INTRODUCTION

PROJECT DESCRIPTION

A computerized Complex Effluent Toxicity Information System (CETIS) data base has been developed to assemble the results of effluent toxicity tests so toxicity characteristics of complex effluents can be determined on an industry-by-industry basis. The information is available through the National Computer Center (NCC) to state or regional environmental offices to assist them in determining where to use toxicity testing, in interpreting the results, and in setting discharge limits. This data base was designed collaboratively by the Environmental Research Laboratory-Duluth (ERL-D) of the Office of Research and Development and the Permits Division of the Office of Water.

DATA ACQUISITION

Data for CETIS are obtained from both published papers and from unpublished results of tests conducted by state or regional environmental offices.

DATA ENCODING AND ENTRY

These data are evaluated by trained reviewers, and selected information is encoded onto data record forms. The data are entered into data files on the PDP 11/70 computer at ERL-D. The data files are proofread and checked to insure they accurately reflect the test data.

ERL-D CETIS personnel transmit data to the IBM computer system at NCC. Incoming CETIS data are cross-referenced with corresponding data from the Industrial Facilities Discharge (IFD) file using In-House Software (IHS). IFD is linked to the United States Geological Survey river gage level file, GAGE, by way of the hydrologic network file, REACH. Consequently, cross-referenced information from the IFD, REACH and GAGE files are included in the

IHS CETIS data base. The cross-referenced information is proofread and edited by ERL-D CETIS personnel prior to inclusion in the IHS CETIS data base.

DATA RETRIEVAL

The CETIS Retrieval System allows users with an account at NCC to select the following template retrieval reports: 1) industrial report, 2) receiving water or area report, 3) test report, 4) test species report, 5) effluent treatment report, and 6) total data listing report. The user can also design and implement specific retrievals to obtain data from CETIS.

USING THE CETIS RETRIEVAL SYSTEM

The CETIS retrieval system is an interactive TSO CLIST program that prepares and submits batch IHS retrieval requests. Several different types of reports are available. Within each report type are options for selecting and sorting records and for formatting outputs. Table 1 summarizes the CETIS report specifications.

The program is useful for retrieving large quantities of data from CETIS. Further analysis of retrieval data can be accomplished by specifying the SAS format output which is saved on disk storage. The data can then be analyzed using SAS.

Because the program submits a batch request, it may take several hours or overnight to generate the reports requested. Job turnaround time can be shortened by selecting a high priority number for the job. However, computer cost is directly related to job priority.

Users may also design their own retrieval specifications and output format by using IHS directly without going through the CETIS retrieval program.

ACCESSING CETIS

It is assumed that the user is familiar with the basic operation and use of TSO on the EPA NCC IBM computer. If not, the user should contact EPA User Support (FTS/629-7862 or 919/541-7862) for further information. The "NCC-IBM User's Guide" and the "TSO User's Guide" may also be obtained from EPA User Support.

Different types of accounts and phone connectors require slightly different logon procedures. Usually, an account number and password are all that are required. After entering the CETIS retrieval program, you will also have to enter the number of the remote printer (station id) where the output will be sent.

HELP

General questions regarding CETIS may be directed to the CETIS Coordinator, U.S. EPA Environmental Research Laboratory, 6201 Congdon Boulevard, Duluth, MN 55804.

Questions about the retrieval program and IHS should be directed to the STORET Support Group (WH-553), U.S. EPA, 401 M Street SW, Washington, DC 20460 (FTS/382-7220 or 202/382-7220).

The following CETIS data base documentation may be purchased from the National Technical Information Service (U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22151):

SAMPLES

An example of a typical retrieval session and sample outputs (Appendix A) for the various report types follows:

To begin a retrieval:

- LOGON to TSO using your user id and password.
- Type: EX 'GDOETDB.CLIST(RETRIEVE)'

1. The first input required is your station id number.

ENTER YOUR 3 DIGIT STATION ID

EXAMPLE: 013

ENTER STATION ID: NNN (CR)

Type: NNN (CR) where NNN = your station id and (CR) = a carriage return

2. Choose the type of report you want.

SELECT THE TYPE OF REPORT YOU WISH TO OBTAIN BY NUMBER.

1. INDUSTRY REPORT
2. RECEIVING WATER OR AREA REPORT
3. TEST REPORT
4. TEST SPECIES REPORT
5. EFFLUENT TREATMENT REPORT
6. TOTAL DATA LISTING FOR UP TO 8 REFERENCES
7. GO BACK TO TSO COMMAND MODE

ENTER (1-7): 1 (CR)

Your response would be entered after the colon. We chose the industry report.

