

USEPA Manual of Methods for Virology

Foreword

Environmental measurements are required to determine the quality of ambient water, the character of effluents, and the effects of pollutants on aquatic life. The Environmental Monitoring Systems Laboratory-Cincinnati conducts research to develop, evaluate, standardize and promulgate methods to:

- Measure the presence and concentration of physical and chemical pollutants in water, wastewater, bottom sediments, and solid waste.
- Concentrate, recover, and identify enteric viruses, bacteria, and other microorganisms in water, waste, soil and air.
- Determine the health and ecological effects of viruses, bacteria and parasites in the environment.
- Measure the effects of pollution on freshwater, estuarine, and marine organisms, including the phytoplankton, zooplankton, periphyton, macrophyton, macroinvertebrates, and fish.
- Automate the measurement of the physical, chemical, and biological quality of water.
- Conduct an Agencywide quality assurance program to assure standardization and quality control of systems for monitoring water and wastewater.

This manual was prepared and updated in order to meet mandates of the Congress of the United States of America as directed in the Water Quality Act of 1987 (PL 100-4), the Safe Drinking Water Act (PL 93-523) as amended by the Safe Drinking Water Act Amendments of 1986 (PL 99-339), the Marine Protection, Research, and Sanctuaries Act (PL 92-532), and the Resource Conservation and Recovery Act (PL 94-580). The manual presents a standardized, step-by-step procedure for recovering viruses from most environmental samples other than air.

Thomas A. Clark, Director
Environmental Monitoring Systems
Laboratory—Cincinnati

Purpose

This manual provides procedures for collecting scientifically valid and legally defensible information on human enteric viruses in water, wastewater and treated effluents and in sludge, sediments and other solids as related to water quality problems, pollution sources and control requirements. It focuses on practical and economical virus monitoring technology and makes it possible for any competent water bacteriology laboratory that can arrange for viral assays (and identifications) to evaluate and quantify enteric viruses in environmental samples.

Table of Contents

Foreword	i
Purpose	ii
Figures	xi
Tables	xiii
Chapter 1 Introduction	1-1
1. Perspectives in Environmental Virology	1-1
2. The Viruses in Environmental Waters	1-2
3. Conclusions and Recommendations of the World Health Organization (WHO) Scientific Group on Human Viruses in Water, Wastewater and Soil	1-4
3.1 Conclusions of the Group	1-4
3.2 Recommendations of the Group	1-6
3.3 Summary	1-7
4. History of Methods Selection	1-7
4.1 Recommendations of the WHO Working Group and the WHO Scientific Group	1-9
4.2 Recommendations in <i>Standard Methods</i> for Detecting Viruses in Various Waters	1-10
4.3 Recommendations of the American Society for Testing and Materials (ASTM)	1-11
5. The USEPA Manual	1-11
6. Bibliography	1-13
Chapter 2 Cleansing Laboratory Ware and Equipment	2-1
1. Precautions	2-2
2. Alternate Procedures	2-3
3. Preparation of Cleansing Compounds and Reagents	2-4
4. Procedure for Cleansing Laboratory Ware and Equipment	2-5
4.1 Cleansing with Detergent	2-5
4.1.1 General Laboratory Ware and Washable Equipment	2-5
(a) Washing machine procedure	2-5
(b) Manual washing procedure	2-6
4.1.2 Test Tubes	2-7
4.1.3 Pipettes	2-8
4.1.4 Automatic Pipettor	2-9
4.1.5 Automatic Syringe	2-14
4.1.6 Disc Filter Holder	2-17
4.1.7 Dispensing Pressure Vessel	2-18
4.1.8 Plastic Screw Caps	2-19

