Section C: Training Providers

Section D: Evaluation

Acknowledgments

Tools for Trainers was prepared by the Joint STAPPA/ALAPCO/EPA Training Committee. The Work Group, which reviewed and commented on the project, was chaired by Mary Boyer (California Air Resources Board) who is also STAPPA Chair of the Joint Training Committee. Members of the Work Group included Tom Allen (NESCAUM), Bob Hague (Rutgers/EOHSI), Rick St. Louis (State of Pennsylvania), Ron Townsend (U.S. EPA), and Susan Wierman (MARAMA). Bill Becker and Gail Lewkowicz of STAPPA/ALAPCO provided assistance and input. Many state and local agencies furnished materials which are duplicated in *Tools for Trainers*; the Texas Natural Resource Conservation Commission was generous in sharing its extensive work on staff development plans. Joel Ann Todd of The Scientific Consulting Group, Inc. provided assistance in assembling *Tools for Trainers*, with funding from the Education and Outreach Group, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency.

Tools for Trainers

What is Tools for Trainers?

Tools for Trainers is a notebook that contains information on many of the tasks that trainers and training coordinators must perform, such as how to design and conduct a needs assessment, how to evaluate training programs, and how to develop a training curriculum for agency staff. In addition to this “how to” information, there are examples of materials that have been developed and used by state agencies, local agencies, and EPA. These materials can be adapted for use in your agency. Tools for Trainers also contains up-to-date information on training providers.

The notebook is organized into four sections. Each section contains an introduction to that section's topic and examples of materials that can be used or adapted. There is a brief description of each example to make it easier for users to find the materials that are most likely to be relevant.

Who Will Find Tools for Trainers Useful?

Tools for Trainers is designed for training coordinators and others in state or local agencies who have responsibility for planning, conducting, and evaluating training programs. It will be particularly useful for those who are new to their jobs or who have never performed some of these tasks before, such as conducting a needs assessment or an evaluation.

User Registration Tools for Trainers

Please complete this form and send to:

Gail Lewkowicz
STAPPA/ALAPCO
444 North Capitol Street, N.W.
Washington, DC 20001

We plan to update Tools for Trainers periodically and this will ensure that you receive these updates.

Name: _____

Title: _____

Agency: _____

Address: _____

City: _____

State/Zip Code: _____

Telephone: _____

Fax: _____

E-Mail: _____

Thank you very much!

Feedback Form

We want to hear from you — what do you think of *Tools for Trainers*? How could we improve it? As you use *Tools*, please send us your ideas. Please send this form to:

Gail Lewkowicz
STAPPA/ALAPCO
444 North Capitol Street, N.W.
Washington, DC 20001

What do you find most helpful about *Tools for Trainers*? _____

What suggestions would you make for improving *Tools for Trainers*? _____

How have you used *Tools for Trainers*? _____

Section A

Needs Assessment

Table of Contents

Training Needs Assessment Resources

<u>Overview of Needs Assessment</u>	Page A1
--	---------

<u>STAPPA/ALAPCO FY1998 Training Needs Assessment Survey</u>	Page A5
---	---------

This is the most recent version of the annual STAPPA/ALAPCO training needs assessment survey. It is intended to identify future trends in air pollution training needs and gaps in current training from a state and local perspective. It gathers information on the needs of the agency as a whole.

<u>Air Compliance Inspector Basic Training Program Questionnaire</u>	Page A17
---	----------

This form is intended to gather information on the needs of the agency as a whole. It was developed for the Ohio Regional Air Pollution Control Agency in preparation for delivery of the CARB 100 series, to further characterize the need for basic training and to obtain information on more intermediate or advanced training needs for the future.

<u>Training Needs Questionnaire</u>	Page A23
--	----------

This one-page questionnaire was developed for the Michigan Department of Natural Resources, Air Quality Division. It was designed for staff who had already attended basic training, to learn about their needs for intermediate or advanced training and training in areas not covered by the basic course.

<u>Training Needs Assessment Methodology and Instruments</u>	Page A27
---	----------

This material was developed for the Texas Natural Resource Conservation Commission in 1994 and was used to conduct a needs assessment for TNRCC air program staff. It includes approaches and data collection instruments for managers, staff, and industry on the training needs of individual staff members and groups within an agency.

<u>Draft Needs Assessment for Personnel in Mexico</u>	Page A53
--	----------

This needs assessment package was adapted from the TNRCC materials. It was designed to be implemented by staff from the Universidad Autonoma Metropolitana in Mexico. The draft materials are in English. It is designed to gather information on the needs of individual staff members and groups within an agency.

<u>Participant Profile</u>	Page A71
---	----------

This form was developed to obtain information on course participants, specifically their level of knowledge of the subject matter coming into the course. This assisted the

instructors in tailoring their presentations to the appropriate level for the trainees and was used to assign participants to small work groups for course exercises.

Needs Assessment

Why Conduct a Needs Assessment?

Every training project should begin with some form of needs assessment. Sometimes this assessment is very informal, involving a discussion with the supervisor of the training participants or the potential participants themselves. In other cases, it is more formal, involving a survey of potential trainees or a job analysis. The needs assessment plays a vital role in focusing the training on the most important topics and providing the training on the appropriate level—in short, getting the most value for the resources invested.

Training needs assessments provide valuable information to training providers, enabling them to develop and offer the courses that will be most useful to agency staff. STAPPA and ALAPCO conduct a training needs assessment survey each year to assist training providers in planning their programs — if your agency conducts its own internal needs assessment in preparation for this survey, you will be able to report more accurately the types of training that you will need.

In conducting a needs assessment, it is important to differentiate between training “needs” and training “wants” so that scarce resources can be allocated most effectively. It is also important to probe expressions of training needs to get past symptoms of problems to the problem itself. Finally, it is important to separate those problems or issues that can be addressed by training from those that cannot be addressed by training and that are, in fact, management or resource issues.

How Can Training Needs be Identified?

Some training needs can be readily identified. Training needs can arise from many events or conditions, such as:

- ✓ changes in regulations
- ✓ installation of new equipment
- ✓ new procedures or modifications of existing procedures
- ✓ hiring of new staff or creation of new job positions.

For example, all new regulations require some staff training; in fact, STAPPA and ALAPCO sent a letter to EPA requesting that all new regulations be accompanied by appropriate training at the time of promulgation.

Training needs can also be identified from problems that have arisen. If staff are unable to complete their assigned workload or if work products contain errors, there might be a need for training.

Training can also be a morale-builder in an organizations, a way that the organization can indicate to its employees that they are valued.

One approach to assessing training needs is a discussion within the sponsoring agency or organization, including supervisors of the potential trainees and the trainees themselves. This discussion should explore issues such as objectives for the training, in terms of the desired knowledge, skill, and/or attitude changes that the training is intended to effect. If problems related to job performance are the primary reason for the scheduling of the training, these should be highlighted. If the training is intended to prepare staff to understand and implement new regulations, equipment, or procedures, these should be described.

Informal discussions within the agency provide vital information but are often inadequate for a complete and accurate needs assessment. Surveys of potential trainees and their supervisors are useful in pinpointing training needs. These surveys can be conducted through telephone or face-to-face interviews or through written questionnaires. These surveys can simply ask the potential trainees what they think their needs are, or the survey can delve into the roles and responsibilities of the potential trainees, the skills that they need to fulfill these roles and responsibilities, existing levels of knowledge and skill, and the gaps between the existing and required knowledge and skill.

