1.0 Introduction

1.1 Definition of a Facility.

The Facility Index System (FINDS) is a central and common inventory of facilities monitored or regulated by the EPA, with cross-references to the program office data bases that have additional programmatic information about the facility.

FINDS has adopted and modified the following facility definition from the National Bureau of Standards, Federal Information Processing System (FIPS):

"FACILITY: A locational entity, deliberately established as a site for designated activities, but not primarily for habitation (even though on-site habitation may be necessary to the execution of the primary activities); for example, a college, factory, hospital, military base, national park, office building, or prison."

Since the definition of a facility varies from EPA program to program, the term facility is used in this document. Among EPA programs, the regulated unit may be a smokestack (Clean Air Act), a building or plant (NPDES), or a property (RCRA).

FINDS maintains the programmatic definition by showing the source of the FINDS record, and pointers to the records in the programmatic data base associated with the FINDS record.

1.2 Background

FINDS evolved from a Region II system which provided the region with the names, addresses, locations (including latitude/longitude) and regulating EPA programs for facilities in that region. The Region II system was the basis for a mapping system which displayed these facilities in relation to population centers, fish and wildlife refuges, etc., as well as the medium at risk from the site or facility.

In 1982, the Region II concept was adopted by the EPA Headquarters for application to sites and facilities nationwide. Originally part of the Office of Solid Waste's Hazardous Waste Data Management System (HWDMS), FINDS was used primarily for the assignment of EPA ID's to facilities. It still serves this purpose today.

In 1984, FINDS was separated from HWDMS and implemented as a stand-alone system in ADABAS. This system operated until April of 1988 when an enhanced version eliminated many data elements which were not used, reduced the number of files from 5 to 2, and implemented new online data entry and data base search programs. These enhancements and improvements were documented in the "FINDS System Enhancement Analysis Document", which was distributed for review and comment to headquarters, regions, and interested parties.

An attribute of the enhanced version of FINDS is the capability for access and use by any authorized person. User support and access questions can be directed to the Program Systems Division (PM-218B) at 382-2416. Dan Cirelli of the Program Systems Division is responsible for operation and management of the FINDS.

1.3 Program Overview

To understand FINDS it is important to look at the two major functions of the system:

- o Assignment of EPA ID's to regulated facilities, and
- o Providing a unifying view of regulated facilities.

These functions are both centered around using a unique identifier while allowing for the condition of a facility being regulated and/or tracked by more than one program.

1.3.1 FINDS ID

The FINDS ID is composed of the following information:

- o State Code (e.g., CA)
- o Type of Number (e.g., Dun and Bradstreet Number, GSA number, or a dummy number)

Dun and Bradstreet Numbers (DUNS Numbers) are used when there is knowledge of the institution responsible for the facility, or the General Services Administration (GSA) number is used when the facility is a Federal Facility. Where neither of these conditions apply, a "dummy DUNS" number is assigned.

Of the 262,736 records in FINDS:

- o 152,523 have DUNS Numbers,
- o 5,278 have GSA Numbers, and
- o 104,935 have dummy DUNS numbers

1.3.2 Facilities Contained in FINDS

FINDS maintains information on facilities regulated by Program Offices as manifested in their data systems. FINDS currently maintains pointers to Program Office data systems. These pointers have been updated infrequently; therefore users should be aware of the possibility for less than current information. Table 1.0(a) shows the distribution of FINDS facilities by Program Office and the year of the last update. In the future, FINDS will be updated at a pace consistent with Program Office update cycles.

FINDS can maintain pointers to multiple Program Offices regulating a single facility. Table 1.0(b) shows the distribution of facilities versus number of Program Offices having regulatory authority and responsibilities.

TABLE 1.0(a)
DISTRIBUTION OF FINDS FACILITIES BY PROGRAM OFFICE

Program Office	Data System	Number Records	Yr. Last Update
OSW	HWDMS	170,719	1988
OWEP	PCS	17,744	1983
OA	CDS	48,916	1988
OPTS	FATES	36,265	1984
OERR	CERCLIS	28,821	1988
OLEC	DOCKET	9,211	1988
OW	FURS	6,590	1983
OFA	FFIS	2,826	1988
OTS	CICIS	6,991	1983
STATES *	Various	11,559	1988
		339,783 **	

* Certain Regions enter State-regulated facilities into FINDS.

