15. SUPPLEMENTARY NOTES IERL-RTP project officer is L.D. Johnson, MD-62, 919/541-2557. Report EPA-600/2-78-211 is an earlier report compiling similar data between the start of the program and 3/78.

16. ABSTRACT The three-volume report compiles all data from EPA/IERL-RTP's phased environmental assessment program for the period 2/78-3/79. It includes data from 14 environmental assessment studies, compiled in standard format. The formatted Level 1 data are organized within each study by the analytical technique used to generate the data. Inorganic data as generated by spark source mass spectroscopy, atomic absorption, gas chromatography, chemiluminescence for oxides of nitrogen, anion analysis, and aqueous analysis precede the organic data generated by gas chromatography for C1-C6/C7 or C7-C17, liquid chromatographic fractionation, infrared spectroscopy, and low resolution mass spectroscopy. Sampling and analytical techniques that were used, that are not specified in Level 1, are documented in the summaries and data pages. Each Level 1 data section is followed by a Level 2 data section and/or an additional data section. Tables and figures in the Level 2 and additional data sections have been reproduced from the documents originally published by the organization conducting the study. The studies are organized by industrial type: (Vol. I) chemically active fluidized-bed combustion, coal-fired boiler and oil-fired boiler, coal-fired power plant, and coal gasifier; (Vol. II) coke production, and ferroalloy process; and (Vol. III) the remaining industrial processes.

DISCLAIMER

This report has been reviewed by the Industrial Environmental Research Laboratory, U.S. Environmental Protection Agency, and approved for publication. Approval does not signify that the contents necessarily reflect the views and policies of the U.S. Environmental Protection Agency, nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

ABSTRACT

This document compiles all available data from the IERL Phased Environmental Assessment Program for the period February 1978 through March 1979. This document follows an earlier publication, EPA-600/2-78-211, Compilation of Level 1 Environmental Assessment Data, which compiled all available chemical data from the inception of the Environmental Assessment Program through March 1978.

Available data from 14 environmental assessment studies are compiled in this document in standard formats. The formatted Level 1 data are organized within each study by the analytical technique used to generate the data. Inorganic data as generated by spark source mass spectroscopy, atomic absorption, gas chromatography, chemiluminescence for oxides of nitrogen, anion analysis, and aqueous analysis precede the organic data generated by gas chromatography for C_1-C_6/C_7 or C_7-C_{17}, liquid chromatographic fractionation, infrared spectroscopy, and low resolution mass spectroscopy. Sampling and analytical techniques that were used that are not specified in Level 1 are documented in the summaries and data pages.

Each Level 1 data section is followed by a Level 2 data section and/or an additional data section. The tables and figures in the Level 2 and additional data sections have been reproduced from the documents originally published by the organization conducting the study.

Each study is introduced by a summary, which is followed by the data generated in that study. The studies are organized by industrial type as follows: Chemically Active Fluidized-Bed Combustion, Coal-Fired Boiler and Oil-Fired Boiler, Coal-Fired Power Plant, Coal Gasifier, Coke Production, Ferroalloy Process, Internal Combustion Engine, Iron and Steel Mills, Residential Heating, Shale Oil Retorting, and Textiles.

INTRODUCTION

This document is an accumulation of all available environmental assessment data published from February 1978 through March 1979.

This document is the second comprehensive compilation of data from the IERL Phased Environmental Assessment Program. The first data compilation was published in October 1978 as EPA-600/2-78-211, Compilation of Level 1 Environmental Assessment Data. As in the first data compilation, the primary purpose of this compilation is to permit those involved in environmental assessment programs to evaluate the quality and quantity of data generated by the phased approach. It is felt that critical reviews of these data may lead to improvements in procedures, data formatting, data storage, and data interpretation. Although conclusions related to specific sources or source types may have been abstracted from the references to provide background information, the focus of this presentation is on data resulting from the Level 1 sampling and analytical methods. The interested reader should consult the referenced documents for more details and conclusions concerning pollutant sources, control techniques, etc.

The phased environmental assessment program, developed by the Industrial Environmental Research Laboratory (IERL) of the Environmental Protection Agency (EPA) at Research Triangle Park (RTP), North Carolina, is divided into three levels. Level 1 is the survey step to determine which samples from an environmental assessment might be hazardous or toxic. Level 1 also serves to establish the priority of samples and rank samples for further testing. When the Level 1 sampling and analysis scheme shows the possible presence of hazards, a Level 2 scheme is initiated to specifically identify and quantify suspected hazardous materials. If Level 2 reveals pollutants capable of environmental detriment, then a Level 3 scheme is begun to evaluate control technologies and to assess long-term effects.

Fourteen studies have been identified that contain phased environmental assessment data; these studies are organized alphabetically by source types in

this compilation. It should be noted that each study included in this compil tion will be identified as final draft, preliminary draft, etc., based on the completeness of the study summarized; therefore, absence of data does not necessarily indicate analysis was not performed but that the study was possib not complete when it became necessary to compile the data. In each study, mention is made of methods used if they differ from the methodology specified in the IERL-RTP Procedures Manual: Level 1 Environmental Assessment (Second Edition), EPA-600/7-78-201.

Within each study, information is organized in the following manner:

I. Summary of the study

II. Level 1 data

- A. Inorganic analysis data
  1. Spark source mass spectroscopy (SSMS)
  2. Atomic absorption (AA) wet chemical methods--Hg, As, Sb
  3. Gas chromatography for inorganic gases
  4. Chemiluminescence for NO_x
  5. Anion analysis
  6. Aqueous analyses for pH, acidity, alkalinity, BOD, COD, DO, conductivity, dissolved and suspended solids, and other selected physical parameters
- B. Organic analysis data
  1. Gas chromatography for gases, b.p. <100° C (C_1-C_7)
  2. Gas chromatography for gases, b.p. >100° C (C_1-C_{17})
  3. LC fractionation
  4. IR
  5. Low resolution mass spectrometry (LRMS)

III. Level 2 data

IV. Additional data

Data in categories III and IV are photocopied from the referenced documents. Level 1 data are presented in standard format.

STUDY NUMBER 8

STUDY NUMBER 8

DATA SOURCE: **ENVIRONMENTAL ASSESSMENT OF COKE BY-PRODUCT RECOVERY PLANTS**

DATA STATUS: EPA—600/2-79-016, January 1979

AUTHORS: D. W. VanOsdell, D. Marsland, B. H. Carpenter, C. Sparacino, and R. Jablin

CONTRACTOR: Research Triangle Institute
P.O. Box 12194
Research Triangle Park, North Carolina 27709
Contract No. 68-02-2630

PROJECT OFFICER: Robert V. Hendriks
Industrial Environmental Research Laboratory
Office of Energy, Minerals, and Industry
U.S. Environmental Protection Agency
Research Triangle Park, NC 27711

The purpose of this study was to screen the solid, liquid, and gaseou discharges from coke byproduct recovery plants for their environmental eff Coke byproduct recovery plants separate and concentrate the volatile compo produced when coal is heated to form coke; these compounds include coal ta ammonia, light oil (benzene, toluene, xylene, and other organics), coke-ov gas, and many other organic and inorganic components.

The study was performed in three phases. First, a very thorough evalu tion was performed of information available from the literature, from other governmental testing, and from other studies. Approximately 60 pages of th report are devoted to detailed descriptions of the various coke byproduct recovery technologies, the accompanying pollution controls, and results of earlier analyses of effluents and emissions.

The Level 1 protocol was performed at the Fairfield Works, U.S. Steel Corporation, coke byproduct recovery plant. Figure 8-1 (from the final repo is a flow diagram of this plant showing the major process streams. Table 8- (from the document) shows the samples taken for analysis at this plant and t analyses performed on these samples.

This Level 1 environmental assessment focuses on organic vapor emission because this was the area where the least amount of information was available In addition to the specified Level 1 procedures, the following were performed NaOH bubbler samplers for cyanide in gases by a colorimetric/$AgNO_3$ procedure; evacuated stainless steel canister samplers for benzene and benzene derivativ by GC-FID; and GC/MS on the SASS solvent concentrate for specific PNAs.

Based on the Level 1 and other sampling and analyses at the Fairfield plant, estimated pollutant emission rates were calculated for six major processes: tar processing, ammonia processing, dephenolization, final cooler/ naphthalene handling, light oil recovery, and wastewater processing. The SAM/1A model was used to estimate the relative hazard of various processes; the biological treatment plant (wastewater) effluent was the most significant environmental hazard when emission rates were considered. Other major sources were the cooling tower for the contact final cooler and the biological treatment sludge.

A summary of the study's conclusions, taken from the final report, follows:

This study is a limited-scope first look at the by-product plant from the environmental point of view [underline added]. As such, it points to a need for control of light aromatics and PNA's. Control may be most likely achieved throught techniques that essentially eliminate the sources: venting tanks back to the gas mains; blanketing with coke oven gas. The potential for application of venting and coke oven gas blanketing should be determined by further study. Alternative technologies for dephenolization, cyanide handling, and desulfurization should be further studied with respect to their relative environmental impacts. Solid wastes present hazards in disposal that require further investigation. Wastewater treatment capabilities and effects need further delineation. Economic models of the annualized costs of alternative processes should be further developed to permit delineation of most cost effective technologies.

TABLE 8-46.
IR REPORT

SAMPLE: 8A-P, ammonia liquor, pH 2 extract; preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3590, 3470	w	free and dimeric OH stretch of phenols
3600-3000	w(broad)	alcohol or phenolic OH stretch (polymeric)
3040, 3000	w	aromatic CH stretch
2955, 2938,		
2850	s	aliphatic CH stretch
1660-1650	m	diaryl ketones, carboxylate ion, or aromatic c
		highly conj. carboxylic acid
1455, 1380	m,w	alkyl CH bend
845-800	w	sub. aromatic CH bend
1330	w	unassigned

OTHER REMARKS:

Spectrum indicates that sample is predominantly alkylated phenols or alkylated derivates of highly unsaturated or aromatic acids.

TABLE 8-47.
IR REPORT

SAMPLE: 8A-C, ammonia liquor, pH 2 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3418	w	alcoholic or phenolic OH
3055	m	aromatic C-H
2959, 2925,		
2856	s	aliphatic C-H
1650	m	β-diketone, diaryl ketone
1602	m	aromatic
1459	s	aromatic, methyl, methylene
1376	m	aromatic, methyl, methylene
814	m	aromatic, methyl, methylene
746	s	aromatic, C-Cl, aliphatic
1240	w	unassigned

OTHER REMARKS:

2363 and 2342 due to Co_2.
Sample appears to contain predominantly alkylated phenols.

TABLE 8-48.
IR REPORT

SAMPLE: 8A-LC1, ammonia liquor, pH 2 extract: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2932,		
2856	s	aliphatic C-H
1465, 1376	m	aliphatic CH bend
725	w	unassigned

OTHER REMARKS:

Probable saturated hydrocarbon, LRMS indicative of some PNAs as well as saturated chains.

TABLE 8-49.
IR REPORT

MPLE: 8A-LC2, ammonia liquor, pH 2 extract: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3055	s	aromatic C-H, $-CH_2$-halogen
2959, 2925,		
2870	s	aliphatic C-H
1931	w	aromatic
1808	w	aromatic
1733	w	aromatic
1602	m	aromatic
1458	s	aliphatic CH bend
1376	m	methyl CH bend
1315	m	aromatic
1246	m	aromatic
1911	m	aromatic
1081, 1033,		
958	m	aromatic
833, 732	s	aromatic, C-Cl, aliphatic

THER REMARKS:

Probable mono-substituted alkyl aromatic.

TABLE 8-50.
IR REPORT

SAMPLE: 8A-LC3, ammonia liquor, pH 2 extract: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3055	s	aromatic C-H, $-CH_2$-halogen
2925	w	aliphatic C-H
1650	w	unsaturated aromatic
1602	m	aromatic
1452	s	aromatic
1191	m	aromatic
883	m	aromatic
842	s	aromatic
815	s	aromatic
773	s	aromatic
746	s	aromatic
1924, 1801	w	unassigned

OTHER REMARKS:

PNA hydrocarbons; confirmed by LRMS

TABLE 8-51.
IR REPORT

IPLE: 8A-LC4, ammonia liquor, pH 2 extract: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
425	m	alcoholic or phenolic OH
055	w	aromatic C-H
650	w	β-diketone unsaturated C-H carboxylic acid, diaryl ketone
452	s	aliphatic C-H
328	m	aliphatic C-H, phenol, acid
239	m	aliphatic C-H, phenol, acid or alcohol
46	s	CH_3, C-Cl, aromatic
25	s	CH_3, C-Cl, aromatic

IER REMARKS:

2390, 2370, due to CO_2.

TABLE 8-52.
IR REPORT

SAMPLE: 8A-LC5, ammonia liquor, pH 2 extract: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3384	m	OH
3055	m	aromatic C-H
2932	s	aliphatic C-H
2856	m	aliphatic C-H
1719	w	ketone, ester
1602	m	aromatic
1458	s	aromatic
1376	m	aromatic
1273	m	CH_3-
821	m	
746	s	phenyl, C-Cl, aliphatic
2226, 1917	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria fo IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Substituted phenol probable. Bands at 2363 cm^{-1} and 2239 cm^{-1} due to CO_2.

TABLE 8-53.
IR REPORT

PLE: 8A-LC6, ammonia liquor, pH 2 extract: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
280	s	aromatic C-H
199	s	aromatic C-H
055	s	aromatic C-H
925	s	aliphatic C-H
363	m	aliphatic C-H
550	s	β-diketone, carboxylate, diaryl ketone
596	s	substituted phenyl
459	s	substituted phenyl
280	s	ester, ether
35	m	aromatic C-H
52	s	C-Cl, aromatic C-H, aliphatic
226	w	unassigned

:R REMARKS:

LRMS supports aromatic nature of compounds responsible for this spectrum. Probably terocyclic amines.

TABLE 8-54.
IR REPORT

SAMPLE: 8A-LC7, ammonia liquor, pH 2 extract: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2970	s	aliphatic C-H (stretching)
2925	s	aliphatic C-H (stretching)
2875	m	aliphatic C-H (stretching)
1740	s	ester or aliphatic ketone
1431	m	aliphatic C-H (bending)
1376	m	aliphatic C-H (bending)
1239	s	ester C-O
1123	m	ester C-O
1082	m	ester C-O
1027	m	ester C-O
739	m	C-Cl, aromatic C-H, aliphatic
698	m	C-Cl, aromatic C-H, aliphatic
616	m	C-Cl, aromatic C-H, aliphatic

OTHER REMARKS:

Probable ester.

TABLE 8-55.
IR REPORT

PLE: 8B-P, ammonia liquor, pH 12 extract: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
)00-3150	Broad	unresolved band due to NH stretch of amines and anides
)90, 3020	m	aromatic or olefinic CH stretch
)20, 2918,		
:860	m	diphatic CH stretch
'25	s	ester or diphatic ketone
;50	s	amide I band
;15-1590	s (broad)	substituted aromatic C-C or NH bend of 1° amine
;70	w	aliphatic CH bend
:40, 1120	s	ester of aromatic acid, CN stretch of amines or anides, alcohol or aromatic ether
)0, 640	m	substituted aromatic CH bend
:0	w	unassigned

R REMARKS:

Sample appears to be predominantly aliphatic amides and ketones, but only some substituted benzene compounds.

TABLE 8-56.
IR REPORT

SAMPLE: 8B-C, ammonia liquor, pH 12 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600		"Free" OH of alcohol or phenol
3500-2900	(broad)	OH and/or NH stretch of alcohols, amines, and anides
3030, 3000		aromatic or olefinic CH stretch
2955, 2930, 2875, 2850		diphatic CH stretch
1725		ester or aliphatic ketone
1660		amide I band
1595, 1500		aromatic C-C and amino NH bend
1470, 1385		aliphatic CH bend
1250-1080		CH stretch for amines and anides, C-O stretch of alcohol, C-C-O stretch of aromatic esters, or C-O-C stretch of ethers
840-730	(broad)	amine and anide NH bend
810		substituted aromatic CH bend
1510, 1340, 1000, 950	w	unassigned

OTHER REMARKS:

Bands at 1610, 1605, 1595, and 1510 cm^{-1} probably arising from NH stretching of 1° and 2° amides and amines.

