall be assigned to replace him. Assignment of a replacement for Regional Administrator or for the Regional Judicial Officer shall be made by the Administrator or the Regional Administrator, respectively. The Administrator, should he or she withdraw or disqualify himself or herself, shall assign the Regional Administrator from the Region where the case originated to replace him or her. If that Regional Administrator would be disqualified, the Administrator shall assign a Regional Administrator from another region to replace the Administrator. The Regional Administrator shall assign a new Presiding Officer if the original Presiding Officer was not an Administrative Law Judge. The Chief Administrative Law Judge shall assign a new Presiding Officer from among available Administrative Law Judges if the original Presiding Officer was an Administrative Law Judge.

(3) The Chief Administrative Law Judge, at any stage in the proceeding, may reassign the case to an Administrative Law Judge other than the one originally assigned in the event of the unavailability of the Administrative Law Judge or where reassignment will result in efficiency in the scheduling of hearings and would not prejudice the parties.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5324, Feb. 13, 1992; 57 FR 60129, Dec. 18, 1992]

§ 22.05 Filing, service, and form of pleadings and documents.

(a) *Filing of pleadings and documents.* (1) Except as otherwise provided, the original and one copy of the complaint, and the original of the answer and of all other documents served in the proceeding shall be filed with the Regional Hearing Clerk.

(2) A certificate of service shall accompany each document filed or served. Except as otherwise provided, a party filing documents with the Regional Hearing Clerk, after the filing of the answer, shall serve copies thereof upon all other parties and the Presiding Officer. The Presiding Officer shall maintain a duplicate file during the course of the proceeding.

(3) When the Presiding Officer corresponds directly with the parties, the original of the correspondence shall be sent to the Regional Hearing Clerk, a copy shall be maintained by the Presiding Officer in the duplicate file, and a copy shall be sent to all parties. Parties who correspond directly with the Presiding Officer shall in addition to serving all other parties send a copy of all such correspondence to the Regional Hearing Clerk. A certificate of service shall accompany each document served under this subsection.

(b) *Service of pleadings and documents*—(1) *Service of complaint.* (i) Service of a copy of the signed original of the complaint, together with a copy of these rules of practice, may be made personally or by certified mail, return receipt requested, on the respondent (or his representative).

(ii) Service upon a domestic or foreign corporation or upon a partnership or other unincorporated association which is subject to suit under a common name shall be made by personal service or certified mail, as prescribed by paragraph (b)(1)(i) of this section, directed to an officer, partner, a managing or general agent, or to any other person authorized by appointment or by Federal or State law to receive service of process.

(iii) Service upon an officer or agency of the United States shall be made by delivering a copy of the complaint to the officer or agency, or in any

manner prescribed for service by applicable regulations. If the agency is a corporation, the complaint shall be served as prescribed in paragraph (b)(1)(ii) of this section.

(iv) Service upon a State or local unit of government, or a State or local officer, agency, department, corporation or other instrumentality shall be made by serving a copy of the complaint in the manner prescribed by the law of the State for the service of process on any such persons, or:

(A) If upon a State or local unit of government, or a State or local department, agency, corporation or other instrumentality, by delivering a copy of the complaint to the chief executive officer thereof;

(B) If upon a State or local officer by delivering a copy to such officer.

(v) Proof of service of the complaint shall be made by affidavit of the person making personal service, or by properly executed return receipt. Such proof of service shall be filed with the complaint immediately upon completion of service.

(2) *Service of documents other than complaint, rulings, orders, and decisions.* All documents other than the complaint, rulings, orders, and decisions, may be served personally or by certified or first class mail.

(c) *Form of pleadings and documents.* (1) Except as provided herein, or by order of the Presiding Officer or of the Environmental Appeals Board, there are no specific requirements as to the form of documents.

(2) The first page of every pleading, letter, or other document shall contain a caption identifying the respondent and the docket number which is exhibited on the complaint.

(3) The original of any pleading, letter or other document (other than exhibits) shall be signed by the party filing or by his counsel or other representative. The signature constitutes a representation by the signer that he has read the pleading, letter or other document, that to the best of his knowledge, information and belief, the statements made therein are true, and that it is not interposed for delay.

(4) The initial document filed by any person shall contain his name, address and telephone number. Any changes in this information shall be communicated promptly to the Regional Hearing Clerk, Presiding Officer, and all parties to the proceeding. A party who fails to furnish such information and any changes thereto shall be deemed to have waived his right to notice and service under these rules.

(5) The Environmental Appeals Board, the Regional Administrator, the Presiding Officer, or the Regional Hearing Clerk may refuse to file any document which does not comply with this paragraph. Written notice of such refusal, stating the reasons therefor, shall be promptly given to the person submitting the document. Such person may amend and resubmit any document refused for filing upon motion granted by the Environmental Appeals Board, the Regional Administrator, or the Presiding Officer, as appropriate.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5324, Feb. 13, 1992]

§ 22.06 Filing and service of rulings, orders, and decisions.

All rulings, orders, decisions, and other documents issued by the Regional Administrator, Regional Judicial Officer, or Presiding Officer, as appropriate, shall be filed with the Regional Hearing Clerk. All such documents issued by the Environmental Appeals Board shall be filed with the Clerk of the Environmental Appeals Board. Copies of such rulings, orders, decisions, or other documents shall be served personally, or by certified mail, return receipt requested, upon all parties by the Environmental Appeals Board, the Regional Administrator, the Regional Judicial Officer, or the Presiding Officer, as appropriate.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5324, Feb. 13, 1992]

§ 22.07 Computation and extension of time.

(a) *Computation.* In computing any period of time prescribed or allowed in these rules of practice, except as otherwise provided, the day of the event from which the designated period begins to run shall not be included. Saturdays, Sundays, and Federal legal holidays shall be included. When a stated time expires on a Saturday, Sunday or legal holiday, the stated time period shall be extended to include the next business day.

(b) *Extensions of time.* The Environmental Appeals Board, the Regional Administrator, or the Presiding Officer, as appropriate, may grant an extension of time for the filing of any pleading, document, or motion (1) upon timely motion of a party to the proceeding, for good cause shown, and after consideration of prejudice to other parties, or (2) upon its or his own motion. Such a motion by a party may only be made after notice to all other parties, unless the movant can show good cause why serving notice is impracticable. The motion shall be filed in advance of the date on which the pleading, document or motion is due to be filed, unless the failure of a party to make timely motion for extension of time was the result of excusable neglect.

(c) *Service by mail.* Service of the complaint is complete when the return receipt is signed. Service of all other pleadings and documents is complete upon mailing. Where a pleading or document is served by mail, five (5) days shall be added to the

time allowed by these rules for the filing of a responsive pleading or document.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5324, Feb. 13, 1992]

§ 22.08 Ex parte discussion of proceeding.

At no time after the issuance of the complaint shall the Administrator, the members of the Environmental Appeals Board, the Regional Administrator, the Regional Judicial Officer, the Presiding Officer, or any other person who is likely to advise these officials in the decision on the case, discuss ex parte the merits of the proceeding with any interested person outside the Agency, with any Agency staff member who performs a prosecutorial or investigative function in such proceeding or a factually related proceeding, or with any representative of such person. Any ex parte memorandum or other communication addressed to the Administrator, the Regional Administrator, the Environmental Appeals Board, the Regional Judicial Officer, or the Presiding Officer during the pendency of the proceeding and relating to the merits thereof, by or on behalf of any party shall be regarded as argument made in the proceeding and shall be served upon all other parties. The other parties shall be given an opportunity to reply to such memorandum or communication.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

§ 22.09 Examination of documents filed.

(a) Subject to the provisions of law restricting the public disclosure of confidential information, any person may, during Agency business hours, inspect and copy any document filed in any proceeding. Such documents shall be made available by the Regional Hearing Clerk, the Hearing Clerk, or the Environmental Appeals Board, as appropriate.

(b) The cost of duplicating documents filed in any proceeding shall be borne by the person seeking copies of such documents. The Agency may waive this cost in appropriate cases.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

Subpart B—Parties and Appearances

§ 22.10 Appearances.

Any party may appear in person or by counsel or other representative. A partner may appear on behalf of a partnership and an officer may appear on behalf of a corporation. Persons who appear as counsel or other representative must conform to the standards of conduct and ethics required of practitioners before the courts of the United States.

§ 22.11 Intervention.

(a) *Motion.* A motion for leave to intervene in any proceeding conducted under these rules of practice must set forth the grounds for the proposed intervention, the position and interest of the movant and the likely impact that intervention will have on the expeditious progress of the proceeding. Any person already a party to the proceeding may file an answer to a motion to intervene, making specific reference to the factors set forth in the foregoing sentence and paragraph (c) of this section, within ten (10) days after service of the motion for leave to intervene.

(b) *When filed.* A motion for leave to intervene in a proceeding must ordinarily be filed before the first prehearing conference or, in the absence of a prehearing conference, before the initiation of correspondence under § 22.19(e), or if there is no such correspondence, prior to the setting of a time and place for a hearing. Any motion filed after that time must include, in addition to the information set forth in paragraph (a) of this section, a statement of good cause for the failure to file in a timely manner. The intervenor shall be bound by any agreements, arrangements and other matters previously made in the proceeding.

(c) *Disposition.* Leave to intervene may be granted only if the movant demonstrates that (1) his presence in the proceeding would not unduly prolong or otherwise prejudice the adjudication of the rights of the original parties; (2) the movant will be adversely affected by a final order; and (3) the interests of the movant are not being adequately represented by the original parties. The intervenor shall become a full party to the proceeding upon the granting of leave to intervene.

(d) *Amicus curiae.* The motion shall identify the interest of the applicant and shall state the reasons why the proposed amicus brief is desirable. If the motion is granted, the Presiding Officer or Administrator shall issue an order setting the time for filing such brief. If the motion is granted, the Presiding Officer or the Environmental Appeals Board shall issue an order setting the time for filing such brief.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

§ 22.12 Consolidation and severance.

(a) *Consolidation.* The Presiding Officer may, by motion or sua sponte, consolidate any or all matters at issue in two or more proceedings docketed under these rules of practice where (1) there exists common parties or common questions of fact or law, (2) consolidation would expedite and

simplify consideration of the issues, and (3) consolidation would not adversely affect the rights of parties engaged in otherwise separate proceedings.

(b) *Severance.* The Presiding Officer may, by motion or sua sponte, for good cause shown order any proceedings severed with respect to any or all parties or issues.

Subpart C—Prehearing Procedures

§ 22.13 Issuance of complaint.

If the complainant has reason to believe that a person has violated any provision of the Act, or regulations promulgated or a permit issued under the Act, he may institute a proceeding for the assessment of a civil penalty by issuing a complaint under the Act and these rules of practice. If the complainant has reason to believe that

(a) A permittee violated any term or condition of the permit, or

(b) A permittee misrepresented or inaccurately described any material fact in the permit application or failed to disclose all relevant facts in the permit application, or

(c) Other good cause exists for such action, he may institute a proceeding for the revocation or suspension of a permit by issuing a complaint under the Act and these rules of practice. A complaint may be for the suspension or revocation of a permit in addition to the assessment of a civil penalty.

§ 22.14 Content and amendment of the complaint.

(a) *Complaint for the assessment of a civil penalty.* Each complaint for the assessment of a civil penalty shall include:

(1) A statement reciting the section(s) of the Act authorizing the issuance of the complaint;

(2) Specific reference to each provision of the Act and implementing regulations which respondent is alleged to have violated;

(3) A concise statement of the factual basis for alleging the violation;

(4) The amount of the civil penalty which is proposed to be assessed;

(5) A statement explaining the reasoning behind the proposed penalty;

(6) Notice of respondent's right to request a hearing on any material fact contained in the complaint, or on the appropriateness of the amount of the proposed penalty.

A copy of these rules of practice shall accompany each complaint served.

(b) *Complaint for the revocation or suspension of a permit.* Each complaint for the revocation or suspension of a permit shall include:

(1) A statement reciting the section(s) of the Act, regulations, and/or permit authorizing the issuance of the complaint;

(2) Specific reference to each term or condition of the permit which the respondent is alleged to have violated, to each alleged inaccuracy or misrepresentation in respondent's permit application, to each fact which the respondent allegedly failed to disclose in his permit application, or to other reasons which form the basis for the complaint;

(3) A concise statement of the factual basis for such allegations;

(4) A request for an order to either revoke or suspend the permit and a statement of the terms and conditions of any proposed partial suspension or revocation;

(5) A statement indicating the basis for recommending the revocation, rather than the suspension, of the permit, or vice versa, as the case may be;

(6) Notice of the respondent's right to request a hearing on any material fact contained in the complaint, or on the appropriateness of the proposed revocation or suspension.

A copy of these rules of practice shall accompany each complaint served.

(c) *Derivation of proposed civil penalty.* The dollar amount of the proposed civil penalty shall be determined in accordance with any criteria set forth in the Act relating to the proper amount of a civil penalty and with any civil penalty guidelines issued under the Act.

(d) *Amendment of the complaint.* The complainant may amend the complaint once as a matter of right at any time before the answer is filed. Otherwise the complainant may amend the complaint only upon motion granted by the Presiding Officer or Regional Administrator, as appropriate. Respondent shall have twenty (20) additional days from the date of service of the amended complaint to file his answer.

(e) *Withdrawal of the complaint.* The complainant may withdraw the complaint, or any part thereof, without prejudice one time before the answer has been filed. After one withdrawal before the filing of an answer, or after the filing of an answer, the complainant may withdraw the complaint, or any part thereof, without prejudice, only upon motion granted by the Presiding Officer or Regional Administrator, as appropriate.

§ 22.15 Answer to the complaint.

(a) *General.* Where respondent: (1) Contests any material fact upon which the complaint is based; (2) contends that the amount of the penalty proposed in the complaint or the proposed revocation or suspension, as the case may be, is inappropriate; or (3) contends that he is entitled to judgment as a matter of law, he shall file a written answer

to the complaint with the Regional Hearing Clerk. Any such answer to the complaint must be filed with the Regional Hearing Clerk within twenty (20) days after service of the complaint.

(b) *Contents of the answer.* The answer shall clearly and directly admit, deny or explain each of the factual allegations contained in the complaint with regard to which respondent has any knowledge. Where respondent has no knowledge of a particular factual allegation and so states, the allegation is deemed denied. The answer shall also state (1) the circumstances or arguments which are alleged to constitute the grounds of defense, (2) the facts which respondent intends to place at issue, and (3) whether a hearing is requested.

(c) *Request for hearing.* A hearing upon the issues raised by the complaint and answer shall be held upon request of respondent in the answer. In addition, a hearing may be held at the discretion of the Presiding Officer, sua sponte, if issues appropriate for adjudication are raised in the answer.

(d) *Failure to admit, deny, or explain.* Failure of respondent to admit, deny, or explain any material factual allegation contained in the complaint constitutes an admission of the allegation.

(e) *Amendment of the answer.* The respondent may amend the answer to the complaint upon motion granted by the Presiding Officer.

§ 22.16 Motions.

(a) *General.* All motions, except those made orally on the record during a hearing, shall (1) be in writing; (2) state the grounds therefor with particularity; (3) set forth the relief or order sought; and (4) be accompanied by any affidavit, certificate, other evidence, or legal memorandum relied upon. Such motions shall be served as provided by § 22.05(b)(2).

(b) *Response to motions.* A party's response to any written motion must be filed within ten (10) days after service of such motion, unless additional time is allowed for such response. The response shall be accompanied by any affidavit, certificate, other evidence, or legal memorandum relied upon. If no response is filed within the designated period, the parties may be deemed to have waived any objection to the granting of the motion. The Presiding Officer, the Regional Administrator, or the Environmental Appeals Board, as appropriate, may set a shorter time for response, or make such orders concerning the disposition of motions as they deem appropriate.

(c) *Decision.* Except as provided in § 22.04(d)(1) and § 22.28(a), the Regional Administrator shall rule on all motions filed or made before an answer to the complaint is filed. The Environmental Appeals Board shall rule on all motions filed or made after service of the initial decision upon the parties. The Administrator shall rule on all motions filed or made after service of the initial decision upon the parties. The Presiding Officer shall rule on all other motions. Oral argument on motions will be permitted where the Presiding Officer, the Regional Administrator, or the Environmental Appeals Board considers it necessary or desirable.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992; 57 FR 60129, Dec. 18, 1992]

§ 22.17 Default order.

(a) *Default.* A party may be found to be in default (1) after motion, upon failure to file a timely answer to the complaint; (2) after motion or sua sponte, upon failure to comply with a prehearing or hearing order of the Presiding Officer; or (3) after motion or sua sponte, upon failure to appear at a conference or hearing without good cause being shown. No finding of default on the basis of a failure to appear at a hearing shall be made against the respondent unless the complainant presents sufficient evidence to the Presiding Officer to establish a prima facie case against the respondent. Any motion for a default order shall include a proposed default order and shall be served upon all parties. The alleged defaulting party shall have twenty (20) days from service to reply to the motion. Default by respondent constitutes, for purposes of the pending action only, an admission of all facts alleged in the complaint and a waiver of respondent's right to a hearing on such factual allegations. If the complaint is for the assessment of a civil penalty, the penalty proposed in the complaint shall become due and payable by respondent without further proceedings sixty (60) days after a final order issued upon default. If the complaint is for the revocation or suspension of a permit, the conditions of revocation or suspension proposed in the complaint shall become effective without further proceedings on the date designated by the Administrator in his final order issued upon default. Default by the complainant shall result in the dismissal of the complaint with prejudice.

(b) *Procedures upon default.* When Regional Administrator or Presiding Officer finds a default has occurred, he shall issue a default order against the defaulting party. This order shall constitute the initial decision, and shall be filed with the Regional Hearing Clerk.

(c) *Contents of a default order.* A default order shall include findings of fact showing the grounds for the order, conclusions regarding all material issues of law or discretion, and the penalty which is recommended to be assessed or the terms and conditions of permit revocation or suspension, as appropriate.

(d) For good cause shown the Regional Administrator or the Presiding Officer, as appropriate, may set aside a default order.

§ 22.18 Informal settlement; consent agreement and order.

(a) *Settlement policy.* The Agency encourages settlement of a proceeding at any time if the settlement is consistent with the provisions and objectives of the Act and applicable regulations. The respondent may confer with complainant concerning settlement whether or not the respondent requests a hearing. Settlement conferences shall not affect the respondent's obligation to file a timely answer under § 22.16.

(b) *Consent agreement.* The parties shall forward a written consent agreement and a proposed consent order to the Regional Administrator whenever settlement or compromise is proposed. The consent agreement shall state that, for the purpose of this proceeding, respondent (1) admits the jurisdictional allegations of the complaint; (2) admits the facts stipulated in the consent agreement or neither admits nor denies specific factual allegations contained in the complaint; and (3) consents to the assessment of a stated civil penalty or to the stated permit revocation or suspension, as the case may be. The consent agreement shall include any and all terms of the agreement, and shall be signed by all parties or their counsel or representatives.

(c) *Consent order.* No settlement or consent agreement shall dispose of any proceeding under these rules of practice without a consent order from the Regional Administrator. In preparing such an order, the Regional Administrator may require that the parties to the settlement appear before him to answer inquiries relating to the consent agreement or order.

§ 22.19 Prehearing conference.

(a) *Purpose of prehearing conference.* Unless a conference appears unnecessary, the Presiding Officer, at any time before the hearing begins, shall direct the parties and their counsel or other representatives to appear at a conference before him to consider:

(1) The settlement of the case;

(2) The simplification of issues and stipulation of facts not in dispute;

(3) The necessity or desirability of amendments to pleadings;

(4) The exchange of exhibits, documents, prepared testimony, and admissions or stipulations of fact which will avoid unnecessary proof;

(5) The limitation of the number of expert or other witnesses;

(6) Setting a time and place for the hearing; and

(7) Any other matters which may expedite the disposition of the proceeding.

(b) *Exchange of witness lists and documents.* Unless otherwise ordered by the Presiding Officer, each party at the prehearing conference shall make available to all other parties (1) The names of the expert and other witnesses he intends to call, together with a brief narrative summary of their expected testimony, and (2) copies of all documents and exhibits which each party intends to introduce into evidence. Documents and exhibits shall be marked for identification as ordered by the Presiding Officer. Documents that have not been exchanged and witnesses whose names have not been exchanged shall not be introduced into evidence or allowed to testify without permission of the Presiding Officer. The Presiding Officer shall allow the parties reasonable opportunity to review new evidence.

(c) *Record of the prehearing conference.* No transcript of a prehearing conference relating to settlement shall be made. With respect to other prehearing conferences, no transcript of any prehearing conferences shall be made unless ordered by the Presiding Officer upon motion of a party or sua sponte. The Presiding Officer shall prepare and file for the record a written summary of the action taken at the conference. The summary shall incorporate any written stipulations or agreements of the parties and all rulings and appropriate orders containing directions to the parties.

(d) *Location of prehearing conference.* The prehearing conference shall be held in the county where the respondent resides or conducts the business which the hearing concerns, in the city in which the relevant Environmental Protection Agency Regional Office is located, or in Washington, DC, unless (1) the Presiding Officer determines that there is good cause to hold it at another location in a region or by telephone, or (2) the Supplemental rules of practice provide otherwise.

(e) *Unavailability of a prehearing conference.* If a prehearing conference is unnecessary or impracticable, the Presiding Officer, on motion or sua sponte, may direct the parties to correspond with him to accomplish any of the objectives set forth in this section.

(f) *Other discovery.* (1) Except as provided by paragraph (b) of this section, further discovery, under this section, shall be permitted only upon determination by the Presiding Officer:

(i) That such discovery will not in any way unreasonably delay the proceeding;

(ii) That the information to be obtained is not otherwise obtainable; and

(iii) That such information has significant probative value.

(2) The Presiding Officer shall order depositions upon oral questions only upon a showing of good cause and upon a finding that:

(i) The information sought cannot be obtained by alternative methods; or

(ii) There is a substantial reason to believe that relevant and probative evidence may otherwise not

be preserved for presentation by a witness at the hearing.

(3) Any party to the proceeding desiring an order of discovery shall make a motion therefor. Such a motion shall set forth;

(i) The circumstances warranting the taking of the discovery;

(ii) The nature of the information expected to be discovered; and

(iii) The proposed time and place where it will be taken. If the Presiding Officer determines that the motion should be granted, he shall issue an order for the taking of such discovery together with the conditions and terms thereof.

(4) When the information sought to be obtained is within the control of one of the parties, failure to comply with an order issued pursuant to this paragraph may lead to (i) the inference that the information to be discovered would be adverse to the party from whom the information was sought, or (ii) the issuance of a default order under § 22.17(a).

§ 22.20 Accelerated decision; decision to dismiss.

(a) *General.* The Presiding Officer, upon motion of any party or sua sponte, may at any time render an accelerated decision in favor of the complainant or the respondent as to all or any part of the proceeding, without further hearing or upon such limited additional evidence, such as affidavits, as he may require, if no genuine issue of material fact exists and a party is entitled to judgment as a matter of law, as to all or any part of the proceeding. In addition, the Presiding Officer, upon motion of the respondent, may at any time dismiss an action without further hearing or upon such limited additional evidence as he requires, on the basis of failure to establish a prima facie case or other grounds which show no right to relief on the part of the complainant.

(b) *Effect.* (1) If an accelerated decision or a decision to dismiss is issued as to all the issues and claims in the proceeding, the decision constitutes an initial decision of the Presiding Officer, and shall be filed with the Regional Hearing Clerk.

(2) If an accelerated decision or a decision to dismiss is rendered on less than all issues or claims in the proceeding, the Presiding Officer shall determine what material facts exist without substantial controversy and what material facts remain controverted in good faith. He shall thereupon issue an interlocutory order specifying the facts which appear substantially uncontroverted, and the issues and claims upon which the hearing will proceed.

Subpart D—Hearing Procedure

§ 22.21 Scheduling the hearing.

(a) When an answer is filed, the Regional Hearing Clerk shall forward the complaint, the answer, and any other documents filed thus far in the proceeding to the Chief Administrative Law Judge who shall assign himself or another Administrative Law Judge as Presiding Officer, unless otherwise provided in the Supplemental rules of practice. The Presiding Officer shall then obtain the case file from the Chief Administrative Law Judge and notify the parties of his assignment.

(b) *Notice of hearing.* If the respondent requests a hearing in his answer, or one is ordered by the Presiding Officer under § 22.15(c), the Presiding Officer shall serve upon the parties a notice of hearing setting forth a time and place for the hearing. The Presiding Officer may issue the notice of hearing at any appropriate time, but not later than twenty (20) days prior to the date set for the hearing.

(c) *Postponement of hearing.* No request for postponement of a hearing shall be granted except upon motion and for good cause shown.

(d) *Location of the hearing.* The location of the hearing shall be determined in accordance with the method for determining the location of a prehearing conference under § 22.19(d).

§ 22.22 Evidence.

(a) *General.* The Presiding Officer shall admit all evidence which is not irrelevant, immaterial, unduly repetitious, or otherwise unreliable or of little probative value, except that evidence relating to settlement which would be excluded in the federal courts under Rule 408 of the Federal Rules of Evidence is not admissible. In the presentation, admission, disposition, and use of evidence, the Presiding Officer shall preserve the confidentiality of trade secrets and other commercial and financial information. The confidential or trade secret status of any information shall not, however, preclude its being introduced into evidence. The Presiding Officer may make such orders as may be necessary to consider such evidence *in camera*, including the preparation of a supplemental initial decision to address questions of law, fact, or discretion which arise out of that portion of the evidence which is confidential or which includes trade secrets.

(b) *Examination of witnesses.* Witnesses shall be examined orally, under oath or affirmation, except as otherwise provided in these rules of practice or by the Presiding Officer. Parties shall have the right to cross-examine a witness who appears at the hearing provided that such cross-examination is not unduly repetitious.

(c) *Verified statements.* The Presiding Officer may admit an insert into the record as evidence,

in lieu of oral testimony, statements of fact or opinion prepared by a witness. The admissibility of the evidence contained in the statement shall be subject to the same rules as if the testimony were produced under oral examination. Before any such statement is read or admitted into evidence, the witness shall deliver a copy of the statement to the Presiding Officer, the reporter, and opposing counsel. The witness presenting the statement shall swear to or affirm the statement and shall be subject to appropriate oral cross-examination upon the contents thereof.

(d) *Admission of affidavits where the witness is unavailable.* The Presiding Officer may admit into evidence affidavits of witnesses who are unavailable. The term ''unavailable'' shall have the meaning accorded to it by Rule 804(a) of the Federal Rules of Evidence.

(e) *Exhibits.* Where practicable, an original and one copy of each exhibit shall be filed with the Presiding Officer for the record and a copy shall be furnished to each party. A true copy of any exhibit may be substituted for the original.

(f) *Official notice.* Official notice may be taken of any matter judicially noticed in the Federal courts and of other facts within the specialized knowledge and experience of the Agency. Opposing parties shall be given adequate opportunity to show that such facts are erroneously noticed.

§ 22.23 Objections and offers of proof.

(a) *Objection.* Any objection concerning the conduct of the hearing may be stated orally or in writing during the hearing. The party raising the objection must supply a short statement of its grounds. The ruling by the Presiding Officer on any objection and the reasons given for it shall be part of the record. An exception to each objection overruled shall be automatic and is not waived by further participation in the hearing.

(b) *Offer of proof.* Whenever evidence is excluded from the record, the party offering the evidence may make an offer of proof, which shall be included in the record. The offer of proof for excluded oral testimony shall consist of a brief statement describing the nature of the evidence excluded. The offer of proof for excluded documents or exhibits shall consist of the insertion in the record of the documents or exhibits excluded. Where the Environmental Appeals Board decides that the ruling of the Presiding Officer in excluding the evidence was both erroneous and prejudicial, the hearing may be reopened to permit the taking of such evidence.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

§ 22.24 Burden of presentation; burden of persuasion.

The complainant has the burden of going forward with and of proving that the violation occurred as set forth in the complaint and that the proposed civil penalty, revocation, or suspension, as the case may be, is appropriate. Following the establishment of a prima facie case, respondent shall have the burden of presenting and of going forward with any defense to the allegations set forth in the complaint. Each matter of controversy shall be determined by the Presiding Officer upon a preponderance of the evidence.

§ 22.25 Filing the transcript.

The hearing shall be transcribed verbatim. Promptly following the taking of the last evidence, the reporter shall transmit to the Regional Hearing Clerk the original and as many copies of the transcript of testimony as are called for in the reporter's contract with the Agency, and also shall transmit to the Presiding Officer a copy of the transcript. A certificate of service shall accompany each copy of the transcript. The Regional Hearing Clerk shall notify all parties of the availability of the transcript and shall furnish the parties with a copy of the transcript upon payment of the cost of reproduction, unless a party can show that the cost is unduly burdensome. Any person not a party to the proceeding may receive a copy of the transcript upon payment of the reproduction fee, except for those parts of the transcript order to be kept confidential by the Presiding Officer.

§ 22.26 Proposed findings, conclusions, and order.

Within twenty (20) days after the parties are notified of the availability of the transcript, or within such longer time as may be fixed by the Presiding Officer, any party may submit for the consideration of the Presiding Officer, proposed findings of fact, conclusions of law, and a proposed order, together with briefs in support thereof. The Presiding Officer shall set a time by which reply briefs must be submitted. All submissions shall be in writing, shall be served upon all parties, and shall contain adequate references to the record and authorities relied on.

Subpart E—Initial Decision and Motion To Reopen a Hearing

§ 22.27 Initial decision.

(a) *Filing and contents.* The Presiding Officer shall issue and file with the Regional Hearing Clerk his initial decision as soon as practicable after the period for filing reply briefs under § 22.26 has expired. The Presiding Officer shall

retain a copy of the complaint in the duplicate file. The initial decision shall contain his findings of fact, conclusions regarding all material issues of law or discretion, as well as reasons therefor, a recommended civil penalty assessment, if appropriate, and a proposed final order. Upon receipt of an initial decision, the Regional Hearing Clerk shall forward a copy to all parties, and shall send the original, along with the record of the proceeding, to the Hearing Clerk. The Hearing Clerk shall forward a copy of the initial decision to the Environmental Appeals Board.

(b) *Amount of civil penalty.* If the Presiding Officer determines that a violation has occurred, the Presiding Officer shall determine the dollar amount of the recommended civil penalty to be assessed in the initial decision in accordance with any criteria set forth in the Act relating to the proper amount of a civil penalty, and must consider any civil penalty guidelines issued under the Act. If the Presiding Officer decides to assess a penalty different in amount from the penalty recommended to be assessed in the complaint, the Presiding Officer shall set forth in the initial decision the specific reasons for the increase or decrease. The Presiding Officer shall not raise a penalty from that recommended to be assessed in the complaint if the respondent has defaulted.

(c) *Effect of initial decision.* The initial decision of the Presiding Officer shall become the final order of the Environmental Appeals Board within forty-five (45) days after its service upon the parties and without further proceedings unless (1) an appeal to the Environmental Appeals Board is taken from it by a party to the proceedings, or (2) the Environmental Appeals Board elects, sua sponte, to review the initial decision.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

§ 22.28 Motion to reopen a hearing.

(a) *Filing and content.* A motion to reopen a hearing to take further evidence must be made no later than twenty (20) days after service of the initial decision on the parties and shall (1) state the specific grounds upon which relief is sought, (2) state briefly the nature and purpose of the evidence to be adduced, (3) show that such evidence is not cumulative, and (4) show good cause why such evidence was not adduced at the hearing. The motion shall be made to the Presiding Officer and filed with the Regional Hearing Clerk.

(b) *Disposition of motion to reopen a hearing.* Within ten (10) days following the service of a motion to reopen a hearing, any other party to the proceeding may file with the Regional Hearing Clerk and serve on all other parties an answer thereto. The Presiding Officer shall announce his intent to grant or deny such motion as soon as practicable thereafter. The conduct of any proceeding which may be required as a result of the granting of any motion allowed in this section shall be governed by the provisions of the applicable sections of these rules. The filing of a motion to reopen a hearing shall automatically stay the running of all time periods specified under these Rules until such time as the motion is denied or the reopened hearing is concluded.

Subpart F—Appeals and Administrative Review

§ 22.29 Appeal from or review of interlocutory orders or rulings.

(a) *Request for interlocutory appeal.* Except as provided in this section, appeals to the Environmental Appeals Board shall obtain as a matter of right only from a default order, an accelerated decision or decision to dismiss issued under § 22.20(b)(1), or an initial decision rendered after an evidentiary hearing. Appeals from other orders or rulings shall lie only if the Presiding Officer or Regional Administrator, as appropriate, upon motion of a party, certifies such orders or rulings to the Environmental Appeals Board on appeal. Requests for such certification shall be filed in writing within six (6) days of notice of the ruling or service of the order, and shall state briefly the grounds to be relied upon on appeal.

(b) *Availability of interlocutory appeal.* The Presiding Officer may certify any ruling for appeal to the Environmental Appeals Board when (1) the order or ruling involves an important question of law or policy concerning which there is substantial grounds for difference of opinion, and (2) either (i) an immediate appeal from the order or ruling will materially advance the ultimate termination of the proceeding, or (ii) review after the final order is issued will be inadequate or ineffective.

(c) *Decision.* If the Environmental Appeals Board determines that certification was improvidently granted, or if the Environmental Appeals Board takes no action within thirty (30) days of the certification, the appeal is dismissed. When the Presiding Officer declines to certify an order or ruling to the Environmental Appeals Board on interlocutory appeal, it may be reviewed by the Environmental Appeals Board only upon appeal from the initial decision, except when the Environmental Appeals Board determines, upon motion of a party and in exceptional circumstances, that to delay review would be contrary to the public interest. Such motion shall be made within six (6) days of service of an order of the Presiding Officer refusing to certify a ruling for interlocutory appeal to the Environmental Appeals Board. Ordinarily, the interlocutory appeal will be decided on the basis of the submissions made by the Presiding

Officer. The Environmental Appeals Board may, however, allow further briefs and oral argument.

(d) *Stay of proceedings.* The Presiding Officer may stay the proceedings pending a decision by the Environmental Appeals Board upon an order or ruling certified by the Presiding Officer for an interlocutory appeal. Proceedings will not be stayed except in extraordinary circumstances. Where the Presiding Officer grants a stay of more than thirty (30) days, such stay must be separately approved by the Environmental Appeals Board.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

§ 22.30 Appeal from or review of initial decision.

(a) *Notice of appeal.* (1) Any party may appeal an adverse ruling or order of the Presiding Officer by filing a notice of appeal and an accompanying appellate brief with the Environmental Appeals Board and upon all other parties and amicus curiae within twenty (20) days after the initial decision is served upon the parties. The notice of appeal shall set forth alternative findings of fact, alternative conclusions regarding issues of law or discretion, and a proposed order together with relevant references to the record and the initial decision. The appellant's brief shall contain a statement of the issues presented for review, a statement of the nature of the case and the facts relevant to the issues presented for review, argument on the issues presented, and a short conclusion stating the precise relief sought, together with appropriate references to the record.

(2) Within fifteen (15) days of the service of notices of appeal and briefs under paragraph (a)(1) of this section, any other party or amicus curiae may file and serve with the Environmental Appeals Board a reply brief responding to argument raised by the appellant, together with references to the relevant portions of the record, initial decision, or opposing brief. Reply briefs shall be limited to the scope of the appeal brief. Further briefs shall be filed only with the permission of the Environmental Appeals Board.

(b) *Sua sponte review by the Environmental Appeals Board.* Whenever the Environmental Appeals Board determines sua sponte to review an initial decision, the Environmental Appeals Board shall serve notice of such intention on the parties within forty-five (45) days after the initial decision is served upon the parties. The notice shall include a statement of issues to be briefed by the parties and a time schedule for the service and filing of briefs.

(c) *Scope of appeal or review.* If the Environmental Appeals Board determines that issues raised, but not appealed by the parties, should be argued, it shall give counsel for the parties reasonable written notice of such determination to permit preparation of adequate argument. Nothing herein shall prohibit the Environmental Appeals Board from remanding the case to the Presiding Officer for further proceedings.

(d) *Argument before the Environmental Appeals Board.* The Environmental Appeals Board may, upon request of a party or sua sponte, assign a time and place for oral argument after giving consideration to the convenience of the parties.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5325, Feb. 13, 1992]

Subpart G—Final Order on Appeal

§ 22.31 Final order on appeal.

(a) *Contents of the final order.* When an appeal has been taken or the Environmental Appeals Board issues a notice of intent to conduct a review sua sponte, the Environmental Appeals Board shall issue a final order as soon as practicable after the filing of all appellate briefs or oral argument, whichever is later. The Environmental Appeals Board shall adopt, modify, or set aside the findings and conclusions contained in the decision or order being reviewed and shall set forth in the final order the reasons for its actions. The Environmental Appeals Board may, in its discretion, increase or decrease the assessed penalty from the amount recommended to be assessed in the decision or order being reviewed, except that if the order being reviewed is a default order, the Environmental Appeals Board may not increase the amount of the penalty.

(b) *Payment of a civil penalty.* The respondent shall pay the full amount of the civil penalty assessed in the final order within sixty (60) days after receipt of the final order unless otherwise agreed by the parties. Payment shall be made by forwarding to the Regional Hearing Clerk a cashier's check or certified check in the amount of the penalty assessed in the final order, payable to the Treasurer, United States of America.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5326, Feb. 13, 1992]

§ 22.32 Motion to reconsider a final order.

Motions to reconsider a final order shall be filed within ten (10) days after service of the final order. Every such motion must set forth the matters claimed to have been erroneously decided and the nature of the alleged errors. Motions for reconsideration under this provision shall be directed to, and decided by, the Environmental Appeals Board. Motions for reconsideration directed to the Administrator, rather than to the Environmental Appeals Board, will not be considered, except in cases that

the Environmental Appeals Board has referred to the Administrator pursuant to § 22.04(a) and in which the Administrator has issued the final order. A motion for reconsideration shall not stay the effective date of the final order unless specifically so ordered by the Environmental Appeals Board.

[57 FR 5326, Feb. 13, 1992]

Subpart H—Supplemental Rules

§ 22.33 Supplemental rules of practice governing the administrative assessment of civil penalties under the Toxic Substances Control Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules of practice shall govern, in conjunction with the preceding consolidated rules of practice (40 CFR part 22), all formal adjudications for the assessment of any civil penalty conducted under section 16(a) of the Toxic Substances Control Act (15 U.S.C. 2615(a)). Where inconsistencies exist between these Supplemental rules and the Consolidated rules, (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Subpoenas.* (1) The attendance of witnesses or the production of documentary evidence may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of (i) the grounds and necessity therefor, and (ii) the materiality and relevancy of the evidence to be adduced. Requests for the production of documents shall describe the evidence sought as specifically as practicable.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to a request initiated by the Presiding Officer, fees shall be paid by the agency.

§ 22.34 Supplemental rules of practice governing the administrative assessment of civil penalties under title II of the Clean Air Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all proceedings to assess a civil penalty conducted under sections 205(c), 211(d), and 213(d) of the Clean Air Act, as amended (42 U.S.C. 7524(c), 7545(d), and 7547(d)). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Issuance of notice.* (1) Prior to the issuance of an administrative penalty order assessing a civil penalty, the person to whom the order is to be issued shall be given written notice of the proposed issuance of the order. Such notice shall be provided by the issuance of a complaint pursuant to § 22.13 of the Consolidated Rules of Practice.

(2) Notwithstanding § 22.15(a), any answer to the complaint must be filed with the Hearing Clerk within thirty (30) days after service of the complaint.

(c) *Subpoenas.* (1) The attendance of witnesses or the production of documentary evidence may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of;

(i) The grounds and necessity therefor, and

(ii) The materiality and relevancy of the evidence to be adduced.

Requests for the production of documents shall describe with specificity the documents sought.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid in the courts of the United States. Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to a request initiated by the Presiding Officer, fees shall be paid by EPA.

[57 FR 4318, Feb. 4, 1992]

§ 22.35 Supplemental rules of practice governing the administrative assessment of civil penalties under the Federal Insecticide, Fungicide, and Rodenticide Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all formal adjudications for the assessment of any civil penalty conducted under section 14(a) of the Federal Insecticide, Fungicide, and Rodenticide Act as amended (7 U.S.C. 1261(a)). Where inconsistencies exist between these Supplemental rules and the Consolidated rules, (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Venue.* The prehearing conference and the hearing shall be held in the county, parish, or incorporated city of the residence of the person charged, unless otherwise agreed in writing by all parties.

(c) *Evaluation of proposed civil penalty.* In determining the dollar amount of the recommended civil penalty assessed in the initial decision, the Presiding Officer shall consider, in addition to the criteria listed in section 14(a)(3) of the Act, (1) respondent's history of compliance with the Act or

its predecessor statute and (2) any evidence of good faith or lack thereof. The Presiding Officer must also consider the guidelines for the Assessment of Civil Penalties published in the FEDERAL REGISTER (39 FR 27711), and any amendments or supplements thereto.

§ 22.36 Supplemental rules of practice governing the administrative assessment of civil penalties and the revocation or suspension of permits under the Marine Protection, Research, and Sanctuaries Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all formal adjudications conducted under section 105(a) or (f) of the Marine Protection, Research, and Sanctuaries Act as amended (33 U.S.C. 1415(a) and (f)). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules, (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Additional criterion for the issuance of a complaint for the revocation or suspension of a permit.* In addition to the three criteria listed in 40 CFR 22.13 for issuing a complaint for the revocation or suspension of a permit, complaints may be issued on the basis of a person's failure to keep records and notify appropriate officials of dumping activities, as required by 40 CFR 224.1 and 223.2.

§ 22.37 Supplemental rules of practice governing the administrative assessment of civil penalties under the Solid Waste Disposal Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all proceedings to assess a civil penalty conducted under section 3008 of the Solid Waste Disposal Act (42 U.S.C. 6928) (the ''Act''). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules, (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Issuance of notice.* Whenever, on the basis of any information, the Administrator determines that any person is in violation of (1) any requirement of subtitle C of the Act, (2) any regulation promulgated pursuant to subtitle C of the Act, or (3) a term or condition of a permit issued pursuant to subtitle C of the Act, the Administrator shall issue notice to the alleged violator of his failure to comply with such requirement, regulation or permit.

(c) *Content of notice.* Each notice of violation shall include:

(1) A specific reference to each provision of the Act, regulation, or permit term or condition which the alleged violator is alleged to have violated; and

(2) A concise statement of the factual basis for alleging such violation.

(d) *Service of notice.* Service of notice shall be made in accordance with § 22.05(b)(2) of the Consolidated Rules of Practice.

(e) *Issuance of the complaint.* (1) Except as provided in paragraph (e)(3) of this section, the complainant may issue a complaint whenever he has reason to believe that any violation extends beyond the thirtieth day after service of the notice of violation.

(2) The complaint shall include, in addition to the elements stated in § 22.14 of the Consolidated Rules, an order requiring compliance within a specified time period. The complaint shall be equivalent to the compliance order referred to in section 3008 of the Act.

(3) Whenever a violation is of a non-continuous or intermittent nature, the Administrator may issue a complaint, without any prior notice to the violator, pursuant to § 22.14 of the Consolidated Rules of Practice which may also require the violator to take any and all measures necessary to offset all adverse effects to health and the environment created, directly or indirectly, as a result of the violation.

(4) Notwithstanding § 22.15(a), any answer to the complaint must be filed with the Regional Hearing Clerk within thirty (30) days after the filing of the complaint.

(f) *Subpoenas.* (1) The attendance of witnesses or the production of documentary evidence may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of (i) the grounds and necessity therefor, and (ii) the materiality and relevancy of the evidence to be adduced. Requests for the production of documents shall describe with specificity the documents sought.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to a request initiated by the Presiding Officer, fees shall be paid by the Agency.

(g) *Final Orders to Federal Agencies on Appeal.* (1) In the case of an administrative order or decision issued to a department, agency, or instrumentality of the United States, such order or decision shall become the final order for purposes of the Federal Facility Compliance Act, 42 U.S.C.

6961(b), in accordance with §§ 22.27(c) and 22.31 except as provided in paragraph (g)(2) of this section.

(2) In the case of an administrative order or decision issued by the Environmental Appeals Board, if the head of the affected department, agency, or instrumentality requests a conference with the Administrator in writing and serves a copy of the request on the parties of record within thirty days of the Environmental Appeals Board's service of the order or decision, a decision by the Administrator (rather than the Environmental Appeals Board) shall be the final order for the purposes of the Federal Facility Compliance Act.

(3) In the event the department, agency, or instrumentality of the United States files a motion for reconsideration with the Environmental Appeals Board in accordance with § 22.32, filing such motion for reconsideration shall not toll the thirty-day period for filing the request with the Administrator for a conference unless specifically so ordered by the Environmental Appeals Board.

(42 U.S.C. 6901, *et seq.*)

[45 FR 24363, Apr. 9, 1980, as amended at 61 FR 11092, Mar. 18, 1996]

EFFECTIVE DATE NOTE: At 45 FR 79808, Dec. 2, 1980, paragraphs (b), (c), (d), (e)(1) and (3) of § 22.37 were suspended until further notice, effective Dec. 2, 1980.

§ 22.38 Supplemental rules of practice governing the administrative assessment of Class II penalties under the Clean Water Act.

(a) *Scope of these supplemental rules.* These supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), administrative proceedings for the assessment of any Class II civil penalty under section 309(g) of the Clean Water Act (33 U.S.C. 1319(g)).

(b) *Consultation with states.* The Administrator will consult with the state in which the alleged violation occurs before issuing a final order assessing a Class II civil penalty.

(c) *Public notice.* Before issuing a final order assessing a Class II civil penalty, the Administrator will provide public notice of the complaint.

(d) *Comment by a person who is not a party.* A person not a party to the Class II proceeding who wishes to comment upon a complaint must file written comments with the Regional Hearing Clerk within 30 days after public notice of the complaint and serve a copy of the comments upon each party. For good cause shown the Administrator, the Regional Administrator, or the Presiding Officer, as appropriate, may accept late comments. The Administrator will give any person who comments on a complaint notice of any hearing and notice of the final order assessing a penalty. Although commenters may be heard and present evidence at any hearing held under section 309(g) of the Act, commenters shall not be accorded party status with right of cross examination unless they formally move to intervene and are granted party status under § 22.11.

(e) *Administrative procedure and judicial review.* Action of the Administrator for which review could have been obtained under section 509(b)(1) of the Act shall not be subject to review in an administrative proceeding for the assessment of Class II civil penalty under section 309(g).

(f) *Petitions to set aside an order and to provide a hearing.* If no hearing on the complaint is held before issuance of an order assessing a Class II civil penalty, any person who commented on the complaint may petition the Administrator, within 30 days after issuance of the order, to set aside the order and to provide a hearing on the complaint. If the evidence presented by the petitioner in support of the petition is material and was not considered in the issuance of the order, the Administrator will immediately set aside the order and provide a hearing in accordance with the Consolidated Rules of Practice and these supplemental rules of practice. If the Administrator denies a hearing under section 309(g)(4)(C) of the Act, the Administrator will provide to the petitioner, and publish in the FEDERAL REGISTER, notice of and the reasons for the denial.

[55 FR 23840, June 12, 1990]

§ 22.39 Supplemental rules of practice governing the administrative assessment of administrative penalties under section 109 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended.

(a) *Scope of these Supplemental rules.* These Supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), administrative proceedings for the assessment of any civil penalty under section 109 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (42 U.S.C. 9609). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Subpoenas.* (1) The attendance and testimony of witnesses or the production of relevant papers, books, and documents may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of—

(i) The grounds and necessity therefor, and

(ii) The materiality and relevancy of the evidence to be adduced.

Requests for the production of documents shall describe the evidence sought as specifically as practicable.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to a request initiated by the Presiding Officer, fees shall be paid by the Agency.

(c) *Judicial review.* Any person who requested a hearing with respect to a Class II civil penalty under section 109 of CERCLA and who is the recipient of a final order assessing a civil penalty may file a petition for judicial review of such order with the United States Court of Appeals for the District of Columbia or for any other circuit in which such person resides or transacts business. Any person who requested a hearing with respect to a Class I civil penalty under section 109 of CERCLA and who is the recipient of a final order assessing the civil penalty may file a petition for judicial review of such order with the appropriate district court of the United States. All petitions must be filed within 30 days of the date the order making the assessment was issued.

(d) *Payment of civil penalty assessed.* Payment of civil penalties finally assessed by the Regional Administrator shall be made by forwarding a cashier's check, payable to the ''EPA, Hazardous Substances Superfund,'' in the amount assessed, and noting the case title and docket number, to the appropriate regional Superfund Lockbox Depository. Notice of payment must be sent by Respondent to the Hearing Clerk for inclusion as part of the administrative record for the proceeding in which the civil penalty was assessed. Interest on overdue payments shall be collected pursuant to the Debt Collection Act, 37 U.S.C. 3717.

[54 FR 21176, May 16, 1989]

§ 22.40 Supplemental rules of practice governing the administrative assessment of administrative penalties under section 325 of the Emergency Planning and Community Right-To-Know Act of 1986 (EPCRA).

(a) *Scope of these Supplemental Rules.* These Supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), administrative proceedings for the assessment of any civil penalty under section 325 for violations of the Emergency Planning and Community Right-To-Know Act of 1986 (EPCRA). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules, (§§ 22.01 through 22.32) these Supplemental rules shall apply.

(b) *Subpoenas.* (1) The attendance and testimony of witnesses or the production of relevant papers, books, and documents may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of (i) the grounds and necessity therefore, and (ii) the materiality and relevancy of the evidence to be adduced. Requests for the production of documents shall describe the evidence sought as specifically as practicable.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to request initiated by the Presiding Officer, fees shall be paid by the Agency.

(c) *Judicial review.* Any person against whom a civil penalty is assessed may seek judicial review in the appropriate district court of the United States by filing a notice of appeal and by simultaneously sending a copy of such notice by certified mail to the Administrator. The notice must be filed within 30 days of the date the order making such assessment was issued. The Administrator shall promptly file in such court a certified copy of the record upon which such violation was found or such penalty imposed.

(d) *Procedures for collection of civil penalty.* If any person fails to pay an assessment of a civil penalty after it has become a final and unappealable order or after the appropriate court has entered final judgment in favor of the United States, the Administrator may request the Attorney General of the United States to institute a civil action in an appropriate district court of the United States to collect the penalty, and such court shall have jurisdiction to hear and decide any such action. In hearing such action, the court shall have authority to review the violation and the assessment of the civil penalty on the record. Interest on overdue payments shall be collected pursuant to the Debt Collection Act, 37 U.S.C. 3717.

[54 FR 21176, May 16, 1989]

§ 22.41 Supplemental rules of practice governing the administrative assessment of civil penalties under Title II of the Toxic Substances Control Act, enacted as section 2 of the Asbestos Hazard Emergency Response Act (AHERA).

(a) Scope of the Supplemental rules. These Supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all proceedings to assess a civil penalty conducted under section 207 of the Toxic Substances Control Act (the ''Act'') (15 U.S.C. 2647). Where inconsistencies exist between these Supplemental rules and the Consolidated rules (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) Collection of civil penalty. Any civil penalty collected under section 207 of the Act shall be used by the local educational agency for purposes of complying with Title II of the Act. Any portion of a civil penalty remaining unspent after a local educational agency achieves compliance shall be deposited into the Asbestos Trust Fund established under section 5 of AHERA.

[54 FR 24112, June 5, 1989]

§ 22.42 Supplemental rules of practice governing the administrative assessment of civil penalties for violations of compliance orders issued under Part B of the Safe Drinking Water Act.

(a) *Scope of these supplemental rules.* These supplemental rules of practice shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all proceedings to assess a civil penalty under section 1414(g)(3)(B). Where inconsistencies exist between these supplemental rules and the Consolidated rules, these supplemental rules shall apply.

