

Region 3 GPRA Baseline RCRA Corrective Action Facility**General Chemical Corporation**

**6300 Philadelphia Pike
Marcus Hook, PA 19601
Congressional District 6
EPA ID #: PAD990823742
Last Updated 01/04/2006**

Current Progress at the Site

In September 2000 EPA issued an Administrative Order to the General Chemical Corporation (GCC), which requires a facility wide investigation and cleanup of the former GCC facility in Claymont, DE. The Administrative Order was issued pursuant to Section 3008(h) of the Resource Conservation and Recovery Act (RCRA). The requirements of the order include:

- Interim Measures/Stabilization to achieve the initial goal of controlling ground water releases and controlling current human and ecological exposure to contaminated media;
- RCRA Facility Investigation (RFI) if warranted, to provide more in-depth information about Solid Waste Management Units (SWMUs), and;
- Corrective Measures Study (CMS) if warranted, to propose final cleanup actions needed.

GCC, with EPA and State oversight, has completed a phase I investigation of the facility. This included the collection of groundwater and soil samples for 28 SWMUs. The data resulting from the phase I field activities will be used to evaluate and characterize the nature and extent of potential contamination. A phase II sample collection is anticipated for the Spring of 2006. EPA and the Delaware Department of Natural Resources and Environmental Control will oversee all investigations, interim actions and cleanup activities conducted at the GCC facility.

As a former owner of the property, Allied Chemical Corporation (now known as Honeywell International, Inc.), is conducting an investigation of 8 SWMUs located on parcels of property that are contiguous to the General Chemical facility and currently owned by Honeywell. A Phase II field investigation for the Honeywell parcels was completed in the Fall of 2004. The data from this investigation is currently being evaluated. Additional field work is anticipated in the Spring of 2006.

Site Description

The former General Chemical facility also known as the Delaware Valley Works ("DVW") is a chemical manufacturing plant located in Claymont, New Castle County, Delaware ("Facility"). The Facility consists of approximately one hundred acres, which is divided by Route 13 into two separate plants, referred to as the "DVW North Plant" and "DVW South Plant". Two-thirds of the DVW North Plant is located in Pennsylvania with the remainder situated in Delaware. Virtually all of the DVW South Plant is located in Delaware. A variety of inorganic chemicals and pesticides were manufactured at the Facility during different periods since it began operation in the very late 1890's. General Chemical

acquired the Facility from Allied Signal in 1986. Allied Signal retained ownership of several contiguous parcels of property upon which chemical operations were conducted and continue today (the "Honeywell Property").

In October 2002, General Chemical and certain of its affiliates filed a voluntary petition in the United States Bankruptcy Court for the District of Delaware for reorganization relief. General Chemical subsequently emerged from bankruptcy under an approved Reorganization Plan in October 2003. As a result of the finalized Reorganization Plan, GCC assumed cleanup responsibility for most of the soils in the DVW South Plant and Honeywell assumed responsibility for cleanup of the remainder of the DVW.

Site Responsibility

RCRA Corrective Action activities at the GCC facility is being conducted under the direction of EPA Region 3 with assistance from the State.

Contaminants

Metals and volatile organic compounds are the main constituents of concern found in groundwater at the site.

Community Interaction

The facility is located within the cities of Claymont, DE and Marcus Hook, PA. Plans documenting EPA's preferred cleanup alternatives will be made available, by public notice, for members of the community to review and comment.

Institutional Controls

Institutional Controls, if required, will be determined at the time of remedy selection.