Sample predominantly aromatic and aliphatic amines and amides, but also containing some alcohols aliphatic ketones, esters of aromatic acids, and/or aromatic - or aliphatic ethers.

TABLE 8-57.
IR REPORT

MPLE: 8B-LC1, ammonia liquor, pH 12 extract: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
960, 2926,		
2852	s	alkane
462, 1377,		
1281	m	alkane
)37	m	alkane
'35	w	unassigned

R REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR ysis. A spectrum of acceptable quality was obtained by using Fourier Transform echniques.

Sample consisted of saturated hydrocarbons and saturated ethers.

TABLE 8-58.
IR REPORT

SAMPLE: 8B-LC2, ammonia liquor, pH 12 extract: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3055	m	aromatic C-H, $-CH_2$-halogen
2959, 2925,		
2856	s	aliphatic C-H
1452	m	aromatic, aliphatic
1376	w	aliphatic
833, 842,		
815, 773	m	aliphatic
732	s	aliphatic, C-Cl, aliphatic
1938, 1726	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

2362 and 2342 due to CO_2. Probably PNA hydrocarbon. Sample contains alkylated aromatic hydrocarbons.

TABLE 8-59.
IR REPORT

AMPLE: 8B-LC3, ammonia liquor, pH 12 extract: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3053	w	aromatic C-H, $-CH_2$-halogen
2926, 2853	s	aliphatic C-H
1728	w	ester or aliphatic ketone
1668	w	alkene
1456	m	aromatic, methyl, methylene
1238	w	ester, ether
815	m	aromatic, C-Cl
749	m	aromatic, C-Cl
1377, 881,		
640	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

2363 and 2339 due to CO_2. Specific PNA's identified by LRMS.

TABLE 8-60.
IR REPORT

SAMPLE: 8B-LC4, ammonia liquor, pH 12 extract: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3459	m	OH/NH
3062	m	aromatic C-H,-CH_2-halogen
2973, 2918	s	aliphatic C-H
2856	m	aliphatic C-H
1725	w	ester, ketone
1602	w	aromatic
1431, 1335	s	aromatic, methyl
1239	s	ester, ether, amine
1095	m	aromatic
965	m	aromatic
746, 615	s	aromatic, C-Cl, aliphatic
1198, 698	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable aromatic amine or alcohol. LRMS more consistent with amines.

TABLE 8-61.
IR REPORT

MPLE: 8B-LC5, ammonia liquor, pH 12 extract: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
600-3200	w(broad)	alcohol or phenolic OH
959, 2932,		
2856	s	aliphatic CH stretch
733	m	ester or aliphatic ketone
602	w	aromatic C-C
459, 1438	m	aliphatic CH bend, aromatic
249, 1102	m	ester or aromatic acid, alcohol, ether
46, 698	w	substituted aromatic CH bend
72, 855	w	unassigned

ER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria or IR analysis. A spectrum of acceptable quality was obtained by using Fourier transform IR techniques.

Probable alcohols and esters of aromatic acids.

TABLE 8-62.

1507, 1472	s	aromatic, methyl, methylene
1376	m	methyl CH bend
1239	s	ester, ether, CH stretch of aromatic amine
787	s	

OTHER REMARKS:

Sample predominantly aromatic amines, esters of aromatic acids, or diphatic or aromatic ethers.

TABLE 8-64.
IR REPORT

SAMPLE: 8B-LC7, ammonia liquor, pH 12 extract: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2932	s	aliphatic C-H
2856	m	aliphatic C-H
1733	s	ketone, ester
1616	m	aromatic C=C
1459	m	aromatic, methyl, methylene
1383	m	methyl CH bend
1246	m	ester, ether
1171	m	ester, ether
746	w	aromatic, C-Cl, diphatic
3596	w (broad)	unassigned

OTHER REMARKS:

Probable ester.

TABLE 8-65.
IR REPORT

MPLE: Froth flotation separator XAD-2 resin, preliminary analysis

Wave Number (cm^{-1})	Intensity	Assignment/Comments
154	w	aromatic or olefinic CH stretch
156, 2926,	s	aliphatic CH stretch
2854		
723	m	ketone or ester
501	m	conj. olefine and/or aromatic C⋯C
1495	w	aromatic C⋯C
1454	w	aliphatic CH bend
1262, 1069	w	aromatic ester Ø-CO-O stretch
3	m	substituted aromatic compds
1713, 1693,	w	unassigned
1182, 1022, 824		

ER REMARKS:

This sample possesses less mass than that required by Level 1 criteria for IR lysis. A spectrum of acceptable quality was obtained, however, since Fourier Trans-m IR techniques were utilized.

Sample appeared to contain principally aliphatic and aromatic ketones and esters. so, large peak at 1602 cm^{-1} indicates significant amounts of conjugated olefins.

TABLE 8-66.
IR REPORT

SAMPLE: Froth flotation separator, XAD-2 resin, IR on concentrate

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3072, 3054, 3007	w	aromatic and olefinic CH
1956-1674	w	aromatic overtones/combinations
1592, 1387	w,m	α-substituted naphthalene, or
		conjugated vinyl C⋯C stretch
1269-1005	w	aromatic fingerprint region
958	m	vinyl CH bend, or aromatic in-plane bend
782-700	s-m	substituted aromatic compds
1504, 847, 618	w	unassigned

OTHER REMARKS:

Sample contains substituted aromatic and/or unsat. hydrocarbons. Large band at 782 cm^{-1} suggests that sample is predominantly naphthalene, i.e., band at 782 cm^{-1} is the resultant of CH out-of-plane bending of 4 adj. aromatic H.

SAMPLE: Froth flotation separator, XAD-2 resin, LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2958, 2927,	s	aliphatic CH stretch
2857		
1741	w	ester
1464, 1378	m,w	aliphatic CH bend
1261	s	ester of aromatic or α,β-unsaturated acids
1078, 1041	s	aliphatic ethers, or esters
863, 749, 702	w	substituted aromatic
802	s	substituted aromatic--predominantly α-substitute
		naphthalene or m-sub. benzene
1613, 1604	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly esters of aromatic and/or α,β-unsaturated acids and/or aromatic and aliphatic ethers.

TABLE 8-69
IF REPORT

AMPLE: Froth flotation separator, XAD-2 resin, LC cut #3 IA

Wave Number (cm^{-1})	Intensity	Assignment/Comments
1		
2955-2854	s	aliphatic CH stretch
1745-1730	w	ester or aliphatic ketone
1465, 1381	w	aliphatic CH bend
1262, 1162,	w	aromatic ester or ether,
1080		aliphatic ether
801, 719	w	sub. aromatic compds
1481, 1038, 668	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques. Spectrum includes peaks of I~Intensity of blanks. Sample appears to contain only aliphatic esters of aromatic acids, or aliphatic ketones.

TABLE 8-70.
IR REPORT

SAMPLE: Froth flotation separator, XAD-2 resin, LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2955-2854	s	aliphatic CH stretch
1756-1715	w	ketone or ester
1462,1453	w	aliphatic CH bend
1380,1368	w	gem, -dimethyl bend
746	w	sub benzene
1271,1163,1072	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Spectrum appears to contain predominantly alkylated aromatic hydrocarbons and aliphatic ketones or esters of aromatic acids.

TABLE 8-71.
IR REPORT

IPLE: Froth flotation separator, XAD-2 resin, LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
50	broad	alcohol or phenol OH
52	w	aromatic CH stretch
59,2932,2856	s	aliphatic CH stretch
26	m	aliphatic ketone, or ester
02	m	aromatic C⋯C
55,1376	m,w	aliphatic CH bend
37,1253	m	ester of aromatic acid, or alcoholic or phenolic C-O
23,1075	w	ester of 10 and/or 20 alc.
3,698	w	mono-sub. benzene
.3,1493,1027	w	unassigned

ER REMARKS:
Sample contains primarily sat. hydrocarbons, aliphatic esters of aromatic acids, dominantly benzoates, and alcohols or phenols.

TABLE 8-72.
IR REPORT

SAMPLE: Froth flotation separator, XAD-2 resin, LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2956,2927,2854	s	aliphatic CH stretch
1729	s	ketone or ester
1452	w	aliphatic CH bend
1380,1371	w	geminal-dimethyl CH bend
758,743	w	substituted aromatic
1258,1244	w	ester or aromatic acid, or aromatic and/or
		aliphatic ethers
1077,1032	m	
1601,1464	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transfo IR techniques.

Sample contains predominantly alkylated aromatic esters and/or ethers.

TABLE 8-73.
IR REPORT

IPLE: Froth flotation separator, XAD-2 resin, LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
52,2930,2854	s	aliphatic CH
44,1732	s	aliphatic ketone, or ester
51,1380	w	aliphatic CH bend
58,1076,1032		acetates or primary or secondary alcohols,
		or aromatic ethers
3,743,723	w	sub. aromatic compds
57,3091,1604,	w	unassigned
1553,1121		

IER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for analysis. A spectrum of acceptable quality was obtained by using Fourier Transform techniques.

Sample appears to contain predominantly aliphatic esters (acetates), cyclic turated ketones, and some aromatic material.

TABLE 8-74.
IR REPORT

SAMPLE: 1XR-P, froth flotation separator, canister rinse: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3050	w	aromatic CH stretch
2970,2925,2848	w	aliphatic CH stretch
1720,1712	w	aliphatic ketone and esters
1640,1595	w	aromatic C⋯C
1440,1420,1375	m,m,w	aliphatic CH bend
1265	s	ester of α,β-unsat. or aromatic acid
		or aromatic ester
1140-1125	w	aromatic and/or aliphatic ethers
		or aromatic esters
890	w	substituted aromatic cmpds.
860-700	w	substituted aromatic compds
700-650	w	substituted aromatic cmpds.
2550,2540,2400,	w	unassigned
1070-970		

OTHER REMARKS:

Sample contains predominantly unsat. and/or aromatic ethers and esters of aroma acids or aromatic ethers. Bands at 1712, 1440, and 1420 cm^{-1} suggest that aliphatic ketones or esters of saturated acids are present:{$-CH_2-(C=O)-$absorbs at 1420} spectr dominated by band at 1265 cm^{-1} suggesting sample predominantly aromatic ethers.

TABLE 8-75.
IR REPORT

SAMPLE: 1XR-C, froth flotation separator, canister rinse: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3043, 3007	w	aromatic or olefinic CH
2959, 2946, 2856	s	aliphatic CH
1737	m	ester or aliphatic ketone
2061, 1936	w	aromatic overtones/combinations
1598	m	aromatic C···C
1452, 1380	m,w	aliphatic CH bend
1259	m	ester of aromatic or α,β-unsat. acid
1096, 1023	m,w	ester, aliphatic ether
842, 812, 751	w,w,m	sub. aromatic cmpds
2366, 878	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain primarily esters of aromatic or α,β-unsat. acids and 1° and/or 2° alcohols. Peak at 1598 cm^{-1} due to org. nitrates or substituted aromatic cmpds. which occasionally show a large, broad unresolved peak in this region.

TABLE 8-76.
IR REPORT

SAMPLE: 1XR-LC1, froth flotation separator, canister rinse; LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2931, 2856	s	aliphatic, CH stretch
1465	m	aliphatic, CH bend
1376	w	isolated methyl, CH bend
718	w	$-(CH_2)_4$-rocking
1739, 670	w	unassigned

OTHER REMARKS:

Sample predominantly sat. hydrocarbons, containing a trace of ketone.

TABLE C-77
IR REPORT

AMPLE: 1XR-LC2, froth flotation separator, canister rinse; LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
048	m	aromatic C-H
925, 2852	m	aliphatic C-H
602	m	aromatic
452	m	aromatic, methyl
42-705	s	aromatic aliphatic
925, 1301, 1246, 1185, 1136, 1034	w	unassigned

IER REMARKS:

High concentration of aromatic material.

TABLE 8-78.
IR REPORT

SAMPLE: 1XR-LC3, froth flotation separator, canister rinse: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3052	s	aromatic or olefinic CH
2957, 2926, 2857		aliphatic CH
1927, 1000, 1780		aromatic combinations and overtones
1599		aromatic or olefinic C-C
1456, 1440		aliphatic CH
1382		methyl CH
1195-1025		fingerprint region-aromatics
880, 843, 811,		
744, 748	s	substituted aromatic cmpds
1731, 949, 711		
690	w	unassigned

OTHER REMARKS:

Sample contains significant amounts of aromatic hydrocarbons.

TABLE 8-79.
IR REPORT

SAMPLE: 1XR-LC4, froth flotation separator, canister rinse; LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3502	s	2° amine
3055	m	aromatic or olefinic CH stretch
2959, 2925, 2856	s	aliphatic CH stretch
1925-1712	w	aromatic combination/overtones
1602	m	aromatic or olefinic C=C
1459, 1451	s	aliphatic CH bend
1376	w	methyl CH bend
1263-1017	m-w	fingerprint region aromatic
804, 746, 725	m-s	substituted aromatic cmpds.
2226, 1492, 1326		
867, 842, 700, 616, 566	w	unassigned

OTHER REMARKS:

Probable alkylated aromatic amines.

TABLE 8-80.
IR REPORT

SAMPLE: 1XR-LC5, froth flotation separator, canister rinse: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3357	w (broad)	alcoholic or phenolic OH or amine
3055	w	aromatic CH
2959, 2932, 2856	s	aliphatic CH
2226, 2075	w	conjugated C≡N, or unsymmetric
		disub. acetylenic -C≡C-
1733	m	ester or aliphatic ketone
1602	m	aromatic C⋯C
1458, 1376	m,w	aliphatic CH bend
1260	m	phenolic C-O aromatic ether, ester or aromatic
1095, 1027	m	ester, alcohol, phenol, 2° aromatic amine
801, 753	m,w	substituted aromatic CH bend
1177, 876, 690	w	unassigned

OTHER REMARKS:

Shape peak at 1260 possibly due to Ø-NH-R absorption.

Sample predominantly alkylated phenols or secondary aromatic amines, or aroma esters.

TABLE 8-81.
IR REPORT

MPLE: 1XR-LC6, froth flotation separator, canister rinse; LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
62	w	aromatic CH stretch
59, 2932, 2856	s	aliphatic CH stretch
62	m	ketene or ketenimine, or keazoketone
40	m	ketene, ester or aliphatic ketone
50	m	aliphatic diazoketone
02	m	aromatic C···C
52, 1376	m	aliphatic CH
67-1177	m	aliphatic or aromatic C-O
8, 752	w,m	substituted aromatic
09, 1020, 704	w	unassigned

HER REMARKS:

Sample predominantly aromatic and saturated and/or unsaturated hydrocarbons but appear to contain some aliphatic esters and aliphatic diazoketones.

TABLE 8-82.
IR REPORT

SAMPLE: 1XR-LC7, froth flotation separator, canister rinse: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3055	w	aromatic CH stretch
2959, 2932, 2856	s	aliphatic CH stretch
2062	s	ketene or ketenimine (C=C=O) (>C=C=N-)
1746	m	ketene, ester or aliphatic ketone
1465, 1383	m,w	aliphatic CH bend
1074	m	aromatic ester ethyl or n-propyl C-C
821, 753	w	substituted aromatic or ethyl or n-propyl C-C
1644, 1609, 1348,		
1314, 1178, 952,		
691	w	unassigned

OTHER REMARKS:

Band at 3261^{-1} believed to be due to presence of H_2O in IR cell.

No strong bands in region 1300-1000 cm^{-1} except at 1074 cm^{-1} suggest that absorption at 1746 cm^{-1} due to ester of saturated acid.

Sample predominantly saturated esters, ketenes, or ketenimines.

TABLE 8-83.
IR REPORT

SAMPLE: 2X-P, final cooler cooling tower vapor, XAD-2 resin: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3034	w	aromatic or olefinic CH
2966, 2932,		
2875, 2864	s	aliphatic CH stretch
1723	s	ketone or ester
1604, 1491	m, w	aromatic or olefinic C⋯C
1456, 1377	m, w	aliphatic CH
1269, 1110,		
1076	m, s, m	ester or aromatic acid, or aromatic and/or
		aliphatic ethers
798, 753, 702	w, w, m	sub. aromatic cmpds.-2 and 5 adj. hydrogens
1025	w	unassigned

OTHER REMARKS:

Sample contains predominantly aromatic and aliphatic esters and/or ethers. Bands in aromatic CH out-of-plane region suggest monosubstituted and p-disubstituted benzenes are predominant.