(b) *Definition of ''person.''* In addition to the terms set forth in 40 CFR 22.03(a) that define *person*, for purposes of this section and proceedings under section 1414(g)(3)(B) of the Safe Drinking Water Act, the term person shall also include any officer, employee, or agent of any corporation, company or association.

(c) *Issuance of complaint.* If the Administrator determines that a person has violated any provision of a compliance order issued under section 1414(g)(1) of the Safe Drinking Water Act, 42 U.S.C. 300g–3(g)(1), he may institute a proceeding for the assessment of a civil penalty by issuing a complaint under the Act and this part.

(d) *Content of the complaint.* A complaint for the assessment of civil penalties under this part shall include specific reference to:

(1) Each provision of the compliance order issued under section 1414(g)(1) of the Act, 42 U.S.C. 300g–3(g)(1), which is alleged to have violated; and

(2) Each violation of a Safe Drinking Water Act regulation, schedule, or other requirement which served as the basis for the compliance order which is alleged to have been violated.

(e) *Scope of hearing.* Action of the Administrator with respect to which judicial review could have been obtained under section 1448 of the Safe Drinking Water Act, 42 U.S.C. 300j–7, shall not be subject to review in an administrative proceeding for the assessment of a civil penalty under section 1414(g)(3)(B) of the SDWA and this part.

[56 FR 3757, Jan. 30, 1991]

§ 22.43 Supplemental rules of practice governing the administrative assessment of civil penalties under section 113(d)(1) of the Clean Air Act.

(a) *Scope of these Supplemental rules.* These Supplemental rules shall govern, in conjunction with the preceding Consolidated Rules of Practice (40 CFR part 22), all proceedings to assess a civil penalty conducted under section 113(d)(1) of the Clean Air Act (42 U.S.C. 7413(d)(1)). Where inconsistencies exist between these Supplemental rules and the Consolidated Rules (§§ 22.01 through 22.32), these Supplemental rules shall apply.

(b) *Issuance of notice.* (1) Prior to the issuance of an administrative penalty order assessing a civil penalty, the person to whom the order is to be issued shall be given written notice of the proposed issuance of the order. Such

notice shall be provided by the issuance of a complaint pursuant to § 22.13 of the Consolidated Rules of Practice.

(2) Notwithstanding § 22.15(a), any answer to the complaint must be filed with the Regional Hearing Clerk within thirty (30) days after service of the complaint.

(c) *Subpoenas.* (1) The attendance of witnesses or the production of documentary evidence may be required by subpoena. The Presiding Officer may grant a request for a subpoena upon a showing of;

(i) The grounds and necessity therefor, and

(ii) The materiality and relevancy of the evidence to be adduced.

Requests for the production of documents shall describe with specificity the documents sought.

(2) Subpoenas shall be served in accordance with § 22.05(b)(1) of the Consolidated Rules of Practice.

(3) Witnesses summoned before the Presiding Officer shall be paid the same fees and mileage that are paid in the courts of the United States.

Fees shall be paid by the party at whose instance the witness appears. Where a witness appears pursuant to a request initiated by the Presiding Officer, fees shall be paid by EPA.

PART 23—JUDICIAL REVIEW UNDER EPA—ADMINISTERED STATUTES

AUTHORITY: Clean Water Act, 33 U.S.C. 1361(a), 1369(b); Clean Air Act, 42 U.S.C. 7601(a)(1), 7607(b); Resource, Conservation and Recovery Act, 42 U.S.C. 6912(a), 6976; Toxic Substances Control Act, 15 U.S.C. 2618; Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. 136n(b), 136w(a); Safe Drinking Water Act, 42 U.S.C. 300j–7(a)(2), 300j–9(a); Atomic Energy Act, 42 U.S.C. 2201, 2239; Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 371(a), 346a, 348; 28 U.S.C. 2112(a), 2343, 2344.

SOURCE: 50 FR 7270, Feb. 21, 1985, unless otherwise noted.

§ 23.1 Definitions.

As used in this part, the term:

(a) *Federal Register document* means a document intended for publication in the Federal Register and bearing in its heading an identification code including the letters *FRL.*

(b) *Admininstrator* means the Administrator or any official exercising authority delegated by the Administrator.

(c) *General Counsel* means the General Counsel of EPA or any official exercising authority delegated by the General Counsel.

[50 FR 7270, Feb. 21, 1985, as amended at 53 FR 29322, Aug. 3, 1988]

§ 23.2 Timing of Administrator's action under Clean Water Act.

Unless the Administrator otherwise explicity provides in a particular promulgation or approval action, the time and date of the Administrator's action in promulgation (for purposes of sections 509(b)(1) (A), (C), and (E)), approving (for purposes of section 509(b)(1)(E)), making a determination (for purposes of section 509(b)(1) (B) and (D), and issuing or denying (for purposes of section 509(b)(1)(F)) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on (a) for a FEDERAL REGISTER document, the date that is two weeks after the date when the document is published in the FEDERAL REGISTER, or (b) for any other document, two weeks after it is signed.

§ 23.3 Timing of Administrator's action under Clean Air Act.

Unless the Administrator otherwise explicitly provides in a particular promulgation, approval, or action, the time and date of such promulgation, approval or action for purposes of the second sentence of section 307(b)(1) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on (a) for a FEDERAL REGISTER document, the date when the document is published in the FEDERAL REGISTER, or (b) for any other document, two weeks after it is signed.

§ 23.4 Timing of Administrator's action under Resource Conservation and Recovery Act.

Unless the Administrator otherwise explicitly provides in taking a particular action, for purposes of section 7006(b), the time and date of the Administrator's action in issuing, denying, modifying, or revoking any permit under section 3005, or in granting, denying, or withdrawing authorization or interim authorization under section 3006, shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is (a) for a FEDERAL REGISTER document, two weeks after the date when the document is published in the FEDERAL REGISTER, or (b) for any other document, two weeks after it is signed.

§ 23.5 Timing of Administrator's action under Toxic Substances Control Act.

Unless the Administrator otherwise explicitly provides in promulgating a particular rule or issuing a particular order, the time and date of the Administrator's promulgation or issuance for purposes of section 19(a)(1) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is (a) for a FEDERAL REGISTER document, two weeks after the date when the document is published in the FEDERAL REGISTER, or (b) for any other document, two weeks after it is signed.

§ 23.6 Timing of Administrator's action under Federal Insecticide, Fungicide and Rodenticide Act.

Unless the Administrator otherwise explicitly provides in a particular order, the time and date of

entry of an order issued by the Administrator following a public hearing for purposes of section 16(b) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is two weeks after it is signed.

§ 23.7 Timing of Administrator's action under Safe Drinking Water Act.

Unless the Administrator otherwise explicitly provides in a particular promulgation action or determination, the time and date of the Administrator's promulgation, issuance, or determination for purposes of section 1448(a)(2) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is (a) for a FEDERAL REGISTER document, two weeks after the date when the document is published in the FEDERAL REGISTER or (b) for any other document, two weeks after it is signed.

§ 23.8 Timing of Administrator's action under Uranium Mill Tailings Radiation Control Act of 1978.

Unless the Administrator otherwise explicitly provides in a particular rule, the time and date of the Administrator's promulgation for purposes of 42 U.S.C. 2022(c)(2) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is two weeks after the date when notice of promulgation is published in the FEDERAL REGISTER.

§ 23.9 Timing of Administrator's action under the Atomic Energy Act.

Unless the Administrator otherwise explicitly provides in a particular order, the time and date of the entry of an order for purposes of 28 U.S.C. 2344 shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is two weeks after the date when notice thereof is published in the FEDERAL REGISTER.

§ 23.10 Timing of Administrator's action under the Federal Food, Drug, and Cosmetic Act.

Unless the Administrator otherwise explicitly provides in a particular order, the time and date of the entry of an order issued after a public hearing for purposes of 21 U.S.C. 346a(i) or 348(g) shall be at 1:00 p.m. eastern time (standard or daylight, as appropriate) on the date that is (a) for a FEDERAL REGISTER document, two weeks after the date when the document is published in the FEDERAL REGISTER, or (b) for any other document, two weeks after it is signed.

§ 23.11 Holidays.

If the date determined under §§ 23.2 to 23.10 falls on a Federal holiday, then the time and date of the Administrator's action shall be at 1:00 p.m. eastern time on the next day that is not a Federal holiday.

§ 23.12 Filing notice of judicial review.

(a) For the purposes of 28 U.S.C. 2112(a), a copy of any petition filed in any United States Court of Appeals challenging a final action of the Administrator shall be sent by certified mail, return receipt requested, or by personal delivery to the General Counsel. The petition copy shall be time-stamped by the Clerk of the Court when the original is filed with the Court. The petition should be addressed to: Correspondence Control Unit, Office of General Counsel (LE–130), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

(b) If the General Counsel receives two or more petitions filed in two or more United States Courts of Appeals for review of any Agency action within ten days of the effective date of that action for purposes of judicial review (as specified under §§ 23.2 through 23.10 of this part), the General Counsel will notify the United States Judicial Panel of Multidistrict Litigation of any petitions that were received within the ten day period, in accordance with the applicable rules of the Panel.

(c) For purposes of determining whether a petition for review has been received within the ten day period under paragraph (b) of this section, the petition shall be considered received on the date of service, if served personally. If service is accomplished by mail, the date of receipt shall be considered to be the date noted on the return receipt card.

[53 FR 29322, Aug. 3, 1988]

PART 24—RULES GOVERNING ISSUANCE OF AND ADMINISTRATIVE HEARINGS ON INTERIM STATUS CORRECTIVE ACTION ORDERS

Subpart A—General

Sec.

Subpart B—Hearings on Orders Requiring Investigations or Studies

Subpart C—Hearings on Orders Requiring Corrective Measures

Subpart D—Post-Hearing Procedures

AUTHORITY: 42 U.S.C. sections 6912, 6928, 6991b.

SOURCE: 53 FR 12263, Apr. 13, 1988, unless otherwise noted.

Subpart A—General

§ 24.01 Scope of these rules.

(a) These rules establish procedures governing issuance of administrative orders for corrective action pursuant to sections 3008(h) and 9003(h) of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act (the Act), and conduct of administrative hearings on such orders, except as specified in paragraphs (b) and (c) of this section.

(b) The hearing procedures appearing at 40 CFR part 22 govern administrative hearings on any order issued pursuant to section 3008(h) of the Act which:

(1) Is contained within an administrative order that includes claims under section 3008(a) of the Act; or

(2) Includes a suspension or revocation of authorization to operate under section 3005(e) of the Act; or

(3) Seeks penalties under section 3008(h)(2) of the Act for non-compliance with a section 3008(h) order.

(c) The hearing procedures appearing at 40 CFR part 22 govern administrative hearings on any order issued pursuant to section 9003(h) of the Act that is contained within an administrative order that includes claims under section 9006 of the Act.

(d) Questions arising at any stage of the proceeding which are not addressed in these rules shall be resolved at the discretion of the Regional Administrator or Presiding Officer, as appropriate.

[53 FR 12263, Apr. 13, 1988, as amended at 56 FR 49380, Sept. 27, 1991]

§ 24.02 Issuance of initial orders; definition of final orders and orders on consent.

(a) An administrative action under section 3008(h) or 9003(h) of the Act shall be commenced by issuance of an administrative order. When the order is issued unilaterally, the order shall be referred to as an initial administrative order and may be referenced as a proceeding under section 3008(h) or 9003(h) of the Act. When the order has become effective, either after issuance of a final order following a final decision by the Regional Administrator, or after thirty days from issuance if no hearing is requested, the order shall be referred to as a final administrative order. Where the order is agreed to by the parties, the order shall be denominated as a final administrative order on consent.

(b) The initial administrative order shall be executed by an authorized official of EPA (petitioner), other than the Regional Administrator or the Assistant Administrator for the Office of Solid Waste and Emergency Response. For orders issued by EPA Headquarters, rather than by a Regional office, all references in these procedures to the Regional Administrator shall be understood to be to the Assistant Administrator for Solid Waste and Emergency Response or his delegatee.

(c) The initial administrative order shall contain:

(1) A reference to the legal authority pursuant to which the order is issued,

(2) A concise statement of the factual basis upon which the order is issued, and

(3) Notification of respondent's right to request a hearing with respect to any issue of material fact or the appropriateness of the proposed corrective action.

[53 FR 12263, Apr. 13, 1988, as amended at 56 FR 49380, Sept. 27, 1991]

§ 24.03 Maintenance of docket and official record.

(a) A Clerk shall be designated by the Regional Administrator to receive all initial orders, final orders, decisions, responses, memoranda, and documents regarding the order and to maintain the official record and docket.

(b) On or before the date the initial order is served on respondent the EPA office issuing the order shall deliver to the Clerk (a copy of) the administrative record supporting the findings of fact, determinations of law, and relief sought in the initial administrative order. This record shall include all relevant documents and oral information (which has been reduced to writing), which the Agency considered in the process of developing and issuing the order, exclusive of privileged internal communications. The administrative record delivered to the Clerk must have an index and be available for review in the appropriate Agency Regional or Headquarters office during normal business hours after the order is issued.

§ 24.04 Filing and service of orders, decisions, and documents.

(a) *Filing of orders, decisions, and documents.* The original and one copy of the initial administrative order, the recommended decision of the Presiding Officer, the final decision and the final administrative order, and one copy of the administrative record and an index thereto must be filed with the Clerk designated for 3008(h) or 9003(h) orders. In addition, all memoranda and documents submitted in the proceeding shall be filed with the clerk.

(b) *Service of orders, decisions, and rulings.* The Clerk (or in the case of the initial administrative order, any other designated EPA employee) shall arrange for the effectuation of service of the initial administrative order, the recommended decision of the Presiding Officer, the final decision, and final administrative order. Service of a copy of the initial administrative order together with a copy of these procedures, the recommended decision of the Presiding Officer, the final decision, or a final administrative order, shall be made personally or by certified mail, return receipt requested or, if personal service cannot be effectuated or certified mail is returned refused or unsigned, by regular mail, on the respondent or his representative. The Clerk shall serve other documents from the Presiding Officer by regular mail.

(c) *Service of documents filed by the parties.* Service of all documents, filed by the parties, shall be made by the parties or their representatives on other parties or their representatives and may be regular mail, with the original filed with the Clerk. The original of any pleading, letter, or other document (other than exhibits) shall be signed by the party filing or by his counsel or other representative. The signature constitutes a representation by the signer that he has read the pleading, letter, or other document, that to the best of his knowledge, information, and belief, the statements made therein are true, and that it is not interposed for delay.

(d) *Service in general.* Service of orders, decisions, rulings, or documents by either the Clerk or the parties shall, in the case of a domestic or foreign corporation, a partnership, or other unincorporated association, which is subject to suit under a common name, be made, as prescribed in § 24.04 (b) and (c), upon an officer, partner, managing or general agent, or any person authorized by appointment or by Federal or State law to receive service of process.

(e) *Effective date of service.* Service of the initial administrative order and final administrative order is complete upon receipt by respondent (or the respondent's agent, attorney, representative or other person employed by respondent and receiving such service), personally or by certified mail, or upon mailing by regular mail, if personal service or service by certified mail cannot be accomplished, in accordance with § 24.04(b). Service of all other pleadings and documents is complete upon mailing, except as provided in §§ 24.10(b) and 24.14(e).

[53 FR 12263, Apr. 13, 1988, as amended at 56 FR 49380, Sept. 27, 1991]

§ 24.05 Response to the initial order; request for hearing.

(a) The initial administrative order becomes a final administrative order thirty (30) days after service of the order, unless the respondent files with the Clerk within thirty (30) days after service of the order, a response to the initial order and requests a hearing.

(b) The response to the initial order and request for a hearing must be in writing and mailed to, or personally served on, the Clerk of the Regional office which issued the order.

(c) The response to the initial order shall specify each factual or legal determination, or relief provision in the initial order the respondent disputes and shall briefly indicate the basis upon which it disputes such determination or provision.

(d) Respondent may include with its response to the initial order and request for a hearing a statement indicating whether it believes the subpart B or subpart C hearing procedures should be em-

ployed for the requested hearing and the reason(s) therefore.

§ 24.06 Designation of Presiding Officer.

Upon receipt of a request for a hearing, the Regional Administrator shall designate a Presiding Officer to conduct the hearing and preside over the proceedings.

§ 24.07 Informal settlement conference.

The respondent may request an informal settlement conference at any time by contacting the appropriate EPA employee, as specified in the initial administrative order. A request for an informal conference will not affect the respondent's obligations to timely request a hearing. Whether or not the respondent requests a hearing, the parties may confer informally concerning any aspect of the order. The respondent and respondent's representatives shall generally be allowed the opportunity at an informal conference to discuss with the appropriate Agency technical and legal personnel all aspects of the order, and in particular the basis for the determination that a release has occurred and the appropriateness of the ordered corrective action.

§ 24.08 Selection of appropriate hearing procedures.

(a) The hearing procedures set forth in subpart B of this part shall be employed for any requested hearing if the initial order directs the respondent——

(1) To undertake only a RCRA Facility Investigation and/or Corrective Measures Study, which may include monitoring, surveys, testing, information gathering, analyses, and/or studies (including studies designed to develop recommendations for appropriate corrective measures), or

(2) To undertake such investigations and/or studies and interim corrective measures, and if such interim corrective measures are neither costly nor technically complex and are necessary to protect human health and the environment prior to development of a permanent remedy, or

(3) To undertake investigations/studies with respect to a release from an underground storage tank.

(b) The hearing procedures set forth in subpart C of this part shall be employed if the respondent seeks a hearing on an order directing that——

(1) Corrective measures or such corrective measures together with investigations/studies be undertaken, or

(2) Corrective action or such corrective action together with investigations/studies be undertaken with respect to any release from an underground storage tank.

(c) The procedures contained in subparts A and D of this part shall be followed regardless of whether the initial order directs the respondent to undertake an investigation pursuant to the procedures in subpart B of this part, or requires the respondent to implement corrective measures pursuant to the procedures in subpart C of this part.

[56 FR 49380, Sept. 27, 1991]

Subpart B—Hearings on Orders Requiring Investigations or Studies

§ 24.09 Qualifications of Presiding Officer; ex parte discussion of the proceeding.

The Presiding Officer shall be either the Regional Judicial Officer (as described in 40 CFR 22.04(b)) or another attorney employed by the Agency, who has had no prior connection with the case, including the performance of any investigative or prosecuting functions. At no time after issuance of the initial administrative order and prior to issuance of the final order shall the Regional Administrator, Presiding Officer, or any person who will advise these officials in the decision on the case, discuss ex parte the merits of the proceeding with any interested person outside the Agency, with any Agency staff member who performs a prosecutorial or investigative function in such proceeding or a factually related proceeding, or with any representative of such person. If, after issuance of the initial order and prior to issuance of the final order, the Regional Administrator, Presiding Officer, or any person who will advise these officials in the decision on the case receives from or on behalf of any party in an ex parte communication information which is relevant to the decision on the case and to which other parties have not had an opportunity to respond, a summary of such information shall be served on all other parties, who shall have an opportunity to reply to same within ten (10) days of service of the summary.

§ 24.10 Scheduling the hearing; prehearing submissions by respondent.

(a) *Date and time for hearing.* The Presiding Officer shall establish the date, time, location, and agenda for the requested public hearing and transmit this information to the parties. Subject to § 24.10(c), the hearing shall be scheduled and held within thirty (30) days of the Agency's receipt of the request for a public hearing.

(b) *Pre-hearing submissions by respondent.* At any time up to five (5) business days before the hearing respondent may, but is not required to, submit for inclusion in the administrative record information and argument supporting respondent's

positions on the facts, law and relief, as each relates to the order in question. A copy of any information or argument submitted by respondent shall be served such that the Clerk and petitioner receive same at least five (5) business days before hearing.

(c) *Postponment of hearing.* The Presiding Officer may grant an extension of time for the conduct of the hearing upon written request of either party, for good cause shown, and after consideration of any prejudice to other parties. The Presiding Officer may not extend the date by which the request for hearing is due under § 24.05(a).

(d) *Location of hearing.* The hearing shall be held in the city in which the relevant EPA Regional Office is located, unless the Presiding Officer determines that there is good cause to hold it in another location.

§ 24.11 Hearing; oral presentations and written submissions by the parties.

The Presiding Officer shall conduct the hearing in a fair and impartial way, taking action as needed to avoid unnecessary delay, exclude redundant material and maintain order during the proceedings. Representatives of EPA shall introduce the administrative record and be prepared to summarize the basis for the order. The respondent shall have a reasonable opportunity to address relevant issues and present its views through legal counsel or technical advisors. The Presiding Officer may also allow technical and legal discussions and interchanges between the parties, including responses to questions to the extent deemed appropriate. It is not the Agency's intent to provide EPA or respondent an opportunity to engage in direct examination or cross-examination of witnesses. The Presiding Officer may address questions to the respondent's or EPA's representative(s) during the hearing. Each party shall insure that a representative(s) is (are) present at the hearing, who is (are) capable of responding to questions and articulating that party's position on the law and facts at issue. Where respondent can demonstrate that through no fault of its own certain documents supportive of its position could not have been submitted before hearing in accordance with the requirements of § 24.10(b), it may submit such documents at the hearing. Otherwise no new documentary support may be submitted at hearing. The Presiding Officer may upon request grant petitioner leave to respond to submissions made by respondent pursuant to this section or § 24.10(b). The Presiding Officer shall have the discretion to order either party to submit additional information (including but not limited to posthearing briefs on undeveloped factual, technical, or legal matters) in whatever form he deems appropriate either at or after the hearing.

§ 24.12 Summary of hearing; Presiding Officer's recommendation.

(a) As soon as practicable after the conclusion of the hearing a written summary of the proceeding shall be prepared. This summary shall, at a minimum, identify:

(1) The dates of and known attendees at the hearing; and

(2) The bases upon which the respondent contested the terms of the order.

The summary must be signed by the Presiding Officer.

(b) The Presiding Officer will evaluate the entire administrative record and, on the basis of that review and the representations of EPA and respondent at the hearing, shall prepare and file a recommended decision with the Regional Administrator. The recommended decision must address all material issues of fact or law properly raised by respondent, and must recommend that the order be modified, withdrawn or issued without modification. The recommended decision must provide an explanation with citation to material contained in the record for any decision to modify a term of the order, to issue the order without change, or to withdraw the order. The recommended decision shall be based on the administrative record. If the Presiding Officer finds that any contested relief provision in the order is not supported by a preponderance of the evidence in the record, the Presiding Officer shall recommend that the order be modified and issued on terms that are supported by the record or withdrawn.

(c) At any time within twenty-one (21) days of service of the recommended decision on the parties, the parties may file comments on the recommended decision with the Clerk. The Clerk shall promptly transmit any such comments received to the Regional Administrator for his consideration in reaching a final decision.

Subpart C—Hearings on Orders Requiring Corrective Measures

§ 24.13 Qualifications of Presiding Officer; ex parte discussion of the proceeding.

(a) *Qualifications of Presiding Officer.* The Presiding Officer shall be either the Regional Judicial Officer (as described in 40 CFR 22.04(b)) of another attorney employed by the Agency, who has had no prior connection with the case, including the performance of any investigative or prosecuting functions.

(b) *Ex parte discussion of the proceeding.* At no time after issuance of the initial administrative order and prior to issuance of the final order shall the Regional Administrator, Presiding Officer, or

any person who will advise these officials in the decision on the case, discuss ex parte the merits of the proceeding with any interested person outside the Agency, with any Agency staff member who performs a prosecutorial or investigative function in such proceeding or a factually related proceeding, or with any representative of such person. If, after issuance of the initial order and prior to issuance of the final order, the Regional Administrator, Presiding Officer, or any person who will advise these officials in the decision on the case receives from or on behalf of any party in an ex parte communication information which is relevant to the decision on the case and to which other parties have not had an opportunity to respond, a summary of such information shall be served on all other parties, who shall have an opportunity to reply to same within ten (10) days of service of the summary.

§ 24.14 Scheduling the hearing; pre-hearing submissions by the parties.

(a) The Presiding Officer shall establish an expeditious schedule for:

(1) The submission by respondent of a memorandum, with appropriate affidavits and exhibits, stating and supporting respondent's position on the facts, law and relief, specifying the bases upon and manner in which such determinations or relief provisions, if erroneous, require modification or withdrawal of the order:

(2) Submission of a response by EPA; and

(3) A public hearing.

Subject to § 24.14(b), a hearing shall be scheduled within 45 days of the order setting the schedule. The Presiding Officer shall establish the date, time, location and agenda for the hearing and shall transmit this information to the parties along with the schedule for the hearing.

(b) *Postponement of the hearing.* The Presiding Officer, as appropriate, may grant an extension of time for the filing of any document, other than a request for a hearing under § 24.05(a), or may grant an extension of time for the conduct of the hearing, upon written request of either party, for good cause shown and after consideration of any prejudice to other parties.

(c) *Respondent's pre-hearing submission.* In accordance with the schedule set by the Presiding Officer, the respondent shall file a memorandum stating and supporting respondent's position on the facts, law and relief. The memorandum must identify each factual allegation and all issues regarding the appropriateness of the terms of the relief in the initial order that respondent contests and for which respondent requests a hearing. The memorandum must clearly state respondent's position with respect to each such issue. Respondent must also include any proposals for modification of the order. The memorandum shall also present any arguments on the legal conclusions contained in the order.

(d) *Written questions to EPA.* The respondent may file a request with the Presiding Officer for permission to submit written questions to the EPA Regional Office issuing the order concerning issues of material fact in the order.

(1) Requests shall be accompanied by the proposed questions. In most instances, no more than twenty-five (25) questions, including subquestions and subparts, may be posed. The request and questions must be submitted to the Presiding Officer at least twenty-one (21) days before the hearing.

(2) The Presiding Officer may direct EPA to respond to such questions as he designates. In deciding whether or not to direct the Agency to respond to written questions the Presiding Officer should consider whether such responses are required for full disclosure and adequate resolution of the facts. No questions shall be allowed regarding privileged internal communications. The Presiding Officer shall grant, deny, or modify such requests expeditiously. If a request is granted the Presiding Officer may revise questions and may limit the number and scope of questions. Questions may be deleted or revised in the discretion of the Presiding Officer for reasons, which may include the fact that he finds the questions to be irrelevant, redundant, unnecessary, or an undue burden on the Agency. The Presiding Officer shall transmit the questions as submitted or as modified to EPA. EPA shall respond to the questions within fourteen (14) calendar days of service of the questions by the Presiding Officer, unless an extension is granted.

(e) *Submission of additional information.* The Presiding Officer shall have the discretion to order either party to submit additional information (including but not limited to post-hearing briefs on undeveloped factual, technical, or legal matters) in whatever form he deems appropriate either before, at, or after the hearing. The Presiding Officer may issue subpoenas for the attendance and testimony of persons and the production of relevant papers, books and documents. Since these hearing procedures provide elsewhere that the parties are not to engage in direct or cross-examination of witnesses, the subpoena power is to serve only as an adjunct to the Presiding Officer's authority to ask questions and otherwise take steps to clarify factual matters which are in dispute. Upon request of the respondent the Presiding Officer may, in his discretion, allow submittal by the respondent of additional information in support of its claim, if it is received by the Clerk and petitioner at least five (5) business days before the hearing.

(f) *Location of hearing.* The hearing shall be held in the city in which the relevant EPA Re-

gional Office is located, unless the Presiding Officer determines that there is good cause to hold it in another location.

§ 24.15 Hearing; oral presentations and written submissions by the parties.

(a) The Presiding Officer shall conduct the hearing in a fair and impartial manner, take action to avoid unnecessary delay in the disposition of the proceedings, and maintain order. The Presiding Officer shall permit oral statements on behalf of the respondent and EPA. The Presiding Officer may address questions to the respondent's or the EPA's representative(s) during the hearing. Each party shall ensure that a representative(s) is (are) present at the hearing, who is (are) capable of responding to questions and articulating that party's position on the law and facts at issue. Apart from questions by the Presiding Officer, no direct examination or cross-examination shall be allowed.

(b) Upon commencement of the hearing, a representative of EPA shall introduce the order and record supporting issuance of the order, and summarize the basis for the order. The respondent may respond to the administrative record and offer any facts, statements, explanations or documents which bear on any issue for which the hearing has been requested. Any such presentation by respondent may include new documents only to the extent that respondent can demonstrate that, through no fault of its own, such documents could not have been submitted before hearing in accordance with the requirements of § 24.14 (c) and (e). The Agency may then present matters solely in rebuttal to matters previously presented by the respondent. The Presiding Officer may allow the respondent to respond to any such rebuttal submitted. The Presiding Officer may exclude repetitive or irrelevant matter. The Presiding Officer may upon request grant petitioner leave to respond to submissions made by respondent pursuant to this paragraph or § 24.14(e).

§ 24.16 Transcript or recording of hearing.

(a) The hearing shall be either transcribed stenographically or tape recorded. Upon written request, such transcript or tape recording shall be made available for inspection or copying.

(b) The transcript or recording of the hearing and all written submittals filed with the Clerk by the parties subsequent to initial issuance of the order including post-hearing submissions will become part of the administrative record for the proceeding, for consideration by the Presiding Officer and Regional Administrator.

§ 24.17 Presiding Officer's recommendation.

(a) The Presiding Officer will, as soon as practicable after the conclusion of the hearing, evaluate the entire administrative record and, on the basis of the administrative record, prepare and file a recommended decision with the Regional Administrator. The recommended decision must address all material issues of fact or law properly raised by respondent, and must recommend that the order be modified, withdrawn or issued without modification. The recommended decision must provide an explanation, with citation to material contained in the record for any decision to modify a term of the order, to issue the order without change or to withdraw the order. The recommended decision shall be based on the administrative record. If the Presiding Officer finds that any contested relief provision in the order is not supported by a preponderance of the evidence in the record, the Presiding Officer shall recommend that the order be modified and issued on terms that are supported by the record, or withdrawn.

(b) At any time within twenty-one (21) days of service of the recommended decision on the parties, the parties may file comments on the recommended decision with the Clerk. The Clerk shall promptly transmit any such comments received to the Regional Administrator for his consideration in reaching a final decision.

Subpart D—Post-Hearing Procedures

§ 24.18 Final decision.

As soon as practicable after receipt of the recommended decision, the Regional Administrator will either sign or modify such recommended decision, and issue it as a final decision. If the Regional Administrator modifies the recommended decision, he shall insure that the final decision indicates the legal and factual basis for the decision as modified. The Regional Administrator's decision shall be based on the administrative record.

§ 24.19 Final order.

If the Regional Administrator does not adopt portions of the initial order, or finds that modification of the order is necessary, the signatory official on the initial administrative order shall modify the order in accordance with the terms of the final decision and file and serve a copy of the final administrative order. If the Regional Administrator finds the initial order appropriate as originally issued, the final decision shall declare the initial administrative order to be a final order, effective upon service of the final decision. If the Regional Administrator declares that the initial order must

be withdrawn, the signatory official on the initial administrative order will file and serve a withdrawal of the initial administrative order. This may be done without prejudice.

§ 24.20 Final agency action.

The final decision and the final administrative order are final agency actions that are effective on filing and service. These actions are not appealable to the Administrator.

PART 25—PUBLIC PARTICIPATION IN PROGRAMS UNDER THE RESOURCE CONSERVATION AND RECOVERY ACT, THE SAFE DRINKING WATER ACT, AND THE CLEAN WATER ACT

AUTHORITY: Sec. 101(e), Clean Water Act, as amended (33 U.S.C. 1251(e)); sec. 7004(b), Resource Conservation and Recovery Act (42 U.S.C. 6974(b)); sec. 1450(a)(1), Safe Drinking Water Act, as amended (42 U.S.C. 300j–9).

SOURCE: 44 FR 10292, Feb. 16, 1979, unless otherwise noted.

§ 25.1 Introduction.

This part sets forth minimum requirements and suggested program elements for public participation in activities under the Clean Water Act (Pub. L. 95–217), the Resource Conservation and Recovery Act (Pub. L. 94–580), and the Safe Drinking Water Act (Pub. L. 93–523). The applicability of the requirements of this part is as follows:

(a) Basic requirements and suggested program elements for public information, public notification, and public consultation are set forth in § 25.4. These requirements are intended to foster public awareness and open processes of government decisionmaking. They are applicable to all covered activities and programs described in § 25.2(a).

(b) Requirements and suggested program elements which govern the structure of particular public participation mechanisms (for example, advisory groups and responsiveness summaries) are set forth in §§ 25.5, 25.6, 25.7, and 25.8. This part does not mandate the use of these public participation mechanisms. It does, however, set requirements which those responsible for implementing the mechanisms must follow if the mechanisms are required elsewhere in this chapter.

(c) Requirements which apply to Federal financial assistance programs (grants and cooperative agreements) under the three acts are set forth in §§ 25.10 and 25.12(a).

(d) Requirements for public involvement which apply to specific activities are set forth in § 25.9 (Permit enforcement), § 25.10 (Rulemaking), and § 25.12 (Assuring compliance with requirements).

§ 25.2 Scope.

(a) The activities under the three Acts which are covered by this part are:

(1) EPA rulemaking, except non-policy rulemaking (for example publication of funding allotments under statutory formulas); and State rulemaking under the Clean Water Act and Resource Conservation and Recovery Act;

(2) EPA issuance and modification of permits, and enforcement of permits as delineated by § 25.9;

(3) Development by EPA of major informational materials, such as citizen guides or handbooks, which are expected to be used over several years and which are intended to be widely distributed to the public;

(4) Development by EPA of strategy and policy guidance memoranda when a Deputy Assistant Administrator determines it to be appropriate;

(5) Development and implementation of plans, programs, standards, construction, and other activities supported with EPA financial assistance (grants and cooperative agreements) to State, interstate, regional and local agencies (herein after referred to as ''State, interstate, and substate agencies'');

(6) The process by which EPA makes a determination regarding approval of State administration of the Construction Grants program in lieu of Federal administration; and the administration of the Construction Grants Program by the State after EPA approval;

(7) The process by which EPA makes a determination regarding approval of State administration of the following programs in lieu of Federal administration: The State Hazardous Waste Program; the NPDES Permit Program; the Dredge and Fill Permit Program; and the Underground Injection Control Program;

(8) Other activities which the Assistant Administrator for Water and Waste Management, the Assistant Administrator for Enforcement, or any EPA Regional Administrator deems appropriate in view of the Agency's responsibility to involve the public in significant decisions.

(b) Activities which are not covered by this part, except as otherwise provided under (a)(8) or (c) of this section, are activities under Parts 33 (Subagreements), 39 (Loan Guarantees for Construction of Treatment Works), 40 (Research and Development Grants), 45 (Training Grants and

Manpower Forecasting) and 46 (Fellowships) of this chapter.

(c) Some programs covered by these regulations contain further provisions concerning public participation. These are found elsewhere in this chapter in provisions which apply to the program of interest. Regulations which govern the use and release of public information are set forth in part 2 of this chapter.

(d) Specific provisions of court orders which conflict with requirements of this part, such as court-established timetables, shall take precedence over the provisions in this part.

(e) Where the State undertakes functions in the construction grants program, the State shall be responsible for meeting these requirements for public participation, and any applicable public participation requirements found elsewhere in this chapter, to the same extent as EPA.

(f) Where the State undertakes functions in those programs specifically cited in § 25.2(a)(7), the State shall be responsible for meeting the requirements for public participation included in the applicable regulations governing those State programs. The requirements for public participation in State Hazardous Waste Programs, Dredge and Fill Permit programs, Underground Injection Control programs and NPDES permit programs are found in part 123 of this chapter. These regulations embody the substantive requirements of this part.

(g) These regulations apply to the activities of all agencies receiving EPA financial assistance which is awarded after [the effective date of final regulations], and to all other covered activities of EPA, State, interstate, and substate agencies which occur after that date. These regulations will apply to ongoing grants or other covered activities upon any significant change in the activity (for example, upon a significant proposed increase in project scope of a construction grant). Parts 105 (Public Participation in Water Pollution Control) and 249 (Public Participation in Solid Waste Management) will no longer appear in the Code of Federal Regulations; however, they will remain applicable, in uncodified form, to grants awarded prior to the effective date of this part and to all other ongoing activities.

§ 25.3 Policy and objectives.

(a) EPA, State, interstate, and substate agencies carrying out activities described in § 25.2(a) shall provide for, encourage, and assist the participation of the public. The term, ''the public'' in the broadest sense means the people as a whole, the general populace. There are a number of identifiable ''segments of the public'' which may have a particular interest in a given program or decision. Interested and affected segments of the public may be affected directly by a decision, either beneficially or adversely; they may be affected indirectly; or they may have some other concern about the decision. In addition to private citizens, the public may include, among others, representatives of consumer, environmental, and minority associations; trade, industrial, agricultural, and labor organizations; public health, scientific, and professional societies; civic associations; public officials; and governmental and educational associations.

(b) Public participation is that part of the decision-making process through which responsible officials become aware of public attitudes by providing ample opportunity for interested and affected parties to communicate their views. Public participation includes providing access to the decision-making process, seeking input from and conducting dialogue with the public, assimilating public viewpoints and preferences, and demonstrating that those viewpoints and preferences have been considered by the decision-making official. Disagreement on significant issues is to be expected among government agencies and the diverse groups interested in and affected by public policy decisions. Public agencies should encourage full presentation of issues at an early stage so that they can be resolved and timely decisions can be made. In the course of this process, responsible officials should make special efforts to encourage and assist participation by citizens representing themselves and by others whose resources and access to decision-making may be relatively limited.

(c) The following are the objectives of EPA, State, interstate, and substate agencies in carrying out activities covered by this part:

(1) To assure that the public has the opportunity to understand official programs and proposed actions, and that the government fully considers the public's concerns;

(2) To assure that the government does not make any significant decision on any activity covered by this part without consulting interested and affected segments of the public;

(3) To assure that government action is as responsive as possible to public concerns;

(4) To encourage public involvement in implementing environmental laws;

(5) To keep the public informed about significant issues and proposed project or program changes as they arise;

(6) To foster a spirit of openness and mutual trust among EPA, States, substate agencies and the public; and

(7) To use all feasible means to create opportunities for public participation, and to stimulate and support participation.

§ 25.4 Information, notification, and consultation responsibilities.

(a) *General.* EPA, State, interstate, and substate agencies shall conduct a continuing program for public information and participation in the development and implementation of activities covered by this part. This program shall meet the following requirements:

(b) *Information and assistance requirements.* (1) Providing information to the public is a necessary prerequisite to meaningful, active public involvement. Agencies shall design informational activities to encourage and facilitate the public's participation in all significant decisions covered by § 25.2(a), particularly where alternative courses of action are proposed.

(2) Each agency shall provide the public with continuing policy, program, and technical information and assistance beginning at the earliest practicable time. Informational materials shall highlight significant issues that will be the subject of decision-making. Whenever possible, consistent with applicable statutory requirements, the social, economic, and environmental consequences of proposed decisions shall be clearly stated in such material. Each agency shall identify segments of the public likely to be affected by agency decisions and should consider targeting informational materials toward them (in addition to the materials directed toward the general public). Lengthy documents and complex technical materials that relate to significant decisions should be summarized for public and media uses. Fact sheets, news releases, newsletters, and other similar publications may be used to provide notice that materials are available and to facilitate public understanding of more complex documents, but shall not be a substitute for public access to the full documents.

(3) Each agency shall provide one or more central collections of reports, studies, plans, and other documents relating to controversial issues or significant decisions in a convenient location or locations, for example, in public libraries. Examples of such documents are catalogs of documents available from the agency, grant applications, fact sheets on permits and permit applications, permits, effluent discharge information, and compliance schedule reports. Copying facilities at reasonable cost should be available at the depositories.

(4) Whenever possible, agencies shall provide copies of documents of interest to the public free of charge. Charges for copies should not exceed prevailing commercial copying costs. EPA requirements governing charges for information and documents provided to the public in response to requests made under the Freedom of Information Act are set forth in part 2 of this chapter. Consistent with the objectives of § 25.3(b), agencies may reserve their supply of free copies for private citizens and others whose resources are limited.

(5) Each agency shall develop and maintain a list of persons and organizations who have expressed an interest in or may, by the nature of their purposes, activities or members, be affected by or have an interest in any covered activity. Generally, this list will be most useful where subdivided by area of interest or geographic area. Whenever possible, the list should include representatives of the several categories of interests listed under § 25.3(a). Those on the list, or relevant portions if the list is subdivided, shall receive timely and periodic notification of the availability of materials under § 25.4(b)(2).

(c) *Public notification.* Each agency shall notify interested and affected parties, including appropriate portions of the list required by paragraph (b)(5) of this section, and the media in advance of times at which major decisions not covered by notice requirements for public meetings or public hearings are being considered. Generally, notices should include the timetable in which a decision will be reached, the issues under consideration, any alternative courses of action or tentative determinations which the agency has made, a brief listing of the applicable laws or regulations, the location where relevant documents may be reviewed or obtained, identification of any associated public participation opportunities such as workshops or meetings, the name of an individual to contact for additional information, and any other appropriate information. All advance notifications under this paragraph must be provided far enough in advance of agency action to permit time for public response; generally this should not be less than 30 days.

(d) *Public consultation.* For the purposes of this part, ''public consultation'' means an exchange of views between governmental agencies and interested or affected persons and organizations in order to meet the objectives set forth in § 25.3. Requirements for three common forms of public consultation (public hearings, public meetings, and advisory groups) are set forth in §§ 25.5, 25.6, and 25.7. Other less formal consultation mechanisms may include but are not limited to review groups, ad hoc committees, task forces, workshops, seminars and informal personal communications with individuals and groups. Public consultation must be preceded by timely distribution of information and must occur sufficiently in advance of decision-making to allow the agency to assimilate public views into agency action. EPA, State, interstate, and substate agencies shall provide for early and continuing public consultation in any significant action covered by this part. Merely conferring with the public after an agency decision does not meet this requirement. In addition to holding hear-

ings and meetings as specifically required in this chapter, a hearing or meeting shall be held if EPA, the State, interstate, or substate agency determines that there is significant public interest or that a hearing or meeting would be useful.

(e) *Public information concerning legal proceedings.* EPA, State, interstate, and substate agencies shall provide full and open information on legal proceedings to the extent not inconsistent with court requirements, and where such disclosure would not prejudice the conduct of the litigation. EPA actions with regard to affording opportunities for public comment before the Department of Justice consents to a proposed judgment in an action to enjoin discharges of pollutants into the environment shall be consistent with the Statement of Policy issued by the Department of Justice (see Title 28, CFR, Chapter 1, § 50.7).

§ 25.5 Public hearings.

(a) *Applicability.* Any non-adjudicatory public hearing, whether mandatory or discretionary, under the three Acts shall meet the following minimum requirements. These requirements are subordinate to any more stringent requirements found elsewhere in this chapter or otherwise imposed by EPA, State, interstate, or substate agencies. Procedures developed for adjudicatory hearings required by this chapter shall be consistent with the public participation objectives of this part, to the extent practicable.

(b) *Notice.* A notice of each hearing shall be well publicized, and shall also be mailed to the appropriate portions of the list of interested and affected parties required by § 25.4(b)(5). Except as otherwise specifically provided elsewhere in this chapter, these actions must occur at least 45 days prior to the date of the hearing. However, where EPA determines that there are no substantial documents which must be reviewed for effective hearing participation and that there are no complex or controversial matters to be addressed by the hearing, the notice requirement may be reduced to no less than 30 days. EPA may further reduce or waive the hearing notice requirement in emergency situations where EPA determines that there is an imminent danger to public health. To the extent not duplicative, the agency holding the hearing shall also provide informal notice to all interested persons or organizations that request it. The notice shall identify the matters to be discussed at the hearing and shall include or be accompanied by a discussion of the agency's tentative determination on major issues (if any), information on the availability of a bibliography of relevant materials (if deemed appropriate), and procedures for obtaining further information. Reports, documents and data relevant to the discussion at the public hearing shall be available to the public at least 30 days before the hearing. Earlier availability of materials relevant to the hearing will further assist public participation and is encouraged where possible.

(c) *Locations and time.* Hearings must be held at times and places which, to the maximum extent feasible, facilitate attendance by the public. Accessibility of public transportation, and use of evening and weekend hearings, should be considered. In the case of actions with Statewide interest, holding more than one hearing should be considered.

(d) *Scheduling presentations.* The agency holding the hearing shall schedule witnesses in advance, when necessary, to ensure maximum participation and allotment of adequate time for all speakers. However, the agency shall reserve some time for unscheduled testimony and may consider reserving blocks of time for major categories of witnesses.

(e) *Conduct of hearing.* The agency holding the hearing shall inform the audience of the issues involved in the decision to be made, the considerations the agency will take into account, the agency's tentative determinations (if any), and the information which is particularly solicited from the public. The agency should consider allowing a question and answer period. Procedures shall not unduly inhibit free expression of views (for example, by onerous written statement requirements or qualification of witnesses beyond minimum identification).

(f) *Record.* The agency holding the hearing shall prepare a transcript, recording or other complete record of public hearing proceedings and make it available at no more than cost to anyone who requests it. A copy of the record shall be available for public review.

§ 25.6 Public meetings.

Public meetings are any assemblies or gathering, (such as conferences, informational sessions, seminars, workshops, or other activities) which the responsible agency intends to be open to anyone wishing to attend. Public meetings are less formal than public hearings. They do not require formal presentations, scheduling of presentations and a record of proceedings. The requirements of § 25.5 (b) and (c) are applicable to public meetings, except that the agency holding the meeting may reduce the notice to not less than 30 days if there is good reason that longer notice cannot be provided.

§ 25.7 Advisory groups.

(a) *Applicability.* The requirements of this section on advisory groups shall be met whenever provisions of this chapter require use of an advisory group by State, interstate, or substate agen-

cies involved in activities supported by EPA financial assistance under any of the three Acts.

(b) *Role.* Primary responsibility for decision-making in environmental programs is vested by law in the elected and appointed officials who serve on public bodies and agencies at various levels of government. However, all segments of the public must have the opportunity to participate in environmental quality planning. Accordingly, where EPA identifies a need for continued attention of an informed core group of citizens in relation to activities conducted with EPA financial assistance, program regulations elsewhere in this chapter will require an advisory group to be appointed by the financially assisted agency. Such advisory groups will not be the sole mechanism for public participation, but will complement other mechanisms. They are intended to assist elected or appointed officials with final decision-making responsibility by making recommendations to such officials on important issues. In addition, advisory groups should foster a constructive interchange among the various interests present on the group and enhance the prospect of community acceptance of agency action.

(c) *Membership.* (1) The agency receiving financial assistance shall assure that the advisory group reflects a balance of interests in the affected area. In order to meet this requirement, the assisted agency shall take positive action, in accordance with paragraph (c)(3) of this section, to establish an advisory group which consists of substantially equivalent proportions of the following four groups:

(i) *Private citizens.* No person may be included in this portion of the advisory group who is likely to incur a financial gain or loss greater than that of an average homeowner, taxpayer or consumer as a result of any action likely to be taken by the assisted agency.

(ii) *Representatives of public interest groups.* A ''public interest group'' is an organization which reflects a general civic, social, recreational, environmental or public health perspective in the area and which does not directly reflect the economic interests of its membership.

(iii) Public officials.

(iv) Citizens or representatives of organizations with substantial economic interests in the plan or project.

(2) Generally, where the activity has a particular geographic focus, the advisory group shall be made up of persons who are residents of that geographic area.

(3) In order to meet the advisory group membership requirements of paragraph (c)(1) of this section, the assisted agency shall:

(i) Identify public interest groups, economic interests, and public officials who are interested in or affected by the assisted activity.

(ii) Make active efforts to inform citizens in the affected area, and the persons or groups identified under paragraph (c)(3)(i) of this section, of this opportunity for participation on the advisory group. This may include such actions as placing notices or announcements in the newspapers or other media, mailing written notices to interested parties, contacting organizations or individuals directly, requesting organizations to notify their members through meetings, newsletters, or other means.

(iii) Where the membership composition set forth in paragraph (c)(1) of this section is not met after the above actions, the assisted agency shall identify the causative problems and make additional efforts to overcome such problems. For example, the agency should make personal contact with prospective participants to invite their participation.

(iv) Where problems in meeting the membership composition arise, the agency should request advice and assistance from EPA.

(d) The assisted agency shall record the names and mailing addresses of each member of the advisory group, with the attributes of each in relation to the membership requirements set forth in paragraph (c)(1) of this section, provide a copy to EPA, and make the list available to the public. In the event that the membership requirements set forth in paragraph (c)(1) of this section are not met, the assisted agency shall append to the list a description of its efforts to comply with those requirements and an explanation of the problems which prevented compliance. EPA shall review the agency's efforts to comply and approve the advisory group composition or, if the agency's efforts were inadequate, require additional actions to achieve the required membership composition.

(e) *Responsibilities of the assisted agency.* (1) The assisted agency shall designate a staff contact who will be responsible for day-to-day coordination among the advisory group, the agency, and any agency contractors or consultants. The financial assistance agreement shall include a budget item for this staff contact. Where substantial portions of the assisted agency's responsibilities will be met under contract, the agency shall require a similar designation, and budget specification, of its contractor. In the latter event, the assisted agency does not have to designate a separate staff contact on its own staff, if the Regional Administrator determines that the contractor's designation will result in adequate coordination. The staff contact shall be located in the project area.

(2) The assisted agency has such responsibilities as providing the advisory group with information,

identifying issues for the advisory group's consideration, consulting with the advisory group throughout the project, requesting the advisory group's recommendations prior to major decisions, transmitting advisory group recommendations to decision-making officials, and making written responses to any formal recommendation by the advisory group. The agency shall make any such written responses available to the public. To the maximum extent feasible, the assisted agency shall involve the advisory group in the development of the public participation program.

(3) The assisted agency shall identify professional and clerical staff time which the advisory group may depend upon for assistance, and provide the advisory group with an operating budget which may be used for technical assistance and other purposes agreed upon between the advisory group and the agency.

(4) The assisted agency shall establish a system to make costs of reasonable out-of-pocket expenses of advisory group participation available to group members. Time away from work need not be reimbursed; however, assisted agencies are encouraged to schedule meetings at times and places which will not require members to leave their jobs to attend.

(f) *Advisory group responsibilities and duties.* The advisory group may select its own chairperson, adopt its own rules of order, and schedule and conduct its own meetings. Advisory group meetings shall be announced well in advance and shall be open to the public. At all meetings, the advisory group shall provide opportunity for public comment. Any minutes of advisory group meetings and recommendations to the assisted agency shall be available to the public. The advisory group should monitor the progress of the project and become familiar with issues relevant to project development. In the event the assisted agency and the advisory group agree that the advisory group will assume public participation responsibilities, the group should undertake those responsibilities promptly. The advisory group should make written recommendations directly to the assisted agency and to responsible decision-making officials on major decisions (including approval of the public participation program) and respond to any requests from the agency or decision-making officials for recommendations. The advisory group should remain aware of community attitudes and responses to issues as they arise. As part of this effort, the advisory group may, within the limitations of available resources, conduct public participation activities in conjunction with the assisted agency; solicit outside advice; and establish, in conjunction with the assisted agency, subcommittees, ad hoc groups, or task forces to investigate and develop recommendations on particular issues as they arise. The advisory group should undertake its responsibilities fully and promptly in accordance with the policies and requirements of this part. Nothing shall preclude the right of the advisory group from requesting EPA to perform an evaluation of the assisted agency's compliance with the requirements of this part.

(g) *Training and assistance.* EPA will promptly provide appropriate written guidance and project information to the newly formed advisory group and may provide advice and assistance to the group throughout the life of the project. EPA will develop and, in conjunction with the State or assisted agency, carry out a program to provide a training session for the advisory group, and appropriate assisted agency representatives, promptly after the advisory group is formed. The assisted agency shall provide additional needed information or assistance to the advisory group.

§ 25.8 Responsiveness summaries.