Job analyses can also assist in identifying training needs. The job analysis consists of a delineation of the specific tasks that are performed by staff in various positions and the knowledge and skills that are needed to perform these tasks. The job analysis can be combined with an assessment of existing knowledge and skill levels to identify the gaps.

Agency staff can be reluctant to discuss training needs if they believe that this will reflect badly on them and their capabilities — they might be afraid to admit that there are aspects of their jobs that they do not feel thoroughly competent to perform. The use of anonymous questionnaires can overcome this reluctance, although this also reduces the agency's ability to target the training to those in need. Another approach is to have a third party or neutral outsider conduct the questioning and prepare the analysis. This third party can be someone from another part of the agency or a consultant. In the best of situations, the agency will cultivate an atmosphere in which enhancement of knowledge and skills through training is viewed positively and assessments of training needs are part of normal agency routine.

The needs assessment will assist in clarifying training goals and objectives. It can also gather information on appropriate training methods. For example, it is critical to know whether the potential training audience has access to satellite downlink sites if a satellite videoconference is planned. Or, if CD-ROM or Internet training is under consideration, it is important to know whether potential trainees have access to needed equipment at their own desks.

When analyzing needs assessment results, it is crucial to be as specific as possible. While it is useful to identify broad topic areas in which training is needed, it is more useful to determine what particular aspects of the topic are most important and whether the training should be at a beginning, intermediate, or advanced level. The analysis should also indicate the different needs of various subgroups within the agency staff — inspectors, permit writers, SIP developers, and other groups might have some needs in common but also are likely to have some needs that are very specific to their jobs and responsibilities. An accurate understanding of these different needs will enable you to pinpoint those staff members who should attend various training events,

thus avoiding wasting resources and time by sending staff to training that is irrelevant or at an inappropriate level for their needs.

The forms in this section of *Tools for Trainers* can be adapted by your agency to help you assess your staff's training needs. Adoption of a training plan or career ladder for staff will also help you determine the training needs of the staff, based on a prescribed curriculum (examples of training plans and career ladders are included in a separate section of *Tools*).

Tips on Using Needs Assessment Tools

This section of *Tools for Trainers* presents samples of needs assessment interview guides and written questionnaires that can be used or adapted for use by your agency. The steps to follow in designing your needs assessment include the following:

Step 1: Establish Objectives. Why are you conducting the needs assessment? To decide how to spend training funds in the upcoming year? To focus a specific course that you have selected? To identify individual staff members' needs so that training resources can be allocated among staff appropriately? To respond to the STAPPA/ALAPCO survey? Other?

Step 2: Select an Approach. What is the best approach to achieve your objective(s) — informal discussions, surveys of potential participants, job analyses? How much can you learn from existing information — for example, if the training need will be created by a new regulation, what skills and knowledge will agency staff need to implement the new regulation? Based on the approach selected, who should be included in the respondent pool — all or a sample of the potential trainees, their supervisors?

Step 3: Develop Materials and Procedures. Look through the materials in this section of the *Tools* notebook and select formats and questions that might apply. You can take portions of various different forms or you can use a format that you like and create new questions within its framework. If you don't know how you will use the answer to a specific question, leave it out! This will keep the questionnaire short, to the point, and easy for staff to complete.

Step 4: Pretest Materials and Procedures. If possible, you should pretest your materials and procedures with a few selected respondents. This pretest will tell you if your materials will gather the information you anticipate. It will also indicate those questions that can be easily misinterpreted. It is helpful to talk with the pretest respondents after they have completed the materials to discuss their suggestions for improving the forms.

Finally, let staff know that their participation in the needs assessment mattered — show them that the training planned for the agency and for individuals was based, at least to some extent, on their feedback.

FY1998 TRAINING NEEDS ASSESSMENT SURVEY

AGENCY NAME: (02) _____

AGENCY ADDRESS: (03-07) _____

EPA REGION: (08) _____

AGENCY TYPE: (09) ☐ STATE ☐ LOCAL/MUNICIPAL ☐ FEDERAL

PERSON COMPLETING THIS SURVEY:

NAME: (10) _____

TITLE: (11) _____

MAILING ADDRESS: (12-16) _____

TELEPHONE: (17) _____

FAX: (18) _____

E-MAIL: (19) _____

WHAT ARE YOUR RESPONSIBILITIES FOR TRAINING AT YOUR AGENCY? (20)

☐ (A) TRAINING COORDINATOR

☐ (B) SITE COORDINATOR FOR SATELLITE BROADCASTS

☐ (C) BUDGETING, AUTHORIZING, AND APPROVING TRAINING

☐ (D) OTHER _____

DID AGENCY MANAGEMENT REVIEW THESE RESPONSES? (21) ☐ YES ☐ NO

Please return one copy of this completed training needs assessment survey by **July 15, 1997** to:

Gail Lewkowicz
STAPPA/ALAPCO
444 North Capitol Street, N.W., #307
Washington, DC 20001-1512
FAX: (202) 625-7863

1. Does your agency have a structured staff development plan for training your air program staff? ⁽²²⁾
☐ YES ☐ NO
If yes, please send materials describing this program when you return this questionnaire.

2. Does your agency's staff have access to external electronic e-mail from the Internet? ⁽²³⁾
☐ YES ☐ NO

3. Does your agency's staff have access to the **World Wide Web** on the Internet using their own computers at their desks (using web browsers such as Netscape Navigator, Microsoft Internet Explorer, or NCSA Mosaic)? ⁽²⁴⁾ ☐ YES ☐ NO

4. Can your agency's staff use CD-ROM disks at their desk computers? ⁽²⁵⁾ ☐ YES ☐ NO

- 5A. From the list below, please check the 10 course topics that will be most important for your agency and staff in Fiscal Year 1998 (October 1997-September 1998). (Note: **this list includes topics for which courses are currently available**; question 6 addresses topics for which courses are *not* currently available.) ⁽²⁶⁾

- ☐ ⁽⁰¹⁾ Inspection Fundamentals
- ☐ ⁽⁰²⁾ Fundamentals of Air Pollution Control
- ☐ ⁽⁰³⁾ Air Toxics-Basic (including MACT)
- ☐ ⁽⁰⁴⁾ Air Toxics-Advanced (including MACT)
- ☐ ⁽⁰⁵⁾ Control of Particulate Emissions
- ☐ ⁽⁰⁶⁾ Control of Gaseous Emissions
- ☐ ⁽⁰⁷⁾ Air Pollution Dispersion Models
- ☐ ⁽⁰⁸⁾ Basic Health and Safety
- ☐ ⁽⁰⁹⁾ Baseline Source Inspection Techniques
- ☐ ⁽¹⁰⁾ Monitoring and Source Sampling
- ☐ ⁽¹¹⁾ VOC Sampling and Analysis
- ☐ ⁽¹²⁾ Combustion Evaluation
- ☐ ⁽¹³⁾ Visible Emission Enforcement
- ☐ ⁽¹⁴⁾ Analytical Methods
- ☐ ⁽¹⁵⁾ Quality Assurance
- ☐ ⁽¹⁶⁾ NESHAPS
- ☐ ⁽¹⁷⁾ Enforcement Fundamentals
- ☐ ⁽¹⁸⁾ Advanced Enforcement
- ☐ ⁽¹⁹⁾ Multi-Media Enforcement
- ☐ ⁽²⁰⁾ Enforcement Case Development
- ☐ ⁽²¹⁾ Criminal Enforcement
- ☐ ⁽²²⁾ Permitting-Basic
- ☐ ⁽²³⁾ Permitting-Intermediate
- ☐ ⁽²⁴⁾ TitleV Operating Permits
- ☐ ⁽²⁵⁾ Emissions Inventory
- ☐ ⁽²⁶⁾ Data Management and Reporting
- ☐ ⁽²⁷⁾ Supplemental Environmental Projects (SEP)
- ☐ ⁽²⁸⁾ Pollution Prevention
- ☐ ⁽²⁹⁾ Gasoline Distribution and Marketing