TABLE 8-84.
IR REPORT

SAMPLE: 2X-C, final cooler cooling tower vapor, XAD-2 resin: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3094, 3053, 3006	w,m,w	aromatic or olefinic CH stretch
2965, 2934, 2865	w	aliphatic CH stretch
1674-1955	w	aromatic overtones/combinations
1597, 1426	m	condensed aromatic C---C, α-sub. naphthalenes, conj. vinyl
781-699	s-m	substituted aromatic cmpds.
957	m	vinyl CH out-of-plane bend or aromatic in-plane ben
1568, 1509, 1456, 1391, 1274, 1245	w	unassigned

OTHER REMARKS:

Sample contains predominantly aromatic hydrocarbons. Bands at 1597, 1426, and 781 cm^{-1} highly suggestive of α-substituted naphthyl derivatives. Some saturated hydrocarbons are present as evidenced by weak bands at 2965-2865 cm^{-1}. Strong band at 950 cm^{-1} characteristic of conjugated vinyl group.

TABLE 8-85.
IR REPORT

SAMPLE: 2X-LC1, final cooler cooling tower vapor, XAD-2 resin: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2961, 2972, 2859	s	aliphatic CH stretch
1460, 1375	m,w	aliphatic CH bend

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transfor IR Techniques.

Sample contains only saturated hydrocarbons.

TABLE 8-86.
IR REPORT

SAMPLE: 2X-LC2, final cooler cooling tower vapor, XAD-2 resin: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3062, 3024, 3006	w	aromatic or olefinic CH
2962, 2924, 2871	s	aliphatic CH stretch
1604, 1514, 1494	w	aromatic CH bend

800, 755, 735, 699	w,w,w,	substituted aromatic cmpds predominantly mono-sub. benzene
1261, 1089, 1029,		
886, 868	w	unassigned

OTHER REMARKS:

Sample predominantly saturated hydrocarbons containing some substituted aromatic cmpds.

TABLE 8-87
IR REPORT

SAMPLE: 2X-LC3, final cooler cooling tower vapor, XAD-2 resin; LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3030	w	aromatic or olefinic CH
2965, 2930, 2859	s	aliphatic CH stretch
1738	w	ketone or ester
1456, 1380	m	aliphatic CH bend
1263, 1151, 1028	w	ester of aromatic acid, aromatic ether, aliphatic ether
799, 775, 751, 699	w,w,w,m	substituted aromatic CH bend
1603, 1492, 893	w	unassigned

OTHER REMARKS:
Sample predominantly saturated and aromatic hydrocarbons, with some aromatic and aliphatic esters and/or aromatic and aliphatic ethers present.

TABLE 8-88.
IR REPORT

SAMPLE: 2X-LC4, final cooler cooling tower vapor, XAD-2 resin: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2929,		
2859	s	aliphatic CH stretch
1738	m	ketone or ester
1462, 1380	m	aliphatic CH bend
1268, 1116,		
1028	m, w, w	ester of aromatic acid (Ø-CO-O) aliphatic or
		aromatic ether (C-O-C)
799, 752, 711		substituted aromatic cmpds.
1661, 1603,		
1069	w	unassigned

OTHER REMARKS:

Sample predominantly aliphatic and aromatic hydrocarbons, containing some esters of aromatic acids, and/or aromatic or aliphatic ethers.

TABLE 8-89.
IR REPORT

SAMPLE: 2X-LC5, final cooler cooling tower vapor, XAD-2 resin: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
959, 2930, 2859	s	aliphatic CH stretch
732	s	ester or aliphatic ketone
603	w	aromatic or olefinic C⋯C
462, 1380	m,w	aliphatic CH bend
1280, 1128	s,m	aliphatic ester of aromatic acid, aromatic or aliphatic ether
740, 711	w	substituted aromatic
1075	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain predominantly aliphatic esters of aromatic acids and/or aromatic or aliphatic ethers.

TABLE 8-90.
IR REPORT

SAMPLE: 2X-LC6, final cooler cooling tower vapor, XAD-2 resin: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3063	w	aromatic or olefinic CH
2959, 2930, 2859	s	aliphatic CH stretch
1726	s	ester or aliphatic ketone
1603	m	aromatic or olefinic C=C
1462, 1380	m,w	aliphatic CH
1274, 1116	m,m	ester of aromatic or α,β-unsaturated acids
752, 711, 693	m-w	substituted aromatic cmpds
1497	w	unassigned

OTHER REMARKS:
Sample predominantly esters of aromatic or α,β-unsaturated acids and primary alcohols.

TABLE 8-91.
IR REPORT

SAMPLE: 2X-LC7, final cooler cooling tower vapor, XAD-2 resin: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2953, 2930, 2859	s	aliphatic CH stretch
1726	m	ester of aliphatic ketone
1603	m	aromatic of olefinic C=C
1450, 1374	m	aliphatic CH bend
1274, 1045	m	ester of aromatic or α,β-unsat. acid
1110	s	aliphatic ether
722	w	sub. aromatic, predominantly 4 adj. H
3323, 3096, 1668,		
1556, 940	w	unassigned

OTHER REMARKS:

Sample contains predominantly aliphatic ethers with evidence of esters of aromatic or α,β-unsaturated acids.

TABLE 8-92.
IR REPORT

SAMPLE: 2XR-P, final cooler cooling tower vapor, canister rinse: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3060	w	aromatic or olefinic CH
2963, 2927, 2862	s	aliphatic CH
1733	s	ester or aliphatic ketone
1603	m	aromatic C--C
1461, 1378	s,m	aliphatic CH
1414	m	α-naphthalene, aliphatic CH
1260	s	aromatic and aliphatic ethers and esters
1088 and 1023	s	aromatic fingerprint region
805, 864, 698	m	substituted aromatic CH bend
2064, 1946	w	unassigned

OTHER REMARKS:
Bands at 2363-2340 cm^{-1} are due to presence of CO_2 in cell.
Probable aliphatic esters of aromatic acids, and alkylated aromatic hydrocarbons.

TABLE 8-93.
IR REPORT

SAMPLE: 2XR-C, final cooler cooling tower vapor, canister rinse; concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3070	w	aromatic or olefinic CH
2966-2856	s	aliphatic CH
1740	m	aliphatic ketone or ester
1667	m	aromatic ketone or olefinic C=C
1600	w	aromatic or conj. olefinic C=C
1465	s	aliphatic (methylene) or aromatic C-C
1410	m	α-naphthalene, olefine, or paraffin
1380	m	methyl and α-naphthalene
1264	s	aromatic ethers, or esters
1093-1020	s	aliphatic ethers, aromatic C-C
867-800, 697	s,m	substituted aromatic CH bend
2082, 1947, 666	w	unassigned

OTHER REMARKS:

Peaks at 2365-2340 cm^{-1} due to presence of CO_2

Bands at 867, 800, and 697 are suggestive of symmetrically substituted aromatic rings, e.g., 1,3,5-trisubstituted benzene.

Probable aromatic hydrocarbons and alkylated derivatives and unsaturated hydrocarbons.

TABLE 8-94.
IR REPORT

SAMPLE: 9A-C, final cooler cooling tower hot well, pH 2 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600, 3470	s	"Free" alcoholic OH, aromatic amines "free" NH
3300-3100	(broad)	NH stretch of H-bonded amine or OH stretch of H-bonded alc.
3030, 3005	s	aryl or vinyl CH stretch
2920, 2960	s,m	alkyl CH stretch
1720	s	aliphatic ketone or ester
1615	s	NH banding of 1° amines
1595, 1500, 1495	s	NH banding of 2° amines + aryl or vinyl C=C
1455, 1375	s,w	alkyl, CH bend
1280-1200	m-w	aromatic CH bends or ester of α,β-unsat. acids or aromatic acids, aromatic CN stretch, or aryl ether
1150, 1110, 1035	s,w,w	aliphatic or aromatic ester, aliphatic ether, or amine C-N
835, 730	s,m	substituted aromatic CH
1415, 1320, 1175,		
930, 880, 690	w	unassigned

OTHER REMARKS:

Sample predominantly amines, diphatic ketones or esters of aromatic acids, and some alcoholic compounds.

TABLE 8-95.
IR REPORT

SAMPLE: 9A-LC1, final cooler cooling tower hot well, pH 2 extract: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2964, 2916, 2821	w	aliphatic CH stretch
1494	s	aromatic C···C
1462	s	aliphatic CH bend, or aromatic

812	m	aliphatic, aromatic, C-Cl
745	s	
1184, 1163, 1038	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transfrom IR techniques.

Probable PNA hydrocarbon.

TABLE 8-98.

IR REPORT

SAMPLE: 9A-LC4, final cooler cooling tower hot well, pH 2 extract: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3418	s	OH, NH
3062	w	aromatic C-H
2959, 2933, 2856	w	aliphatic C-H
1719	w	ketone, ester
1459	s	aromatic, aliphatic CH bend
1434	m	aromatic, methyl, methylene
1095	m	aromatic
746	s	multiplet-aromatic, C-Cl

OTHER REMARKS:

2363 and 2336 due to CO_2.

TABLE 8-99.
IR REPORT

SAMPLE: 9A-LC5, final cooler cooling tower hot well, pH 2 extract: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3418	w	OH, NH
2932, 2856	s	aliphatic C-H
1719	w	ketone, ester
1458	m	aromatic, methyl, methylene
746	m	aromatic, C-Cl
670	s	aromatic, C-Cl
1287, 1095, 1013	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

2363 and 2336 due to CO_2. Probable aromatic alcohol or amine.

TABLE 8-100.
IR REPORT

SAMPLE: 9A-LC6, final cooler cooling tower hot well, pH 2 extract: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3363	m	OH
3041	m	aromatic C-H
2925	s	aliphatic C-H
2856	m	aliphatic C-H
1705	s	ketone, ester
1596, 1506	s	aromatic C⋯C
1459	s	aliphatic CH bend
1376	m	methyl CH bend
1287	s	ether ester of aromatic acid, alcohol, or phenol
753	m	substituted aromatic CH bend

OTHER REMARKS:
Probable alcohols or alkylated phenols.

TABLE 8-101.
IR REPORT

SAMPLE: 9A-LC7, final cooler cooling tower hot well, pH 2 extract: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3287	w	alcoholic, phenolic, or acidic OH
2927	s	aliphatic C-H
2856	m	aliphatic C-H
1738	s	ketone, ester
1693	m	ketone, acid
1597, 1558	m	aromatic C···C
1455, 1417	m	aromatic, methyl, methylene
749	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable alkylated phenols, ketones or carboxylic acids.

TABLE 8-102.
IR REPORT

SAMPLE: 9B-P, final cooler cooling tower hot well, pH 12 extract: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3300, 3100	m (broad)	alcoholic OH or amine or amide NH
3058	w	aromatic or olefinic CH
2928, 2857	s,m	aliphatic CH
1727	s	ester or aliphatic ketone
1597	s	aromatic C⋯C, amine NH bend
1502	m	aromatic C⋯C
1455, 1178	s	aliphatic CH bend, ester, aromatic amine C-N
1106, 1059	m	ether, ester, aliphatic amine
746	s(b)	substituted aromatic CH bend and NH bend of 1°
		amines
834, 811	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transfon IR techniques.

Doubled at 1242 and 1172 cm^{-1} highly suggestive of CN stretching of aromatic amines. Probable alkylated aromatic amines, and esters of aromatic acids.

TABLE 8-103.

IR REPORT

SAMPLE: 9B-C, final cooler cooling tower hot well, pH 12 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3620	m	alcoholic free OH stretch
3600, 2900	(broad)	alcoholic OH, amide or amine NH
3070, 3006	s	aromatic or olefinic CH stretch
2990, 2959, 2890	s,s	aliphatic CH stretch
1630, 1610	s	1° amine-NH bend, or amide
1590, 1515	m,s	aromatic C···C
1580, 1480	s	aromatic C···C
1450, 1380, 1350	w,m,w	gem-dimethyl CH vibration
1295	m	aromatic amine CH
1260	m (broad)	aliphatic amine CH or alcohol
1190, 1010	m-w	aromatic fingerprint region, ether, alcohol,
		aliphatic amine or amide
850, 680	s (broad)	1° and/or 2° amine NH wagging and CH bend of
		aromatic compounds, including heterocyclic amines
760, 700	m	substituted benzene
1325, 958, 950,		
940 and 895	w	unassigned

OTHER REMARKS:

Sample predominantly alcohols, aniline, and alkylated anilines (both N- and ring substituted). Bands at 1380 cm^{-1} and 1350 cm^{-1} suggest that alkylated derivatives are primarily i-pr or t-bu compounds. Also, the series of bands in region of 1630 - 1450 may arise from heterocyclic aromatic amines such as pyridine and quinoline, as well as from the carbon homologs.

TABLE 8-104.
IR REPORT

SAMPLE: 9B-LC1, final cooler cooling tower hot well, pH 12 extract: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2956, 2926, 2859	s	aliphatic CH stretch
1743	w	ester, or aliphatic ketone
1464	m	aromatic C=C stretch, or aliphatic CH bend
1452, 1379	w	aliphatic CH bend
723	w	$-(CH_2)_4$ - rocking or substituted aromatic CH bend
1258, 1021	w	unassigned

OTHER REMARKS:

Sample contains predominantly saturated hydrocarbons and saturated ketones. Possibly small amounts of saturated esters.

TABLE 8-105.
IR REPORT

SAMPLE: 9B-LC2, final cooler cooling tower hot well, pH 12 extract: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2954, 2926, 2858	s	aliphatic CH stretch
1462, 1450	m	aliphatic CH bend
1377	w	methyl CH bend
809	w	substituted aromatic CH bend
1193, 1143, 1119	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample contains only saturated hydrocarbons with trace amounts of aromatic compounds.

TABLE 8-106.
IR REPORT

SAMPLE: 9B-LC3, final cooler cooling tower hot well, pH 12 extract: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2957, 2928, 2853	s	aliphatic-CH
1733	m	ester or aliphatic ketone
1456, 1375	m	aliphatic CH bend
751	w	$(-CH_2)_4$ - or substituted aromatic
1687, 1288, 1265	w	unassigned

OTHER REMARKS:

Probable saturated hydrocarbons.

TABLE 8-107.
IR REPORT

SAMPLE: 9B-LC3, final cooler cooling tower hot well, pH 12 extract: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2929, 2859	s	aliphatic CH stretch
1456	m	aliphatic CH bend
1379	w	methyl CH bend
1262	w	t-butyl
752	w	substituted aromatic CH bend
1738, 1597, 1380,		
1280, 1021	w	unassigned

OTHER REMARKS:

Probable saturated and alkylated aromatic hydrocarbons.

TABLE 8-108.
IR REPORT

SAMPLE: 9B-LC4, final cooler cooling tower hot well, pH 12 extract: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2956, 2927, 2856	s	aliphatic CH stretch
1735	m	aliphatic ketone or ester
1604, 1496	w	aromatic C⋯C stretch
1455, 1377	m,w	aliphatic CH bend
1276, 1121	w	aromatic ester Ø-C-O stretch
745, 698	w	substituted aromatic CH or C-Cl
1216, 1073, 1020	w	unassigned

OTHER REMARKS:

Sample appears to be predominantly aliphatic ketones, with some aromatic esters of considerable aliphatic character present.

Shape spike @ 668 cm^{-1} remains unidentified.

TABLE 8-109.
IR REPORT

SAMPLE: 9B-LC5, final cooler cooling tower hot well, pH 12 extract: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2932, 2856	s	aliphatic CH
1733	s	ester or aliphatic ketone
1465	m	aliphatic CH bend
1287, 1274	s	ester of aromatic acid, aromatic ether
1123, 1075	m	ester or ether
746, 695	w	substituted aromatic CH bend, C-Cl
3244, 1602, 1582,		
1383, 952, 876	w	unassigned

OTHER REMARKS:

Probable aliphatic esters of aromatic acids.