4.2	Cleansing with Acid	2-20
4.2.1	General Acid-Resistant Laboratory Ware	2-21
	(a) Chromic acid procedure	2-21
	(b) Nitric acid procedure	2-22
4.2.2	Test Tubes	2-23
4.2.3	Pipettes	2-25
4.3	Cleansing with Alkalies	2-27
5.	Bibliography	2-28
Chapter 3	Sterilization and Disinfection	3-1
1.	General Procedures	3-1
2.	Sterilization Techniques	3-1
2.1	Solutions	3-1
2.2	Glassware, Autoclavable Plasticware, and Equipment	3-1
2.3	Contaminated Materials	3-7
3.	Disinfection Techniques	3-8
4.	Bibliography	3-9
Chapter 4.	Quality Assurance	4-1
1.	Introduction	4-1
1.1	Role in Research	4-1
1.2	Scope of Program	4-2
2.	Sample Collection	4-2
2.1	Water and Sewage Samples	4-2
2.2	Chain of Custody	4-3
2.3	Sample Handling Procedures	4-3
2.4	Transport of Samples	4-3
3.	Laboratory Facilities	4-4
3.1	Air Handling Systems	4-4
3.2	Disinfection of Laboratory	4-4
3.3	Space Allocation	4-4
3.4	Traffic	4-4
3.5	Bench Space Allocation	4-5
3.6	Lighting	4-5
3.7	Walls and Floors	4-5
3.8	Monitoring for Cleanliness in Work Areas	4-6
4.	Laboratory Maintenance	4-6
4.1	Cleaning	4-6
4.2	Storage	4-7
5.	Laboratory Personnel	4-7
5.1	Professional Level	4-7
5.2	Supervisory and Senior Grade Level	4-8
5.3	Technical Level	4-8
5.4	Supervision of Personnel in Laboratory	4-8
6.	Laboratory Equipment and Instruments	4-9
6.1	Balances	4-9

6.2	pH Meters	4-9
6.3	Distilled Water	4-9
6.4	Deionized Distilled Water	4-10

Chapter 6	Virus Adsorption-Elution (Viradel) Cartridge Filter Procedures for Recovering Viruses from Sewage, Effluents, and Waters	6-1
1.	Adsorption—Method One	6-1
1.1	Preparation	6-1
1.1.1	Apparatus and Materials	6-2
1.1.2	Media and Reagents	6-4
1.2	Procedure	6-5
1.2.1	Preparation and Implementation	6-5
	(a) Assembly of apparatus	6-5
	(b) Salt supplementation	6-9
	(c) Adjustment of pH	6-10
	(d) Dechlorination	6-10
	(e) Fluid proportioner	6-11
1.2.2	Filtration of Sample	6-13
2.	Adsorption—Method Two	6-15
2.1	Preparation	6-15
2.1.1	Apparatus and Materials	6-15
2.1.2	Media and Reagents	6-20
2.2	Procedure	6-21
2.2.1	Preparation and Implementation	6-23
	(a) Assembly of apparatus	6-23
	(b) Salt supplementation	6-24
	(c) Adjustment of pH	6-25
	(d) Dechlorination	6-25
	(e) Fluid proportioner	6-26
2.2.2	Filtration of Sample	6-29
3.	Elution and Concentration—Method One	6-31
3.1	Procedure for Eluting Viruses from Filters	6-31
3.1.1	Apparatus and Materials	6-31
3.1.2	Media and Reagents	6-34
3.1.3	Rearrangement of Apparatus	6-34
	(a) Rearrangement for Method One	6-34
	(b) Rearrangement for Method Two	6-35

	3.1.4	Elution Procedure	6-37
3.2		Reconcentration—Method A. Membrane Disc Procedure	6-38
	3.2.1	Apparatus and Materials	6-38
	3.2.2	Media and Reagents	6-39
	3.2.3	Procedure	6-40
		(a) Assembly of apparatus	6-40
		(b) Adjustment of pH of eluate	6-40
		(c) Filtration of eluate	6-43
		(d) Elution of viruses from filter	6-43
3.3		Reconcentration—Method B. Aluminum Hydroxide-Hydroextraction Procedure	6-45
	3.3.1	Apparatus and Materials	6-45
	3.3.2	Media and Reagents	6-46
	3.3.3	Procedure	6-47
		(a) Preparation of dialysis bag	6-47
		(b) Flocculation and hydroextraction	6-48
4.		Elution and Concentration—Method Two	6-53
	4.1	Procedure for Eluting Viruses from Filters	6-53
		4.1.1 Apparatus and Materials	6-53
		4.1.2 Media and Reagents	6-55
		4.1.3 Rearrangement of apparatus	6-55
		(a) Rearrangement for Method One	6-55
		(b) Rearrangement for Method Two	6-56
		4.1.4 Elution Procedure	6-57
	4.2	Organic Flocculation Concentration Procedure of Katzenelson	6-58
		4.2.1 Apparatus and Materials	6-58
		4.2.2 Media and Reagents	6-59
		4.2.3 Procedure	6-59
