

Water Quality Funding Sources for Schools

**A Resource for
K-12 Schools
and Child Care
Facilities**

Introduction

The US Environmental Protection Agency (EPA) developed this guide to help schools and child care providers identify potential funding sources for water quality related projects. In addition to water quality projects, this guide can also be used to identify potential funding sources for a variety of programs related to children's health and environment.

Background

EPA is concerned about the potential for elevated lead levels in the drinking water in schools and child care facilities. In response to this concern, EPA created a suite of materials¹ to help schools and child care facilities implement programs and policies to reduce children's exposure to lead in drinking water. However, implementing a drinking water quality program that includes testing, remediation, and outreach activities can be costly. This guide provides potential funding resources to help school and child care facilities implement drinking water quality programs.

The Benefit of This Guide

To help schools and child care facilities with the grantseeking process, EPA has compiled information on 65 funding sources that support schools and child care initiatives related to the environment and public health. This resource includes information on organizations with a history of supporting school activities, environmental programs, and children's health protection initiatives.

How This Information Was Compiled

This guide provides the most current and accurate information available at the time of publication. This information was compiled through extensive research and analysis of funding information collected from philanthropists with relevant funding priorities. Potential donors were identified primarily through Internet searches of funding directories and information published by foundations, non-profit organizations, and corporations. The researchers systematically excluded donors that did not support schools or child care facilities as well as donors without funding priorities related to water quality programs. Organizations were selected for this guide based only on the criteria described above. **This guide is not a comprehensive list of funding opportunities for environmental initiatives and inclusion in this guide does not constitute endorsement by EPA.**

How to Use This Guide

This guide includes information on the funding priorities, grant-making history, available funding, eligibility criteria, and geographic focus of each donor. For each listing, grantseekers will find information on whether a particular donor has a state-specific or national focus under National/State Focus. If the donor focuses on a specific county or metropolitan region, this information will be listed under Regional Focus. Information about specific school districts or types of schools emphasized by a donor can be found under School Focus. The index contains a list of national funding sources (p. 71) and a listing of funding sources by state (p. 72). Schools and child care facilities should review the funding sources listed under their state as well as the national funders to identify potential sources of support for their programs. Because information on funding priorities and contact information may change frequently, it is important for schools and child care providers to confirm the information provided when they seek funding.

¹ For more information on EPA's 3Ts for Reducing Lead in Drinking Water in Schools and Child Care Facilities suite of materials please visit www.epa.gov/safewater/schools.

What are the Funding Sources in This Guide?

The majority of funding sources listed in this guide are foundations that provide support to a specific community, state, or region. These foundations have a history of awarding grants to schools and child care programs and many of them focus on environmental and health issues in their grant-making priorities. Some of the foundations have programs explicitly focused on water quality projects in schools. For example, The Virginia Environmental Endowment (p. 65) has a mini-grant program to help public schools in Virginia implement water quality testing, monitoring, and awareness-building activities. Most of the organizations listed here do not have specific grant programs for water quality projects. They were included in this guide because of their focus on improving school facilities or reducing environmental toxins in places where children spend their time. For example, the Peninsula Community Foundation (p. 36) in San Mateo, California has made numerous grants to schools in Northern California for building renovation projects. Such organizations may support water quality programs in schools and child care facilities.

Lead in Drinking Water at Schools and Child Care Facilities

School officials and child care providers need to know if the drinking water that children, teachers, and staff consume contains elevated levels of lead. Exposure to lead can cause serious health problems, particularly for young children. EPA has developed guidance documents to help schools and child care facilities implement simple strategies for managing the risks of lead in their drinking water including:

- Identifying potential sources of lead in their facilities.
- Monitoring their drinking water for elevated lead levels.
- Resolving problems if elevated lead levels are found.
- Communicating about their lead control programs

You can find *The 3Ts For Reducing Lead In Schools: Revised Technical Guidance*, and *The 3Ts For Reducing Lead In Child Care Facilities: Revised Technical Guidance* at <http://www.epa.gov/safewater/schools/guidance.html>

This guide also provides information on national foundations and corporations that have a strong commitment to supporting school and child care improvement initiatives. The national organizations listed here provide funding for environmental health, children's health, and environmental education projects. In addition, these organizations are committed to serving the local communities where their employees and customers live and work. For example, The Home Depot (p. 57) funds school building and refurbishment projects and supports programs that encourage community involvement and volunteering.

Other Funding Sources

EPA has compiled this guide as a helpful tool for schools and child care facilities to find potential donors but it is not an exhaustive listing of funding opportunities. There are other resources available to help identify non-profit, private, and local government funding opportunities not listed in this guide. For example, because there are numerous local government funding sources in each state, it is not possible to list them all here. EPA encourages schools and child care facilities, particularly those that do not find a funding match in this guide, to contact their state and local water authorities and departments of health and education to inquire about technical assistance and funding for water quality programs and other activities.
