HAZARDOUS WASTE SUPERFUND COLLECTION AND DATABASE

■ The Hazardous Waste Superfund Collection (HWSFC) is a special EPA Headquarters Library Collection on the subject of hazardous waste. Access to the Collection is enhanced by a Database (HWSFD) of bibliographic entries which correspond to each item in the Collection. The EPA Information Access Branch is responsible for the contents and maintenance of the Collection and Database.

GOALS

The Collection and Database:

- Provide a unified resource of major hazardous waste reports, books and journals available through the EPA Library Network.
- Provide current information to assist EPA staff in making timely and effective policy and regulatory policy decisions.
- Assist in the transfer of hazardous waste information from the EPA to the states as part of the Agency's technology transfer effort.

CONTENTS

- Continually growing, the Collection contains books and journals, legislation and regulations, reports from Federal agencies, Office of Solid Waste and Emergency Response (OSWER) policy and guidance directives and EPA reports from selected program offices.
- The Database mirrors the contents of the Collection. A user can search the Database with little or no computer experience.

ACCESS

■ The Hazardous Waste Superfund Collection is available for use in the EPA Headquarters Library. Selected documents from the Collection are distributed to the 10 EPA Regional libraries and laboratories in Ada, OK; Cincinnati, OH; Edison, NJ; Las Vegas, NV; Research Triangle Park, NC and the National Enforcement Investigations Center (NEIC) in Denver, CO.

■ The Database is updated quarterly and reflects ongoing acquisitions to the Collection.

■ The Database is available to the public through the EPA Online Library System (OLS) which resides on the EPA mainframe. To access it, the user will need a computer, modem and telecommunications software. The dial in number is (919) 549-0720. The parameters are as follows:

300-9600 baud rate
7 bits
1 stop bit
even parity

At the first prompt, the user types F to access "EPA OLS". The user then follows the prompts. To log off, the user types Q and follows the prompts. For user support, call: (800) 334-2405. For a user manual to OLS, call (919) 541-2777.

■ A PC version of the Database can be used at the HQ Hazardous Waste Superfund Collection Reference area. It is also on display at EPA's new Public Information Center.

INTRODUCTION

This publication is intended as a guide to the holdings of the Environmental Protection Agency's (EPA) Hazardous Waste Superfund Collection (HWSFC). The Collection is a special library collection which provides a unified resource of major hazardous waste reports, books and journals available through the EPA Library Network.

The Guide to Key Documents and Information Sources is designed for professionals (both in the government and the private sector) who are engaged in activities related to the Superfund program and overlapping programs or need to understand hazardous waste topics generally, including risk assessment, waste minimization and human health issues.

The Guide is divided into three parts.

The first two parts *identify and describe* key documents in the Collection and discuss *access* information for EPA staff and the public. The third part is an *annotated bibliography* of basic hazardous waste information contained in the Collection. Specifically:

- Part One is divided into sections that describe each document type -- Directives, Records of Decision, Toxicological Profiles, etc. In most instances, the information includes the background and purpose of the document, the issuing office, contacts and format. Following this description are citations to pertinent references available in the Hazardous Waste Superfund Collection.

- Part Two is divided into two sections. The first section presents information on obtaining hard copies of these key documents through EPA offices, related government agencies or commercial sources. The second section discusses other aids for accessing the documents, such as computer indexes and personal contacts.

- Part Three is divided into categories of *reference types* with bibliographic entries taken from the HWSFC and cited within. Materials selected as references provide quick, ready access into a topic or lead to other sources of information. In some instances, abstracts are included to explain the entry further. Publisher information is recorded for non-EPA documents. A definition for each reference type is included at the head of the section as it is presented. However, sources cited for each reference type may be applicable to other categories. *Sources (with exceptions) are within the last three to six years. Legislative and regulatory entries are presented in another volume (see below).*

At the end of the Guide are Appendices which contain a list of the EPA network libraries with established Hazardous Waste Superfund Collections, as well as other contacts and commercial publishers.

For further information about this document or the Hazardous Waste Superfund Collection, contact the following librarians of the Hazardous Waste Superfund Collection: Felice Sacks, (contractor), Head Librarian, or Fabienne McGovern (contractor), Reference Librarian at 202/260-5934. The address is U.S. EPA Headquarters Library, Room 2904, Mail Code PM-211A, 401 M Street, SW, Washington, DC 20460.

This document is part of a series entitled Superfund Information Access Series. The series is a comprehensive guide to information resources available at the Environmental Protection Agency on the subject of the Superfund program and related hazardous waste topics. The individual publications comprising the series are as follows:

- *Guide to Key Documents and Information Sources* - describes individual document types forming the core of the Hazardous Waste Superfund Collection and categorizes the Collection according to reference type and subtopics. Provides information on obtaining publications.
- *Journals* - an annotated guide to journals and other serials covering hazardous waste topics.
- *Databases and Electronic Systems* - fact sheets on databases and bulletin board systems supported by EPA and containing data related to hazardous waste.
- *Hazardous Waste Superfund Database Users Manual* - a guide for using the online and PC versions of the Hazardous Waste Superfund Database.
- *Hazardous Waste Superfund Database Thesaurus* - a keyword guide for terms used to search the Hazardous Waste Superfund Database.
- *Legislation and Regulations* - information about legislative and regulatory sources within the Collection.
- *Building a Hazardous Waste Collection* - a "how to" book on acquiring basic items for a hazardous waste collection.

Descriptions of Documents

In Part One each key document type is described according to the following categories:

Source - the reference used to describe the document

Background - the authority and/or purpose of the document and other significant background information

Contents - the information contained in the document type and/or format

Contacts - sources for further information

Hard Copies - information on how to obtain the physical document

References - bibliographic citations which provide additional information on the document type in the Hazardous Waste Superfund Collection

SECTION ONE: OSWER DIRECTIVES

Source: OSWER Directives System Manual. U.S. Environmental Protection Agency, Office of Solid Waste and Emergency Response, OSWER Directive 9013.15-3, July 15, 1986.

■ Background

On September 17, 1985, the Environmental Protection Agency (EPA) Assistant Administrator and Deputy Assistant Administrator announced the implementation of the Office of Solid Waste and Emergency Response (OSWER) Directives System to provide a systematic process for identifying and communicating policy and procedures for OSWER programs to the Regions. In short, an "OSWER Directive" is a document which mandates action for Regional personnel. It originates from the following program offices:

- Office of Emergency and Remedial Response (OERR)
- Office of Solid Waste (OSW)
- Office of Underground Storage Tanks (OUST)
- Office of Waste Programs Enforcement (OWPE)

■ Contents

The above offices use a directive to set forth program or management policy, procedural guidelines, program guidance, delegation and/or redelegation of authority. Directives may be in the form of memoranda, letters, notices, handbooks or manuals. The document that describes the definition and purpose of a directive is the OSWER Directives System Manual, OSWER Directive No. 9013.15-3, July 1986.

The status of directives—whether they have been deleted, superseded or supplemented—can be obtained partially by accessing the Hazardous Waste Superfund Database (HWSFD) or by contacting the RCRA/Superfund Hotline at 703/920-9810 or 800/424-9346.

Classification System

Each OSWER Directive is assigned a subject specific classification number as follows:

<u>Number</u>	<u>Subject</u>
9000 to 9199	Administrative (AAOSWER)
9200 to 9399	Superfund (OERR)
9400 to 9599	RCRA (OSW)
9600 to 9799	Underground Storage Tanks (OUST)
9800 to 9899	Superfund Enforcement (OWPE)
9900 to 9999	RCRA Enforcement (OWPE)

■ **Contacts**

Each of the above categories of directives is managed by an OSWER Coordinator who assists in the production of catalogs containing a listing of the current OSWER Directives. A listing of the Headquarters and Regional Coordinators is updated annually in the OSWER Directives System Catalog Guidance and Policy.