Each agency which conducts any activities required under this part shall prepare a Responsiveness Summary at specific decision points as specified in program regulations or in the approved public participation work plan. Responsiveness Summaries are also required for rulemaking activities under § 25.10. Each Responsiveness Summary shall identify the public participation activity conducted; describe the matters on which the public was consulted; summarize the public's views, significant comments, criticisms and suggestions; and set forth the agency's specific responses in terms of modifications of the proposed action or an explanation for rejection of proposals made by the public. Responsiveness Summaries prepared by agencies receiving EPA financial assistance shall also include evaluations by the agency of the effectiveness of the public participation program. Assisted agencies shall request such evaluations from any advisory group and provide an opportunity for other participating members of the public to contribute to the evaluation. (In the case of programs with multiple responsiveness summary requirements, these analyses need only be prepared and submitted with the final summary required.) Responsiveness summaries shall be forwarded to the appropriate decision-making official and shall be made available to the public. Responsiveness Summaries shall be used as part of evaluations required under this part or elsewhere in this chapter.

§ 25.9 Permit enforcement.

Each agency administering a permit program shall develop internal procedures for receiving evidence submitted by citizens about permit violations and ensuring that it is properly considered. Public effort in reporting violations shall be encouraged, and the agency shall make available in-

formation on reporting procedures. The agency shall investigate alleged violations promptly.

§ 25.10 Rulemaking.

(a) EPA shall invite and consider written comments on proposed and interim regulations from any interested or affected persons and organizations. All such comments shall be part of the public record, and a copy of each comment shall be available for public inspection. EPA will maintain a docket of comments received and any Agency responses. Notices of proposed and interim rulemaking, as well as final rules and regulations, shall be distributed in accordance with § 25.4(c) to interested or affected persons promptly after publication. Each notice shall include information as to the availability of the full texts of rules and regulations (where these are not set forth in the notice itself) and places where copying facilities are available at reasonable cost to the public. Under Executive Order 12044 (March 23, 1978), further EPA guidance will be issued concerning public participation in EPA rulemaking. A Responsiveness Summary shall be published as part of the preamble to interim and final regulations. In addition to providing opportunity for written comments on proposed and interim regulations, EPA may choose to hold a public hearing.

(b) State rulemaking specified in § 25.2(a)(1) shall be in accord with the requirements of paragraph (a) of this section or with the State's administrative procedures act, if one exists. However, in the event of conflict between a provision of paragraph (a) of this section and a provision of a State's administrative procedures act, the State's law shall apply.

§ 25.11 Work elements in financial assistance agreements.

(a) This section is applicable to activities under § 25.2(a)(5) except as otherwise provided in parts 30 or 35.

(b) Each applicant for EPA financial assistance shall set forth in the application a public participation work plan or work element which reflects how public participation will be provided for, encouraged, and assisted in accordance with this part. This work plan or element shall cover the project period. At a minimum, the work plan or element shall include:

(1) Staff contacts and budget resources to be devoted to public participation by category;

(2) A proposed schedule for public participation activities to impact major decisions, including consultation points where responsiveness summaries will be prepared;

(3) An identification of consultation and information mechanisms to be used;

(4) The segments of the public targeted for involvement.

(c) All reasonable costs of public participation incurred by assisted agencies which are identified in an approved public participation work plan or element, or which are otherwise approved by EPA, shall be eligible for financial assistance.

(d) The work plan or element may be revised as necessary throughout the project period with approval of the Regional Administrator.

§ 25.12 Assuring compliance with public participation requirements.

(a) *Financial assistance programs*—(1) *Applications.* EPA shall review the public participation work plan (or, if no work plan is required by this chapter for the particular financial assistance agreement, the public participation element) included in the application to determine consistency with all policies and requirements of this part. No financial assistance shall be awarded unless EPA is satisfied that the public participation policies and requirements of this part and, any applicable public participation requirements found elsewhere in this chapter, will be met.

(2) *Compliance*—(i) *Evaluation.* EPA shall evaluate compliance with public participation requirements using the work plan, responsiveness summary, and other available information. EPA will judge the adequacy of the public participation effort in relation to the objectives and requirements of § 25.3 and § 25.4 and other applicable requirements. In conducting this evaluation, EPA may request additional information from the assisted agency, including records of hearings and meetings, and may invite public comment on the agency's performance. The evaluation will be undertaken as part of any mid-project review required in various programs under this chapter; where no such review is required the review shall be conducted at an approximate mid-point in continuing EPA oversight activity. EPA may, however, undertake such evaluation at any point in the project period, and will do so whenever it believes that an assisted agency may have failed to meet public participation requirements.

(ii) *Remedial actions.* Whenever EPA determines that an assisted agency has not fully met public participation requirements, EPA shall take actions which it deems appropriate to mitigate the adverse effects of the failure and assure that the failure is not repeated. For ongoing projects, that action shall include, at a minimum, imposing more stringent requirements on the assisted agency for the next budget period or other period of the project (including such actions as more specific output requirements and milestone schedules for output achievement; interim EPA review of public participation activities and materials prepared by

the agency, and phased release of funds based on compliance with milestone schedules.) EPA may terminate or suspend part or all financial assistance for non-compliance with public participation requirements, and may take any further actions that it determines to be appropriate in accordance with parts 30 and 35 of this chapter (see, in particular, §§ 30.340, Noncompliance and 30.615–3, Withholding of Payments, and subpart H of part 30, Modification, Suspension, and Termination).

(b) *State programs approved in lieu of Federal programs.* State compliance with applicable public participation requirements in programs specified in § 25.2(a) (6) and (7) and administered by approved States shall be monitored by EPA during the annual review of the State's program, and during any financial or program audit or review of these programs. EPA may withdraw an approved program from a State for failure to comply with applicable public participation requirements.

(c) *Other covered programs.* Assuring compliance with these public participation requirements for programs not covered by paragraphs (a) and (b) of this section is the responsibility of the Administrator of EPA. Citizens with information concerning alleged failures to comply with the public participation requirements should notify the Administrator. The Administrator will assure that instances of alleged non-compliance are promptly investigated and that corrective action is taken where necessary.

§ 25.13 Coordination and non-duplication.

The public participation activities and materials that are required under this part should be coordinated or combined with those of closely related programs or activities wherever this will enhance the economy, the effectiveness, or the timeliness of the effort; enhance the clarity of the issue; and not be detrimental to participation by the widest possible public. Hearings and meetings on the same matter may be held jointly by more than one agency where this does not conflict with the policy of this paragraph. Special efforts shall be made to coordinate public participation procedures under this part and applicable regulations elsewhere in this chapter with environmental assessment and analysis procedures under 40 CFR part 6. EPA encourages interstate agencies in particular to develop combined proceedings for the States concerned.

§ 25.14 Termination of reporting requirements.

All reporting requirements specifically established by this part will terminate on (5 years from date of publication) unless EPA acts to extend the requirements beyond that date.

PART 26—PROTECTION OF HUMAN SUBJECTS

AUTHORITY: 5 U.S.C. 301; 42 U.S.C. 300v–1(b).

SOURCE: 56 FR 28012, 28022, June 18, 1991, unless otherwise noted.

§ 26.101 To what does this policy apply?

(a) Except as provided in paragraph (b) of this section, this policy applies to all research involving human subjects conducted, supported or otherwise subject to regulation by any federal department or agency which takes appropriate administrative action to make the policy applicable to such research. This includes research conducted by federal civilian employees or military personnel, except that each department or agency head may adopt such procedural modifications as may be appropriate from an administrative standpoint. It also includes research conducted, supported, or otherwise subject to regulation by the federal government outside the United States.

(1) Research that is conducted or supported by a federal department or agency, whether or not it is regulated as defined in § 26.102(e), must comply with all sections of this policy.

(2) Research that is neither conducted nor supported by a federal department or agency but is subject to regulation as defined in § 26.102(e) must be reviewed and approved, in compliance with § 26.101, § 26.102, and § 26.107 through § 26.117 of this policy, by an institutional review board (IRB) that operates in accordance with the pertinent requirements of this policy.

(b) Unless otherwise required by department or agency heads, research activities in which the only involvement of human subjects will be in one or more of the following categories are exempt from this policy:

(1) Research conducted in established or commonly accepted educational settings, involving normal educational practices, such as (i) research on regular and special education instructional strategies, or (ii) research on the effectiveness of or the comparison among instructional techniques, curricula, or classroom management methods.

(2) Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures or observation of public behavior, unless:

(i) Information obtained is recorded in such a manner that human subjects can be identified, directly or through identifiers linked to the subjects; and (ii) any disclosure of the human subjects' responses outside the research could reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, or reputation.

(3) Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior that is not exempt under paragraph (b)(2) of this section, if:

(i) The human subjects are elected or appointed public officials or candidates for public office; or (ii) federal statute(s) require(s) without exception that the confidentiality of the personally identifiable information will be maintained throughout the research and thereafter.

(4) Research, involving the collection or study of existing data, documents, records, pathological specimens, or diagnostic specimens, if these sources are publicly available or if the information is recorded by the investigator in such a manner that subjects cannot be identified, directly or through identifiers linked to the subjects.

(5) Research and demonstration projects which are conducted by or subject to the approval of department or agency heads, and which are designed to study, evaluate, or otherwise examine:

(i) Public benefit or service programs; (ii) procedures for obtaining benefits or services under those programs; (iii) possible changes in or alternatives to those programs or procedures; or (iv)

possible changes in methods or levels of payment for benefits or services under those programs.

(6) Taste and food quality evaluation and consumer acceptance studies, (i) if wholesome foods without additives are consumed or (ii) if a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural chemical or environmental contaminant at or below the level found to be safe, by the Food and Drug Administration or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture.

(c) Department or agency heads retain final judgment as to whether a particular activity is covered by this policy.

(d) Department or agency heads may require that specific research activities or classes of research activities conducted, supported, or otherwise subject to regulation by the department or agency but not otherwise covered by this policy, comply with some or all of the requirements of this policy.

(e) Compliance with this policy requires compliance with pertinent federal laws or regulations which provide additional protections for human subjects.

(f) This policy does not affect any state or local laws or regulations which may otherwise be applicable and which provide additional protections for human subjects.

(g) This policy does not affect any foreign laws or regulations which may otherwise be applicable and which provide additional protections to human subjects of research.

(h) When research covered by this policy takes place in foreign countries, procedures normally followed in the foreign countries to protect human subjects may differ from those set forth in this policy. [An example is a foreign institution which complies with guidelines consistent with the World Medical Assembly Declaration (Declaration of Helsinki amended 1989) issued either by sovereign states or by an organization whose function for the protection of human research subjects is internationally recognized.] In these circumstances, if a department or agency head determines that the procedures prescribed by the institution afford protections that are at least equivalent to those provided in this policy, the department or agency head may approve the substitution of the foreign procedures in lieu of the procedural requirements provided in this policy. Except when otherwise required by statute, Executive Order, or the department or agency head, notices of these actions as they occur will be published in the FEDERAL REGISTER or will be otherwise published as provided in department or agency procedures.

(i) Unless otherwise required by law, department or agency heads may waive the applicability of some or all of the provisions of this policy to specific research activities or classes of research activities otherwise covered by this policy. Except when otherwise required by statute or Executive Order, the department or agency head shall forward advance notices of these actions to the Office for Protection from Research Risks, Department of Health and Human Services (HHS), and shall also publish them in the FEDERAL REGISTER or in such other manner as provided in department or agency procedures.[1]

[56 FR 28012, 28022, June 18, 1991, 56 FR 29756, June 28, 1991]

§ 26.102 Definitions.

(a) *Department or agency head* means the head of any federal department or agency and any other officer or employee of any department or agency to whom authority has been delegated.

(b) *Institution* means any public or private entity or agency (including federal, state, and other agencies).

(c) *Legally authorized representative* means an individual or judicial or other body authorized under applicable law to consent on behalf of a prospective subject to the subject's participation in the procedure(s) involved in the research.

(d) *Research* means a systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge. Activities which meet this definition constitute research for purposes of this policy, whether or not they are conducted or supported under a program which is considered research for other purposes. For example, some demonstration and service programs may include research activities.

(e) *Research subject to regulation*, and similar terms are intended to encompass those research activities for which a federal department or agency has specific responsibility for regulating as a research activity, (for example, Investigational New Drug requirements administered by the Food and

[1] Institutions with HHS-approved assurances on file will abide by provisions of title 45 CFR part 46 subparts A–D. Some of the other Departments and Agencies have incorporated all provisions of title 45 CFR part 46 into their policies and procedures as well. However, the exemptions at 45 CFR 46.101(b) do not apply to research involving prisoners, fetuses, pregnant women, or human in vitro fertilization, subparts B and C. The exemption at 45 CFR 46.101(b)(2), for research involving survey or interview procedures or observation of public behavior, does not apply to research with children, subpart D, except for research involving observations of public behavior when the investigator(s) do not participate in the activities being observed.

Drug Administration). It does not include research activities which are incidentally regulated by a federal department or agency solely as part of the department's or agency's broader responsibility to regulate certain types of activities whether research or non-research in nature (for example, Wage and Hour requirements administered by the Department of Labor).

(f) *Human subject* means a living individual about whom an investigator (whether professional or student) conducting research obtains

(1) Data through intervention or interaction with the individual, or

(2) Identifiable private information.

Intervention includes both physical procedures by which data are gathered (for example, venipuncture) and manipulations of the subject or the subject's environment that are performed for research purposes. Interaction includes communication or interpersonal contact between investigator and subject. ''Private information'' includes information about behavior that occurs in a context in which an individual can reasonably expect that no observation or recording is taking place, and information which has been provided for specific purposes by an individual and which the individual can reasonably expect will not be made public (for example, a medical record). Private information must be individually identifiable (i.e., the identity of the subject is or may readily be ascertained by the investigator or associated with the information) in order for obtaining the information to constitute research involving human subjects.

(g) *IRB* means an institutional review board established in accord with and for the purposes expressed in this policy.

(h) *IRB approval* means the determination of the IRB that the research has been reviewed and may be conducted at an institution within the constraints set forth by the IRB and by other institutional and federal requirements.

(i) *Minimal risk* means that the probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests.

(j) *Certification* means the official notification by the institution to the supporting department or agency, in accordance with the requirements of this policy, that a research project or activity involving human subjects has been reviewed and approved by an IRB in accordance with an approved assurance.

§ 26.103 Assuring compliance with this policy—research conducted or supported by any Federal Department or Agency.

(a) Each institution engaged in research which is covered by this policy and which is conducted or supported by a federal department or agency shall provide written assurance satisfactory to the department or agency head that it will comply with the requirements set forth in this policy. In lieu of requiring submission of an assurance, individual department or agency heads shall accept the existence of a current assurance, appropriate for the research in question, on file with the Office for Protection from Research Risks, HHS, and approved for federalwide use by that office. When the existence of an HHS-approved assurance is accepted in lieu of requiring submission of an assurance, reports (except certification) required by this policy to be made to department and agency heads shall also be made to the Office for Protection from Research Risks, HHS.

(b) Departments and agencies will conduct or support research covered by this policy only if the institution has an assurance approved as provided in this section, and only if the institution has certified to the department or agency head that the research has been reviewed and approved by an IRB provided for in the assurance, and will be subject to continuing review by the IRB. Assurances applicable to federally supported or conducted research shall at a minimum include:

(1) A statement of principles governing the institution in the discharge of its responsibilities for protecting the rights and welfare of human subjects of research conducted at or sponsored by the institution, regardless of whether the research is subject to federal regulation. This may include an appropriate existing code, declaration, or statement of ethical principles, or a statement formulated by the institution itself. This requirement does not preempt provisions of this policy applicable to department- or agency-supported or regulated research and need not be applicable to any research exempted or waived under § 26.101 (b) or (i).

(2) Designation of one or more IRBs established in accordance with the requirements of this policy, and for which provisions are made for meeting space and sufficient staff to support the IRB's review and recordkeeping duties.

(3) A list of IRB members identified by name; earned degrees; representative capacity; indications of experience such as board certifications, licenses, etc., sufficient to describe each member's chief anticipated contributions to IRB deliberations; and any employment or other relationship between each member and the institution; for example: full-time employee, part-time employee, member of

governing panel or board, stockholder, paid or unpaid consultant. Changes in IRB membership shall be reported to the department or agency head, unless in accord with § 26.103(a) of this policy, the existence of an HHS-approved assurance is accepted. In this case, change in IRB membership shall be reported to the Office for Protection from Research Risks, HHS.

(4) Written procedures which the IRB will follow (i) for conducting its initial and continuing review of research and for reporting its findings and actions to the investigator and the institution; (ii) for determining which projects require review more often than annually and which projects need verification from sources other than the investigators that no material changes have occurred since previous IRB review; and (iii) for ensuring prompt reporting to the IRB of proposed changes in a research activity, and for ensuring that such changes in approved research, during the period for which IRB approval has already been given, may not be initiated without IRB review and approval except when necessary to eliminate apparent immediate hazards to the subject.

(5) Written procedures for ensuring prompt reporting to the IRB, appropriate institutional officials, and the department or agency head of (i) any unanticipated problems involving risks to subjects or others or any serious or continuing noncompliance with this policy or the requirements or determinations of the IRB and (ii) any suspension or termination of IRB approval.

(c) The assurance shall be executed by an individual authorized to act for the institution and to assume on behalf of the institution the obligations imposed by this policy and shall be filed in such form and manner as the department or agency head prescribes.

(d) The department or agency head will evaluate all assurances submitted in accordance with this policy through such officers and employees of the department or agency and such experts or consultants engaged for this purpose as the department or agency head determines to be appropriate. The department or agency head's evaluation will take into consideration the adequacy of the proposed IRB in light of the anticipated scope of the institution's research activities and the types of subject populations likely to be involved, the appropriateness of the proposed initial and continuing review procedures in light of the probable risks, and the size and complexity of the institution.

(e) On the basis of this evaluation, the department or agency head may approve or disapprove the assurance, or enter into negotiations to develop an approvable one. The department or agency head may limit the period during which any particular approved assurance or class of approved assurances shall remain effective or otherwise condition or restrict approval.

(f) Certification is required when the research is supported by a federal department or agency and not otherwise exempted or waived under § 26.101 (b) or (i). An institution with an approved assurance shall certify that each application or proposal for research covered by the assurance and by § 26.103 of this Policy has been reviewed and approved by the IRB. Such certification must be submitted with the application or proposal or by such later date as may be prescribed by the department or agency to which the application or proposal is submitted. Under no condition shall research covered by § 26.103 of the Policy be supported prior to receipt of the certification that the research has been reviewed and approved by the IRB. Institutions without an approved assurance covering the research shall certify within 30 days after receipt of a request for such a certification from the department or agency, that the application or proposal has been approved by the IRB. If the certification is not submitted within these time limits, the application or proposal may be returned to the institution.

(Approved by the Office of Management and Budget under control number 9999–0020)

[56 FR 28012, 28022, June 18, 1991, 56 FR 29756, June 28, 1991]

§§ 26.104—26.106 [Reserved]

§ 26.107 IRB membership.

(a) Each IRB shall have at least five members, with varying backgrounds to promote complete and adequate review of research activities commonly conducted by the institution. The IRB shall be sufficiently qualified through the experience and expertise of its members, and the diversity of the members, including consideration of race, gender, and cultural backgrounds and sensitivity to such issues as community attitudes, to promote respect for its advice and counsel in safeguarding the rights and welfare of human subjects. In addition to possessing the professional competence necessary to review specific research activities, the IRB shall be able to ascertain the acceptability of proposed research in terms of institutional commitments and regulations, applicable law, and standards of professional conduct and practice. The IRB shall therefore include persons knowledgeable in these areas. If an IRB regularly reviews research that involves a vulnerable category of subjects, such as children, prisoners, pregnant women, or handicapped or mentally disabled persons, consideration shall be given to the inclusion of one or more individuals who are knowledgeable about and experienced in working with these subjects.

(b) Every nondiscriminatory effort will be made to ensure that no IRB consists entirely of men or entirely of women, including the institution's consideration of qualified persons of both sexes, so long as no selection is made to the IRB on the basis of gender. No IRB may consist entirely of members of one profession.

(c) Each IRB shall include at least one member whose primary concerns are in scientific areas and at least one member whose primary concerns are in nonscientific areas.

(d) Each IRB shall include at least one member who is not otherwise affiliated with the institution and who is not part of the immediate family of a person who is affiliated with the institution.

(e) No IRB may have a member participate in the IRB's initial or continuing review of any project in which the member has a conflicting interest, except to provide information requested by the IRB.

(f) An IRB may, in its discretion, invite individuals with competence in special areas to assist in the review of issues which require expertise beyond or in addition to that available on the IRB. These individuals may not vote with the IRB.

§ 26.108 IRB functions and operations.

In order to fulfill the requirements of this policy each IRB shall:

(a) Follow written procedures in the same detail as described in § 26.103(b)(4) and, to the extent required by, § 26.103(b)(5).

(b) Except when an expedited review procedure is used (see § 26.110), review proposed research at convened meetings at which a majority of the members of the IRB are present, including at least one member whose primary concerns are in nonscientific areas. In order for the research to be approved, it shall receive the approval of a majority of those members present at the meeting.

§ 26.109 IRB Review of Research.

(a) An IRB shall review and have authority to approve, require modifications in (to secure approval), or disapprove all research activities covered by this policy.

(b) An IRB shall require that information given to subjects as part of informed consent is in accordance with § 26.116. The IRB may require that information, in addition to that specifically mentioned in § 26.116, be given to the subjects when in the IRB's judgment the information would meaningfully add to the protection of the rights and welfare of subjects.

(c) An IRB shall require documentation of informed consent or may waive documentation in accordance with § 26.117.

(d) An IRB shall notify investigators and the institution in writing of its decision to approve or disapprove the proposed research activity, or of modifications required to secure IRB approval of the research activity. If the IRB decides to disapprove a research activity, it shall include in its written notification a statement of the reasons for its decision and give the investigator an opportunity to respond in person or in writing.

(e) An IRB shall conduct continuing review of research covered by this policy at intervals appropriate to the degree of risk, but not less than once per year, and shall have authority to observe or have a third party observe the consent process and the research.

(Approved by the Office of Management and Budget under control number 9999–0020)

§ 26.110 Expedited review procedures for certain kinds of research involving no more than minimal risk, and for minor changes in approved research.

(a) The Secretary, HHS, has established, and published as a Notice in the FEDERAL REGISTER, a list of categories of research that may be reviewed by the IRB through an expedited review procedure. The list will be amended, as appropriate after consultation with other departments and agencies, through periodic republication by the Secretary, HHS, in the FEDERAL REGISTER. A copy of the list is available from the Office for Protection from Research Risks, National Institutes of Health, HHS, Bethesda, Maryland 20892.

(b) An IRB may use the expedited review procedure to review either or both of the following:

(1) Some or all of the research appearing on the list and found by the reviewer(s) to involve no more than minimal risk,

(2) Minor changes in previously approved research during the period (of one year or less) for which approval is authorized.

Under an expedited review procedure, the review may be carried out by the IRB chairperson or by one or more experienced reviewers designated by the chairperson from among members of the IRB. In reviewing the research, the reviewers may exercise all of the authorities of the IRB except that the reviewers may not disapprove the research. A research activity may be disapproved only after review in accordance with the non-expedited procedure set forth in § 26.108(b).

(c) Each IRB which uses an expedited review procedure shall adopt a method for keeping all members advised of research proposals which have been approved under the procedure.

(d) The department or agency head may restrict, suspend, terminate, or choose not to authorize an institution's or IRB's use of the expedited review procedure.

§ 26.111 Criteria for IRB approval of research.

(a) In order to approve research covered by this policy the IRB shall determine that all of the following requirements are satisfied:

(1) Risks to subjects are minimized: (i) By using procedures which are consistent with sound research design and which do not unnecessarily expose subjects to risk, and (ii) whenever appropriate, by using procedures already being performed on the subjects for diagnostic or treatment purposes.

(2) Risks to subjects are reasonable in relation to anticipated benefits, if any, to subjects, and the importance of the knowledge that may reasonably be expected to result. In evaluating risks and benefits, the IRB should consider only those risks and benefits that may result from the research (as distinguished from risks and benefits of therapies subjects would receive even if not participating in the research). The IRB should not consider possible long-range effects of applying knowledge gained in the research (for example, the possible effects of the research on public policy) as among those research risks that fall within the purview of its responsibility.

(3) Selection of subjects is equitable. In making this assessment the IRB should take into account the purposes of the research and the setting in which the research will be conducted and should be particularly cognizant of the special problems of research involving vulnerable populations, such as children, prisoners, pregnant women, mentally disabled persons, or economically or educationally disadvantaged persons.

(4) Informed consent will be sought from each prospective subject or the subject's legally authorized representative, in accordance with, and to the extent required by § 26.116.

(5) Informed consent will be appropriately documented, in accordance with, and to the extent required by § 26.117.

(6) When appropriate, the research plan makes adequate provision for monitoring the data collected to ensure the safety of subjects.

(7) When appropriate, there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data.

(b) When some or all of the subjects are likely to be vulnerable to coercion or undue influence, such as children, prisoners, pregnant women, mentally disabled persons, or economically or educationally disadvantaged persons, additional safeguards have been included in the study to protect the rights and welfare of these subjects.

§ 26.112 Review by institution.

Research covered by this policy that has been approved by an IRB may be subject to further appropriate review and approval or disapproval by officials of the institution. However, those officials may not approve the research if it has not been approved by an IRB.

§ 26.113 Suspension or termination of IRB approval of research.

An IRB shall have authority to suspend or terminate approval of research that is not being conducted in accordance with the IRB's requirements or that has been associated with unexpected serious harm to subjects. Any suspension or termination of approval shall include a statement of the reasons for the IRB's action and shall be reported promptly to the investigator, appropriate institutional officials, and the department or agency head.

(Approved by the Office of Management and Budget under control number 9999–0020)

§ 26.114 Cooperative research.

Cooperative research projects are those projects covered by this policy which involve more than one institution. In the conduct of cooperative research projects, each institution is responsible for safeguarding the rights and welfare of human subjects and for complying with this policy. With the approval of the department or agency head, an institution participating in a cooperative project may enter into a joint review arrangement, rely upon the review of another qualified IRB, or make similar arrangements for avoiding duplication of effort.

§ 26.115 IRB records.

(a) An institution, or when appropriate an IRB, shall prepare and maintain adequate documentation of IRB activities, including the following:

(1) Copies of all research proposals reviewed, scientific evaluations, if any, that accompany the proposals, approved sample consent documents, progress reports submitted by investigators, and reports of injuries to subjects.

(2) Minutes of IRB meetings which shall be in sufficient detail to show attendance at the meetings; actions taken by the IRB; the vote on these actions including the number of members voting for, against, and abstaining; the basis for requiring changes in or disapproving research; and a written summary of the discussion of controverted issues and their resolution.

(3) Records of continuing review activities.

(4) Copies of all correspondence between the IRB and the investigators.

(5) A list of IRB members in the same detail as described is § 26.103(b)(3).

(6) Written procedures for the IRB in the same detail as described in § 26.103(b)(4) and § 26.103(b)(5).

(7) Statements of significant new findings provided to subjects, as required by § 26.116(b)(5).

(b) The records required by this policy shall be retained for at least 3 years, and records relating to research which is conducted shall be retained for at least 3 years after completion of the research. All records shall be accessible for inspection and copying by authorized representatives of the department or agency at reasonable times and in a reasonable manner.

(Approved by the Office of Management and Budget under control number 9999–0020)

§ 26.116 General requirements for informed consent.

Except as provided elsewhere in this policy, no investigator may involve a human being as a subject in research covered by this policy unless the investigator has obtained the legally effective informed consent of the subject or the subject's legally authorized representative. An investigator shall seek such consent only under circumstances that provide the prospective subject or the representative sufficient opportunity to consider whether or not to participate and that minimize the possibility of coercion or undue influence. The information that is given to the subject or the representative shall be in language understandable to the subject or the representative. No informed consent, whether oral or written, may include any exculpatory language through which the subject or the representative is made to waive or appear to waive any of the subject's legal rights, or releases or appears to release the investigator, the sponsor, the institution or its agents from liability for negligence.

(a) Basic elements of informed consent. Except as provided in paragraph (c) or (d) of this section, in seeking informed consent the following information shall be provided to each subject:

(1) A statement that the study involves research, an explanation of the purposes of the research and the expected duration of the subject's participation, a description of the procedures to be followed, and identification of any procedures which are experimental;

(2) A description of any reasonably foreseeable risks or discomforts to the subject;

(3) A description of any benefits to the subject or to others which may reasonably be expected from the research;

(4) A disclosure of appropriate alternative procedures or courses of treatment, if any, that might be advantageous to the subject;

(5) A statement describing the extent, if any, to which confidentiality of records identifying the subject will be maintained;

(6) For research involving more than minimal risk, an explanation as to whether any compensation and an explanation as to whether any medical treatments are available if injury occurs and, if so, what they consist of, or where further information may be obtained;

(7) An explanation of whom to contact for answers to pertinent questions about the research and research subjects' rights, and whom to contact in the event of a research-related injury to the subject; and

(8) A statement that participation is voluntary, refusal to participate will involve no penalty or loss of benefits to which the subject is otherwise entitled, and the subject may discontinue participation at any time without penalty or loss of benefits to which the subject is otherwise entitled.

(b) Additional elements of informed consent. When appropriate, one or more of the following elements of information shall also be provided to each subject:

(1) A statement that the particular treatment or procedure may involve risks to the subject (or to the embryo or fetus, if the subject is or may become pregnant) which are currently unforeseeable;

(2) Anticipated circumstances under which the subject's participation may be terminated by the investigator without regard to the subject's consent;

(3) Any additional costs to the subject that may result from participation in the research;

(4) The consequences of a subject's decision to withdraw from the research and procedures for orderly termination of participation by the subject;

(5) A statement that significant new findings developed during the course of the research which may relate to the subject's willingness to continue participation will be provided to the subject; and

(6) The approximate number of subjects involved in the study.

(c) An IRB may approve a consent procedure which does not include, or which alters, some or all of the elements of informed consent set forth above, or waive the requirement to obtain informed consent provided the IRB finds and documents that:

(1) The research or demonstration project is to be conducted by or subject to the approval of state or local government officials and is designed to study, evaluate, or otherwise examine: (i) Public benefit of service programs; (ii) procedures for obtaining benefits or services under those programs; (iii) possible changes in or alternatives to those programs or procedures; or (iv) possible changes in methods or levels of payment for benefits or services under those programs; and

(2) The research could not practicably be carried out without the waiver or alteration.

(d) An IRB may approve a consent procedure which does not include, or which alters, some or all of the elements of informed consent set forth

in this section, or waive the requirements to obtain informed consent provided the IRB finds and documents that:

(1) The research involves no more than minimal risk to the subjects;

(2) The waiver or alteration will not adversely affect the rights and welfare of the subjects;

(3) The research could not practicably be carried out without the waiver or alteration; and

(4) Whenever appropriate, the subjects will be provided with additional pertinent information after participation.

(e) The informed consent requirements in this policy are not intended to preempt any applicable federal, state, or local laws which require additional information to be disclosed in order for informed consent to be legally effective.

(f) Nothing in this policy is intended to limit the authority of a physician to provide emergency medical care, to the extent the physician is permitted to do so under applicable federal, state, or local law.

(Approved by the Office of Management and Budget under control number 9999–0020)

§ 26.117 Documentation of informed consent.

(a) Except as provided in paragraph (c) of this section, informed consent shall be documented by the use of a written consent form approved by the IRB and signed by the subject or the subject's legally authorized representative. A copy shall be given to the person signing the form.

(b) Except as provided in paragraph (c) of this section, the consent form may be either of the following:

(1) A written consent document that embodies the elements of informed consent required by § 26.116. This form may be read to the subject or the subject's legally authorized representative, but in any event, the investigator shall give either the subject or the representative adequate opportunity to read it before it is signed; or

(2) A short form written consent document stating that the elements of informed consent required by § 26.116 have been presented orally to the subject or the subject's legally authorized representative. When this method is used, there shall be a witness to the oral presentation. Also, the IRB shall approve a written summary of what is to be said to the subject or the representative. Only the short form itself is to be signed by the subject or the representative. However, the witness shall sign both the short form and a copy of the summary, and the person actually obtaining consent shall sign a copy of the summary. A copy of the summary shall be given to the subject or the representative, in addition to a copy of the short form.

(c) An IRB may waive the requirement for the investigator to obtain a signed consent form for some or all subjects if it finds either:

(1) That the only record linking the subject and the research would be the consent document and the principal risk would be potential harm resulting from a breach of confidentiality. Each subject will be asked whether the subject wants documentation linking the subject with the research, and the subject's wishes will govern; or

(2) That the research presents no more than minimal risk of harm to subjects and involves no procedures for which written consent is normally required outside of the research context.

In cases in which the documentation requirement is waived, the IRB may require the investigator to provide subjects with a written statement regarding the research.

(Approved by the Office of Management and Budget under control number 9999–0020)

§ 26.118 Applications and proposals lacking definite plans for involvement of human subjects.

Certain types of applications for grants, cooperative agreements, or contracts are submitted to departments or agencies with the knowledge that subjects may be involved within the period of support, but definite plans would not normally be set forth in the application or proposal. These include activities such as institutional type grants when selection of specific projects is the institution's responsibility; research training grants in which the activities involving subjects remain to be selected; and projects in which human subjects' involvement will depend upon completion of instruments, prior animal studies, or purification of compounds. These applications need not be reviewed by an IRB before an award may be made. However, except for research exempted or waived under § 26.101 (b) or (i), no human subjects may be involved in any project supported by these awards until the project has been reviewed and approved by the IRB, as provided in this policy, and certification submitted, by the institution, to the department or agency.

§ 26.119 Research undertaken without the intention of involving human subjects.

In the event research is undertaken without the intention of involving human subjects, but it is later proposed to involve human subjects in the research, the research shall first be reviewed and approved by an IRB, as provided in this policy, a certification submitted, by the institution, to the department or agency, and final approval given to the proposed change by the department or agency.

§ 26.120 Evaluation and disposition of applications and proposals for research to be conducted or supported by a Federal Department or Agency.

The department or agency head will evaluate all applications and proposals involving human subjects submitted to the department or agency through such officers and employees of the department or agency and such experts and consultants as the department or agency head determines to be appropriate. This evaluation will take into consideration the risks to the subjects, the adequacy of protection against these risks, the potential benefits of the research to the subjects and others, and the importance of the knowledge gained or to be gained.

(b) On the basis of this evaluation, the department or agency head may approve or disapprove the application or proposal, or enter into negotiations to develop an approvable one.

§ 26.121 [Reserved]

§ 26.122 Use of Federal funds.

Federal funds administered by a department or agency may not be expended for research involving human subjects unless the requirements of this policy have been satisfied.

§ 26.123 Early termination of research support: Evaluation of applications and proposals.

(a) The department or agency head may require that department or agency support for any project be terminated or suspended in the manner prescribed in applicable program requirements, when the department or agency head finds an institution has materially failed to comply with the terms of this policy.

(b) In making decisions about supporting or approving applications or proposals covered by this policy the department or agency head may take into account, in addition to all other eligibility requirements and program criteria, factors such as whether the applicant has been subject to a termination or suspension under paragarph (a) of this section and whether the applicant or the person or persons who would direct or has have directed the scientific and technical aspects of an activity has have, in the judgment of the department or agency head, materially failed to discharge responsibility for the protection of the rights and welfare of human subjects (whether or not the research was subject to federal regulation).

§ 26.124 Conditions.

With respect to any research project or any class of research projects the department or agency head may impose additional conditions prior to or at the time of approval when in the judgment of the department or agency head additional conditions are necessary for the protection of human subjects.

PART 27—PROGRAM FRAUD CIVIL REMEDIES

AUTHORITY: 31 U.S.C. 3801–3812; Pub. L. 101–410, 104 Stat. 890, 28 U.S.C. 2461 note; Pub. L. 104–134, 110 Stat. 1321, 31 U.S.C. 3701 note.

SOURCE: 53 FR 15182, Apr. 27, 1988, unless otherwise noted.

§ 27.1 Basis and purpose.

(a) *Basis.* This part implements the Program Fraud Civil Remedies Act of 1986, Public Law No. 99–509, sections 6101–6104, 100 Stat. 1874 (October 21, 1986), to be codified at 31 U.S.C. 3801–3812. 31 U.S.C. 3809 of the statute requires each authority head to promulgate regulations necessary to implement the provisions of the statute.

(b) *Purpose.* This part (1) establishes administrative procedures for imposing civil penalties and assessments against persons who make, submit, or present, or cause to be made, submitted, or presented, false, fictitious, or fraudulent claims or written statements to the Environmental Protection Agency, and (2) specifies the hearing and appeal rights of persons subject to allegations of liability for such penalties and assessments.

§ 27.2 Definitions.

Administrative Law Judge means an administrative law judge in the Authority appointed pursuant to 5 U.S.C. 3105 or detailed to the Authority pursuant to 5 U.S.C. 3344.

Administrator means the Administrator of the United States Environmental Protection Agency.

Authority means the United States Environmental Protection Agency.

Benefit means, in the context of ''statement,'' anything of value, including but not limited to any advantage, preference, privilege, license, permit, favorable decision, ruling, status, or loan guarantee.

Claim means any request, demand, or submission—

(a) Made to the Authority for property, services, or money (including money representing grants, loans, insurance, or benefits);

(b) Made to a recipient of property, services, or money from the Authority or to a party to a contract with the Authority—

(1) For property or services if the United States—

(i) Provided such property or services;

(ii) Provided any portion of the funds for the purchase of such property or services; or

(iii) Will reimburse such recipient or party for the purchase of such property or services; or

(2) For the payment of money (including money representing grants, loans, insurance, or benefits) if the United States—

(i) Provided any portion of the money requested or demanded; or

(ii) Will reimburse such recipient or party for any portion of the money paid on such request or demand; or

(c) Made to the Authority which has the effect of decreasing an obligation to pay or account for property, services, or money.

Complaint means the administrative complaint served by the reviewing official on the defendant under § 27.7.

Defendant means any person alleged in a complaint under § 27.7 to be liable for a civil penalty or assessment under § 27.3.

Environmental Appeals Board means the Board within the Agency described in § 1.25 of this title.

Government means the United States Government.

Hearing Clerk means the Hearing Clerk, A–110, United States Environmental Protection Agency, 401 M St. SW., Washington, DC 20460.

Individual means a natural person.

Initial decision means the written decision of the presiding officer required by § 27.10 or § 27.37, and includes a revised initial decision issued following a remand or a motion for reconsideration.

Investigating official means the Inspector General of the United States Environmental Protection Agency or an officer or employee of the Office of Inspector General designated by the Inspector General and serving in a position for which the rate of basic pay is not less than the minimum rate of basic pay for grade GS–16 under the General Schedule.

Knows or has reason to know means that a person, with respect to a claim or statement—

(a) Has actual knowledge that the claim or statement is false, fictitious, or fraudulent;

(b) Acts in deliberate ignorance of the truth or falsity of the claim or statement; or

(c) Acts in reckless disregard of the truth or falsity of the claim or statement.

Makes, wherever it appears, shall include the terms presents, submits, and causes to be made, presented, or submitted. As the context requires, *making* or *made* shall likewise include the corresponding forms of such terms.

Person means any individual, partnership, corporation, association, or private organization, and includes the plural of those terms.

Presiding officer means the administrative law judge designated by the Chief administrative law judge to serve as presiding officer.

Representative means an attorney who is a member in good standing of the bar of any State, Territory, or possession of the United States or of the District of Columbia or the Commonwealth of Puerto Rico, or other representative who must conform to the standards of conduct and ethics required of practitioners before the courts of the United States.

Reviewing official means the General Counsel of the Authority or his designee who is—

(a) Not subject to supervision by, or required to report to, the investigating official;

(b) Not employed in the organizational unit of the Authority in which the investigating official is employed; and

(c) Serving in a position for which the rate of basic pay is not less than the minimum rate of basic pay for grade GS–16 under the General Schedule.

Statement means any representation, certification, affirmation, document, record, or accounting or bookkeeping entry made—

(a) With respect to a claim or to obtain the approval or payment of a claim (including relating to eligibility to make a claim); or

(b) With respect to (including relating to eligibility for)—

(1) A contract with, or a bid or proposal for a contract with; or

(2) A grant, loan, or benefit from,

the Authority, or any State, political subdivision of a State, or other party, if the United States Government provides any portion of the money or property under such contract or for such grant, loan, or benefit, or if the Government will reimburse such State, political subdivision, or party for any portion of the money or property under such contract or for such grant, loan, or benefit.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5326, Feb. 13, 1992]

§ 27.3 Basis for civil penalties and assessments.

(a) *Claims.* (1) Except as provided in paragraph (c) of this section, any person who makes a claim that the person knows or has reason to know—

(i) Is false, fictitious, or fraudulent;

(ii) Includes or is supported by any written statement which asserts a material fact which is false, fictitious, or fraudulent;

(iii) Includes, or is supported by, any written statement that—

(A) Omits a material fact;

(B) Is false, fictitious, or fraudulent as a result of such omission; and

(C) Is a statement in which the person making such statement has a duty to include such material fact; or

(iv) Is for payment for the provision of property or services which the person has not provided as claimed, shall be subject, in addition to any other remedy that may be prescribed by law, to a civil penalty of not more than $5,500 [1] for each such claim.

(2) Each voucher, invoice, claim form, or other individual request or demand for property, services, or money constitutes a separate claim.

[1] As adjusted in accordance with the Federal Civil Penalties Inflation Adjustment Act of 1990 (Pub. L. 101–410, 104 Stat. 890), as amended by the Debt Collection Improvement Act of 1996 (Pub. L. 104–134, 110 Stat. 1321).

(3) A claim shall be considered made to the Authority, recipient, or party when such claim is actually made to an an agent, fiscal intermediary, or other entity, including any State or political subdivision thereof, acting for or on behalf of the Authority, recipient, or party.

(4) Each claim for property, services, or money is subject to a civil penalty regardless of whether such property, services, or money is actually delivered or paid.

(5) If the Government has made any payment (including transferred property or provided services) on a claim, a person subject to a civil penalty under paragraph (a)(1) of this section, shall also be subject to an assessment of not more than twice the amount of such claim or that portion thereof that is determined to be in violation of paragraph (a)(1) of this section. Such assessment shall be in lieu of damages sustained by the Government because of such claim.

(b) *Statements.* (1) Except as provided in paragraph (c) of this section, any person who makes a written statement that—

(i) The person knows or has reason to know—

(A) Asserts a material fact which is false, factitious, or fraudulent; or

(B) Is false, factitious, or fraudulent because it omits a material fact that the person making the statement has a duty to include in such statement; and

(ii) Contains, or is accompanied by, an express certification or affirmation of the truthfulness and accuracy of the contents of the statement, shall be subject, in addition to any other remedy that may be prescribed by law, to a civil penalty of not more than $5,500 [2] for each such statement.

(2) Each written representation, certification, or affirmation constitutes a separate statement.

(3) A statement shall be considered made to the Authority when such statement is actually made to an agent, fiscal intermediary, or other entity, including any State or political subdivision thereof, acting for or on behalf of such Authority.

(c) No proof of specific intent to defraud is required to establish liability under this section.

(d) In any case in which it is determined that more than one person is liable for making a claim or statement under this section, each such person may be held liable for a civil penalty under this section.

(e) In any case in which it is determined that more than one person is liable for making a claim under this section on which the Government has made payment (including transferred property or provided services), an assessment may be imposed against any such person or jointly and severally against any combination of such persons.

[53 FR 15182, Apr. 27, 1988, as amended at 61 FR 69366, Dec. 31, 1996]

§ 27.4 Investigation.

(a) If the investigating official concludes that a subpoena pursuant to the authority conferred by 31 U.S.C. 3804(a) is warranted—

(1) The subpoena so issued shall notify the person to whom it is addressed of the authority under which the subpoena is issued and shall identify the records or documents sought;

(2) The investigating official may designate a person to act on his or her behalf to receive the documents sought; and

(3) The person receiving such subpoena shall be required to tender to the investigating official or the person designated to receive the documents a certification that the documents sought have been produced, or that such documents are not available and the reasons therefor, or that such documents, suitably identified, have been withheld based upon the assertion of an identified privilege.

(b) If the investigating official concludes that an action under the Program Fraud Civil Remedies Act may be warranted, the investigating official shall submit a report containing the findings and conclusions of such investigation to the reviewing official.

(c) Nothing in this section shall preclude or limit an investigating official's discretion to defer or postpone a report or referral to the reviewing official to avoid interference with a criminal investigation or prosecution.

(d) Nothing in this section modifies any responsibility of an investigating official to report violations of criminal law to the Attorney General.

§ 27.5 Review by the reviewing official.

(a) If, based on the report of the investigating official under § 27.4(b), the reviewing official determines that there is adequate evidence to believe that a person is liable under § 27.3 of this part, the reviewing official shall transmit to the Attorney General a written notice of the reviewing official's intention to issue a complaint under § 27.7.

(b) Such notice shall include—

(1) A statement of the reviewing official's reasons for issuing a complaint;

(2) A statement specifying the evidence that supports the allegations of liability;

(3) A description of the claims or statements upon which the allegations of liability are based;

(4) An estimate of the amount of money or the value of property, services, or other benefits requested or demanded in violation of § 27.3 of this part;

[2] As adjusted in accordance with the Federal Civil Penalties Inflation Adjustment Act of 1990 (Pub. L. 101–410, 104 Stat. 890), as amended by the Debt Collection Improvement Act of 1996 (Pub. L. 104–134, 110 Stat. 1321).

(5) A statement of any exculpatory or mitigating circumstances that may relate to the claims or statements known by the reviewing official or the investigating official; and

(6) A statement that there is a reasonable prospect of collecting an appropriate amount of penalties and assessments.

§ 27.6 Prerequisites for issuing a complaint.

(a) The reviewing official may issue a complaint under § 27.7 only if—

(1) The Department of Justice approves the issuance of a complaint in written statement described in 31 U.S.C. 3803(b)(1), and

(2) In the case of allegations of liability under § 27.3(a) with respect to a claim, the reviewing official determines that, with respect to such claim or a group of related claims submitted at the same time such claim is submitted (as defined in paragraph (b) of this section), the amount of money or the value of property or services demanded or requested in violation of § 27.3(a) does not exceed $150,000.

(b) For the purposes of this section, a related group of claims submitted at the same time shall include only those claims arising from the same transaction (*e.g.*, grant, loan, application, or contract) that are submitted simultaneously as part of a single request, demand, or submission.

(c) Nothing in this section shall be construed to limit the reviewing official's authority to join in a single complaint against a person, claims that are unrelated or were not submitted simultaneously, regardless of the amount of money, or the value of property or services, demanded or requested.

§ 27.7 Complaint.

(a) On or after the date the Department of Justice approves the issuance of a complaint in accordance with 31 U.S.C. 3803(b)(1), the reviewing official may serve a complaint on the defendant, as provided in § 27.8.

(b) The complaint shall state—

(1) The allegations of liability against the defendant, including the statuory basis for liability, an identification of the claims or statements that are the basis for the alleged liability, and the reasons why liability allegedly arises from such claims or statements;

(2) The maximum amount of penalties and assessments for which the defendant may be held liable;

(3) Instructions for filing an answer to request a hearing, including a specific statement of the defendant's right to request a hearing by filing an answer and to be represented by a representative; and

(4) That failure to file an answer within 30 days of service of the complaint will result in the imposition of the maximum amount of penalties and assessments without right to appeal as provided in § 27.10.

(c) At the same time the reviewing official serves the complaint, he or she shall serve the defendant with a copy of these regulations.

§ 27.8 Service of complaint.

(a) Service of a complaint must be made by certified or registered mail or by delivery in any manner authorized by Rule 4(d) of the Federal Rules of Civil Procedure. Service is complete upon receipt.

(b) Proof of service, stating the name and address of the person on whom the complaint was served, and the manner and date of service, may be made by—

(1) Affidavit of the individual serving the complaint by delivery;

(2) A United States Postal Service return receipt card acknowledging receipt; or

(3) Written acknowledgment of receipt by the defendant or his or her representative.

§ 27.9 Answer.

(a) The defendant may request a hearing by filing an answer with the reviewing official within 30 days of service of the complaint. An answer shall be deemed to be a request for hearing.

(b) In the answer, the defendant—

(1) Shall admit or deny each of the allegations of liability made in the complaint;

(2) Shall state any defense on which the defendant intends to rely;

(3) May state any reasons why the defendant contends that the penalties and assessments should be less than the statutory maximum; and

(4) Shall state the name, address, and telephone number of the person authorized by the defendant to act as defendant's representative, if any.

(c) If the defendant is unable to file an answer meeting the requirements of paragraph (b) of this section within the time provided, the defendant may, before the expiration of 30 days from service of the complaint, file with the reviewing official a general answer denying liability and requesting a hearing, and a request for an extension of time within which to file an answer meeting requirements of paragraph (b) of this section. The reviewing official shall file promptly with the hearing clerk the complaint, the general answer denying liability, and the request for an extension of time as provided in § 27.11. Upon assignment to a presiding officer, the presiding officer may, for good cause shown, grant the defendant up to 30 additional days within which to file an answer meeting the requirements of paragraph (b) of this section.

§ 27.10 Default upon failure to file an answer.

(a) If the defendant does not file an answer within the time prescribed in § 27.9(a), the reviewing official may file the complaint with the hearing clerk as provided in § 27.11.

(b) Upon assignment of the complaint to a presiding officer, the presiding officer shall promptly serve on defendant in the manner prescribed in § 27.8, a notice that an initial decision will be issued under this section.

(c) The presiding officer shall assume the facts alleged in the complaint to be true, and, if such facts establish liability under § 27.3, the presiding officer shall issue an initial decision imposing the maximum amount of penalties and assessments allowed under the statute.

(d) Except as otherwise provided in this section, by failing to file a timely answer, the defendant waives any right to further review of the penalties and assessments imposed under paragraph (c) of this section, and the initial decision shall become final and binding upon the parties 30 days after it is issued.

(e) If, before such an initial decision becomes final, the defendant files a motion seeking to reopen on the grounds that extraordinary circumstances prevented the defendant from filing an answer, the initial decision shall be stayed pending the presiding officer's decision on the motion.

(f) If, on such motion, the defendant can demonstrate extraordinary circumstances excusing the failure to file a timely answer, the presiding officer shall withdraw the initial decision in paragraph (c) of this section, if such a decision has been issued, and shall grant the defendant an opportunity to answer the complaint.

(g) A decision of the presiding officer denying a defendant's motion under paragraph (e) of this section, is not subject to reconsideration under § 27.38.

(h) The defendant may appeal to the Environmental Appeals Board the decision denying a motion to reopen by filing a notice of appeal within 15 days after the presiding officer denies the section. The timely filing of a notice of appeal shall stay the initial decision the Environmental Appeals Board decides the issue.

(i) If the defendant files a timely notice of appeal, the presiding officer shall forward the record of the proceeding to the Environmental Appeals Board.

(j) The Environmental Appeals Board shall decide expeditiously whether extraordinary circumstances excuse the defendant's failure to file a timely answer based solely on the record before the presiding officer.

(k) If the Environmental Appeals Board decides that extraordinary circumstances excused the defendant's failure to file a timely answer, the Environmental Appeals Board shall remand the case to the presiding officer with instructions to grant the defendant an opportunity to answer.

(l) If the Environmental Appeals Board decides that the defendant's failure to file a timely answer is not excused, the Environmental Appeals Board shall reinstate the initial decision of the presiding officer, which shall become final and binding upon the parties 30 days after the Environmental Appeals Board issues such decision.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5326, Feb. 13, 1992]

§ 27.11 Referral of complaint and answer to the presiding officer.

(a) Upon receipt of an answer, the reviewing official shall file the complaint and answer with the hearing clerk.

(b) The hearing clerk shall forward the complaint and answer to the Chief administrative law judge who shall assign himself or herself or another administrative law judge as presiding officer. The presiding officer shall then obtain the complaint and answer from the Chief administrative law judge and notify the parties of his or her assignment.

§ 27.12 Notice of hearing.

