EPA/600/SR-92/141 December 1992

Research and Development

## **Project Summary**

## Recommended Operating Procedure No. 56: Collection of Gaseous Grab Samples from Combustion Sources for Nitrous Oxide Measurement

Jeffrey V. Ryan and Shawn A. Karns

This recommended operating procedure (ROP) has been prepared for use in research activities conducted by EPA's Air and Energy Engineering Research Laboratory (AEERL). The procedure applies to the collection of gaseous grab samples from fossil fuel combustion sources for subsequent analysis of nitrous oxide. This procedure details only the grab sampling methodology and associated equipment.

This Project Summary was developed by EPA's Air and Energy Engineering Research Laboratory, Research Triangle Park, NC, to announce key findings of the research project that is fully documented in a separate report of the same title (see Project Report ordering information at back).

ROPs describe non-routine or experimental research operations where some judgment in application may be warranted. ROPs may not be applicable to activities conducted by other research groups and should not be used in place of standard operating procedures or EPA-approved test methods. Use of ROPs must be accompanied by an understanding of their purpose and scope.

Jeffrey V. Ryan and Shawn A. Karns are with Acurex Environmental, Research Triangle Park, NC 27709.

William P. Linak is the EPA Project Officer (see below)

The complete report, entitled "Recommended Operating Procedure No. 56: Collection of Gaseous Grab Samples from Combustion Sources for Nitrous Oxide Measurement," (Order No. PB92-216 928/AS; Cost: \$17.00; subject to change) will be available only from:
