How to Use This Catalog

Ordering Publications from EPA

Many publications in this catalog are distributed compliments of the U.S. Environmental Protection Agency's Office of Science and Technology (OST). EPA distributes one free copy of each publication to each customer until supplies are depleted.

Publication titles are listed alphabetically under different subject categories. For each title you will find listed (if available):

EPA Number -----
NTIS Number -----
ERIC Number -----

These are the accession numbers by which a document is identified. The EPA number is a document's unique identifying number and should be used when ordering the document from the EPA.

When the EPA's supply of a publication is depleted, requestors are referred to either the National Technical Information Service (NTIS) or the Educational Resources Information Center (ERIC). These clearinghouses provide copies of OST publications for a fee. Both NTIS and ERIC assign unique identifying numbers to each document they distribute. Customers should use these numbers when ordering documents from either NTIS or ERIC.

To check on the current availability of any publication listed in this catalog write to:

U.S. Environmental Protection Agency
Office of Water Resource Center
RC-4100
401 M St., SW
Washington, DC 20460

Internet address: Waterpubs@EPAMail.EPA.gov

or call the Resource Center publications request line at (202) 260-7786. You will be notified if the document you request is no longer available from the EPA. When receiving a document from the EPA, please allow 3-4 weeks for delivery.

Instructions for ordering documents from NTIS and ERIC are outlined in the following pages.

Introduction

The Office of Science and Technology (OST) is responsible for developing sound, scientifically defensible standards, criteria, advisories, guidelines, limitations and standards guidelines under the Clean Water Act and the Safe Drinking Water Act. OST is also responsible for developing risk assessment methodologies and for providing risk assessment support for the Office of Water in the U.S. Environmental Protection Agency. These products articulate the goals and provide the regulatory framework for restoring and maintaining the biological, chemical, and physical integrity of the nation's water resources, for protecting the nation's public water supplies, and for achieving technology-based pollution control requirements in support of:

- point source (end of pipe) discharge programs
- nonpoint source programs
- wetlands programs
- drinking water programs
- dredge material management programs
- geographic-specific programs (e.g., Great Lakes, coastal, estuaries)

The Office of Science and Technology consists of several offices, which are discussed in the following sections:

- Engineering and Analysis Division
- Health and Ecological Criteria Division
- Standards and Applied Science Division
- Policy and Communications Staff
- Budget and Program Management Staff

Office of Water Organization Chart

Engineering and Analysis Division

The Engineering and Analysis Division's goal is to provide national technology-based effluent limitations for industrial facilities discharging directly into the nation's waters and pretreatment standards for industries discharging into municipal treatment facilities.

The Consumer Commodities, Energy Industry, Chemicals Industry, Economic and Statistical Analysis, and Analytical Methods branches comprise the Division. The Consumer Commodities Branch develops effluent limitations and standards for pulp and paper, leather, textiles, timber, and similar types of industries. The Chemicals Branch develops effluent guidelines for organic chemicals manufacturing, plastics, waste treatment, and all industrial categories involving metals, including battery manufacturing and photographic. The Energy Branch develops effluent guidelines for inorganic chemicals, oil and gas, and pesticides manufacturing. The Economic and Statistical Analysis Branch conducts economic studies and analyses and prepares economic impact and regulatory analyses to identify national, regional, and international effects and benefits of regulations developed by the Office of Water. Effluent guidelines provide a means for regulating pollutants, through discharge permits, that is founded on technology to treat wastewaters. The Analytical Methods Staff conducts wastewater sampling analysis, initiates development of analytical methods of detection of pollutants in wastewater, sludge sediment, and other media, revising existing methods and developing wastewater treatment regulations.

Health and Ecological Criteria Division

The Health and Ecological Criteria Division (HECD) is responsible for developing sound, scientifically defensible criteria that articulate the goals for the nation's water resources through development and refinement of risk and exposure assessment methodologies. The Division provides all risk assessment methodologies and provides all risk assessment support for the Clean Water Act (CWA) and the Safe Drinking Water Act (SDWA), including maximum contaminant level goals (MCLGs) and health advisories. Specific criteria include:

- Health goals for drinking water
- Criteria for human health surface water
- Criteria for aquatic life surface water
- Sediment criteria
- Biological criteria
- Ecological criteria/habitat
- Municipal sludge regulations

Clean Water Act Overview

The principal law governing pollution of the Nation's waterways is the Federal Water Pollution Control Act, or Clean Water Act. Originally enacted in 1948, it was totally revised by amendments in 1972 that gave the Act its current shape. The 1972 legislation spelled out ambitious programs for water quality improvement that are still being implemented by industries and municipalities. Congress made certain fine-tuning amendments in 1977, revised portions of the law in 1981, and enacted further amendments in 1987.