** Some facilities are regulated by two or more Program Offices.
There are actually 262,736 facility records in FINDS @ 3/88.

TABLE 1.0(b)

DISTRIBUTION OF FACILITIES VS. NUMBER OF REGULATING
PROGRAM OFFICES

Number of Program Offices	Number of Facilities
1	219,250

3	7,707
4	3,473
5	1,824
6	1,062
7	650
8	418
9	271
10	729

2.0 System Overview

2.1 System Description

FINDS is written in the NATURAL programming language to operate on an ADABAS data base containing locational information on facilities regulated by the EPA. It also contains pointers (references) to Agency data bases and Program Offices having regulatory responsibilities over each facility. Currently, there are approximately 260,000 facility records in the FINDS data base.

Each record contains a unique identification number ("EPA-ID") assigned by FINDS Data Analysts located at Regional Offices. These numbers are of three types depending on the type of facility:

1. Industrial, contained in the Dun and Bradstreet "DUNS Universal Numbering System" (DUNS) file,
2. Industrial, not contained in the DUNS file (dummy DUNS),
3. Federal facilities contained in the Office of Federal Activities Federal Facilities Information System (FFIS).

The format for EPA-ID numbers is

	ssx	ddddddddd	
where			
	ss		= state code
	x		= D for DUNS or dummy DUNS numbers or 0-9 for GSA number
	ddddddddd		= 9-digit DUNS, dummy DUNS or GSA number.

Dummy DUNS numbers are further characterized by "98" in position 4 and 5 of the EPA-ID number.

Certain Program Office data bases do not contain EPA-ID numbers. Linkage between FINDS and these data bases is provided by the "SOURCE" and "SOURCE-ID" fields in FINDS which are entered by Regional data analysts. SOURCE refers to the Program Office operating the data base (see p. 4 of Appendix B.) SOURCE-ID is a number used internally by the Program Office to designate the facility. (The format of SOURCE-ID numbers varies; no attempt was made to characterize the number within FINDS.) These two fields have been combined to form a Superdescriptor ("SOURCE-SOURCE-ID") in FINDS to increase retrieval efficiency within FINDS.

2.2 System Operation (see Fig. 2.1(a))

2.2.1 Data Input (Fig. 2.1(b))

There are two methods for input of data into FINDS:

a. Through requests by Program Offices personnel to the Regional Data Analysts for EPA-ID numbers for new facilities.

In this case, the analyst researches the data base to determine that the facility has not been entered into FINDS by another Program Office. If FINDS contains a record for the facility, the SOURCE and SOURCE-ID of the new regulating office are entered into the record. If the facility is not contained in FINDS, an EPA-ID number is assigned and the facility record is entered into FINDS. In both cases, the EPA-ID number is reported to the requesting Program office.

b. Through batch input of facility data received through the "Program Office Reconciliation Process" or from State Offices.

Periodically, the FINDS Data Base Administrator will exercise a module in FINDS which compares facility data in FINDS with equivalent data in the Program Office data base. Facilities not contained in FINDS are identified, assigned EPA-ID numbers if necessary and entered into FINDS.

Certain State environmental offices maintain FINDS-like data bases on STATE computers linked to the EPA communications network. Periodically, this data is retrieved by FINDS for batch input into the system.

2.2.1.1 Automatic Entry of Facility Data

With one exception, data entry into FINDS is done automatically from the on-line DUNS or FFIS data bases. Linkage between FINDS and these data bases are through a STATE-NAME-ZIPCODE key entered via a FINDS screen by the analyst. The screens used for data input are similar to the screen shown on pages 18-19 of the Users Guide. (See also pp 29-34 of the Data Entry Manual.) By comparing addresses of the input record with the alphabetical list generated by the search parameters, the analyst can select the proper record from the DUNS or FFIS file for automatic entry into FINDS.

The exception is assignment of a User Block Number to a facility. In this case the full name, address and other data is manually entered by the FINDS analyst.

Data input is performed solely by Regional Data Analysts and by the FINDS Data Base Administrator.