■ **Hard Copies**

The Office of Solid Waste and Emergency Response, Organizational Management and Integrity publishes an official listing of all directives signed by the Assistant Administrator of the respective program office or the delegated authority. In addition, some of the program offices listed above publish their own catalog to include these directives as well as other program documents.

A listing of all these catalogs and where to obtain them is provided in Appendix B on p. A-3. See also Part Two and Appendices C and D (pp. A-4 and A-5) for more access information.

■ Background

Section 300.430(f)(5) in the National Contingency Plan (NCP), the major regulation implementing the Superfund law, authorizes the creation of the "record of decision" as a document to "support the selection of a remedial action".

A Record of Decision, commonly known as a ROD, describes the EPA's planned course of action to clean up a Superfund site proposed or listed on the National Priorities List (NPL). Each ROD is the official record of EPA's remedy selection for the site and achieves the following:

- Documents the Agency's decision making process concerning a Superfund site;
- Certifies that the remedy selection process was carried out in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the Superfund Amendments and Reauthorization Act (SARA) of 1986, and the National Contingency Plan (NCP);
- Supports technical and legal decisions; and
- Functions as the centerpiece for the Superfund administrative record by providing the public with a consolidated source of information about the site, the selected remedy and the rationale for selection.

■ Contents

Most RODs follow a standard format. Usually a ROD document contains three major sections:

- (1) **The Declaration** - which provides the name and location of the site, the statement of purpose, major components of the selected remedy, a statement of basis for the preferred remedial approach, and the signature of the EPA's Regional Administrator or Assistant Administrator;
- (2) **The Decision Summary** - which provides detailed information of the site and the selected remedy; and
- (3) **The Responsiveness Summary** - which documents EPA's responses to the comments and questions raised by the public.

SECTION THREE: TOXICOLOGICAL PROFILES

Source: Superfund Amendments and Reauthorization Act of 1986 (SARA), Public Law 99-499, Section 110, 42 U.S.C. 9604.

■ Background

Establishing Priority Lists and Profiles

Section 110 of the Superfund Amendments and Reauthorization Act of 1986 (SARA) amended Section 104(i) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA or Superfund), by requiring the Agency for Toxic Substances and Disease Registry (ATSDR) in Atlanta, Georgia and EPA to prepare:

(1) a list of hazardous substances, *in order of priority*, which are most commonly found at facilities on the CERCLA National Priorities List and which, *in their sole discretion*, pose the most significant potential threat to human health; and

(2) toxicological profiles of those substances.

Establishing Timetables

SARA Section 110 further established a timetable for preparing priority lists of hazardous substances:

- The first priority list of at least 100 hazardous substances was to be prepared within 6 months of the enactment of SARA. This list was published in the Federal Register on April 17, 1987. (52 FR 12866)
- Within 24 months of the 1987 notice this first priority list was to be revised and supplemented with another 100 substances. (53 FR 41280, October 20, 1988)
- Thereafter, the list was to be revised annually and supplemented.

The amended law also established a timetable for preparation of the toxicological profiles of the listed substances:

- Profiles of no fewer than 25 substances on the first priority list were to be completed within one year of the enactment of SARA. These were published in the Federal Register on October 15, 1987. (52 FR 38340)
- Substances added to the priority list after 1988 were to be profiled within 3 years of the listing.
- Each profile would be revised and republished as necessary, but no less often than every three years.

■ Contents

SARA mandated that each profile comprise the following components:

(A) An examination, summary and interpretation of available toxicological information and epidemiologic evaluations on a hazardous substance in order to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects.

(B) A determination of whether adequate information on the health effects of each substance is available or in the process of development to determine levels of exposure which present a significant risk to human health of acute, subacute, and chronic health effects.

(C) Where appropriate, an identification of toxicological testing needed to identify the types of levels of exposure that may present significant risk of adverse health effects in humans.