(a) When the presiding officer obtains the complaint and answer, the presiding officer shall promptly serve a notice of hearing upon the defendant in the manner prescribed by § 27.8. At the same time, the presiding officer shall send a copy of such notice to the representative for the Government.

(b) Such notice shall include—

(1) The date, time and place, and the nature of the hearing;

(2) The legal authority and jurisdiction under which the hearing is to be held;

(3) The matters of fact and law to be asserted;

(4) A description of the procedures for the conduct of the hearing;

(5) The name, address, and telephone number of the representative of the Government and of the defendant, if any; and

(6) Such other matters as the presiding officer deems appropriate.

(c) The presiding officer shall issue the notice of hearing at least twenty (20) days prior to the date set for the hearing.

§ 27.13 Parties to the hearing.

(a) The parties to the hearing shall be the defendant and the Authority.

(b) Pursuant to 31 U.S.C. 3730(c)(5), a private plaintiff under the False Claims Act may participate in these proceedings to the extent authorized by the provisions of that Act.

§ 27.14 Separation of functions.

(a) The investigating official, the reviewing official, and any employee or agent of the Authority who takes part in investigating, preparing, or presenting a particular case, may not, in such case or a factually related case—

(1) Participate in the hearing as the presiding officer;

(2) Participate or advise in the initial decision or the review of the initial decision by the Environmental Appeals Board, except as a witness or representative in public proceedings; or

(3) Make the collection of penalties and assessments under 31 U.S.C. 3806.

(b) Neither the presiding officer nor the members of the Environmental Appeals Board shall be responsible to, or subject to, the supervision or direction of the investigating official or the reviewing official.

(c) Except as provided in paragraph (a) of this section, the representative for the Government may be employed anywhere in the authority, including in the offices of either the investigating official or the reviewing official.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5326, Feb. 13, 1992]

§ 27.15 Ex parte contacts.

No party or person (except employees of the presiding officer's office) shall communicate in any way with the presiding officer on any matter at issue in a case, unless on notice and opportunity for all parties to participate. This provision does not prohibit a person or party from inquiring about the status of a case or asking routine question concerning administrative functions or procedures.

§ 27.16 Disqualification of the reviewing official or presiding officer.

(a) A reviewing official or presiding officer in a particular case may disqualify himself or herself at any time.

(b) A party may file a motion for disqualification of a reviewing official or presiding officer with the hearing clerk. Such motion shall be accompanied by an affidavit alleging personal bias or other reason for disqualification.

(c) Such motion and affidavit shall be filed within 15 days of the party's discovery of reasons requiring disqualification, or such objections shall be deemed waived.

(d) Such affidavit shall state specific facts that support the party's belief that personal bias or other reason for disqualification exists and the time and circumstances of the party's discovery of such facts. It shall be accompanied by a certificate of the representative of record that it is made in good faith.

(e) Upon the filing of such a motion and affidavit, the presiding officer shall proceed no further in the case until he or she resolves the matter of disqualification in accordance with paragraph (f) of this section.

(f)(1) If the presiding officer determines that the reviewing official is disqualified because the reviewing official could not have made an impartial determination pursuant to § 27.5(a), the presiding officer shall dismiss the complaint without prejudice.

(2) If the presiding officer disqualifies himself or herself, the case shall be reassigned promptly to another presiding officer.

(3) If the presiding officer denies a motion to disqualify, the Environmental Appeals Board may determine the matter only as part of its review of the initial decision upon appeal, if any.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5326, Feb. 13, 1992]

§ 27.17 Rights of parties.

Except as otherwise limited by this part, all parties may—

(a) Be accompanied, represented, and advised by a representative;

(b) Participate in any conference held by the presiding officer;

(c) Conduct discovery;

(d) Agree to stipulations of fact or law, which shall be made part of the record;

(e) Present evidence relevant to the issues at the hearing;

(f) Present and cross-examine witnesses;

(g) Present oral arguments at the hearing as permitted by the presiding officer; and

(h) Submit written briefs and proposed findings of fact and conclusions of law after the hearing.

§ 27.18 Authority of the presiding officer.

(a) The presiding officer shall conduct a fair and impartial hearing, avoid delay, maintain order, and assure that a record of the proceeding is made.

(b) The presiding officer has the authority to—

(1) Set and change the date, time, and place of the hearing upon reasonable notice to the parties;

(2) Continue or recess the hearing in whole or in part for a reasonable period of time;

(3) Hold conferences to identify or simplify the issues, or to consider other matters that may aid in the expeditious disposition of the proceeding;

(4) Administer oaths and affirmations;

(5) Issue subpoenas requiring the attendance of witnesses and the production of documents at depositions or at hearings;

(6) Rule on motions and other procedural matters;

(7) Regulate the scope and timing of discovery;

(8) Regulate the course of the hearing and the conduct of representatives and parties;

(9) Examine witnesses;

(10) Receive, rule on, exclude, or limit evidence;

(11) Upon motion of a party, take official notice of facts;

(12) Upon motion of a party, decide cases, in whole or in part, by summary judgment where there is no disputed issue of material fact;

(13) Conduct any conference, argument, or hearing on motions in person or by telephone; and

(14) Exercise such other authority as is necessary to carry out the responsibilities of the presiding officer under this part.

(c) The presiding officer does not have the authority to find Federal statutes or regulations invalid.

§ 27.19 Prehearing conferences.

(a) The presiding officer may schedule prehearing conferences as appropriate.

(b) Upon the motion of any party, the presiding officer shall schedule at least one prehearing conference at a reasonable time in advance of the hearing.

(c) The presiding officer may use prehearing conferences to discuss the following:

(1) Simplification of the issues;

(2) The necessity or desirability of amendments to the pleadings, including the need for a more definite statement;

(3) Stipulations and admissions of fact as to the contents and authenticity of documents;

(4) Whether the parties can agree to submission of the case on a stipulated record;

(5) Whether a party chooses to waive appearance at an oral hearing and to submit only documentary evidence (subject to the objection of other parties) and written argument;

(6) Limitation of the number of witnesses;

(7) Scheduling dates for the exchange of witness lists and of proposed exhibits;

(8) Discovery;

(9) The time and place for the hearing; and

(10) Such other matters as may tend to expedite the fair and just disposition of the proceedings.

(d) The presiding officer may issue an order containing all matters agreed upon by the parties or ordered by the presiding officer at a prehearing conference.

§ 27.20 Disclosure of documents.

(a) Upon written request to the reviewing official, the defendant may review any relevant and material documents, transcripts, records, and other materials that relate to the allegations set out in the complaint and upon which the findings and conclusions of the investigating official under § 27.4(b) are based, unless such documents are subject to a privilege under Federal law. Upon payment of fees for duplication, the defendant may obtain copies of such documents.

(b) Upon written request to the reviewing official, the defendant also may obtain a copy of all exculpatory information in the possession of the reviewing official or investigating official relating to the allegations in the complaint, even if it is contained in a document that would otherwise be privileged. If the document would otherwise be privileged, only that portion containing exculpatory information must be disclosed.

(c) The notice sent to the Attorney General from the reviewing official as described in § 27.5 is not discoverable under any circumstances.

(d) The defendant may file a motion to compel disclosure of the documents subject to the provisions of this section. Such a motion may only be filed following the filing of an answer pursuant to § 27.9.

§ 27.21 Discovery.

(a) The following types of discovery are authorized:

(1) Requests for production of documents for inspection and copying;

(2) Requests for admissions of the authenticity of any relevant document or of the truth of any relevant fact;

(3) Written interrogatories; and

(4) Depositions.

(b) For the purpose of this section and §§ 27.22 and 27.23, the term ''documents'' includes information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence. Nothing contained herein shall be interpreted to require the creation of a document.

(c) Unless mutually agreed to by the parties, discovery is available only as ordered by the presiding officer. The presiding officer shall regulate the timing of discovery.

(d) *Motions for discovery.* (1) A party seeking discovery may file a motion which shall be accompanied by a copy of the requested discovery, or in the case of depositions, a summary of the scope of the proposed deposition.

(2) Within ten days of service, a party may file an opposition to the motion and/or a motion for protective order as provided in § 27.24.

(3) The presiding officer may grant a motion for discovery only if he finds that the discovery sought—

(i) Is necessary for the expeditious, fair, and reasonable consideration of the issues;

(ii) Is not unduly costly or burdensome;

(iii) Will not unduly delay the proceeding; and

(iv) Does not seek privileged information.

(4) The burden of showing that discovery should be allowed is on the party seeking discovery.

(5) The presiding officer may grant discovery subject to a protective order under § 27.24.

(e) *Depositions.* (1) If a motion for deposition is granted, the presiding officer shall issue a subpoena for the deponent, which may require the deponent to produce documents. The subpoena shall specify the time and place at which the deposition will be held.

(2) The party seeking to depose shall serve the subpoena in the manner prescribed in § 27.8.

(3) The deponent may file a motion to quash the subpoena or a motion for a protective order within ten days of service.

(4) The party seeking to depose shall provide for the taking of a verbatim transcript of the deposition, which it shall make available to all other parties for inspection and copying.

(f) Each party shall bear its own costs of discovery.

§ 27.22 Exchange of witness lists, statements, and exhibits.

(a) At least 15 days before the hearing or at such other time as may be ordered by the presiding officer, the parties shall exchange witness lists, copies of prior statements of proposed witnesses, and copies of proposed hearing exhibits, including copies of any written statements that the party intends to offer in lieu of live testimony in accordance with § 27.33(b). At the time the above documents are exchanged, any party that intends to rely on the transcript of deposition testimony in lieu of live testimony at the hearing, if permitted by the presiding officer, shall provide each party with a copy of the specific pages of the transcript it intends to introduce into evidence.

(b) If a party objects, the presiding officer shall not admit into evidence the testimony of any witness whose name does not appear on the witness list or any exhibit not provided to the opposing party as provided above unless the presiding officer finds good cause for the failure or that there is not prejudice to the objecting party.

(c) Unless another party objects within the time set by the presiding officer, documents exchanged in accordance with paragraph (a) of this section shall be deemed to be authentic for the purpose of admissibility at the hearing.

§ 27.23 Subpoenas for attendance at hearing.

(a) A party wishing to procure the appearance and testimony of any individual at the hearing may request that the presiding officer issue a subpoena.

(b) A subpoena requiring the attendance and testimony of an individual may also require the individual to produce documents at the hearing.

(c) A party seeking a subpoena shall file a written request therefor not less than 15 days before the date fixed for the hearing unless otherwise allowed by the presiding officer for good cause shown. Such request shall specify any documents to be produced and shall designate the witnesses and describe the address and location thereof with sufficient particularity to permit such witnesses to be found.

(d) The subpoena shall specify the time and place at which the witness is to appear and any documents the witness is to produce.

(e) The party seeking the subpoena shall serve it in the manner prescribed in § 27.8. A subpoena on a party or upon an individual under the control of a party may be served by first class mail.

(f) A party or the individual to whom the subpoena is directed may file a motion to quash the subpoena within ten days after service or on or before the time specified in the subpoena for compliance if it is less than ten days after service.

§ 27.24 Protective order.

(a) A party or a prospective witness or deponent may file a motion for a protective order with respect to discovery sought by a party or with respect to the hearing, seeking to limit the availability or disclosure of evidence.

(b) In issuing a protective order, the presiding officer may make any order which justice requires to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense, including one or more of the following:

(1) That the discovery not be had;

(2) That the discovery may be had only on specified terms and conditions, including a designation of the time or place;

(3) That the discovery may be had only through a method of discovery other than that requested;

(4) That certain matters not be inquired into, or that the scope of discovery be limited to certain matters;

(5) That discovery be conducted with no one present except persons designated by the presiding officer;

(6) That the contents of discovery or evidence be sealed;

(7) That a deposition after being sealed be opened only by order of the presiding officer;

(8) That a trade secret or other confidential research, development, or commercial information, or facts pertaining to any criminal investigation, proceeding, or other administrative investigation not be disclosed or be disclosed only in a designated way; or

(9) That the parties simultaneously file specified documents or information enclosed in sealed envelopes to be opened as directed by the presiding officer.

§ 27.25 Fees.

The party requesting a subpoena shall pay the cost of the fees and mileage of any witness subpoenaed in the amounts that would be payable to a witness in a proceeding in United States District Court. A check for witness fees and mileage shall accompany the subpoena when served, except that when a subpoena is issued on behalf of the Authority, a check for witness fees and mileage need not accompany the subpoena.

§ 27.26 Form, filing and service of papers.

(a) *Form.* (1) Documents filed with the hearing clerk shall include an original and two copies.

(2) The first page of every pleading and paper filed in the proceeding shall contain a caption setting forth the title of the action, the case number assigned by the hearing clerk, and a designation of the paper (*e.g.,* motion to quash subpoena).

(3) Every pleading and paper shall be signed by, and shall contain the address and telephone number of, the party or the person on whose behalf the paper was filed, or his or her representative.

(4) Papers are considered filed when they are mailed. Date of mailing may be established by a certificate from the party or its representative or by proof that the document was sent by certified or registered mail.

(b) *Service.* A party filing a document with the hearing clerk shall, at the time of filing, serve a copy of such document on every other party. Service upon any party of any document, other than those required to be served as prescribed in § 27.8, shall be made by delivering a copy or by placing a copy of the document in the United States mail, postage prepaid and addressed, to the party's last known address. When a party is represented by a representative, service shall be made upon such representative in lieu of the actual party.

(c) *Proof of service.* A certificate of the individual serving the document by personal delivery or by mail, setting forth the manner of service, shall be proof of service.

§ 27.27 Computation of time.

(a) In computing any period of time under this part or in an order issued thereunder, the time begins with the day following the act, event, or default, and includes the last day of the period, unless it is a Saturday, Sunday, or legal holiday observed by the Federal government, in which event it includes the next business day.

(b) When the period of time allowed is less than seven days, intermediate Saturdays, Sundays, and legal holidays observed by the Federal government shall be excluded from the computation.

(c) When a document has been served or issued by placing it in the mail, an additional five days will be added to the time permitted for any response.

§ 27.28 Motions.

(a) Any application to the presiding officer for an order or ruling shall be by motion. Motions shall state the relief sought, the authority relied upon, and the facts alleged, and shall be filed with hearing clerk and served on all other parties.

(b) Except for motions made during a prehearing conference or at the hearing, all motions shall be in writing. The presiding officer may require that oral motions be reduced to writing.

(c) Within 15 days after a written motion is served, or such other time as may be fixed by the presiding officer, any party may file a response to such motion.

(d) The presiding officer may not grant a written motion before the time for filing responses thereto has expired, except upon consent of the parties or following a hearing on the motion, but may overrule or deny such motion without awaiting a response.

(e) The presiding officer shall make a reasonable effort to dispose of all outstanding motions prior to the beginning of the hearing.

§ 27.29 Sanctions.

(a) The presiding officer may sanction a person, including any party or representative for—

(1) Failing to comply with an order, rule, or procedure governing the proceeding;

(2) Failing to prosecute or defend an action; or

(3) Engaging in other misconduct that interferes with the speedy, orderly, or fair conduct of the hearing.

(b) Any such sanction, including but not limited to those listed in paragraphs (c), (d), and (e) of this section, shall reasonably relate to the severity and nature of the failure or misconduct.

(c) When a party fails to comply with an order, including an order for taking a deposition, the production of evidence within the party's control, or a request for admission, the presiding officer may—

(1) Draw an inference in favor of the requesting party with regard to the information sought;

(2) In the case of requests for admission, deem each matter of which an admission is requested to be admitted;

(3) Prohibit the party failing to comply with such order from introducing evidence concerning, or otherwise relying upon, testimony relating to the information sought; and

(4) Strike any part of the pleadings or other submissions of the party failing to comply with such request.

(d) If a party fails to prosecute or defend an action under this part commenced by service of a notice of hearing, the presiding officer may dismiss the action or may issue an initial decision imposing penalties and assessments.

(e) The presiding officer may refuse to consider any motion, request, response, brief or other document which is not filed in a timely fashion.

§ 27.30 The hearing and burden of proof.

(a) The presiding officer shall conduct a hearing on the record in order to determine whether the defendant is liable for a civil penalty or assessment under § 27.3 and, if so, the appropriate amount of any such civil penalty or assessment considering any aggravating or mitigating factors.

(b) The Authority shall prove defendant's liability and any aggravating factors by a preponderance of the evidence.

(c) The defendant shall prove any affirmative defenses and any mitigating factors by a preponderance of the evidence.

(d) The hearing shall be open to the public unless otherwise ordered by the presiding officer for good cause shown.

§ 27.31 Determining the amount of penalties and assessments.

(a) In determining an appropriate amount of civil penalties and assessments, the presiding officer and the Environmental Appeals Board, upon appeal, should evaluate any circumstances that mitigate or aggravate the violation and should articulate in their opinions the reasons that support the penalties and assessments they impose. Because of the intangible costs of fraud, the expense of investigating such conduct, and the need to deter others who might be similarly tempted, ordinarily double damages and a significant civil penalty should be imposed.

(b) Although not exhaustive, the following factors are among those that may influence the presiding officer and the Environmental Appeals Board in determining the amount of penalties and assessments to impose with respect to the misconduct (*i.e.,* the false, fictitious, or fraudulent claims or statements) charged in the complaint:

(1) The number of false, fictitious, or fraudulent claims or statements;

(2) The time period over which such claims or statements were made;

(3) The degree of the defendant's culpability with respect to the misconduct;

(4) The amount of money or the value of the property, services, or benefit falsely claimed;

(5) The value of the Government's actual loss as a result of the misconduct, including foreseeable consequential damages and the costs of investigation;

(6) The relationship of the amount imposed as civil penalties to the amount of the Government's loss;

(7) The potential or actual impact of the misconduct upon national defense, public health or safety, or public confidence in the management of Government programs and operations, including particularly the impact on the intended beneficiaries of such programs;

(8) Whether the defendant has engaged in a pattern of the same or similar misconduct;

(9) Whether the defendant attempted to conceal the misconduct;

(10) The degree to which the defendant has involved others in the misconduct or in concealing it;

(11) Where the misconduct of employees or agents is imputed to the defendant, the extent to which the defendant's practices fostered or attempted to preclude such misconduct;

(12) Whether the defendant cooperated in or obstructed an investigation of the misconduct;

(13) Whether the defendant assisted in identifying and prosecuting other wrongdoers;

(14) The complexity of the program or transaction, and the degree of the defendant's sophistication with respect to it, including the extent of the defendant's prior participation in the program or in similar transactions;

(15) Whether the defendant has been found, in any criminal, civil, or administrative proceeding to have engaged in similar misconduct or to have dealt dishonestly with the Government of the United States or of a State, directly or indirectly; and

(16) The need to deter the defendant and others from engaging in the same or similar misconduct.

(c) Nothing in this section shall be construed to limit the presiding officer or the Environmental Appeals Board from considering any other factors that in any given case may mitigate or aggravate the offense for which penalties and assessments are imposed.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

§ 27.32 Location of hearing.

(a) The hearing may be held—

(1) In any judicial district of the United States in which the defendant resides or transacts business;

(2) In any judicial district of the United States in which the claim or statement in issue was made; or

(3) In such other place as may be agreed upon by the defendant and the presiding officer.

(b) Each party shall have the opportunity to present argument with respect to the location of the hearing.

(c) The hearing shall be held at the place and at the time ordered by the presiding officer.

§ 27.33 Witnesses.

(a) Except as provided in paragraph (b) of this section, testimony at the hearing shall be given orally by witnesses under oath or affirmation.

(b) At the discretion of the presiding officer, testimony may be admitted in the form of a written statement or deposition. Any such written statement must be provided to all other parties along with the last known address of such witness, in a manner which allows sufficient time for other parties to subpoena such witness for cross-examination at the hearing. Prior written statements of witnesses proposed to testify at the hearing and deposition transcripts shall be exchanged as provided in § 27.22(a).

(c) The presiding officer shall exercise reasonable control over the mode and order of interrogating witnesses and presenting evidence so as to:

(1) Make the interrrogation and presentation effective for the ascertainment of the truth,

(2) Avoid needless consumption of time, and

(3) Protect witnesses from harassment or undue embarrassment.

(d) The presiding officer shall permit the parties to conduct such cross-examination as may be required for a full and true disclosure of the facts.

(e) At the discretion of the presiding officer, a witness may be cross-examined on matters relevant to the proceeding without regard to the scope of his or her direct examination. To the extent permitted by the presiding officer, cross-examination on matters outside the scope of direct examination shall be conducted in the manner of direct examination and may proceed by leading questions only if the witness is a hostile witness, an adverse party, or a witness identified with an adverse party.

(f) Upon motion of any party, the presiding officer shall order witnesses excluded so that they cannot hear the testimony of other witnesses. This rule does not authorize exclusion of—

(1) A party who is an individual;

(2) In the case of a party that is not an individual, an officer or empoyee of the party appearing for the entity *pro se* or designated by the party's representative; or

(3) an individual whose presence is shown by a party to be essential to the presentation of its case, including an individual employed by the Government engaged in assisting the representative for the Government.

§ 27.34 Evidence.

(a) The presiding officer shall determine the admissibility of evidence.

(b) Except as provided in this part, the presiding officer shall not be bound by the Federal Rules of Evidence. However, the presiding officer may apply the Federal Rules of Evidence when appropriate, *e.g.,* to exclude unreliable evidence.

(c) The presiding officer shall exclude irrelevant and immaterial evidence.

(d) Although relevant, evidence may be excluded if its probative value is substantially outweighed by the danger of unfair prejudice, confusion of the issues, or by considerations of undue delay or needless presentation of cumulative evidence.

(e) Although relevant, evidence may be excluded if it is privileged under Federal law.

(f) Evidence concerning offers of compromise or settlement shall be inadmissible to the extent provided in Rule 408 of the Federal Rules of Evidence.

(g) The presiding officer shall permit the parties to introduce rebuttal witnesses and evidence.

(h) All documents and other evidence offered or taken for the record shall be open to examination by all parties, unless otherwise ordered by the presiding officer pursuant to § 27.24.

§ 27.35 The record.

(a) The hearing will be recorded and transcribed. Transcripts may be obtained following the hearing from the hearing clerk at a cost not to exceed the actual cost of duplication.

(b) The transcript of testimony, exhibits and other evidence admitted at the hearing, and all papers and requests filed in the proceeding constitute the record for the decision by the presiding officer and the Environmental Appeals Board.

(c) The record may be inspected and copied (upon payment of a reasonable fee) by anyone, unless otherwise ordered by the presiding officer pursuant to § 27.24.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

27.36 Post-hearing briefs.

The presiding officer may require the parties to file post-hearing briefs. In any event, any party may file a post-hearing brief. The presiding officer

shall fix the time for filing such briefs, not to exceed 60 days from the date the parties receive the transcript of the hearing or, if applicable, the stipulated record. Such briefs may be accompanied by proposed findings of fact and conclusions of law. The presiding officer may permit the parties to file responsive briefs.

§ 27.37 Initial decision.

(a) The presiding officer shall issue an initial decision based only on the record. The decision shall contain findings of fact, conclusions of law, and the amount of any penalties and assessments imposed.

(b) The findings of fact shall include a finding on each of the following issues:

(1) Whether the claims or statements identified in the complaint, or any portions thereof, violate § 27.3;

(2) If the person is liable for penalties or assessments, the appropriate amount of any such penalties or assessments considering any mitigating or aggravating factors that he or she finds in the case, such as those described in § 27.31.

(c) The presiding officer shall promptly serve the initial decision on all parties within 90 days after the time for submission of post-hearing briefs and responsive briefs (if permitted) has expired. The presiding officer shall at the same time serve all parties with a statement describing the right of any defendant determined to be liable for a civil penalty or assessment to file a motion for reconsideration or a notice of appeal. If the presiding officer fails to meet the deadline contained in this paragraph, he or she shall notify the parties of the reason for the delay and shall set a new deadline.

(d) Unless the initial decision of the presiding officer is timely appealed to the Environmental Appeals Board, or a motion for reconsideration of the initial decision is timely filed, the initial decision shall constitute the final decision of the Environmental Appeals Board and shall be final and binding on the parties 30 days after it is issued by the presiding officer.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

§ 27.38 Reconsideration of initial decision.

(a) Except as provided in paragraph (d) of this section, any party may file a motion for reconsideration of the initial decision within 20 days of receipt of the initial decision. If service was made by mail, receipt will be presumed to be five days from the date of mailing in the absence of contrary proof.

(b) Every such motion must set forth the matters claimed to have been erroneously decided and the nature of the alleged errors. Such motion shall be accompanied by a supporting brief.

(c) Responses to such motions shall be allowed only upon request of the presiding officer.

(d) No party may file a motion for reconsideration of an initial decision that has been revised in response to a previous motion for reconsideration.

(e) The presiding officer may dispose of a motion for reconsideration by denying it or by issuing a revised intial decision.

(f) If the presiding officer denies a motion for reconsideration, the initial decision shall constitute the final decision of the Environmental Appeals Board and shall be final and binding on the parties 30 days after the presiding officer denies the motion, unless the initial decision is timely appealed to the Environmental Appeals Board in accordance with § 27.39.

(g) If the presiding officer issued a revised initial decision, that decision shall constitute the final decision of the Environmental Appeals Board and shall be final and binding on the parties 30 days after it is issued, unless it is timely appealed to the Environmental Appeals Board in accordance with § 27.39.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

§ 27.39 Appeal to authority head.

(a) Any defendant who has filed a timely answer and who is determined in an initial decision to be liable for a civil penalty or assessment may appeal such decision to the Environmental Appeals Board by filing a notice of appeal with the hearing clerk in accordance with this section.

(b)(1) A notice of appeal may be filed at any time within 30 days after the presiding officer issues an initial decision. However, if another party files a motion for reconsideration under § 27.38, consideration of the appeal shall be stayed automatically pending resolution of the motion for reconsideration.

(2) If a motion for reconsideration is timely filed, a notice of appeal may be filed within 30 days after the presiding officer denies the motion or issues a revised initial decision, whichever applies.

(3) The Environmental Appeals Board may extend the initial 30 day period for an additional 30 days if the defendant files a request for an extension within the initial 30 day period and shows good cause.

(c) If the defendant filed a timely notice of appeal, and the time for filing motions for reconsideration under § 27.38 has expired, the presiding officer shall forward the record of the proceeding to the Environmental Appeals Board.

(d) A notice of appeal shall be accompanied by a written brief specifying exceptions to the initial decision and reasons supporting the exceptions.

(e) The representative for the Government may file a brief in opposition to exceptions within 30 days of receiving the notice of appeal and accompanying brief.

(f) There is no right to appear personally before the Environmental Appeals Board.

(g) There is no right to appeal any interlocutory ruling by the presiding officer.

(h) In reviewing the initial decision, the Environmental Appeals Board shall not consider any objection that was not raised before the presiding officer unless a demonstration is made of extraordinary circumstances causing the failure to raise the objection.

(i) If any party demonstrates to the satisfaction of the Environmental Appeals Board that additional evidence not presented at such hearing is material and that there were reasonable grounds for the failure to present such evidence at such hearing, the Environmental Appeals Board shall remand the matter to the presiding officer for consideration of such additional evidence.

(j) The Environmental Appeals Board may affirm, reduce, reverse, compromise, remand, or settle any penalty or assessment, determined by the presiding officer in any initial decision.

(k) The Environmental Appeals Board shall promptly serve each party to the appeal with a copy of the decision of the Environmental Appeals Board and a statement describing the right of any person determined to be liable for a civil penalty or assessment to seek judicial review.

(l) Unless a petition for review is filed as provided in 31 U.S.C. 3805 after a defendant has exhausted all administrative remedies under this part and within 60 days after the date on which the Environmental Appeals Board serves the defendant with a copy of the Environmental Appeals Board's decision, a determination that a defendant is liable under § 27.3 is final and is not subject to judicial review.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

§ 27.40 Stay ordered by the Department of Justice.

If at any time the Attorney General or an Assistant Attorney General designated by the Attorney General transmits to the Environmental Appeals Board a written finding that continuation of the administrative process described in this part with respect to a claim or statement may adversely affect any pending or potential criminal or civil action related to such claim or statement, the Environmental Appeals Board shall stay the process immediately. The Environmental Appeals Board may order the process resumed only upon receipt of the written authorization of the Attorney General.

[57 FR 5327, Feb. 13, 1992]

§ 27.41 Stay pending appeal.

(a) An initial decision is stayed automatically pending disposition of a motion for reconsideration or of an appeal to the Environmental Appeals Board.

(b) No administrative stay is available following a final decision of the Environmental Appeals Board.

[57 FR 5327, Feb. 13, 1992]

§ 27.42 Judicial review.

Section 3805 of title 31, United States Code, authorizes judicial review by an appropriate United States District Court of a final decision of the Environmental Appeals Board imposing penalties or assessments under this part and specifies the procedures for such review.

[57 FR 5327, Feb. 13, 1992]

§ 27.43 Collection of civil penalties and assessments.

Sections 3806 and 3808(b) of title 31, United States Code, authorize actions for collection of civil penalties and assessments imposed under this part and specify the procedures for such actions.

§ 27.44 Right to administrative offset.

The amount of any penalty or assessment which has become final, or for which a judgment has been entered under §§ 27.42 or 27.43, or any amount agreed upon in a compromise or settlement under § 27.46, may be collected by administrative offset under 31 U.S.C. 3716, except that an administrative offset may not be made under this section against a refund of an overpayment of Federal taxes, then or later owing by the United States to the defendant.

§ 27.45 Deposit in Treasury of United States.

All amounts collected pursuant to this part shall be deposited as miscellaneous receipts in the Treasury of the United States, except as provided in 31 U.S.C. 3806(g).

§ 27.46 Compromise or settlement.

(a) Parties may make offers of compromise or settlement at any time.

(b) The reviewing official has the exclusive authority to compromise or settle a case under this part at any time after the date on which the reviewing official is permitted to issue a complaint

and before the date on which the presiding officer issues an initial decision.

(c) The Environmental Appeals Board has exclusive authority to compromise or settle a case under this part at any time after the date on which the presiding officer issues an initial decision, except during the pendency of any review under § 27.42 or during the pendency of any action to collect penalties and assessments under § 27.43.

(d) The Attorney General has exclusive authority to compromise or settle a case under this part during the pendency of any review under § 27.42 or of any action to recover penalties and assessments under 31 U.S.C. 3806.

(e) The investigating official may recommend settlement terms to the reviewing official, the Environmental Appeals Board, or the Attorney General, as appropriate. The reviewing official may recommend settlement terms to the Environmental Appeals Board or the Attorney General, as appropriate.

(f) Any compromise or settlement must be in writing.

[45 FR 24363, Apr. 9, 1980, as amended at 57 FR 5327, Feb. 13, 1992]

§ 27.47 Limitations.

(a) The notice of hearing with respect to a claim or statement must be served in the manner specified in § 27.8 within 6 years after the date on which such claim or statement is made.

(b) If the defendant fails to file a timely answer, service of a notice under § 27.10(b) shall be deemed a notice of hearing for purposes of this section.

(c) The statute of limitations may be extended by agreement of the parties.

§ 27.48 Delegated functions.

The Administrator delegates authority to the Environmental Appeals Board to issue final decisions in appeals filed under this part. An appeal directed to the Administrator, rather than the Environmental Appeals Board, will not be considered. This delegation of authority to the Environmental Appeals Board does not preclude the Environmental Appeals Board from referring an appeal or motion filed under this part to the Administrator for decision when the Environmental Appeals Board, in its descretion, deems it appropriate to do so. When an appeal or motion is referred to the Administrator, all parties shall be so notified and the rules in this part referring to the Environmental Appeals Board shall be interpreted as referring to the Administrator. If a case or motion is referred to the Administrator by the Environmental Appeals Board, the Administrator may consult with any EPA employee concerning the matter, provided such consultation does not violate the ex parte contacts restrictions set forth in §§ 27.14 and 27.15 of this part.

[57 FR 5328, Feb. 13, 1992]

PART 29—INTERGOVERNMENTAL REVIEW OF ENVIRONMENTAL PROTECTION AGENCY PROGRAMS AND ACTIVITIES

Sec.

AUTHORITY: E.O. 12372, July 14, 1982 (47 FR 30959), as amended Apr. 8, 1983 (48 FR 15887); sec. 401 of the Intergovernmental Cooperation Act of 1968 as amended (31 U.S.C. 6506); sec. 204 of the Demonstration Cities and Metropolitan Development Act of 1966, as amended (42 U.S.C. 3334).

SOURCE: 48 FR 29300, June 24, 1983, unless otherwise noted.

§ 29.1 What is the purpose of these regulations?

(a) The regulations in this part implement Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' issued July 14, 1982, and amended, on April 8, 1983. These regulations also implement applicable provisions of section 401 of the Intergovernmental Cooperation Act of 1968, as amended and section 204 of the Demonstration Cities and Metropolitan Development Act of 1966, as amended.

(b) These regulations are intended to foster an intergovernmental partnership and a strengthened federalism by relying on state processes and on state, areawide, regional and local coordination for review of proposed Federal financial assistance and direct Federal development.

(c) These regulations are intended to aid the internal management of the Environmental Protection Agency (EPA) and are not intended to create any right or benefit enforceable at law by a party against EPA or its officers.

§ 29.2 What definitions apply to these regulations?

Administrator means the Administrator of the U.S. Environmental Protection Agency or an official or employee of the Agency acting for the Administrator under a delegation of authority.

Agency means the U.S. Environmental Protection Agency (EPA). *Order* means Executive Order 12372, issued July 14, 1982, and amended April 8, 1983, and titled ''Intergovernmental Review of Federal Programs.''

States means any of the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, Guam, American Samoa, the U.S. Virgin Islands, or the Trust Territory of the Pacific Islands.

§ 29.3 What programs and activities of the Environmental Protection Agency are subject to these regulations?

The Administrator publishes in the FEDERAL REGISTER a list of the EPA programs and activities that are subject to these regulations and identifies which of these are subject to the requirements of section 204 of the Demonstration Cities and Metropolitan Development Act.

§ 29.4 What are the Administrator's general responsibilities under the Order?

(a) The Administrator provides opportunities for consultation by elected officials of those State and local governments that would provide the non-Federal funds for, or that would be directly affected by, proposed Federal financial assistance from, or direct Federal development by, the EPA.

(b) If a State adopts a process under the Order to review and coordinate proposed Federal financial assistance and direct Federal development, the Administrator to the extent permitted by law:

(1) Uses the State process to determine official views of State and local elected officials;

(2) Communicates with State and local elected officials as early in a program planning cycle as is reasonably feasible to explain specific plans and actions;

(3) Makes efforts to accommodate State and local elected officials' concerns with proposed Federal financial assistance and direct Federal development that are communicated through the State process;

(4) Allows the States to simplify and consolidate existing federally required State plan submissions;

(5) Where State planning and budgeting systems are sufficient and where permitted by law, encourages the substitution of State plans for federally required State plans;

(6) Seeks the coordination of views of affected State and local elected officials in one State with those of another State when proposed Federal financial assistance or direct Federal development has an impact on interstate metropolitan urban centers or other interstate areas; and

(7) Supports State and local governments by discouraging the reauthorization or creation of any planning organization which is federally-funded, which has a limited purpose, and which is not adequately representative of, or accountable to, State or local elected officials,

§ 29.5 What is the Administrator's obligation with respect to Federal interagency coordination?

The Administrator, to the extent practicable, consults with and seeks advice from all other substantially affected Federal departments and agencies in an effort to assure full coordination between such agencies and EPA regarding programs and activities covered under these regulations.

§ 29.6 What procedures apply to the selection of programs and activities under these regulations?

(a) A State may select any program or activity published in the FEDERAL REGISTER in accordance with § 29.3 of this part for intergovernmental review under these regulations. Each State, before selecting programs and activities, shall consult with local elected officials.

(b) Each State that adopts a process shall notify the Administrator of EPA programs and activities selected for that process.

(c) A State may notify the Administrator of changes in its selections at any time. For each change, the State shall submit an assurance to the Administrator that the State has consulted with local elected officials regarding the change. EPA may establish deadlines by which States are required to inform the Administrator of changes in their program selections.

(d) The Administrator uses a State's process as soon as feasible, depending on individual programs and activities, after the Administrator is notified of its selections.

§ 29.7 How does the Administrator communicate with State and local officials concerning the EPA programs and activities?

(a) For those programs and activities covered by a State process under § 29.6, the Administrator, to the extent permitted by law:

(1) Uses the State process to determine views of State and local elected officials; and

(2) Communicates with State and local elected officials, through the State process, as early in a program planning cycle as is reasonably feasible to explain specific plans and actions.

(b) The Administrator provides notice of proposed Federal financial assistance or direct Federal development to directly affected State, areawide, regional, and local entities in a State if:

(1) The State has not adopted a process under the Order; or

(2) The assistance or development involves a program or activity not selected for the State process.

This notice may be published in the FEDERAL REGISTER or issued by other means which EPA, in its discretion deems appropriate.

§ 29.8 How does the Administrator provide States an opportunity to comment on proposed Federal financial assistance and direct Federal development?

(a) Except in unusual circumstances, the Administrator gives State processes or directly affected State, areawide, regional and local officials and entities:

(1) At least 30 days from the date established by the Administrator to comment on proposed Federal financial assistance in the form of noncompeting continuation awards; and

(2) At least 60 days from the date established by the Administrator to comment on proposed direct Federal development or Federal financial assistance, other than noncompeting continuation awards.

(b) This section also applies to comments in cases in which the review, coordination, and communication with the Environmental Protection Agency have been delegated.

(c) Applicants for programs and activities subject to section 204 of the Demonstration Cities and Metropolitan Development Act shall allow areawide agencies a 60-day opportunity for review and comment.

§ 29.9 How does the Administrator receive and respond to comments?

(a) The Administrator follows the procedures in § 29.10 if:

(1) A State office or official is designated to act as a single point of contact between a State process and all Federal agencies, and

(2) That office or official transmits a State process recommendation for a program selected under § 29.6.

(b) The single point of contact is not obligated to transmit comments from State, areawide, re-

gional or local officials and entities where there is no State process recommendation. However, if a State process recommendation is transmitted by a single point of contact, all comments from State, area-wide, regional, and local officials and entities that differ from it must also be transmitted.

(c) If a State has not established a process, or is unable to submit a State process recommendation, the State, areawide, regional and local officials and entities may submit comments directly either to the applicant or to EPA.

(d) If a program or activity is not selected for a State process, the State, areawide, regional and local officials and entities may submit comments either directly to the applicant or to EPA. In addition, if a State process recommendation for a nonselected program or activity is transmitted to EPA by the single point of contact, the Administrator follows the procedures of § 29.10 of this part.

(e) The Administrator *considers* comments which do not constitute a State process recommendation submitted under these regulations and for which the Administrator is not required to apply the procedures of § 29.10 of this part, when such comments are provided by a single point of contact, by the applicant, or directly to the Agency by a commenting party.

§ 29.10 How does the Administrator make efforts to accommodate intergovernmental concerns?

(a) If a State process provides a State process recommendation to the Agency through the State's single point of contact, the Administrator either:

(1) Accepts the recommendation;

(2) reaches a mutually agreeable solution with the State process; or

(3) Provides the single point of contact with such written explanation of the decision, as the Administrator, in his or her discretion, deems appropriate. The Administrator may also supplement the written explanation by providing the explanation to the single point of contact by telephone, other telecommunication, or other means.

(b) In any explanation under paragraph (a)(3) of this section, the Administrator informs the single point of contact that:

(1) EPA will not implement its decision for at least ten days after the single point of contact receives the explanation; or

(2) The Administrator has reviewed the decision and determined that, because of unusual circumstances, the waiting period of at least ten days is not feasible.

(c) For purposes of computing the waiting period under paragraph (b)(1) of this section, a single point of contact is presumed to have received written notification 5 days after the date of mailing of such notification.

§ 29.11 What are the Administrator's obligations in interstate situations?

(a) The Administrator is responsible for:

(1) Identifying proposed Federal financial assistance and direct Federal development that have an impact on interstate areas;

(2) Notifying appropriate officials and entities in States which have adopted a process and selected an EPA program or activity.

(3) Making efforts to identify and notify the affected State, areawide, regional, and local officials and entities in those States that do not adopt a process under the Order or do not select an EPA program or activity;

(4) Responding in accordance with § 29.10 of this part to a recommendation received from a designated areawide agency transmitted by a single point of contact, in cases in which the review, coordination, and communication with EPA were delegated.

(b) The Administrator uses the procedures in § 29.10 if a State process provides a State process recommendation to the Agency through a single point of contact.

§ 29.12 How may a State simplify, consolidate, or substitute federally required State plans?

(a) As used in this section:

(1) *Simplify* means that a State may develop its own format, choose its own submission date, and select the planning period for a State plan.

(2) *Consolidate* means that a State may meet statutory and regulatory requirements by combining two or more plans into one document and that the State can select the format, submission date, and planning period for the consolidated plan.

(3) *Substitute* means that a State may use a plan or other document that it has developed for its own purposes to meet Federal requirements.

(b) If not inconsistent with law, a State may decide to try to simplify, consolidate, or substitute federally required State plans without prior approval by the Administrator.

(c) The Administrator reviews each State plan that a State has simplified, consolidated, or substituted and accepts the plan only if its contents meet Federal requirements.

§ 29.13 May the Administrator waive any provision of these regulations?

In an emergency, the Administrator may waive any provision of these regulations.

APPENDIX G -- PUBLIC PARTICIPATION REGULATIONS IN 40 CFR 124 SUBPART A

PART 100—[RESERVED]

PART 104—PUBLIC HEARINGS ON EFFLUENT STANDARDS FOR TOXIC POLLUTANTS

AUTHORITY: Secs. 501 and 307(a) of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1251 *et seq.*, Pub. L. 92–500, 86 Stat. 816).

SOURCE: 41 FR 17902, Apr. 29, 1976, unless otherwise noted.

§ 104.1 Applicability.

This part shall be applicable to hearings required by statute to be held in connection with the establishment of toxic pollutant effluent standards under section 307(a) of the Act.

§ 104.2 Definitions.

As used in this part, the term:

(a) *Act* means the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251 *et seq.*, Public Law 92–500, 86 Stat. 816.

(b) *Administrator* means the Administrator of the Environmental Protection Agency, or any employee of the Agency to whom the Administrator may by order delegate his authority to carry out his functions under section 307(a) of the Act, or any person who shall by operation of law be authorized to carry out such functions.

(c) *Agency* means the Environmental Protection Agency.

(d) *Hearing Clerk* means the Hearing Clerk, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

(e) *Party* means the Environmental Protection Agency as the proponent of an effluent standard or standards, and any person who files an objection pursuant to § 104.3 hereof.

(f) *Person* means an individual, corporation, partnership, association, state, municipality or other political subdivision of a state, or any interstate body.

(g) *Effluent standard* means any effluent standard or limitation, which may include a prohibition of any discharge, established or proposed to be established for any toxic pollutant under section 307(a) of the Act.

(h) *Presiding Officer* means the Chief Administrative Law Judge of the Agency or a person designated by the Chief Administrative Law Judge or by the Administrator to preside at a hearing under this part, in accordance with § 104.6 hereof.

§ 104.3 Notice of hearing; objection; public comment.

(a) *Notice of hearing.* Whenever the Administrator publishes any proposed effluent standard, he shall simultaneously publish a notice of a public hearing to be held within thirty days following the date of publication of the proposed standard. Any person who has any objection to a proposed standard may file with the hearing clerk a concise statement of any such objection. No person may participate in the hearing on the proposed toxic pollutant effluent standards unless the hearing clerk has received within 25 days of the publication of the notice of the proposed standards a statement of objection as herein described. In exceptional circumstances and for good cause shown the Presiding Officer may allow an objection to be filed after the filing deadline prescribed in the preceding sentence, which good cause must include at a minimum lack of actual notice on the part of the objector or any representative of such objector of the proposed standards despite his exercise of due diligence, so long as such later filing will not cause undue delay in the proceedings or prejudice to any of the parties.

(b) *Objections.* Any objection to a proposed standard which is filed pursuant to paragraph (a) of this section shall meet the following requirements:

(1) It shall be filed in triplicate with the hearing clerk within the time prescribed in paragraph (a) of this section;

(2) It shall state concisely and with particularity each portion of the proposed standard to which objection is taken; to the greatest extent feasible it shall state the basis for such objection;

(3) To the greatest extent feasible it shall (i) state specifically the objector's proposed modification to any such standard proposed by the Agency to which objection is taken, (ii) set forth the reasons why such modification is sought, and (iii) identify and describe the scientific or other basis for such proposed modification, including reference to any pertinent scientific data or authority in support thereof.

Any objection which fails to comply with the foregoing provisions shall not be accepted for filing.

The Presiding Officer shall promptly notify any person whose objection is not accepted for any of the reasons set forth in this section, stating the reasons therefor.

(c) *Data in support of objection or modification.* In the event that the time prescribed for filing objections pursuant to paragraphs (a) and (b) of this section is insufficient to permit an objecting party to fully set forth with such objection the basis therefor together with the information and data specified in paragraph (b) (3) of this section, he may so state at the time of the filing of such objection, and file a more complete statement of such basis, information, and data (hereinafter referred to as ''supplemental data'') within the time prescribed by this paragraph (c). The supplemental data herein described shall be filed not later than 40 days following publication of the proposed effluent standards.

(d) *Public comment.* The notice required under paragraph (a) of this section shall also provide for the submission to the Agency of written comments on the proposed rulemaking by interested persons not filing objections pursuant to this section as hereinabove described, and hence not participating in the hearing as parties. The notice shall fix a time deadline for the submission of such comments which shall be not later than the date set for commencement of the hearing. Such comments shall be received in evidence at the commencement of the hearing. The Administrator in making any decision based upon the record shall take into account the unavailability of cross-examination in determining the weight to be accorded such comments.

(e) *Promulgation in absence of objection.* If no objection is filed pursuant to this section, then the Administrator shall promulgate the final standards on the basis of the Agency's statement of basis and purpose and any public comments received pursuant to paragraph (d) of this section.

§ 104.4 Statement of basis and purpose.

Whenever the Administrator publishes a proposed effluent standard, the notice thereof published in the FEDERAL REGISTER shall include a statement of the basis and purpose of the standard or a summary thereof. This statement shall include:

(a) The purpose of the proposed standard;

(b) An explanation of how the proposed standard was derived;

(c) Scientific and technical data and studies supporting the proposed standard or references thereto if the materials are published or otherwise readily available; and

(d) Such other information as may be reasonably required to set forth fully the basis of the standard.

Where the notice of the proposed rulemaking summarizes the full statement of basis and purpose, or incorporates documents by reference, the documents thus summarized or incorporated by reference shall thereupon be made available by the Agency for inspection and copying by any interested person.

§ 104.5 Docket and record.

Whenever the Administrator publishes a notice of hearing under this part, the hearing clerk shall promptly establish a docket for the hearing. The docket shall include all written objections filed by any party, any public comments received pursuant to § 104.3(d), a verbatim transcript of the hearing, the statement of basis and purpose required by § 104.4, and any supporting documents referred to therein, and other documents of exhibits that may be received in evidence or marked for identification by or at the direction of the Presiding Officer, or filed by any party in connection with the hearing. Copies of documents in the docket shall be available to any person upon payment to the Agency of such charges as the Agency may prescribe to cover the costs of duplication. The materials contained in the docket shall constitute the record.

§ 104.6 Designation of Presiding Officer.

The Chief Administrative Law Judge of the Agency may preside personally at any hearing under this part, or he may designate another Administrative Law Judge as Presiding Officer for the hearing. In the event of the unavailability of any such Administrative Law Judge, the Administrator may designate a Presiding Officer. No person who has any personal pecuniary interest in the outcome of a proceeding under this part, or who has participated in the development or enforcement of any standard or proposed standard at issue in a proceeding hereunder, shall serve as Presiding Officer in such proceeding.

§ 104.7 Powers of Presiding Officer.

The Presiding Officer shall have the duty to conduct a fair hearing within the time constraints imposed by section 307(a) of the Act. He shall take all necessary action to avoid delay and to maintain order. He shall have all powers necessary to these ends, including but not limited to the power to:

(a) Rule upon motions and requests;

(b) Change the time and place of the hearing, and adjourn the hearing from time to time or from place to place;

(c) Examine and cross-examine witnesses;

(d) Admit or exclude evidence; and

(e) Require any part or all of the evidence to be submitted in writing and by a certain date.

§ 104.8 Prehearing conferences.

Prehearing conferences are encouraged for the purposes of simplification of issues, identification and scheduling of evidence and witnesses, the establishment of an orderly framework for the proceedings, the expediting of the hearing, and such other purposes of a similar nature as may be appropriate.

(a) The Presiding Officer on his own motion may, and at the request of any party made within 20 days of the proposal of standards hereunder shall, direct all parties to appear at a specified time and place for an initial hearing session in the nature of a prehearing conference. Matters taken up at the conference may include, without limitation:

(1) Consideration and simplification of any issues of law or fact;

(2) Identification, advance submission, marking for identification, consideration of any objections to admission, and admission of documentary evidence;

(3) Possible stipulations of fact;

(4) The identification of each witness expected to be called by each party, and the nature and substance of his expected testimony;

(5) Scheduling of witnesses where practicable, and limitation of the number of witnesses where appropriate in order to avoid delay or repetition;

(6) If desirable, the segregation of the hearing into separate segments for different provisions of the proposed effluent standards and the establishment of separate service lists;

(7) Encouragement of objecting parties to agree upon and designate lead counsel for objectors with common interests so as to avoid repetitious questioning of witnesses.

(b) The Presiding Officer may, following a prehearing conference, issue an order setting forth the agreements reached by the parties or representatives, the schedule of witnesses, and a statement of issues for the hearing. In addition such order may direct the parties to file and serve copies of documents or materials, file and serve lists of witnesses which may include a short summary of the expected testimony of each and, in the case of an expert witness, his curriculum vitae, and may contain such other directions as may be appropriate to facilitate the proceedings.

§ 104.9 Admission of evidence.

(a) Where the Presiding Officer has directed identification of witnesses and production of documentation evidence by a certain date, the Presiding Officer may exclude any such evidence, or refuse to allow any witness to testify, when the witness was not identified or the document was not served by the time set by the Presiding Officer. Any such direction with respect to a party's case in chief shall not preclude the use of such evidence or testimony on rebuttal or response, or upon a showing satisfactory to the Presiding Officer that good cause existed for failure to serve testimony or a document or identify a witness by the time required. The Presiding Officer may require direct testimony to be in writing under oath and served by a certain date, and may exclude testimony not so served.

(b) At the first prehearing conference, or at another time before the beginning of the taking of oral testimony to be set by the Presiding Officer, the statement of basis and purpose, together with any publications or reference materials cited therein, except where excluded by stipulation, shall be received in evidence.

(c) The Presiding Officer may exclude evidence which is immaterial, irrelevant, unduly repetitious or cumulative, or would involve undue delay, or which, if hearsay, is not of the sort upon which responsible persons are accustomed to rely.

(d) If relevant and material evidence is contained in a report or document containing immaterial or irrelevant matter, such immaterial or irrelevant matter may be excluded.

(e) Whenever written testimony or a document or object is excluded from evidence by the Presiding Officer, it shall at the request of the proponent be marked for identification. Where oral testimony is permitted by the Presiding Officer, but the Presiding Officer excludes particular oral testimony, the party offering such testimony may make a brief offer of proof.

(f) Any relevant and material documentary evidence, including but not limited to affidavits, published articles, and official documents, regardless of the availability of the affiant or author for cross-examination, may be admitted in evidence, subject to the provisions of paragraphs (a), (c), and (d) of this section. The availability or nonavailability of cross-examination shall be considered as affecting the weight to be accorded such evidence in any decision based upon the record.

(g) Official notice may be taken by the Presiding Officer or the Administrator of any matter which could be judicially noticed in the United States District Courts, and of other facts within the specialized knowledge and experience of the Agency. Opposing parties shall be given adequate opportunity to show the contrary.

