INTRODUCTION

The Environmental Protection Agency (EPA) operates the Aerometric and Emissions Reporting System (AEROS) for the storage, summary, and retrieval of aerometric and emissions data. The Storage and Retrieval of Aerometric Data (SAROAD) system, one of the major component data systems in AEROS, is comprised of air quality and site information data from the various contributing networks. Data are submitted to EPA from local, state and Federal air pollution control agencies as well as a limited number of private institutions. Prior to the submission of any ambient air data, the participating agency must supply EPA with specific information related to the sampling site and its environment. It is imperative that this site information be complete and accurate for the proper interpretation and analysis of the aerometric data contained in the data bank.

A prior publication, the Directory of Air Quality Monitoring Sites, 1972, EPA-450/2-73-006, contained all monitoring sites which submitted a SAROAD (Storage and Retrieval of Aerometric Data) Site Identification Form (Figures 1 and 2) through 1972, whether the site was then active or inactive. Also, the publication, Directory of Air Monitoring Sites Active in 1973, EPA - 450/2-75-006

contained all monitoring sites which reported SAROAD data for 1973. For historical information relating to sites which may have been active before 1974, but not during 1974, please consult the above publications.

This present publication includes a listing of all monitoring sites active in 1974 which have submitted a SAROAD (Storage and Retrieval of Aerometric Data) Site Identification Form (Figures 1 and 2). Each site to be classified as operational and listed in this directory must have sampled at least one pollutant in 1974. In addition to the site listings, this document reflects useful information on the pollutant(s) sampled.

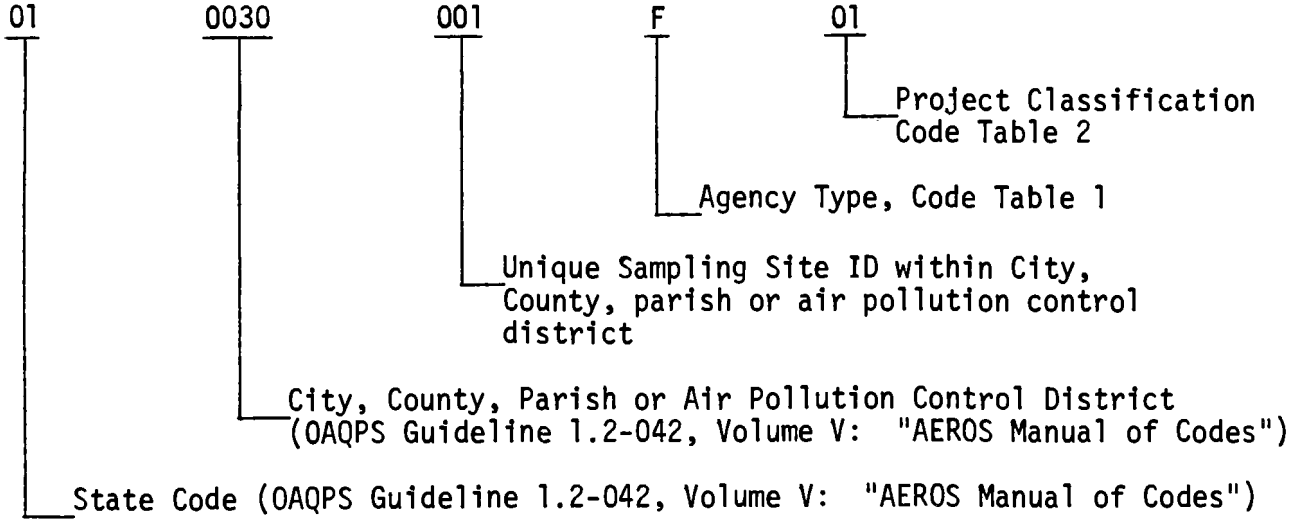
The organization of this directory is based on the SAROAD site code therefore, to find a specific sampling location it is necessary to thoroughly understand the site code. The following paragraphs and tables describe the various identifying codes used to characterize the site information.