TABLE 8-110.
IR REPORT

SAMPLE: 9B-LC6, final cooler cooling tower hot well, pH 12 extract: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3500-2500	broad	1° or 2° amines and 1° or 2° amides
3055	s	aromatic CH
2924, 2856	s	aliphatic CH
1595, 1506	s	aromatic C⋯C, amide I and II bands
1460, 1376	m	aliphatic CH bend
1246	s	aliphatic or aromatic C-N
897, 699	s	substituted aromatic compounds
2068, 1924, 1314,		
1157, 1040, 944	w	unassigned

OTHER REMARKS:

Sample appears to be predominantly aromatic and aliphatic amines or amides.

TABLE 8-111.
IR REPORT

SAMPLE: 9B-LC7, final cooler cooling tower hot well, pH 12 extract; LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2953, 2930, 2854	s	alkyl CH stretch
2061	s	isothiocyanate or keterimines (-N=C=S) (C=C=N)
1603	s	unresolved C⋯C stretch of sub. aromatic compound
1462	m	alkyl CH bend
756, 699	m	substituted aromatic CH bend
1656, 1497, 1280	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample contains alkylated aromatic compounds and/or alkyl or aryl isothiocyanates or keterimines.

TABLE 8-112.
IR REPORT

SAMPLE: 10A-P, final cooler cooling tower cold well, pH 2 extract: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3500-3200	w (broad)	alcoholic or phenolic OH
3056	w	aromatic or olefinic CH
2959, 2918,		
2849	m,s,s	aliphatic CH stretch
1712	s	ketone, ester
1689-1644		ketone, acid
1603, 1495	m	aromatic C⋯C
1461, 1380	m,w	aliphatic CH bend
1243	s (broad)	phenol, alcohol, acid, ester
809, 741, 698	m,s,m	sub. aromatic CH bend
1724, 1432,		
1123, 1009		
837	w	unassigned

OTHER REMARKS:

Probable alkylated phenols and carboxylic acids.

TABLE 8-113.
IR REPORT

SAMPLE: 10A-C, final cooler cooling tower cold well, pH 2 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3620, 3500	s	free alcoholic or phenolic OH
3500-2900	2 (broad bands)	banded OH-alcohol or phenol
3030	s	aromatic or olefinic CH stretch
2950, 2890	s	aliphatic CH stretch
1712	w	ketone or ester
1630, 1610	s (broad)	substituted aromatic C⋯C
1520, 1500	s	aromatic or olefinic C⋯C
1465, 1390,		
1365	s,m,m	aliphatic CH bend
1190-1160, 1115	s,m	alcoholic or phenolic C-O, or aliphatic ethers
890, 845, 695	w,m,w	substituted aromatic CH
1422, 1330,		
1320, 1290,		
1275, 1040, 945	w	unassigned

OTHER REMARKS:
Sample predominantly alcohols, and alkylated phenols. Small peak at 1712 cm^{-1} suggests that small quantities of carboxylic acids, ketones, and/or esters might be present.

TABLE 8-114.
IR REPORT

SAMPLE: 10A-LC1, final cooler cooling tower cold well, pH 2 extract; LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2949, 2923,		
2854	s	alkyl CH stretch
1748, 1711	w	ester and/or ketone
1463, 1379	w	alkyl CH bend
1154, 1197	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain only aliphatic hydrocarbons, esters, and ketones.

TABLE 8-115.
IR REPORT

SAMPLE: 10A-LC2, final cooler cooling tower cold well, pH 2 extract: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3045	w	aromatic or olefinic CH
2954, 2926,		
2857	s	aliphatic CH stretch
1726	w	ketone or ester
1459, 1378	m,w	aliphatic CH bend
1261	w	aromatic ester C-CO-O stretch
841-699	w	aromatic CH bending (substituted)
1039, 876	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly saturated and aromatic hydrocarbons, with some aromatic and/or alkyl esters.

TABLE 8-116.
IR REPORT

SAMPLE: 10A-LC3, final cooler cooling tower cold well, pH 2 extract: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2942, 2930,

835, 773, 752,		
691	m	aromatic compounds-substituted
2068, 1869, 931	w	unassigned

OTHER REMARKS:

Sample predominantly aromatic and aliphatic carboxylic acids and/or alkylated phenols.

TABLE 8-120.
IR REPORT

SAMPLE: 10A-LC7, final cooler cooling tower cold well, pH 2 extract: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2962, 2920,	m	alkyl CH stretch
2852		
1738	m	ester, or aliphatic ketone
1703	s	ketone or ester
1618, 1439 (?)	m	aromatic or olefinic C---C
1104, 1042	m	aliphatic ethers, or 2^{O} alcohol
1676, 863, 834	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain only residual aliphatic ketones and esters.

TABLE 8-121.

IR REPORT

SAMPLE: 10B-C, final cooler cooling tower cold well, pH 12 extract: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3400 - 3000	s(broad)	amine or amide NH stretch
3062	s	aromatic or olefinic CH stretch
2954, 2870	m	aliphatic CH stretch
2151, 2055	w	ketenes (C=C=O) and isothiocyanates
1705, 1664	s	amide I bands (N=C=S)(C=O stretch)
1604, 1515	s	amide II bands (N-H bend) or amine NH bend, or
		aromatic C···C
1500	s	aromatic C···C
1445	s	aliphatic CH or saturated 1° amide
1376	m	aliphatic CH bend
1322		aromatic amine C-N
1267 - 1034	w	aromatic fingerprint region and/or amino C-N
		stretching
900 - 800	m(broad)	amine and/or amide NH bend
746 - 691	s,m	monosubstituted benzene
1548	w	unassigned

OTHER REMARKS:

Sample predominantly aryl and/or alkyl amines and amides; bands at 3062, 1664, 1604, 815, 746, and 691^{+1} strongly suggesting that appreciable amounts of aniline, N-alkylated aniline, and/or amides of benzoic acid are present.

TABLE 8-122.
IR REPORT

SAMPLE: 10B-LC1, final cooler cooling tower cold well, pH 12 extract: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2957, 2928,		
2853	s	aliphatic CH stretch
1750	w	ketone or ester
1462, 1375	m,w	aliphatic CH bend
1467, 722	w	unassigned

OTHER REMARKS:

Sample contains predominantly saturated hydrocarbons.

TABLE 8-123.

IR REPORT

SAMPLE: 10B-LC2, final cooler cooling tower cold well, pH 12 extract: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2854, 2956,		
2947, 2424	s	aliphatic CH stretch
1457, 1463,		
1380	m	aliphatic CH bend
1261, 1161	w	aromatic or aliphatic ether
1015, 1038	w	aromatic or aliphatic ether
810, 804	w	substituted aromatic CH bend or C-Cl
1600, 1586	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable saturated hydrocarbons, with some aromatic or aliphatic ethers.

TABLE 8-124.

828	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable alkylated aromatic amides and amines.

TABLE 8-129.

IR REPORT

SAMPLE: 3X-P, vapor above tar storage tank, XAD-2 resin: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3060, 3031	w	aromatic or olefinic CH
2964, 2930,	s	aliphatic CH stretch
2874		
1725	m	ketone or ester
1602, 1495	m	aromatic CH bend
1455, 1376	m,w	aliphatic CH bend
1275, 1106,	m	ester of aromatic acid, aromatic
1067		and/or aliphatic ether
802, 751, 701	w,w,m	sub. aromatic CH bend
1027, 892, 830	w	unassigned

OTHER REMARKS:

Sample predominantly aliphatic and aromatic esters and ethers. IR spectrum suggests that sample is predominantly esters of aromatic acids and alkyl ethers.

TABLE 8-130.
IR REPORT

SAMPLE: 3X-C, vapor above tar storage tank, XAD-2 resin: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3071, 3054,	w,m,w	aromatic and/or olefinic CH
3007		
2967 - 2863	w	aliphatic CH stretch
1954 - 1676	w	aromatic overtone region
1595, 1387	m	aromatic or conjugated olefinic C=C
1213 - 1011	w	aromatic fingerprint region
958	m	conjugated vinyl CH bend, or
		aromatic in-plane bend
785 - 698	s-w	substituted aromatic CH bend
1566, 1508,	w	unassigned
1364, 843		

OTHER REMARKS:
Sample predominantly aromatic and unsaturated hydrocarbons.

TABLE 8-131.
IR REPORT

SAMPLE: 3X-LC1 vapor above tar storage tank, XAD-2 resin: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2975, 2936,	s	aliphatic CH
2859		
1513, 1464	m	aliphatic stretch
1282, 1216, 970	m	aliphatic stretch

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable aliphatic hydrocarbons.

TABLE 8-132.
IR REPORT

SAMPLE: 3X-LC2, vapor above tar storage tank, XAD-2 resin: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3060, 3025	w	aromatic CH stretch
2963, 2924,	s	aliphatic CH stretch
2857		
1604, 1494	w	aromatic C--C stretch
1455, 1375	m,w	aliphatic CH bend

752, 699	w,m	sub. aromatic CH bend
1589, 1535,	w	unassigned
1261, 1029,		
889		

OTHER REMARKS:

Sample predominantly saturated hydrocarbons and mono-substituted benzene.

TABLE 8-133.
IR REPORT

SAMPLE: 3X-LC3, vapor above tar storage tank, XAD-2 resin: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3025	w	aromatic CH stretch
2961, 2926,	s	aliphatic CH stretch
2854		
1741, 1732	w	ester of aromatic acid, Ø-CO-O
1603, 1588,	w	aromatic C⋯⋯C stretch
1494		
1462, 1453,	w	aliphatic CH bend
1377		
799, 758, 705	w,w,m	sub. aromatic compds, primarily
		monosub. benzene
1263, 1072,	w	unassigned
1031, 893		

OTHER REMARKS:
Sample predominantly saturated hydrocarbons, sat. ketones or ester, containing trace of aromatic compds.

TABLE 8-134.
IR REPORT

SAMPLE: 3X-LC4, vapor above tar storage tank, XAD-2 resin: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2930,	s	aliphatic CH stretch
2859		
1726	m	ester, or aliphatic ketone
1462	m	aromatic C⋯C
1456, 1380	m,w	aliphatic CH bend
1268, 1110,	m,w,w	ester of aromatic acid, aromatic and/or
1028		aliphatic ether
799, 752, 711	w,w,m	substituted aromatic
1585, 1069	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample contains predominantly alkylated esters of aromatic acids, and/or saturated hydrocarbons.

TABLE 8-135.
IR REPORT

SAMPLE: 3X-LC5, vapor above tar storage tank, XAD-2 resin: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2932	s	aliphatic CH stretch
2856		
1726	s	ester, or aliphatic ketone
1459, 1376	m,w	aliphatic CH bend
1274, 1116,	s,w	ester of aromatic acid, aromatic
1075		or aliphatic ether
801, 746, 712	w	substituted aromatic
1027	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly saturated hydrocarbons and alkyl esters of aromatic acids and/or alkyl and aryl ethers.

749, 711, 699	w - m	substituted aromatic CH bend
1681, 1312,	w	unassigned
1029, 1022,		
824, 800		

OTHER REMARKS:
Sample predominantly alkylated esters of aromatic acids and alcohols.

TABLE 8-139.
IR REPORT

SAMPLE: 3XR-LC1, vapor above tar storage tank, canister rinse: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2924	s	aliphatic CH stretch
2856		
1733	m	ester or aliphatic ketone
1459	m	aliphatic CH
1376	w	methyl CH
1274	w	conjugated ester or ether C-O or Si-C
1561, 1123,	w	unassigned
1068, 718, 671		

OTHER REMARKS:
Probable saturated hydrocarbons with trace of aromatic ether or ester of aromatic acid.

TABLE 8-140.
IR REPORT

SAMPLE: 3XR-LC2, vapor above tar storage tank, canister rinse: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600 - 3000	m(broad)	alcoholic or phenolic OH
3048		aromatic CH
2959, 2931,	s	aliphatic CH
2856		
1719	s	ketone, ester
1452, 1376	m	aliphatic CH bend
1260	m	ether, ester, alcohol, phenol
1095, 1034	m	ether, alcohol, phenol, ester
		of aromatic acid
810	m	monosubstituted benzene
739	m	"
1630, 1239,	w	unassigned
1164, 864		

OTHER REMARKS:
Probable aliphatic esters of aromatic acids and alcohols.

TABLE 8-141.
IR REPORT

SAMPLE: 3XR-LC3, vapor above tar storage tank, canister rinse: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3055, 3041	m	aromatic CH stretch
2959, 2932,	s	aliphatic CH stretch
2856		
1925	m	aromatic sub.
1732, 1718	m	ketone, ester
1459, 1376	s	aliphatic CH bend
1260, 1089,	m	ester or ether, aromatic CH bend
1020, 958		
780, 746, 712	s	substituted aromatic CH bend
1390, 671, 670,	w	unassigned
1616		

OTHER REMARKS:
This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.
Probable alkylated aromatic ethers and alkylated aromatic hydrocarbons.

TABLE 8-142.
IR REPORT

SAMPLE: 3XR-LC4, vapor above tar storage tank, canister rinse: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2932,	s	aliphatic CH stretch
2856		
1733	s	ester or aliphatic ketone
1459, 1376	m,w	aliphatic CH bend
1287, 1123,	s,m,w	ester of aromatic acid and/or
1075		aryl and alkyl ethers
739, 660	m	monosubstituted benzene

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Spectrum strongly suggests that sample is predominantly benzoates of 1° and 2° alcohols.

TABLE 8-143.
IR REPORT

SAMPLE: 3XR-LC5, vapor above tar storage tank, canister rinse: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2961, 2929,	s	aliphatic CH
2861		
1733	s	ester or aliphatic ketone
1457	m	aliphatic CH bend
1376	w	methyl CH bend
1276, 1126	m	aliphatic ester of aromatic acid
1075, 744	w,m	substituted aromatic CH or ethyl C-C
744, 701	m	substituted aromatic CH
1038	w	unassigned

OTHER REMARKS:
Sample predominantly aliphatic esters and/or sat. hydrocarbons but bands at 1075, 1038, 744, and 701 cm^{-1} suggest presence of same aromatic cmpds.

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3068, 3056	m	aromatic or olefinic CH
2966, 2931,	w	aliphatic CH
2856		
1671, 1958,	w	aromatic combinations/overtones
1924, 1842,		
1787, 1739		
1595, 1390	m	aromatic or olefinic C⋯C, or
		monosub. naphthalene
1273 - 1006	w	aromatic fingerprint region
958	m	aromatic or olefinic CH bend
780, 739	s,m	substituted aromatic CH bend
2294, 1821,	w	unassigned
1622, 828,		
615		

OTHER REMARKS:

Sample predominantly unsaturated and aromatic hydrocarbons. IR spectrum suggests that aromatic hydrocarbons are predominantly α- and β-substituted naphthalenes.

TABLE 8-147.
IR REPORT

SAMPLE: 4X-R, tar decanter vapor, XAD-2 resin: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3088, 3071,	w,m,s,w	aromatic or olefinic CH
3054, 3007		
2967 - 2863	w	aliphatic CH
1948 - 1624	w	aromatic overtones/combinations
1595, 1387	m	condensed aromatic, α-sub. naphthyl,
		or conj. vinyl C···C
1271 - 1010	w	aromatic fingerprint region
958	m	conj. olefinic or aromatic CH
779, 739, 698	s,m,w	substituted aromatic cmpds.
2290, 1508,	w	unassigned
1427, 831, 617		

OTHER REMARKS:

Sample predominantly naphthalene, substituted aromatic cmpds, and unsaturated hydrocarbons with some aliphatic groups present.

TABLE 8-148.
IR REPORT

SAMPLE: 4X-LC1, tar decanter vapor, XAD-2 resin: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2930,	s	aliphatic CH stretch
2859		
1739	w	ester or aliphatic ketone
1005	w	aliphatic ester
1457, 1381	m,w	aliphatic CH bend
1686, 1645, 668	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly saturated hydrocarbons with a trace of aliphatic ketones and/or saturated esters.

TABLE 8-149.
IR REPORT

SAMPLE: 4X-LC2, tar decanter vapor, XAD-2 resin: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2930,	s	aliphatic CH stretch
2854		
1744	w	ester
1603	w	aromatic C···C
1462, 1380	m,w	aliphatic CH bend
1034	w	aliphatic ester or ether
746	w	substituted aromatic CH bend
1675, 1151,	w	unassigned
816		

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly aliphatic hydrocarbons, esters and/or ethers. Bands at 1603 and 746 cm^{-1} suggest aromatic cmpds are predominantly monosubstituted benzene.