§ 104.10 Hearing procedures.

(a) Following the admission in evidence of the materials described in § 104.9(b), the Agency shall

have the right at the commencement of the hearing to supplement that evidence or to introduce additional relevant evidence. Thereafter the evidence of each objector shall be presented in support of its objection and any proposed modification. The Agency staff shall then be given an opportunity to rebut or respond to the objectors' presentation, including at its option the introduction of evidence which tends to support a standard or standards other than as set forth in the Agency's own initially proposed standards. In the event that evidence which tends to support such other standard or standards is offered and received in evidence, then the objectors may thereafter rebut or respond to any such new evidence.

(b) The burden of proof as to any modification of any standard proposed by the Agency shall be upon the party who advocates such modification to show that the proposed modification is justified based upon a preponderance of the evidence.

(c) Where necessary in order to prevent undue prolongation of the hearing, or to comply with time limitations set forth in the Act, the Presiding Officer may limit the number of witnesses who may testify, and the scope and extent of cross-examination.

(d) A verbatim transcript of the hearing shall be maintained and shall constitute a part of the record.

(e) If a party objects to the admission or rejection of any evidence or to any other ruling of the Presiding Officer during the hearing, he shall state briefly the grounds of such objection. With respect to any ruling on evidence, it shall not be necessary for any party to claim an exception in order to preserve any right of subsequent review.

(f) Any party may at any time withdraw his objection to a proposed effluent standard.

§ 104.11 Briefs and findings of fact.

At the conclusion of the hearing, the Presiding Officer shall set a schedule for the submission by the parties of briefs and proposed findings of fact and conclusions. In establishing the aforesaid time schedule, the Presiding Officer shall consider the time constraints placed upon the parties and the Administrator by the statutory deadlines.

§ 104.12 Certification of record.

As soon as possible after the hearing, the Presiding Officer shall transmit to the hearing clerk the transcript of the testimony and exhibits introduced in the hearing. The Presiding Officer shall attach to the original transcript his certificate stating that, to the best of his knowledge and belief, the transcript is a true transcript of the testimony given at the hearing except in such particulars as he shall specify, and that the exhibits transmitted are all the exhibits as introduced at the hearing with such exceptions as he shall specify.

§ 104.13 Interlocutory and post-hearing review of rulings of the Presiding Officer; motions.

(a) The Presiding Officer may certify a ruling for interlocutory review by the Administrator where a party so requests and the Presiding Officer concludes that (1) the ruling from which review is sought involves an important question as to which there is substantial ground for difference of opinion, and (2) either (i) a subsequent reversal of his ruling would be likely to result in substantial delay or expense if left to the conclusion of the proceedings, or (ii) a ruling on the question by the Administrator would be of material assistance in expediting the hearing. The certificate shall be in writing and shall specify the material relevant to the ruling certified. If the Administrator determines that interlocutory review is not warranted, he may decline to consider the ruling which has been certified.

(b) Where the Presiding Officer declines to certify a ruling the party who had requested certification may apply to the Administrator for interlocutory review, or the Administrator may on his own motion direct that any matter be submitted to him for review, subject to the standards for review set forth in paragraph (a) of this section. An application for review shall be in writing and shall briefly state the grounds relied on. If the Administrator takes no action with respect to such application for interlocutory review within 15 days of its filing, such application shall be deemed to have been denied.

(c) Unless otherwise ordered by the Presiding Officer or the Administrator, the hearing shall continue pending consideration by the Administrator of any ruling or request for interlocutory review.

(d) Unless otherwise ordered by the Presiding Officer or the Administrator, briefs in response to any application for interlocutory review may be filed by any party within five days of the filing of the application for review.

(e) Failure to request or obtain interlocutory review does not waive the rights of any party to complain of a ruling following completion of the hearing. Within five days following the close of a hearing under this part, any party may apply to the Administrator for post-hearing review of any procedural ruling, or any ruling made by the Presiding Officer concerning the admission or exclusion of evidence to which timely objection was made. Within seven days following the filing of any such application any other party may file a brief in response thereto.

(f) If the Administrator on review under paragraph (e) of this section determines that evidence

was improperly excluded, he may order its admission without remand for further proceedings, or may remand with such instructions as he deems appropriate concerning cross-examination, or opportunity for any party to submit further evidence, with respect to such evidence as he directs should be admitted. In making his determination whether to remand, the Administrator shall consider whether the statutory time restraints permit a remand, and whether it would be constructive to allow cross-examination or further evidence with respect to the newly admitted evidence. If evidence is admitted without cross-examination, the Administrator shall consider the lack of opportunity for cross-examination in determining the weight to be given such evidence.

(g) Motions shall be brief, in writing, and may be filed at any time following the publication of the proposed effluent standards, unless otherwise ordered by the Presiding Officer or the Administrator. Unless otherwise ordered or provided in these rules, responses to motions may be filed within seven days of the actual filing of the motion with the hearing clerk.

§ 104.14 Tentative and final decision by the Administrator.

(a) As soon as practicable following the certification of the record and the filing by the parties of briefs and proposed findings of fact and conclusions under § 104.11, the Administrator, with such staff assistance as he deems necessary and appropriate, shall review the entire record and prepare and file a tentative decision based thereon. The tentative decision shall include findings of fact and conclusions, and shall be filed with the hearing clerk who shall at once transmit a copy thereof to each party who participated at the hearing, or his attorney or other representative.

(b) Upon filing of the tentative decision, the Administrator may allow a reasonable time for the parties to file with him any exceptions to the tenative decision, a brief in support of such exceptions containing appropriate references to the record, and any proposed changes in the tentative decision. Such materials shall, upon submission, become part of the record. As soon as practicable after the filing thereof the Administrator shall prepare and file a final decision, copies of which shall be transmitted to the parties or their representatives in the manner prescribed in paragraph (a) of this section.

(c) In the event that the Administrator determines that due and timely execution of his functions, including compliance with time limitations established by law, imperatively and unavoidably so requires, he may omit the preparation and filing of the tentative decision and related procedures set forth in paragraph (b) of this section, and shall instead prepare and file a final decision, copies of which shall be transmitted to the parties or their representatives in the manner prescribed in paragraph (a) of this section.

(d) Any decision rendered by the Administrator pursuant to this section shall include a statement of his findings and conclusions, and the reasons and basis therefor, and shall indicate the toxic pollutant effluent standard or standards which the Administrator is promulgating or intends to promulgate based thereon.

§ 104.15 Promulgation of standards.

Upon consideration of the record, at the time of his final decision the Administrator shall determine whether the proposed effluent standard or standards should be promulgated as proposed, or whether any modification thereof is justified based upon a proponderance of the evidence adduced at the hearing, regardless of whether or not such modification was actually proposed by any objecting party. If he determines that a modification is not justified, he shall promulgate the standard or standards as proposed. If he determines that a modification is justified, he shall promulgate a standard or standards as so modified.

§ 104.16 Filing and time.

(a) All documents or papers required or authorized by the foregoing provisions of this part including, but not limited to, motions, applications for review, and briefs, shall be filed in duplicate with the hearing clerk, except as otherwise expressly provided in these rules. Any document or paper so required or authorized to be filed with the hearing clerk, if it is filed during the course of the hearing, shall be also filed with the Presiding Officer. A copy of each document or paper filed by any party with the Presiding Officer, with the hearing clerk, or with the Administrator shall be served upon all other parties, except to the extent that the list of parties to be so served may be modified by order of the Presiding Officer, and each such document or paper shall be accompanied by a certificate of such service.

(b) A party may be represented in any proceeding under this part by an attorney or other authorized representative. When any document or paper is required under these rules to be served upon a party such service shall be made upon such attorney or other representative.

(c) Except where these rules or an order of the Presiding Officer require receipt of a document by a certain date, any document or paper required or authorized to be filed by this part shall be deemed to be filed when postmarked, or in the case of papers delivered other than by mail, when received by the hearing clerk.

(d) Sundays and legal holidays shall be included in computing the time allowed for the filing of any document or paper, provided, that when such time expires on a Sunday or legal holiday, such period shall be extended to include the next following business day.

PART 108—EMPLOYEE PROTECTION HEARINGS

Sec.

AUTHORITY: Sec. 507(e), Pub. L. 92–500, 86 Stat. 816 (33 U.S.C. 1251 et seq.).

SOURCE: 39 FR 15398, May 3, 1974, unless otherwise noted.

§ 108.1 Applicability.

This part shall be applicable to investigations and hearings required by section 507(e) of the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251 *et seq.* (Pub. L. 92–500).

§ 108.2 Definitions.

As used in this part, the term:

(a) *Act* means the Federal Water Pollution Control Act, as amended;

(b) *Effluent limitation* means any effluent limitation which is established as a condition of a permit issued or proposed to be issued by a State or by the Environmental Protection Agency pursuant to section 402 of the Act; any toxic or pretreatment effluent standard established under section 307 of the Act; any standard of performance established under section 306 of the Act; and any effluent limitation established under section 302, section 316, or section 318 of the Act.

(c) *Order* means any order issued by the Administrator under section 309 of the Act; any order issued by a State to secure compliance with a permit, or condition thereof, issued under a program approved pursuant to section 402 of the Act; or any order issued by a court in an action brought pursuant to section 309 or section 505 of the Act.

(d) *Party* means an employee filing a request under § 108.3, any employee similarly situated, the employer of any such employee, and the Regional Administrator or his designee.

(e) *Administrator* or *Regional Administrator* means the Administrator or a Regional Administrator of the Environmental Protection Agency.

§ 108.3 Request for investigation.

Any employee who is discharged or laid-off, threatened with discharge or lay-off, or otherwise discriminated against by any person because of the alleged results of any effluent limitation or order issued under the Act, or any representative of such employee, may submit a request for an investigation under this part to the Regional Administrator of the region in which such discrimination is alleged to have occurred.

§ 108.4 Investigation by Regional Administrator.

Upon receipt of any request meeting the requirements of § 108.3, the Regional Administrator shall conduct a full investigation of the matter, in order to determine whether the request may be related to an effluent limitation or order under the Act. Following the investigation, the Regional Administrator shall notify the employee requesting the investigation (or the employee's representative) and the employer of such employee, in writing, of his preliminary findings and conclusions. The employee, the representative of such employee, or the employer may within fifteen days following receipt of the preliminary findings and conclusions of the Regional Administrator request a hearing under this part. Upon receipt of such a request, the Regional Administrator, with the concurrence of the Chief Administrative Law Judge, shall publish notice of a hearing to be held not less than 30 days following the date of such publication where he determines that there are factual issues concerning the existence of the alleged discrimination or its relationship to an effluent limitation or order under the Act. The notice shall specify a date before which any party (or representative of such party) may submit a request to appear.

§ 108.5 Procedure.

Any hearing held pursuant to this part shall be of record and shall be conducted according to the requirements of 5 U.S.C. 554. The Administrative Law Judge shall conduct the hearing in an orderly and expeditious manner. By agreement of the parties, he may dismiss the hearing. The Administrative Law Judge, on his own motion, or at the request of any party, shall have the power to hold prehearing conferences, to issue subpoenas for the attendance and testimony of witnesses and the production of relevant papers, books, and documents, and he may administer oaths. The Regional Administrator, and any party submitting a request pursuant to § 108.3 or § 108.4, or counsel or other representative of such party or the Regional Administrator, may appear and offer evidence at the hearing.

§ 108.6 Recommendations.

At the conclusion of any hearing under this part, the Administrative Law Judge shall, based on the record, issue tentative findings of fact and recommendations concerning the alleged discrimination, and shall submit such tentative findings and recommendations to the Administrator. The Administrator shall adopt or modify the findings and recommendations of the Administrative Law

Judge, and shall make copies of such findings and recommendations available to the complaining employee, the employer, and the public.

§ 108.7 Hearing before Administrator.

At his option, the Administrator may exercise any powers of an Administrative Law Judge with respect to hearings under this part.

PART 109—CRITERIA FOR STATE, LOCAL AND REGIONAL OIL REMOVAL CONTINGENCY PLANS

Sec.

AUTHORITY: Sec. 11(j)(1)(B), 84 Stat. 96, 33 U.S.C. 1161(j)(1)(B).

SOURCE: 36 FR 22485, Nov. 25, 1971, unless otherwise noted.

§ 109.1 Applicability.

The criteria in this part are provided to assist State, local and regional agencies in the development of oil removal contingency plans for the inland navigable waters of the United States and all areas other than the high seas, coastal and contiguous zone waters, coastal and Great Lakes ports and harbors and such other areas as may be agreed upon between the Environmental Protection Agency and the Department of Transportation in accordance with section 11(j)(1)(B) of the Federal Act, Executive Order No. 11548 dated July 20, 1970 (35 FR 11677) and § 306.2 of the National Oil and Hazardous Materials Pollution Contingency Plan (35 FR 8511).

§ 109.2 Definitions.

As used in these guidelines, the following terms shall have the meaning indicated below:

(a) *Oil* means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil.

(b) *Discharge* includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

(c) *Remove* or *removal* refers to the removal of the oil from the water and shorelines or the taking of such other actions as may be necessary to minimize or mitigate damage to the public health or welfare, including, but not limited to, fish, shellfish, wildlife, and public and private property, shorelines, and beaches.

(d) *Major disaster* means any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, earthquake, drought, fire, or other catastrophe in any part of the United States which, in the determination of the President, is or threatens to become of sufficient severity and magnitude to warrant disaster assistance by the Federal Government to supplement the efforts and available resources of States and local governments and relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby.

(e) *United States* means the States, the District of Columbia, the Commonwealth of Puerto Rico, the Canal Zone, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

(f) *Federal Act* means the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1151, *et seq.*

§ 109.3 Purpose and scope.

The guidelines in this part establish minimum criteria for the development and implementation of State, local, and regional contingency plans by State and local governments in consultation with private interests to insure timely, efficient, coordinated and effective action to minimize damage resulting from oil discharges. Such plans will be directed toward the protection of the public health or welfare of the United States, including, but not limited to, fish, shellfish, wildlife, and public and private property, shorelines, and beaches. The development and implementation of such plans shall be consistent with the National Oil and Hazardous Materials Pollution Contingency Plan. State, local and regional oil removal contingency plans shall provide for the coordination of the total response to an oil discharge so that contingency organizations established thereunder can function independently, in conjunction with each other, or in conjunction with the National and Regional Response Teams established by the National Oil and Hazardous Materials Pollution Contingency Plan.

§ 109.4 Relationship to Federal response actions.

The National Oil and Hazardous Materials Pollution Contingency Plan provides that the Federal on-scene commander shall investigate all reported spills. If such investigation shows that appropriate action is being taken by either the discharger or non-Federal entities, the Federal on-scene commander shall monitor and provide advice or assistance, as required. If appropriate containment or cleanup action is not being taken by the discharger or non-Federal entities, the Federal on-scene commander will take control of the response activity in accordance with section 11(c)(1) of the Federal Act.

§ 109.5 Development and implementation criteria for State, local and regional oil removal contingency plans.

Criteria for the development and implementation of State, local and regional oil removal contingency plans are:

(a) Definition of the authorities, responsibilities and duties of all persons, organizations or agencies which are to be involved or could be involved in planning or directing oil removal operations, with particular care to clearly define the authorities, responsibilities and duties of State and local governmental agencies to avoid unnecessary duplication of contingency planning activities and to minimize the potential for conflict and confusion that could be generated in an emergency situation as a result of such duplications.

(b) Establishment of notification procedures for the purpose of early detection and timely notification of an oil discharge including:

(1) The identification of critical water use areas to facilitate the reporting of and response to oil discharges.

(2) A current list of names, telephone numbers and addresses of the responsible persons and alternates on call to receive notification of an oil discharge as well as the names, telephone numbers and addresses of the organizations and agencies to be notified when an oil discharge is discovered.

(3) Provisions for access to a reliable communications system for timely notification of an oil discharge and incorporation in the communications system of the capability for interconnection with the communications systems established under related oil removal contingency plans, particularly State and National plans.

(4) An established, prearranged procedure for requesting assistance during a major disaster or when the situation exceeds the response capability of the State, local or regional authority.

(c) Provisions to assure that full resource capability is known and can be committed during an oil discharge situation including:

(1) The identification and inventory of applicable equipment, materials and supplies which are available locally and regionally.

(2) An estimate of the equipment, materials and supplies which would be required to remove the maximum oil discharge to be anticipated.

(3) Development of agreements and arrangements in advance of an oil discharge for the acquisition of equipment, materials and supplies to be used in responding to such a discharge.

(d) Provisions for well defined and specific actions to be taken after discovery and notification of an oil discharge including:

(1) Specification of an oil discharge response operating team consisting of trained, prepared and available operating personnel.

(2) Predesignation of a properly qualified oil discharge response coordinator who is charged with the responsibility and delegated commensurate authority for directing and coordinating response operations and who knows how to request assistance from Federal authorities operating under existing national and regional contingency plans.

(3) A preplanned location for an oil discharge response operations center and a reliable communications system for directing the coordinated overall response operations.

(4) Provisions for varying degrees of response effort depending on the severity of the oil discharge.

(5) Specification of the order of priority in which the various water uses are to be protected where more than one water use may be adversely affected as a result of an oil discharge and where response operations may not be adequate to protect all uses.

(e) Specific and well defined procedures to facilitate recovery of damages and enforcement measures as provided for by State and local statutes and ordinances.

§ 109.6 Coordination.

For the purposes of coordination, the contingency plans of State and local governments should be developed and implemented in consultation with private interests. A copy of any oil removal contingency plan developed by State and local governments should be forwarded to the Council on Environmental Quality upon request to facilitate the coordination of these contingency plans with the National Oil and Hazardous Materials Pollution Contingency Plan.

PART 110—DISCHARGE OF OIL

Sec.

AUTHORITY: 33 U.S.C. 1321(b)(3) and (b)(4) and 1361(a); E.O. 11735, 38 FR 21243, 3 CFR Parts 1971–1975 Comp., p. 793.

SOURCE: 52 FR 10719, Apr. 2, 1987, unless otherwise noted.

§ 110.1 Definitions.

Terms not defined in this section have the same meaning given by the Section 311 of the Act. As used in this part, the following terms shall have the meaning indicated below:

Act means the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251 *et seq.*, also known as the Clean Water Act;

Administrator means the Administrator of the Environmental Protection Agency (EPA);

Applicable water quality standards means State water quality standards adopted by the State pursuant to section 303 of the Act or promulgated by EPA pursuant to that section;

MARPOL 73/78 means the International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 relating thereto, Annex I, which regulates pollution from oil and which entered into force on October 2, 1983;

Navigable waters means the waters of the United States, including the territorial seas. The term includes:

(a) All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide;

(b) Interstate waters, including interstate wetlands;

(c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, and wetlands, the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:

(1) That are or could be used by interstate or foreign travelers for recreational or other purposes;

(2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce;

(3) That are used or could be used for industrial purposes by industries in interstate commerce;

(d) All impoundments of waters otherwise defined as navigable waters under this section;

(e) Tributaries of waters identified in paragraphs (a) through (d) of this section, including adjacent wetlands; and

(f) Wetlands adjacent to waters identified in paragraphs (a) through (e) of this section: Provided, That waste treatment systems (other than cooling ponds meeting the criteria of this paragraph) are not waters of the United States;

Navigable waters do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

NPDES means National Pollutant Discharge Elimination System;

Sheen means an iridescent appearance on the surface of water;

Sludge means an aggregate of oil or oil and other matter of any kind in any form other than dredged spoil having a combined specific gravity equivalent to or greater than water;

United States means the States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands;

Wetlands means those areas that are inundated or saturated by surface or ground water at a frequency or duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include playa lakes, swamps, marshes, bogs and similar areas such as sloughs, prairie potholes, wet meadows, prairie river overflows, mudflats, and natural ponds.

[52 FR 10719, Apr. 2, 1987, as amended at 58 FR 45039, Aug. 25, 1993; 61 FR 7421, Feb. 28, 1996]

§ 110.2 Applicability.

The regulations of this part apply to the discharge of oil prohibited by section 311(b)(3) of the Act.

[61 FR 7421, Feb. 28, 1996]

§ 110.3 Discharge of oil in such quantities as "may be harmful" pursuant to section 311(b)(4) of the Act.

For purposes of section 311(b)(4) of the Act, discharges of oil in such quantities that the Administrator has determined may be harmful to the public health or welfare or the environment of the United States include discharges of oil that:

(a) Violate applicable water quality standards; or

(b) Cause a film or sheen upon or discoloration of the surface of the water or adjoining shorelines or cause a sludge or emulsion to be deposited be-

neath the surface of the water or upon adjoining shorelines.

[61 FR 7421, Feb. 28, 1996]

§110.4 Dispersants.

Addition of dispersants or emulsifiers to oil to be discharged that would circumvent the provisions of this part is prohibited.

[52 FR 10719, Apr. 2, 1987. Redesignated at 61 FR 7421, Feb. 28, 1996]

§110.5 Discharges of oil not determined "as may be harmful" pursuant to Section 311(b)(3) of the Act.

Notwithstanding any other provisions of this part, the Administrator has not determined the following discharges of oil ''as may be harmful'' for purposes of section 311(b) of the Act:

(a) Discharges of oil from a properly functioning vessel engine (including an engine on a public vessel) and any discharges of such oil accumulated in the bilges of a vessel discharged in compliance with MARPOL 73/78, Annex I, as provided in 33 CFR part 151, subpart A;

(b) Other discharges of oil permitted under MARPOL 73/78, Annex I, as provided in 33 CFR part 151, subpart A; and

(c) Any discharge of oil explicitly permitted by the Administrator in connection with research, demonstration projects, or studies relating to the prevention, control, or abatement of oil pollution.

[61 FR 7421, Feb. 28, 1996]

§110.6 Notice.

Any person in charge of a vessel or of an onshore or offshore facility shall, as soon as he or she has knowledge of any discharge of oil from such vessel or facility in violation of section 311(b)(3) of the Act, immediately notify the National Response Center (NRC) (800–424–8802; in the Washington, DC metropolitan area, 202–426–2675). If direct reporting to the NRC is not practicable, reports may be made to the Coast Guard or EPA predesignated On-Scene Coordinator (OSC) for the geographic area where the discharge occurs. All such reports shall be promptly relayed to the NRC. If it is not possible to notify the NRC or the predesignated OCS immediately, reports may be made immediately to the nearest Coast Guard unit, provided that the person in charge of the vessel or onshore or offshore facility notifies the NRC as soon as possible. The reports shall be made in accordance with such procedures as the Secretary of Transportation may prescribe. The procedures for such notice are set forth in U.S. Coast Guard regulations, 33 CFR part 153, subpart B and in the National Oil and Hazardous Substances Pollution Contingency Plan, 40 CFR part 300, subpart E.

(Approved by the Office of Management and Budget under the control number 2050–0046)

[52 FR 10719, Apr. 2, 1987. Redesignated and amended at 61 FR 7421, Feb. 28, 1996; 61 FR 14032, Mar. 29, 1996]

PART 112—OIL POLLUTION PREVENTION

AUTHORITY: 33 U.S.C. 1321 and 1361; E.O. 12777 (October 18, 1991), 3 CFR, 1991 Comp., p. 351.

SOURCE: 38 FR 34165, Dec. 11, 1973, unless otherwise noted.

§ 112.1 General applicability.

(a) This part establishes procedures, methods and equipment and other requirements for equipment to prevent the discharge of oil from non-transportation-related onshore and offshore facilities into or upon the navigable waters of the United States or adjoining shorelines.

(b) Except as provided in paragraph (d) of this section, this part applies to owners or operators of non-transportation-related onshore and offshore facilities engaged in drilling, producing, gathering, storing, processing, refining, transferring, distributing or consuming oil and oil products, and which, due to their location, could reasonably be expected to discharge oil in harmful quantities, as defined in part 110 of this chapter, into or upon the navigable waters of the United States or adjoining shorelines.

(c) As provided in section 313 (86 Stat. 875) departments, agencies, and instrumentalities of the Federal government are subject to these regulations to the same extent as any person, except for the provisions of § 112.6.

(d) This part does not apply to:

(1) Facilities, equipment or operations which are not subject to the jurisdiction of the Environmental Protection Agency, as follows:

(i) Onshore and offshore facilities, which, due to their location, could not reasonably be expected to discharge oil into or upon the navigable waters of the United States or adjoining shorelines. This determination shall be based solely upon a consideration of the geographical, locational aspects of the facility (such as proximity to navigable waters or adjoining shorelines, land contour, drainage, etc.) and shall exclude consideration of manmade features such as dikes, equipment or other structures which may serve to restrain, hinder, contain, or otherwise prevent a discharge of oil from reaching navigable waters of the United States or adjoining shorelines; and

(ii) Equipment or operations of vessels or transportation-related onshore and offshore facilities which are subject to authority and control of the Department of Transportation, as defined in the Memorandum of Understanding between the Secretary of Transportation and the Administrator of the Environmental Protection Agency, dated November 24, 1971, 36 FR 24000.

(2) Those facilities which, although otherwise subject to the jurisdiction of the Environmental Protection Agency, meet both of the following requirements:

(i) The underground buried storage capacity of the facility is 42,000 gallons or less of oil, and

(ii) The storage capacity, which is not buried, of the facility is 1,320 gallons or less of oil, provided no single container has a capacity in excess of 660 gallons.

(e) This part provides for the preparation and implementation of Spill Prevention Control and Countermeasure Plans prepared in accordance with § 112.7, designed to complement existing laws, regulations, rules, standards, policies and procedures pertaining to safety standards, fire prevention and pollution prevention rules, so as to form a comprehensive balanced Federal/State spill prevention program to minimize the potential for oil discharges. Compliance with this part does not in any way relieve the owner or operator of an onshore or an offshore facility from compliance with other Federal, State or local laws.

[38 FR 34165, Dec. 11, 1973, as amended at 41 FR 12657, Mar. 26, 1976]

§ 112.2 Definitions.

For the purposes of this part:

Adverse weather means the weather conditions that make it difficult for response equipment and

personnel to cleanup or remove spilled oil, and that will be considered when identifying response systems and equipment in a response plan for the applicable operating environment. Factors to consider include significant wave height as specified in Appendix E to this part, as appropriate, ice conditions, temperatures, weather-related visibility, and currents within the area in which the systems or equipment are intended to function.

Complex means a facility possessing a combination of transportation-related and non-transportation-related components that is subject to the jurisdiction of more than one Federal agency under section 311(j) of the Clean Water Act.

Contract or other approved means: (1) A written contractual agreement with an oil spill removal organization(s) that identifies and ensures the availability of the necessary personnel and equipment within appropriate response times; and/or

(2) A written certification by the owner or operator that the necessary personnel and equipment resources, owned or operated by the facility owner or operator, are available to respond to a discharge within appropriate response times; and/or

(3) Active membership in a local or regional oil spill removal organization(s) that has identified and ensures adequate access through such membership to necessary personnel and equipment to respond to a discharge within appropriate response times in the specified geographic areas; and/or

(4) Other specific arrangements approved by the Regional Administrator upon request of the owner or operator.

Discharge includes but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying or dumping. For purposes of this part, the term *discharge* shall not include any discharge of oil which is authorized by a permit issued pursuant to section 13 of the River and Harbor Act of 1899 (30 Stat. 1121, 33 U.S.C. 407), or sections 402 or 405 of the FWPCA Amendments of 1972 (86 Stat. 816 *et seq.*, 33 U.S.C. 1251 *et seq.*).

Fish and wildlife and sensitive environments means areas that may be identified by either their legal designation or by evaluations of Area Committees (for planning) or members of the Federal On-Scene Coordinator's spill response structure (during responses). These areas may include wetlands, National and State parks, critical habitats for endangered/threatened species, wilderness and natural resource areas, marine sanctuaries and estuarine reserves, conservation areas, preserves, wildlife areas, wildlife refuges, wild and scenic rivers, recreational areas, national forests, Federal and State lands that are research national areas, heritage program areas, land trust areas, and historical and archeological sites and parks. These areas may also include unique habitats such as: aquaculture sites and agricultural surface water intakes, bird nesting areas, critical biological resource areas, designated migratory routes, and designated seasonal habitats.

Injury means a measurable adverse change, either long- or short-term, in the chemical or physical quality or the viability of a natural resource resulting either directly or indirectly from exposure to a discharge of oil, or exposure to a product of reactions resulting from a discharge of oil.

Maximum extent practicable means the limitations used to determine oil spill planning resources and response times for on-water recovery, shoreline protection, and cleanup for worst case discharges from onshore non- transportation-related facilities in adverse weather. It considers the planned capability to respond to a worst case discharge in adverse weather, as contained in a response plan that meets the requirements in § 112.20 or in a specific plan approved by the Regional Administrator.

The term *navigable waters* of the United States means *navigable waters* as defined in section 502(7) of the FWPCA, and includes:

(1) All navigable waters of the United States, as defined in judicial decisions prior to passage of the 1972 Amendments to the FWPCA (Pub. L. 92–500), and tributaries of such waters;

(2) Interstate waters;

(3) Intrastate lakes, rivers, and streams which are utilized by interstate travelers for recreational or other purposes; and

(4) Intrastate lakes, rivers, and streams from which fish or shellfish are taken and sold in interstate commerce.

Navigable waters do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

Offshore facility means any facility of any kind located in, on, or under any of the navigable waters of the United States, which is not a transportation-related facility.

Oil means oil of any kind or in any form, including, but not limited to petroleum, fuel oil, sludge, oil refuse and oil mixed with wastes other than dredged spoil.

Oil Spill Removal Organization means an entity that provides oil spill response resources, and includes any for-profit or not-for-profit contractor, cooperative, or in-house response resources that have been established in a geographic area to provide required response resources.

Onshore facility means any facility of any kind located in, on, or under any land within the United States, other than submerged lands, which is not a transportation-related facility.

Owner or operator means any person owning or operating an onshore facility or an offshore facility, and in the case of any abandoned offshore facility, the person who owned or operated such facility immediately prior to such abandonment.

Person includes an individual, firm, corporation, association, and a partnership.

Regional Administrator, means the Regional Administrator of the Environmental Protection Agency, or his designee, in and for the Region in which the facility is located.

Spill event means a discharge of oil into or upon the navigable waters of the United States or adjoining shorelines in harmful quantities, as defined at 40 CFR part 110.

Transportation-related and *non-transportation-related* as applied to an onshore or offshore facility, are defined in the Memorandum of Understanding between the Secretary of Transportation and the Administrator of the Environmental Protection Agency, dated November 24, 1971, 36 FR 24080.

United States means the States, the District of Columbia, the Commonwealth of Puerto Rico, the Canal Zone, Guam, American Samoa, the Virgin Islands, and the Trust Territory of the Pacific Islands.

Vessel means every description of watercraft or other artificial contrivance used, or capable of being used as a means of transportation on water, other than a public vessel.

Worst case discharge for an onshore non-transportation-related facility means the largest foreseeable discharge in adverse weather conditions as determined using the worksheets in Appendix D to this part.

[38 FR 34165, Dec. 11, 1973, as amended at 58 FR 45039, Aug. 25, 1993; 59 FR 34097, July 1, 1994]

§ 112.3 Requirements for preparation and implementation of Spill Prevention Control and Countermeasure Plans.

(a) Owners or operators of onshore and offshore facilities in operation on or before the effective date of this part that have discharged or, due to their location, could reasonably be expected to discharge oil in harmful quantities, as defined in 40 CFR part 110, into or upon the navigable waters of the United States or adjoining shorelines, shall prepare a Spill Prevention Control and Countermeasure Plan (hereinafter ''SPCC Plan''), in writing and in accordance with § 112.7. Except as provided for in paragraph (f) of this section, such SPCC Plan shall be prepared within six months after the effective date of this part and shall be fully implemented as soon as possible, but not later than one year after the effective date of this part.

(b) Owners or operators of onshore and offshore facilities that become operational after the effective date of this part, and that have discharged or could reasonably be expected to discharge oil in harmful quantities, as defined in 40 CFR part 110, into or upon the navigable waters of the United States or adjoining shorelines, shall prepare an SPCC Plan in accordance with § 112.7. Except as provided for in paragraph (f) of this section, such SPCC Plan shall be prepared within six months after the date such facility begins operations and shall be fully implemented as soon as possible, but not later than one year after such facility begins operations.

(c) Owners or operators of onshore and offshore mobile or portable facilities, such as onshore drilling or workover rigs, barge mounted offshore drilling or workover rigs, and portable fueling facilities shall prepare and implement an SPCC Plan as required by paragraphs (a), (b) and (d) of this section. The owners or operators of such facility need not prepare a new SPCC Plan each time the facility is moved to a new site. The SPCC Plan may be a general plan, prepared in accordance with § 112.7, using good engineering practice. When the mobile or portable facility is moved, it must be located and installed using the spill prevention practices outlined in the SPCC Plan for the facility. No mobile or portable facility subject to this regulation shall operate unless the SPCC Plan has been implemented. The SPCC Plan shall only apply while the facility is in a fixed (non-transportation) operating mode.

(d) No SPCC Plan shall be effective to satisfy the requirements of this part unless it has been reviewed by a Registered Professional Engineer and certified to by such Professional Engineer. By means of this certification the engineer, having examined the facility and being familiar with the provisions of this part, shall attest that the SPCC Plan has been prepared in accordance with good engineering practices. Such certification shall in no way relieve the owner or operator of an onshore or offshore facility of his duty to prepare and fully implement such Plan in accordance with § 112.7, as required by paragraphs (a), (b) and (c) of this section.

(e) Owners or operators of a facility for which an SPCC Plan is required pursuant to paragraph (a), (b) or (c) of this section shall maintain a complete copy of the Plan at such facility if the facility is normally attended at least 8 hours per day, or at the nearest field office if the facility is not so attended, and shall make such Plan available to the Regional Administrator for on-site review during normal working hours.

(f) *Extensions of time.* (1) The Regional Administrator may authorize an extension of time for the preparation and full implementation of an SPCC

Plan beyond the time permitted for the preparation and implementation of an SPCC Plan pursuant to paragraph (a), (b) or (c) of this section where he finds that the owner or operator of a facility subject to paragraphs (a), (b) or (c) of this section cannot fully comply with the requirements of this part as a result of either nonavailability of qualified personnel, or delays in construction or equipment delivery beyond the control and without the fault of such owner or operator or their respective agents or employees.

(2) Any owner or operator seeking an extension of time pursuant to paragraph (f)(1) of this section may submit a letter of request to the Regional Administrator. Such letter shall include:

(i) A complete copy of the SPCC Plan, if completed;

(ii) A full explanation of the cause for any such delay and the specific aspects of the SPCC Plan affected by the delay;

(iii) A full discussion of actions being taken or contemplated to minimize or mitigate such delay;

(iv) A proposed time schedule for the implementation of any corrective actions being taken or contemplated, including interim dates for completion of tests or studies, installation and operation of any necessary equipment or other preventive measures.

In addition, such owner or operator may present additional oral or written statements in support of his letter of request.

(3) The submission of a letter of request for extension of time pursuant to paragraph (f)(2) of this section shall in no way relieve the owner or operator from his obligation to comply with the requirements of § 112.3 (a), (b) or (c). Where an extension of time is authorized by the Regional Administrator for particular equipment or other specific aspects of the SPCC Plan, such extension shall in no way affect the owner's or operator's obligation to comply with the requirements of § 112.3 (a), (b) or (c) with respect to other equipment or other specific aspects of the SPCC Plan for which an extension of time has not been expressly authorized.

[38 FR 34165, Dec. 11, 1973, as amended at 41 FR 12657, Mar. 26, 1976]

§ 112.4 Amendment of SPCC Plans by Regional Administrator.

(a) Notwithstanding compliance with § 112.3, whenever a facility subject to § 112.3 (a), (b) or (c) has: Discharged more than 1,000 U.S. gallons of oil into or upon the navigable waters of the United States or adjoining shorelines in a single spill event, or discharged oil in harmful quantities, as defined in 40 CFR part 110, into or upon the navigable waters of the United States or adjoining shorelines in two spill events, reportable under section 311(b)(5) of the FWPCA, occurring within any twelve month period, the owner or operator of such facility shall submit to the Regional Administrator, within 60 days from the time such facility becomes subject to this section, the following:

(1) Name of the facility;

(2) Name(s) of the owner or operator of the facility;

(3) Location of the facility;

(4) Date and year of initial facility operation;

(5) Maximum storage or handling capacity of the facility and normal daily throughput;

(6) Description of the facility, including maps, flow diagrams, and topographical maps;

(7) A complete copy of the SPCC Plan with any amendments;

(8) The cause(s) of such spill, including a failure analysis of system or subsystem in which the failure occurred;

(9) The corrective actions and/or countermeasures taken, including an adequate description of equipment repairs and/or replacements;

(10) Additional preventive measures taken or contemplated to minimize the possibility of recurrence;

(11) Such other information as the Regional Administrator may reasonably require pertinent to the Plan or spill event.

(b) Section 112.4 shall not apply until the expiration of the time permitted for the preparation and implementation of an SPCC Plan pursuant to § 112.3 (a), (b), (c) and (f).

(c) A complete copy of all information provided to the Regional Administrator pursuant to paragraph (a) of this section shall be sent at the same time to the State agency in charge of water pollution control activities in and for the State in which the facility is located. Upon receipt of such information such State agency may conduct a review and make recommendations to the Regional Administrator as to further procedures, methods, equipment and other requirements for equipment necessary to prevent and to contain discharges of oil from such facility.

(d) After review of the SPCC Plan for a facility subject to paragraph (a) of this section, together with all other information submitted by the owner or operator of such facility, and by the State agency under paragraph (c) of this section, the Regional Administrator may require the owner or operator of such facility to amend the SPCC Plan if he finds that the Plan does not meet the requirements of this part or that the amendment of the Plan is necessary to prevent and to contain discharges of oil from such facility.

(e) When the Regional Administrator proposes to require an amendment to the SPCC Plan, he shall notify the facility operator by certified mail

addressed to, or by personal delivery to, the facility owner or operator, that he proposes to require an amendment to the Plan, and shall specify the terms of such amendment. If the facility owner or operator is a corporation, a copy of such notice shall also be mailed to the registered agent, if any, of such corporation in the State where such facility is located. Within 30 days from receipt of such notice, the facility owner or operator may submit written information, views, and arguments on the amendment. After considering all relevant material presented, the Regional Administrator shall notify the facility owner or operator of any amendment required or shall rescind the notice. The amendment required by the Regional Administrator shall become part of the Plan 30 days after such notice, unless the Regional Administrator, for good cause, shall specify another effective date. The owner or operator of the facility shall implement the amendment of the Plan as soon as possible, but not later than six months after the amendment becomes part of the Plan, unless the Regional Administrator specifies another date.

(f) An owner or operator may appeal a decision made by the Regional Administrator requiring an amendment to an SPCC Plan. The appeal shall be made to the Administrator of the United States Environmental Protection Agency and must be made in writing within 30 days of receipt of the notice from the Regional Administrator requiring the amendment. A complete copy of the appeal must be sent to the Regional Administrator at the time the appeal is made. The appeal shall contain a clear and concise statement of the issues and points of fact in the case. It may also contain additional information from the owner or operator, or from any other person. The Administrator or his designee may request additional information from the owner or operator, or from any other person. The Administrator or his designee shall render a decision within 60 days of receiving the appeal and shall notify the owner or operator of his decision.

[38 FR 34165, Dec. 11, 1973, as amended at 41 FR 12658, Mar. 26, 1976]

§ 112.5 Amendment of Spill Prevention Control and Countermeasure Plans by owners or operators.

(a) Owners or operators of facilities subject to § 112.3 (a), (b) or (c) shall amend the SPCC Plan for such facility in accordance with § 112.7 whenever there is a change in facility design, construction, operation or maintenance which materially affects the facility's potential for the discharge of oil into or upon the navigable waters of the United States or adjoining shore lines. Such amendments shall be fully implemented as soon as possible, but not later than six months after such change occurs.

(b) Notwithstanding compliance with paragraph (a) of this section, owners and operators of facilities subject to § 112.3 (a), (b) or (c) shall complete a review and evaluation of the SPCC Plan at least once every three years from the date such facility becomes subject to this part. As a result of this review and evaluation, the owner or operator shall amend the SPCC Plan within six months of the review to include more effective prevention and control technology if: (1) Such technology will significantly reduce the likelihood of a spill event from the facility, and (2) if such technology has been field-proven at the time of the review.

(c) No amendment to an SPCC Plan shall be effective to satisfy the requirements of this section unless it has been certified by a Professional Engineer in accordance with § 112.3(d).

§ 112.7 Guidelines for the preparation and implementation of a Spill Prevention Control and Countermeasure Plan.

The SPCC Plan shall be a carefully thought-out plan, prepared in accordance with good engineering practices, and which has the full approval of management at a level with authority to commit the necessary resources. If the plan calls for additional facilities or procedures, methods, or equipment not yet fully operational, these items should be discussed in separate paragraphs, and the details of installation and operational start-up should be explained separately. The complete SPCC Plan shall follow the sequence outlined below, and include a discussion of the facility's conformance with the appropriate guidelines listed:

(a) A facility which has experienced one or more spill events within twelve months prior to the effective date of this part should include a written description of each such spill, corrective action taken and plans for preventing recurrence.

(b) Where experience indicates a reasonable potential for equipment failure (such as tank overflow, rupture, or leakage), the plan should include a prediction of the direction, rate of flow, and total quantity of oil which could be discharged from the facility as a result of each major type of failure.

(c) Appropriate containment and/or diversionary structures or equipment to prevent discharged oil from reaching a navigable water course should be provided. One of the following preventive systems or its equivalent should be used as a minimum:

(1) Onshore facilities:

(i) Dikes, berms or retaining walls sufficiently impervious to contain spilled oil;

(ii) Curbing;

(iii) Culverting, gutters or other drainage systems;

(iv) Weirs, booms or other barriers;

(v) Spill diversion ponds;

(vi) Retention ponds;

(vii) Sorbent materials.

(2) Offshore facilities:

(i) Curbing, drip pans;

(ii) Sumps and collection systems.

(d) When it is determined that the installation of structures or equipment listed in § 112.7(c) to prevent discharged oil from reaching the navigable waters is not practicable from any onshore or offshore facility, the owner or operator should clearly demonstrate such impracticability and provide the following:

(1) A strong oil spill contingency plan following the provision of 40 CFR part 109.

(2) A written commitment of manpower, equipment and materials required to expeditiously control and remove any harmful quantity of oil discharged.

(e) In addition to the minimal prevention standards listed under § 112.7(c), sections of the Plan should include a complete discussion of conformance with the following applicable guidelines, other effective spill prevention and containment procedures (or, if more stringent, with State rules, regulations and guidelines):

(1) *Facility drainage* (*onshore*)*;* (*excluding production facilities*). (i) Drainage from diked storage areas should be restrained by valves or other positive means to prevent a spill or other excessive leakage of oil into the drainage system or inplant effluent treatment system, except where plan systems are designed to handle such leakage. Diked areas may be emptied by pumps or ejectors; however, these should be manually activated and the condition of the accumulation should be examined before starting to be sure no oil will be discharged into the water.

(ii) Flapper-type drain valves should not be used to drain diked areas. Valves used for the drainage of diked areas should, as far as practical, be of manual, open-and-closed design. When plant drainage drains directly into water courses and not into wastewater treatment plants, retained storm water should be inspected as provided in paragraphs (e)(2)(iii) (B), (C) and (D) of this section before drainage.

(iii) Plant drainage systems from undiked areas should, if possible, flow into ponds, lagoons or catchment basins, designed to retain oil or return it to the facility. Catchment basins should not be located in areas subject to periodic flooding.

(iv) If plant drainage is not engineered as above, the final discharge of all in-plant ditches should be equipped with a diversion system that could, in the event of an uncontrolled spill, return the oil to the plant.

(v) Where drainage waters are treated in more than one treatment unit, natural hydraulic flow should be used. If pump transfer is needed, two ''lift'' pumps should be provided, and at least one of the pumps should be permanently installed when such treatment is continuous. In any event, whatever techniques are used facility drainage systems should be adequately engineered to prevent oil from reaching navigable waters in the event of equipment failure or human error at the facility.

(2) *Bulk storage tanks* (*onshore*)*;* (*excluding production facilities*). (i) No tank should be used for the storage of oil unless its material and construction are compatible with the material stored and conditions of storage such as pressure and temperature, etc.

(ii) All bulk storage tank installations should be constructed so that a secondary means of containment is provided for the entire contents of the largest single tank plus sufficient freeboard to allow for precipitation. Diked areas should be sufficiently impervious to contain spilled oil. Dikes, containment curbs, and pits are commonly employed for this purpose, but they may not always be appropriate. An alternative system could consist of a complete drainage trench enclosure arranged so that a spill could terminate and be safely confined in an in-plant catchment basin or holding pond.

(iii) Drainage of rainwater from the diked area into a storm drain or an effluent discharge that empties into an open water course, lake, or pond, and bypassing the in-plant treatment system may be acceptable if:

(A) The bypass valve is normally sealed closed.

(B) Inspection of the run-off rain water ensures compliance with applicable water quality standards and will not cause a harmful discharge as defined in 40 CFR part 110.

(C) The bypass valve is opened, and resealed following drainage under responsible supervision.

(D) Adequate records are kept of such events.

(iv) Buried metallic storage tanks represent a potential for undetected spills. A new buried installation should be protected from corrosion by coatings, cathodic protection or other effective methods compatible with local soil conditions. Such buried tanks should at least be subjected to regular pressure testing.

(v) Partially buried metallic tanks for the storage of oil should be avoided, unless the buried section of the shell is adequately coated, since partial burial in damp earth can cause rapid corrosion of metallic surfaces, especially at the earth/air interface.

(vi) Aboveground tanks should be subject to periodic integrity testing, taking into account tank design (floating roof, etc.) and using such techniques as hydrostatic testing, visual inspection or a system of non-destructive shell thickness testing. Comparison records should be kept where appropriate, and tank supports and foundations should be included in these inspections. In addition, the

outside of the tank should frequently be observed by operating personnel for signs of deterioration, leaks which might cause a spill, or accumulation of oil inside diked areas.

(vii) To control leakage through defective internal heating coils, the following factors should be considered and applied, as appropriate.

(A) The steam return or exhaust lines from internal heating coils which discharge into an open water course should be monitored for contamination, or passed through a settling tank, skimmer, or other separation or retention system.

(B) The feasibility of installing an external heating system should also be considered.

(viii) New and old tank installations should, as far as practical, be fail-safe engineered or updated into a fail-safe engineered installation to avoid spills. Consideration should be given to providing one or more of the following devices:

(A) High liquid level alarms with an audible or visual signal at a constantly manned operation or surveillance station; in smaller plants an audible air vent may suffice.

(B) Considering size and complexity of the facility, high liquid level pump cutoff devices set to stop flow at a predetermined tank content level.

(C) Direct audible or code signal communication between the tank gauger and the pumping station.

(D) A fast response system for determining the liquid level of each bulk storage tank such as digital computers, telepulse, or direct vision gauges or their equivalent.

(E) Liquid level sensing devices should be regularly tested to insure proper operation.

(ix) Plant effluents which are discharged into navigable waters should have disposal facilities observed frequently enough to detect possible system upsets that could cause an oil spill event.

(x) Visible oil leaks which result in a loss of oil from tank seams, gaskets, rivets and bolts sufficiently large to cause the accumulation of oil in diked areas should be promptly corrected.

(xi) Mobile or portable oil storage tanks (onshore) should be positioned or located so as to prevent spilled oil from reaching navigable waters. A secondary means of containment, such as dikes or catchment basins, should be furnished for the largest single compartment or tank. These facilities should be located where they will not be subject to periodic flooding or washout.

(3) *Facility transfer operations, pumping, and in-plant process* (*onshore*)*;* (*excluding production facilities*). (i) Buried piping installations should have a protective wrapping and coating and should be cathodically protected if soil conditions warrant. If a section of buried line is exposed for any reason, it should be carefully examined for deterioration. If corrosion damage is found, additional examination and corrective action should be taken as indicated by the magnitude of the damage. An alternative would be the more frequent use of exposed pipe corridors or galleries.

(ii) When a pipeline is not in service, or in standby service for an extended time the terminal connection at the transfer point should be capped or blank-flanged, and marked as to origin.

(iii) Pipe supports should be properly designed to minimize abrasion and corrosion and allow for expansion and contraction.

(iv) All aboveground valves and pipelines should be subjected to regular examinations by operating personnel at which time the general condition of items, such as flange joints, expansion joints, valve glands and bodies, catch pans, pipeline supports, locking of valves, and metal surfaces should be assessed. In addition, periodic pressure testing may be warranted for piping in areas where facility drainage is such that a failure might lead to a spill event.

(v) Vehicular traffic granted entry into the facility should be warned verbally or by appropriate signs to be sure that the vehicle, because of its size, will not endanger above ground piping.

(4) *Facility tank car and tank truck loading/unloading rack* (*onshore*). (i) Tank car and tank truck loading/unloading procedures should meet the minimum requirements and regulation established by the Department of Transportation.

(ii) Where rack area drainage does not flow into a catchment basin or treatment facility designed to handle spills, a quick drainage system should be used for tank truck loading and unloading areas. The containment system should be designed to hold at least maximum capacity of any single compartment of a tank car or tank truck loaded or unloaded in the plant.

(iii) An interlocked warning light or physical barrier system, or warning signs, should be provided in loading/unloading areas to prevent vehicular departure before complete disconnect of flexible or fixed transfer lines.

(iv) Prior to filling and departure of any tank car or tank truck, the lowermost drain and all outlets of such vehicles should be closely examined for leakage, and if necessary, tightened, adjusted, or replaced to prevent liquid leakage while in transit.

(5) *Oil production facilities* (*onshore*)—(i) *Definition.* An onshore production facility may include all wells, flowlines, separation equipment, storage facilities, gathering lines, and auxiliary non-transportation-related equipment and facilities in a single geographical oil or gas field operated by a single operator.

(ii) *Oil production facility* (*onshore*) *drainage.* (A) At tank batteries and central treating stations where an accidental discharge of oil would have

a reasonable possibility of reaching navigable waters, the dikes or equivalent required under § 112.7(c)(1) should have drains closed and sealed at all times except when rainwater is being drained. Prior to drainage, the diked area should be inspected as provided in paragraphs (e)(2)(iii)(B), (C), and (D) of this section. Accumulated oil on the rainwater should be picked up and returned to storage or disposed of in accordance with approved methods.

(B) Field drainage ditches, road ditches, and oil traps, sumps or skimmers, if such exist, should be inspected at regularly scheduled intervals for accumulation of oil that may have escaped from small leaks. Any such accumulations should be removed.

(iii) *Oil production facility* (*onshore*) *bulk storage tanks.* (A) No tank should be used for the storage of oil unless its material and construction are compatible with the material stored and the conditions of storage.

(B) All tank battery and central treating plant installations should be provided with a secondary means of containment for the entire contents of the largest single tank if feasible, or alternate systems such as those outlined in § 112.7(c)(1). Drainage from undiked areas should be safely confined in a catchment basin or holding pond.

(C) All tanks containing oil should be visually examined by a competent person for condition and need for maintenance on a scheduled periodic basis. Such examination should include the foundation and supports of tanks that are above the surface of the ground.

(D) New and old tank battery installations should, as far as practical, be fail-safe engineered or updated into a fail-safe engineered installation to prevent spills. Consideration should be given to one or more of the following:

(*1*) Adequate tank capacity to assure that a tank will not overfill should a pumper/gauger be delayed in making his regular rounds.

(*2*) Overflow equalizing lines between tanks so that a full tank can overflow to an adjacent tank.

(*3*) Adequate vacuum protection to prevent tank collapse during a pipeline run.

(*4*) High level sensors to generate and transmit an alarm signal to the computer where facilities are a part of a computer production control system.

(iv) *Facility transfer operations, oil production facility* (*onshore*). (A) All above ground valves and pipelines should be examined periodically on a scheduled basis for general condition of items such as flange joints, valve glands and bodies, drip pans, pipeline supports, pumping well polish rod stuffing boxes, bleeder and gauge valves.