5B. For each of the 10 topics checked above in Question 5A, please go to the *Question 5B Provider/Course Preference Matrix* and indicate which providers and courses you would prefer to meet these needs. If you have no preference, check the "no preference" box. (27)

6 From the listing below of **topics for which courses are not currently offered** (or which you do not have access to), please choose the 5 course topics that would be most important for your agency in FY 1998 (October 1997-September 1998). (28)

- ☐ (01) Mobile Sources-Transportation Control Strategies
- ☐ (02) Mobile Sources-Conformity
- ☐ (03) Mobile Sources-I&M Techniques
- ☐ (04) Mobile Sources-Quality Assurance for I&M
- ☐ (05) Stage I and II Vapor Recovery Inspections
- ☐ (06) Emissions Inventory
- ☐ (07) New Source Review
- ☐ (08) New National Ambient Air Quality Standards (NAAQS) including ozone & PM_{2.5}
- ☐ (09) PM_{2.5} Monitoring, QA/QC, and Laboratory Operations
- ☐ (10) Emission Inventory Development for PM_{2.5} with Emphasis on Area Sources
- ☐ (11) PM_{2.5} SIP Development Requirements, Timelines, and Procedures
- ☐ (12) Market-Based Incentives and Emission Trading Programs
- ☐ (13) Regional Transport Fundamentals and Emission Management Strategies
- ☐ (14) PAMS (Photochemical Assessment Monitoring Stations) & PAMS Data Analysis
- ☐ (15) Air Toxics (specify) _____
- ☐ (16) MACT Standards (specify) _____
- ☐ (17) MACT Standards (specify) _____
- ☐ (18) Other _____
- ☐ (19) Other _____

7. Please check the 3 most important barriers to your agency's use of government- or private-sponsored training courses in FY 1998 (October 1997-September 1998). (29)

- ☐ (01) There is a lack of funds for training course fees.
- ☐ (02) There is a lack of travel funds.
- ☐ (03) We are not allowed to travel to out-of-state training courses, regardless of cost.
- ☐ (04) The content of available courses does not meet our specific training needs.
- ☐ (05) The quality of the training is not worth the time/money expenditure
- ☐ (06) The training courses are too long and require too much staff time.
- ☐ (07) The scheduling of training courses makes it difficult to attend.
- ☐ (08) The training courses are out-of-date or need to be updated.
- ☐ (09) Management of our agency does not perceive a need for off-site training courses.
- ☐ (10) We do not have access to the technology to receive satellite courses.
- ☐ (11) It is difficult to find out what courses are offered
- ☐ (12) Other _____

8. Please check the 4 most important items that your agency **needs** to support training in FY 1998 (October 1997-September 1998). (30)

- ☐ (01) Long-term funding for training.
- ☐ (02) Better communication from providers about available training courses & schedules
- ☐ (03) Travel funding for staff to attend training courses.
- ☐ (04) Updating of current training course materials.
- ☐ (05) Support for state/local development of training courses
- ☐ (06) Travel funding to bring trainers to our agency
- ☐ (07) More courses offered on-site (in state or region)
- ☐ (08) Access to satellite downlink for distance learning courses
- ☐ (09) Other _____

9 How important do you consider training for the accomplishment of your agency's mission? (31)

- ☐ (01) Vitally important
- ☐ (02) Very important
- ☐ (03) Somewhat important
- ☐ (04) Not very important
- ☐ (05) Don't know

10. Do you have any **additional comments** or suggestions? (32)

Please return this survey by July 15, 1997 to STAPPA/ALAPCO:

Gail Lewkowicz
STAPPA/ALAPCO
444 North Capitol Street, N.W., #307
Washington, DC 20001-1512
FAX: (202) 625-7863

Thank you.

QUESTION 5B: PROVIDER PREFERENCE MATRIX

Instructions: For each of the 10 topics checked in Question 5A, please indicate which providers and courses you prefer to meet these needs. If you have no preference, check the "no preference" box. Please indicate preferred providers and courses only for those topics checked in Question 5A.

Topic (from Question 5A)	Providers and Courses/Course Numbers
<input type="checkbox"/> Inspection Fundamentals (01) <input type="checkbox"/> (a) No provider/course preference	California Air Resources Board (CARB) <input type="checkbox"/> (a) 100 Series/101-115 (5 days) EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (b) Basic Inspector Course/CST 109 (4 days) Rutgers/EOHSI <input type="checkbox"/> (c) Fundamentals of Environmental Compliance Inspections-Level I (3 days) Other <input type="checkbox"/> (d) (Provider/course)
<input type="checkbox"/> Fundamentals of Air Pollution Control (02) <input type="checkbox"/> (a) No provider/course preference	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Principles and Practice of Air Pollution Control/452 (3 5 days) California Air Resources Board (CARB) <input type="checkbox"/> (b) 100 Series/101-115 (5 days) Rutgers/EOHSI <input type="checkbox"/> (c) Principles and Practice of Air Pollution Control-Level I (3 days) Other <input type="checkbox"/> (d) (Provider/course)
<input type="checkbox"/> Air Toxics-Basic (including MACT) (03) <input type="checkbox"/> (d) No provider/course preference	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Introduction to Air Toxics/400 (2 days) California Air Resources Board (CARB) <input type="checkbox"/> (b) Dry Cleaning/287 (1 day) Other <input type="checkbox"/> (c) (Provider/course)
<input type="checkbox"/> Air Toxics-Advanced (including MACT) (04) <input type="checkbox"/> (c) No provider/course preference	California Air Resources Board (CARB) <input type="checkbox"/> (a) Dry Cleaners/387 (1 day) Other <input type="checkbox"/> (b) (Provider/course)
<input type="checkbox"/> Control of Particulate Emissions (05) <input type="checkbox"/> (d) No provider/course preference	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Control of Particulate Emissions/413 (4 days) California Air Resources Board (CARB) <input type="checkbox"/> (b1) ESPs/281 (1 day) <input type="checkbox"/> (b2) Baghouses/282 (1 day) <input type="checkbox"/> (b3) Aggregate Plants/243 (1 day) <input type="checkbox"/> (b4) Concrete Batch Plants/244 (1 day) <input type="checkbox"/> (b5) Hot Mix Asphalt Facilities/242 (1 day) Other <input type="checkbox"/> (c) (Provider/course)

Question 5B: Provider Preference Matrix

Topic (from Question 5A)	Providers and Courses/Course Numbers
<input type="checkbox"/> Control of Gaseous Emissions (06)	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Control of Gaseous Emissions/415 (4 days) : California Air Resources Board (CARB) <input type="checkbox"/> (b1) Incinerators/270 (1 day) <input type="checkbox"/> (b2) Industrial Boilers/273 (1 day) <input type="checkbox"/> (b3) Stationary Gas Turbines/272 (1 day) <input type="checkbox"/> (b4) Landfill Gas Control/285 (1 day) : Rutgers/EOHSI <input type="checkbox"/> (c) Nitrogen Oxides Emissions Control Technology-Level III (2 days) : Other <input type="checkbox"/> (d) (Provider/course)

Question 5B: Provider Preference Matrix

Topic (from Question 5A)	Providers and Courses/Course Numbers
<input type="checkbox"/> Multi-Media Enforcement (19)	California Air Resources Board (CARB) <input type="checkbox"/> (a) Symposium/300 (4 days) EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (b1) Multi-Media Inspections/MLS 102 (? days) <input type="checkbox"/> (b2) Multi-Media Training for Regulators/MLS 103 (3 days) <input type="checkbox"/> (b3) Advanced Multi-Media Course for Regulators/MLS 202 (3 days) Other <input type="checkbox"/> (c) (Provider/course)
<input type="checkbox"/> Enforcement Case Development (20)	California Air Resources Board (CARB) <input type="checkbox"/> (a) Mutual Settlement Workshop/350 (1 day) EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (b01) Interviewing Techniques for Regulators/CST 111 (1 day) <input type="checkbox"/> (b02) Interviewing and Interrogation Techniques/CST 210 (3 days) <input type="checkbox"/> (b03) Negotiation Skills/CST 113 (2 days) <input type="checkbox"/> (b04) Advanced Negotiation Skills/CST 204 (2 days) <input type="checkbox"/> (b05) Administrative Enforcement and Case Development/CST 115 (3 days) <input type="checkbox"/> (b06) Administrative Hearings and Trials/CST 207 (1 day) <input type="checkbox"/> (b07) Advanced Administrative Practice/CST 302 (2 days) <input type="checkbox"/> (b08) ABEL/CST 101 (1 day) <input type="checkbox"/> (b09) BEN/CST 103 (1 day) <input type="checkbox"/> (b10) Financial Analysis/CST 118 (3 days) <input type="checkbox"/> (b11) Intermediate Ability to Pay/CST 201 (? days) <input type="checkbox"/> (b12) Financial Analysts Workshop/CST 203 (3 days) <input type="checkbox"/> (b13) Pleading and Litigating Civil Penalties/CST 303 (4 5 days) <input type="checkbox"/> (b14) MUNIPAY/CST 305 (1 day) <input type="checkbox"/> (b15) INDIPAY/CST 306 (1 day) Other <input type="checkbox"/> (c) (Provider/course)
<input type="checkbox"/> Criminal Enforcement (21)	EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (a1) Basic Criminal Environmental Investigations/CRM 105 (5 days) <input type="checkbox"/> (a2) Basic Environmental Enforcement Training/CRM 106 (4 days) <input type="checkbox"/> (a3) Basic Environmental Investigations Training/CRM 108 (3 days) <input type="checkbox"/> (a4) Basic Environmental Investigations Training/CRM 113 (4 days) Other <input type="checkbox"/> (b) (Provider/course)
<input type="checkbox"/> Permitting-Basic (22)	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Introduction to Permits/460 (5 days) Other <input type="checkbox"/> (b) (Provider/course)

Question 5B: Provider Preference Matrix

Topic (from Question 5A)	Providers and Courses/Course Numbers
<input type="checkbox"/> Permitting-Intermediate (23)	EPA/Air Pollution Training Institute (APTI) <input type="checkbox"/> (a) Intermediate Permitting/461 (5 days) Rutgers/EOHSI <input type="checkbox"/> (b) Air Permitting: A Technical Approach-Level III (2 days) WESTAR <input type="checkbox"/> (c) Operating Permits-NSR/PSD (3 days) Other <input type="checkbox"/> (d) (Provider/course)
<input type="checkbox"/> (e) No provider/course preference	
<input type="checkbox"/> Title V Operating Permits (24)	WESTAR <input type="checkbox"/> (a) Advanced Operating Permits (3 days) Other <input type="checkbox"/> (b) (Provider/course)
<input type="checkbox"/> (c) No provider/course preference	
<input type="checkbox"/> Emissions Inventory (25)	No choices available
<input type="checkbox"/> Data Management and Reporting (26)	EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (a1) AIRS Input and Reporting/AIR 103 (3 days) <input type="checkbox"/> (a2) ACTS/NARS Training/AIR 104 (2 days) <input type="checkbox"/> (a3) IDEA Basic Training/IMS 102 (1 day) <input type="checkbox"/> (a4) IDEA WIN for the New User/IMS 193 (? days) <input type="checkbox"/> (a5) DOCKET/Case Conclusion Data Sheets/IMS 104 (? days) <input type="checkbox"/> (a6) IDEA Advanced Training/IMS 202 (.5 day) Other <input type="checkbox"/> (b) (Provider/course).
<input type="checkbox"/> (c) No provider/course preference	
<input type="checkbox"/> Supplemental Environmental Projects (SEP) (27)	EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (a1) SEP Policy Training/CST 107 (1 day) <input type="checkbox"/> (a2) PROJECT-SEP Training/CST 205 (5 day) Other <input type="checkbox"/> (b) (Provider/course).
<input type="checkbox"/> (c) No provider/course preference	
<input type="checkbox"/> Pollution Prevention (28)	EPA/National Enforcement Training Institute (NETI) <input type="checkbox"/> (a) Pollution Prevention for Enforcement and Compliance Officers/CPA 103 (2 days) WESTAR <input type="checkbox"/> (b) Pollution Prevention in Permitting (3 days) Other <input type="checkbox"/> (c) (Provider/course)
<input type="checkbox"/> (d) No provider/course preference	
<input type="checkbox"/> Gasoline Distribution and Marketing (29)	California Air Resources Board (CARB) <input type="checkbox"/> (a1) Gasoline Cargo Tanks/210 (1 day) <input type="checkbox"/> (a2) Gasoline Facilities Phase I and II/263 (1 day) <input type="checkbox"/> (a3) Oil Field Production/260 (1 day) <input type="checkbox"/> (a4) Air to Liquid Ratio Testing/264 (1 day) <input type="checkbox"/> (a5) Petroleum Refining/288 (1 day) Other <input type="checkbox"/> (b) (Provider/course)
<input type="checkbox"/> (c) No provider/course preference	

Please return to Question 6.

Air Compliance Inspector Basic Training Program Questionnaire

Air Compliance Inspector Basic Training Program Questionnaire

EPA Order 3500.1, June 29, 1988, established an EPA agency-wide training program for environmental compliance and field inspectors. The order requires that EPA regional and headquarters inspectors meet minimum training criteria prior to conducting facility inspections. Minimum training curricula include Occupational Health and Safety, Basic Inspector Curriculum, and Program Specific Curriculum. Since 1988, EPA has been developing and delivering training relative to Order 3500.1 in cooperation with state and local agencies. Many state/local inspectors have attended these courses.

Although the order is voluntary for state/local agency inspectors, and does not specifically establish training criteria for them, it could form the basis for state/local training programs. State and local agency inspectors conduct the majority of compliance inspections, and therefore would benefit a great deal from similar formalized training. EPA/Stationary Source Compliance Division (SSCD) in coordination with EPA Region V, Ohio EPA, and the Ohio Regional Air Pollution Control Agencies (RAPCA) are conducting a program development demonstration project in which state and local agency inspectors will be trained specific to their needs.

The purpose of this questionnaire is to establish a baseline for the inspector training programs currently available to Ohio EPA and RAPCA personnel and to identify the basic level training needs of these agencies. In responding to this survey, please answer each question as it best represents your agency. Answers should be kept simple and should not require research or a significant amount of time. The results will be summarized and reported back to you.