The Clean Water Act has as its objective the restoration and maintenance of the "chemical, physical, and biological integrity of the Nation's waters." Two goals also were established in the 1972 legislation: zero discharge of pollutants by 1985 and, as an interim goal and where possible, water quality that is both "fishable and swimmable" by mid-1983. While those dates have passed, the goals remain, and efforts to attain the goals continue.

Major parts of the Act are title II and title VI provisions which authorize Federal financial assistance for municipal sewage treatment plant construction and regulatory requirements, found throughout the Act, that apply to industrial and municipal dischargers.

The Act has been termed a technology-forcing statute because of the rigorous demands placed on those who are regulated by it to achieve higher and higher levels of pollution abatement. Industries were given until July 1, 1977, to install "best practicable control technology" (BPT) to clean up waste discharges.

The Clean Water Act required greater pollutant cleanup than BPT by no later than March 31, 1989, generally demanding that industry use the "best available technology" (BAT) that is economically achievable. In addition to the BPT and BAT national standards, States are required to implement control strategies for so-called "toxic hot spots" -- waters expected to remain polluted by toxic chemicals even after industrial dischargers have installed the best available cleanup technologies required under the law.

The Environmental Protection Agency (EPA) issues regulations containing the BPT and BAT effluent standards applicable to categories of industrial sources (such as iron and steel manufacturing, organic chemical manufacturing, petroleum refining, and others). Certain responsibilities are delegated to the States, and this Act, like other environmental laws, embodies a philosophy of Federal-State partnership in which the Federal government sets the agenda and standards for pollution abatement while States carry out day-to-day activities of implementation and enforcement.

In addition, States are responsible for establishing water quality standards, which consist of a designated use (recreation, water supply, industrial, or other), plus a numerical or narrative statement identifying the maximum concentrations of various pollutants which would not interfere with the designated use. These standards serve as the backup to federally set technology-based requirements, by indicating where additional pollution controls are needed to achieve the overall goals of the Act.

While the Act imposes great technological demands, it also recognizes the need for comprehensive research on water quality problems. This is provided throughout the statute, on topics including pollution in the Great Lakes and Chesapeake Bay, in-place toxic pollutants in harbors and navigable waterways, and water pollution resulting from mine drainage. The Act provides support to train personnel who operate and maintain wastewater treatment facilities.

The Safe Drinking Water Act has been amended four times since the original P.L. 93-523: (1) in November 1977 by P.L. 95-190; (2) in September 1979 by P.L. 96-63; (3) in December 1980 by P.L. 96-502; and (4) in June 1986 by P.L. 99-339. The 1986 amendments include provisions requiring EPA to (1) set drinking water regulations for 83 specified contaminants by June 1989, (2) promulgate requirements for disinfection and filtration of public water supplies and provide related technical assistance to small communities, (3) ban the use of lead pipes and lead solder in new drinking water distribution systems, (4) establish an elective wellhead protection program around public water supply wells, (5) establish an elective demonstration grant program for States and local authorities having designated sole-source aquifers to develop groundwater protection programs, and (6) issue rules for monitoring wells that inject wastes below a drinking water source. The amendments also increase EPA's enforcement authority. In addition, the 100th Congress enacted the Lead Contamination Control Act of 1988, (P.O. 100-572) which added a new part F to the SDWA. Part F is intended to reduce exposure to lead in drinking water, specifically by requiring the recall of lead-lined water coolers, and establishing an information and screening program for schools.

This section is listed alphabetically by point source category. Where applicable, the 40 CFR Citation is given. For some categories, there is no 40 CFR Regulation. This section is further divided between the most current documents available and older historical documents.

Safe Drinking Water Act Overview

The Safe Drinking Water Act (P.L. 93-523), enacted on December 16, 1974, and codified as 42 U.S.C. 300(f), is the basis for protecting public drinking water systems from harmful contaminants. The major part of this law is title XIV of the Public Health Service Act -- Safety of Public Water Systems. Basically, the Act directs the EPA Administrator to develop: (1) national primary drinking water regulations that incorporate maximum contaminant level goals and maximum contaminant levels or treatment techniques; (2) underground injection control regulations to protect underground sources of drinking water; and (3) groundwater protection grant programs for the administration of sole-source aquifer demonstration projects and for wellhead protection area programs. The Act permits these activities to be implemented by the States. The Act was last reauthorized in June 1986 (P.L. 99-339), and is authorized through FY91.