3. Choose your select option.

SELECT YOUR OPTION BY NUMBER.

1. SELECT AN INDUSTRY CATEGORY FROM A MENU
2. SELECT SIC CODES (UP TO 15)

ENTER (1 or 2): 1 (CR)

Your response would be entered after the colon. We chose to select an industry category.

4. Choose an industry category number.

SELECT YOUR INDUSTRY CATEGORY BY NUMBER.

- | | |

ENTER (1-27): 3 (CR)

Your response would be entered after the colon. We chose to get information on the coal mining industry.

5. Choose your sort option.

CHOOSE HOW YOU WANT THE REPORT SORTED.

1. SIC CODE / STATE
2. STATE / SIC CODE

ENTER (1 or 2): 2 (CR)

Your response would be entered after the colon. We chose to get the information sorted by state abbreviation and by SIC codes within those states.

6. Choose the format option for your retrieval.

SELECT YOUR FORMAT OPTION BY NUMBER.

1. BRIEF FORMAT
2. EXPANDED FORMAT
3. SAS FORMAT DISK FILE AND PRINTOUT

ENTER (1-3): 2 (CR)

Your response would be entered after the colon. We chose the expanded format.

Note: The SAS format will be available by October, 1984.

7. Choose the type of output you would prefer.

SELECT YOUR REPORT CRITERIA BY NUMBER.

1. PRINTED REPORT ONLY
2. PRINTED REPORT AND DATA SAVED ON DISK

ENTER (1 or 2): 1 (CR)

Your response would be entered after the colon. We chose to get the printed report only.

8. Choose the job priority. Keep in mind that job priority correlates directly with the cost of each report.

ENTER THE PRIORITY YOU WANT THIS JOB TO RUN AT.
PRIORITY = 2 IS NORMAL.

5 IS THE HIGHEST.
1 IS THE LOWEST.

ENTER (1-5): 3 (CR)

Your response would be entered after the colon. We chose a job priority of three.

9. Wait. The CETIS retrieval system is compiling your request and submitting it as a batch job.

A BATCH RETRIEVAL IS NOW BEING ASSEMBLED. WAIT WHILE THE SYSTEM PROCESSES YOUR REQUEST.

YOUR BATCH RETRIEVAL IS SUBMITTED.

PLEASE TAKE NOTE OF THE JOB NUMBER ENCLOSED IN PARENTHESES FOR FUTURE REFERENCE.

The job number is the number that will be used for identification purposes when the retrieval is in the queue and when the retrieval is printed.

11. Choose to continue with another retrieval or stop the CETIS retrieval system.

WOULD YOU LIKE TO SUBMIT ANOTHER RETRIEVAL?

ENTER (Y OR N): N (CR)

ENTERING TSO COMMAND LEVEL ...

READY

You would enter your response after the colon. If you had chosen yes (to continue with more retrievals), the CETIS retrieval system would return you to selection of report type (see #2 of this section). By choosing not to continue, we were returned to the TSO command level.

11. When you are finished creating retrievals, the output can be printed at your remote site. If you created a disk file using the CETIS retrieval system, you can use that file with other programs for analysis.

Appendix A

CETIS RETRIEVAL SYSTEM EXAMPLES

The following section contains examples of each report option in a brief and expanded format. A unique set of data elements are retrieved from the IHS CETIS data base for each report option (refer to Appendix B for a description of the CETIS data elements). The SAS format output examples are for viewing purposes only. The NCC-IBM, SAS package utilizes the disk file which is generated. This disk file contains no headings or column labels and all the data for a record is on a single line.

CETIS DATA ELEMENTS

The following list of data elements has been excerpted from the CETIS Project Description, Guidelines, and Procedures documentation; the complete documentation may be obtained from NTIS (see page 3). Data elements which are cross-referenced with the IFD, REACH and GAGE IHS data files at NCC are denoted by an asterisk. Further information about these cross-referenced elements may be obtained from the Monitoring and Data Support Division, U.S. EPA, Washington, D.C. 20460 (FTS/382-7046 or 202/382-7046).

Unavailable or not applicable information is denoted by blank spaces on printouts from the IHS CETIS data base.

FACILITY INFORMATION

1) REFERENCE NUMBER

Consists of a 4-letter prefix assigned by ERL-D indicating the organization that is responsible for the coding, a 5-digit sequence assigned by the encoder identifying the number assigned to each report, and a 3-digit suffix assigned by the encoder to uniquely identify multiple references from a single paper. Any change in data elements 2-6 requires a new reference number, and any change in data elements 11-14 requires a new 3-digit suffix.

Example:

<u>M</u> <u>N</u>	<u>E</u> <u>D</u>	<u>0</u> <u>0</u> <u>0</u> <u>1</u> <u>5</u>	<u>0</u> <u>0</u> <u>0</u>
State Code	Coded at ERL-D	Assigned Number	3-Digit Suffix

*2) NPDES NUMBER

Direct discharger (receiving facility) NPDES number.

*3) INDIRECT SOURCE/INDIRECT SOURCE NUMBER

A yes (Y) or no (N) indicates if the test data refers to an indirect discharge facility. If yes, the indirect source number is given.

*4) INDIRECT DISCHARGER FACILITY NAME OR TYPE

If the facility name is unknown, the type of facility (e.g., textile mill) is indicated.

*5) DIRECT DISCHARGER FACILITY NAME OR TYPE

If the facility name is unknown, the type of facility (e.g., textile mill) is indicated.

*6) DIRECT DISCHARGER LOCATION

ADDRESS

CITY

COUNTY (3-digit county code (obtained from the STORET User's Handbook, second edition)

STATE (State (see Appendix C) or Canadian province)

ZIP OR COUNTRY (zip code or country if foreign)

*7) FACILITY SIC CODES

Up to five 4-digit codes identifying the type of discharging industry (see Appendix D).

EFFLUENT/RECEIVING WATER INFORMATION

*11) DIRECT DISCHARGER PIPE NUMBER

NPDES outfall pipe number.

INDIRECT DISCHARGER PIPE NUMBER

Pipe number assigned by IFD.

12) EFFLUENT TREATMENT

Up to 7 codes for treatment processes employed by the facility prior to effluent discharge (see Appendix E).

14) DISPOSAL

S = facility discharges to surface water (e.g., stream, lake, reservoir)
O = facility disposes of its waste in some other manner (e.g., evaporation, lagoon or pond, septic tank, underground well)

***15) DISCHARGE TYPE/INDIRECT DISCHARGE TYPE**

Flow type for the direct and indirect dischargers.

C = non-contact cooling water

P = process water (e.g., mine drainage, wash down, filter backwash, ash pond, transport water, or if the SIC code = 4952, sanitary waste)

B = both process and cooling water (e.g., contact cooling water, boiler blowdown)

O = other (e.g., storm water runoff, or if the SIC code ≠ 4952, sanitary waste)

***16) DISCHARGE SIC CODES**

Up to five 4-digit codes for each pipe (see Appendix D).

***17) RECEIVING WATER NAME**

MAJOR/MINOR BASIN

Refer to Appendix F for major/minor basin codes.

***18) REACH NUMBER**

8-digit catalog unit and 3-digit segment number identifying the stream reach.

*19) MEAN ANNUAL FLOW

Flow in cfs units.

Q7-10 LOW FLOW

Flow in cfs units.

REVIEWER NAME/CODING DATE INFORMATION

REVIEWER NAME

CODING DATE

TEST DATA INFORMATION

TEST NUMBER

Test numbers begin sequentially with 1. Any change in sections 20-80 requires a new test number. If data elements 20-80 remain constant, but section 90 changes (e.g., LC50s given at multiple durations for one bioassay), then the same test number is kept.

SAMPLING INFORMATION

21) SAMPLE COLLECTION DATE AND TIME

Date and time at which sampling began as YY/MM/DD and HHMM.

22) SAMPLE TYPE

Composite (P), Continuous (C), or Grab (G).

23) SAMPLING LOCATION

End of treatment (E), or Different (D).

24) WASTE TYPE

Actual (A), Spiked (K), or Synthetic (S).

25) DAILY AVERAGE FLOW AT SAMPLING TIME

Flow unit codes:

1 = mgd
2 = 1000 gpd
3 = cfs
4 = m³/d

5 = 10⁶ l/hr
6 = 1/min
7 = gal/min

TOXICITY TEST INFORMATION

31) TEST DATE AND TIME

Date and time at which the bioassay began as YY/MM/DD and HHMM.