Questions concerning this questionnaire can be forwarded to Bruno Maier at the Ohio Regional Air Pollution Control Agency in Dayton, Ohio at 513-225-4795, fax number 513-225-3486. Completed questionnaires should be sent to Bruno at the following address: RAPCA, 451 W. 3rd Street, Dayton, OH 45422

Agency Profile

Survey completed by (name): _____
Title: _____
Phone Number: _____
Fax Number: _____

1. How many people does your agency employ (i.e., FTE's)? _____

2. How many inspectors do you have? _____

What percentage of these inspectors would you categorize as:

New (< 1 year experience) _____ Experienced _____

3. Does your agency have required training (please circle)? Yes No

4. Does your agency have a training program (please circle)? Yes No

Course Information

5. Please Rank the following training courses as 1 = high priority; 2 = medium; 3 = low; or NA - not available.

CARB Courses

100	Fundamentals of Enforcement	___
101.	History of Air pollution Control	___
102	Climatology and Meteorology	___
103	Classification of Air Pollutants	___
104	Inspector Safety	___
105.	Concepts of Regulatory Development	___
106	Investigative and Report Writing Techniques	___
107.	Basic Air Pollution Control Equipment	___
108	Introduction to Visible Emissions Evaluations	___
109	Complaint Response Procedures	___
110	Sample Gathering and Integrity	___
111.	Basic Chemistry of Air Pollution	___
112.	Evolution of Environmental Law	___
113	Inspector Conduct and Liability	___
114.	Air Quality Monitoring Concepts	___
115	Interfacing with Related Agencies	___

EPA/Rutgers

1	Fundamentals of Environmental Compliance Inspections	___
2	Basic Health and Safety for Field Activities	___
3.	Respiratory Protection and Use of Safety Equipment	___
4	Principles and Practice of Air Pollution Control	___
5	Basic Source Inspection	___
6	Emission Capture and Gas Handling System Inspection	___
7	Emission Monitoring and Testing Series Source Sampling Source Sampling and Analysis	___
8	Emission Monitoring and Testing Series Continuous Emissions Monitoring Systems	___
9	Emission Monitoring and Testing Series. VOC Sampling and Analysis	___
10	Visible Emission Enforcement Training and Certification	___
11	Combustion Source Inspection	___
12	Asbestos NESHAP Demolition and Renovation Inspection Procedures Workshop	___
13	General VOC Source Regulation and Inspection - Part I	___
14	VOC Fugitive Emission Source and Benzene Process - Part II	___

Miscellaneous

1	Air Toxics-Basic	___
2.	SIP Development	___
3	Control Measures O ₃ , CO and NO _x - Basic	___
4	Advanced Inspection	___
5	Enforcement and Case Development - Basic	___
6	Clean Air Act Update	___

Delivery and Availability

6. For this basic training, would you have any objections to being trained with industry?
Please explain
7. Please indicate the most significant roadblocks hindering your organization's use of government and private sponsored training courses? (Rank the following items, 1 is the most important).
- | | | |
|----|------------------------------------|-------|
| A. | Lack of training funds | _____ |
| B. | Lack of travel funds | _____ |
| C. | Location of course | _____ |
| D. | Content of course | _____ |
| E. | Quality of instruction | _____ |
| F. | Length of course | _____ |
| G. | Scheduling | _____ |
| H. | Updates needed for current courses | _____ |
| I. | Other, please specify: | _____ |

Resources

8. What sources are available to meet your training's funding needs? (Check all sources; rank the top 3)
- | | Now | Future |
|----|--|--------|
| A. | Cooperative federal funding | _____ |
| B. | Other state/local operating funds | _____ |
| C. | Tuition/User fees | _____ |
| D. | Permit fees | _____ |
| E. | Penalties | _____ |
| F. | 105 Grants | _____ |
| G. | Federal tuition-free (no cost) courses | _____ |
| H. | Other, please specify: | _____ |

Additional (attach a separate sheet, if necessary)

9. What key recommendations would you make to EPA to improve their efforts to provide comprehensive basic air quality training?
10. Is there any other information or comments you would like to provide for this baseline survey for basic level training?
11. If the training were held March 15-18 and/or March 29-April 14 in Dayton, OH would your organization participate?

Follow-up - To be answered at a later date.

12. Did training meet your objectives?
13. What aspects of the course(s) would you like to highlight for future training?
14. What aspects would you like to see improved in future training?
15. What would you recommend as the next step in this state/local training program development demonstration project?

Training Needs Questionnaire

Training Needs Questionnaire
Michigan Department of Natural Resources, Air Quality Division

The Air Quality Division of Michigan's Department of Natural Resources is gathering information on the training and experience of staff to assist in planning future training programs. Your response to these questions will enable us to develop training programs that truly meet your needs. This form is designed for staff who were hired before October 1, 1992--a different version was designed for staff hired after that date. If you have received the incorrect form, please contact Rebecca Patrick (517) 335-6984.

Please send the completed form no later than September 10 to:

Rebecca M. Patrick, Air Quality Division
P.O. Box 30028
Lansing, Michigan 48909.

Thank you for your cooperation

Training Needs

What types of training are you most interested in receiving in the future?

Intermediate or Advanced Compliance Inspection Courses in.

- ☐ Visible Emission Enforcement/Certification
- ☐ Source Sampling and Analysis
- ☐ Continuous Emissions Monitoring Systems
- ☐ VOC Sampling and Analysis
- ☐ Combustion Source Inspection
- ☐ Asbestos NESHAP Demolition and Renovation Inspection Procedures
- ☐ General VOC Source Regulation and Inspection
- ☐ VOC Fugitive Emission Source and Benzene Process
- ☐ Specific Industrial Process Controls/Inspection (specify) _____
- ☐ Other _____
- _____
- _____
- _____
- _____

Courses in

- ☐ Basic Health and Safety
- ☐ Advanced Health and Safety
- ☐ Case Development
- ☐ Pollution Prevention
- ☐ Other _____
- _____

Training Needs Assessment Methodology and Instruments

OBJECTIVES

Objectives of the Needs Assessment

1. To develop lists of skills that are required to perform selected technical job functional categories.
2. To identify current training needs and priorities, including the basis or reason for these needs.
3. To provide information on identified training needs that is sufficient for overall program and specific course planning (e.g., specific topics, levels of difficulty, numbers of staff, location of staff, etc.).
4. To develop a process and data collection instruments that can be used by the Technical Training Academy to update training requirements in the future.
5. To develop a process and data collection instruments that can be used by the Technical Training Academy to conduct needs assessments in other program areas (e.g., water, hazardous waste, etc.).

The needs assessment will be designed to answer the following questions:

1. What types of technical training are currently needed by what types and how many staff? Where are these staff located?
2. What problems in air pollution control have been identified that have training solutions?
3. What anticipated changes in the air pollution control program or changes in the composition of the regulated community will create future training needs?
4. What resources are available to meet these needs? What types of training resources are most appropriate and cost-effective to meet the identified needs?

PRELIMINARY REPORT OUTLINE

1. Executive Summary
2. Methodology
3. Findings
 - a. Skills Inventory
 - b. Problem Identification (training related and non-training related)
 - c. Perceived Training Needs and Priorities (including rationale for need)
 - d. Training Currently Provided/Available
4. Conclusions
 - a. Training Needs by Division and Section (including priorities, number of staff, location of staff)
 - Current Needs
 - Projected Future Needs
 - b. Training Needs by Region (including priorities, number of staff, location of staff)
 - Current Needs
 - Projected Future Needs
 - c. Potential Resources to Meet Needs
 - EPA/APTI/CARB/Rutgers
 - Universities
 - Private Providers

Appendices

- A. Data Collection Instruments

DATA COLLECTION APPROACH

There are three distinct components in the data collection approach. They are:

1. Study Population Definition
2. Skills Inventory
3. Needs Assessment Survey

Study Population Definition

The first step in the needs assessment is the definition of the study population. Tasks and subtasks include the following:

1. Select Divisions and Sections for inclusion in the study.
2. Define functional job titles to be included in the inventory and needs assessment, based on discussions with Division Managers and Section Managers.