The toxicological profile is intended to characterize succinctly the toxicological and health effects information for the hazardous substance being described. Each profile identifies and reviews the key literature that describes a hazardous substance's toxicological properties. Other literature is presented in less detail than the key studies. The profile is not intended to be an exhaustive document. More comprehensive sources of specialty are referenced.

The profile is prepared in accordance with *guidelines* developed by ATSDR and EPA which were published in the April 17, 1987 Federal Register cited below.

■ Federal Register Notices

From time to time the Federal Register announces the availability of priority lists as well as draft and final toxicological profiles. To date the following Federal Register notices have appeared: (Bolded entries denote final lists published).

- 52 FR 12866, April 17, 1987, "Notice of the First Priority List of Hazardous Substances That Will Be the Subject of Toxicological Profiles."
- 52 FR 38340, October 15, 1987, "Availability of Toxicological Profiles."

SECTION FOUR: HEALTH DOCUMENTS

Source: Chemical Assessments and Related Activities: Documents Published in NTIS. U.S. Environmental Protection Agency, Office of Health and Environmental Assessment, OHEA-I-127, April 1991.

■ Background

EPA's Office of Health and Environmental Assessment (OHEA) prepares a variety of health, risk and exposure assessments for many regulatory and enforcement offices within the Agency. OHEA publishes guidelines and methods documents, journal articles and symposia proceedings. Set forth below is a description of those OHEA documents contained in the Hazardous Waste Superfund Collection at the Headquarters library, including legislative/regulatory references for which the documents support.

■ Contents

• Health Effects Assessments (HEA)

These reports are brief, quantitatively oriented, preliminary assessments of relevant health effects data. The Office of Emergency and Remedial Response (OERR or Superfund) uses HEAs in evaluating risk for its preliminary assessment process at uncontrolled sites and for appraising clean-up alternatives in its remedial investigation/feasibility studies.

• Health and Environmental Effects Profiles (HEEP)

Replaced by HEEDs; see below.

• Health Assessment Documents (HAD)

HADs are comprehensive evaluations of the known health data, including carcinogenicity, mutagenicity, and developmental and reproductive effects, from exposure to particular chemicals or compounds. The HADs serve as the scientific database for establishing relationships between exposure concentrations and potential health risks and are used by the Office of Air Quality Planning and Standards (OAQPS) to determine the possible listing of hazardous air pollutants (HAP) under Sections 111 and 112 of the Clean Air Act.

• Health and Environmental Effects Documents (HEED)

HEEDs are summaries of the literature concerning health hazards associated with environmental exposures to particular chemicals or chemical compounds. These documents are prepared to help OSWER develop waste characterization regulations under RCRA and provide health-related limits and goals for emergency and remedial actions under CERCLA. HEEDs contain HEAs as well as other OHEA issued documents (see below, Chemical Assessments and Related Activities: Documents Published in NTIS) and supersede previously developed HEEPs. HEEDs become part of the RCRA and CERCLA public dockets.

- **Guidelines and Methodologies**

These documents study the range of assumptions, models and data to provide the scientific basis for evaluating risk and assuring credibility, consistency, and uniformity in assessments used to support regulatory decisions.

U.S. Environmental Protection Agency, Office of Emergency and Remedial Response, OSWER Directive 9320.2-3A, April, 1989, p. 1.

■ Background

CERCLA Section 105 requires that EPA maintain a National Priorities List (NPL) of hazardous waste sites with known or threatened releases of hazardous substances. The NPL "serve[s] primarily informational purposes, identifying for the States and the public those facilities and sites or other releases which appear to warrant remedial actions." Report of the Committee on Environment and Public Works, Senate Report No. 96-848, 96th Cong., 2d. Sess. 60 (1980), p. 60.

By law, the NPL must be revised at least annually. CERCLA also requires that the NPL be included as part of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), the Federal regulation by which CERCLA is implemented. The NCP (promulgated pursuant to CERCLA Section 105 and Executive Order 12316) lists the NPL in its Appendix B as codified in 40 Code of Federal Regulations Part 300.