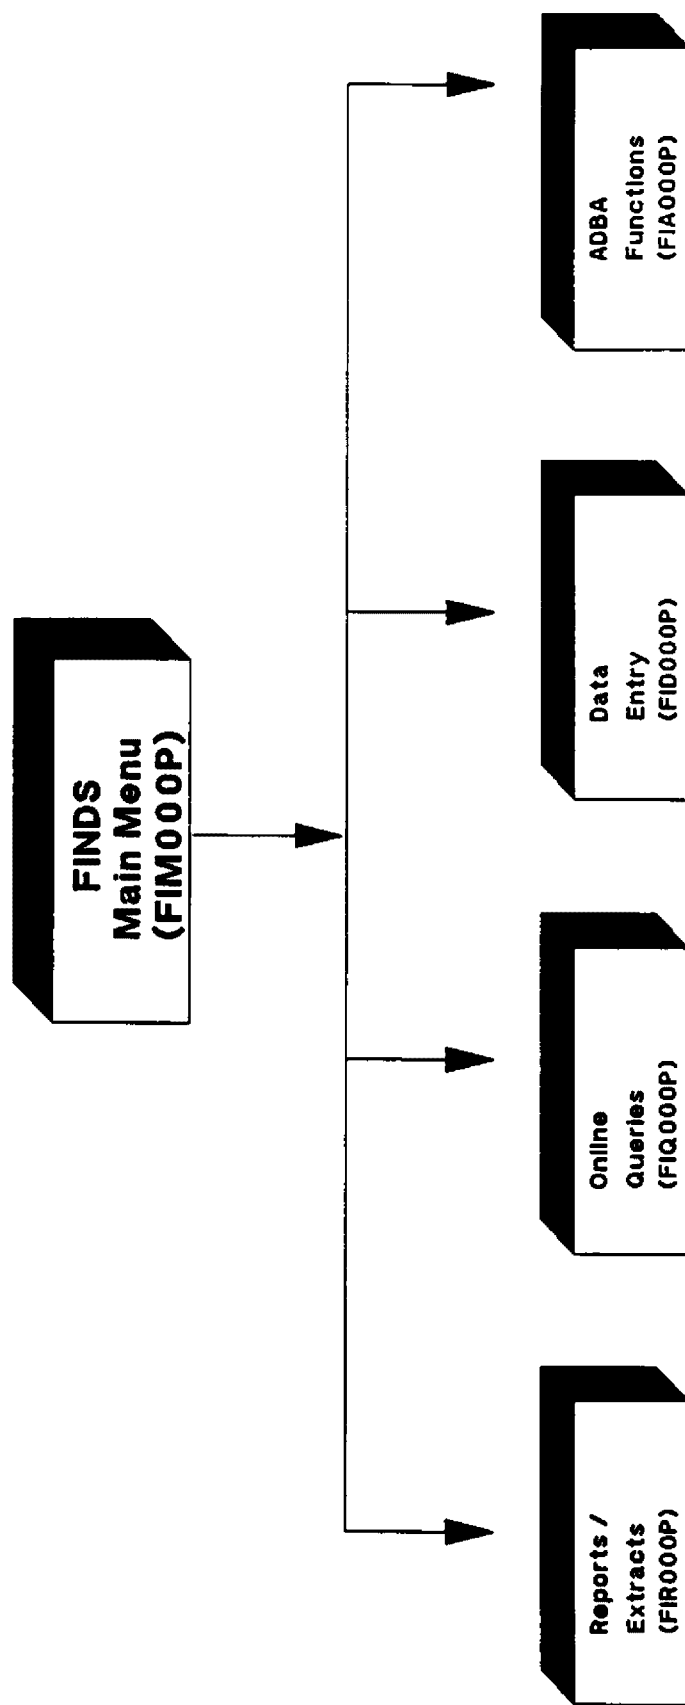

Figure 2.1(a).
Facility Index System (FINDS)
System Structure Chart
Main Menu

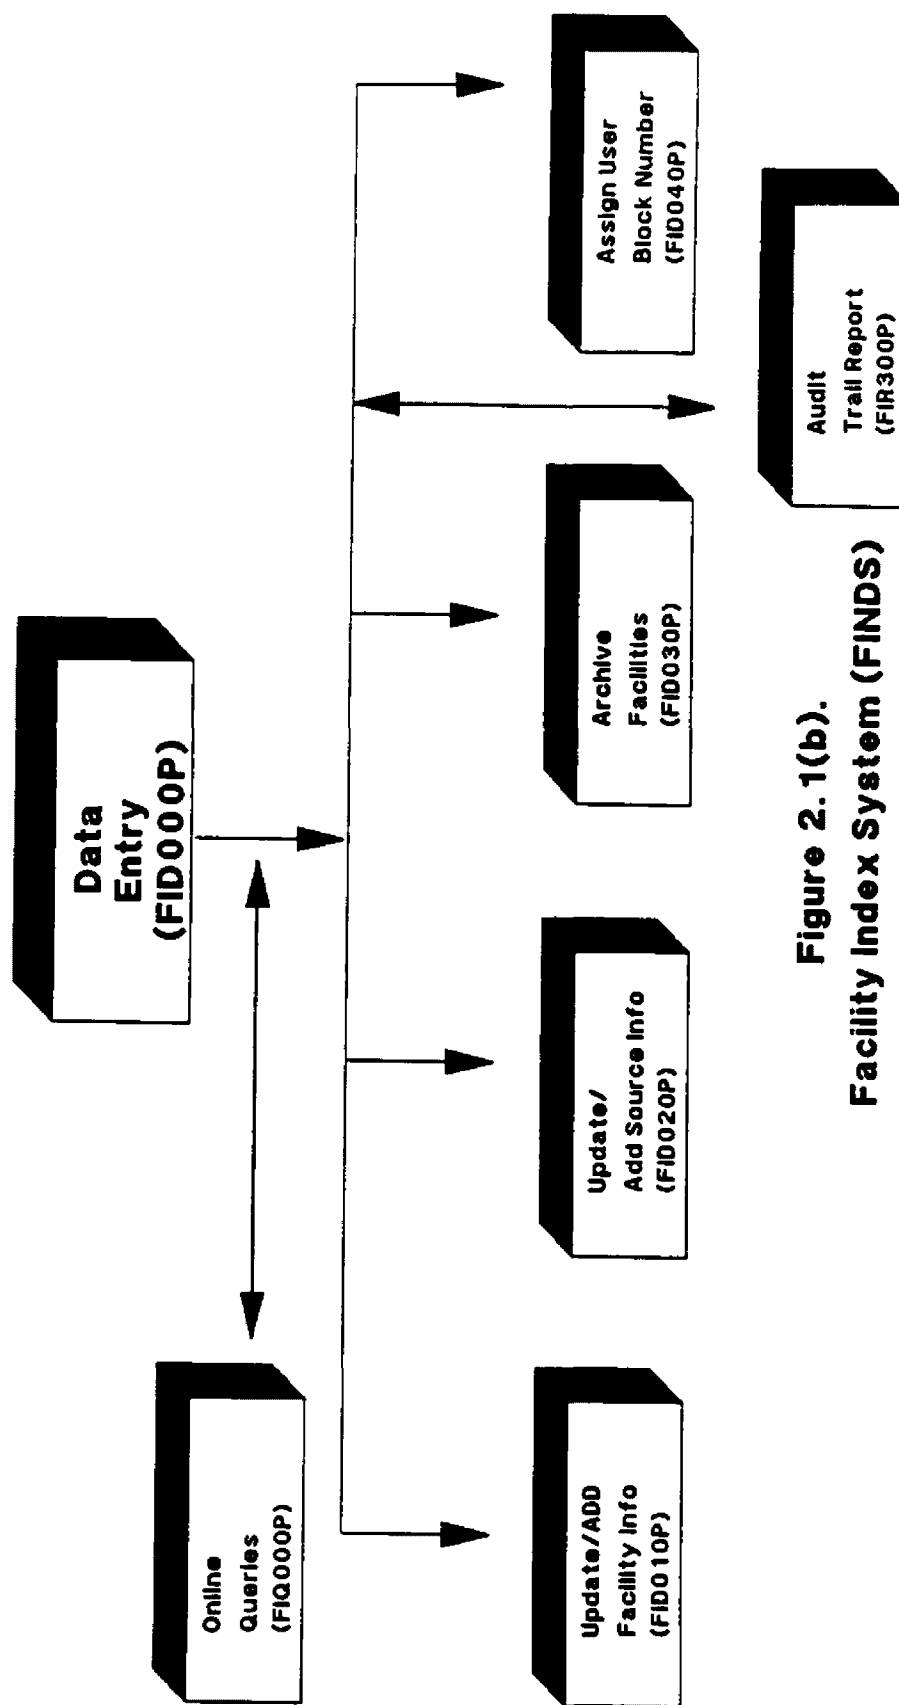

Figure 2.1(b).
Facility Index System (FINDS)
System Structure Chart
Data Entry

2.2.2 Data Retrievals (Fig. 2.1(c) and 2.1(d))

Retrievals from FINDS are of two types: Reports/Data Extracts and On-line. Each type is generated from user responses to screen queries from FINDS.