32) TESTING ORGANIZATION

College/University (C), U.S. EPA (E), Local (L), National (N),
Private (P), State (S), or Different (D).

33) EXPOSURE TYPE

Diet (D), Flow-through (F), Renewal (R), or Static (S).

34) RESIDUE ANALYSIS

Tissue analysis conducted? (Y or N)

35) BIOASSAY TYPE - 1

Acute (A), Life cycle (L), or Partial life cycle (P).

36) BIOASSAY TYPE - 2

Complete (C) or Screen (S).

TEST WATER INFORMATION

Test water values are reported if given. Otherwise, for all parameters, excepting temperature, diluent/effluent values are used and denoted as such in Remarks. Chemical data is reported only for the length of time reported in data element 91 (i.e., test duration).

41) DISSOLVED OXYGEN

Units in mg/l (M), percent (%), or saturation (S).

42) PH

43) TEMPERATURE

Units in °C.

44) ALKALINITY

Units in mg/l CaCO₃.

45) HARDNESS

Units in mg/l CaCO₃

OTHER WATER PROFILE INFORMATION

Analyses of water/wastewater constituents (Y or N).

51) ANIONS

52) METALS

53) NONMETAL CATIONS

54) ORGANICS

55) OTHER ANALYSES

TEST ORGANISM INFORMATION

61) SPECIES

5-digit code (see Appendix G)

62) LIFESTAGE

ALEV - alevin	FRY - fry	YNG - young
ADLT - adult	INST - instars	YRLG - yearling
EGG - egg	JUV - juvenile	ZOEA - zoea, zoeal
EGGE - eyed egg	LARV - larval	stages
EGGF - fertilized egg	NEON - neonate	
EMBR - embryo	NYMP - nymph	
FING - fingerling	UNYR - underyearling	

63) AGE units in days (D), hours (H), weeks (W), months (M), or years (Y)

64) WEIGHT

Units in grams

65) LENGTH

Units in millimeters

66) SOURCE

Cultured (C), Field-Collected (F), Hatchery (H), or Different (D)

67) ACCLIMATION TIME

Time in dilution water prior to test. Units in days (D), hours (H), or weeks (W).

DILUTION WATER INFORMATION

71) SOURCE

A = other
B = brackish
C = chlorinated tap
D = dechlorinated tap
G = spring
L = lake
M = marine, sea

P = pond
R = reconstituted
S = stream, river, brook
T = unchlorinated tap
W = well
X = distilled

72) PRETREATMENT

1 = none
2 = pH adjustment
3 = hardness adjustment
4 = dissolved oxygen adjustment
5 = temperature adjustment
6 = salinity adjustment
7 = solids removal
8 = phosphate removal
9 = sulfate removal
10 = ammonia removal

11 = deionization (Cu, Pb, Zn, etc.)
12 = defluoridization
13 = dechlorination
14 = carbon filtered
15 = filtered
16 = de-supersaturated
17 = neutralized
18 = autoclaved
98 = not applicable
99 = unknown

TEST METHOD INFORMATION

81) CONTROL QUALITY

S = satisfactory, if <10 percent of the controls die/are affected or
if the control mortality/effect is statistically accounted for by
standard methods.

N = not satisfactory, if more than 10 percent of the controls die/are
affected and are not statistically accounted for or if no
controls are used.

I = indeterminate, if insufficient information is provided for
assessment.

82) STATISTICAL METHOD

1 = Log-Concentration vs. Percent Survival
2 = Litchfield-Wilcoxon
3 = Probit
4 = Logit
5 = Moving-Average
6 = Trimmed Spearman-Karber
7 = Students T-test
0 = unknown, not applicable or other

83) DATA QUALITY CODE

1 = Published papers; e.g., journal articles, EPA reports, and other agency reports, which meet the following criteria:

- Effluent was collected less than 24 hours prior to testing.
The method of collection was reported. Experimental procedures followed published methods.
- Standard test water chemistry data (i.e., D.O., pH, temperature, alkalinity, and hardness) were reported.
- Control mortality/effect was satisfactory (i.e., equal to or less than 10%).
- Statistical methodology used to determine the endpoint was reported.

2 = Published papers which contain satisfactory effluent collection methods and experimental procedures but:

- Standard test water chemistry data (i.e., D.O., pH, temperature, alkalinity, and hardness) were either partial or not reported.
- Control mortality/effect was not reported, was high (>10%) or was high but accounted for statistically.