TABLE 8-150.
IR REPORT

SAMPLE: 4X-LC3, tar decanter vapor, XAD-2 resin: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3072, 3052,	w	aromatic CH stretch
3030		
2927, 2860	w	aliphatic CH stretch
1449	w	aliphatic CH bend
1261 - 1040	w	aromatic fingerprint region
886, 869	w	substituted aromatic CH bend
818	m	substituted aromatic CH bend
732	s	substituted aromatic CH bend
1398, 1301, 954	w	unassigned

OTHER REMARKS:

Sample predominantly aromatic hydrocarbons and alkylated derivatives; e.g., α- and β-substituted naphthalenes.

TABLE 8-151.
IR REPORT

SAMPLE: 4X-LC4, tar decanter vapor, XAD-2 resin: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3421, 3395	m,w	1° amine, pyrrole or indole N-H
2955, 2921,	s	aliphatic CH stretch
2854		
1723	w	ketone or ester
1462, 1450,	w,m,w	aliphatic CH bend
1380		
1263	w	ester of aromatic acid
1098, 1086,	w	aliphatic C-N, aromatic ester,
1034		aromatic or aliphatic ethers
805, 749, 725	w,m,s	sub. aromatics CH bend
1336, 1327,	w	unassigned
1239, 1207		

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by Fourier Transform IR techniques.

Sample predominantly aromatic and aliphatic hydrocarbons with some aromatic and aliphatic esters and ethers and some 1° amino-cmpds or derivatives of pyrrole and/or indole.

TABLE 8-152.
IR REPORT

SAMPLE: 4X-LC5, tar decanter vapor, XAD-2 resin: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2930,	s	aliphatic CH
2854		
1728	w	ketone or ester
1462, 1380	w	aliphatic CH
1280	w	acetate, sat. ester
1034, 740, 670	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by Fourier Transform IR techniques.

Sample appears to contain only saturated hydrocarbons and saturated esters.

TABLE 8-153.
IR REPORT

SAMPLE: 4X-LC6, tar decanter vapor, XAD-2 resin; LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2953, 2930,	s	aliphatic CH stretch
2859		
1720	m	ketone or ester
1609	m	aromatic or conj. olefinic C⋯C
1462, 1374	m,w	aliphatic CH bend

		and/or aromatic ethers
1028, 1010	w	aromatic fingerprint region
752	w	sub. aromatic CH bend
1674, 1292	w	unassigned

OTHER REMARKS:

Sample predominantly aliphatic esters of aromatic acids; i.e., benzoates, phthalates, etc.

TABLE 8-154.
IR REPORT

SAMPLE: 4X-7, tar decanter vapor, XAD-2 resin: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2929,	s	aliphatic CH stretch
2859		
1744	m	ester or aliphatic ketone
1668, 1603,	m	aromatic or olefinic C⋯C
1556		
1462, 1380	m	aliphatic CH bend
1169, 1110	w,m	aliphatic ester or ether
1075, 1034	w	aromatic fingerprint
722, 828	w	substituted aromatic CH bend
1415	w	unassigned

OTHER REMARKS:

IR spectrum suggests that sample predominantly aromatic or aliphatic esters of saturated carboxylic acids and aliphatic ethers.

TABLE 8-155.
IR REPORT

SAMPLE: 4XR-P, tar decanter vapor, canister rinse: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3058	m	aromatic CH stretch
2964 - 2852	w	aliphatic CH stretch
1601	m	conj. DBL-bond, nitroso, aromatic
1495	m	aromatic, nitroso
1447	s	aliphatic CH bend
1265 - 1023	m	aromatic or vinyl ether, ketal or acetal,
		C-N stretching, C-O stretching, alkane .
952 - 864	m	epoxy, N-H bending
816	s	aromatic CH bend
781	m	aromatic CH bend
734	s	aromatic CH bend
2339, 1689-2079	w	unassigned

OTHER REMARKS:
2340 & 2370 cm^{-1} due to CO_2.
Probable aromatic hydrocarbons and some aromatic ethers.

TABLE 8-156.
IR REPORT

SAMPLE: 4XR-C, tar decanter vapor, canister rinse: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3090, 3050	s(broad)	aromatic CH stretch
2980 - 2880	w	aliphatic CH stretch
1950 - 1650	w	aromatic overtones/combinations
1595, 1509	s	aromatic C⋯C stretch
1455	w	aliphatic CH bend
1390, 1360	w	gem-dimethyl CH bend
1270 - 960	s	aromatic fingerprint region
835 - 700	s(broad)	substituted aromatic CH bend
1425, 1320,	w	unassigned
865		

OTHER REMARKS:

Sample predominantly substituted hydrocarbons. Bands at 1390, 1360, 865 cm^{-1} strongly suggest that sample contains significant amounts of α- and β- i-pr and t-bu naphthalenes.

TABLE 8-157.
IR REPORT

SAMPLE: 4XR-LC1, tar decanter vapor, canister rinse: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2925,	s	aliphatic CH
2856		
1733	w	ester, or aliphatic ketone
1465	m	aliphatic CH
1376	w	aliphatic CH
1123 & 1068	w	ester or aliphatic ether
719	w	$-(CH_2)_n^-$ rocking for ≥ 4
1274	w	unassigned

OTHER REMARKS:
Bands at 1733 cm^{-1} and 1123 and 1068 cm^{-1} suggests the presence of trace amounts of esters. Sample predominantly saturated hydrocarbons.

TABLE 8-158.
IR REPORT

SAMPLE: 4XR-LC2, tar decanter vapor, canister rinse: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3071, 3053	m	aromatic or olefinic -CH
2000 - 1600	w	aromatic combinations/overtones
1507	m	aromatic C⋯C
1392	m	α-naphthalenes C⋯C
1200 - 1000	m	aromatic fingerprint region
957	m	olefinic C-H (trans)
828	m	substituted aromatic hydrocarbons
781	s	substituted aromatic hydrocarbons
740	s	substituted aromatic hydrocarbons
1456, 1445,	w	unassigned
1427, 1245,		
699, 617		

OTHER REMARKS:

Sample contained virtually no aliphatic hydrocarbons, but appeared to consist almost entirely of aromatic hydrocarbons. Bands at 781 and 740 cm^{-1} highly suggestive of α-naphthalenes, i.e., 3 adjacent hydrogens on a ring or monosubstituted benzene.

TABLE 8-159.
IR REPORT

SAMPLE: 4XR-U3, tar decanter vapor, canister rinse: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3425	m	aliphatic 2° amine
3055	w	aromatic or olefinic CH stretch
2966, 2925,	m	aliphatic CH stretch
2856		
1718	w	ketone or ester
1452	s	aliphatic CH bend
1260 - 1027	w - m	C-N stretching of aromatic and
		aliphatic amine
801, 746, 725,	m,s,s	substituted aromatic CH bend
698		
1424, 1335, 993,	w	unassigned
931, 890		

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

The sample seemed to contain predominantly aliphatic 2° amines. The lack of a medium-to-strong band in the region 1650-1580 cm^{-1} arising from 1° amine NH wagging supports the idea that aliphatic 2° amines are predominant. Strong bands in region 890-700 cm^{-1} suggests appreciable amounts of aromatic hydrocarbons.

TABLE 8-160.
IR REPORT

SAMPLE: 4XR-LC4, tar decanter vapor, canister rinse: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2595, 2932,	m	aliphatic CH stretch
2877, 2963		
733	s	ester or aliphatic ketone
1459, 1383	m	aliphatic CH bend
1280, 1274	s	aromatic ether or ester of aromatic acid
1123, 1075	s	aliphatic or aromatic ether or
		ester of aromatic acid
739	m	substituted aromatic CH bend
1041, 965, 831,	w	unassigned
671		

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

3398 due to uneven sample.

671 & 739 may be due to $MeCl_2$.

Probable aliphatic esters of aromatic acids and alkylated aromatic hydrocarbons.

TABLE 8-161.
IR REPORT

SAMPLE: 4XR-LC5, tar decanter vapor, canister rinse: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3078	w	aromatic or olefinic CH
2963, 2933,	s	aliphatic CH
2878, 2866		
1732	s	ester or aliphatic ketone
1599, 1581	w	aromatic or olefinic C⋯C
1465, 1380	m,w	aliphatic CH bend
1280	s	ester of aromatic acid or aromatic ether
1126, 1071	s	ester of aromatic acid, aliphatic
		or aromatic ether
744, 701	m,w	substituted aromatic CH bend
1041, 956, 762,	w	unassigned
653		

OTHER REMARKS:

Sample predominantly aliphatic esters, ethers and/or saturated hydrocarbons, but does contain some aromatic compounds; possibly ester or aromatic acids.

TABLE 8-162.
IR REPORT

SAMPLE: 4XR-LC6, tar decanter vapor, canister rinse, LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3062	w	aromatic or olefinic CH
2966, 2932,	s	aliphatic CH
2856		
1740	s	ester, or aliphatic ketone
1609, 1596	m	aromatic or olefinic C=C stretch
1465	m	aliphatic CH bend or aromatic C⋯C stretch
1130, 1074,	w	aromatic C⋯C stretch, aliphatic ether or ester
1027		
835	w	$-(CH_2)_4^-$ rocking or substituted aromatic
780, 753	m	substituted aromatic CH bend
3302, 1643,	w	unassigned
1513		

OTHER REMARKS:

- Splitting pattern about 750 cm^{-1} suggests monosubstituted aromatic compounds are predominant.
- Carbonyl group most likely a keto group due to absence of strong absorption bands @ 1300-1050 cm^{-1} which accompany an ester.

Sample predominantly aliphatic ketones and alkylated aromatic hydrocarbons.

TABLE 8-163.
IR REPORT

SAMPLE: 4XR-LC7, tar decanter vapor, canister rinse: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3076	w	aromatic CH
2959, 2932,	s	aliphatic CH
2856		
1240	s	ester or aliphatic ketone
2082, 1002	w	cyanide
1465, 1376	w	aliphatic CH bend
1247, 1239	s	ester of aromatic acid, or aromatic ether
1212, 1123,	m	ester of aromatic acid, or aromatic or
1026		aliphatic ether
746, 615	w	substituted aromatic CH bend
1582, 1438,	w	unassigned
1081, 965, 835,		
780, 698		

OTHER REMARKS:

746, 615, 698 possibly due to $MeCl_2$.
Sample predominantly aliphatic esters of aromatic acids.

TABLE 8-164.
IR REPORT

SAMPLE: 11A-P, tar decanter vapor, condensate extract pH 2: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3300 - 2500	m	broad O-H stretch of carboxylic acid,
		alcohol or phenol
3058	m	aromatic CH stretch
2924, 2856	w	aliphatic CH stretch
1691	m	carboxylic acid dimer-asym. -CO-O stretch,
		aromatic or conj. acid
1594, 1502	m	aromatic or olefinic C=C
1453, 1380	w	aliphatic CH bend
1246	m	C-O stretch of carboxylic acid or phenol
886, 813, 782,	w - s - w	substituted aromatic compounds
740, 691		
1929, 953, 867	w	unassigned

OTHER REMARKS:
1191 - 1039 cm^{-1} aromatic fingerprint region.
Sample predominantly aromatic acids and phenolic derivatives.

TABLE 8-165.
IR REPORT

SAMPLE: 11A-C, tar decanter vapor, condensate extract pH 2: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3590, 3475	s	alcoholic or phenolic free OH
3500 - 2800	(2 broad bands)	alcoholic or phenolic OH H-bonded
3060 - 3040, 3005	m,s	aromatic or conj. olefinic CH stretch
2975, 2960,	m	aliphatic CH stretch
2880		
1620, 1595,	m,s	aromatic C···C
1510, 1500		
1455, 1375	s,w	aliphatic CH bend
1285-1200	m - w	aromatic fingerprint region
1150	s	alcoholic or phenolic C-O
830 - 750	broad	alcoholic or phenolic OH bend, substituted
		aromatic CH bend
1410, 1345,	w	unassigned
1215, 1120,		
1035, 1000,		
[illegible]		

OTHER REMARKS:

. Sample appears to contain predominantly alcohols and alkylated phenols. Broad, unresolved band at 1595 cm^{-1} strongly suggest that considerable phenolic compounds are present.

TABLE 8-166.
IR REPORT

SAMPLE: 11A-LC1, tar decanter vapor, condensate extract pH 2: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959	s	aliphatic CH stretch
2925, 2856	s	aliphatic CH stretch
1465	m	aliphatic CH bend
1376, 1274	w	unassigned

OTHER REMARKS:
2340 and 2370 cm^{-1} due to CO_2.
Only saturated hydrocarbons.

TABLE 8-167.
IR REPORT

SAMPLE: 11A-LC2, tar decanter vapor, condensate extract pH 2: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3044	w	aromatic CH stretch
2960 - 2900	w	aliphatic CH stretch
1602	w	aromatic C⋯C
1445	w	aliphatic CH bend
815, 732	s	substituted aromatic CH bend
1623, 1026, 951,	w	unassigned
890, 712		

OTHER REMARKS:
· Sample predominantly aromatic.

TABLE 8-168.
IR REPORT

SAMPLE: 11A-LC3, tar decanter vapor, condensate extract pH 2: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3048	w	aromatic or olefinic CH stretch
2952 - 2850	w	aliphatic CH stretch
1925 - 1602	w	aromatic combination/overtone
1445	m	aromatic or olefinic
1246 - 951	w	fingerprint region-aromatic
814, 732	s	substituted aromatic C-H bend
1396, 1301, 883,	w	unassigned
869, 712, 698		

OTHER REMARKS:

Sample contained only traces of saturated hydrocarbons - almost entirely aromatic and/or unsaturated hydrocarbons.

TABLE 8-169.
IR REPORT

SAMPLE: 11A-LC4, tar decanter vapor, condensate extract pH 2: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3423	s	alcoholic or phenolic OH, H-bonded
3047	w	aromatic or olefinic CH stretch
2924, 2854	m	aliphatic CH stretch
1703	w	ketone, ester
1603, 1497	m,w	aromatic C⋯C
1450	s	aliphatic CH bend
1239, 1886,	m,w,m	alcohol, phenol, ester or aromatic acid.
1010		
822, 775, 746,	m,s,s,s,w	substituted aromatic CH
722, 698		
1656, 1627,	w	unassigned
1339, 1263,		
1203, 928		

OTHER REMARKS:

Sample contains predominantly phenolic compounds, and some aliphatic esters of aromatic acids.

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

TABLE 8-170.
IR REPORT

SAMPLE: 11A-LC5, tar decanter vapor, condensate extract pH 2: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3425	s	phenolic or alcoholic OH
3055	w	aromatic or olefinic CH
2959, 2931, 2863	s	aliphatic CH
1726	s	ketone or ester
1452	s	aliphatic CH bend
1280, 1133	s,m	phenol, alcohol, ester or ether
1075, 1006	m	phenol, alcohol, ester or ether
746, 725	s	substituted aromatic CH (suggestive of monosubstituted benzene-phenol?)

OTHER REMARKS:
Probable alkylated phenols, diaphatic esters of aromatic acids, ethers, alcohols.

TABLE 8-171.
IR REPORT

AMPLE: 11A-LC6, tar decanter vapor, condensate extract pH 2: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3300 - 2500	s	carboxylic acid or phenolic derivatives
2959, 2931,	s	aliphatic CH stretch
2863		
1596, 1506	s	C---C ring stretches
1465, 1376	s,m	aliphatic CH bend
1376	m	phenolic OH bend
1246	s	phenolic C-O stretch
1000 - 1200	w - m	aromatic fingerprint region
691 - 807	m - s	substituted aromatic CH
1924, 1623,	w	unassigned
1314, 951,		
931, 623		

THER REMARKS:
· Probable alkylated phenols.

