Pueblo, CO 81009

The water we drink is essential to our health and well-being, indeed, life itself. We rely on tap water daily . . . often without much thought about where it comes from or how it gets there. None of use should take drinking water for granted. It's up to all of us—private citizens, the drinking water industry, and all levels of government—to help maintain the quality of our drinking water supply.

Where does your drinking water come from?

How do you know if your drinking water is safe?

How can you protect it?

What can you do if there's a problem with your drinking water?

To help answer these—and other—questions, the U.S. Environmental Protection Agency (EPA) prepared *Water on Tap: A Consumer's Guide to the Nation's Drinking Water*. This booklet explains how regulators and the water industry work to provide safe drinking water. It reviews how water delivery systems work, how we can decrease water use, and how recent changes to the Safe Drinking Water Act will help make us better informed about the quality of our drinking water. And it explains how we can all get involved in efforts to protect our drinking water.

Water on Tap: A Consumer's Guide to the Nation's Drinking Water is available now from EPA. To order your copy, fill out the attached form and send it in. Don't forget to put a first-class stamp on the front of the form. The postal service won't deliver it without one.

Cut Along Dotted Line

Yes! I want to learn more about drinking water.
Please send me a copy of *Water on Tap: A Consumer's Guide to the Nation's Drinking Water*.