The NCP sets forth the *mechanisms* that are used for placing sites on the list.

- One of the mechanisms is a set of criteria called the Hazard Ranking System (HRS) which comprises Appendix A of the NCP.
- The second mechanism allows the States or Territories to designate one top priority site regardless of its HRS score.
- The third mechanism allows a site to be listed if the Agency for Toxic Substances and Disease Registry has issued a health advisory and certain other requirements are met. (See Supplementary Materials: National Priorities List, Proposed Rule cited on the next page).

EPA uses informal rulemaking to place sites on the NPL. Proposed sites are published in the Federal Register where EPA asks for public comment. The Agency responds to the public's comments and then publishes the final listing in the Federal Register. (See the latest listing of Federal Register notices in the intermittent bulletins listed on the next page).

■ Contents

There are several types of documents containing NPL information. They are:

- Background documents of sites listed by rank and by state
- Descriptions of NPL sites
- Fact sheets or bulletins
- Background documents supporting Federal Register notices
- Guidance documents

■ Contacts

For regulatory information about NPL sites, contact the Superfund Docket at 202/260-3046.

■ Hard Copies

See Appendix C, p. A-4 for access to hard copies.

SECTION SIX: TREATABILITY STUDIES

Source: Guide for Conducting Treatability Studies Under CERCLA, Interim Final, U.S. Environmental Protection Agency, Office of Research and Development, Cincinnati, OH EPA/540/2-89/058, December 1989, p. 1, 80-84.

■ Background

Under the Superfund Amendments and Reauthorization Act of 1986, EPA is required to select a remedial action involving treatment that "permanently and significantly reduces the volume, toxicity, or mobility of the hazardous substances, pollutants, and contaminants," (CERCLA, Section 121(b), as amended).

■ Contents

Treatability studies provide site-specific data that is needed to support Superfund remedial response. They aid in the *selection and implementation* of the remedy. During the remedial investigation/feasibility phase these studies indicate whether a particular technology can achieve cleanup goals. During the remedial design/remedial action phase, they establish the design and operating parameters to optimize technology performance.

■ Contacts

For more information about obtaining these studies, contact the publications office of the Office of Research and Development (ORD) at 513/569-7562.

■ Hard Copies

See Part Two and Appendix C, p. A-4 for access to hard copies.

PART TWO

Access to Documents

SECTION ONE: HARD COPY SOURCES FOR DOCUMENTS

Hard copies of EPA documents that are contained in the Hazardous Waste Superfund Database are acquired from a variety of sources. Patrons can obtain most of them through the sources listed below. This section discusses typical sources for these documents, focusing first on EPA and then other sources.

Note, however, that the hard copy of a Record of Decision takes a period of time before it is *available for viewing* in the EPA library network. For example, a ROD signed in December, 1990 might not be accessible in an EPA library or through commercial sources until April 1991. Nonetheless, immediately, after a ROD is signed it is available to EPA staff and associates through the Regional office.

■ EPA Sources

• Superfund Document Center

EPA staff can obtain copies of OSWER Directives 9200-9399 and 9800-9999 through the Superfund Document Center by telephoning 202/260-9760. The public can obtain a catalog of these directives from the Center.

• RCRA/Superfund Hotline

The public can call the RCRA/Superfund Hotline (703/920-9810 or 800/424-9346) to find out if a directive is available. The Hotline will direct the caller to the National Technical Information Service (NTIS) (see p. 19) and provide an NTIS order number or direct the caller to a Freedom of Information Act (FOIA) contact if applicable.

• Dockets

RCRA Docket

The RCRA Docket provides access to OSWER Directives 9400 to 9599 for EPA staff, EPA contractors, Federal and State personnel. The public, however, can view or photocopy information supporting all regulatory decisions issued under the Resource Conservation and Recovery Act, as amended, by appointment only. The rate of \$.015 per page is charged with the first 100 pages free. The docket also takes out of town requests for these materials only. The docket is open 9 to 4, Monday to Friday. For more information, contact:

U.S. EPA RCRA Docket OS-305
401 M Street, SW, Room M-2427
Washington, DC 20460
202/260-9327

The Office of Solid Waste (OSW) provides numerous reports developed over the years in response to requests filed under the Freedom of Information Act (FOIA).