Reports/Extracts are batch reports on multiple facilities having a common characteristic, such as State, County, Zipcode, etc. These reports/extracts are routed to the user's printer using a FINDS screen which asks for Userid and other parameters required by the RTP facilities. Alternately, this data can be stored as a file for downloading to Personal Computers, Logical Mainframes or other devices in the EPA communications network.

On-line retrievals display individual facility information from the FINDS, DUNS or FFIS data bases. In addition, corporate relationships contained in the DUNS file can be tracked and displayed.

Any registered user of the EPA computer facilities at Research Triangle Park, NC can access and utilize FINDS. Permission of the Data Base Administrator or of NCC is not required.

2.2.3 Data Base Administrator Functions (Fig. 2.1(e))

This module is restricted for use solely by the FINDS DBA. He/she will invoke the various programs when necessary to accomplish the functions shown in Fig. 2.1(e). In addition, he/she will batch update the entire FINDS file with State and other batch input data (this function is in the design stage at this time).

3.0 System Access

The system operates on the EPA Mainframe computer, the IBM 3090, and uses the ADABAS DataBase Management System with its NATURAL programming language.

3.1 Equipment Needed

In order to access the system, the user will need one of the following types of equipment:

- o IBM 3270 or equivalent terminal connected to the EPA Network
- o Display Terminals or PCs with modems to dial in to the EPA Network

3.2 General Operating Procedures

3.2.1 Logging On

1. At the System Introduction Screen, Enter 'M' for menu.
2. At the EPA Telecommunications Network Menu, Enter PCICS.
3. Type your USER-ID, Account, FIMAS-ID, Group, Password and press <ENTER>.
4. At the NEWS Release menu, press PF3. A blank screen will appear.
5. Type 'NSSP' and press <ENTER>.
6. At the Application screen, type 'FINDPROD' for APPLICATION-ID. The FINDS Main Menu will be displayed where you can continue using the system as described in section 4.0.

3.2.2 Logging Off

1. Return to the FINDS MAIN MENU.
2. Press 'PF4' OR 'PF16'
A blank screen will appear.
3. Type 'CSSF LOGOFF' and press <ENTER>.

The system will return to the
Introduction screen.

3.2.3 PFKEYS

A set of Program Function Keys (PF Keys) have been designed into the system to make it easy to go from one menu or screen to another. The PF Keys and the <ENTER> Key are listed and their use is described here.

PF1/13 = HELP

This will bring up a help screen for the screen being processed; Returns to the screen being processed when PF3/15 is pressed.

PF3/15 = PREVIOUS SCREEN

This will return to the previous screen/menu, without updating or adding the record.

PF4/16 = MAIN MENU

This will return to the FINDS Main Menu, without updating or adding the record.

PF5/17 = RESTART LIST

This will restart a list which is being displayed.

PF8/20 = NEXT PAGE

This will give the user the capability to browse forward within a file to find a record to be selected. (No add/updating of data).

<ENTER> KEY (Data Entry Screens)

This will add or update the present record displayed; Brings up the next logical screen for entry or update of more data.

<ENTER> KEY (Selection Screens)

This will copy or display the selected record; Transfers to data entry or display screen as applicable.

3.2.4 Batch Submission (FIZ100M)

Scheduling of batch programs is controlled by a batch submissions function which is invoked whenever selections are made for reports or extracts. The screen on the opposite page is displayed and allows the user to enter parameters as shown.

OPERATING PROCEDURES

1. Enter your ACCOUNT.
2. Enter the REMOTE printer number or laser node number prefixed by the letter 'N' e.g. RMT255 or N7.
3. Enter the BIN (Box) Number assigned to you.
4. Change the TIME and PRIORITY parameters which appear on the screen if desired.
5. Press <ENTER>.

Your job will be submitted. The system will return to the previous menu or screen and the job number will be displayed in the upper left hand corner in the format "JOB##### xxx SUBMITTED" where xxx is your USER-ID.

It is recommended that batch jobs be run during off-peak hours (before 7 AM, EST or after 6 PM, EST). See Figure 5.1 for scheduling/priority.