The most important code used in the data bank is the unique 12-digit SAROAD site code. This code, based on the sampling site location, is assigned by EPA. The first two digits of the site code identify the state code, which has been assigned sequentially to an alphabetic listing of state names. For consistency, the District of Columbia, Puerto Rico, Guam, Virgin Islands, and American Samoa have also been assigned codes. (Codes for Guam, Virgin Islands, and American Samoa were not assigned alphabetically.) The next four digits of the site code identify the city, county, parish, or air pollution control district within the state. This code is obtained from a publication

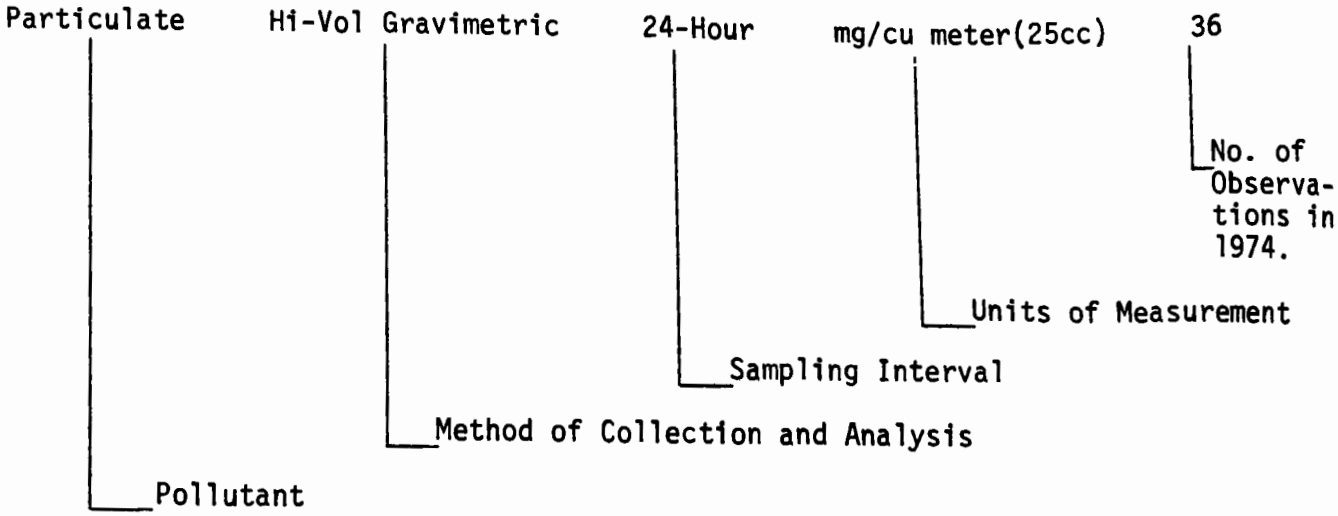
listing the codes within each state alphabetically for all cities with a population of 2,500 or more, and all counties, parishes, and control districts, regardless of population (OAQPS Guideline 1.2-042, Volume V: "AEROS Manual of Codes"). The following three digits identify the particular sampling site within the city or county, and the next letter and two digits identify the type of agency responsible for the sample analysis (Table 1) and the type of project being conducted at the site (Table 2).

It is important to note that this 12-digit site code assigned by EPA is used to identify data being submitted from the sampling site, and cannot be changed in any manner without prior notification by EPA.

The following example will illustrate the format of a site identification code.



Immediately after an individual site description, the pollutant sampling information begins. For easier readability and in conjunction with conservation of space, redundant headings have been eliminated. To serve as a guide, the following example will show the items contained in each column.



Particulate
Hi-Vol Gravimetric
24-Hour
mg/cu meter(25cc)
36
No. of Observations in 1974.

Following this introduction is a computer listing of all the information which is currently stored in the Aerometric and Emissions Reporting System for the sites which were active during 1974. The site information is sorted sequentially by the 12-digit SAROAD site code with each state beginning a new page. It should be emphasized that a directory of this nature requires constant revision. Corrections and additions to this information will be made as necessary, and updates to this directory will be published annually to permit timely interpretation of the aerometric data stored in the Aerometric and Emissions Reporting System. Anyone detecting errors in this publication should notify Chief, Reports and Information Section (MD-14), National Air Data Branch, Office of Air Quality Planning and Standards, Research Triangle Park, North Carolina 27711, via the appropriate EPA Regional Office.