In promulgating national primary drinking water regulations (section 1412) EPA was directed to:

- Issue national interim primary drinking water regulations, which were designed to protect health to the extent feasible, taking technology, treatment techniques, and costs into consideration.

The interim regulations became effective within 18 months of their promulgation and established maximum contaminant levels (MCLs) for ten inorganic chemicals, three organic chemical groups (comprising six pesticides and trihalomethanes), three radionuclides, microbes, and turbidity.

- Contract with the National Academy of Sciences for a study to determine MCLs of pollutants that should be recommended for regulation.

Based on a report entitled "Drinking Water and Health," the Administrator was to propose and promulgate revised primary drinking water regulations for the 22 interim contaminants and any other contaminants that need to be regulated.

- Issue secondary drinking water regulations, which specify the maximum contaminant levels necessary to protect public welfare and deal primarily with contaminants affecting drinking water odor and appearance.

These "aesthetics" standards are not federally enforceable and are issued only as guidelines for the States. The Administrator is required to promulgate regulations for State underground injection control programs to protect underground sources of drinking water. These regulations contain minimum requirements for the underground injection of wastes in five well classes to protect underground sources of drinking water and require that a State prohibit any underground injection that was authorized by State permit (section 1421).

The 1986 amendments to the Safe Drinking Water Act created two new sections that focus on groundwater protection grants. Section 1427 established procedures for demonstration programs to develop, implement, and assess critical aquifer protection areas already designated by the Administrator as sole-source aquifers.

- Awarded grants would pay for 50 percent of the costs of developing and implementing a protection program, and no grant may exceed \$4 million in any fiscal year.

The second grant program created under P.L. 99-339 established an elective program for protecting State wellhead areas around public water system wells.

- If a State chooses to establish a wellhead protection program, and EPA approves the State's program, then the Administrator awards grants between 50 and 90 percent for costs incurred in developing and implementing the program.
- A State choosing not to establish a wellhead protection program will only be "penalized" by not being eligible for a grant, and EPA has no authority to establish a wellhead program for a State.

Standards and Applied Science Division

The Standards and Applied Science Division's (SASD) responsibilities are to direct the national program for adoption of water quality standards, to develop policies and guidance on translation of criteria to specific waterbodies, and to develop and manage cross-media and multi-Agency policies to ensure exposure goals are attained. Other responsibilities include:

- National products such as guidance, regulations, policies, strategies
- Environmental assessments
- National assessment studies
- Management strategies for sediment contamination and fish contamination
- Total Maximum Daily Loads, wasteload allocations, mixing zones

International Air Mail

Paper copy reports and microfiche copies are shipped surface mail unless Air Mail is requested.

Canada and Mexico add \$4 per paper copy report;
\$1 per microfiche copy.

Other countries add \$8 per paper copy report;
\$1.25 per microfiche copy.

Computer products are shipped Air Mail at no extra cost.

Return Policy

NTIS does not permit returns for credit or refund. NTIS will replace items if an error was made in filling your order, if the item is defective, or if it was received in damaged condition. Call (703) 487-4660.

After the original stock of a technical report is exhausted, NTIS reprints directly from the master archive copy. These printed-to-order copies are the best possible reproductions.

For more order forms, call (703) 487-4650 and ask for PR-OFA.

The Office of Science and Technology Publications Catalog is an educational resource for schools, local governments, professional organizations, the general public, and any other groups that would like information on water quality. It is provided to you, compliments of the Office of Science and Technology (Office of Water). If you would like a copy of this catalog, please write or call:

Great Lakes Water Quality Initiative Criteria Documents for the Protection of Wildlife: DDT, Mercury, 2,3,7,8-TCDD, PCBs
EPA#: 820/B-95-008 YEAR: 1995 PAGES: 86
NTIS#: PB95-187324
ERIC#: D-052

Great Lakes Water Quality Initiative Technical Support Document for Wildlife Criteria
EPA#: 820/B-95-009 YEAR: 1995 PAGES: 59
NTIS#: PB95-187332

Assessment of Compliance Costs Resulting from Implementation of the Final Great Lakes Water Quality Guidance
EPA#: 820/B-95-010 YEAR: 1995 PAGES: 108
NTIS#: PB95-183740
ERIC#: D-054

Regulatory Impact Analysis of the Final Great Lakes Water Quality Guidance
EPA#: 820/B-95-011 YEAR: 1995 PAGES: 213
NTIS#: PB95-187357

Great Lakes Water Quality Initiative (Press Kit and Press Release)
EPA#: none YEAR: 1995 PAGES:

Great Lakes Water Quality Initiative: a Summary
EPA#: 820/S-95-001 YEAR: 1995 PAGES: 8
ERIC#: D-A09