Skills Inventory

Data collection for the skills inventory will include the following tasks and subtasks:

1. Obtain written position descriptions, performance appraisal forms, and other materials that relate to the functional job titles included in the study.
2. Review written materials and extract data on skills.
3. Prepare draft skills inventory based on written materials.
4. Circulate draft skills inventory to Section Managers and Regional Air Program Managers during interviews for review.
5. Based on comments received from step 4, revise skills inventory and distribute.

Needs Assessment Surveys

The needs assessment survey will include the following sources and will use the methods indicated with each source:

<u>Source and Number</u>	<u>Method</u>
Division Managers ()	Individual interview
Section Managers ()	Individual interview Follow-up focus group (?)
Individual Staff ()	Written questionnaire Selected interviews (?)
Regional Air Program Managers ()	Telephone interview
Regional Field Staff ()	Telephone interview
Industry Associations ()	Individual interview
 TOTAL RESPONDENTS ()	

The following pages describe each of these data collection efforts and provide draft data collection instruments.

DIVISION MANAGERS

Number of Respondents:

Selected Respondents:

Objectives:

- Obtain information on problems that might have technical training solutions.
- Obtain information on anticipated changes in staffing levels or distribution (organization), regulations, equipment, regulated community, etc. that could create training needs.
- Obtain their perceptions of highest priority technical training needs.
- Encourage top-level support for technical training efforts.
- Develop top-level interest in on-going training needs assessment process and willingness to participate in annual or semi-annual update.

Method:

- Face-to-face interview, using interview guide, by outside consultant. Interviews should require 15-30 minutes.
- Interviews will be conducted with all Division Managers included in the study.
- Send a letter in advance of the interview that describes the purpose of the interview and how the information will be used, and lists the questions that will be discussed during the interview.

SECTION MANAGERS

Number of Respondents:

Selected Respondents:

Objectives of Interviews:

- Review/check draft functional job descriptions and skills inventory for staff under their purview.
- Obtain information on problems that might have technical training solutions.
- Obtain information on anticipated changes in staffing levels or distribution (organization), regulations, equipment, regulated community, etc. that could create training needs.
- Obtain their perceptions of highest priority technical training needs.
- Obtain their perceptions of barriers and impediments to training for their staff.
- Obtain their opinions on the most effective training formats for their staff and the needs they have identified.
- Encourage support for technical training efforts.
- Develop interest in on-going training needs assessment process and willingness to participate in annual or semi-annual update.

Method:

- Face-to-face interview, using interview guide, by outside consultant. Interviews should require 45-60 minutes.
- Interviews will be conducted with all Section Managers included in the study.
- Once information from interviews has been summarized, a focus group may be convened to discuss and refine the findings and conclusions.

INDIVIDUAL STAFF

Number of Respondents:

Selected Functional Job Titles:

Objectives:

- Review/check draft functional job description and skills inventory for their position.
- Obtain their perceptions of their own technical training needs.
- Obtain information on problems they encounter in their jobs that might have training solutions.
- Obtain their opinions on preferred methods/formats for receiving training.

Method:

- Written questionnaire to a sample of individuals in selected functional job categories. Written or telephone follow up to non-respondents will be performed to obtain an adequate response for each section or regional office. Telephone follow up may be necessary to clarify responses.
- Samples will be developed in cooperation with Section Managers.

REGIONAL SUPERVISORS

Number of Respondents:

Selected Regional Supervisors:

- Air Program Managers in Regions _____
- _____ in Region 12, Houston

Objectives:

- Review/check draft functional job descriptions and skills inventory for staff under their purview.
- Obtain information on problems that might have technical training solutions, identifying those that might be particular to their region.
- Obtain information on anticipated changes in staffing levels or distribution (organization), regulations, equipment, regulated community, etc. that could create training needs.
- Obtain their perceptions of highest priority technical training needs.
- Obtain their perceptions of barriers and impediments to training for their staff.
- Obtain their opinions on the most effective training formats for their staff and the needs they have identified.
- Encourage support for technical training efforts.
- Develop interest in on-going training needs assessment process and willingness to participate in annual or semi-annual update.

Method:

- Telephone interview, using interview guide, by outside consultant. Interviews should require 20-30 minutes.
- A sample of Air Program Managers will be drawn by Field Operations, combining regions that are similar and/or have only one or two staff.
- Introduce study to this group at their September 15 meeting in Austin. Give them list of questions for telephone interviews and questions for field staff for review.

INDIVIDUAL FIELD STAFF

Number of respondents:

Selected Functional Job Titles:

Field Inspectors
Monitoring Technicians
Stack Samplers
I&M Supervisors
Employee Trip Reduction Program Staff (Houston)

Objectives:

- Review/check draft functional job description and skills inventory for their position.
- Obtain their perceptions of their own technical training needs.
- Obtain information on problems they encounter in their jobs that might have training solutions.
- Obtain their opinions on preferred methods/formats for receiving training.

Method:

- Telephone interviews with a sample of senior field staff to be identified by Field Operations. Interviews should require approximately 15 minutes.

INDUSTRY ASSOCIATIONS

Number of Respondents: maximum of 3

Selected Associations:

Objectives:

- Obtain their perceptions of strengths and weaknesses of TNRCC air pollution control staff in terms of job performance.
- Obtain their perceptions of problems their member companies encounter in dealing with TNRCC air pollution control staff that might have training solutions.

Method:

- Face-to-face interviews, using interview guide, by outside consultant. Interviews should require approximately 30 minutes.
- Approximately one month prior to interviews, respondents will be sent a letter outlining the objectives of the interview to allow them to poll their membership if desired.

DATA COLLECTION INSTRUMENTS

Three types of data collection instruments have been developed for this project:

Interview guides for face-to-face interviews

Interview guides for telephone interviews

Written questionnaire

The following data collection instruments are included in this section:

Division Manager Interview Guide

Section Manager Interview Guide

Headquarters Staff Questionnaire

Regional Air Program Managers Telephone Interview Guide

Regional Field Staff Telephone Interview Guide

Industry Associations Interview Guide

DIVISION MANAGERS INTERVIEW GUIDE

*Introduce yourself, your affiliation, your relationship to TNRCC.
Provide overview of the interview*

Estimated time: 15-30 minutes.

*Objectives: obtain their perspective on training needs for
air pollution control staff and how training might improve
agency performance.*

Discussion Questions:

1. What do the staff in your division do particularly well, their strengths? Do they bring these skills to their jobs or is this the result of training?
2. What problems do the staff in your division encounter in performing their jobs? Have you heard any complaints about their performance in any areas?

Probe for specifics.

3. Are there any specific areas in which you think staff need training now? Have you identified appropriate training resources/providers to meet these needs? What are they?

Probe for specifics.

4. What changes do you see in the future that might require additional training for staff?

Probe for changes in

- *laws/regulations (Federal and state),*
- *purchase and/or use of new equipment (field, office, laboratory),*
- *advances in industry processes or technology,*
- *changes in the regulated community (new industry, new products in existing industry),*
- *changes in staffing levels or organization.*

5. (Quickly summarize the training needs identified in questions 2, 3, and 4.) Among these potential training needs that you have identified, which ones are highest priority?