- Statistical methodology used to determine the endpoint was not reported.

3 = Unpublished reports; e.g., state and Federal agency studies which document experimental procedures and results.

4 = Data sheets which contain the raw test data and include minimal information about experimental procedures.

TEST RESULT INFORMATION

Statistically-derived effect endpoint (see data element 93) values are reported for each test duration. If no effect endpoint is calculated, a sublethal effect (see data element 94) is reported, and a description of the effect is given in the Remarks. Mortalities are reported at the earliest time and lowest concentration at which 100% mortality occurs.

If mortality is not 100%, the latest time and highest concentration tested is reported. For other effects (e.g., abundance, behavior, and population growth), the percent change from the control or pretreatment at the lowest concentration and earliest time is reported along with the significance level (if calculated).

A total data listing report will contain the word "RESK" just before data element 91. RESK numbers are a bookkeeping procedure to denote multiple durations, concentrations, and effect endpoints for a test (e.g., the RESK numbers 1, 2, 3, and 4 denote 24, 48, 72, and 96 H LC50s for a single test, respectively).

91) TEST DURATION

Units in hours (H), days (D), weeks (W), months (M), or years (Y)

92) CONCENTRATION

Test endpoint concentrations as g/l (G), mg/l (M), µg/l (X), % effluent (%), or different (D). The statistical range (usually a 95% confidence interval) is reported if given.

93) EFFECT ENDPOINT

EC50 - Median effect concentration at which an effect occurred to 50% of the test organisms within a given length of time.

EC50AB - Abnormalities

EC50GR - Growth

EC50IM - Immobilization

EC50RE - Reproduction

LC50 - Median concentration lethal to 50% of the test species within a given length of time.

LT50 - Median lethal time for 50% of the test organisms.

94) EFFECT

ABD - Abundance: number of organisms of the same species has changed within a population

ABN - Abnormalities: physical deviations observed from normal control organisms

AVO - Avoidance: organism avoids or is attracted to certain effluent concentrations

BEH - Behavior: quantifiable change in activity which arose from exposure to internal or external stimuli

BIO - Biochemical Effect: physiochemical reactions (e.g., change in glycogen levels) occurring within the organism on a cellular level

CYT - Cytogenetic Effect: genetic mutation on a cellular level

DIS - Disease: impairment of vital functions observed as a result of effluent concentrations, specific infective agents, inherent organism defects, or a combination of these factors

ENZ - Enzyme Effect: deviations in enzyme activity

FCR - Food Consumption Rate: quantifiable change in rate of food consumed by test animal

GRO - Growth: measured increase of animal size in length and/or weight

HAT - Hatchability: percent hatch

HEM - Hematological Effect: changes in the blood parameters observed

HIS - Histological Effect: indicated by the presence of lesions or other damage to tissues

MOR - Mortality: percentage of dead organisms

MOT - Motility: change in locomotor behavior

OC - Oxygen Consumption: change in O₂ uptake in animals

PGR - Population Growth: increase or decrease in growth of an algal population (e.g., change in cell number)

POP - Population: change in the species composition or diversity

PSE - Photosynthesis Effect: change in plant productivity

RES - Respiratory Rate: change in respiratory rate of vertebrates, invertebrates

RSD - Residue: toxicant uptake by tissues of test organism

SS - Swimming Speed: change in swimming speed

STR - Stress: observed physiological tension in animals or plants

TMR - Tumor Occurrence: presence of a mass of abnormal tissue

REMARKS

Remarks are coded with the number of the data element to which they refer, plus a third digit to permit multiple comments for a single data element. For example, if the Remark refers specifically to the control

mortality (#81) the first Remark would be numbered 810, any additional remarks would be numbered as 811, 812, etc. For standard abbreviations used in Remarks, refer to Appendix H.

For the following common Remarks, these codes are used:

200/ sampler used//

300/ photoperiod//

400/ aeration, salinity (units as ppt instead of o/oo), carrier or solvent (in what amount)//

600/ fed or unfed (during test)//

800/ reference cited including any deviations from cited methods//

900/ erratic mortality and/or stress//

MAJOR/MINOR BASIN CODES¹

The following contains complete listings of the major and minor river basin codes which the EPA has defined for the waterways within the United States. There are 23 major river basins defined within the U.S., with a variable number of minor basins defined within each major basin. The listings are in order by major basin code, and minor basin code within major basin.

Major River Basins
