

The Bioremediation in the Field Search System

EPA's
**Bioremediation
Field Initiative** is
pleased to announce
the release of
Version 2.0
of the
**Bioremediation in
the Field Search
System (BFSS)**,
an updated
information-sharing
resource for federal
and state regulators,
consulting engineers,
industry personnel,
and researchers
interested in the
field application of
bioremediation.

What is the Bioremediation in the Field Search System (BFSS)?

BFSS is a PC-based software product that provides access to a database of information on waste sites in the United States and Canada where bioremediation is being tested or implemented, or has been completed. BFSS allows users to search the database electronically, view data on specific types of bioremediation sites, and print reports of selected information.

What type of information is in the BFSS database?

BFSS currently provides electronic access to information on over 450 bioremediation sites nationwide and internationally. The database spans both full-scale remediation efforts and treatability and feasibility studies, and covers sites under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Resource Conservation and Recovery Act (RCRA), Toxic Substances Control Act (TSCA), and Underground Storage Tank (UST) authority. Data include:

- Location—U.S. EPA region and state, and international province or territory
- Media—Soil, surface and ground water, sediments, and sludge
- Contaminants—Wood preserving wastes, petroleum, solvents, pesticides, munitions, and others
- Ex situ and in situ technologies—Includes reactor treatments, aerated lagoon treatment, land treatment, composting, air sparging, bioventing, and other in situ treatments
- Cost and performance—Capital and operation and maintenance costs, rate of contaminant degradation, and lowest contaminant concentration achieved

How does BFSS work?

Accessing information through BFSS is simple:

- ① The user selects one or several search criteria from among contaminant and media being treated, technology, location, authority, or status of treatment operations.
- ② BFSS retrieves a list of sites that match the criteria specified by the user.
- ③ The user views information about the sites on line or prints site reports, which provide detailed records of information on each site.

BIOREMEDIATION
Field Initiative

*A cooperative effort of the
U.S. EPA's Office of Research
and Development,
Office of Solid Waste and
Emergency Response,
and regional offices,
and other federal agencies,
state agencies, industry, and
universities to expand the
nation's field experience
in bioremediation
technologies for Superfund
and other contaminated sites.*

How can I get a copy of BFSS?

BFSS is available on EPA's Alternative Treatment Technology Information Clearinghouse (ATTIC) (703-908-2138), Cleanup Information (CLU-IN) (301-589-8366), and Office of Research and Development (ORD) (513-569-7610) electronic bulletin board systems. The software is designed to be downloaded and operated off of a hard disk or a local area network (LAN). BFSS also is available on diskette from EPA's National Risk Management Research Laboratory, Center for Environmental Research Information. To request a copy of the system, call 513-569-7562. At the same number, you can also request to be on EPA's bioremediation mailing list, and you will receive EPA's quarterly *Bioremediation in the Field* bulletin, as well as notices of system updates and other bioremediation publications.

How can I contribute to the BFSS database?

The Bioremediation Field Initiative is continually adding new sites to the BFSS database. If you are aware of a site suitable for inclusion, please write to Jennifer Helmick, Eastern Research Group, Inc. (ERG), 110 Hartwell Avenue, Lexington, MA 02173, or fax to 617-674-2851. Once you provide information on a site, this information will be made available through BFSS to the community of users, and you will be given the opportunity to update the site status on a semiannual basis.