TABLE 8-172.
IR REPORT

SAMPLE: 11A-LC7, tar decanter vapor, condensate extract pH 2: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
1956, 2929,	s	aliphatic CH stretch
2856		
2064	m	isothiocyanate
1731, 1711	s	ketone, ester
1597, 1484	s,m	aromatic or conj. olefinic C=C
1465	m	aliphatic CH bend
1278	s	ester, ether
1125, 1072	w	ester, ether
746	m	alkene, substituted aromatic CH bend
1551, 1451	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Probable aliphatic esters of aromatic acids.

TABLE 8-173.
IR REPORT

SAMPLE: 11B-P, tar decanter vapor, condensate extract pH 12: preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3500 - 3200	w(broad)	amine or amide NH, H-bonded
2954, 2930,	s	aliphatic CH stretch
2859		
1743, 1732	m	ester, or possibly aliphatic ketone
1701	w	amide I band of 1° amides, ketone, ester
1462, 1380	m,w	aliphatic CH bend
1262 - 1074	w	amino C-N stretch, esters of aromatic acids,
		aromatic and/or aliphatic ethers
799, 740	w	amine or amide NH bend, sub. aromatic NH bend

OTHER REMARKS:

Sample predominantly aliphatic ketones, and aryl alkyl amines and/or amides. May contain some esters of aromatic acids.

TABLE 8-174.
IR REPORT

SAMPLE: 11B-C, tar decanter vapor, condensate extract pH 12: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3545, 3585	s,w	alcoholic OH stretch
3500 - 3100	s→m(broad)	amines or amides NH stretch
3050-3030, 3006	s	aromatic CH stretch
2980, 2920,	m,m,w	aliphatic CH stretch
2865		
2064	m	isothiocyanate (-N=C=S)
1720	m	aliphatic ketones or esters
1660, 1620,	s	1° amines, amide I (>C=O) and amide II
1590, 1580		(NH bend) bands, or aromatic C⋯C
1455, 1375	s,w	aliphatic CH bend
1410	m	1° amide C-N stretch
1265, 1255,	m,m,s→m	esters of aromatic acids, C-N stretch of 1°, 2°,
1155 - 1090		and/or 3° amines and 2° amides or alcoholic C-O
830 - 730	m	amines and 1° amide NH wag or substituted aromatic
		CH bend
2560, 2400,	w	unassigned
1500, 1480,		
1010, 840		

OTHER REMARKS:

Sample appears to contain predominantly aryl and alkyl amines or amides. The broad unresolved peak about 1600 cm^{-1} is typical of monosubstituted benzene, suggesting the presence of aniline and N-alkylated derivatives.

TABLE 8-175.
IR REPORT

SAMPLE: 11B-LC1, tar decanter vapor, condensate extract pH 12; LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959	s	aliphatic CH stretch
2925, 2856	s	aliphatic CH stretch
1465	m	aliphatic CH bend
1739, 1376,	w	unassigned
1287		

OTHER REMARKS:

2340 and 2370 cm^{-1} due to CO_2.
Only saturated hydrocarbons present.

TABLE 8-176.
IR REPORT

SAMPLE: 11B-LC2, tar decanter vapor, condensate extract pH 12: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3053	w	aromatic or olefinic CH stretch
2951, 2931,	m,s,m	aliphatic CH stretch
2846		
1570, 1472	w,m	aromatic C=C
1450	m	aliphatic CH bend
872	w	isolated aromatic CH bend
810, 739, 692	m,s,s	substituted aromatic CH bend
1014	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample contained saturated and unsaturated or aromatic hydrocarbons.

TABLE 8-177.
IR REPORT

SAMPLE: 11B-LC3, tar decanter vapor, condensate extract pH 12: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3056, 3044,	w	aromatic or olefinic CH stretch
3017		
2950, 2923,	s	aliphatic CH stretch
2855		
1730	m	aliphatic ketone or ester
1600, 1583,	w,w,w,m	aromatic C⋯⋯C stretch
1492, 1477		
1462, 1459,	m	aliphatic CH bend
1442		
1374, 1365	w	methyl CH bend, possibly gem-dimethyl
1263, 1092,	m - s	ester of aromatic acid or aromatic
1064, 1025		or aliphatic ether
822, 813, 799,	m,s,m,s	substituted aromatic isolated H
778, 737		substituted aromatic CH bend
1201, 1177, 699	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain predominantly aromatic compounds and ester of aromatic acids or aryl ethers.

TABLE 8-178.
IR REPORT

SAMPLE: 11B-LC4, tar decanter vapor, condensate extract pH 12: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3411	s	2^{o} amine or amide NH stretch
3062	w	aromatic CH stretch
2959, 2931,	s	aliphatic CH stretch
2856		
1718	m	ketone, formate or conjugated ester or amide
1459	m	aliphatic CH or amide C-N
1280, 1239	m	amide or aryl alkyl ether
1095, 1013	m	ester, ether
739	s	substituted benzene
691	m	substituted benzene
1342, 1123,	w	unassigned
1075, 808		

OTHER REMARKS:

IR spectrum suggests sample contains appreciable amounts of aromatic and aliphatic 2^{o} amines. Lack of strong absorption at 1718 cm^{-1} suggests that absorption at 3411 cm^{-1} due to 2^{o} amine not amide.

TABLE 8-179.
IR REPORT

SAMPLE: 11B-LC5, tar decanter vapor, condensate extract pH 12: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3391	m	2° amine or 2° amide
3055	w	aromatic or olefinic CH
2959, 2911,	s	aliphatic CH
2863		
1726	s	ketone or ester
1602, 1581	w	aromatic C⋯C
1465, 1388	m,w	aliphatic CH, methyl CH bend
1280, 1123	s,m	aliphatic ester of aromatic acid
1075, 952	m,w	aromatic fingerprint region
734, 691	s,w	substituted benzene, probably
		ortho-disubstituted
1581 (probably	w	unassigned
N-H bending),		
1410, 1239,		
952, 780		

OTHER REMARKS:

Carboryl absorption too high for amide, and lack of doublet in region 3400-3100 cm^{-1} leads to conclusion that compounds are secondary amino derivatives. Sample contains aryl and alkyl 2° amines and aryl and/or alkyl esters.

TABLE 8-180.
IR REPORT

SAMPLE: 11B-LC6, tar decanter vapor, condensate extract pH 12: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3329	m(broad)	alcoholic OH or amide or amine NH
3150, 3068	s	aromatic or olefinic CH stretch
2954, 2931,	s	aliphatic CH stretch
2863		
2068	w	isothiocyanate or ketenimine
1725	m	ester and/or aliphatic ketone
1610, 1595,	s	aromatic C⋯C and/or amine or amide NH bend
1506		
1459, 1390	s,m	aliphatic CH bend
1287 - 1246	s	ester of aromatic acid, aryl ether of C-N
		stretch of aryl or alkyl amines
944, 849, 807 -	w,w,m	sharp bands in aromatic fingerprint region,
691		substituted aromatic CH bend
2733, 2698,	w	unassigned
2575, 1321		

OTHER REMARKS:

Sample predominantly alkylated derivatives of aniline or polynuclear aromatic amine, and saturated ketones. The lack of a broad band in region 1250-100 cm^{-1} corresponding to an ethercal or alcoholic C-O stretch suggests that the sharp, strong band in this region is likely due to C-N stretch of amines.

TABLE 8-181.
IR REPORT

SAMPLE: 11B-LC7, tar decanter vapor, condensate extract pH 12: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments

1671, 1568,	w	unassigned
1246, 1006,		
616		

OTHER REMARKS:

Sample appears to contain predominant aromatic hydrocarbons and methylated and/or other derivatives.

TABLE 8-183.
IR REPORT

SAMPLE: 5X-C, vapor above chemical oil tank, XAD-2 resin: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3068, 3051,	w,m,w	aromatic or olefinic CH
3004		
2952 - 2850	w	aliphatic CH stretch
1957 - 1671	w	aromatic overtones/combinations
1596, 1508	m,w	aromatic C⋯C
1392	m	highly substituted aromatics
961, 780, 746	m,s,m,m	substituted aromatic cmpds
1298, 1270,	w	unassigned
1124, 1008,		
845, 816		

OTHER REMARKS:
Sample comprised almost entirely of aromatic hydrocarbons with very few saturated or oxygen-containing cmpds present.

TABLE 8-184.
IR REPORT

SAMPLE: 5X-LC1, vapor above chemical oil tank, XAD-2 resin: LC cut #1 IR.

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2960, 2926,	s	aliphatic C-H stretch
2858		
1462	m	aliphatic CH bend
1377	w	isolated methyl CH bend
1746, 1604	w	unassigned

OTHER REMARKS:

Sample contains predominantly saturated hydrocarbons.

TABLE 8-185.
IR REPORT

SAMPLE: 5X-LC2, vapor above chemical oil tank, XAD-2 resin: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2926,	m,s,m	aliphatic CH stretch
2856		
1462, 1452	w	aliphatic CH bend
1380	w	methyl CH bend
1262	s	aromatic ether
1098, 1040	s	aromatic and/or aliphatic ether
802	s	substituted aromatic CH bend
753, 750, 701	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly aliphatic and aromatic ethers. Absorption bands in CH out-of-plane bending region for aromatics suggests that para-substituted benzene is predominant but some monosub. benzene is present.

TABLE 8-186.
IR REPORT

SAMPLE: 5X-LC3, vapor above chemical oil tank, XAD-2 resin: LC cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2965, 2930,	s	aliphatic CH stretch
2859		
1738	w	ester or aliphatic ketone
1462, 1380	m,w	aliphatic CH bend
1263	s	aromatic ether or ester of aromatic acid
1098, 1039	s	aromatic and/or aliphatic ethers or alkanes
869, 805, 699	w,s,w	substituted aromatic
1656, 670	w	unassigned

OTHER REMARKS:

Sample seems to consist primarily of vinyl or aromatic ethers, and a small amount of aromatic or aliphatic esters.

TABLE 8-187.
IR REPORT

SAMPLE: 5X-LC4, vapor above chemical oil tank, XAD-2 resin: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2960, 2920,	s	aliphatic CH stretch
2850		
1706	w	ketone or ester
1593	w	aromatic C⋯C
1460, 1375	w	aliphatic CH bend
1020	w	aliphatic ester or ether
726	w	substituted aromatic CH bend

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appears to contain predominantly saturated hydrocarbons and a trace amount of aromatic compounds.

TABLE 8-188.
IR REPORT

SAMPLE: 5X-LC5, vapor above chemical oil tank, XAD-2 resin; LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2924,	s	aliphatic CH stretch
2859		
1726	m	ketone or ester
1468, 1450	m,w	aliphatic CH bend
1380	w	isolated methyl CH bend
1286, 1130	m,w	aliphatic or aromatic ester or ether
740	w	substituted aromatic CH bend
1661, 1632,	w	unassigned
1603, 1074		

OTHER REMARKS:

Sample predominantly saturated hydrocarbons and aliphatic esters. Bands in region 1660-1600 and at 1074 and 740 cm^{-1} suggest presence of aromatic cmpds, possibly alkylated derivatives or aromatic esters.

TABLE 8-189.
IR REPORT

SAMPLE: 5X-LC6, vapor above chemical oil tank, XAD-2 resin; LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3063	w	aromatic or olefinic CH
2956, 2927,	s	aliphatic CH stretch
2856		
1727	s	ketone or ester
1603, 1460	m	aromatic C⋯C
1454, 1380	m,w	aliphatic CH bend
1280, 1125	m,w	ester of aromatic acid or aromatic
		and/or aliphatic ether
748, 694	m,w	substituted aromatic CH bend
1075, 1040, 618	w	unassigned

OTHER REMARKS:
Sample predominantly aromatic esters of 1° alcohols (i.e., benzoates, etc.)

TABLE 8-190.
IR REPORT

SAMPLE: 5X-LC7, vapor above chemical oil tank, XAD-2 resin: LC.cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2964, 2962,	s	aliphatic CH stretch
2859		
1738	m	ester or aliphatic ketone
1562	m	aromatic C⋯C stretch
1456	m	aliphatic CH bend
1286, 1268,	w	esters of aromatic acids or aromatic
1122		or aliphatic ethers
740	w	substituted aromatic CH bend
1074, 669	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly saturated ethers or saturated ethers and/or esters of aromatic acids.

TABLE 8-191.
IR REPORT

SAMPLE: 5XR-P, vapor above chemical oil tank, canister rinse: Preliminary IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3085, 3045, 3010	s	aromatic CH stretch
2960, 2950, 2920	w	aliphatic CH stretch
1950-1650	w	aromatic overtones and combinations
1595, 1500	s	aliphatic C---C stretch
1390, 1360	s,w	gem-dimethyl CH bend or highly substituted aromatic cmpds.
1270-960	s (sharp)	aromatic fingerprint region
840-770	m (broad)	substituted aromatic CH bend
775	w	substituted aromatic CH bend
720	w	unassigned

OTHER REMARKS:

Sample predominantly aromatic hydrocarbons. Bands at 1390, 1360 and 840-770 cm^{-1} strongly suggest that alkylated derivatives are i-propyl or t-butyl α- and β-substituted naphthalenes.

TABLE 8-192.
IR REPORT

SAMPLE: 5XR-C, vapor above chemical oil tank, canister rinse: Concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3090, 3060-3000	s	aromatic CH stretch
2980, 2960, 2870	m,w	aliphatic CH stretch
1945-1665	m	aromatic overtones/combinations
1598, 1555, 1500	s,w,s	aromatic C⋯C stretch
1450	w	aliphatic CH bend
1390, 1360	s	gem-dimethyl or t-butyl CH
1270-960	s (sharp)	aromatic fingerprint region
825, 720	s,m	sub. aromatic CH bend
2290	w	unassigned - (nitrile?)

OTHER REMARKS:

Sample contains primarily aromatic hydrocarbons and alkylated derivates. Bands at 1390, 1360, 825 and 720 cm^{-1} strongly suggest that these alkylated derivatives are almost entirely i-propyl or t-butyl derivatives of α- and β-sub. naphthalenes.

TABLE 8-193.
IR REPORT

FILE: 5XR-LC1, vapor above chemical oil tank, canister rinse: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2925, 2856	s	aliphatic CH
1733	m	ester or aliphatic ketone
1457	m	aliphatic CH
1376	w	methyl C-H
1123, 1075	w	ester or ether C-O
739	w	$-(CH_2)_n-$, $n \geq 4$ rocking or substituted aromatic
1318, 1280, 1274		CH bend
1318, 1280, 1274	w	unassigned

OTHER REMARKS:

Bands at 1733, 1123 and 1075 cm^{-1} very likely due to esters that are present. Bands at 1280, 1274 and 739 cm^{-1} possible due to aromatic ether. Sample appears to consist predominantly of saturated hydrocarbons and/or aliphatic esters or ketones.

TABLE 8-194.
IR REPORT

SAMPLE: 5XR-LC2, vapor above chemical oil tank, canister rinse: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3050	w	aromatic CH stretch
1956-1785	w	aromatic combination and overtone region
1593, 1505	w	aromatic C⋯C stretch
842	w	substituted aromatic CH bend
780 S	w	substituted aromatic CH bend
1391, 1272, 1210,		
1127, 1008,	w	unassigned
961	m	unassigned

OTHER REMARKS:

Bands in region 1956-1785 cm^{-1} and single bands at 842 and 780 cm^{-1} highly suggestive of meta- or ortho-disubstituted benzene, i.e., 3 or 4 adjacent hydrogen atoms. Sample is primarily aromatic hydrocarbons, containing few aliphatic hydrocarbons. This sample probably contains significant amounts of naphthalene.

TABLE 8-195.
IR REPORT

SAMPLE: 5XR-LC3, Vapor above chemical oil tank, canister rinse: LC Cut #3 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2952, 2856	s	aliphatic CH stretch
1733	s	esters or aliphatic ketones
1459, 1376	m,w	aliphatic CH bend
1274, 1123, 1075	m,w,w	aromatic ester of 1° and 2° alcohols or aromatic or aliphatic ethers
788, 746	w	substituted aromatic CH bend
1541, 1034	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

This sample appears to be predominantly aromatic esters of 1° and/or 2° alcohols.

