

measure below which facilities are not considered to be significantly impacted as a result of a regulation. Under the scenario in which facilities are assumed to submit one TRI Form R, the cost impact percentages are well below one percent for all employee size classes in all SICs. The highest cost impact percentage is 0.4 percent for small facilities in Standard Industrial Classification (SIC) codes 25 (Furniture) and 31 (Leather) in the first year of reporting.

Under the scenario in which facilities are assumed to submit four TRI Form Rs, cost impact percentages in the first year of reporting are above one percent only for small facilities in SIC codes 25 (1.2 percent) and 31 (1.1 percent). Cost impact percentages are below 0.8 percent for all industries in subsequent years.

The higher impact rates for the hypothetical facilities occur in industry sectors where there have historically been a relatively small number of establishments reporting. Approximately 8 percent of all facilities in SIC code 25 (Furniture) and 10 percent of all facilities in SIC code 31 (Leather) currently report to EPCRA section 313 (compared to 57 percent of all facilities in the chemical industry). It is reasonable that large and medium businesses are more highly represented in these percentages than small businesses, because they would be more likely to exceed the EPCRA section 313 thresholds. In addition, facilities in SIC 25 and 31 have typically submitted fewer than four reports each, and would be less likely to submit four reports for the new chemicals than facilities in other industries.

Thus, cost impacts for facilities potentially affected by the rule were not found to be of sufficient magnitude to cause significant impacts. Although

EPA has found that the rule does not result in significant impacts on small facilities, EPA has separately developed alternatives to meet the goals of the Regulatory Flexibility Act (i.e., to accomplish the objectives of EPCRA section 313 while minimizing the economic impact on small entities). EPA proposed a rule establishing an alternative reporting threshold for low-level releases and transfers (July 28, 1994, 59 FR 38524). The proposal requested comment on five different levels for the alternate reporting threshold. This rule is being finalized elsewhere in today's issue of the Federal Register.

C. Paperwork Reduction Act

The collection of information and other requirements under section 313 of EPCRA and section 6607 of the PPA are covered under OMB approval number 2070-0093, which was issued on May 14, 1992. While this approval normally would have expired on November 30, 1992, it remains in effect pursuant to the 1993 Department of Veteran Affairs and Housing and Urban Development and Independent Agencies Appropriations Act, Pub. L. 102-389, signed October 6, 1992, which states that:

Notwithstanding the Paperwork Reduction Act of 1980 or any requirements thereunder the Environmental Protection Agency Toxic Chemical Release Inventory TRI Form R and instructions, revised 1991 version issued May 19, 1992, and related requirements (OMB No. 2070-0093), shall be effective for reporting under section 6607 of the Pollution Prevention Act of 1990 (Public Law 101-508) and section 313 of the Superfund Amendments and Reauthorization Act of 1986 (Public Law 99-499) until such time as revisions are promulgated pursuant to law.

This final rule adds chemicals to the list of toxic chemicals subject to reporting under section 313 of EPCRA and section 6607 of the PPA and does

not change the elements of the TRI reporting form, its instructions, or related requirements. Accordingly, the TRI Form R and instructions and related requirements remain in effect, as provided by Pub. L. 102-389.

The industry reporting burden for collecting this information is estimated to average 53 hours per respondent annually, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. The actual burden to a specific facility may deviate from this estimate depending on the complexity of the facility's operations and the profile of the release.