Methods

Analytical Methods for the Determination of Pollutants in Pharmaceutical Manufacturing Industry Wastewater
EPA#: 821/B-94-001

Method 1613: Tetra- through Octa-Chlorinated Dioxins and Furans by Isotope Dilution HRGC/HRMS (Revision B)
EPA#: 821/B-94-005A YEAR: 1994 PAGES: 80
NTIS#: PB95-104774
ERIC#: D-739

Method 1631: Mercury in Water by Oxidation, Purge and Trap, and Cold Vapor Atomic Fluorescence Spectrometry
EPA#: 821/R-95-027 YEAR: 1995 PAGES: 33

Method 1632: Determination of Inorganic Arsenic in Water by Hydride Generation Flame Atomic Absorption
EPA#: 821/R-95-028 YEAR: 1995 PAGES: 30

Method 1636: Determination of Hexavalent Chromium By Ion Chromatography
EPA#: 821/R-95-029 YEAR: 1995 PAGES: 31

Method 1637: Determination of Trace Elements in Ambient Waters by Chelation Preconcentration with Graphite Furnace Atomic Absorption
EPA#: 821/R-95-030 YEAR: 1995 PAGES: 45

Method 1638: Determination of Trace Elements in Ambient Waters by Inductively Coupled Plasma-Mass Spectrometry
EPA#: 821/R-95-031 YEAR: 1995 PAGES: 47

Method 1640: Determination of Trace Elements in Ambient Waters by On-Line Chelation Preconcentration and Inductively Coupled Plasma-Mass Spectrometry
EPA#: 821/R-95-033 YEAR: 1995 PAGES: 45

Development Document for Effluent Limitations Guidelines and Standards for the Coastal Subcategory of the Oil and Gas Extraction Point Source Category

EPA#: 821/R-95-009 YEAR: 1995 PAGES: 658

ERIC#: D-029

Cost Effectiveness Analysis for Proposed Effluent Limitations Guidelines and Standards for the Coastal Subcategory of the Oil and Gas Extraction Point Source Category

EPA#: 821/R-95-010 YEAR: 1995 PAGES: 46

ERIC#: D-037

Water Quality Benefit Analysis for the Proposed Effluent Guidelines for the Coastal Subcategory of the Oil and Gas Extraction Industry

EPA#: 821/R-95-011 YEAR: 1995 PAGES: 236

ERIC#: D-035

Economic Impact Analysis for Proposed Effluent Limitations Guidelines and Standards for the Coastal Subcategory of the Oil and Gas Extraction Point Source Category

EPA#: 821/R-95-012 YEAR: 1995 PAGES: 282

ERIC#: D-031

The Potential Benefits of Effluent Limitations Guidelines for Coastal Oil and Gas Facilities in Cook Inlet, Alaska

EPA#: 821/R-95-013 YEAR: 1995 PAGES: 70

ERIC#: D-032

Development Document for the Proposed Effluent Limitations Guidelines and Standards for the Metal Products and Machinery Phase 1 Point Source Category EPA#: 821/R-95-021 YEAR: 1995 PAGES: 585

ERIC#: D-A27

Economic Impact Analysis of Proposed Effluent Limitations Guidelines and Standards for the Metal Products and Machinery Industry (Phase I)

EPA#: 821/R-95-022 YEAR: 1995 PAGES:

ERIC#: D-A21

Regulatory Impact Analysis of Proposed Effluent Limitations Guidelines and Standards for the Metal Products and Machinery Industry (Phase 1)

EPA#: 821/R-95-023 YEAR: 1995 PAGES: 362

ERIC#: D-A30

Cost Effectiveness Analysis of Proposed Effluent Limitations Guidelines and Standards for the Metal Products and Machinery Industry (Phase I)

EPA#: 821/R-95-025 YEAR: 1995 PAGES:

ERIC#: D-A24

Regulatory Impact Assessment of Proposed Effluent Guidelines for the Pharmaceutical Manufacturing Industry

EPA#: 821/R-95-017 YEAR: 1995 PAGES:

ERIC#: D-A01

Economic Impact Analysis and Regulatory Flexibility Analysis of Proposed Effluent Guidelines for the Pharmaceutical Manufacturing Industry

EPA#: 821/R-95-018 YEAR: 1995 PAGES:

ERIC#: D-A26

Development Document for Proposed Effluent Limitations Guidelines and Standards for the Pharmaceutical Manufacturing Point Source Category

EPA#: 821/R-95-019 YEAR: 1995 PAGES:

ERIC#: D-A23
