## **Using the Catalog**

Publications are listed alphabetically under the different subject categories given in the Table of Contents. An additional finding aid in the form of a brief subject and selected title index may be found at the end of this document.

Items new to the catalog in this edition have been shaded in grey for easy identification.

Many publications in this catalog are distributed compliments of the U.S. Environmental Protection Agency's Office of Science and Technology (OST). EPA distributes one free copy of each publication to each customer until supplies are depleted. Requestors are then referred to the National Technical Information Service (NTIS), and/or the Educational Resources Information Center, Clearinghouse for Science, Mathematics, and Environmental Education (ERIC/CSMEE). These clearinghouses provide copies of OST publications for a fee. EPA, NTIS, and ERIC all assign their own unique identifying number to each document they distribute. These numbers are given in each document listing (if available) and customers should cite the appropriate number when ordering..

## **Ordering Publications from EPA**

You may request copies of publications listed in this catalog by contacting EPA's National Service Center for Environmental Publications and using the EPA# given in the catalog entry as an order number.

## **Ordering Publications from NTIS**

Extensive ordering information is provided on the NTIS order form on the following page. Orders should be placed using the NTIS# given in the catalog entry as the order number. Additionally, NTIS provides customized services to clients with special needs. Please inquire of NTIS if you have any questions.

## **Ordering Publications from ERIC/CSMEE**

Ordering information is provided on the ERIC order form on page iv. Orders should be placed using the ERIC# given in the catalog entry as the order number. Additionally, you may order publications and search the ERIC publications catalog at its Internet address <<http://www.ericse.org>>.

# **Introduction to the Office of Science and Technology (OST)**

The Office of Science and Technology (OST) is responsible for developing sound, scientifically defensible standards, criteria, advisories, guidelines, limitations and standards guidelines under the Clean Water Act and the Safe Drinking Water Act. OST is also responsible for developing risk assessment methodologies and for providing risk assessment support for the Office of Water in the U.S. Environmental Protection Agency. These products articulate the goals and provide the regulatory framework for restoring and maintaining the biological, chemical, and physical integrity of the nation's water resources, for protecting the nation's public water supplies, and for achieving technology-based pollution control requirements in support of:

- Point source (end of pipe) discharge programs
- Nonpoint source (runoff) programs
- Wetlands programs
- Drinking water programs
- Dredge material management programs
- Geographic-specific programs (e.g., Great Lakes, coastal areas, estuaries)
- Beach water quality programs

The Office of Science and Technology consists of several offices:

- Engineering and Analysis Division\*
- Health and Ecological Criteria Division\*
- Standards and Applied Science Division\*
- Policy and Communications Staff
- Budget and Program Management Staff

\*Description follows on page vii

**Office of Water**

## **Engineering and Analysis Division**

The Engineering and Analysis Division's goal is to provide national technology-based effluent limitations for industrial facilities discharging directly into the nation's waters and pretreatment standards for industries discharging into municipal treatment facilities. The Commodities, Energy, Chemicals/Metals, Economic and Statistical Analysis Branches, and the Analytical Methods staff comprise the Division. The Commodities Branch develops effluent limitations and standards for pulp and paper, leather, textiles, timber, and similar types of industries. The Chemicals/Metals Branch develops effluent guidelines for organic chemicals manufacturing, plastics, waste treatment, and all industrial categories involving metals, including battery manufacturing and photographic. The Energy Branch develops effluent guidelines for inorganic chemicals, oil and gas, and pesticides manufacturing. The Economic and Statistical Analysis Branch conducts economic studies and analyses and prepares economic impact and regulatory analyses to identify national, regional, and international effects and benefits of regulations developed by the Office of Water. Effluent guidelines provide a means for regulating pollutants, through discharge permits, that is founded on technology to treat wastewaters. The Analytical Methods Staff conducts wastewater sampling analysis, initiates development of analytical methods of detection of pollutants in wastewater, sludge sediment, and other media, revising existing methods and developing wastewater treatment regulations.

## **Health and Ecological Criteria Division**

The Health and Ecological Criteria Division (HECD) is responsible for developing sound, scientifically defensible criteria that articulate the goals for the nation's water resources through development and refinement of risk and exposure assessment methodologies. The Division provides all risk assessment methodologies and provides all risk assessment support for the Clean Water Act (CWA) and the Safe Drinking Water Act (SDWA), including maximum contaminant level goals (MCLGs) and health advisories. Specific criteria include:

- Health goals for drinking water
- Criteria for human health surface water
- Criteria for aquatic life surface water
- Sediment criteria
- Biological criteria
- Ecological criteria/habitat
- Municipal sludge regulations

## **Standards and Applied Science Division**

The Standards and Applied Science Division's (SASD) responsibilities are to direct the national program for adoption of water quality standards, to develop policies and guidance on translation of criteria to specific waterbodies, and to develop and manage cross-media and multi-Agency policies to ensure exposure goals are attained. Other responsibilities include:

- National guidance, regulations, policies, strategies
- Environmental assessments
- National assessment studies
- Management strategies for sediment contamination and fish contamination
- Total Maximum Daily Loads, wasteload allocations, mixing zones
