INTRODUCTION

This publication is a Cumulative Supplement to EPA's *Toxic Substances Control Act Chemical Substances Inventory: Initial Inventory*, which was published in May 1979. The Initial Inventory and the Cumulative Supplement constitute the Revised Inventory representing a total of 55,103 chemical substances including 686 generic names generated for chemicals with confidential identities.

Section 8(b) of the Toxic Substances Control Act (TSCA), Public Law 94-469, requires the Administrator of the U.S. Environmental Protection Agency to identify, compile, keep current and publish a list of chemical substances which are manufactured, imported, or processed for commercial purposes in the United States. In accordance with this requirement, the Office of Pesticides and Toxic Substances (OPTS) promulgated the Inventory Reporting Regulations (40 CFR Part 710) in December 1977, which set into motion a two-phase reporting period. The first phase, January 1 - June 1, 1978, affected manufacturers and importers of chemical substances in bulk form. This resulted in the publication of the Initial Inventory in May 1979 listing 43,641 chemical substances reported during the first reporting period. Another 3,000 chemical substances which were received too late for inclusion in the May version or had been defined inadequately during the first reporting period were listed in an October 1979 publication, *Toxic Substances Control Act Chemical Substances Inventory: Supplement I.*

Publication of the Initial Inventory marked the beginning of a 210-day second reporting period, June 1 - December 31, 1979, during which processors and users of chemical substances and importers of chemical substances as part of mixtures or articles were asked to report. The present publication, the Cumulative Supplement, lists 11,462 chemical substances including those which were (a) listed in Supplement I, (b) reported during the second reporting period; (c) reported too late for inclusion in Supplement I; and (d) inadequately defined for inclusion in Supplement I.

The Inventory defines what chemical substances are "existing" in U.S. commerce for purposes of implementing the Toxic Substances Control Act. Chemical substances which are not included on the Inventory are considered "new" and are therefore subject to premanufacture notification requirements under Section 5 of TSCA. As a major building block of an information base, the Inventory provides valuable support for assessing human health and environmental risks posed by chemical substances. It is not a list of toxic chemicals, since toxicity was not a criterion used in determining the eligibility of chemical substances for inclusion on the Inventory.

The Inventory does not purport to identify all chemical substances currently in U.S. commerce, since some such substances are specifically excluded by statute or regulation (40 CFR Part 710). Additionally, no printed version of the Inventory can be completely up-to-date since it is continually subject to change. New substances which have completed premanufacture review under Section 5 and are being manufactured or imported will be added to the Inventory. A few substances which have been included on the Inventory may be deleted if the Agency, after a careful review of the Inventory, decides that certain substances should not have been reported. Furthermore, information regarding chemical identity which has been claimed confidential cannot be included on the published version of the Inventory. Recognizing these limitations, the Agency maintains and keeps current a Master Inventory File which includes all eligible substances that have been reported and which is continually updated as new information becomes available. After the publication of this Cumulative Supplement, the Agency may publish updates to the printed Inventory as it deems appropriate.

The Cumulative Supplement does not contain all eligible chemical substances that have been reported since the publication of the Initial Inventory. Substances which are still in process include those that (a) were reported during the initial reporting period as Form C submissions containing substances for which generic names have to be developed for confidential identity masking; (b) are trademark reaction products for which the chemical identities of the trademark substances need further clarification; (c) are trademark substances reported during the second reporting period as Form E submissions; (d) are submissions containing non-confidential substances with yet-to-be-resolved problems; and (e) were received too late for inclusion in the Cumulative Supplement. These substances are, nevertheless, included in the Agency's Master Inventory File and their names (or generic names if identity is confidential) will be published as soon as the aforementioned problems have been satisfactorily resolved.

For submitters who cannot locate their reported substances on the Revised Inventory, i.e. the Initial Inventory and the Cumulative Supplement, the Agency is providing an Inventory Inquiry Service. A submitter may ask EPA to determine the status of any submission in question and confirm that it has been included in the Agency's Master Inventory File. Usually the Agency will provide that confirmation within two weeks. All requests must be made in writing and be accompanied by a legible copy of the Inventory Reporting Form as it was submitted. Special care should be taken if the original reporting forms contained TSCA Confidential Business Information. Requests should be addressed to:

A person who intends to manufacture or import a chemical substance that does not appear on the published Revised Inventory or which is not included by a specific name but falls within one of the published generic name categories may contact EPA to determine whether the substance is included in the Agency's Master Inventory File, thus confirming whether the substance is, in fact, new. The Agency will provide a response only if the person who submits the inquiry is able to demonstrate a bona fide intent to manufacture or import the substance for a commercial purpose not exempted under TSCA. The exact procedures for establishing a bona fide intent to manufacture or import are discussed in detail in the Premanufacture Notification Requirements and Review Procedures (44 FR 2242). The Agency also provides user assistance to persons who have questions regarding the printed Inventory. Persons desiring assistance in using the Revised Inventory or interpreting regulations related to it may call the OPTS Industry Assistance Office at (800) 424-9065 (in Washington, D.C., call 554-1404), or write to:

Like the Initial Inventory, the Cumulative Supplement lists, in ascending CAS Registry Number order, the preferred names of chemical substances covered by this publication. A dagger (†) denotes chemical substances that are defined more precisely in Appendix A: Chemical Substance Definitions. Appendix B: Confidential Chemical Substance Identities, lists generic (less specific) names of chemical substances that are included in the Master Inventory File, but whose identities have been determined by the Agency to merit confidential treatment. These names were developed according to procedures specified in the EPA publication, *Guidelines for Creating Proposed Generic Names for Confidential Chemical Substance Identities for the TSCA Inventory*. Each generic name actually describes a category of chemical substances. However, of the substances covered by a particular generic name, only those actually reported for the Inventory are considered to be included.

The Agency has also prepared three indices to the Cumulative Supplement for use in conjunction with, but not as a substitute for, the Supplement. The Substance Name Index, the Molecular Formula Index, and the UVCB (Chemical Substances of *U*known or *V*ariable Composition, *C*omplex Reaction Products, and *B*iological Materials), provide alternate means of finding substances that are listed on the Inventory.