Others were prepared to aid OSW in examining facets of the regulated community that is subject to the requirements of RCRA. These reports are listed in a catalog, Hazardous Waste FOIA Reports, available by calling Lisa Hearn, FOIA Coordinator, at 202/260-3393. To request reports from the catalog, the public must complete a form in the catalog and mail or fax it to:

Ms. Jeralene Green
U.S. EPA
National FOIA Office (A-101)
401 M Street, SW
Washington, DC 20460
FAX: 202/252-0295

Note: FOIA fee schedules apply.

Superfund Docket

The Superfund Docket located in the same space as the RCRA Docket provides services for background documents relating to Superfund regulatory decisions, such as NPL listings. The telephone number is 202/260-3046.

UST Docket

The Underground Storage Tank (UST) Docket provides public access to information supporting all regulatory information pursuant to EPA's regulatory action on underground storage tanks, as well as the OSWER Directives 9500 to 9699. Directives are available for viewing and copying on a walk-in basis. No appointment is necessary. The docket will take telephone and written requests. The rate of \$.015 per page is charged. The docket is open 9 to 4, Monday to Friday. For more information, contact:

U.S. EPA UST Docket OS-400
401 M Street, SW, Room M-2427
Washington, DC 20460
202/260-9720

- **Libraries**

Hard copies of documents discussed in this guide are available for viewing at the EPA Headquarters Library, Hazardous Waste Superfund Collection (HWSFC) and the EPA Regional/Laboratory Libraries forming the Hazardous Waste Library network. (See p. A-1.) Some of these libraries have photocopying facilities or provide interlibrary loan services. For example, at the Headquarters Library *photocopying is limited only to 25 pages* for on-site duplication, but interlibrary loans are available under certain circumstances. *In general, patrons must use other resources described below to meet heavy duplication needs.*

■ Related Government Sources

• Agency for Toxic Substances and Disease Registry (ATSDR)

Individual copies of the draft (and final) toxicological profiles are available at no charge from ATSDR. To request individual profiles or the entire set, please make a written request to:

Agency for Toxic Substances and Disease Registry
1600 Clifton Road, NE
MS F-38
Atlanta, Georgia 30333

ATSDR has a 24-hour Tox Information Line for ordering: 404/639-6000.

• National Technical Information Service

The National Technical Information Service is an important resource that EPA relies upon for supplying requestors with hard copies of the following documents:

OSWER Directives
Records of Decision
Toxicological Profiles
Health Assessments

To order individual documents or a standing order of Superfund documents, call or write:

National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
Tel. : 800/553-NTIS; 703/487-4650
Document Identification: 703/487-4870

(Note: NTIS does not have the complete set of OSWER Directives or Records of Decision). While NTIS will search for the desired document based on certain information, such as title, EPA report number, the service is improved when the caller has the appropriate order number or "PB" number in advance. These can be obtained through the program office catalog publications. (See Appendix B on p. A-3) or by accessing the Hazardous Waste Superfund Database. (See Part Two, Section Two on "Computer Indexes").

■ Commercial Publishers

In addition, a few commercial publication companies provide hazardous waste documents. (See Appendix D on p. A-5).

SECTION TWO: COMPUTER INDEXES

The first two databases described below provide information about all the hazardous waste documents addressed in this publication. Special databases for searching certain documents follow these descriptions.

- **Hazardous Waste Superfund Database (HWSFD)**

Administered by the EPA Headquarters Library, Hazardous Waste Superfund Collection, the Hazardous Waste Superfund Database is a bibliographic database containing over 5000 items on the subject of hazardous waste. The database is *not full text*. It can be accessed through the EPA mainframe or on a personal computer. The database provides patrons with the means for searching the Hazardous Waste Superfund Collection through keywords, titles and dates. In addition, it contains "PB" numbers for ordering documents from NTIS (see below).