(B) Salt water (oil field brine) disposal facilities should be examined often, particularly following a sudden change in atmospheric temperature to detect possible system upsets that could cause an oil discharge.

(C) Production facilities should have a program of flowline maintenance to prevent spills from this source. The program should include periodic examinations, corrosion protection, flowline replacement, and adequate records, as appropriate, for the individual facility.

(6) *Oil drilling and workover facilities* (*onshore*). (i) Mobile drilling or workover equipment should be positioned or located so as to prevent spilled oil from reaching navigable waters.

(ii) Depending on the location, catchment basins or diversion structures may be necessary to intercept and contain spills of fuel, crude oil, or oily drilling fluids.

(iii) Before drilling below any casing string or during workover operations, a blowout prevention (BOP) assembly and well control system should be installed that is capable of controlling any well head pressure that is expected to be encountered while that BOP assembly is on the well. Casing and BOP installations should be in accordance with State regulatory agency requirements.

(7) *Oil drilling, production, or workover facilities* (*offshore*). (i) Definition: ''An oil drilling, production or workover facility (offshore)'' may include all drilling or workover equipment, wells, flowlines, gathering lines, platforms, and auxiliary nontransportation-related equipment and facilities in a single geographical oil or gas field operated by a single operator.

(ii) Oil drainage collection equipment should be used to prevent and control small oil spillage around pumps, glands, valves, flanges, expansion joints, hoses, drain lines, separators, treaters, tanks, and allied equipment. Drains on the facility should be controlled and directed toward a central collection sump or equivalent collection system sufficient to prevent discharges of oil into the navigable waters of the United States. Where drains and sumps are not practicable oil contained in collection equipment should be removed as often as necessary to prevent overflow.

(iii) For facilities employing a sump system, sump and drains should be adequately sized and a spare pump or equivalent method should be available to remove liquid from the sump and assure that oil does not escape. A regular scheduled preventive maintenance inspection and testing program should be employed to assure reliable operation of the liquid removal system and pump start-up device. Redundant automatic sump pumps and control devices may be required on some installations.

(iv) In areas where separators and treaters are equipped with dump valves whose predominant mode of failure is in the closed position and pollution risk is high, the facility should be specially

equipped to prevent the escape of oil. This could be accomplished by extending the flare line to a diked area if the separator is near shore, equipping it with a high liquid level sensor that will automatically shut-in wells producing to the separator, parallel redundant dump valves, or other feasible alternatives to prevent oil discharges.

(v) Atmospheric storage or surge tanks should be equipped with high liquid level sensing devices or other acceptable alternatives to prevent oil discharges.

(vi) Pressure tanks should be equipped with high and low pressure sensing devices to activate an alarm and/or control the flow or other acceptable alternatives to prevent oil discharges.

(vii) Tanks should be equipped with suitable corrosion protection.

(viii) A written procedure for inspecting and testing pollution prevention equipment and systems should be prepared and maintained at the facility. Such procedures should be included as part of the SPCC Plan.

(ix) Testing and inspection of the pollution prevention equipment and systems at the facility should be conducted by the owner or operator on a scheduled periodic basis commensurate with the complexity, conditions and circumstances of the facility or other appropriate regulations.

(x) Surface and subsurface well shut-in valves and devices in use at the facility should be sufficiently described to determine method of activation or control, e.g., pressure differential, change in fluid or flow conditions, combination of pressure and flow, manual or remote control mechanisms. Detailed records for each well, while not necessarily part of the plan should be kept by the owner or operator.

(xi) Before drilling below any casing string, and during workover operations a blowout preventer (BOP) assembly and well control system should be installed that is capable of controlling any wellhead pressure that is expected to be encountered while that BOP assembly is on the well. Casing and BOP installations should be in accordance with State regulatory agency requirements.

(xii) Extraordinary well control measures should be provided should emergency conditions, including fire, loss of control and other abnormal conditions, occur. The degree of control system redundancy should vary with hazard exposure and probable consequences of failure. It is recommended that surface shut-in systems have redundant or ''fail close'' valving. Subsurface safety valves may not be needed in producing wells that will not flow but should be installed as required by applicable State regulations.

(xiii) In order that there will be no misunderstanding of joint and separate duties and obligations to perform work in a safe and pollution free manner, written instructions should be prepared by the owner or operator for contractors and subcontractors to follow whenever contract activities include servicing a well or systems appurtenant to a well or pressure vessel. Such instructions and procedures should be maintained at the offshore production facility. Under certain circumstances and conditions such contractor activities may require the presence at the facility of an authorized representative of the owner or operator who would intervene when necessary to prevent a spill event.

(xiv) All manifolds (headers) should be equipped with check valves on individual flowlines.

(xv) If the shut-in well pressure is greater than the working pressure of the flowline and manifold valves up to and including the header valves associated with that individual flowline, the flowline should be equipped with a high pressure sensing device and shut-in valve at the wellhead unless provided with a pressure relief system to prevent over pressuring.

(xvi) All pipelines appurtenant to the facility should be protected from corrosion. Methods used, such as protective coatings or cathodic protection, should be discussed.

(xvii) Sub-marine pipelines appurtenant to the facility should be adequately protected against environmental stresses and other activities such as fishing operations.

(xviii) Sub-marine pipelines appurtenant to the facility should be in good operating condition at all times and inspected on a scheduled periodic basis for failures. Such inspections should be documented and maintained at the facility.

(8) *Inspections and records.* Inspections required by this part should be in accordance with written procedures developed for the facility by the owner or operator. These written procedures and a record of the inspections, signed by the appropriate supervisor or inspector, should be made part of the SPCC Plan and maintained for a period of three years.

(9) *Security* (*excluding oil production facilities*). (i) All plants handling, processing, and storing oil should be fully fenced, and entrance gates should be locked and/or guarded when the plant is not in production or is unattended.

(ii) The master flow and drain valves and any other valves that will permit direct outward flow of the tank's content to the surface should be securely locked in the closed position when in non-operating or non-standby status.

(iii) The starter control on all oil pumps should be locked in the ''off'' position or located at a site accessible only to authorized personnel when the pumps are in a non-operating or non-standby status.

(iv) The loading/unloading connections of oil pipelines should be securely capped or blank-flanged when not in service or standby service for an extended time. This security practice should also apply to pipelines that are emptied of liquid content either by draining or by inert gas pressure.

(v) Facility lighting should be commensurate with the type and location of the facility. Consideration should be given to: (A) Discovery of spills occurring during hours of darkness, both by operating personnel, if present, and by non-operating personnel (the general public, local police, etc.) and (B) prevention of spills occurring through acts of vandalism.

(10) *Personnel, training and spill prevention procedures.* (i) Owners or operators are responsible for properly instructing their personnel in the operation and maintenance of equipment to prevent the discharges of oil and applicable pollution control laws, rules and regulations.

(ii) Each applicable facility should have a designated person who is accountable for oil spill prevention and who reports to line management.

(iii) Owners or operators should schedule and conduct spill prevention briefings for their operating personnel at intervals frequent enough to assure adequate understanding of the SPCC Plan for that facility. Such briefings should highlight and describe known spill events or failures, malfunctioning components, and recently developed precautionary measures.

§ 112.20 Facility response plans.

(a) The owner or operator of any non-transportation-related onshore facility that, because of its location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines shall prepare and submit a facility response plan to the Regional Administrator, according to the following provisions:

(1) For the owner or operator of a facility in operation on or before February 18, 1993 who is required to prepare and submit a response plan under 33 U.S.C. 1321(j)(5), the Oil Pollution Act of 1990 (Pub. L. 101–380, 33 U.S.C. 2701 *et seq.*) requires the submission of a response plan that satisfies the requirements of 33 U.S.C. 1321(j)(5) no later than February 18, 1993.

(i) The owner or operator of an existing facility that was in operation on or before February 18, 1993 who submitted a response plan by February 18, 1993 shall revise the response plan to satisfy the requirements of this section and resubmit the response plan or updated portions of the response plan to the Regional Administrator by February 18, 1995.

(ii) The owner or operator of an existing facility in operation on or before February 18, 1993 who failed to submit a response plan by February 18, 1993 shall prepare and submit a response plan that satisfies the requirements of this section to the Regional Administrator before August 30, 1994.

(2) The owner or operator of a facility in operation on or after August 30, 1994 that satisfies the criteria in paragraph (f)(1) of this section or that is notified by the Regional Administrator pursuant to paragraph (b) of this section shall prepare and submit a facility response plan that satisfies the requirements of this section to the Regional Administrator.

(i) For a facility that commenced operations after February 18, 1993 but prior to August 30, 1994, and is required to prepare and submit a response plan based on the criteria in paragraph (f)(1) of this section, the owner or operator shall submit the response plan or updated portions of the response plan, along with a completed version of the response plan cover sheet contained in Appendix F to this part, to the Regional Administrator prior to August 30, 1994.

(ii) For a newly constructed facility that commences operation after August 30, 1994, and is required to prepare and submit a response plan based on the criteria in paragraph (f)(1) of this section, the owner or operator shall submit the response plan, along with a completed version of the response plan cover sheet contained in Appendix F to this part, to the Regional Administrator prior to the start of operations (adjustments to the response plan to reflect changes that occur at the facility during the start-up phase of operations must be submitted to the Regional Administrator after an operational trial period of 60 days).

(iii) For a facility required to prepare and submit a response plan after August 30, 1994, as a result of a planned change in design, construction, operation, or maintenance that renders the facility subject to the criteria in paragraph (f)(1) of this section, the owner or operator shall submit the response plan, along with a completed version of the response plan cover sheet contained in Appendix F to this part, to the Regional Administrator before the portion of the facility undergoing change commences operations (adjustments to the response plan to reflect changes that occur at the facility during the start-up phase of operations must be submitted to the Regional Administrator after an operational trial period of 60 days).

(iv) For a facility required to prepare and submit a response plan after August 30, 1994, as a result of an unplanned event or change in facility characteristics that renders the facility subject to the criteria in paragraph (f)(1) of this section, the owner or operator shall submit the response plan, along with a completed version of the response plan cover sheet contained in Appendix F to this

part, to the Regional Administrator within six months of the unplanned event or change.

(3) In the event the owner or operator of a facility that is required to prepare and submit a response plan uses an alternative formula that is comparable to one contained in Appendix C to this part to evaluate the criterion in paragraph (f)(1)(ii)(B) or (f)(1)(ii)(C) of this section, the owner or operator shall attach documentation to the response plan cover sheet contained in Appendix F to this part that demonstrates the reliability and analytical soundness of the alternative formula.

(b)(1) The Regional Administrator may at any time require the owner or operator of any non-transportation-related onshore facility to prepare and submit a facility response plan under this section after considering the factors in paragraph (f)(2) of this section. If such a determination is made, the Regional Administrator shall notify the facility owner or operator in writing and shall provide a basis for the determination. If the Regional Administrator notifies the owner or operator in writing of the requirement to prepare and submit a response plan under this section, the owner or operator of the facility shall submit the response plan to the Regional Administrator within six months of receipt of such written notification.

(2) The Regional Administrator shall review plans submitted by such facilities to determine whether the facility could, because of its location, reasonably be expected to cause significant and substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.

(c) The Regional Administrator shall determine whether a facility could, because of its location, reasonably be expected to cause significant and substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines, based on the factors in paragraph (f)(3) of this section. If such a determination is made, the Regional Administrator shall notify the owner or operator of the facility in writing and:

(1) Promptly review the facility response plan;

(2) Require amendments to any response plan that does not meet the requirements of this section;

(3) Approve any response plan that meets the requirements of this section; and

(4) Review each response plan periodically thereafter on a schedule established by the Regional Administrator provided that the period between plan reviews does not exceed five years.

(d)(1) The owner or operator of a facility for which a response plan is required under this part shall revise and resubmit revised portions of the response plan within 60 days of each facility change that materially may affect the response to a worst case discharge, including:

(i) A change in the facility's configuration that materially alters the information included in the response plan;

(ii) A change in the type of oil handled, stored, or transferred that materially alters the required response resources;

(iii) A material change in capabilities of the oil spill removal organization(s) that provide equipment and personnel to respond to discharges of oil described in paragraph (h)(5) of this section;

(iv) A material change in the facility's spill prevention and response equipment or emergency response procedures; and

(v) Any other changes that materially affect the implementation of the response plan.

(2) Except as provided in paragraph (d)(1) of this section, amendments to personnel and telephone number lists included in the response plan and a change in the oil spill removal organization(s) that does not result in a material change in support capabilities do not require approval by the Regional Administrator. Facility owners or operators shall provide a copy of such changes to the Regional Administrator as the revisions occur.

(3) The owner or operator of a facility that submits changes to a response plan as provided in paragraph (d)(1) or (d)(2) of this section shall provide the EPA-issued facility identification number (where one has been assigned) with the changes.

(4) The Regional Administrator shall review for approval changes to a response plan submitted pursuant to paragraph (d)(1) of this section for a facility determined pursuant to paragraph (f)(3) of this section to have the potential to cause significant and substantial harm to the environment.

(e) If the owner or operator of a facility determines pursuant to paragraph (a)(2) of this section that the facility could not, because of its location, reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines, the owner or operator shall complete and maintain at the facility the certification form contained in Appendix C to this part and, in the event an alternative formula that is comparable to one contained in Appendix C to this part is used to evaluate the criterion in paragraph (f)(1)(ii)(B) or (f)(1)(ii)(C) of this section, the owner or operator shall attach documentation to the certification form that demonstrates the reliability and analytical soundness of the comparable formula and shall notify the Regional Administrator in writing that an alternative formula was used.

(f)(1) A facility could, because of its location, reasonably be expected to cause substantial harm to the environment by discharging oil into or on

the navigable waters or adjoining shorelines pursuant to paragraph (a)(2) of this section, if it meets any of the following criteria applied in accordance with the flowchart contained in Attachment C-I to Appendix C to this part:

(i) The facility transfers oil over water to or from vessels and has a total oil storage capacity greater than or equal to 42,000 gallons; or

(ii) The facility's total oil storage capacity is greater than or equal to 1 million gallons, and one of the following is true:

(A) The facility does not have secondary containment for each aboveground storage area sufficiently large to contain the capacity of the largest aboveground oil storage tank within each storage area plus sufficient freeboard to allow for precipitation;

(B) The facility is located at a distance (as calculated using the appropriate formula in Appendix C to this part or a comparable formula) such that a discharge from the facility could cause injury to fish and wildlife and sensitive environments. For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III of the ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability) and the applicable Area Contingency Plan prepared pursuant to section 311(j)(4) of the Clean Water Act;

(C) The facility is located at a distance (as calculated using the appropriate formula in Appendix C to this part or a comparable formula) such that a discharge from the facility would shut down a public drinking water intake; or

(D) The facility has had a reportable oil spill in an amount greater than or equal to 10,000 gallons within the last 5 years.

(2)(i) To determine whether a facility could, because of its location, reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines pursuant to paragraph (b) of this section, the Regional Administrator shall consider the following:

(A) Type of transfer operation;

(B) Oil storage capacity;

(C) Lack of secondary containment;

(D) Proximity to fish and wildlife and sensitive environments and other areas determined by the Regional Administrator to possess ecological value;

(E) Proximity to drinking water intakes;

(F) Spill history; and

(G) Other site-specific characteristics and environmental factors that the Regional Administrator determines to be relevant to protecting the environment from harm by discharges of oil into or on navigable waters or adjoining shorelines.

(ii) Any person, including a member of the public or any representative from a Federal, State, or local agency who believes that a facility subject to this section could, because of its location, reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines may petition the Regional Administrator to determine whether the facility meets the criteria in paragraph (f)(2)(i) of this section. Such petition shall include a discussion of how the factors in paragraph (f)(2)(i) of this section apply to the facility in question. The RA shall consider such petitions and respond in an appropriate amount of time.

(3) To determine whether a facility could, because of its location, reasonably be expected to cause significant and substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines, the Regional Administrator may consider the factors in paragraph (f)(2) of this section as well as the following:

(i) Frequency of past spills;

(ii) Proximity to navigable waters;

(iii) Age of oil storage tanks; and

(iv) Other facility-specific and Region-specific information, including local impacts on public health.

(g)(1) All facility response plans shall be consistent with the requirements of the National Oil and Hazardous Substance Pollution Contingency Plan (40 CFR part 300) and applicable Area Contingency Plans prepared pursuant to section 311(j)(4) of the Clean Water Act. The facility response plan should be coordinated with the local emergency response plan developed by the local emergency planning committee under section 303 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (42 U.S.C. 11001 et seq.). Upon request, the owner or operator should provide a copy of the facility response plan to the local emergency planning committee or State emergency response commission.

(2) The owner or operator shall review relevant portions of the National Oil and Hazardous Substances Pollution Contingency Plan and applicable Area Contingency Plan annually and, if necessary, revise the facility response plan to ensure consistency with these plans.

(3) The owner or operator shall review and update the facility response plan periodically to reflect changes at the facility.

(h) A response plan shall follow the format of the model facility-specific response plan included in Appendix F to this part, unless an equivalent response plan has been prepared to meet State or other Federal requirements. A response plan that does not follow the specified format in Appendix F to this part shall have an emergency response

action plan as specified in paragraphs (h)(1) of this section and be supplemented with a cross-reference section to identify the location of the elements listed in paragraphs (h)(2) through (h)(10) of this section. To meet the requirements of this part, a response plan shall address the following elements, as further described in Appendix F to this part:

(1) *Emergency response action plan.* The response plan shall include an emergency response action plan in the format specified in paragraphs (h)(1)(i) through (viii) of this section that is maintained in the front of the response plan, or as a separate document accompanying the response plan, and that includes the following information:

(i) The identity and telephone number of a qualified individual having full authority, including contracting authority, to implement removal actions;

(ii) The identity of individuals or organizations to be contacted in the event of a discharge so that immediate communications between the qualified individual identified in paragraph (h)(1) of this section and the appropriate Federal officials and the persons providing response personnel and equipment can be ensured;

(iii) A description of information to pass to response personnel in the event of a reportable spill;

(iv) A description of the facility's response equipment and its location;

(v) A description of response personnel capabilities, including the duties of persons at the facility during a response action and their response times and qualifications;

(vi) Plans for evacuation of the facility and a reference to community evacuation plans, as appropriate;

(vii) A description of immediate measures to secure the source of the discharge, and to provide adequate containment and drainage of spilled oil; and

(viii) A diagram of the facility.

(2) *Facility information.* The response plan shall identify and discuss the location and type of the facility, the identity and tenure of the present owner and operator, and the identity of the qualified individual identified in paragraph (h)(1) of this section.

(3) *Information about emergency response.* The response plan shall include:

(i) The identity of private personnel and equipment necessary to remove to the maximum extent practicable a worst case discharge and other discharges of oil described in paragraph (h)(5) of this section, and to mitigate or prevent a substantial threat of a worst case discharge (To identify response resources to meet the facility response plan requirements of this section, owners or operators shall follow Appendix E to this part or, where not appropriate, shall clearly demonstrate in the response plan why use of Appendix E of this part is not appropriate at the facility and make comparable arrangements for response resources);

(ii) Evidence of contracts or other approved means for ensuring the availability of such personnel and equipment;

(iii) The identity and the telephone number of individuals or organizations to be contacted in the event of a discharge so that immediate communications between the qualified individual identified in paragraph (h)(1) of this section and the appropriate Federal official and the persons providing response personnel and equipment can be ensured;

(iv) A description of information to pass to response personnel in the event of a reportable spill;

(v) A description of response personnel capabilities, including the duties of persons at the facility during a response action and their response times and qualifications;

(vi) A description of the facility's response equipment, the location of the equipment, and equipment testing;

(vii) Plans for evacuation of the facility and a reference to community evacuation plans, as appropriate;

(viii) A diagram of evacuation routes; and

(ix) A description of the duties of the qualified individual identified in paragraph (h)(1) of this section, that include:

(A) Activate internal alarms and hazard communication systems to notify all facility personnel;

(B) Notify all response personnel, as needed;

(C) Identify the character, exact source, amount, and extent of the release, as well as the other items needed for notification;

(D) Notify and provide necessary information to the appropriate Federal, State, and local authorities with designated response roles, including the National Response Center, State Emergency Response Commission, and Local Emergency Planning Committee;

(E) Assess the interaction of the spilled substance with water and/or other substances stored at the facility and notify response personnel at the scene of that assessment;

(F) Assess the possible hazards to human health and the environment due to the release. This assessment must consider both the direct and indirect effects of the release (i.e., the effects of any toxic, irritating, or asphyxiating gases that may be generated, or the effects of any hazardous surface water runoffs from water or chemical agents used to control fire and heat-induced explosion);

(G) Assess and implement prompt removal actions to contain and remove the substance released;

(H) Coordinate rescue and response actions as previously arranged with all response personnel;

(I) Use authority to immediately access company funding to initiate cleanup activities; and

(J) Direct cleanup activities until properly relieved of this responsibility.

(4) *Hazard evaluation.* The response plan shall discuss the facility's known or reasonably identifiable history of discharges reportable under 40 CFR part 110 for the entire life of the facility and shall identify areas within the facility where discharges could occur and what the potential effects of the discharges would be on the affected environment. To assess the range of areas potentially affected, owners or operators shall, where appropriate, consider the distance calculated in paragraph (f)(1)(ii) of this section to determine whether a facility could, because of its location, reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines.

(5) *Response planning levels.* The response plan shall include discussion of specific planning scenarios for:

(i) A worst case discharge, as calculated using the appropriate worksheet in Appendix D to this part. In cases where the Regional Administrator determines that the worst case discharge volume calculated by the facility is not appropriate, the Regional Administrator may specify the worst case discharge amount to be used for response planning at the facility. For complexes, the worst case planning quantity shall be the larger of the amounts calculated for each component of the facility;

(ii) A discharge of 2,100 gallons or less, provided that this amount is less than the worst case discharge amount. For complexes, this planning quantity shall be the larger of the amounts calculated for each component of the facility; and

(iii) A discharge greater than 2,100 gallons and less than or equal to 36,000 gallons or 10 percent of the capacity of the largest tank at the facility, whichever is less, provided that this amount is less than the worst case discharge amount. For complexes, this planning quantity shall be the larger of the amounts calculated for each component of the facility.

(6) *Discharge detection systems.* The response plan shall describe the procedures and equipment used to detect discharges.

(7) *Plan implementation.* The response plan shall describe:

(i) Response actions to be carried out by facility personnel or contracted personnel under the response plan to ensure the safety of the facility and to mitigate or prevent discharges described in paragraph (h)(5) of this section or the substantial threat of such discharges;

(ii) A description of the equipment to be used for each scenario;

(iii) Plans to dispose of contaminated cleanup materials; and

(iv) Measures to provide adequate containment and drainage of spilled oil.

(8) *Self-inspection, drills/exercises, and response training.* The response plan shall include:

(i) A checklist and record of inspections for tanks, secondary containment, and response equipment;

(ii) A description of the drill/exercise program to be carried out under the response plan as described in § 112.21;

(iii) A description of the training program to be carried out under the response plan as described in § 112.21; and

(iv) Logs of discharge prevention meetings, training sessions, and drills/exercises. These logs may be maintained as an annex to the response plan.

(9) *Diagrams.* The response plan shall include site plan and drainage plan diagrams.

(10) *Security systems.* The response plan shall include a description of facility security systems.

(11) *Response plan cover sheet.* The response plan shall include a completed response plan cover sheet provided in Section 2.0 of Appendix F to this part.

(i)(1) In the event the owner or operator of a facility does not agree with the Regional Administrator's determination that the facility could, because of its location, reasonably be expected to cause substantial harm or significant and substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shorelines, or that amendments to the facility response plan are necessary prior to approval, such as changes to the worst case discharge planning volume, the owner or operator may submit a request for reconsideration to the Regional Administrator and provide additional information and data in writing to support the request. The request and accompanying information must be submitted to the Regional Administrator within 60 days of receipt of notice of the Regional Administrator's original decision. The Regional Administrator shall consider the request and render a decision as rapidly as practicable.

(2) In the event the owner or operator of a facility believes a change in the facility's classification status is warranted because of an unplanned event or change in the facility's characteristics (i.e., substantial harm or significant and substantial harm), the owner or operator may submit a request for reconsideration to the Regional Administrator and provide additional information and data in writing to support the request. The Regional Administrator

shall consider the request and render a decision as rapidly as practicable.

(3) After a request for reconsideration under paragraph (i)(1) or (i)(2) of this section has been denied by the Regional Administrator, an owner or operator may appeal a determination made by the Regional Administrator. The appeal shall be made to the EPA Administrator and shall be made in writing within 60 days of receipt of the decision from the Regional Administrator that the request for reconsideration was denied. A complete copy of the appeal must be sent to the Regional Administrator at the time the appeal is made. The appeal shall contain a clear and concise statement of the issues and points of fact in the case. It also may contain additional information from the owner or operator, or from any other person. The EPA Administrator may request additional information from the owner or operator, or from any other person. The EPA Administrator shall render a decision as rapidly as practicable and shall notify the owner or operator of the decision.

[59 FR 34098, July 1, 1994]

§ 112.21 Facility response training and drills/exercises.

(a) The owner or operator of any facility required to prepare a facility response plan under § 112.20 shall develop and implement a facility response training program and a drill/exercise program that satisfy the requirements of this section. The owner or operator shall describe the programs in the response plan as provided in § 112.20(h)(8).

(b) The facility owner or operator shall develop a facility response training program to train those personnel involved in oil spill response activities. It is recommended that the training program be based on the USCG's Training Elements for Oil Spill Response, as applicable to facility operations. An alternative program can also be acceptable subject to approval by the Regional Administrator.

(1) The owner or operator shall be responsible for the proper instruction of facility personnel in the procedures to respond to discharges of oil and in applicable oil spill response laws, rules, and regulations.

(2) Training shall be functional in nature according to job tasks for both supervisory and nonsupervisory operational personnel.

(3) Trainers shall develop specific lesson plans on subject areas relevant to facility personnel involved in oil spill response and cleanup.

(c) The facility owner or operator shall develop a program of facility response drills/exercises, including evaluation procedures. A program that follows the National Preparedness for Response Exercise Program (PREP) (see Appendix E to this part, section 10, for availability) will be deemed satisfactory for purposes of this section. An alternative program can also be acceptable subject to approval by the Regional Administrator.

[59 FR 34101, July 1, 1994]

APPENDIX A TO PART 112—MEMORANDUM OF UNDERSTANDING BETWEEN THE SECRETARY OF TRANSPORTATION AND THE ADMINISTRATOR OF THE ENVIRONMENTAL PROTECTION AGENCY

SECTION II—DEFINITIONS

The Environmental Protection Agency and the Department of Transportation agree that for the purposes of Executive Order 11548, the term:

(1) *Non-transportation-related onshore and offshore facilities* means:

(A) Fixed onshore and offshore oil well drilling facilities including all equipment and appurtenances related thereto used in drilling operations for exploratory or development wells, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(B) Mobile onshore and offshore oil well drilling platforms, barges, trucks, or other mobile facilities including all equipment and appurtenances related thereto when such mobile facilities are fixed in position for the purpose of drilling operations for exploratory or development wells, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(C) Fixed onshore and offshore oil production structures, platforms, derricks, and rigs including all equipment and appurtenances related thereto, as well as completed wells and the wellhead separators, oil separators, and storage facilities used in the production of oil, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(D) Mobile onshore and offshore oil production facilities including all equipment and appurtenances related thereto as well as completed wells and wellhead equipment, piping from wellheads to oil separators, oil separators, and storage facilities used in the production of oil when such mobile facilities are fixed in position for the purpose of oil production operations, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(E) Oil refining facilities including all equipment and appurtenances related thereto as well as in-plant processing units, storage units, piping, drainage systems and waste treatment units used in the refining of oil, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(F) Oil storage facilities including all equipment and appurtenances related thereto as well as fixed bulk plant storage, terminal oil storage facilities, consumer storage, pumps and drainage systems used in the storage of oil, but excluding inline or breakout storage tanks needed for the continuous operation of a pipeline system and any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(G) Industrial, commercial, agricultural or public facilities which use and store oil, but excluding any terminal facility, unit or process integrally associated with the handling or transferring of oil in bulk to or from a vessel.

(H) Waste treatment facilities including in-plant pipelines, effluent discharge lines, and storage tanks, but excluding waste treatment facilities located on vessels and terminal storage tanks and appurtenances for the reception of oily ballast water or tank washings from vessels and associated systems used for off-loading vessels.

(I) Loading racks, transfer hoses, loading arms and other equipment which are appurtenant to a nontransportation-related facility or terminal facility and which are used to transfer oil in bulk to or from highway vehicles or railroad cars.

(J) Highway vehicles and railroad cars which are used for the transport of oil exclusively within the confines of a nontransportation-related facility and which are not intended to transport oil in interstate or intrastate commerce.

(K) Pipeline systems which are used for the transport of oil exclusively within the confines of a nontransportation-related facility or terminal facility and which are not intended to transport oil in interstate or intrastate commerce, but excluding pipeline systems used to transfer oil in bulk to or from a vessel.

(2) *Transportation-related onshore and offshore facilities* means:

(A) Onshore and offshore terminal facilities including transfer hoses, loading arms and other equipment and appurtenances used for the purpose of handling or transferring oil in bulk to or from a vessel as well as storage tanks and appurtenances for the reception of oily ballast water or tank washings from vessels, but excluding terminal waste treatment facilities and terminal oil storage facilities.

(B) Transfer hoses, loading arms and other equipment appurtenant to a non-transportation-related facility which is used to transfer oil in bulk to or from a vessel.

(C) Interstate and intrastate onshore and offshore pipeline systems including pumps and appurtenances related thereto as well as in-line or breakout storage tanks needed for the continuous operation of a pipeline system, and pipelines from onshore and offshore oil production facilities, but excluding onshore and offshore piping from wellheads to oil separators and pipelines which are used for the transport of oil exclusively within the confines of a nontransportation-related facility or terminal facility and which are not intended to transport oil in interstate or intrastate commerce or to transfer oil in bulk to or from a vessel.

(D) Highway vehicles and railroad cars which are used for the transport of oil in interstate or intrastate commerce and the equipment and appurtenances related thereto, and equipment used for the fueling of locomotive units, as well as the rights-of-way on which they operate. Excluded are highway vehicles and railroad cars and motive power used exclusively within the confines of a nontransportation-related facility or terminal facility and which are not intended for use in interstate or intrastate commerce.

APPENDIX B TO PART 112—MEMORANDUM OF UNDERSTANDING AMONG THE SECRETARY OF THE INTERIOR, SECRETARY OF TRANSPORTATION, AND ADMINISTRATOR OF THE ENVIRONMENTAL PROTECTION AGENCY

PURPOSE

This Memorandum of Understanding (MOU) establishes the jurisdictional responsibilities for offshore facilities, including pipelines, pursuant to section 311 (j)(1)(c), (j)(5), and (j)(6)(A) of the Clean Water Act (CWA), as amended by the Oil Pollution Act of 1990 (Public Law 101–380). The Secretary of the Department of the Interior (DOI), Secretary of the Department of Transportation (DOT), and Administrator of the Environmental Protection Agency (EPA) agree to the division of responsibilities set forth below for spill prevention and control, response planning, and equipment inspection activities pursuant to those provisions.

BACKGROUND

Executive Order (E.O.) 12777 (56 FR 54757) delegates to DOI, DOT, and EPA various responsibilities identified in section 311(j) of the CWA. Sections 2(b)(3), 2(d)(3), and 2(e)(3) of E.O. 12777 assigned to DOI spill prevention and control, contingency planning, and equipment inspection activities associated with offshore facilities. Section 311(a)(11) defines the term ''offshore facility'' to include facilities of any kind located in, on, or under navigable waters of the United States. By using this definition, the traditional DOI role of regulating facilities on the Outer Continental Shelf is expanded by E.O. 12777 to include inland lakes, rivers, streams, and any other inland waters.

RESPONSIBILITIES

Pursuant to section 2(i) of E.O. 12777, DOI redelegates, and EPA and DOT agree to assume, the functions vested in DOI by sections 2(b)(3), 2(d)(3), and 2(e)(3) of E.O. 12777 as set forth below. For purposes of this MOU, the term ''coast line'' shall be defined as in the Submerged Lands Act (43 U.S.C. 1301(c)) to mean ''the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters.''

1. To EPA, DOI redelegates responsibility for nontransportation-related offshore facilities located landward of the coast line.

2. To DOT, DOI redelegates responsibility for transportation-related facilities, including pipelines, located landward of the coast line. The DOT retains jurisdiction for deepwater ports and their associated seaward pipelines, as delegated by E.O. 12777.

3. The DOI retains jurisdiction over facilities, including pipelines, located seaward of the coast line, except for deepwater ports and associated seaward pipelines delegated by E.O. 12777 to DOT.

EFFECTIVE DATE

This MOU is effective on the date of the final execution by the indicated signatories.

LIMITATIONS

1. The DOI, DOT, and EPA may agree in writing to exceptions to this MOU on a facility-specific basis. Affected parties will receive notification of the exceptions.

2. Nothing in this MOU is intended to replace, supersede, or modify any existing agreements between or among DOI, DOT, or EPA.

MODIFICATION AND TERMINATION

Any party to this agreement may propose modifications by submitting them in writing to the heads of the other agency/department. No modification may be adopted except with the consent of all parties. All parties shall indicate their consent to or disagreement with any proposed modification within 60 days of receipt. Upon the request of any party, representatives of all parties shall meet for the purpose of considering exceptions or modifications to this agreement. This MOU may be terminated only with the mutual consent of all parties.

Dated: November 8, 1993.
Bruce Babbitt,
Secretary of the Interior.
Dated: December 14, 1993.
Federico Peña,
Secretary of Transportation.
Dated: February 3, 1994.
Carol M. Browner,
Administrator, Environmental Protection Agency.

[59 FR 34102, July 1, 1994]

APPENDIX C TO PART 112—SUBSTANTIAL HARM CRITERIA

1.0 Introduction

The flowchart provided in Attachment C–I to this appendix shows the decision tree with the criteria to identify whether a facility ''could reasonably be expected to cause substantial harm to the environment by discharging into or on the navigable waters or adjoining shorelines.'' In addition, the Regional Administrator has the discretion to identify facilities that must prepare and submit facility-specific response plans to EPA.

1.1 Definitions

1.1.1 *Great Lakes* means Lakes Superior, Michigan, Huron, Erie, and Ontario, their connecting and tributary waters, the Saint Lawrence River as far as Saint Regis, and adjacent port areas.

1.1.2 Higher Volume Port Areas include

(1) Boston, MA;
(2) New York, NY;
(3) Delaware Bay and River to Philadelphia, PA;
(4) St. Croix, VI;
(5) Pascagoula, MS;
(6) Mississippi River from Southwest Pass, LA to Baton Rouge, LA;
(7) Louisiana Offshore Oil Port (LOOP), LA;
(8) Lake Charles, LA;
(9) Sabine-Neches River, TX;
(10) Galveston Bay and Houston Ship Channel, TX;
(11) Corpus Christi, TX;
(12) Los Angeles/Long Beach Harbor, CA;
(13) San Francisco Bay, San Pablo Bay, Carquinez Strait, and Suisun Bay to Antioch, CA;
(14) Straits of Juan de Fuca from Port Angeles, WA to and including Puget Sound, WA;
(15) Prince William Sound, AK; and
(16) Others as specified by the Regional Administrator for any EPA Region.

1.1.3 *Inland Area* means the area shoreward of the boundary lines defined in 46 CFR part 7, except in the Gulf of Mexico. In the Gulf of Mexico, it means the area shoreward of the lines of demarcation (COLREG lines as defined in 33 CFR 80.740—80.850). The inland area does not include the Great Lakes.

1.1.4 *Rivers and Canals* means a body of water confined within the inland area, including the Intracoastal Waterways and other waterways artificially created for navigating that have project depths of 12 feet or less.

2.0 Description of Screening Criteria for the Substantial Harm Flowchart

A facility that has the potential to cause substantial harm to the environment in the event of a discharge must prepare and submit a facility-specific response plan to EPA in accordance with Appendix F to this part. A description of the screening criteria for the substantial harm flowchart is provided below:

2.1 *Non-Transportation-Related Facilities With a Total Oil Storage Capacity Greater Than or Equal to 42,000 Gallons Where Operations Include Over-Water Transfers of Oil.* A non-transportation-related facility with a total oil storage capacity greater than 42,000 gallons that transfers oil over water to or from vessels must submit a response plan to EPA. Daily oil transfer operations at these types of facilities occur between barges and vessels and onshore bulk storage tanks over open water. These facilities are located adjacent to navigable water.

2.2 *Lack of Adequate Secondary Containment at Facilities With a Total Oil Storage Capacity Greater Than or Equal to 1 Million Gallons.* Any facility with a total oil storage capacity greater than or equal to 1 million gallons without secondary containment sufficiently large to contain the capacity of the largest aboveground oil storage tank within each area plus sufficient freeboard to allow for precipitation must submit a response plan to EPA. Secondary containment structures that meet the standard of good engineering practice for the purposes of this part include berms, dikes, retaining walls, curbing, culverts, gutters, or other drainage systems.

2.3 *Proximity to Fish and Wildlife and Sensitive Environments at Facilities With a Total Oil Storage Capacity Greater Than or Equal to 1 Million Gallons.* A facility with a total oil storage capacity greater than or equal to 1 million gallons must submit its response plan if it is located at a distance such that a discharge from the facility could cause injury (as defined at 40 CFR 112.2) to fish and wildlife and sensitive environments. For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability) and the applicable Area Contingency Plan. Facility owners or operators must determine the distance at which an oil spill could cause injury to fish and wildlife and sensitive environments using the appropriate formula presented in Attachment C–III to this appendix or a comparable formula.

2.4 *Proximity to Public Drinking Water Intakes at Facilities with a Total Storage Oil Capacity Greater Than or Equal to 1 Million Gallons.* A facility with a total stor-

age capacity greater than or equal to 1 million gallons must submit its response plan if it is located at a distance such that a discharge from the facility would shut down a public drinking water intake, which is analogous to a public water system as described at 40 CFR 143.2(c). The distance at which an oil spill from an SPCC-regulated facility would shut down a public drinking water intake shall be calculated using the appropriate formula presented in Attachment C–III to this appendix or a comparable formula.

2.5 *Facilities That Have Experienced Reportable Oil Spills in an Amount Greater Than or Equal to 10,000 Gallons Within the Past 5 Years and That Have a Total Oil Storage Capacity Greater Than or Equal to 1 Million Gallons.* A facility's oil spill history within the past 5 years shall be considered in the evaluation for substantial harm. Any facility with a total oil storage capacity greater than or equal to 1 million gallons that has experienced a reportable oil spill in an amount greater than or equal to 10,000 gallons within the past 5 years must submit a response plan to EPA.

3.0 Certification for Facilities That Do Not Pose Substantial Harm

If the facility does not meet the substantial harm criteria listed in Attachment C–I to this appendix, the owner or operator shall complete and maintain at the facility the certification form contained in Attachment C–II to this appendix. In the event an alternative formula that is comparable to the one in this appendix is used to evaluate the substantial harm criteria, the owner or operator shall attach documentation to the certification form that demonstrates the reliability and analytical soundness of the comparable formula and shall notify the Regional Administrator in writing that an alternative formula was used.

ATTACHMENTS TO APPENDIX C

EC01MR92.009

ATTACHMENT C–II—CERTIFICATION OF THE APPLICABILITY OF THE SUBSTANTIAL HARM CRITERIA

Facility Name: _____

Facility Address: _____

1. Does the facility transfer oil over water to or from vessels and does the facility have a total oil storage capacity greater than or equal to 42,000 gallons?

Yes _____ No _____

2. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and does the facility lack secondary containment that is sufficiently large to contain the capacity of the largest aboveground oil storage tank plus sufficient freeboard to allow for precipitation within any aboveground oil storage tank area?

Yes _____ No _____

3. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance (as calculated using the appropriate formula in Attachment C–III to this appendix or a comparable formula [1]) such that a discharge from the facility could cause injury to fish and wildlife and sensitive environments? For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability) and the applicable Area Contingency Plan.

Yes _____ No _____

4. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance (as calculated using the appropriate formula in Attachment C-III to this appendix or a comparable formula [1]) such that a discharge from the facility would shut down a public drinking water intake [2]?

Yes _____ No _____

5. Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and has the facility experienced a reportable oil spill in an amount greater than or equal to 10,000 gallons within the last 5 years?

Yes _____ No _____

Certification

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document, and that based on my inquiry of those individuals responsible for obtaining this information, I believe that the submitted information is true, accurate, and complete.

ATTACHMENT C-III—CALCULATION OF THE PLANNING DISTANCE

1.0 Introduction

1.1 The facility owner or operator must evaluate whether the facility is located at a distance such that a discharge from the facility could cause injury to fish and wildlife and sensitive environments or disrupt operations at a public drinking water intake. To quantify that distance, EPA considered oil transport mechanisms over land and on still, tidal influence, and moving navigable waters. EPA has determined that the primary concern for calculation of a planning distance is the transport of oil in navigable waters during adverse weather conditions. Therefore, two formulas have been developed to determine distances for planning purposes from the point of discharge at the facility to the potential site of impact on moving and still waters, respectively. The formula for oil transport on moving navigable water is based on the velocity of the water body and the time interval for arrival of re-

[1] If a comparable formula is used, documentation of the reliability and analytical soundness of the comparable formula must be attached to this form.

[2] For the purposes of 40 CFR part 112, public drinking water intakes are analogous to public water systems as described at 40 CFR 143.2(c).

sponse resources. The still water formula accounts for the spread of discharged oil over the surface of the water. The method to determine oil transport on tidal influence areas is based on the type of oil spilled and the distance down current during ebb tide and up current during flood tide to the point of maximum tidal influence.

1.2 EPA's formulas were designed to be simple to use. However, facility owners or operators may calculate planning distances using more sophisticated formulas, which take into account broader scientific or engineering principles, or local conditions. Such comparable formulas may result in different planning distances than EPA's formulas. In the event that an alternative formula that is comparable to one contained in this appendix is used to evaluate the criterion in 40 CFR 112.20(f)(1)(ii)(B) or (f)(1)(ii)(C), the owner or operator shall attach documentation to the response plan cover sheet contained in Appendix F to this part that demonstrates the reliability and analytical soundness of the alternative formula and shall notify the Regional Administrator in writing that an alternative formula was used.[1]

1.3 A regulated facility may meet the criteria for the potential to cause substantial harm to the environment without having to perform a planning distance calculation. For facilities that meet the substantial harm criteria because of inadequate secondary containment or oil spill history, as listed in the flowchart in Attachment C–I to this appendix, calculation of the planning distance is unnecessary. For facilities that do not meet the substantial harm criteria for secondary containment or oil spill history as listed in the flowchart, calculation of a planning distance for proximity to fish and wildlife and sensitive environments and public drinking water intakes is required, unless it is clear without performing the calculation (e.g., the facility is located in a wetland) that these areas would be impacted.

1.4 A facility owner or operator who must perform a planning distance calculation on navigable water is only required to do so for the type of navigable water conditions (i.e., moving water, still water, or tidal- influenced water) applicable to the facility. If a facility owner or operator determines that more than one type of navigable water condition applies, then the facility owner or operator is required to perform a planning distance calculation for each navigable water type to determine the greatest single distance that oil may be transported. As a result, the final planning distance for oil transport on water shall be the greatest individual distance rather than a summation of each calculated planning distance.

1.5 The planning distance formula for transport on moving waterways contains three variables: the velocity of the navigable water (v), the response time interval (t), and a conversion factor (c). The velocity, v, is determined by using the Chezy-Manning equation, which, in this case, models the flood flow rate of water in open channels. The Chezy-Manning equation contains three variables which must be determined by facility owners or operators. Manning's Roughness Coefficient (for flood flow rates), n, can be determined from Table 1 of this attachment. The hydraulic radius, r, can be estimated using the average mid-channel depth from charts provided by the sources listed in Table 2 of this attachment. The average slope of the river, s, can be determined using topographic maps that can be ordered from the U.S. Geological Survey, as listed in Table 2 of this attachment.

1.6 Table 3 of this attachment contains specified time intervals for estimating the arrival of response resources at the scene of a discharge. Assuming no prior planning, response resources should be able to arrive at the discharge site within 12 hours of the discovery of any oil discharge in Higher Volume Port Areas and within 24 hours in Great Lakes and all other river, canal, inland, and nearshore areas. The specified time intervals in Table 3 of Appendix C are to be used only to aid in the identification of whether a facility could cause substantial harm to the environment. Once it is determined that a plan must be developed for the facility, the owner or operator shall reference Appendix E to this part to determine appropriate resource levels and response times. The specified time intervals of this appendix include a 3-hour time period for deployment of boom and other response equipment. The Regional Administrator may identify additional areas as appropriate.

2.0 Oil Transport on Moving Navigable Waters

2.1 The facility owner or operator must use the following formula or a comparable formula as described in § 112.20(a)(3) to calculate the planning distance for oil transport on moving navigable water:

d=v x t x c; where

d: the distance downstream from a facility within which fish and wildlife and sensitive environments could be injured or a public drinking water intake would be shut down in the event of an oil discharge (in miles);

v: the velocity of the river/navigable water of concern (in ft/sec) as determined by Chezy-Manning's equation (see below and Tables 1 and 2 of this attachment);

t: the time interval specified in Table 3 based upon the type of water body and location (in hours); and

c: constant conversion factor 0.68 sec•mile/hr•ft (3600 sec/hr ÷ 5280 ft/mile).

2.2 Chezy-Manning's equation is used to determine velocity:

$v=1.5/n \times r^{2/3} \times s^{1/2}$; where

v=the velocity of the river of concern (in ft/sec);

n=Manning's Roughness Coefficient from Table 1 of this attachment;

r=the hydraulic radius; the hydraulic radius can be approximated for parabolic channels by multiplying the average mid-channel depth of the river (in feet) by 0.667 (sources for obtaining the mid-channel depth are listed in Table 2 of this attachment); and

s=the average slope of the river (unitless) obtained from U.S. Geological Survey topographic maps at the address listed in Table 2 of this attachment.

[1] For persistent oils or non-persistent oils, a worst case trajectory model (i.e., an alternative formula) may be substituted for the distance formulas described in still, moving, and tidal waters, subject to Regional Administrator's review of the model. An example of an alternative formula that is comparable to the one contained in this appendix would be a worst case trajectory calculation based on credible adverse winds, currents, and/or river stages, over a range of seasons, weather conditions, and river stages. Based on historical information or a spill trajectory model, the Agency may require that additional fish and wildlife and sensitive environments or public drinking water intakes also be protected.

TABLE 1.—MANNING'S ROUGHNESS COEFFICIENT FOR NATURAL STREAMS

[NOTE: Coefficients are presented for high flow rates at or near flood stage.]

Stream description	Roughness coefficient (n)
Minor Streams (Top Width <100 ft.)	
Clean:	
Straight	0.03
Winding	0.04
Sluggish (Weedy, deep pools):	
No trees or brush	0.06
Trees and/or brush	0.10
Major Streams (Top Width >100 ft.)	
Regular section:	
(No boulders/brush)	0.035
Irregular section:	
(Brush)	0.05

The average slope of the river (s) may be obtained from topographic maps:
U.S. Geological Survey
Map Distribution
Federal Center
Bldg. 41
Box 25286
Denver, Colorado 80225

Additional information can be obtained from the following sources:
1. The State's Department of Natural Resources (DNR) or the State's Aids to Navigation office;
2. A knowledgeable local marina operator; or
3. A knowledgeable local water authority (e.g., State water commission)

2.3 The average slope of the river (s) can be determined from the topographic maps using the following steps:

(1) Locate the facility on the map.

(2) Find the Normal Pool Elevation at the point of discharge from the facility into the water (A).

(3) Find the Normal Pool Elevation of the public drinking water intake or fish and wildlife and sensitive environment located downstream (B) (Note: The owner or operator should use a minimum of 20 miles downstream as a cutoff to obtain the average slope if the location of a specific public drinking water intake or fish and wildlife and sensitive environment is unknown).

(4) If the Normal Pool Elevation is not available, the elevation contours can be used to find the slope. Determine elevation of the water at the point of discharge from the facility (A). Determine the elevation of the water at the appropriate distance downstream (B). The formula presented below can be used to calculate the slope.

(5) Determine the distance (in miles) between the facility and the public drinking water intake or fish and wildlife and sensitive environments (C).

(6) Use the following formula to find the slope, which will be a unitless value: Average Slope=[(A · B) (ft)/C (miles)] × [1 mile/5280 feet]

2.4 If it is not feasible to determine the slope and mid-channel depth by the Chezy-Manning equation, then the river velocity can be approximated on- site. A specific length, such as 100 feet, can be marked off along the shoreline. A float can be dropped into the stream above the mark, and the time required for the float to travel the distance can be used to determine the velocity in feet per second. However, this method will not yield an average velocity for the length of the stream, but a velocity only for the specific location of measurement. In addition, the flow rate will vary depending on weather conditions such as wind and rainfall. It is recommended that facility owners or operators repeat the measurement under a variety of conditions to obtain the most accurate estimate of the surface water velocity under adverse weather conditions.

2.5 The planning distance calculations for moving and still navigable waters are based on worst case discharges of persistent oils. Persistent oils are of concern because they can remain in the water for significant periods of time and can potentially exist in large quantities downstream. Owners or operators of facilities that store persistent as well as non-persistent oils may use a comparable formula. The volume of oil discharged is not included as part of the planning distance calculation for moving navigable waters. Facilities that will meet this substantial harm criterion are those with facility capacities greater than or equal to 1 million gallons. It is assumed that these facilities are capable of having an oil discharge of sufficient quantity to cause injury to fish and wildlife and sensitive environments or shut down a public drinking water intake. While owners or operators of transfer facilities that store greater than or equal to 42,000 gallons are not required to use a planning distance formula for purposes of the substantial harm criteria, they should use a planning distance calculation in the development of facility-specific response plans.

TABLE 3.—SPECIFIED TIME INTERVALS

Operating areas	Substantial harm planning time (hrs)
Higher volume port area.	12 hour arrival+3 hour deployment=15 hours.
Great Lakes ...	24 hour arrival+3 hour deployment=27 hours.
All other rivers and canals, inland, and nearshore areas.	24 hour arrival+3 hour deployment=27 hours.

2.6 *Example of the Planning Distance Calculation for Oil Transport on Moving Navigable Waters.* The following example provides a sample calculation using the planning distance formula for a facility discharging oil into the Monongahela River:

(1) Solve for v by evaluating n, r, and s for the Chezy-Manning equation:

Find the roughness coefficient, n, on Table 1 of this attachment for a regular section of a major stream with a top width greater than 100 feet. The top width of the river can be found from the topographic map.

n=0.035.

Find slope, s, where A=727 feet, B=710 feet, and C=25 miles.

Solving:

$s=[(727 \text{ ft} \cdot 1710 \text{ ft})/25 \text{ miles}] \times [1 \text{ mile}/5280 \text{ feet}]=1.3\times10^{\cdot 4}$

The average mid-channel depth is found by averaging the mid-channel depth for each mile along the length of the river between the facility and the public drinking water intake or the fish or wildlife or sensitive environment (or 20 miles downstream if applicable). This value is multiplied by 0.667 to obtain the hydraulic radius. The mid-channel depth is found by obtaining values for r and s from the sources shown in Table 2 for the Monongahela River.

Solving:

r=0.667×20 feet=13.33 feet

Solve for v using:

$v=1.5/n\times r^{2/3}\times s^{1/2}$:

$v=[1.5/0.035]\times(13.33)^{2/3}\times(1.3\times10^{\cdot 4})^{1/2}$

v=2.73 feet/second

(2) Find t from Table 3 of this attachment. The Monongahela River's resource response time is 27 hours.