TABLE 8-196.
IR REPORT

SAMPLE: 5XR-LC4, vapor above chemical oil tank, canister rinse: LC cut #4 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2962, 2931, 2874,		
2861	s	aliphatic CH stretch
1733	s	ester or aliphatic ketone
1462, 1381	m	aliphatic CH bend
1292, 1273	s	aromatic ether or ester of aromatic acid
1122, 1071	m	aromatic or aliphatic ether or ester of aromatic
		acid
744, 700	m,w	substituted aromatic CH bend
945, 669	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample appeared to contain predominantly saturated hydrocarbons and aliphatic esters of aromatic acids.

TABLE 8-197.

1604	w	unassigned

OTHER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria for IR analysis. A spectrum of acceptable quality was obtained by using Fourier Transform IR techniques.

Sample predominantly aliphatic esters of aromatic acids.

TABLE 8-201.
IR REPORT

MPLE: 7X-C, upwind ambient, XAD-2 resin: concentrate IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3065, 3032	w	aromatic or olefinic CH stretch
2966, 2928,		
2873, 2862	s	aliphatic CH stretch
1727	m	saturated ketone or ester
1705	m	aryl ketone or ester
1607, 1492	m	aromatic C···C stretch
1453, 1376	m	aliphatic CH bend
1261, 1113	m,w	ester of aromatic acid, aromatic or aliphatic ether
801, 757, 708,		
702	m	substituted aromatic CH bend
1316, 1179,		
1097, 1069,		
1026	w	unassigned

THER REMARKS:

Sample contains predominantly alkylated aromatic esters (e.g. benzoates), saturated and aromatic hydrocarbons and possibly some saturated ketones and/or esters.

TABLE 8-202.
IR REPORT

SAMPLE: 7X-LC1, upwind ambient, XAD-2 resin: LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2924,		
2856	s	aliphatic CH stretch
1458	m	aliphatic CH bend
1376	w	isolated methyl CH bend
752, 698	w	mono-substituted benzene
1746, 1610	w	unassigned

OTHER REMARKS:

Sample predominantly saturated hydrocarbons. However, bend @ 1746 suggests presence of small amounts of aliphatic ketones or esters, and bends at 1610, 752 and 698 cm^{-1} suggest presence of small amounts of substituted benzene.

TABLE 8-203.
IR REPORT

SAMPLE: 7X-LC2, upwind ambient, XAD-2 resin: LC cut #2 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3065, 3030	m	aromatic or olefinic CH
2965, 2924,		
2871	s	aliphatic CH stretch

1458	m	aliphatic or aromatic CH
1376	m	aliphatic CH (methyl)
1273-1239	w	aromatic ether, or ester
752	m	$(-CH_2-)$ rocking for n>4 or aromatic CH
821, 787, 691	w	unassigned

OTHER REMARKS:

Bands at 2363 and 2342 cm^{-1} are due to presence of CO_2 in cell, inadequate purging.

Probable compounds and alkylated derivatives.

TABLE 8-215.
IR REPORT

SAMPLE: 12-LC1, biological treatment plant sludge, pH 7 extract LC cut #1 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
2959, 2927,		
2857	s	aliphatic CH stretch
1463	m	aliphatic CH methyl and methylene
1377	w	aliphatic C-C methyl
720, 677	w	aromatic CH bend
2724, 1150	w	unassigned

OTHER REMARKS:

Bands at 2363 and 2342 cm^{-1} due to CO_2. Band at 676 cm^{-1} likely due to residual CH_2Cl_2 left on plate.

Probable saturated hydrocarbons, with trace amounts of aromatic compounds.

TABLE 8-216.
IR REPORT

SAMPLE: 12-LC2, biological treatment plant sludge, pH 7 extract: LC cut #2 IR

OTHER REMARKS:

Bands at 2363 - 2340 cm^{-1} are due to presence of CO_2 in cell.
Spikes about 1600 - 1800 are due to presence of water vapor in cell.
Probable alkylated aromatic hydrocarbons.

TABLE 8-219.
IR REPORT

E: 12-LC5, biological treatment plant sludge, pH 7 extract: LC cut #5 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
48	w	aromatic or olefinic CH
59, 2924,		
856	s	aliphatic CH
02	m	aromatic C⋯C stretch
51	m	aliphatic CH bend
75	w	methyl CH bend
3, 821, 752	w,w,s	substituted aromatic
19, 1280,		
184	w	unassigned

ER REMARKS:

This sample possessed less mass than that required by the Level 1 criteria or IR analysis. A spectrum of acceptable quality was obtained by using Fourier ransform IR techniques.

Sample contains only saturated, unsaturated and/or aromatic hydrocarbons. ossibly some ketones or esters present as evidenced by small absorption at 712 cm^{-1}.

TABLE 8-220.
IR REPORT

SAMPLE: 12-LC6, biological treatment plant sludge, pH 7 extract: LC cut #6 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3281	broad (M)	alcoholic, phenolic or acid OH
3055		aromatic OR olefinic CH
2959, 2931,		
2856	s	aliphatic CH
1712	s	ketone or ester
1657	s	carboxylic acid or ketone
1602	s	aromatic or olefinic C=C
1451, 1376	w	aliphatic CH bend
1280	m	acid, ester of aromatic acid
1191	m	ether, alcohol or phenol
810, 752	m	substituted aromatic CH
1081, 1033,		
835, 615	w	unassigned

OTHER REMARKS:

Sample predominantly phenolic compounds, or carboxylic acids.

TABLE 8-221.
IR REPORT

SAMPLE: 12-LC7, biological treatment plant sludge, pH 7 extract: LC cut #7 IR

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3550-3000	broad	phenol or alcoholic OH stretch
3061	s	aromatic or olefinic
2931, 2856	s	aliphatic CH stretch
1602	s	aromatic or olefinic C=C
1280, 1122, 1040	m	alcohol or phenol
828, 760	w	substituted aromatic CH bend
1664, 1726	w	unassigned

OTHER REMARKS:

Sample predominantly alcohol or phenolic compounds.

ADDITIONAL DATA

TABLE 14. POLLUTANTS FROM BY-PRODUCT RECOVERY PLANT

Stream Number	Stream Identification	Rate: Constituents Based on 1 Mg Coke Production
1	Coal	1.4 Mg
2	Coke	1 Mg
3	Tar Decanter-Fugitive	2.15 sm^3/Mg: benzene, 15.6 g/Mg; H_2S 12.7 g/Mg; XAD-2 sample primarily LC cut #2*
4	Tar Sludge	0.1 l/Mg (very rough estimate): contains tar, coal, and coke fines; no Level 1 analysis
5	Tar Dewatering-Fugitive	Included in 6 below
6	Tar Storage-Fugitive	0.14 sm^3/Mg (working loss only): low rate benzene, toluene; XAD-2 sample primarily LC cut #2*
7	Primary Cooler Condensate Fugitive	1.7 sm^3/Mg: benzene, 9 g/Mg coke; H_2S 5.7 g/Mg; XAD-2 sample not collected
8	Tar Refining-Vapor	Not sampled.
9	Chemical Oil Storage-Fugitive	.024 sm^3/Mg (working loss only): low rate benzene, toluene; XAD-2 sample mostly LC cut #2* and #3
10	Excess Liquor Tanks-Fugitive	Not sampled: at lower temperature than 7 above, but roughly same composition
11	Sulfate Drying	Not sampled
12	Acid Storage-Fugitive	No measurable vent: not sampled
13	Lime Teg Sludge	0.35 kg/Mg: primarily calcium salts
14	Barometric Condenser Water	143 l/Mg: cyanide, 2 g/Mg; ammonia, 1.6 g/Mg; phenol, 0.5 g/Mg (Dunlap and McMichael)
15	Excess Ammonia Liquor	143 l/Mg: cyanide, 8.6 g/Mg; ammonia, 857 g/Mg; phenol, 208 g/Mg (Dunlap and McMichael)
16	Naphthalene Separation	No measurable vent rate: vapor high in benzene and homologs, H_2S; XAD-2 sample mostly LC cuts #2* and #3
17	Naphthalene Drying	2.9 sm^3/Mg: Naphthalene emissions as high as 533 g/sm^3, but an average must be considerably lower
18	Final Cooler Cooling Tower	3,230 sm^3/Mg: benzene, 51.6 g/Mg; H_2S, 11 g/Mg; XAD-2 sample mostly LC cuts #2* and #3
19	Cooling Tower Blowdown	43-430 l/Mg: cyanide, 22-43 g/Mg; ammonia, 8-17 g/Mg; phenol, 10-16 g/Mg (Dunlap and McMichael)
20	Light Oil Plant Wastewater	100-500 l/Mg: cyanide, 0.5-1 g/Mg; ammonia, 0.5-1.6 g/Mg; phenol, 0.8-26 g/Mg (Dunlap and and McMichael); 3 kg/Mg oil (Schroeder)
21	Wash Oil Tanks-Fugitive	No measurable vent: not sampled
22	Light Oil Decanter-Fugitive	Inaccessible: not measured or observed
23	Light Oil Storage-Fugitive	0.013 sm^3/Mg working loss, 15.6 sm^3/Mg breathing loss (crude estimate[95]): benzene, 17.4 g/Mg; toluene, 0.6 g/Mg; H_2S, 0.5 g/Mg
24	Wash Oil Sludge	Not sampled and rate not available.
25	Desulfurization Wastewater	40-60 l/Mg vacuum carbonate plant: cyanide, 64 g/Mg (Dunlap and McMichael)
26	Desulfurization Sludge	Not quantified
27	Wastewater Plant Fugitive	No measurable rate
28	Wastewater Plant Sludge	1.7 kg/Mg: high phenolic levels
29	Final Effluent	470-1,260 l/Mg coke: BPCTCA gives 730 l/Mg; cyanide, 20 g/Mg; ammonia, 91 g/Mg; phenol, 1.5 g/Mg; oil, 11 g/Mg

*LC Cut #2 expected to contain aromatic hydrocarbons, fused polycyclics, fused nonalternant polycyclics, and possibly halogenated aromatics.

TABLE 20. (continued)

IDENTIFICATION

Elution Temperature (°C)	Compound	Elution Temperature (°C)	Compound
100.0	1,1,1-Trichloroethane	125.1	Methyl indenes
100.0	Benzene	128.3	C_2-phenols
100.0	Cyclohexene	129.3	Naphthalene
100.0	Pyridine	137.0	Quinoline
100.0	Toluene	144.0	Methylbenzothiophene isomer
100.0	X-methylpyridines	145.3	Methylnaphthalene
100.0	Xylenes	147.5	Methylnaphthalene
100.0	Phenylacetylene (?)	151.7	Indole
100.0	C_2-pyridines	156.8	Biphenyl
100.0	Styrene[a]	161.3,163.2	C_2-naphthalene isomers
102.1	C_2-pyridine		
105.6	Benzonitrile	166.7	Biphenylene
106.9	Aniline	171.5,171.9	$C_{13}H_{12}$ and $C_{14}H_{14}$ isomers,
		172.9	acenaphthene
107.9	Benzofuran	176.3	Dibenzofuran
108.8	C_2-pyridine (?)	186.3	Fluorene
109.8	Phenol	193.9,198.1	Amino ethylcarbazole (?)
112.7	Indene	210.3	Phenanthrene
115.5	C_7H_9N isomer	210.6	D_{10}-anthracene
116.2	Cresols	265.0	a phthalate[a]
118.1	$C_{10}H_{12}$ isomer	265.0	a phthalate[a]

QUANTITATION

Of those compounds identified, only quinoline and biphenyl were quantitated. Subjectively, naphthalene appeared to be the prevalent compound.

Compound	Wt. of Compound In XAD Extract (mg)	Wt. of Compound in Canister Rinse (mg)	Total Wt.	Concentration (mg/sm^3) in Gas Sample
Biphenyl	1.7	0	1.7	0.06
Quinoline	10.2	0	10.2	0.37

[a]Often an artifact from sample contact with plastics.
[b]Internal standard.

TABLE A-3. FROTH FLOTATION SEPARATOR SAMPLE

Plant Name: United States Steel--Coke By-Product Plant

Location: Birmingham, Alabama

Date: 12/12/77

Test Performed By: F. J. Phoenix, E. E. Stevenson

Run Number: 1

Sampling Location: Wemco Separator

Pre Leak Test: 0.04

Post Leak Test: 0.04

Test Time:

Start: 10:15

Finish: 14:25

Meter Volume (c.f.):

Start: 630.59

Finish: 1680.24

Volume of Gas Sampled: 1049.65 c.f.

1011.29 scf

Average Gas Temperature (°F)

Ambient: 54°

Sampling Location: 54°

XAD-2 Resin: 54°

Meter Box: 85°

Comments:

1. No condensate collected.
   Sampling performed in one of sixteen 8" x 50" openings in top of separator.

NOTE: Values in parentheses are GRAV mass before subtraction of blank. The presence of GRAV mass in the original sample is shown by the Preliminary and Concentrate samples. The MATE Comparison Value is based on the GRAV mass in the LC cut divided by the gas sample volume. For compound classes indicated by IR, the MATE comparison value is 100 percent of the GRAV concentration. For compound classes expected[6] but not identified by IR, the MATE Comparison Value is 10 percent of the GRAV concentration.

NOTE: MATE values are those in effect in January 1979.

TABLE A-15. MATE COMPARISON VALUES, FROTH FLOTATION SEPARATOR, CANISTER RINSE

TABLE A-25. CYANIDE GAS TRAIN DATA

Run #	1	2
Sampling Location	Final Cooler Cooling Tower	Final Cooler Cooling Tower
Volume Metered (scf)	0.732	0.962
Catch (CN^-) (mgms)	1.92	2.16
Concentration ppm	82.4	70.5
µgms/scm	92,618	70,284

TABLE A-26. GAS TRAIN DATA SHEET

Run #1

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Sampling Location: Final cooling tower

Operator: B. Hawks

Date: 13 December 1977

Test Time:

Start: 0915.00

Finish: 0945.00

Meter Volume:

Start: 066.560

Finish: 067.286

Volume Sampled: 0.732 scf

ΔH Setting: 2 scfh

Gas Temperature at Meter Box:

Start: 56

Finish: 56

Ambient Temperature:

Start: 52

Finish: 52

Barometric Pressure: 29.50

Comments:

Gas train bubbling through 0.5M NaOH - 60 ml total volume NaOH

TABLE A-27. GAS TRAIN DATA SHEET

Run #2

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Sampling Location: Final cooling tower

Operator: B. Hawks

Date: 13 December 1977

Test Time:

Start: 1015.00

Finish: 1045.00

Meter Volume:

Start: 067.700

Finish: 068.646

Volume sampled: 0.962 scf

ΔH Setting: 2 scfh

Gas Temperature at Meter Box:

Start: 56°

Finish: 60°

Ambient Temperature:

Start: 52°

Finish: 52°

Barometric Pressure: 29.50

Comments:

Gas train bubbling through 60 ml, 0.5M NaOH

TABLE A-29. SASS TRAIN DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Date: 12/13/77

Test Performed By: F. H. Phoenix, E. E. Stevenson

Run Number: 2

Sampling Location: Final Cooler Cooling Tower

Pre Leak Test: 0.00

Post Leak Test: 0.02

Test Time:

Start: 9:00

Finish: 12:45

Meter Volume (c.f.):

Start: 682.58

Finish: 1683.15

Volume of Gas Sampled: 1000.57 c.f.

974.75 scf.

Average Gas Temperature (°F)

Ambient: 58°

Sampling Location:

XAD-2 Resin: 57°

Meter Box: 79°

Comments:

1. No condensate collected
2. Used 30' Teflon line as probe, ran from top of tower to XAD-2 module
3. Sampling performed in 1 of 2 ~8' diameter outlets - velocity taken from fan data
4. Also ran two gas train runs and took hot well and cold well water samples

NOTES: The MATE Comparison Value is based on the GRAV mass in the LC cut divided by the gas sample volume. For compound classes indicated by IR, the MATE Comparison Value is 100 percent of the GRAV concentration. For compound classes expected[65] but not identified by IR, the MATE Comparison Value is 10 percent of the GRAV concentration.

Values in parentheses are GRAV mass before subtraction of blank. The presence of GRAV mass in the original sample is shown by the Preliminary and Concentrate samples.

NOTE: MATE values are those in effect in January 1979.