- *Create a list of specific needs identified.*
- *Identify those needs that are "technical training needs."*
- *Separate the list of technical training needs into current needs and anticipated future needs.*
- *Ask the respondent to rate them as (1) highest priority, (2) important, and (3) useful but not critical at this time.*

6. Is there anything you would like to tell me about training, training needs, and staff performance that I have not asked?

Conclude the interview by thanking the respondent and outlining the next steps in the needs assessment.

A draft report will be circulate for review
_____. Would they be interested in reviewing
it?

The final report will be available _____. Would
they like to receive a copy?

SECTION MANAGERS INTERVIEW GUIDE

*Introduce yourself, your affiliation, your relationship to TNRCC.
Provide overview of the interview*

Estimated time: 45-60 minutes.

*Objectives: obtain their perspective on training needs for
air pollution control staff and how training might improve
agency performance.*

Discussion Questions:

1. Please review the draft job function descriptions and let us know if they are complete and accurate.

Ask them to review the descriptions during the interview period if possible. Otherwise, ask them to return comments as soon as possible and set a mutually agreeable deadline.

2. What do the staff in your section do particularly well, their strengths? Do they bring these skills to their jobs or is this the result of training?
3. Is any training offered routinely to staff in your section or required of all staff (e.g., orientation for new employees)? If yes, describe courses and providers.
4. What problems do the staff in your section encounter in performing their jobs? Have you heard any complaints about their performance in any areas?

Probe for specifics.

5. Are there any specific areas in which you think staff need training now? Have you identified appropriate training resources/providers to meet these needs? What are they?
6. What changes do you see in the future that might require additional training for staff?

Probe for changes in

- *laws/regulations (Federal and state),*
- *purchase and/or use of new equipment (field, office, laboratory),*
- *advances in industry processes or technology,*
- *changes in the regulated community (new industry, new products in existing industry),*
- *changes in staffing levels or organization.*

7. (Quickly summarize the training needs identified in questions 2, 3, and 4.) Among these potential training needs that you have identified, which ones are highest priority?

- Create a list of specific needs identified.
- Identify those needs that are "technical training needs."
- Separate the list of technical training needs into current needs and anticipated future needs.
- Ask the respondent to rate them as (1) highest priority, (2) important, and (3) useful but not critical at this time.

8. What approaches, formats, methods do you think would be most appropriate and cost-effective for meeting each of the needs rated 1 or 2 above? Note specific courses mentioned.

Ask specifically about classroom training, self-study, computer-based or computer assisted, videotapes, interactive videoconferences.

9. What barriers or impediments do you encounter in obtaining training for your staff?

Probe for items beyond dollars--such as time away from the office, out-of-state travel restrictions, video or computer equipment required, scheduling of available courses, etc.

10. Have any training programs been particularly effective for you or your staff in the past? What made the program(s) so effective?

11. Is there anything you would like to tell me about training, training needs, and staff performance that I have not asked?

Conclude the interview by thanking the respondent and outlining the next steps in the needs assessment.

A draft report will be circulate for review _____. Would they be interested in reviewing it?

The final report will be available _____. Would they like to receive a copy?

**TNRCC AIR POLLUTION CONTROL STAFF
TRAINING NEEDS ASSESSMENT QUESTIONNAIRE**

The Technical Training Academy of the TNRCC is conducting a survey to help us learn more about the types of training that air pollution control staff need to improve their effectiveness in their jobs.

Please fill out this form as completely and accurately as you can. If you have any questions about the survey or the questions on this form, please call _____ at _____.

1. Job Title/Position _____
Division/Section/Location _____
2. What are your major job responsibilities? _____

3. How long have you been in this position? _____
If less than 5 years, what was your previous job? _____
4. What problems have you encountered in performing your job?

5. What is your educational background (check highest level attained and indicate major subject)?
_____ High School Graduate
_____ Technical/Vocational School Graduate _____
_____ Junior College/Community College Graduate _____
_____ Undergraduate College/University Graduate _____
_____ Graduate College/University Degree _____
_____ Other (describe) _____

6. What training have you received for your current job (classroom, self-study, video, on-the-job)?

Course or Topic

Training Provider

7. What other training have you received that has been valuable to you in this job (classroom, self-study, video, on-the-job)?

Course or Topic

Training Provider

8. What types of training would help you perform your job better? How important is this need?

Topic

Very Important Important Useful

9. For each of the topics listed in question 8, how would you prefer to receive the training (classroom, self-study, video, on-the-job, etc)?

Topic

Classroom SelfStudy Video

On-the-Job

10. Are there any other comments you would like to make concerning your interests in training?

**REGIONAL AIR PROGRAM MANAGERS
TELEPHONE INTERVIEW GUIDE**

*Introduce yourself, your affiliation, your relationship to TNRCC.
Provide overview of the interview*

Estimated time: 20-30 minutes.

*Objectives: obtain their perspective on training needs for
air pollution control staff and how training might improve
agency performance.*

Discussion Questions:

1. What are the major industries in your region? Is the regulated community fairly stable? Are there any new industries?
2. What are the major air pollution problems in your region?
3. What do the air pollution control staff in your region do particularly well, their strengths? Do they bring these skills to their jobs or is this the result of training?
4. Is any training offered routinely to staff in your region or required of all staff (e.g., orientation for new employees)? If yes, please describe courses and providers.
5. What problems do the staff in your region encounter in performing their jobs? Have you heard any complaints about their performance in any areas?

Probe for specifics.

6. Are there any specific areas in which you think staff need training now? Have you identified appropriate training resources/providers to meet these needs? What are they?
7. What changes do you see in the future that might require additional training for staff?

Probe for changes in

- *laws/regulations (Federal and state),*
- *purchase and/or use of new equipment (field, office, laboratory),*
- *advances in industry processes or technology,*
- *changes in the regulated community (new industry, new products in existing industry),*
- *changes in staffing levels or organization.*

8. *(Quickly summarize the training needs identified in questions 2, 3, and 4.) Among these potential training needs that you have identified, which ones are highest priority?*

- Create a list of specific needs identified.
- Identify those needs that are "technical training needs."
- Separate the list of technical training needs into current needs and anticipated future needs.
- Ask the respondent to rate them as (1) highest priority, (2) important, and (3) useful but not critical at this time.

9. What approaches, formats, methods do you think would be most appropriate and cost-effective for meeting each of the needs rated 1 or 2 above?

Ask specifically about classroom training, self-study, computer-based or computer assisted, videotapes, interactive videoconferences.

10. What barriers or impediments do you encounter in obtaining training for your staff?

Probe for items beyond dollars--such as time away from the office, out-of-state travel restrictions, video or computer equipment required, scheduling of available courses, etc.

11. Have any training programs been particularly effective for you or your staff in the past? What made the program(s) so effective?

12. Is there anything you would like to tell me about training, training needs, and staff performance that I have not asked?

Conclude the interview by thanking the respondent and outlining the next steps in the needs assessment.

A draft report will be circulate for review _____ . Would they be interested in reviewing it?

The final report will be available _____. Would they like to receive a copy?

**REGIONAL FIELD STAFF
TELEPHONE INTERVIEW GUIDE**

*Introduce yourself, your affiliation, your relationship to TNRCC.
Provide overview of the interview*

Estimated time: 15 minutes.