4.0 Menus, Screens and Reports (Screen, FIM000M)

FINDS is a menu-driven, on-line and batch system. Section 4 gives instructions on how to get the displays, and generate the reports and extracts needed. The menu shown on the opposite page is the initial menu the user will view upon entering FINDS. From here, the user may select one of four functions shown on the screen.

OPERATING INSTRUCTIONS

1. Enter a number between 1 and 4 to obtain one of the following:

- Selection 1. Reports and Data Extracts Menu
- Selection 2. Online Queries Menu
- Selection 3. Data Entry Menu
- Selection 4. System Manager Functions

2. Press <ENTER>.

EDITS

1. Selection must be a number between 1 and 4.
2. For selection 3, the user must be authorized for data entry
3. For selection 4, the user must be the System Manager or his authorized representative.

SORT SEQUENCES (OPTIONAL) -

1. REGION	2. STATE	3. COUNTY	4. CITY	5. ZIP CODE
6. EPA ID	7. FACILITY NAME			

SELECT A MAJOR SORT SEQUENCE (1-7) : .

SELECT A SECOND SORT SEQUENCE (1-7) : .

SELECT A THIRD SORT SEQUENCE (1-7) : .

PF1/13 = HELP

PF3/15 = PREVIOUS MENU

PF4/16 = MAIN MENU

EDITS

1. REGION, if entered, must be a number between 1 and 10 (Left or right justified).
2. STATE , if entered, must be a valid 2 character state abbreviation.
3. COUNTY NAME, if entered, must exist on the County Table.
4. COUNTY CODE, if entered, must be a valid county code for the STATE.
5. PROGRAM OFFICE - Must be 'y' or blank.
6. FEDERAL FACILITIES ONLY - Must be 'y' or blank.
7. FORMAT - must be a number between 1 and 4.
8. SORT CRITERIA - Must be a number between 1 and 5.
9. If program offices are selected, one of the two options, facilities monitored by ALL of the selected program offices or facilities monitored by ANY of the selected program offices must be selected. Example: If 'Office of Solid Waste' and 'Superfund' are selected with the ALL option, then a facility must be monitored by both OSW and OERR to appear on the report. However, if OSW and OERR are selected with the ANY option, the resulting report will contain facilities monitored by either OSW or OERR.

Note that a facility on a report may be monitored by other program offices in addition to the ones indicated in the selection. If in the above example, the ANY option is chosen for a MATRIX format, the additional program offices will be 'X'd along with either of the selected program offices. This may appear to be confusing unless you keep in mind the basic rules.

If no program offices are selected, then facilities will appear on the report regardless of which office monitors them. This is equivalent to selecting all program offices with the ANY option and will cause the program to run more efficiently.

4.2.3 Search D & B FILE (Screen, FIQ300M1)

This function is used by the data entry personnel to obtain the D & B portion of the EPA-ID and by anyone wanting to browse D & B data. It provides two screens, one for entering search criteria and one for displaying the list of records retrieved as a result of the search.

OPERATING INSTRUCTIONS

1. Enter a STATE.
2. Enter NAME. If not entered, search will start with first facility for the state.
3. Optionally enter the ZIP CODE.
4. Upon pressing <ENTER>, a facility listing screen (FIQ300M2) will be displayed listing up to 12 facilities satisfying your entered criteria.
5. Press <ENTER> to continue the alphabetic facility list.

EDITS

1. STATE is required. Must be a valid 2 character state abbreviation.

4.2.3.1 D & B Search List (Screen FIQ300M2)

OPERATING INSTRUCTIONS

1. SELECT FOR DETAIL SCREEN - For a closer look at a facility, enter the line number here.
2. Press <ENTER> or PFKEY as shown below.
Note: If enter is pressed without selecting a single facility, the list of facilities satisfying your entered criteria will continue where it left off.

EDITS

1. Selection must be a number between 1 and 12. May be left or right justified.

4.2.7 Search Federal Facilities Database (Screen FIQ400M1)

This function is used by the data entry personnel to obtain the GSA Number portion of the EPA-ID. It provides two types of screens, one for entering search criteria and one for displaying the list of records retrieved as a result of the search.

OPERATING INSTRUCTIONS

1. Enter a STATE.
2. Enter Facility NAME. If no name is entered, search will be with the first facility for the state.
3. Optionally enter the ZIP CODE.
3. Upon pressing <ENTER>, a facility listing screen (FIQ400M2) will be displayed listing up to 12 facilities satisfying your entered criteria.