TABLE A-86. SASS TRAIN DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Date: 12/13/77

Test Performed By: F. J. Phoenix, E. E. Stevenson

Run Number 3

Sampling Location: Tar Storage Tank

Pre Leak Test: 0.02

Post Leak Test: 0.05

Test Time:

Start: 14:55

Finish: 15:44

Meter Volume (c.f.):

Start: 685.67

Finish: 889.97

Volume of Gas Sampled: 202.28 c.f. *

199.06 scf.

Average Gas Temperature (°F)

Ambient: 60°

Sampling Location: 85°

XAD-2 Resin: 80°

Meter Box: 70°

Comments:

1. Naphthalene condensed on XAD-2 Module.
   We had to take module apart and clean off Naphthalene during run.

* 2.02 c.f. was subtracted from sample volume due to leak check during run.

TABLE A-88. MATE COMPARISON VALUES, VAPOR ABOVE TAR STORAGE TANK, XAD-2 RESIN

TABLE A-108. SASS TRAIN DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Date: 12/14/77

Test Performed By: F. J. Phoenix, E. E. Stevenson

Run Number: 4

Sampling Location: Tar Decanter Tank

Pre Leak Test: 0.00

Post Leak Test: 0.02

Test Time:

Start: 9:00

Finish: 10:40

Meter Vclume (c.f.):

Start: 893.59

Finish: 1191.67

Volume of Gas Sampled: 298.08 c.f.

287.41 scf.

Average Gas Temperature (°F)

Ambient: 61°

Sampling Location: 170°

XAD-2 Resin: 100°

Meter Box: 80°

Comments:

1. Used ice bath at sampling location to cool gases before passing through XAD-2 Resin.
2. Ran for ≈ 3-4 minutes when reaction took place in first impinger Ammonia reacted with hydrogen peroxide - We decided to continue test without first impinger.
3. Sampling performed in one of 4 vents. Tank was leaking vapor in front.

Mercaptans				0.12	0.01		0.13
Carboxylic acids				0.12	0.01		0.13
Sulfoxides				0.12	0.01		0.13

NOTE: The MATE Comparison Value is based on the GRAV mass in the LC cut divided by the gas sample volume. For compound classes indicated by IR, the MATE comparison value is 100 percent of the GRAV concentration. For compound classes expected[65] but not identified by IR, the MATE Comparison Value is 10 percent of the GRAV concentration.

NOTE: MATE values are those in effect in January 1979.

TABLE A-151. SASS TRAIN DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Date: 12/15/77

Test Performed By: F. H. Phoenix, E. E. Stevenson, T. Allen

Run Number: 5

Sampling Location: Chemical Oil Storage Tank

Pre Leak Test: 0.00

Post Leak Test: 0.08

Test Time:

Start: 8:41

Finish: 11:50

Meter Volume (c.f.):

Start: 361.52

Finish: 870.40

Volume of Gas Sampled: 505.48 c.f.*

503.86 scf.

Average Gas Temperature (°F)

Ambient: 50°

Sampling Location: 110°

XAD-2 Resin: 80°

Meter Box: 65°

Comments:

1. Naphthalene was condensing on inside of XAD-2 Module and probe.
* 3.40 cf subtracted due to leak test.

TABLE A-153. MATE COMPARISON VALUES, VAPOR ABOVE CHEMICAL OIL TANK, XAD-2 RESIN

	Preliminary	Concentrate	LC1	LC2	LC3	LC4	LC5	LC6	LC7	
Total organics mg/sm³	2,110	2,420	10.5 (36.8)	522 (543)	620 (641)	0.0 (21.0)	7.01 (21.0)	210 (238)	0.0 (21.0)	1,370 (1,520)

TABLE A-175. AMBIENT DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Operator: Tom Allen

Time of Sample: 15:00 12/12 to 15:00 12/13

Station Number:	1	2	3
Metered Volume cu. meter	0.258		0.275
Cyanide Catch (CN^-) µgms	16.3		1.1
Concentration ppm	0.056		0.004
µgms/std m^3	62.6		4.0

Wind Direction:

Wind came out of the southeast for the 24 hour sample period at approximately 5 mph.

Comments:

Station 1 - Chemical Lab.

2 - Mule Barn

3 - Railroad tracks

Station 2 was not in operation due to power problems at sample location.

TABLE A-176. AMBIENT DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Operator: Tom Allen

Time of Sample: 15:00 12/13 to 15:00 12/14

Station Number	1	2	3
Metered Volume cu. meter	0.280		0.280
Cyanide Catch (CN^-) µgms	22.0		2.5
Concentration ppm	0.069		0.008
µgms/std m^3	78.1		8.9

Wind Direction:

Wind out of Southeast for ≈ 10 hours at ≈ 9 mph.

Wind out of Southwest for ≈ 5½ hours at ≈ 6 mph.

Wind out of Northwest for ≈ 8½ hours at ≈ 5 mph.

Comments:

Station #2 down due to power problems at sampling location.

ppm calculated assuming total cyanides (CN^-) as HCN.

TABLE A-177. AMBIENT DATA SHEET

Plant Name: U.S. Steel

Location: Birmingham, Alabama

Operator: Tom Allen

Time of Sample: 15:00 12/14 to 15:00 12/15

Station Number:	1	2	3
Metered Volume cu. meter	0.289	0.215	0.289

Research Triangle Park. NC 27711

FERROALLOY PROCESS EMISSIONS MEASUREMENT

The stated purpose of this project was to "characterize and quantify particulate, organic, and inorganic chemical emissions in effluents from a totally sealed metallurigical furnace at a ferroalloy production facility" in Beauharnois, Quebec. Such furnaces are of special interest because they may lower particulate emissions, but preliminary data had shown that these furnaces might emit large quantities of polycyclic aromatic hydrocarbons. Quoting from the report, "The 72,000 KVA totally sealed furnace is contained in a 15 m diameter by 8.8 m deep shell which has a air-cooled flat bottom. The inner hearth diameter is 12.1 m, and the crucible depth in 6.3 m. Three self-baking electrodes, 1.9 m diameter, are triangularly arranged at 4.75 m center-to-center distances."

Figure 9-1 shows a diagram of the air pollution abatement equipment for the furnace sampled in this study. Two sampling points were utilized in this study. Samples of the gaseous effluent from the furnace were taken using a SASS train and Level 1 gaseous grab sampling procedures downstream of the venturi scrubber during silicomanganese production and upstream of the scrubber (in the bypass stacks) during ferromanganese production. These two samples, upstream and downstream of the scrubber, were characterized as shown in Table 9-1.

Table 9-1. Sample Characterization

	Upstream of scrubber (in bypass stacks)	Downstream of scrubber
Pressure	Slightly negative	Positive (~ 51 cm)
Temperature	480° - 870° C	32° - 49° C
CO, %	41	41
H_2, %	8	8
O_2, %	1	1
CO_2, %	50	50
H_2O, %	2	Saturated

SOURCE: Reference 1: R. G. Ratzlaff, "Construction and Operation of a New Ferromanganese Facility," paper presented at the 32nd Electric Furnace Conference of the Metallurgical Society of AIME, Dec. 1974, Pittsburgh.

The upstream sample showed a high particulate loading (68,000 mg/m^3 or 17 kg/MWh), a very high level of organics including some species that are possible carcinogens, and high levels of arsenic. The downstream sample showed lower levels of all species of concern with particulate loading of 64 mg/m^3 (or 0.016 kg/MWh) and an arsenic level of 0.5 mg/m^3. The major organic categories found in the downstream sample were simple aromatic hydrocarbons and low molecular weight polycyclics. Because the two tests were run during different production modes, a quantitative measure of venturi scrubber efficiency cannot be made, but the test results do imply good removal of particulates and polynuclear aromatics.

It was noted in the report that good agreement had been found between the results of Level 1 organic analysis and GC/MS analysis for specific polynuclear aromatic hydrocarbons.

Tables 9-2, 9-3, and 9-4 from the document identify the sample codes used in this study.

[e] Values supplied for both sample size and concentration.

Table 9-32

IR REPORT

SAMPLE: ICS-7, LL7, Sorb cmd Venturi scrubber

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3700-3000	S	OH or NH	
3000-2800	S	CH aliphatic	
3060	W	CH aromatic	
1720,1700	S	C=O ester, acid, ketone	
1670,1630	S	Amide, ketone	
1580,1550	S	Nitrites	
1590,1300	S	Nitramine N-NO_2	
1400-1250	S	Amine, numerous peaks	
1150-1000	S	Alcohol, numerous peaks	
550-700	W	Aromatic subst.	

IR REPORT

SAMPLE:

Wave Number (cm^{-1})	Intensity	Assignment	Comments

Table 9-33

IR REPORT

SAMPLE: IIC310, conc. extract, particulates >3m, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600-3100	W	OH, or NH
3100-3000	S	CH, aromatic or olefinic
3000-2800	S	CH, aliphatic (stronger than aromatic CH)
1700	S	Acid, ketones
1660,1600	S	Ketones, C-N
1400-900	M	Numerous bands
900-700	S	Aromatic rings

OTHER REMARKS:

The spectrum resembles that of II C1F except the relatively stronger aliphatic CH peaks

Table 9-34

IR REPORT

SAMPLE: II ClF, conc. extract, particulates >1m, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600-2500	W	OH, acidic, or NH
3100-3000	S	CH, aromatic or olefinic
3000-2800	M	CH, aliphatic (weaker than aromatic CH)
1700	M	Acid, ketones
1660,1600	M	Ketones, C-N
1400-900	W	Numerous bands
900-700	S	Aromatic rings

OTHER REMARKS:

Table 9-35

IR REPORT

SAMPLE: IIX. conc. extract. XAD-2 ferromanganese

Wave Number (cm⁻¹)	Intensity	Assignment/Comments
3420	W	NH
3100-3000	S	CH, aromatic
3000-2800	W.	CH, aliphatic
1710	W	Ketones
1600-900	M,W	Numerous sharp bands
900-700	S	Numerous sharp peaks
		aromatic rings

OTHER REMARKS:

Table 9-36

IR REPORT

SAMPLE: IISC, conc, extract, sorbent condensate, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment/Comments
3600-3100	M	OH, NH
3100-3000	W	CH, aromatic
3000-2800	S	CH, aliphatic
1710	M	Ketones
1660,1600	M	Ketones, C-N, nitrite
1450,1375	M	CH_2 & CH_3
1400-1000	W	Multi-bands
900-700	M	Aromatic rings

OTHER REMARKS:

The spectrum resembles that of II C1f except the much stronger aliphatic CH bands

Table 9-37

IR REPORT

SAMPLE: CL-7 coal

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3400	M	OH, NH	
3000-2800	S	CH, aliphatic	
1700	M	Acid	
1650	M	Amide, nitrate	
1080-1020	W	Alcohol, Si-o	
740	W	Aromatic subst.	

IR REPORT

3000 - 2800	s	CH, aliphatic	
3060	w	CH, aromatic	
1720, 1700	s	C=O, ester, acid, ketone	
1670, 1630	s	Amide, ketone	
1580, 1550	s	Nitrites	
1590, 1300	s	Nitramine $N-NO_2$	
1400 - 1250	s	Amine, numerous peaks	
1150 - 1000	s	Alcohol, numerous peaks	
550 - 700	w	aromatic subst.	

Table 9-83
IR REPORT

SAMPLE: II C310, conc. extract, particulates >3u, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3600 - 3100	w	OH or NH	
3100 - 3000	s	CH, aromatic or olefinic	
3000 - 2800	s	CH, aliphatic (stronger than arom. CH)	
1700	s	Acid, ketones	
1660, 1600	s	Ketones, C-N	
1400 - 900	m	Numerous bands	
900 - 700	s	Aromatic rings	
The spectrum resembles that of II C1F except the relatively stronger			
aliphatic CH peaks			

Table 9-84
IR REPORT

SAMPLE: II ClF, conc. extract, particulates <1μ, Ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3600 - 2500	w	OH acidic, or NH	
3100 - 3000	s	CH, aromatic or olefinic	
3000 - 2800	m	CH, aliphatic (weaker than arom. CH)	
1700	m	Acid, ketones	
1660, 1600	m	Ketones, C-N	
1400 - 900	w	Numerous bands	
900 - 700	s	Aromatic rings	

Table 9-85
IR REPORT

SAMPLE: II X, conc. extract, XAD-2, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3420	w	NH	
3100 - 3000	s	CH, aromatic	
3000 - 2800	w	CH, aliphatic	
1710	w	Ketones	
1600 - 900	m, w	Numerous sharp bands	
900 - 700	s	Numerous sharp peaks, aromatic rings	

Table 9-86
IR REPORT

SAMPLE: II SC, conc. extract, sorbent condensate, ferromanganese

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3600 - 3100	m	OH, NH	
3100 - 3000	w	CH, aromatic	
3000 - 2800	s	CH, aliphatic	
1710	m	Ketones	
1660, 1600	m	Ketones, C-N, nitrite	
1450, 1375	m	CH_2 + CH_3	
1400 - 1000	w	Multibands	
900 - 700	m	Aromatic rings	
The spectrum resembles that of II ClF except the much stronger aliphatic			
CH bands			

Table 9-87
IR REPORT

SAMPLE: CL-7 coal

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3400	m	OH, NH	
3000 - 2800	s	CH, aliphatic	
1700	m	Acid	
1650	m	Amide, nitrate	
1080, 1020	w	Alcohol, Si-o	
740	w	Aromatic subst.	

Table 9-88
IR REPORT

SAMPLE: Coke LC-7

Wave Number (cm^{-1})	Intensity	Assignment	Comments
3400	s	OH, NH (broad)	
2920, 2850	w	CH_2, CH_3 aliphatic	
1150	w	Alcohol	
1100	w	Alcohol, (broad)	

The following samples showed no detectable IR bands:

IX-2, LC2, XAD-2 extract, venturi scrubber

IX-4, LC4, XAD-2 extract, venturi scrubber

IX-5, LC5, XAD-2 extract, venturi scrubber

IX-7, LC7, XAD-2, extract, venturi scrubber

ISC-5, LC5, sorbent cond., venturi scrubber

II X-7, LC7, XAD extract, ferromanganese

II C1F-2, particulates <1μ, ferromanganese

II C1F-7, particulates <1μ, ferromanganese

The following reconstructed gas chromatograms were printed in the document:

IC310
IC1F
IPW
ISC
IIC1F
IIPW
IX
IISC

* Carbazole and Dibenzocarbazole were the only two heterocyclic N species determined in GC/MS analysis.

Table 37

Summary of Organic Analysis Results: Major Components

Concentration, mg/m^3 *

Process	Ferromanganese	Silicomanganese
Sampling Site	Upstream of Venturi	Downstream of Venturi
Compound Categories		
Aliphatic Hydrocarbons	6.9	2.5
Aromatic Hydrocarbons	3.7	23
Fused Aromatics < 216 MW	380	14
Fused Aromatics > 216 MW	450	0.02
Heterocyclic N	80	0.1
Heterocyclic S	37	1.7
Ketones	67	0.8
Esters	0.9	1.8
Carboxylic Acids	4.3	0.7
Organic Gases (GC1 & GC2)	1,030ppm	3,090ppm

*Gas volumes are corrected to standard conditions of 101 KPa (29.9" Hg) 2nd 21.1°C (70°F).

Table 36

Summary of Particulate Emission Data

Sampling Site	Upstream of Venturi	Downstream of Venturi
Process	Ferromanganese	Silicomanganese
Effluent Flow Rate		
m^3/sec	1.20	1.51
m^3/hr	4300	5400
Particulated Concentration		
mg/m^3	68000	64
Particulate Emissions		
kg/hr	290	0.35
Average Furnace Power		
MW (megawatt)	17.3	22.5
Particulate Emissions		
kg/MW-hr	17	0.016

Table 38

Summary of Process and Effluent Parameters

Sampling Site	Upstream of Venturi	Downstream of Venturi
Process	Ferromanganese	Silicomanganese
Electrode Consumption		
lb/day*	6,150	9,000
lb/m^3 of stack gas **	0.059	0.069
Coal/coke content of Feed, %*	14.5	14.9
Emissions, mg/m^3		
Total Organics (SASS train)	1,200	50
Total Aromatics	830	26
Aromatics of MW> 216	450	0.02
Volatile Organics (GC1 & GC2)	1,030	3,090

* Calculated from data in Table 1
** Calculated from data in Tables 1 and 6
