

MtBE Treatment Profiles:

A New Website on MtBE Treatment Technologies

EPA has prepared profiles of drinking water and remediation sites that treat soil and groundwater for methyl tert-butyl ether (MtBE). The MtBE profiles are accessible at <http://clu-in.org/products/mtbe>.

What is MtBE and why is it of concern?

MtBE is an oxygenate and an octane booster that has been added to gasoline. When gasoline leaks or spills, such as at a service station with leaking underground storage tanks, soil and groundwater may become contaminated with MtBE. Such contaminated media poses risks to drinking water supplies and the environment.

Why develop a website with MtBE treatment profiles?

Site managers need site-specific data to help select appropriate treatment approaches at remediation sites and for drinking water contaminated with MtBE.

What types of data does this website contain?

Profiles on the website contain data on completed and ongoing applications of treatment for MtBE in drinking water and contaminated media. As of March 2002, the website included 244 MtBE treatment profiles.

What types of information does a profile provide?

A profile describes the use of *in situ* and *ex situ* technologies to treat MtBE in groundwater, soil, and drinking water at specific sites. Each profile has a varying level of detail, depending on the data and information that was available. Some of the profiles include active links to more detailed case studies, which present in-depth information about the treatment sites.

What specific information does a profile provide?

Each profile contains the following information, as available:

- ◆ Project information
 - Site background and setting
 - Contaminant(s) and media treated
 - Area of contamination and quantity treated
- ◆ Technology design and operation
- ◆ Cost and performance information
 - Cleanup goal and performance information
 - Cost for remediation
- ◆ Point(s) of contact
- ◆ References

What MtBE treatment technologies are covered?

The website includes drinking water treatment (4 profiles) and 11 remediation technologies (some profiles use more than one technology):

- ◆ Air sparging with soil vapor extraction (86)
- ◆ Pump and treat (61)
- ◆ *In situ* bioremediation (53)
- ◆ Soil vapor extraction (32)
- ◆ Air sparging (22)
- ◆ Excavation (16)
- ◆ *In situ* chemical oxidation (9)
- ◆ Multi-phase extraction (7)
- ◆ Product recovery (6)
- ◆ Phytoremediation (4)
- ◆ *Ex situ* bioremediation (4)

What data sources were used to develop this website?

To prepare the profiles, EPA obtained data from site managers, regulatory officials, and technology providers, as well as published reports, conference proceedings, and other available reference materials.

How can I search the website?

The website can be searched in two ways - using a pick list for selected parameters or using the list of all available profiles. The website includes pick lists for contaminant, media, technology, scale, status, state, and site name. Search results are listed alphabetically by site name.

Where are the full case studies on the website?

Profiles that have more detailed case studies (in pdf format) are identified on the results page. The results page will indicate that a case study is available and provide a direct link to that case study.

How can I submit a new profile or update an existing one?

EPA encourages project managers, site owners, and technology vendors to update existing MtBE treatment profiles or add new profiles to this website. A user may select the "Update an MtBE Treatment Profile" button to add more recent data, add data for more fields, or correct errors in existing data. A user may also submit a new profile by selecting the "Submit a New MtBE Treatment Profile" button. Information submitted through the website is reviewed by EPA prior to being made available to the public.

What are the future plans for this website?

EPA is actively seeking additional MtBE treatment sites and preparing additional profiles and links to detailed information on MtBE cleanups.

How can I provide feedback/comments on this website?

Send your feedback and comments to Linda Fiedler of EPA's Technology Innovation Office, by e-mail at fiedler.linda@epa.gov or phone at (703) 603-7194.

Where does EPA provide additional information about MtBE?

Additional EPA resources about MtBE are available at <http://www.epa.gov/swerust1/mtbe/> and <http://www.epa.gov/mtbe>.