EDITS

1. STATE is required. Must be a valid 2 character state abbreviation.

4.2.7.1 Federal Facilities Search List (FIQ400M2)

OPERATING INSTRUCTIONS

1. Press <ENTER> to continue the alphabetic facilities list.

EDITS

NONE.

5.0 PRODUCTION CONSIDERATIONS

5.1 Efficiency

FINDS has a large user community. The user community includes the FINDS data entry staff in each of the regions, program office staff in each region and program office staff at EPA headquarters. Although any given user may only use the system occasionally, the total load on the system is significant, due to the number of users.

With that in mind, it is recommended that batch jobs be run during off-peak hours (before 7 AM, EST or after 6 PM, EST).

The following table is copied from the NCC Users Guide, Section 3.3.2. It is included to give you some idea of how to assign priorities for your batch jobs.

JOB SCHEDULING/PRIORITY TABLE

<u>Priority</u>	<u>Service Timed</u>	<u>Cost Multiplier</u>
5	ASAP	6.0 times normal
4	Better than 3	2.0 times normal
3	Better than 2	1.5 times normal
2 (default)		
Class I	90% of all jobs done in 30 minutes	1.0 times normal
Class II	90% of all jobs done in 60 minutes	1.0 times normal
Class III	90% of all jobs done in 4 hours	1.0 times normal
1 (all classes)	overnight	.8 times normal
Weekends	See specific priority above	.5 times normal
WYLBUR/TSO	No goal established for WYLBUR; see Section 3.4.1 for TSO goals.	2.5 time normal

Figure 5.1

Consult the NCC IBM Users guide, section 3.3.2, 'Job Scheduling JES2' for further information on scheduling priority versus costs.

5.2 Security

All persons requiring access to the mainframe computer must be registered under RACF, the mainframe system security facility, and receive a user ID and password. Authorization on the old FINDS system automatically qualifies users for the same type of access on the new FINDS. In order to use the System, users must also be authorized for NATURAL access.

Update access will be restricted to the FINDS Regional data entry staff. Special functions such as data extracts and archival will be restricted to the FINDS ADBA (System Manager). Other than that, FINDS will be available to anyone for information retrieval as it is a public database.

5.3 Error Recovery

FINDS is set up with sufficient backup procedures to provide users with as few interruptions as possible in case of system failure. However, if the system does go down, data updates will likely be affected to the extent that some restoration and re-entry will be necessary. For this reason, it is mandatory that the System Manager be notified whenever there is a system failure and that updates be suspended until data entry personnel are given the go-ahead by the System Manager.

Minor errors which occur during regular data entry are discussed in the next section.

6.0 ERROR MESSAGES

These errors are meant to be self-explanatory. If there is a question about the meaning, first consult the help screen for the function being executed. If there are still questions, contact the FINDS System Manager at:

(202) 382-2416.

APPENDIX C
REPORT FORMATS

SELECTED FACILITIES REPORT FORMATS

Four formats are available with the Selected Facilities Report: LIST, MATRIX, ID-MATRIX and DETAIL REPORT. The two matrix formats are meant to depict the relationship between Program Offices and Facilities on the FINDS database. The LIST and DETAIL REPORT show general Facility data.

Each format is described here.

FORMAT	CONTENTS
<MATRIX>	Includes EPA-ID, FACILITY-NAME and ADDRESS, displaying an "x" to indicate that a facility is being monitored by a particular program.
<ID MATRIX>	Includes EPA-ID, FACILITY-NAME and ADDRESS, displaying one SOURCE-ID per program that is monitoring a facility.
<LIST>	Includes: EPA-ID, FACILITY NAME, and ADDRESS, LATITUDE, LONGITUDE.
<DETAIL REPORT>	Includes EPA-ID, FACILITY NAME ADDRESS CONGRESSIONAL-DISTRICT COUNTY LAT-LONG SOURCE LAT-LONG ACCURACY LATITUDE LONGITUDE OWNER TYPE OPERATOR TYPE INDIAN LAND INDICATOR (IF NOT SPACES, WORD 'INDIAN' PRINTED FEDERAL FACILITY INDICATOR (IF NOT SPACES, WORD 'FEDERAL' PRINTED) FIRST 4 PROGRAM OFFICES W/SOURCE-ID'S FIRST 4 SIC CODES

A sample of each type of report can be found on the following pages.