The mainframe version can be accessed via modem by dialing 919/549-0720. Parameters on the PC should be set for 300-9600 baud, 7 bits, 1 stop bit and even parity. At the first prompt, the user types F to access EPA's Online Library System (OLS) in which the database resides. For more information about the PC version, call 202/260-5934.

- **National Technical Information Service (NTIS) Bibliographic Database**

Located in Springfield, Virginia, NTIS serves as a central source for U.S. Government publications including scientific and technical reports. NTIS maintains a computerized database of its publications which is available through several commercial services. Some but not all OSWER Directives or Records of Decision are included as *abstracts* in the NTIS Bibliographic Database. Documents can be searched through the title, abstract and keywords fields. To find out which vendors sell access to this database, requestors should call NTIS at 703/487-4650.

Additionally, a partial listing of the NTIS Database is available in microfiche for viewing at the 17 EPA Regional and laboratory libraries as listed on pp. A-1 to A-2. The EPA Headquarters Library at 401 M Street, SW, Room 2904, Washington, DC, maintains a CD ROM diskette of the NTIS database which is updated quarterly. Parts of the NTIS database are on EPA's OLS system as well. (See above for access information).

- **RODS Database**

Administered by the Office of Emergency and Remedial Response (Superfund), the RODS Database is a *full text* database containing all RODs since the inception of the Superfund program. *The graphics and tables that appear in the hard copy ROD are not in this database.* The RODS Database allows the user to search 11 fields including the site name, state, contaminated media, key contaminants, selected remedy, abstract and ROD text. Those users who have access to the RODS Database can only print out specified fields of the ROD or choose from pre-defined reports. For information about accessing data in the RODS Database, requestors should contact the RODS Hotline at 703/538-7227, 7886, 7590.

- **U.S. EPA Integrated Risk Information System (IRIS)**

The Office of Health and Environmental Assessment manages the Integrated Risk Information System (IRIS) database which includes information on health documents, such as HADs, HEAs, HEEPs, etc. (See p. 10).

IRIS contains consensus risk assessment information to those conducting risk assessments. The information may include summaries of health risk and EPA regulatory information, Inhalation Reference Concentrations (RfC), Reference Doses (RfD), and carcinogenic potency factors. EPA staff have access to the database by requesting diskettes from the IRIS Coordinator (202/260-5949).

The database is available to the public through the National Library of Medicine's Toxicology Data Network (TOXNET) (301/496-6531) and NTIS (703/487-4650; Order Number PB90-591330).

- **Electronic Databases on Treatability Studies**

The following sources provide data on the effectiveness of a particular technology in treating different classes of contaminants:

RREL Treatability Database
(Contact: Glenn Shaul: 513/569-7408)

This system is maintained by the Risk Reduction Engineering Laboratory (RREL) in Cincinnati, Ohio. Its purpose is to compile data on the treatability of specific organic and inorganic compounds in all types of waters and wastewaters as well as in soils, sludges and sediments. Users (at no charge) can request floppy disks containing the database for PC use or access it through the Alternative Treatment Technology Information Center (ATTIC) as described below.

Alternative Treatment Technology Information Center (ATTIC)
(Contact: 301/670-6924)

ATTIC is a computerized compendium of information from many available databases. Data relevant to the use of treatment technologies in Superfund actions are collected and stored on the system. The system currently contains technical summaries from Superfund Innovative Technology Evaluation (SITE) program abstracts, treatment technology demonstration projects, industrial project results and international program data. It also contains the RREL Treatability Database described above.

Computerized On-Line Information System (COLIS)
(Contact: System Operator: 908/906-6851)

COLIS -- consolidating several databases from RREL -- provides users with information on the successes and/or failures of innovative technologies at particular sites nationwide and also contains the RREL Treatability Database described above.
