NARRATIVE

On April 13, 1970, the Metropolitan Toledo Interstate Air Quality Control Region was designated pursuant to section 107(a) of the Clean Air Act, as amended. The Region consists of Lucas and Wood Counties in Ohio and Monroe County in Michigan (Figure 1).

This report presents the current status of the Federal facilities in the Region with regard to implementation of the objectives prescribed by the Clean Air Act and Executive Order 11507. Quantitative data on fuel burning, refuse disposal practices and air pollutant emissions, are included. The data in this report reflect that most recently available.

Table I lists the 33 Federal facilities in the Region along with data concerning both fuel burning and refuse disposal practices for each. A summary by county of fuel-use by type --coal, fuel oil, natural gas-- is presented in Table II. There are no Federal sources of pollution which emit more than 100 tons/year (point sources) of one or more of the pollutants listed in Table III.

Within the Metropolitan Toledo Interstate Air Quality Control Region, the Federal facilities emit annually a total of 4 tons of sulfur oxides (SOX), 25 tons of nitrogen oxides (NOX), 31 tons of carbon monoxide (CO), 12 tons of particulates (PART), and 58 tons of hydrocarbons (HC). These emissions, as summarized in Table III, contribute less than 1% of the particulates and carbon monoxide and a negligible quantity of sulfur oxides emitted from all fuel combustion and refuse disposal sources within the area.
