TOXIC CHEMICAL RELEASE INVENTORY GLOSSARY OF SYNONYMS

This glossary contains chemical names and their synonyms for substances covered by the reporting requirements of SARA Title III, Section 313. The glossary was developed to aid in determining whether a facility manufactures, processes, or uses a chemical subject to section 313 reporting. These synonyms are available to the EPA through the public literature, primarily CAS Online.

The glossary is divided into two parts. Part 1 is a listing by CAS registry number. The first chemical name that follows the CAS registry number is the same by which the chemical is identified under Section 313. The synonyms that follow are in alphabetical order.

Part 2 contains names and synonyms in an alphabetical listing. All entries in the alphabetical listing followed by an asterisk (*) represent the name by which the chemical is listed in the regulation that implements Section 313 (see 40 CFR 372.45(a) and (b)). Those chemicals marked with a double asterisk (**) have been proposed for addition to the section 313 list. If promulgated before December 1, 1989, these chemicals will be subject to reporting for the 1989 reporting year with the first reports becoming due by July 1, 1990. None of the 20 categories of chemicals listed in 40 CFR 372.45(c) are included in this glossary. EPA did not attempt to identify synonyms associated with each chemical category because each category itself contains many chemical substances. Prefixes and numbers were not included in the alphabetization of the chemical names. The CAS registry number also appears with each name for cross-referencing purposes.

This glossary enables the trade and common names of a substance to be matched to the CAS number or other synonyms. If the trade or common name of the substance is listed, the TRI name (i.e., the name required for reporting under the Section 313 regulation) can easily be identified. For example, a listing of Acetate Fast Orange R can easily be identified by referencing the alphabetical listed portion of the glossary (Part 2). The corresponding CAS number, 82-28-0, listed with this synonym name can be cross referenced to the TRI name, 1-Amino-2-methyl anthraquinone in Part 1.

Please note that this list may not be complete. The list of synonyms may not describe all products currently available in commerce, particularly mixtures, that may contain a Section 313 chemical.
