## **EXPLANATION**

0

Chemical concentration contours in ppb, based on mean concentrations in samples collected from monitoring and extraction wells during the period specified in the title.

- Location of monitoring well from which samples were collected.
- Location of extraction well from which samples were collected.

Location of monitoring well from which no samples were collected or well installed subsequent to the period specified in the title.

Location of extraction well from which no samples were collected or well installed subsequent to the period specified in the title.

-• . .

#### - EXPLANATION

- Chemical concentration contours in ppb, based on mean concentrations in samples collected from monitoring and extraction wells during the period specified in the title.
- Location of monitoring well from which samples were collected.
- Location of extraction well from which samples were collected.

Location of monitoring well from which no samples were collected or well installed subsequent to the period specified in the title.

Location of extraction well from which no samples were collected or well installed subsequent to the period specified in the title.

## EXPLANATION

٥

- Chemical concentration contours in ppb, based on mean concentrations in samples collected from monitoring and extraction wells during the period specified in the title.
- Location of monitoring well from which samples were collected.
- Location of extraction well from which samples were collected.

Location of monitoring well from which no samples were collected or well installed subsequent to the period specified in the title.

Location of extraction well from which no samples were collected or well installed subsequent to the period specified in the title.

### EXPLANATION

2

Chemical concentration contours in ppb, based on mean concentrations in samples collected from monitoring and extraction wells during the period specified in the title.

- Location of monitoring well from which samples were collected.
- Location of extraction well from which samples were collected.

Location of monitoring well from which no samples were collected or well installed subsequent to the period specified in the title.

Location of extraction well from which no samples were collected or well installed subsequent to the period specified in the title.

NA= Not Analyzed		Sampling Dates:
ND= Not Detected		1a= January 6, 1988
*= Trace concentrations below the reporting limit		1b=January 7, 1988
e= Analyte also detected in ERCO Procedural Blank		2= February 8, 1988
z= Both trace concentrations detected below the reporting limit		3= February 22, 1988
and analyte detected in ERCO Procedural Blank		4= March 21, 1988
NOTE: Acetone, used to decontaminate field sampling equipment,		5= April 19, 1988
was detected in the field blank collected on October 6, 1988,		6= May 19, 1988
at a concentration of 38 ppb. Field and trip blanks had not	•	7= June 21, 1988
previously been analyzed for acetone.		8a= July 21, 1988
	×	8b= July 22, 1988
•		9= October 6, 1988

ND = not detected. 1,2-DCE = 1,2-dichloroethylene.

TCE = trichloroethylene.

PCE = tetrachloroethylene.

ug/L = micrograms per liter.

Source: EPA, ROD, Remedial Alternative Selection, 1985.

Wells MW20B, MW34, and MW36 are within 150 feet of Plaza Cleaners.

Well MW20B was the only well in Vashon till with contamination.

Wells MW34 and MW36 were screened in both Vashon till and Steilacoom gravel.

^aBased on five sampling events; 8/15/84, 9/14/84, 10/17/84, 11/15/84, and 2/13/85. Standard Deviation 2,449 μg/L.

^bBased on five sampling events; 8/27/84, 9/14/84, 10/17/84, 11/15/84, and 2/13/85. Standard deviation, 7,326 µg/L.

^CBased on four sampling events; 8/16/84, 9/14/84, 10/17/84, and 11/15/84. Standard Deviation, 4,008 µg/L.

^dBased on two sampling events; 11/15/84 and 2/13/85. Standard Deviation, 1,060 µg/L.

eComposite computed assuming that all four wells were in operation; MW-7, MW-8, MW-9, and MW-13, pumping at capacity, i.e., 30, 1, 80, and 80 gpm, respectively.

*Polynuclear Aromatic Hydrocarbons.

Note: In calculating mean concentrations, values below the detection limit were considered to be equal to half that limit. Only mean values below 1 μ g/L were recorded as <1 μ g/L.

TRM (

NOTES

å

- 1. THE GEOLOGIC CROSS SECTIONS ARE GENERAL IN NATURE AND DO NOT PURPORT TO BE AN EXACT REPRESENTATION OF SUBSURFACE CONDITIONS BETWEEN BORINGS.
- 2. QUESTION MARKS BETWEEN GEOLOGIC UNITS INDICATES THE CONTACT IS INFERRED.
- 3. AT EACH GROUNDWATER MONITORING WELL OR GEOLOGIC BORING LOG LOCATION THE BORING LOG IS ACCURATELY LOCATED WITH RESPECT TO HORIZONTAL LOCATION AND VERTICAL DEPTHS OF GEOLOGIC UNITS. THE GEOLOGIC UNITS HAVE BEEN GENERALIZED. DETAILED DESCRIP-TIONS ARE PRESENTED IN THE BORING LOGS IN THE ACCOMPANYING TEXT MANUSCRIPT.
- 4. ALL GEOLOGIC UNIT CONTACTS AND THE WATER TABLE SURFACE ARE SHOWN TO THE CENTER OF THE BORING LOG. ALL HORIZINTAL DISTANCES ARE HEASURED WITH RESPECT TO THE CENTER OF EACH BORING LOG.
- 5. WELL DEPTHS AND SCREENED OR OPEN INTERVALS ARE SHOWN FOR ILLUSTRATIVE PURPOSES. REFERENCE REPORT APPENDICES FOR WELL CONSTRUCTION DETAILS AND BORING LOGS FOR RECENT W & B SERIES WELLS AND BORINGS. MUNICIPAL WELL LOGS OBTAINED FROM THE CITY OF BATTLE CREEK.
- 7. THESE CROSS SECTIONS ARE EXAGERRATED VERTICALY 10 TIMES.