(3) Solve for planning distance, d:

d=v x t x c

d=(2.73 ft/sec)×(27 hours)×(0.68 sec•mile/hr•ft)

d=50 miles

Therefore, 50 miles downstream is the appropriate planning distance for this facility.

3.0 Oil Transport on Still Water

3.1 For bodies of water including lakes or ponds that do not have a measurable velocity, the spreading of the oil over the surface must be considered. Owners or operators of facilities located next to still water bodies may use a comparable means of calculating the planning distance. If a comparable formula is used, documentation of the reliability and analytical soundness of the comparable calculation must be attached to the response plan cover sheet.

3.2 *Example of the Planning Distance Calculation for Oil Transport on Still Water.* To assist those facilities which could potentially discharge into a still body of

water, the following analysis was performed to provide an example of the type of formula that may be used to calculate the planning distance. For this example, a worst case discharge of 2,000,000 gallons is used.

(1) The surface area in square feet covered by an oil spill on still water, A1, can be determined by the following formula,[2] where V is the volume of the spill in gallons and C is a constant conversion factor:

$A_1=10^5\times V^{3/4}\times C$

C=0.1643

$A_1=10^5\times(2{,}000{,}000 \text{ gallons})^{3/4}\times(0.1643)$

$A_1=8.74\times10^8$ ft^2

(2) The spreading formula is based on the theoretical condition that the oil will spread uniformly in all directions forming a circle. In reality, the outfall of the discharge will direct the oil to the surface of the water where it intersects the shoreline. Although the oil will not spread uniformly in all directions, it is assumed that the discharge will spread from the shoreline into a semi-circle (this assumption does not account for winds or wave action).

(3) The area of a circle=πr^2

(4) To account for the assumption that oil will spread in a semi-circular shape, the area of a circle is divided by 2 and is designated as A_2.

$A_2=(\pi r^2)/2$

Solving for the radius, r, using the relationship $A_1=A_2$:

8.74×10^8 ft$^2=(\pi^2)/2$

Therefore, r=23,586 ft

r=23,586 ft÷5,280 ft/mile=4.5 miles

Assuming a 20 knot wind under storm conditions:

1 knot=1.15 miles/hour

20 knots×1.15 miles/hour/knot=23 miles/hr

Assuming that the oil slick moves at 3 percent of the wind's speed:[3]

23 miles/hour×0.03=0.69 miles/hour

(5) To estimate the distance that the oil will travel, use the times required for response resources to arrive at different geographic locations as shown in Table 3 of this attachment.

For example:

For Higher Volume Port Areas: 15 hrs×0.69 miles/hr=10.4 miles

For Great Lakes and all other areas: 27 hrs×0.69 miles/hr=18.6 miles

(6) The total distance that the oil will travel from the point of discharge, including the distance due to spreading, is calculated as follows:

Higher Volume Port Areas: d=10.4+4.5 miles or approximately 15 miles

Great Lakes and all other areas: d=18.6+4.5 miles or approximately 23 miles

4.0 Oil Transport on Tidal-Influence Areas

4.1 The planning distance method for tidal influence navigable water is based on worst case discharges of persistent and non-persistent oils. Persistent oils are of primary concern because they can potentially cause harm over a greater distance. For persistent oils discharged into tidal waters, the planning distance is 15 miles from the facility down current during ebb tide and to the point of maximum tidal influence or 15 miles, whichever is less, during flood tide.

4.2 For non-persistent oils discharged into tidal waters, the planning distance is 5 miles from the facility down current during ebb tide and to the point of maximum tidal influence or 5 miles, whichever is less, during flood tide.

4.3 *Example of Determining the Planning Distance for Two Types of Navigable Water Conditions.* Below is an example of how to determine the proper planning distance when a facility could impact two types of navigable water conditions: moving water and tidal water.

(1) Facility X stores persistent oil and is located downstream from locks along a slow moving river which is affected by tides. The river velocity, v, is determined to be 0.5 feet/second from the Chezy-Manning equation used to calculate oil transport on moving navigable waters. The specified time interval, t, obtained from Table 3 of this attachment for river areas is 27 hours. Therefore, solving for the planning distance, d:

d=v x t x c

d=(0.5 ft/sec) x (27 hours) x (0.68 sec•mile/hr•ft)

d=9.18 miles.

(2) However, the planning distance for maximum tidal influence down current during ebb tide is 15 miles, which is greater than the calculated 9.18 miles. Therefore, 15 miles downstream is the appropriate planning distance for this facility.

5.0 Oil Transport Over Land

5.1 Facility owners or operators must evaluate the potential for oil to be transported over land to navigable waters of the United States. The owner or operator must evaluate the likelihood that portions of a worst case discharge would reach navigable waters via open channel flow or from sheet flow across the land, or be prevented from reaching navigable waters when trapped in natural or man-made depressions excluding secondary containment structures.

5.2 As discharged oil travels over land, it may enter a storm drain or open concrete channel intended for drainage. It is assumed that once oil reaches such an inlet, it will flow into the receiving navigable water. During a storm event, it is highly probable that the oil will either flow into the drainage structures or follow the natural contours of the land and flow into the navigable water. Expected minimum and maximum velocities are provided as examples of open concrete channel and pipe flow. The ranges listed below reflect minimum and maximum velocities used as design criteria.[4] The calculation below demonstrates that the time required for oil to travel through a storm drain or open concrete channel to navigable water is negligible and can be considered instantaneous. The velocities are:

For open concrete channels:

maximum velocity=25 feet per second

minimum velocity=3 feet per second

For storm drains:

---

[2] Huang, J.C. and Monastero, F.C., 1982. *Review of the State-of-the-Art of Oil Pollution Models*. Final report submitted to the American Petroleum Institute by Raytheon Ocean Systems, Co., East Providence, Rhode Island.

[3] *Oil Spill Prevention & Control.* National Spill Control School, Corpus Christi State University, Thirteenth Edition, May 1990.

[4] The design velocities were obtained from Howard County, Maryland Department of Public Works' Storm Drainage Design Manual.

maximum velocity=25 feet per second
minimum velocity=2 feet per second

5.3 Assuming a length of 0.5 mile from the point of discharge through an open concrete channel or concrete storm drain to a navigable water, the travel times (distance/velocity) are:

1.8 minutes at a velocity of 25 feet per second
14.7 minutes at a velocity of 3 feet per second
22.0 minutes for at a velocity of 2 feet per second

5.4 The distances that shall be considered to determine the planning distance are illustrated in Figure C-I of this attachment. The relevant distances can be described as follows:

D1=Distance from the nearest opportunity for discharge, X_1, to a storm drain or an open concrete channel leading to navigable water.
D2=Distance through the storm drain or open concrete channel to navigable water.
D3=Distance downstream from the outfall within which fish and wildlife and sensitive environments could be injured or a public drinking water intake would be shut down as determined by the planning distance formula.
D4=Distance from the nearest opportunity for discharge, X_2, to fish and wildlife and sensitive environments not bordering navigable water.

5.5 A facility owner or operator whose nearest opportunity for discharge is located within 0.5 mile of a navigable water must complete the planning distance calculation (D3) for the type of navigable water near the facility or use a comparable formula.

5.6 A facility that is located at a distance greater than 0.5 mile from a navigable water must also calculate a planning distance (D3) if it is in close proximity (i.e., D1 is less than 0.5 mile and other factors are conducive to oil travel over land) to storm drains that flow to navigable waters. Factors to be considered in assessing oil transport over land to storm drains shall include the topography of the surrounding area, drainage patterns, man-made barriers (excluding secondary containment structures), and soil distribution and porosity. Storm drains or concrete drainage channels that are located in close proximity to the facility can provide a direct pathway to navigable waters, regardless of the length of the drainage pipe. If D1 is less than or equal to 0.5 mile, a discharge from the facility could pose substantial harm because the time to travel the distance from the storm drain to the navigable water (D2) is virtually instantaneous.

5.7 A facility's proximity to fish and wildlife and sensitive environments not bordering a navigable water, as depicted as D4 in Figure C–I of this attachment, must also be considered, regardless of the distance from the facility to navigable waters. Factors to be considered in assessing oil transport over land to fish and wildlife and sensitive environments should include the topography of the surrounding area, drainage patterns, man-made barriers (excluding secondary containment structures), and soil distribution and porosity.

5.8 If a facility is not found to pose substantial harm to fish and wildlife and sensitive environments not bordering navigable waters via oil transport on land, then supporting documentation should be maintained at the facility. However, such documentation should be submitted with the response plan if a facility is found to pose substantial harm.

EC01MR92.010

[59 FR 34102, July 1, 1994]

APPENDIX D TO PART 112—DETERMINATION OF A WORST CASE DISCHARGE PLANNING VOLUME

1.0 Instructions

1.1 An owner or operator is required to complete this worksheet if the facility meets the criteria, as presented in Appendix C to this part, or it is determined by the RA that the facility could cause substantial harm to the environment. The calculation of a worst case discharge planning volume is used for emergency planning purposes, and is required in 40 CFR 112.20 for facility owners or operators who must prepare a response plan. When planning for the amount of resources and equipment necessary to respond to the worst case discharge planning volume, adverse weather conditions must be taken into consideration. An owner or operator is required to determine the facility's worst case discharge planning volume from either Part A of this appendix for an onshore storage facility, or Part B of this appendix for an onshore production facility. The worksheet considers the provision of adequate secondary containment at a facility.

1.2 For onshore storage facilities and production facilities, permanently manifolded oil storage tanks are defined as tanks that are designed, installed, and/or operated in such a manner that the multiple tanks function as one storage unit (i.e., multiple tank volumes are equalized). In a worst case discharge scenario, a single failure could cause the discharge of the contents of more than one tank. The owner or operator must provide evidence in the response plan that tanks with common piping or piping systems are not operated as one unit. If such evidence is provided and is acceptable to the RA, the worst case discharge planning volume would be based on the capacity of the largest oil storage tank within a common secondary containment area or the largest oil storage tank within a single secondary containment area, whichever is greater. For permanently manifolded tanks that function as one oil storage unit, the worst case discharge planning volume would be based on the combined oil storage capacity of all manifolded tanks or the capacity of the largest single oil storage tank within a secondary containment area, whichever is greater. For purposes of this rule, permanently manifolded tanks that are separated by internal divisions for each tank are considered to be single tanks and individual manifolded tank volumes are not combined.

1.3 For production facilities, the presence of exploratory wells, production wells, and oil storage tanks must be considered in the calculation. Part B of this appendix takes these additional factors into consideration and provides steps for their inclusion in the total worst case discharge planning volume. Onshore oil production facilities may include all wells, flowlines, separation equipment, storage facilities, gathering lines, and auxiliary non-transportation-related equipment and facilities in a single geographical oil or gas field operated by a single operator. Although a potential worst case discharge planning volume is calculated within each section of the worksheet, the final worst case amount depends on the risk parameter that results in the greatest volume.

1.4 Marine transportation-related transfer facilities that contain fixed aboveground onshore structures used for bulk oil storage are jointly regulated by EPA and the U.S. Coast Guard (USCG), and are termed ''complexes.''

Because the USCG also requires response plans from transportation-related facilities to address a worst case discharge of oil, a separate calculation for the worst case discharge planning volume for USCG-related facilities is included in the USCG IFR (see Appendix E to this part, section 10, for availability). All complexes that are jointly regulated by EPA and the USCG must compare both calculations for worst case discharge planning volume derived by using the EPA and USCG methodologies and plan for whichever volume is greater.

PART A: WORST CASE DISCHARGE PLANNING VOLUME CALCULATION FOR ONSHORE STORAGE FACILITIES [1]

Part A of this worksheet is to be completed by the owner or operator of an SPCC-regulated facility (excluding oil production facilities) if the facility meets the criteria as presented in Appendix C to this part, or if it is determined by the RA that the facility could cause substantial harm to the environment. If you are the owner or operator of a production facility, please proceed to Part B of this worksheet.

A.1 SINGLE-TANK FACILITIES

For facilities containing only one aboveground oil storage tank, the worst case discharge planning volume equals the capacity of the oil storage tank. If adequate secondary containment (sufficiently large to contain the capacity of the aboveground oil storage tank plus sufficient freeboard to allow for precipitation) exists for the oil storage tank, multiply the capacity of the tank by 0.8.

(1) FINAL WORST CASE VOLUME: _____ GAL

(2) Do not proceed further.

A.2 SECONDARY CONTAINMENT—MULTIPLE-TANK FACILITIES

Are *all* aboveground oil storage tanks or groups of aboveground oil storage tanks at the facility *without* adequate secondary containment? [2]

_____ (Y/N)

A.2.1 If the answer is yes, the final worst case discharge planning volume equals the *total aboveground oil storage capacity at the facility.*

(1) FINAL WORST CASE VOLUME: _____ GAL

(2) Do not proceed further.

A.2.2 If the answer is no, calculate the total aboveground oil storage capacity of tanks without adequate secondary containment. If *all* aboveground oil storage tanks or groups of aboveground oil storage tanks at the facility have adequate secondary containment, ENTER ''0'' (zero).

_____ GAL

A.2.3 Calculate the capacity of the largest single aboveground oil storage tank within an adequate secondary containment area or the combined capacity of a group of aboveground oil storage tanks permanently manifolded together, whichever is greater, PLUS THE VOLUME FROM QUESTION A.2.2.

FINAL WORST CASE VOLUME: [3] _____ GAL

PART B: WORST CASE DISCHARGE PLANNING VOLUME CALCULATION FOR ONSHORE PRODUCTION FACILITIES

Part B of this worksheet is to be completed by the owner or operator of an SPCC-regulated oil production facility if the facility meets the criteria presented in Appendix C to this part, or if it is determined by the RA that the facility could cause substantial harm. A production facility consists of all wells (producing and exploratory) and related equipment in a single geographical oil or gas field operated by a single operator.

B.1 SINGLE-TANK FACILITIES

B.1.1 For facilities containing only one aboveground oil storage tank, the worst case discharge planning volume equals the capacity of the aboveground oil storage tank plus the production volume of the well with the highest output at the facility. If adequate secondary containment (sufficiently large to contain the capacity of the aboveground oil storage tank plus sufficient freeboard to allow for precipitation) exists for the storage tank, multiply the capacity of the tank by 0.8.

B.1.2 For facilities with production wells producing by pumping, if the rate of the well with the highest output is known and the number of days the facility is unattended can be predicted, then the production volume is equal to the pumping rate of the well multiplied by the greatest number of days the facility is unattended.

B.1.3 If the pumping rate of the well with the highest output is estimated or the maximum number of days the facility is unattended is estimated, then the production volume is determined from the pumping rate of the well multiplied by 1.5 times the greatest number of days that the facility has been or is expected to be unattended.

B.1.4 Attachment D–1 to this appendix provides methods for calculating the production volume for exploratory wells and production wells producing under pressure.

(1) FINAL WORST CASE VOLUME: _____ GAL

(2) Do not proceed further.

B.2 SECONDARY CONTAINMENT—MULTIPLE-TANK FACILITIES

Are *all* aboveground oil storage tanks or groups of aboveground oil storage tanks at the facility *without* adequate secondary containment?

_____ (Y/N)

B.2.1 If the answer is yes, the final worst case volume equals the total aboveground oil storage capacity without adequate secondary containment plus the production volume of the well with the highest output at the facility.

(1) For facilities with production wells producing by pumping, if the rate of the well with the highest output is known and the number of days the facility is unattended can be predicted, then the production volume is equal to the pumping rate of the well multiplied by the greatest number of days the facility is unattended.

[1] ''Storage facilities'' represent all facilities subject to this part, excluding oil production facilities.

[2] Secondary containment is defined in 40 CFR 112.7(e)(2). Acceptable methods and structures for containment are also given in 40 CFR 112.7(c)(1).

[3] All complexes that are jointly regulated by EPA and the USCG must also calculate the worst case discharge planning volume for the transportation-related portions of the facility and plan for whichever volume is greater.

(2) If the pumping rate of the well with the highest output is estimated or the maximum number of days the facility is unattended is estimated, then the production volume is determined from the pumping rate of the well multiplied by 1.5 times the greatest number of days that the facility has been or is expected to be unattended.

(3) Attachment D–1 to this appendix provides methods for calculating the production volumes for exploratory wells and production wells producing under pressure.

(A) FINAL WORST CASE VOLUME: _____ GAL

(B) Do not proceed further.

B.2.2 If the answer is no, calculate the total aboveground oil storage capacity of tanks without adequate secondary containment. If *all* aboveground oil storage tanks or groups of aboveground oil storage tanks at the facility have adequate secondary containment, ENTER ''0'' (zero).

_____ GAL

B.2.3 Calculate the capacity of the largest single aboveground oil storage tank within an adequate secondary containment area or the combined capacity of a group of aboveground oil storage tanks permanently manifolded together, whichever is greater, plus the production volume of the well with the highest output, PLUS THE VOLUME FROM QUESTION B.2.2. Attachment D–1 provides methods for calculating the production volumes for exploratory wells and production wells producing under pressure.

(1) FINAL WORST CASE VOLUME:[4] _____ GAL

(2) Do not proceed further.

ATTACHMENTS TO APPENDIX D

ATTACHMENT D–I—METHODS TO CALCULATE PRODUCTION VOLUMES FOR PRODUCTION FACILITIES WITH EXPLORATORY WELLS OR PRODUCTION WELLS PRODUCING UNDER PRESSURE

1.0 Introduction

The owner or operator of a production facility with exploratory wells or production wells producing under pressure shall compare the well rate of the highest output well (rate of well), in barrels per day, to the ability of response equipment and personnel to recover the volume of oil that could be discharged (rate of recovery), in barrels per day. The result of this comparison will determine the method used to calculate the production volume for the production facility. This production volume is to be used to calculate the worst case discharge planning volume in Part B of this appendix.

2.0 Description of Methods

2.1 Method A

If the well rate would overwhelm the response efforts (i.e., rate of well/rate of recovery ≥ 1), then the production volume would be the 30-day forecasted well rate for a well 10,000 feet deep or less, or the 45-day forecasted well rate for a well deeper than 10,000 feet.

(1) For wells 10,000 feet deep or less:

Production volume=30 days × rate of well.

(2) For wells deeper than 10,000 feet:

Production volume=45 days × rate of well.

2.2 Method B

2.2.1 If the rate of recovery would be greater than the well rate (i.e., rate of well/rate of recovery <1), then the production volume would equal the sum of two terms:

Production volume=discharge volume$_1$ + discharge volume$_2$

2.2.2 The first term represents the volume of the oil discharged from the well between the time of the blowout and the time the response resources are on scene and recovering oil (discharge volume$_1$).

Discharge volume$_1$=(days unattended+days to respond) × (rate of well)

2.2.3 The second term represents the volume of oil discharged from the well after the response resources begin operating until the spill is stopped, adjusted for the recovery rate of the response resources (discharge volume$_2$).

(1) For wells 10,000 feet deep or less:

Discharge volume$_2$=[30 days · (days unattended + days to respond)] × (rate of well) × (rate of well/rate of recovery)

(2) For wells deeper than 10,000 feet:

Discharge volume$_2$=[45 days · (days unattended + days to respond)] × (rate of well) × (rate of well/rate of recovery)

3.0 Example

3.1 A facility consists of two production wells producing under pressure, which are both less than 10,000 feet deep. The well rate of well A is 5 barrels per day, and the well rate of well B is 10 barrels per day. The facility is unattended for a maximum of 7 days. The facility operator estimates that it will take 2 days to have response equipment and personnel on scene and responding to a blowout, and that the projected rate of recovery will be 20 barrels per day.

(1) First, the facility operator determines that the highest output well is well B. The facility operator calculates the ratio of the rate of well to the rate of recovery:

10 barrels per day/20 barrels per day=0.5 Because the ratio is less than one, the facility operator will use Method B to calculate the production volume.

(2) The first term of the equation is:

Discharge volume$_1$=(7 days + 2 days) × (10 barrels per day)=90 barrels

(3) The second term of the equation is:

Discharge volume$_2$=[30 days—(7 days + 2 days)] × (10 barrels per day) × (0.5)=105 barrels

(4) Therefore, the production volume is:

Production volume=90 barrels + 105 barrels=195 barrels

3.2 If the recovery rate was 5 barrels per day, the ratio of rate of well to rate of recovery would be 2, so the facility operator would use Method A. The production volume would have been:

30 days × 10 barrels per day=300 barrels

[59 FR 34110, July 1, 1994; 59 FR 49006, Sept. 26, 1994]

[4] All complexes that are jointly regulated by EPA and the USCG must also calculate the worst case discharge planning volume for the transportation-related portions of the facility and plan for whichever volume is greater.

APPENDIX E TO PART 112—DETERMINATION AND EVALUATION OF REQUIRED RESPONSE RESOURCES FOR FACILITY RESPONSE PLANS

1.0 Purpose and Definitions

1.1 The purpose of this appendix is to describe the procedures to identify response resources to meet the requirements of § 112.20. To identify response resources to meet the facility response plan requirements of 40 CFR 112.20(h), owners or operators shall follow this appendix or, where not appropriate, shall clearly demonstrate in the response plan why use of this appendix is not appropriate at the facility and make comparable arrangements for response resources.

1.2 Definitions.

1.2.1 *Nearshore* is an operating area defined as extending seaward 12 miles from the boundary lines defined in 46 CFR part 7, except in the Gulf of Mexico. In the Gulf of Mexico, it means the area extending 12 miles from the line of demarcation (COLREG lines) defined in 49 CFR 80.740 and 80.850.

1.2.2 *Non-persistent oils* or *Group 1 oils* include:

(1) A petroleum-based oil that, at the time of shipment, consists of hydrocarbon fractions:

(A) At least 50 percent of which by volume, distill at a temperature of 340 degrees C (645 degrees F); and

(B) At least 95 percent of which by volume, distill at a temperature of 370 degrees C (700 degrees F); and

(2) A non-petroleum oil with a specific gravity less than 0.8.

1.2.3 *Non-petroleum oil* is oil of any kind that is not petroleum-based. It includes, but is not limited to, animal and vegetable oils.

1.2.4 *Ocean* means the nearshore area.

1.2.5 *Operating area* means Rivers and Canals, Inland, Nearshore, and Great Lakes geographic location(s) in which a facility is handling, storing, or transporting oil.

1.2.6 *Operating environment* means Rivers and Canals, Inland, Great Lakes, or Ocean. These terms are used to define the conditions in which response equipment is designed to function.

1.2.7 *Persistent oils* include:

(1) A petroleum-based oil that does not meet the distillation criteria for a non-persistent oil. Persistent oils are further classified based on specific gravity as follows:

(A) Group 2—specific gravity less than 0.85;

(B) Group 3—specific gravity equal to or greater than 0.85 and less than 0.95;

(C) Group 4—specific gravity equal to or greater than 0.95 and less than 1.0; or

(D) Group 5—specific gravity equal to or greater than 1.0.

(2) A non-petroleum oil with a specific gravity of 0.8 or greater. These oils are further classified based on specific gravity as follows:

(A) Group 2—specific gravity equal to or greater than 0.8 and less than 0.85;

(B) Group 3—specific gravity equal to or greater than 0.85 and less than 0.95;

(C) Group 4—specific gravity equal to or greater than 0.95 and less than 1.0; or

(D) Group 5—specific gravity equal to or greater than 1.0.

1.2.8 Other definitions are included in § 112.2 and section 1.1 of Appendix C.

2.0 Equipment Operability and Readiness

2.1 All equipment identified in a response plan must be designed to operate in the conditions expected in the facility's geographic area (i.e., operating environment). These conditions vary widely based on location and season. Therefore, it is difficult to identify a single stockpile of response equipment that will function effectively in each geographic location (i.e., operating area).

2.2 Facilities handling, storing, or transporting oil in more than one operating environment as indicated in Table 1 of this appendix must identify equipment capable of successfully functioning in each operating environment.

2.3 When identifying equipment for the response plan (based on the use of this appendix), a facility owner or operator must consider the inherent limitations of the operability of equipment components and response systems. The criteria in Table 1 of this appendix shall be used to evaluate the operability in a given environment. These criteria reflect the general conditions in certain operating environments.

2.3.1 The Regional Administrator may require documentation that the boom identified in a facility response plan meets the criteria in Table 1 of this appendix. Absent acceptable documentation, the Regional Administrator may require that the boom be tested to demonstrate that it meets the criteria in Table 1 of this appendix. Testing must be in accordance with ASTM F 715, ASTM F 989, or other tests approved by EPA as deemed appropriate (see Appendix E to this part, section 10, for general availability of documents).

2.4 Table 1 of this appendix lists criteria for oil recovery devices and boom. All other equipment necessary to sustain or support response operations in an operating environment must be designed to function in the same conditions. For example, boats that deploy or support skimmers or boom must be capable of being safely operated in the significant wave heights listed for the applicable operating environment.

2.5 A facility owner or operator shall refer to the applicable Area Contingency Plan (ACP), where available, to determine if ice, debris, and weather-related visibility are significant factors to evaluate the operability of equipment. The ACP may also identify the average temperature ranges expected in the facility's operating area. All equipment identified in a response plan must be designed to operate within those conditions or ranges.

2.6 This appendix provides information on response resource mobilization and response times. The distance of the facility from the storage location of the response resources must be used to determine whether the resources can arrive on-scene within the stated time. A facility owner or operator shall include the time for notification, mobilization, and travel of resources identified to meet the medium and Tier 1 worst case discharge requirements identified in section 4.3 of this appendix (for medium discharges) and section 5.3 of this appendix (for worst case discharges). The facility owner or operator must plan for notification and mobilization of Tier 2 and 3 response resources as necessary to meet the requirements for arrival on-scene in accordance with section 5.3 of this appendix. An on-water speed of 5 knots and a land speed of 35 miles per hour is assumed, unless the facility owner or operator can demonstrate otherwise.

2.7 In identifying equipment, the facility owner or operator shall list the storage location, quantity, and manufacturer's make and model. For oil recovery devices, the

effective daily recovery capacity, as determined using section 6 of this appendix, must be included. For boom, the overall boom height (draft and freeboard) shall be included. A facility owner or operator is responsible for ensuring that the identified boom has compatible connectors.

3.0 Determining Response Resources Required for Small Discharges

3.1 A facility owner or operator shall identify sufficient response resources available, by contract or other approved means as described in § 112.2, to respond to a small discharge. A small discharge is defined as any discharge volume less than or equal to 2,100 gallons, but not to exceed the calculated worst case discharge. The equipment must be designed to function in the operating environment at the point of expected use.

3.2 Complexes that are regulated by EPA and the USCG must also consider planning quantities for the transportation-related transfer portion of the facility. The USCG planning level that corresponds to EPA's ''small discharge'' is termed ''the average most probable discharge.'' The USCG revisions to 33 CFR part 154 define ''the average most probable discharge'' as a discharge of 50 barrels (2,100 gallons). Owners or operators of complexes must compare oil spill volumes for a small discharge and an average most probable discharge and plan for whichever quantity is greater.

3.3 The response resources shall, as appropriate, include:

3.3.1 One thousand feet of containment boom (or, for complexes with marine transfer components, 1,000 feet of containment boom or two times the length of the largest vessel that regularly conducts oil transfers to or from the facility, whichever is greater), and a means of deploying it within 1 hour of the discovery of a spill;

3.3.2 Oil recovery devices with an effective daily recovery capacity equal to the amount of oil discharged in a small discharge or greater which is available at the facility within 2 hours of the detection of an oil discharge; and

3.3.3 Oil storage capacity for recovered oily material indicated in section 9.2 of this appendix.

4.0 Determining Response Resources Required for Medium Discharges

4.1 A facility owner or operator shall identify sufficient response resources available, by contract or other approved means as described in § 112.2, to respond to a medium discharge of oil for that facility. This will require response resources capable of containing and collecting up to 36,000 gallons of oil or 10 percent of the worst case discharge, whichever is less. All equipment identified must be designed to operate in the applicable operating environment specified in Table 1 of this appendix.

4.2 Complexes that are regulated by EPA and the USCG must also consider planning quantities for the transportation-related transfer portion of the facility. The USCG planning level that corresponds to EPA's ''medium discharge'' is termed ''the maximum most probable discharge.'' The USCG revisions to 33 CFR part 154 define ''the maximum most probable discharge'' as a discharge of 1,200 barrels (50,400 gallons) or 10 percent of the worst case discharge, whichever is less. Owners or operators of complexes must compare spill volumes for a medium discharge and a maximum most probable discharge and plan for whichever quantity is greater.

4.3 Oil recovery devices identified to meet the applicable medium discharge volume planning criteria must be located such that they are capable of arriving on-scene within 6 hours in higher volume port areas and the Great Lakes and within 12 hours in all other areas. Higher volume port areas and Great Lakes areas are defined in section 1.1 of Appendix C to this part.

4.4 Because rapid control, containment, and removal of oil are critical to reduce spill impact, the owner or operator must determine response resources using an effective daily recovery capacity for oil recovery devices equal to 50 percent of the planning volume applicable for the facility as determined in section 4.1 of this appendix. The effective daily recovery capacity for oil recovery devices identified in the plan must be determined using the criteria in section 6 of this appendix.

4.5 In addition to oil recovery capacity, the plan shall, as appropriate, identify sufficient quantity of containment boom available, by contract or other approved means as described in § 112.2, to arrive within the required response times for oil collection and containment and for protection of fish and wildlife and sensitive environments. For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability) and the applicable ACP. While the regulation does not set required quantities of boom for oil collection and containment, the response plan shall identify and ensure, by contract or other approved means as described in § 112.2, the availability of the quantity of boom identified in the plan for this purpose.

4.6 The plan must indicate the availability of temporary storage capacity to meet section 9.2 of this appendix. If available storage capacity is insufficient to meet this level, then the effective daily recovery capacity must be derated (downgraded) to the limits of the available storage capacity.

4.7 The following is an example of a medium discharge volume planning calculation for equipment identification in a higher volume port area: The facility's largest aboveground storage tank volume is 840,000 gallons. Ten percent of this capacity is 84,000 gallons. Because 10 percent of the facility's largest tank, or 84,000 gallons, is greater than 36,000 gallons, 36,000 gallons is used as the planning volume. The effective daily recovery capacity is 50 percent of the planning volume, or 18,000 gallons per day. The ability of oil recovery devices to meet this capacity must be calculated using the procedures in section 6 of this appendix. Temporary storage capacity available on-scene must equal twice the daily recovery capacity as indicated in section 9.2 of this appendix, or 36,000 gallons per day. This is the information the facility owner or operator must use to identify and ensure the availability of the required response resources, by contract or other approved means as described in § 112.2. The facility owner shall also identify how much boom is available for use.

5.0 Determining Response Resources Required for the Worst Case Discharge to the Maximum Extent Practicable

5.1 A facility owner or operator shall identify and ensure the availability of, by contract or other approved means as described in § 112.2, sufficient response resources to respond to the worst case discharge of oil to

the maximum extent practicable. Section 7 of this appendix describes the method to determine the necessary response resources. A worksheet is provided as Attachment E–1 at the end of this appendix to simplify the procedures involved in calculating the planning volume for response resources for the worst case discharge.

5.2 Complexes that are regulated by EPA and the USCG must also consider planning for the worst case discharge at the transportation-related portion of the facility. The USCG requires that transportation-related facility owners or operators use a different calculation for the worst case discharge in the revisions to 33 CFR part 154. Owners or operators of complex facilities that are regulated by EPA and the USCG must compare both calculations of worst case discharge derived by EPA and the USCG and plan for whichever volume is greater.

5.3 Oil spill response resources identified in the response plan and available, by contract or other approved means as described in § 112.2, to meet the applicable worst case discharge planning volume must be located such that they are capable of arriving at the scene of a discharge within the times specified for the applicable response tier listed below:

	Tier 1	Tier 2	Tier 3
Higher volume port areas.	6 hrs	30 hrs	54 hrs
Great Lakes	12 hrs	36 hrs	60 hrs
All other river and canal, inland, and nearshore areas.	12 hrs	36 hrs	60 hrs

The three levels of response tiers apply to the amount of time in which facility owners or operators must plan for response resources to arrive at the scene of a spill to respond to the worst case discharge planning volume. For example, at a worst case discharge in an inland area, the first tier of response resources (i.e., that amount of on-water and shoreline cleanup capacity necessary to respond to the fraction of the worst case discharge as indicated through the series of steps described in sections 7.2 and 7.3 of this appendix) would arrive at the scene of the discharge within 12 hours; the second tier of response resources would arrive within 36 hours; and the third tier of response resources would arrive within 60 hours.

5.4 The effective daily recovery capacity for oil recovery devices identified in the response plan must be determined using the criteria in section 6 of this appendix. A facility owner or operator shall identify the storage locations of all response resources used for each tier. The owner or operator of a facility whose required daily recovery capacity exceeds the applicable contracting caps in Table 5 of this appendix shall, as appropriate, identify sources of additional equipment, their location, and the arrangements made to obtain this equipment during a response. The owner or operator of a facility whose calculated planning volume exceeds the applicable contracting caps in Table 5 of this appendix shall, as appropriate, identify sources of additional equipment equal to twice the cap listed in Tier 3 or the amount necessary to reach the calculated planning volume, whichever is lower. The resources identified above the cap shall be capable of arriving on-scene not later than the Tier 3 response times in section 5.3 of this appendix. No contract is required. While general listings of available response equipment may be used to identify additional sources (i.e., ''public'' resources vs. ''private'' resources), the response plan shall identify the specific sources, locations, and quantities of equipment that a facility owner or operator has considered in his or her planning. When listing USCG-classified oil spill removal organization(s) that have sufficient removal capacity to recover the volume above the response capacity cap for the specific facility, as specified in Table 5 of this appendix, it is not necessary to list specific quantities of equipment.

5.5 A facility owner or operator shall identify the availability of temporary storage capacity to meet section 9.2 of this appendix. If available storage capacity is insufficient, then the effective daily recovery capacity must be derated (downgraded) to the limits of the available storage capacity.

5.6 When selecting response resources necessary to meet the response plan requirements, the facility owner or operator shall, as appropriate, ensure that a portion of those resources is capable of being used in close-to-shore response activities in shallow water. For any EPA-regulated facility that is required to plan for response in shallow water, at least 20 percent of the on-water response equipment identified for the applicable operating area shall, as appropriate, be capable of operating in water of 6 feet or less depth.

5.7 In addition to oil spill recovery devices, a facility owner or operator shall identify sufficient quantities of boom that are available, by contract or other approved means as described in § 112.2, to arrive on-scene within the specified response times for oil containment and collection. The specific quantity of boom required for collection and containment will depend on the facility-specific information and response strategies employed. A facility owner or operator shall, as appropriate, also identify sufficient quantities of oil containment boom to protect fish and wildlife and sensitive environments. For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability), and the applicable ACP. Refer to this guidance document for the number of days and geographic areas (i.e., operating environments) specified in Table 2 of this appendix.

5.8 A facility owner or operator shall also identify, by contract or other approved means as described in § 112.2, the availability of an oil spill removal organization(s) (as described in § 112.2) capable of responding to a shoreline cleanup operation involving the calculated volume of oil and emulsified oil that might impact the affected shoreline. The volume of oil that shall, as appropriate, be planned for is calculated through the application of factors contained in Tables 2 and 3 of this appendix. The volume calculated from these tables is intended to assist the facility owner or operator to identify an oil spill removal organization with sufficient resources and expertise.

6.0 Determining Effective Daily Recovery Capacity for Oil Recovery Devices

6.1 Oil recovery devices identified by a facility owner or operator must be identified by the manufacturer, model, and effective daily recovery capacity. These capacities must be used to determine whether there is sufficient capacity to meet the applicable planning criteria for a small discharge, a medium discharge, and a worst case discharge to the maximum extent practicable.

6.2 To determine the effective daily recovery capacity of oil recovery devices, the formula listed in section 6.2.1 of this appendix shall be used. This formula considers potential limitations due to available daylight, weather, sea state, and percentage of emulsified oil in the recovered material. The RA may assign a lower efficiency factor to equipment listed in a response plan if it is determined that such a reduction is warranted.

6.2.1 The following formula shall be used to calculate the effective daily recovery capacity:

$R = T \times 24 \text{ hours} \times E$

where:

R—Effective daily recovery capacity;
T—Throughput rate in barrels per hour (nameplate capacity); and
E—20 percent efficiency factor (or lower factor as determined by the Regional Administrator).

6.2.2 For those devices in which the pump limits the throughput of liquid, throughput rate shall be calculated using the pump capacity.

6.2.3 For belt or moptype devices, the throughput rate shall be calculated using the speed of the belt or mop through the device, assumed thickness of oil adhering to or collected by the device, and surface area of the belt or mop. For purposes of this calculation, the assumed thickness of oil will be ¼ inch.

6.2.4 Facility owners or operators that include oil recovery devices whose throughput is not measurable using a pump capacity or belt/mop speed may provide information to support an alternative method of calculation. This information must be submitted following the procedures in section 6.3.2 of this appendix.

6.3 As an alternative to section 6.2 of this appendix, a facility owner or operator may submit adequate evidence that a different effective daily recovery capacity should be applied for a specific oil recovery device. Adequate evidence is actual verified performance data in spill conditions or tests using American Society of Testing and Materials (ASTM) Standard F 631–80, F 808–83 (1988), or an equivalent test approved by EPA as deemed appropriate (see Appendix E to this part, section 10, for general availability of documents).

6.3.1 The following formula must be used to calculate the effective daily recovery capacity under this alternative:

$R = D \times U$

where:

R—Effective daily recovery capacity;
D—Average Oil Recovery Rate in barrels per hour (Item 26 in F 808–83; Item 13.1.15 in F 631–80; or actual performance data); and
U—Hours per day that equipment can operate under spill conditions. Ten hours per day must be used unless a facility owner or operator can demonstrate that the recovery operation can be sustained for longer periods.

6.3.2 A facility owner or operator submitting a response plan shall provide data that supports the effective daily recovery capacities for the oil recovery devices listed. The following is an example of these calculations:

(1) A weir skimmer identified in a response plan has a manufacturer's rated throughput at the pump of 267 gallons per minute (gpm).

267 gpm=381 barrels per hour (bph)
R=381 bph×24 hr/day×0.2=1,829 barrels per day

(2) After testing using ASTM procedures, the skimmer's oil recovery rate is determined to be 220 gpm. The facility owner or operator identifies sufficient resources available to support operations for 12 hours per day.

220 gpm=314 bph
R=314 bph×12 hr/day=3,768 barrels per day

(3) The facility owner or operator will be able to use the higher capacity if sufficient temporary oil storage capacity is available. Determination of alternative efficiency factors under section 6.2 of this appendix or the acceptability of an alternative effective daily recovery capacity under section 6.3 of this appendix will be made by the Regional Administrator as deemed appropriate.

7.0 Calculating Planning Volumes for a Worst Case Discharge

7.1 A facility owner or operator shall plan for a response to the facility's worst case discharge. The planning for on-water oil recovery must take into account a loss of some oil to the environment due to evaporative and natural dissipation, potential increases in volume due to emulsification, and the potential for deposition of oil on the shoreline. The procedures for non-petroleum oils are discussed in section 7.7 of this appendix.

7.2 The following procedures must be used by a facility owner or operator in determining the required on-water oil recovery capacity:

7.2.1 The following must be determined: the worst case discharge volume of oil in the facility; the appropriate group(s) for the types of oil handled, stored, or transported at the facility [persistent (Groups 2, 3, 4, 5) or non-persistent (Group 1)]; and the facility's specific operating area. See sections 1.2.2 and 1.2.7 of this appendix for the definitions of non-persistent and persistent oils, respectively. Facilities that handle, store, or transport oil from different oil groups must calculate each group separately, unless the oil group constitutes 10 percent or less by volume of the facility's total oil storage capacity. This information is to be used with Table 2 of this appendix to determine the percentages of the total volume to be used for removal capacity planning. Table 2 of this appendix divides the volume into three categories: oil lost to the environment; oil deposited on the shoreline; and oil available for on-water recovery.

7.2.2 The on-water oil recovery volume shall, as appropriate, be adjusted using the appropriate emulsification factor found in Table 3 of this appendix. Facilities that handle, store, or transport oil from different petroleum groups must compare the on-water recovery volume for each oil group (unless the oil group constitutes 10 percent or less by volume of the facility's total storage capacity) and use the calculation that results in the largest on-water oil recovery volume to plan for the amount of response resources for a worst case discharge.

7.2.3 The adjusted volume is multiplied by the on-water oil recovery resource mobilization factor found in Table 4 of this appendix from the appropriate operating area and response tier to determine the total on-water oil recovery capacity in barrels per day that must be identified or contracted to arrive on-scene within the applicable time for each response tier. Three tiers are specified. For higher volume port areas, the contracted tiers of resources must be located such that they are capable of arriving on-scene within 6 hours for Tier 1, 30 hours for Tier 2, and 54 hours for Tier 3 of the discovery of an oil discharge.

For all other rivers and canals, inland, nearshore areas, and the Great Lakes, these tiers are 12, 36, and 60 hours.

7.2.4 The resulting on-water oil recovery capacity in barrels per day for each tier is used to identify response resources necessary to sustain operations in the applicable operating area. The equipment shall be capable of sustaining operations for the time period specified in Table 2 of this appendix. The facility owner or operator shall identify and ensure the availability, by contract or other approved means as described in § 112.2, of sufficient oil spill recovery devices to provide the effective daily oil recovery capacity required. If the required capacity exceeds the applicable cap specified in Table 5 of this appendix, then a facility owner or operator shall ensure, by contract or other approved means as described in § 112.2, only for the quantity of resources required to meet the cap, but shall identify sources of additional resources as indicated in section 5.4 of this appendix. The owner or operator of a facility whose planning volume exceeded the cap in 1993 must make arrangements to identify and ensure the availability, by contract or other approved means as described in § 112.2, for additional capacity to be under contract by 1998 or 2003, as appropriate. For a facility that handles multiple groups of oil, the required effective daily recovery capacity for each oil group is calculated before applying the cap. The oil group calculation resulting in the largest on-water recovery volume must be used to plan for the amount of response resources for a worst case discharge, unless the oil group comprises 10 percent or less by volume of the facility's total oil storage capacity.

7.3 The procedures discussed in sections 7.3.1–7.3.3 of this appendix must be used to calculate the planning volume for identifying shoreline cleanup capacity (for Group 1 through Group 4 oils).

7.3.1 The following must be determined: the worst case discharge volume of oil for the facility; the appropriate group(s) for the types of oil handled, stored, or transported at the facility [persistent (Groups 2, 3, or 4) or non-persistent (Group 1)]; and the geographic area(s) in which the facility operates (*i.e.*, operating areas). For a facility handling, storing, or transporting oil from different groups, each group must be calculated separately. Using this information, Table 2 of this appendix must be used to determine the percentages of the total volume to be used for shoreline cleanup resource planning.

7.3.2 The shoreline cleanup planning volume must be adjusted to reflect an emulsification factor using the same procedure as described in section 7.2.2 of this appendix.

7.3.3 The resulting volume shall be used to identify an oil spill removal organization with the appropriate shoreline cleanup capability.

7.4 A response plan must identify response resources with fire fighting capability. The owner or operator of a facility that handles, stores, or transports Group 1 through Group 4 oils that does not have adequate fire fighting resources located at the facility or that cannot rely on sufficient local fire fighting resources must identify adequate fire fighting resources. It is recommended that the facility owner or operator ensure, by contract or other approved means as described in § 112.2, the availability of these resources. The response plan must also identify an individual located at the facility to work with the fire department for Group 1 through Group 4 oil fires. This individual shall also verify that sufficient well-trained fire fighting resources are available within a reasonable response time to a worst case scenario. The individual may be the qualified individual identified in the response plan or another appropriate individual located at the facility.

7.5 The following is an example of the procedure described above in sections 7.2 and 7.3 of this appendix: A facility with a 270,000 barrel (11.3 million gallons) capacity for #6 oil (specific gravity 0.96) is located in a higher volume port area. The facility is on a peninsula and has docks on both the ocean and bay sides. The facility has four aboveground oil storage tanks with a combined total capacity of 80,000 barrels (3.36 million gallons) and no secondary containment. The remaining facility tanks are inside secondary containment structures. The largest aboveground oil storage tank (90,000 barrels or 3.78 million gallons) has its own secondary containment. Two 50,000 barrel (2.1 million gallon) tanks (that are not connected by a manifold) are within a common secondary containment tank area, which is capable of holding 100,000 barrels (4.2 million gallons) plus sufficient freeboard.

7.5.1 The worst case discharge for the facility is calculated by adding the capacity of all aboveground oil storage tanks without secondary containment (80,000 barrels) plus the capacity of the largest aboveground oil storage tank inside secondary containment. The resulting worst case discharge volume is 170,000 barrels or 7.14 million gallons.

7.5.2 Because the requirements for Tiers 1, 2, and 3 for inland and nearshore exceed the caps identified in Table 5 of this appendix, the facility owner will contract for a response to 10,000 barrels per day (bpd) for Tier 1, 20,000 bpd for Tier 2, and 40,000 bpd for Tier 3. Resources for the remaining 7,850 bpd for Tier 1, 9,750 bpd for Tier 2, and 7,600 bpd for Tier 3 shall be identified but need not be contracted for in advance. The facility owner or operator shall, as appropriate, also identify or contract for quantities of boom identified in their response plan for the protection of fish and wildlife and sensitive environments within the area potentially impacted by a worst case discharge from the facility. For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments,'' (see Appendix E to this part, section 10, for availability) and the applicable ACP. Attachment C–III to Appendix C provides a method for calculating a planning distance to fish and wildlife and sensitive environments and public drinking water intakes that may be impacted in the event of a worst case discharge.

7.6 The procedures discussed in sections 7.6.1—7.6.3 of this appendix must be used to determine appropriate response resources for facilities with Group 5 oils.

7.6.1 The owner or operator of a facility that handles, stores, or transports Group 5 oils shall, as appropriate, identify the response resources available by contract or other approved means, as described in § 112.2. The equipment identified in a response plan shall, as appropriate, include:

(1) Sonar, sampling equipment, or other methods for locating the oil on the bottom or suspended in the water column;

(2) Containment boom, sorbent boom, silt curtains, or other methods for containing the oil that may remain floating on the surface or to reduce spreading on the bottom;

(3) Dredges, pumps, or other equipment necessary to recover oil from the bottom and shoreline;

(4) Equipment necessary to assess the impact of such discharges; and

(5) Other appropriate equipment necessary to respond to a discharge involving the type of oil handled, stored, or transported.

7.6.2 Response resources identified in a response plan for a facility that handles, stores, or transports Group 5 oils under section 7.6.1 of this appendix shall be capable of being deployed (on site) within 24 hours of discovery of a discharge to the area where the facility is operating.

7.6.3 A response plan must identify response resources with fire fighting capability. The owner or operator of a facility that handles, stores, or transports Group 5 oils that does not have adequate fire fighting resources located at the facility or that cannot rely on sufficient local fire fighting resources must identify adequate fire fighting resources. It is recommended that the owner or operator ensure, by contract or other approved means as described in § 112.2, the availability of these resources. The response plan shall also identify an individual located at the facility to work with the fire department for Group 5 oil fires. This individual shall also verify that sufficient well-trained fire fighting resources are available within a reasonable response time to respond to a worst case discharge. The individual may be the qualified individual identified in the response plan or another appropriate individual located at the facility.

7.7 The procedures described in sections 7.7.1–7.7.5 of this appendix must be used to determine appropriate response plan development and evaluation criteria for facilities that handle, store, or transport non-petroleum oils. Refer to section 8 of this appendix for information on the limitations on the use of dispersants for inland and nearshore areas.

7.7.1 An owner or operator of a facility that handles, stores, or transports non-petroleum oil must provide information in his or her plan that identifies:

(1) Procedures and strategies for responding to a worst case discharge of non-petroleum oils to the maximum extent practicable; and

(2) Sources of the equipment and supplies necessary to locate, recover, and mitigate such a discharge.

7.7.2 An owner or operator of a facility that handles, stores, or transports non-petroleum oil must ensure that any equipment identified in a response plan is capable of operating in the conditions expected in the geographic area(s) (i.e., operating environments) in which the facility operates using the criteria in Table 1 of this appendix. When evaluating the operability of equipment, the facility owner or operator must consider limitations that are identified in the appropriate ACPs, including:

(1) Ice conditions;

(2) Debris;

(3) Temperature ranges; and

(4) Weather-related visibility.

7.7.3 The owner or operator of a facility that handles, stores, or transports non-petroleum oil must identify the response resources that are available by contract or other approved means, as described in § 112.2. The equipment described in the response plan shall, as appropriate, include:

(1) Containment boom, sorbent boom, or other methods for containing oil floating on the surface or to protect shorelines from impact;

(2) Oil recovery devices appropriate for the type of non-petroleum oil carried; and

(3) Other appropriate equipment necessary to respond to a discharge involving the type of oil carried.

7.7.4 Response resources identified in a response plan according to section 7.7.3 of this appendix must be capable of commencing an effective on-scene response within the applicable tier response times in section 5.3 of this appendix.

7.7.5 A response plan must identify response resources with fire fighting capability. The owner or operator of a facility that handles, stores, or transports non-petroleum oils that does not have adequate fire fighting resources located at the facility or that cannot rely on sufficient local fire fighting resources must identify adequate fire fighting resources. It is recommended that the owner or operator ensure, by contract or other approved means as described in § 112.2, the availability of these resources. The response plan must also identify an individual located at the facility to work with the fire department for non-petroleum fires. This individual shall also verify that sufficient well-trained fire fighting resources are available within a reasonable response time to a worst case scenario. The individual may be the qualified individual identified in the response plan or another appropriate individual located at the facility.

8.0 Determining the Availability of Alternative Response Methods

8.1 For dispersants to be identified in a response plan, they must be on the NCP Product Schedule that is maintained by EPA. (Some States have a list of approved dispersants for use within State waters. These State-approved dispersants are listed on the NCP Product Schedule.)

8.2 Identification of dispersant application in the plan does not imply that the use of this technique will be authorized. Actual authorization for use during a spill response will be governed by the provisions of the NCP and the applicable ACP. To date, dispersant application has not been approved by ACPs for inland areas or shallow nearshore areas.

9.0 Additional Equipment Necessary to Sustain Response Operations

9.1 A facility owner or operator shall, as appropriate, ensure that sufficient numbers of trained personnel and boats, aerial spotting aircraft, containment boom, sorbent materials, boom anchoring materials, and other supplies are available to sustain response operations to completion. All such equipment must be suitable for use with the primary equipment identified in the response plan. A facility owner or operator is not required to list these resources, but shall certify their availability.

9.2 A facility owner or operator shall evaluate the availability of adequate temporary storage capacity to sustain the effective daily recovery capacities from equipment identified in the plan. Because of the inefficiencies of oil spill recovery devices, response plans must identify daily storage capacity equivalent to twice the effective daily recovery capacity required on-scene. This temporary storage capacity may be reduced if a facility owner or operator can demonstrate by waste stream analysis that the efficiencies of the oil recovery devices, ability to decant waste, or the availability of alternative temporary storage or disposal locations will reduce the overall volume of oily material storage requirement.

9.3 A facility owner or operator shall ensure that his or her planning includes the capability to arrange for disposal of recovered oil products. Specific disposal procedures will be addressed in the applicable ACP.

10.0 References and Availability

10.1 All materials listed in this section are part of EPA's rulemaking docket, and are located in the Superfund Docket, Room M2615, at the U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460 (Docket Number SPCC–2P). The docket is available for inspection between 9:00 a.m. and 4:00 p.m., Monday through Friday, excluding Federal holidays. Appointments to review the docket can be made by calling 202–260–3046. The public may copy a maximum of 266 pages from any regulatory docket at no cost. If the number of pages copied exceeds 266, however, a charge of 15 cents will be incurred for each additional page, plus a $25.00 administrative fee. Charges for copies and docket hours are subject to change.

10.2 The docket will mail copies of materials to requestors who are outside the Washington D.C. metro area. Materials may be available from other sources, as noted in this section. The ERNS/SPCC Information line at 202–260–2342 or the RCRA/Superfund Hotline at 800–424–9346 may also provide additional information on where to obtain documents. To contact the RCRA/Superfund Hotline in the Washington, DC metropolitan area, dial 703–412–9810. The Telecommunications Device for the Deaf (TDD) Hotline number is 800–553–7672, or, in the Washington, DC metropolitan area, 703–412–3323.

10.3 Documents Referenced

(1) National Preparedness for Response Exercise Program (PREP). The PREP draft guidelines are available from United States Coast Guard Headquarters (G–MEP–4), 2100 Second Street, SW., Washington, DC 20593. (See 58 FR 53990, October 19, 1993, Notice of Availability of PREP Guidelines).

(2) ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (published in the FEDERAL REGISTER by DOC/NOAA at 59 FR 14713, March 29, 1994). The guidance is available in the Superfund Docket (see sections 10.1 and 10.2 of this appendix).

(3) ASTM Standards. ASTM F 715, ASTM F 989, ASTM F 631–80, ASTM F 808–83 (1988). The ASTM standards are available from the American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103–1187.

TABLE 1 TO APPENDIX E—RESPONSE RESOURCE OPERATING CRITERIA

Oil Recovery Devices		
Operating environment	Significant wave height [1]	Sea state
Rivers and Canals	≤ 1 foot	1
Inland	≤ 3 feet	2
Great Lakes	≤ 4 feet	2–3
Ocean	≤ 6 feet	3–4

Boom				
Boom property	Use			
	Rivers and canals	Inland	Great Lakes	Ocean
Significant Wave Height [1]	≤ 1	≤ 3	≤ 4	≤ 6
Sea State	1	2	2–3	3–4
Boom height—inches (draft plus freeboard)	6–18	18–42	18–42	≥ 42
Reserve Buoyancy to Weight Ratio	2:1	2:1	2:1	3:1 to 4:1
Total Tensile Strength—pounds	4,500	15,000–20,000.	15,000–20,000.	≥ 20,000
Skirt Fabric Tensile Strength—pounds	200	300	300	500
Skirt Fabric Tear Strength—pounds	100	100	100	125

[1] Oil recovery devices and boom *shall* be at least capable of operating in wave heights up to and including the values listed in Table 1 for each operating environment.

TABLE 2 TO APPENDIX E—REMOVAL CAPACITY PLANNING TABLE

Spill location	Rivers and canals			Nearshore/inland Great Lakes		
Sustainability of on-water oil recovery	3 days			4 days		
Oil group [1]	Percent natural dissipation	Percent recovered floating oil	Percent oil onshore	Percent natural dissipation	Percent recovered floating oil	Percent oil Onshore
1. Non-persistent oils	80	10	10	80	20	10
2. Light crudes	40	15	45	50	50	30
3. Medium crudes and fuels	20	15	65	30	50	50
4. Heavy crudes and fuels	5	20	75	10	50	70
Group 5 oils are defined in section 1.2.7 of this appendix; the response resource considerations are outlined in section 7.6 of this appendix.						

[1] Non-petroleum oils are defined in section 1.2.3 of this appendix; the response resource considerations are outlined in section 7.7 of this appendix.

TABLE 3 TO APPENDIX E—EMULSIFICATION FACTORS FOR PETROLEUM OIL GROUPS [1]

Non-Persistent Oil:	
Group 1	1.0
Persistent Oil:	
Group 2	1.8
Group 3	2.0
Group 4	1.4
Group 5 oils are defined in section 1.2.7 of this appendix; the response resource considerations are outlined in section 7.6 of this appendix.	

[1] See sections 1.2.2 and 1.2.7 of this appendix for group designations for non-persistent and persistent oils, respectively.

TABLE 4 TO APPENDIX E—ON-WATER OIL RECOVERY RESOURCE MOBILIZATION FACTORS

Operating area	Tier 1	Tier 2	Tier 3
Rivers and Canals	0.30	0.40	0.60
Inland/Nearshore Great Lakes	0.15	0.25	0.40

Note: These mobilization factors are for total resources mobilized, not incremental response resources.

TABLE 5 TO APPENDIX E—RESPONSE CAPABILITY CAPS BY OPERATING AREA

	Tier 1	Tier 2	Tier 3
February 18, 1993:			
All except Rivers & Canals, Great Lakes	10K bbls/day	20K bbls/day	40K bbls/day.
Great Lakes	5K bbls/day	10K bbls/day	20K bbls/day.
Rivers & Canals	1.5K bbls/day	3.0K bbls/day	6.0K bbls/day.
February 18, 1998:			
All except Rivers & Canals, Great Lakes	12.5K bbls/day	25K bbls/day	50K bbls/day.
Great Lakes	6.35K bbls/day	12.3K bbls/day	25K bbls/day.
Rivers & Canals	1.875K bbls/day	3.75K bbls/day	7.5K bbls/day.
February 18, 2003:			
All except Rivers & Canals, Great Lakes	TBD	TBD	TBD.
Great Lakes	TBD	TBD	TBD.
Rivers & Canals	TBD	TBD	TBD.

Note: The caps show cumulative overall effective daily recovery capacity, not incremental increases.
TBD=To Be Determined.

APPENDIX F TO PART 112—FACILITY-SPECIFIC RESPONSE PLAN

Table of Contents

1.0 Model Facility-Specific Response Plan

(A) Owners or operators of facilities regulated under this part which pose a threat of substantial harm to the environment by discharging oil into or on navigable waters or adjoining shorelines are required to prepare and submit facility-specific response plans to EPA in accordance with the provisions in this appendix. This appendix further describes the required elements in § 112.20(h).

(B) Response plans must be sent to the appropriate EPA Regional office. Figure F–1 of this Appendix lists each EPA Regional office and the address where owners or operators must submit their response plans. Those facilities deemed by the Regional Administrator (RA) to pose a threat of significant and substantial harm to the environment will have their plans reviewed and approved by EPA. In certain cases, information required in the model response plan is similar to information currently maintained in the facility's Spill Prevention, Control, and Countermeasures (SPCC) Plan as required by 40 CFR 112.3. In these cases, owners or operators may reproduce the information and include a photocopy in the response plan.

(C) A complex may develop a single response plan with a set of core elements for all regulating agencies and separate sections for the non-transportation-related and transportation-related components, as described in § 112.20(h). Owners or operators of large facilities that handle, store, or transport oil at more than one geographically distinct location (e.g., oil storage areas at opposite ends of a single, continuous parcel of property) shall, as appropriate, develop separate sections of the response plan for each storage area.

EC01MR92.015

1.1 Emergency Response Action Plan

Several sections of the response plan shall be co-located for easy access by response personnel during an actual emergency or oil spill. This collection of sections shall be called the Emergency Response Action Plan. The Agency intends that the Action Plan contain only as much information as is necessary to combat the spill and be arranged so response actions are not delayed. The Action Plan may be arranged in a number of ways. For example, the sections of the Emergency Response Action Plan may be photocopies or condensed versions of the forms included in the associated sections of the response plan. Each Emergency Response Action Plan section may be tabbed for quick reference. The Action Plan shall be maintained in the front of the same binder that contains the complete response plan or it shall be contained in a separate binder. In the latter case, both binders shall be kept together so that the entire plan can be accessed by the qualified individual and appropriate spill response personnel. The Emergency Response Action Plan shall be made up of the following sections:

1. Qualified Individual Information (Section 1.2) partial
2. Emergency Notification Phone List (Section 1.3.1) partial
3. Spill Response Notification Form (Section 1.3.1) partial
4. Response Equipment List and Location (Section 1.3.2) complete
5. Response Equipment Testing and Deployment (Section 1.3.3) complete
6. Facility Response Team (Section 1.3.4) partial
7. Evacuation Plan (Section 1.3.5) condensed
8. Immediate Actions (Section 1.7.1) complete
9. Facility Diagram (Section 1.9) complete

1.2 Facility Information

The facility information form is designed to provide an overview of the site and a description of past activities at the facility. Much of the information required by this section may be obtained from the facility's existing SPCC Plan.

1.2.1 *Facility name and location:* Enter facility name and street address. Enter the address of corporate headquarters only if corporate headquarters are physically located at the facility. Include city, county, state, zip code, and phone number.

1.2.2 *Latitude and Longitude:* Enter the latitude and longitude of the facility. Include degrees, minutes, and seconds of the main entrance of the facility.

1.2.3 *Wellhead Protection Area:* Indicate if the facility is located in or drains into a wellhead protection area as defined by the Safe Drinking Water Act of 1986 (SDWA).[1] The response plan requirements in the Wellhead Protection Program are outlined by the State or Territory in which the facility resides.

1.2.4 *Owner/operator:* Write the name of the company or person operating the facility and the name of the person or company that owns the facility, if the two are different. List the address of the owner, if the two are different.

1.2.5 *Qualified Individual:* Write the name of the qualified individual for the entire facility. If more than one person is listed, each individual indicated in this section shall have full authority to implement the facility response plan. For each individual, list: name, position, home and work addresses (street addresses, not P.O. boxes), emergency phone number, and specific response training experience.

1.2.6 *Date of Oil Storage Start-up:* Enter the year which the present facility first started storing oil.

1.2.7 *Current Operation:* Briefly describe the facility's operations and include the Standard Industry Classification (SIC) code.

1.2.8 *Dates and Type of Substantial Expansion:* Include information on expansions that have occurred at the facility. Examples of such expansions include, but are not limited to: Throughput expansion, addition of a product line, change of a product line, and installation of additional oil storage capacity. The data provided shall include all facility historical information and detail the expansion of the facility. An example of substantial expansion is any material alteration of the facility which causes the owner or operator of the facility to re-evaluate and increase the response equipment necessary to adequately respond to a worst case discharge from the facility.

1.3 Emergency Response Information

(A) The information provided in this section shall describe what will be needed in an actual emergency involving the discharge of oil or a combination of hazardous substances and oil discharge. The Emergency Response Information section of the plan must include the following components:

(1) The information provided in the Emergency Notification Phone List in section 1.3.1 identifies and prioritizes the names and phone numbers of the organizations and personnel that need to be notified immediately in the event of an emergency. This section shall include all the appropriate phone numbers for the facility. These numbers must be verified each time the plan is updated. The contact list must be accessible to all facility employees to ensure that, in case of a discharge, any employee on site could immediately notify the appropriate parties.

(2) The Spill Response Notification Form in section 1.3.1 creates a checklist of information that shall be provided to the National Response Center (NRC) and other response personnel. All information on this checklist must be known at the time of notification, or be in the process of being collected. This notification form is based on a similar form used by the NRC. Note: Do not delay spill notification to collect the information on the list.

(3) Section 1.3.2 provides a description of the facility's list of emergency response equipment and location of the response equipment. When appropriate, the amount of oil that emergency response equipment can handle and any limitations (e.g., launching sites) must be described.

(4) Section 1.3.3 provides information regarding response equipment tests and deployment drills. Response equipment deployment exercises shall be conducted to ensure that response equipment is operational and the personnel who would operate the equipment in a spill response are capable of deploying and operating it. Only a representative sample of each type of response equipment needs to be deployed and operated, as long as the remainder is properly maintained. If appropriate, testing of response equipment may be conducted while it is being deployed. Facilities without facility-owned response equipment must ensure that the oil spill removal organization that is identified in the response plan to provide this response equipment certifies that the deployment exercises

[1] A wellhead protection area is defined as the surface and subsurface area surrounding a water well or wellfield, supplying a public water system, through which contaminants are reasonably likely to move toward and reach such water well or wellfield. For further information regarding State and territory protection programs, facility owners or operators may contact the SDWA Hotline at 1–800–426–4791.

have been met. Refer to the National Preparedness for Response Exercise Program (PREP) Guidelines (see Appendix E to this part, section 10, for availability), which satisfy Oil Pollution Act (OPA) response exercise requirements.

(5) Section 1.3.4 lists the facility response personnel, including those employed by the facility and those under contract to the facility for response activities, the amount of time needed for personnel to respond, their responsibility in the case of an emergency, and their level of response training. Three different forms are included in this section. The Emergency Response Personnel List shall be composed of all personnel employed by the facility whose duties involve responding to emergencies, including oil spills, even when they are not physically present at the site. An example of this type of person would be the Building Engineer-in-Charge or Plant Fire Chief. The second form is a list of the Emergency Response Contractors (both primary and secondary) retained by the facility. Any changes in contractor status must be reflected in updates to the response plan. Evidence of contracts with response contractors shall be included in this section so that the availability of resources can be verified. The last form is the Facility Response Team List, which shall be composed of both emergency response personnel (referenced by job title/position) and emergency response contractors, included in one of the two lists described above, that will respond immediately upon discovery of an oil spill or other emergency (i.e., the first people to respond). These are to be persons normally on the facility premises or primary response contractors. Examples of these personnel would be the Facility Hazardous Materials (HAZMAT) Spill Team 1, Facility Fire Engine Company 1, Production Supervisor, or Transfer Supervisor. Company personnel must be able to respond immediately and adequately if contractor support is not available.

(6) Section 1.3.5 lists factors that must, as appropriate, be considered when preparing an evacuation plan.

(7) Section 1.3.6 references the responsibilities of the qualified individual for the facility in the event of an emergency.

(B) The information provided in the emergency response section will aid in the assessment of the facility's ability to respond to a worst case discharge and will identify additional assistance that may be needed. In addition, the facility owner or operator may want to produce a wallet-size card containing a checklist of the immediate response and notification steps to be taken in the event of an oil discharge.

		/
		/

Note: If the facility uses contracted help in an emergency response situation, the owner or operator must provide the contractors' names and review the contractors' capacities to provide adequate personnel and response equipment.

1.3.5 Evacuation Plans

1.3.5.1 Based on the analysis of the facility, as discussed elsewhere in the plan, a facility-wide evacuation plan shall be developed. In addition, plans to evacuate parts of the facility that are at a high risk of exposure in the event of a spill or other release must be developed. Evacuation routes must be shown on a diagram of the facility (see section 1.9 of this appendix). When developing evacuation plans, consideration must be given to the following factors, as appropriate:

(1) Location of stored materials;

(2) Hazard imposed by spilled material;

(3) Spill flow direction;

(4) Prevailing wind direction and speed;

(5) Water currents, tides, or wave conditions (if applicable);

(6) Arrival route of emergency response personnel and response equipment;

(7) Evacuation routes;

(8) Alternative routes of evacuation;

(9) Transportation of injured personnel to nearest emergency medical facility;

(10) Location of alarm/notification systems;

(11) The need for a centralized check-in area for evacuation validation (roll call);

(12) Selection of a mitigation command center; and

(13) Location of shelter at the facility as an alternative to evacuation.

1.3.5.2 One resource that may be helpful to owners or operators in preparing this section of the response plan is The *Handbook of Chemical Hazard Analysis Procedures* by the Federal Emergency Management Agency (FEMA), Department of Transportation (DOT), and EPA. *The Handbook of Chemical Hazard Analysis Procedures* is available from: FEMA , Publication Office, 500 C. Street, S.W., Washington, DC 20472, (202) 646–3484.

1.3.5.3 As specified in § 112.20(h)(1)(vi), the facility owner or operator must reference existing community evacuation plans, as appropriate.

1.3.6 Qualified Individual's Duties

The duties of the designated qualified individual are specified in § 112.20(h)(3)(ix). The qualified individual's duties must be described and be consistent with the minimum requirements in § 112.20(h)(3)(ix). In addition, the qualified individual must be identified with the Facility Information in section 1.2 of the response plan.

1.4 Hazard Evaluation

This section requires the facility owner or operator to examine the facility's operations closely and to predict where discharges could occur. Hazard evaluation is a widely used industry practice that allows facility owners or operators to develop a complete understanding of potential hazards and the response actions necessary to address these hazards. *The Handbook of Chemical Hazard Analysis Procedures*, prepared by the EPA, DOT, and the FEMA and the *Hazardous Materials Emergency Planning Guide* (NRT–1), prepared by the National Response Team are good references for conducting a hazard analysis. Hazard identification and evaluation will assist facility owners or operators in planning for potential discharges, thereby reducing the severity of discharge impacts that may occur in the future. The evaluation also may help the operator identify and correct potential sources of discharges. In addition, special hazards to workers and emergency response personnel's health and safety shall be evaluated, as well as the facility's oil spill history.

1.4.1 Hazard Identification

The Tank and Surface Impoundment (SI) forms, or their equivalent, that are part of this section must be completed according to the directions below. (''Surface Impoundment'' means a facility or part of a facility which is a natural topographic depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of liquid wastes or wastes containing free liquids, and which is not an injection well or a seepage facility.) Similar worksheets, or their equivalent, must be developed for any other type of storage containers.

(1) List each tank at the facility with a separate and distinct identifier. Begin aboveground tank identifiers with an ''A'' and belowground tank identifiers with a ''B'', or submit multiple sheets with the aboveground tanks and belowground tanks on separate sheets.

(2) Use gallons for the maximum capacity of a tank; and use square feet for the area.

(3) Using the appropriate identifiers and the following instructions, fill in the appropriate forms:

(a) Tank or SI number—Using the aforementioned identifiers (A or B) or multiple reporting sheets, identify each tank or SI at the facility that stores oil or hazardous materials.

(b) Substance Stored—For each tank or SI identified, record the material that is stored therein. If the tank or SI is used to store more than one material, list all of the stored materials.

(c) Quantity Stored—For each material stored in each tank or SI, report the average volume of material stored on any given day.

(d) Tank Type or Surface Area/Year—For each tank, report the type of tank (e.g., floating top), and the year the tank was originally installed. If the tank has been refabricated, the year that the latest refabrication was completed must be recorded in parentheses next to the year installed. For each SI, record the surface area of the impoundment and the year it went into service.

(e) Maximum Capacity—Record the operational maximum capacity for each tank and SI. If the maximum capacity varies with the season, record the upper and lower limits.

(f) Failure/Cause—Record the cause and date of any tank or SI failure which has resulted in a loss of tank or SI contents.

(4) Using the numbers from the tank and SI forms, label a schematic drawing of the facility. This drawing shall be identical to any schematic drawings included in the SPCC Plan.

(5) Using knowledge of the facility and its operations, describe the following in writing:

(a) The loading and unloading of transportation vehicles that risk the discharge of oil or release of hazardous substances during transport processes. These operations may include loading and unloading of trucks, railroad cars, or vessels. Estimate the volume of material involved in transfer operations, if the exact volume cannot be determined.

(b) Day-to-day operations that may present a risk of discharging oil or releasing a hazardous substance. These activities include scheduled venting, piping repair or replacement, valve maintenance, transfer of tank contents

from one tank to another, etc. (not including transportation-related activities). Estimate the volume of material involved in these operations, if the exact volume cannot be determined.

(c) The secondary containment volume associated with each tank and/or transfer point at the facility. The numbering scheme developed on the tables, or an equivalent system, must be used to identify each containment area. Capacities must be listed for each individual unit (tanks, slumps, drainage traps, and ponds), as well as the facility total.

(d) Normal daily throughput for the facility and any effect on potential discharge volumes that a negative or positive change in that throughput may cause.

HAZARD IDENTIFICATION TANKS [1]

HAZARD IDENTIFICATION SURFACE IMPOUNDMENTS (SIS)

Date of Last Update: _____

SI No.	Substance Stored	Quantity Stored (gallons)	Surface Area/Year	Maximum Capacity (gallons)	Failure/Cause

Attach as many sheets as necessary.

1.4.2 Vulnerability Analysis

The vulnerability analysis shall address the potential effects (i.e., to human health, property, or the environment) of an oil spill. Attachment C–III to Appendix C to this part provides a method that owners or operators shall use to determine appropriate distances from the facility to fish and wildlife and sensitive environments. Owners or opera-

tors can use a comparable formula that is considered acceptable by the RA. If a comparable formula is used, documentation of the reliability and analytical soundness of the formula must be attached to the response plan cover sheet. This analysis must be prepared for each facility and, as appropriate, must discuss the vulnerability of:

(1) Water intakes (drinking, cooling, or other);
(2) Schools;
(3) Medical facilities;
(4) Residential areas;
(5) Businesses;
(6) Wetlands or other sensitive environments; [2]
(7) Fish and wildlife;
(8) Lakes and streams;
(9) Endangered flora and fauna;
(10) Recreational areas;
(11) Transportation routes (air, land, and water);
(12) Utilities; and
(13) Other areas of economic importance (e.g., beaches, marinas) including terrestrially sensitive environments, aquatic environments, and unique habitats.

1.4.3 Analysis of the Potential for an Oil Spill

Each owner or operator shall analyze the probability of a spill occurring at the facility. This analysis shall incorporate factors such as oil spill history, horizontal range of a potential spill, and vulnerability to natural disaster, and shall, as appropriate, incorporate other factors such as tank age. This analysis will provide information for developing discharge scenarios for a worst case discharge and small and medium discharges and aid in the development of techniques to reduce the size and frequency of spills. The owner or operator may need to research the age of the tanks and the oil spill history at the facility.

1.4.4 Facility Reportable Oil Spill History

Briefly describe the facility's reportable oil spill [3] history for the entire life of the facility to the extent that such information is reasonably identifiable, including:

(1) Date of discharge(s);
(2) List of discharge causes;
(3) Material(s) discharged;
(4) Amount discharged in gallons;
(5) Amount of discharge that reached navigable waters, if applicable;
(6) Effectiveness and capacity of secondary containment;
(7) Clean-up actions taken;
(8) Steps taken to reduce possibility of recurrence;
(9) Total oil storage capacity of the tank(s) or impoundment(s) from which the material discharged;
(10) Enforcement actions;
(11) Effectiveness of monitoring equipment; and
(12) Description(s) of how each oil spill was detected.

The information solicited in this section may be similar to requirements in 40 CFR 112.4(a). Any duplicate information required by § 112.4(a) may be photocopied and inserted.

1.5 Discharge Scenarios

In this section, the owner or operator is required to provide a description of the facility's worst case discharge, as well as a small and medium spill, as appropriate. A multi-level planning approach has been chosen because the response actions to a spill (i.e., necessary response equipment, products, and personnel) are dependent on the magnitude of the spill. Planning for lesser discharges is necessary because the nature of the response may be qualitatively different depending on the quantity of the discharge. The facility owner or operator shall discuss the potential direction of the spill pathway.

1.5.1 Small and Medium Discharges

1.5.1.1 To address multi-level planning requirements, the owner or operator must consider types of facility-specific spill scenarios that may contribute to a small or medium spill. The scenarios shall account for all the operations that take place at the facility, including but not limited to:

(1) Loading and unloading of surface transportation;
(2) Facility maintenance;
(3) Facility piping;
(4) Pumping stations and sumps;
(5) Oil storage tanks;
(6) Vehicle refueling; and
(7) Age and condition of facility and components.

1.5.1.2 The scenarios shall also consider factors that affect the response efforts required by the facility. These include but are not limited to:

(1) Size of the spill;
(2) Proximity to downgradient wells, waterways, and drinking water intakes;
(3) Proximity to fish and wildlife and sensitive environments;
(4) Likelihood that the discharge will travel offsite (i.e., topography,
drainage) ;
(5) Location of the material spilled (i.e., on a concrete pad or directly on the soil);
(6) Material discharged;
(7) Weather or aquatic conditions (i.e., river flow);
(8) Available remediation equipment;
(9) Probability of a chain reaction of failures; and
(10) Direction of spill pathway.

1.5.2 Worst Case Discharge

1.5.2.1 In this section, the owner or operator must identify the worst case discharge volume at the facility. Worksheets for production and non-production facility owners or operators to use when calculating worst case discharge are presented in Appendix D to this part. When planning for the worst case discharge response, all of the aforementioned factors listed in the small and medium discharge section of the response plan shall be addressed.

1.5.2.2 For onshore storage facilities and production facilities, permanently manifolded oil storage tanks are defined as tanks that are designed, installed, and/or operated in such a manner that the multiple tanks function as one storage unit (i.e., multiple tank volumes are equal-

[2] Refer to the DOC/NOAA ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (See appendix E to this part, section 10, for availability).

[3] As described in 40 CFR part 110, reportable oil spills are those that: (a) violate applicable water quality standards, or (b) cause a film or sheen upon or discoloration of the surface of the water or adjoining shorelines or cause a sludge or emulsion to be deposited beneath the surface of the water or upon adjoining shorelines.

ized). In this section of the response plan, owners or operators must provide evidence that oil storage tanks with common piping or piping systems are not operated as one unit. If such evidence is provided and is acceptable to the RA, the worst case discharge volume shall be based on the combined oil storage capacity of all manifold tanks or the oil storage capacity of the largest single oil storage tank within the secondary containment area, whichever is greater. For permanently manifolded oil storage tanks that function as one storage unit, the worst case discharge shall be based on the combined oil storage capacity of all manifolded tanks or the oil storage capacity of the largest single tank within a secondary containment area, whichever is greater. For purposes of the worst case discharge calculation, permanently manifolded oil storage tanks that are separated by internal divisions for each tank are considered to be single tanks and individual manifolded tank volumes are not combined.

1.6 Discharge Detection Systems

In this section, the facility owner or operator shall provide a detailed description of the procedures and equipment used to detect discharges. A section on spill detection by personnel and a discussion of automated spill detection, if applicable, shall be included for both regular operations and after hours operations. In addition, the facility owner or operator shall discuss how the reliability of any automated system will be checked and how frequently the system will be inspected.

1.6.1 Discharge Detection by Personnel

In this section, facility owners or operators shall describe the procedures and personnel that will detect any spill or uncontrolled discharge of oil or release of a hazardous substance. A thorough discussion of facility inspections must be included. In addition, a description of initial response actions shall be addressed. This section shall reference section 1.3.1 of the response plan for emergency response information.

1.6.2 Automated Discharge Detection

In this section, facility owners or operators must describe any automated spill detection equipment that the facility has in place. This section shall include a discussion of overfill alarms, secondary containment sensors, etc. A discussion of the plans to verify an automated alarm and the actions to be taken once verified must also be included.

1.7 Plan Implementation

In this section, facility owners or operators must explain in detail how to implement the facility's emergency response plan by describing response actions to be carried out under the plan to ensure the safety of the facility and to mitigate or prevent discharges described in section 1.5 of the response plan. This section shall include the identification of response resources for small, medium, and worst case spills; disposal plans; and containment and drainage planning. A list of those personnel who would be involved in the cleanup shall be identified. Procedures that the facility will use, where appropriate or necessary, to update their plan after an oil spill event and the time frame to update the plan must be described.

1.7.1 Response Resources for Small, Medium, and Worst Case Spills

1.7.1.1 Once the spill scenarios have been identified in section 1.5 of the response plan, the facility owner or operator shall identify and describe implementation of the response actions. The facility owner or operator shall demonstrate accessibility to the proper response personnel and equipment to effectively respond to all of the identified spill scenarios. The determination and demonstration of adequate response capability are presented in Appendix E to this part. In addition, steps to expedite the cleanup of oil spills must be discussed. At a minimum, the following items must be addressed:

(1) Emergency plans for spill response;

(2) Additional response training;

(3) Additional contracted help;

(4) Access to additional response equipment/experts; and

(5) Ability to implement the plan including response training and practice drills.

1.7.1.2A recommended form detailing immediate actions follows.

Oil Spill Response—Immediate Actions

1. Stop the product flow	Act quickly to secure pumps, close valves, etc.
2. Warn personnel	Enforce safety and security measures.
3. Shut off ignition sources.	Motors, electrical circuits, open flames, etc.
4. Initiate containment	Around the tank and/or in the water with oil boom.
5. Notify NRC	1–800–424–8802
6. Notify OSC	
7. Notify, as appropriate	

Source: FOSS, Oil Spill Response—Emergency Procedures, Revised December 3, 1992.

1.7.2 Disposal Plans

1.7.2.1 Facility owners or operators must describe how and where the facility intends to recover, reuse, decontaminate, or dispose of materials after a discharge has taken place. The appropriate permits required to transport or dispose of recovered materials according to local, State, and Federal requirements must be addressed. Materials that must be accounted for in the disposal plan, as appropriate, include:

(1) Recovered product;

(2) Contaminated soil;

(3) Contaminated equipment and materials, including drums, tank parts, valves, and shovels;

(4) Personnel protective equipment;

(5) Decontamination solutions;

(6) Adsorbents; and

(7) Spent chemicals.

1.7.2.2 These plans must be prepared in accordance with Federal (e.g., the Resource Conservation and Recovery Act [RCRA]), State, and local regulations, where applicable. A copy of the disposal plans from the facility's SPCC Plan may be inserted with this section, including any diagrams in those plans.

Material	Disposal facility	Location	RCRA permit/manifest
1.			
2.			
3.			
4.			

1.7.3 Containment and Drainage Planning

A proper plan to contain and control a spill through drainage may limit the threat of harm to human health and the environment. This section shall describe how to contain and control a spill through drainage, including:

(1) The available volume of containment (use the information presented in section 1.4.1 of the response plan);

(2) The route of drainage from oil storage and transfer areas;

(3) The construction materials used in drainage troughs;

(4) The type and number of valves and separators used in the drainage system;

(5) Sump pump capacities;

(6) The containment capacity of weirs and booms that might be used and their location (see section 1.3.2 of this appendix); and

(7) Other cleanup materials.

In addition, facility owners or operators must meet the inspection and monitoring requirements for drainage contained in 40 CFR 112.7(e). A copy of the containment and drainage plans that are required in 40 CFR 112.7(e) may be inserted in this section, including any diagrams in those plans.

Note: The general permit for stormwater drainage may contain additional requirements.

1.8 Self-Inspection, Drills/Exercises, and Response Training

The owner or operator must develop programs for facility response training and for drills/exercises according to the requirements of 40 CFR 112.21. Logs must be kept for facility drills/exercises, personnel response training, and spill prevention meetings. Much of the recordkeeping information required by this section is also contained in the SPCC Plan required by 40 CFR 112.3. These logs may be included in the facility response plan or kept as an annex to the facility response plan.

1.8.1 Facility Self-Inspection

Pursuant to 40 CFR 112.7(e)(8), each facility shall include the written procedures and records of inspections in the SPCC Plan. The inspection shall include the tanks, secondary containment, and response equipment at the facility. Records of the inspections of tanks and secondary containment required by 40 CFR 112.7(e) shall be cross-referenced in the response plan. The inspection of response equipment is a new requirement in this plan. Facility self-inspection requires two steps: (1) a checklist of things to inspect; and (2) a method of recording the actual inspection and its findings. The date of each inspection shall be noted. These records are required to be maintained for 5 years.

1.8.1.1 Tank Inspection

The tank inspection checklist presented below has been included as guidance during inspections and monitoring. Similar requirements exist in 40 CFR 112.7(e). Duplicate information from the SPCC Plan may be photocopied and inserted in this section. The inspection checklist consists of the following items:

TANK INSPECTION CHECKLIST

1. Check tanks for leaks, specifically looking for:
   A. drip marks;
   B. discoloration of tanks;
   C. puddles containing spilled or leaked material;
   D. corrosion;
   E. cracks; and
   F. localized dead vegetation.
2. Check foundation for:
   A. cracks;
   B. discoloration;
   C. puddles containing spilled or leaked material;
   D. settling;
   E. gaps between tank and foundation; and
   F. damage caused by vegetation roots.
3. Check piping for:
   A. droplets of stored material;
   B. discoloration;
   C. corrosion;
   D. bowing of pipe between supports;
   E. evidence of stored material seepage from valves or seals; and
   F. localized dead vegetation.

TANK/SURFACE IMPOUNDMENT INSPECTION LOG

TANK/SURFACE IMPOUNDMENT INSPECTION LOG—Continued

Inspector	Tank or SI#	Date	Comments

1.8.1.2 Response Equipment Inspection

Using the Emergency Response Equipment List provided in section 1.3.2 of the response plan, describe each type of response equipment, checking for the following:

Response Equipment Checklist

1. Inventory (item and quantity);
2. Storage location;
3. Accessibility (time to access and respond);
4. Operational status/condition;
5. Actual use/testing (last test date and frequency of testing); and
6. Shelf life (present age, expected replacement date).

Please note any discrepancies between this list and the available response equipment.

[Use section 1.3.2 of the response plan as a checklist]

Inspector	Date	Comments

RESPONSE EQUIPMENT INSPECTION LOG—Continued

[Use section 1.3.2 of the response plan as a checklist]

Inspector	Date	Comments

1.8.1.3 Secondary Containment Inspection

Inspect the secondary containment (as described in sections 1.4.1 and 1.7.2 of the response plan), checking the following:

Secondary Containment Checklist

1. Dike or berm system.
   A. Level of precipitation in dike/available capacity;
   B. Operational status of drainage valves;
   C. Dike or berm permeability;
   D. Debris;
   E. Erosion;
   F. Permeability of the earthen floor of diked area; and
   G. Location/status of pipes, inlets, drainage beneath tanks, etc.
2. Secondary containment
   A. Cracks;
   B. Discoloration;
   C. Presence of spilled or leaked material (standing liquid);
   D. Corrosion; and
   E. Valve conditions.
3. Retention and drainage ponds
   A. Erosion;
   B. Available capacity;
   C. Presence of spilled or leaked material;
   D. Debris; and
   E. Stressed vegetation.

During inspection, make note of discrepancies in any of the above mentioned items, and report them immediately to the proper facility personnel. Similar requirements exist in 40 CFR 112.7(e). Duplicate information from the SPCC Plan may be photocopied and inserted in this section.

1.8.2 Facility Drills/Exercises

(A) CWA section 311(j)(5), as amended by OPA, requires the response plan to contain a description of facility drills/exercises. According to 40 CFR 112.21(c), the facility owner or operator shall develop a program of facility response drills/exercises, including evaluation procedures. Following the PREP guidelines (see Appendix E to this part, section 10, for availability) would satisfy a facility's requirements for drills/exercises under this part. Alternately, under § 112.21(c), a facility owner or operator may develop a program that is not based on the PREP guidelines. Such a program is subject to approval by the Regional Administrator based on the description of the program provided in the response plan.

(B) The PREP Guidelines specify that the facility conduct internal and external drills/exercises. The internal exercises include: qualified individual notification drills, spill management team tabletop exercises, equipment deployment exercises, and unannounced exercises. External exercises include Area Exercises. Credit for an Area or Facility-specific Exercise will be given to the facility for an actual response to a spill in the area if the plan was utilized for response to the spill and the objectives of the Exercise were met and were properly evaluated, documented and self-certified.

(C) Section 112.20(h)(8)(ii) requires the facility owner or operator to provide a description of the drill/exercise program to be carried out under the response plan. Qualified Individual Notification Drill and Spill Management Team Tabletop Drill logs shall be provided in sections 1.8.2.1 and 1.8.2.2, respectively. These logs may be included in the facility response plan or kept as an annex to the facility response plan. See section 1.3.3 of this appendix for Equipment Deployment Drill Logs.

1.8.3 Response Training

Section 112.21(a) requires facility owners or operators to develop programs for facility response training. Facility owners or operators are required by § 112.20(h)(8)(iii) to provide a description of the response training program to be carried out under the response plan. A facility's training program can be based on the USCG's Training Elements for Oil Spill Response, to the extent applicable to facility operations, or another response training program acceptable to the RA. The training elements are available from Petty Officer Daniel Caras at (202) 267–6570 or fax 267–4085/4065. Personnel response training logs and discharge prevention meeting logs shall be included in sections 1.8.3.1 and 1.8.3.2 of the response plan respectively. These logs may be included in the facility response plan or kept as an annex to the facility response plan.

1.9 Diagrams

The facility-specific response plan shall include the following diagrams. Additional diagrams that would aid in the development of response plan sections may also be included.

(1) The Site Plan Diagram shall, as appropriate, include and identify:
  (A) the entire facility to scale;
  (B) above and below ground bulk oil storage tanks;
  (C) the contents and capacities of bulk oil storage tanks;
  (D) the contents and capacity of drum oil storage areas;
  (E) the contents and capacities of surface impoundments;
  (F) process buildings;
  (G) transfer areas;
  (H) secondary containment systems (location and capacity);
  (I) structures where hazardous materials are stored or handled, including materials stored and capacity of storage;
  (J) location of communication and emergency response equipment;
  (K) location of electrical equipment which contains oil; and
  (L) for complexes only, the interface(s) (i.e., valve or component) between the portion of the facility regulated by EPA and the portion(s) regulated by other Agencies. In most cases, this interface is defined as the last valve inside secondary containment before piping leaves the secondary containment area to connect to the transportation-related portion of the facility (i.e., the structure used or intended to be used to transfer oil to or from a vessel or pipeline). In the absence of secondary containment, this interface is the valve manifold adjacent to the tank nearest the transfer structure as described above. The interface may be defined differently at a specific facility if agreed to by the RA and the appropriate Federal official.

(2) The Site Drainage Plan Diagram shall, as appropriate, include:
  (A) major sanitary and storm sewers, manholes, and drains;
  (B) weirs and shut-off valves;
  (C) surface water receiving streams;
  (D) fire fighting water sources;
  (E) other utilities;
  (F) response personnel ingress and egress;
  (G) response equipment transportation routes; and
  (H) direction of spill flow from discharge points.

(3) The Site Evacuation Plan Diagram shall, as appropriate, include:
  (A) site plan diagram with evacuation route(s); and
  (B) location of evacuation regrouping areas.

1.10 Security

According to 40 CFR 112.7(e)(9), facilities are required to maintain a certain level of security, as appropriate. In this section, a description of the facility security shall be provided and include, as appropriate:

(1) emergency cut-off locations (automatic or manual valves);
(2) enclosures (e.g., fencing, etc.);
(3) guards and their duties, day and night;
(4) lighting;
(5) valve and pump locks; and
(6) pipeline connection caps.

The SPCC Plan contains similar information. Duplicate information may be photocopied and inserted in this section.

2.0 Response Plan Cover Sheet

A three-page form has been developed to be completed and submitted to the RA by owners or operators who are required to prepare and submit a facility-specific response plan. The cover sheet (Attachment F–1) must accompany the response plan to provide the Agency with basic information concerning the facility. This section will describe the Response Plan Cover Sheet and provide instructions for its completion.

2.1 General Information

Owner/Operator of Facility: Enter the name of the owner of the facility (if the owner is the operator). Enter the operator of the facility if otherwise. If the owner/operator of the facility is a corporation, enter the name of the facility's principal corporate executive. Enter as much of the name as will fit in each section.

(1) *Facility Name:* Enter the proper name of the facility.

(2) *Facility Address:* Enter the street address, city, State, and zip code.

(3) *Facility Phone Number:* Enter the phone number of the facility.

(4) *Latitude and Longitude:* Enter the facility latitude and longitude in degrees, minutes, and seconds.

(5) *Dun and Bradstreet Number:* Enter the facility's Dun and Bradstreet number if available (this information may be obtained from public library resources).

(6) *Standard Industrial Classification (SIC) Code:* Enter the facility's SIC code as determined by the Office of Management and Budget (this information may be obtained from public library resources).

(7) *Largest Oil Storage Tank Capacity:* Enter the capacity in GALLONS of the largest aboveground oil storage tank at the facility.

(8) *Maximum Oil Storage Capacity:* Enter the total maximum capacity in GALLONS of all aboveground oil storage tanks at the facility.

(9) *Number of Oil Storage Tanks:* Enter the number of all aboveground oil storage tanks at the facility.

(10) *Worst Case Discharge Amount:* Using information from the worksheets in Appendix D, enter the amount of the worst case discharge in GALLONS.

(11) *Facility Distance to Navigable Waters:* Mark the appropriate line for the nearest distance between an opportunity for discharge (i.e., oil storage tank, piping, or flowline) and a navigable water.

2.2 Applicability of Substantial Harm Criteria

Using the flowchart provided in Attachment C–I to Appendix C to this part, mark the appropriate answer to each question. Explanations of referenced terms can be found in Appendix C to this part. If a comparable formula to the ones described in Attachment C–III to Appendix C to this part is used to calculate the planning distance, documentation of the reliability and analytical soundness of the formula must be attached to the response plan cover sheet.

2.3 Certification

Complete this block after all other questions have been answered.

ATTACHMENTS TO APPENDIX F

ATTACHMENT F–1—RESPONSE PLAN COVER SHEET

This cover sheet will provide EPA with basic information concerning the facility. It must accompany a submitted facility response plan. Explanations and detailed instructions can be found in Appendix F. Please type or write legibly in blue or black ink. Public reporting burden for the collection of this information is estimated to vary from 1 hour to 270 hours per response in the first year, with an average of 5 hours per response. This estimate includes time for reviewing instructions, searching existing data sources, gathering the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate of this information, including suggestions for reducing this burden to: Chief, Information Policy Branch, PM–223, U.S. Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington D.C. 20503.

APPLICABILITY OF SUBSTANTIAL HARM CRITERIA

Does the facility transfer oil over-water[2] to or from vessels and does the facility have a total oil storage capacity greater than or equal to 42,000 gallons?

Yes ———————————————

No ———————————————

Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and, within any storage area, does the facility lack secondary containment[2] that is sufficiently large to contain the capacity of the largest aboveground oil storage tank plus sufficient freeboard to allow for precipitation?

Yes ———————————————

No ———————————————

Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance[2] (as calculated using the appropriate formula in Appendix C or a comparable formula) such that a discharge from the facility could cause injury to fish and wildlife and sensitive environments?[3]

Yes ———————————————

No ———————————————

Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and is the facility located at a distance[2] (as calculated using the appropriate formula in Appendix C or a comparable formula) such that a discharge from the facility would shut down a public drinking water intake?[2] ———————————————

Yes ———————————————

No ———————————————

Does the facility have a total oil storage capacity greater than or equal to 1 million gallons and has the facility experienced a reportable oil spill[2] in an amount greater than or equal to 10,000 gallons within the last 5 years?

Yes ———————————————

No ———————————————

CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document, and that based on my inquiry of those individuals responsible for obtaining information, I believe that the submitted information is true, accurate, and complete.

[59 FR 34122, July 1, 1994; 59 FR 49006, Sept. 26, 1994]

[2] Explanations of the above-referenced terms can be found in Appendix C to this part. If a comparable formula to the ones contained in Attachment C–III is used to establish the appropriate distance to fish and wildlife and sensitive environments or public drinking water intakes, documentation of the reliability and analytical soundness of the formula must be attached to this form.

[3] For further description of fish and wildlife and sensitive environments, see Appendices I, II, and III to DOC/NOAA's ''Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments'' (see Appendix E to this part, section 10, for availability) and the applicable ACP.

PART 113—LIABILITY LIMITS FOR SMALL ONSHORE STORAGE FACILITIES

Subpart A—Oil Storage Facilities

Sec.

AUTHORITY: Sec. 311(f)(2), 86 Stat. 867 (33 U.S.C. 1251 (1972)).

SOURCE: 38 FR 25440, Sept. 13, 1973, unless otherwise noted.

Subpart A—Oil Storage Facilities

§ 113.1 Purpose.

This subpart establishes size classifications and associated liability limits for small onshore oil storage facilities with fixed capacity of 1,000 barrels or less.

§ 113.2 Applicability.

This subpart applies to all onshore oil storage facilities with fixed capacity of 1,000 barrels or less. When a discharge to the waters of the United States occurs from such facilities and when removal of said discharge is performed by the United States Government pursuant to the provisions of subsection 311(c)(1) of the Act, the liability of the owner or operator and the facility will be limited to the amounts specified in § 113.4.

§ 113.3 Definitions.

As used in this subpart, the following terms shall have the meanings indicated below:

(a) *Aboveground* storage facility means a tank or other container, the bottom of which is on a plane not more than 6 inches below the surrounding surface.

(b) *Act* means the Federal Water Pollution Control Act, as amended, 33 U.S.C. 1151, *et seq.*

(c) *Barrel* means 42 United States gallons at 60 degrees Fahrenheit.

(d) *Belowground* storage facility means a tank or other container located other than as defined as ''Aboveground''.

(e) *Discharge* includes, but is not limited to any spilling, leaking, pumping, pouring, emitting, emptying or dumping.

(f) *Onshore Oil Storage Facility* means any facility (excluding motor vehicles and rolling stock) of any kind located in, on, or under, any land within the United States, other than submerged land.

(g) *On-Scene Coordinator* is the single Federal representative designated pursuant to the National Oil and Hazardous Substances Pollution Contingency Plan and identified in approved Regional Oil and Hazardous Substances Pollution Contingency Plans.

(h) *Oil* means oil of any kind or in any form, including but no limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil.

(i) *Remove* or *removal* means the removal of the oil from the water and shorelines or the taking of such other actions as the Federal On-Scene Coordinator may determine to be necessary to minimize or mitigate damage to the public health or welfare, including but not limited to, fish, shellfish, wildlife, and public and private property, shorelines, and beaches.

Additionally, the terms not otherwise defined herein shall have the meanings assigned them by section 311(a) of the Act.

§ 113.4 Size classes and associated liability limits for fixed onshore oil storage facilities, 1,000 barrels or less capacity.

Unless the United States can show that oil was discharged as a result of willful negligence or willful misconduct within the privity and knowledge of the owner or operator, the following limits of liability are established for fixed onshore facilities in the classes specified:

(a) Aboveground storage.

Size class	Capacity (barrels)	Limit (dollars)
I	Up to 10	4,000
II	11 to 170	60,000
III	171 to 500	150,000
IV	501 to 1,000	200,000

(b) Belowground storage.

Size class	Capacity (barrels)	Limit (dollars)
I	Up to 10	5,200
II	11 to 170	78,000
III	171 to 500	195,000
IV	501 to 1,000	260,000

§ 113.5 Exclusions.

This subpart does not apply to:

(a) Those facilities whose average daily oil throughout is more than their fixed oil storage capacity.

(b) Vehicles and rolling stock.

§ 113.6 Effect on other laws.

Nothing herein shall be construed to limit the liability of any facility under State or local law or under any Federal law other than section 311 of the Act, nor shall the liability of any facility for any charges or damages under State or local law reduce its liability to the Federal Government under section 311 of the Act, as limited by this subpart.

PART 116—DESIGNATION OF HAZARDOUS SUBSTANCES

Sec.
116.1 Applicability.
116.2 Abbreviations.
116.3 Definitions.
116.4 Designation of hazardous substances.

AUTHORITY: Secs. 311(b)(2)(A) and 501(a), Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.).

§ 116.1 Applicability.

This regulation designates hazardous substances under section 311(b)(2)(A) of the Federal Water Pollution Control Act (the Act). The regulation applies to discharges of substances designated in Table 116.4.

[43 FR 10474, Mar. 13, 1978]

§ 116.2 Abbreviations.

ppm=parts per million
mg=milligram(s)
kg=kilogram(s)
mg/l=milligrams(s) per liter= (approx.) ppm
mg/kg=milligram(s) per kilogram= (approx.) ppm

[43 FR 10474, Mar. 13, 1978]

§ 116.3 Definitions.

As used in this part, all terms shall have the meaning defined in the Act and as given below:

The Act means the Federal Water Pollution Control Act, as amended by the Federal Water Pollution Control Act Amendments of 1972 (Pub. L. 92–500), and as further amended by the Clean Water Act of 1977 (Pub. L. 95–217), 33 U.S.C. 1251 et seq.; and as further amended by the Clean Water Act Amendments of 1978 (Pub. L. 95–676);

Animals means appropriately sensitive animals which carry out respiration by means of a lung structure permitting gaseous exchange between air and the circulatory system;

Aquatic animals means appropriately sensitive wholly aquatic animals which carry out respiration by means of a gill structure permitting gaseous exchange between the water and the circulatory system;

Aquatic flora means plant life associated with the aquatic eco-system including, but not limited to, algae and higher plants;

Contiguous zone means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone;

Discharge includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying or dumping, but excludes (A) discharges in compliance with a permit under section 402 of this Act, (B) discharges resulting from circumstances identified and reviewed and made a part of the public record with respect to a permit issued or modified under section 402 of this Act, and subject to a condition in such permit, and (C) continuous or anticipated intermittent discharges from a point source, identified in a permit or permit application under section 402 of this Act, which are caused by events occurring within the scope of relevant operating or treatment systems;

LC50 means that concentration of material which is lethal to one-half of the test population of aquatic animals upon continuous exposure for 96 hours or less.

Mixture means any combination of two or more elements and/or compounds in solid, liquid, or gaseous form except where such substances have undergone a chemical reaction so as to become inseparable by physical means.

Navigable waters is defined in section 502(7) of the Act to mean ''waters of the United States, including the territorial seas,'' and includes, but is not limited to:

(1) All waters which are presently used, or were used in the past, or may be susceptible to use as a means to transport interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide, and including adjacent wetlands; the term *wetlands* as used in this regulation shall include those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevelance of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas; the term *adjacent* means bordering, contiguous or neighboring;

(2) Tributaries of navigable waters of the United States, including adjacent wetlands;

(3) Interstate waters, including wetlands; and

(4) All other waters of the United States such as intrastate lakes, rivers, streams, mudflats, sandflats and wetlands, the use, degradation or destruction of which affect interstate commerce including, but not limited to:

(i) Intrastate lakes, rivers, streams, and wetlands which are utilized by interstate travelers for recreational or other purposes; and

(ii) Intrastate lakes, rivers, streams, and wetlands from which fish or shellfish are or could be taken and sold in interstate commerce; and

(iii) Intrastate lakes, rivers, streams, and wetlands which are utilized for industrial purposes by industries in interstate commerce.

Navigable waters do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean

Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

Offshore facility means any facility of any kind located in, on, or under, any of the navigable waters of the United States, and any facility of any kind which is subject to the jurisdiction of the United States and is located in, on, or under any other waters, other than a vessel or a public vessel;

Onshore facility means any facility (including, but not limited to, motor vehicles and rolling stock) of any kind located in, on, or under, any land within the United States other than submerged land;

Otherwise subject to the jurisdiction of the United States means subject to the jurisdiction of the United States by virtue of United States citizenship, United States vessel documentation or numbering, or as provided for by international agreement to which the United States is a party.

A discharge *in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976),* means: (1) A discharge into any waters beyond the contiguous zone from any vessel or onshore or offshore facility, which vessel or facility is subject to or is engaged in activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, and (2) any discharge into any waters beyond the contiguous zone which contain, cover, or support any natural resource belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976).

Public vessel means a vessel owned or bareboat-chartered and operated by the United States, or a State or political subdivision thereof, or by a foreign nation, except when such vessel is engaged in commerce.

Territorial seas means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters, and extending seaward a distance of 3 miles.

Vessel means every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water other than a public vessel;

[43 FR 10474, Mar. 13, 1978; 43 FR 27533, June 26, 1978, as amended at 44 FR 10266, Feb. 16, 1979; 58 FR 45039, Aug. 25, 1993]

§ 116.4 Designation of hazardous substances.

The elements and compounds appearing in Tables 116.4 A and B are designated as hazardous substances in accordance with section 311(b)(2)(A) of the Act. This designation includes any isomers and hydrates, as well as any solutions and mixtures containing these substances. Synonyms and Chemical Abstract System (CAS) numbers have been added for convenience of the user only. In case of any disparity the common names shall be considered the designated substance.

TABLE 116.4A—LIST OF HAZARDOUS SUBSTANCES

Common name	CAS No.	Synonyms	Isomers	CAS No.
Acetaldehyde	75070	Ethanal, ethyl aldehyde, acetic aldehyde		
Acetic acid	64197	Glacial acetic acid, vinegar acid		
Acetic anhydride	108247	Acetic oxide, acetyl oxide		
Acetone cyanohydrin	75865	2-methyllactonitrile, alpha-hydroxyisobutyronitrile.		
Acetyl bromide	506967			
Acetyl chloride	79367			
Acrolein	107028	2-propenal, acrylic aldehyde, acrylaldehyde, acraldehyde.		
Acrylonitrile	107131	Cyanoethylene, Fumigrain, Ventox, propeneitrile, vinyl cyanide.		
Adipic acid	124049	Hexanedioic acid		
Aldrin	309002	Octalene, HHDN		
Allyl alcohol	107186	2-propen-1-ol, 1-propenol-3, vinyl carbinol