*Objectives: obtain their perspective on training needs for
air pollution control staff and how training might improve
agency performance.*

1. Job Title/Position
Division/Section/Location
2. What are your major job responsibilities?
3. How long have you been in this position?
If less than 5 years, what was your previous job?
4. What problems have you encountered in performing your job?
5. What is your educational background (check highest level attained and indicate major subject)?
6. What training have you received for your current job (classroom, self-study, video, on-the-job)? Who provided this training?
7. What other training have you received that has been valuable to you in this job (classroom, self-study, video, on-the-job)? Who provided this training?
8. What types of training would help you perform your job better? How important is this need?
9. For each of the topics listed in question 8, how would you prefer to receive the training (classroom, self-study, video, on-the-job, etc)?
10. Are there any other comments you would like to make concerning your interests in training?

INDUSTRY ASSOCIATIONS INTERVIEW GUIDE

*Introduce yourself, your affiliation, your relationship to TNRCC.
Provide overview of the interview*

Estimated time: 30 minutes.

Objectives: obtain their perspective on the strengths and weaknesses in air pollution control staff and how training might improve agency performance.

Discussion Questions:

1. What types of interactions do your association and your member companies have with TNRCC air pollution control staff (e.g., compliance inspections, reg development, public hearings)?
2. What do you think the strengths of the TNRCC air pollution control staff are?
3. What do you think the weaknesses of the TNRCC air pollution control staff are? In what areas are improvement needed?
4. What problems have you had in your interactions with TNRCC air pollution control personnel?

At the conclusion of this discussion, note that some problems are training related and others are not. We will transmit all of our findings to TNRCC, but the training group is not in a position to cure all ills.

5. What changes do you foresee in your industry that might affect TNRCC air pollution control staff (e.g., process changes, new technologies, expansion or contraction)?

SAMPLE TABLE SHELLS/DATA DISPLAYS

1. Rationale for Training Needs

Need	New Staff	Response to Problem	New Rules/ Regulations	New Technology	New Equipment	New Industry

Cells of this table could contain simple check marks or brief explanation.

2. Training Needs by Region

Need / Region	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Cells of this table could contain simple check marks, the priority of the need within the region, or the number of staff within the region that have the need. The table will illustrate the needs that regions have in common and those needs that are particular to one or two regions. It will illustrate the geographic location and size of the potential audience for specific training programs.

3. Training Needs by Division/Section

	Section	Section	Section	Section	Section	Section	Section

As in table 2, cells of this table could contain simple check marks, the priority of the need within the section, or the number of staff within the section that have the need. The table will illustrate the needs that sections have in common and those needs that are particular to one or two sections. It will illustrate the geographic location and size of the potential audience for specific training programs.

Draft Needs Assessment for Personnel in Mexico

Draft
Needs Assessment

For
OAQPS/Education and Outreach Group
Government of Mexico
Universidad Autonoma Metropolitana

OBJECTIVES

Objectives of the Needs Assessment

1. To develop lists of skills that are required to perform selected technical job functional categories.
2. To identify current training needs and priorities, including the basis or reason for these needs.
3. To provide information on identified training needs that is sufficient for overall program and specific course planning (e.g., specific topics, levels of difficulty, numbers of staff, location of staff, etc.).
4. To develop a process and data collection instruments that can be used to assess needs in other parts of the country and to update training requirements in the future.
5. To develop a process and data collection instruments that can be used to conduct needs assessments in other program areas (e.g., water, hazardous waste, etc.).

The needs assessment will be designed to answer the following questions:

1. What types of training are currently needed by what types and how many staff? Where are these staff located?
2. What problems in air pollution control have been identified that have training solutions?
3. What anticipated changes in the air pollution control program or changes in the composition of the regulated community will create future training needs?
4. What resources are available to meet these needs? What types of training resources are most appropriate and cost-effective to meet the identified needs?

MANAGERS

Number of Respondents:

Selected Respondents:

Objectives:

- Obtain information on problems that might have training solutions.
- Obtain information on anticipated changes in staffing levels or distribution (organization), regulations, equipment, regulated community, etc. that could create training needs.
- Obtain their perceptions of highest priority training needs.
- Encourage top-level support for training efforts.

Method:

- Face-to-face interview, using interview guide. Interviews should require 15-30 minutes.
- Interviews will be conducted with all Managers included in the study
- Send a letter in advance of the interview that describes the purpose of the interview and how the information will be used, and lists the questions that will be discussed during the interview.

LINE SUPERVISORS

Number of Respondents:

Selected Respondents:

Objectives of Interviews:

- Gather information on functional job descriptions and skills inventory for staff under their purview
- Obtain information on problems that might have training solutions.
- Obtain information on anticipated changes in staffing levels or distribution (organization), regulations, equipment, regulated community, etc. that could create training needs.
- Obtain their perceptions of highest priority training needs.
- Obtain their perceptions of barriers and impediments to training for their staff.
- Obtain their opinions on the most effective training formats for their staff and the needs they have identified.
- Encourage support for training efforts.

Method.

- Face-to-face interview, using interview guide Interviews should require 45-60 minutes.
- Interviews will be conducted with all Supervisors included in the study.
- Once information from interviews has been summarized, a focus group may be convened to discuss and refine the findings and conclusions.

INDIVIDUAL STAFF

Number of Respondents:

Selected Functional Job Titles:

Objectives:

- Gather information on functional job description and skills inventory for their position
- Obtain their perceptions of their own training needs.
- Obtain information on problems they encounter in their jobs that might have training solutions.
- Obtain their opinions on preferred methods/formats for receiving training.

Method:

- Interview and written questionnaire to all or a sample of individuals in each functional job category. Written or telephone follow up to non-respondents will be performed to obtain an adequate response. Telephone follow up may be necessary to clarify responses.
- If used, samples will be developed in cooperation with Managers.

LINE SUPERVISORS: INTERVIEW GUIDE

Introduce yourself, your affiliation, and the project.

Provide overview of the interview

Estimated time: 45-60 minutes

Objectives: obtain their perspective on training needs for air pollution control staff and how training might improve agency performance.

Discussion Questions:

1. What are the job categories or positions that you supervise? What are the major functions performed by each of these positions or categories?
2. What do the staff in your section do particularly well, their strengths? Do they bring these skills to their jobs or is this the result of training?
3. Is any training offered routinely to staff in your section or required of all staff (e.g., orientation for new employees)? If yes, describe courses and providers.
4. What problems do the staff in your section encounter in performing their jobs? Have you heard any complaints about their performance in any areas?
Probe for specifics.
5. Are there any specific areas in which you think staff need training now? Have you identified appropriate training resources/providers to meet these needs? What are they?
6. What changes do you see in the future that might require additional training for staff?
Probe for changes in
 - *laws/regulations,*
 - *purchase and/or use of new equipment (field, office, laboratory),*
 - *advances in industry processes or technology,*
 - *changes in the regulated community (new industry, new products in existing industry),*
 - *changes in staffing levels or organization.*
7. *(Quickly summarize the training needs identified in questions 2, 3, and 4.)* Among these potential training needs that you have identified, which ones are highest priority?
 - *Create a list of specific training needs identified.*
 - *Separate the list of training needs into current needs and anticipated future needs.*
 - *Ask the respondent to rate them as (1) highest priority, (2) important, and (3) useful but not critical at this time.*

8. What approaches, formats, methods do you think would be most appropriate and cost-effective for meeting each of the needs rated 1 or 2 above? Note specific courses mentioned.

Ask specifically about classroom training, self-study, computer-based or computer assisted, videotapes, interactive videoconferences.

- 9 What barriers or impediments do you encounter in obtaining training for your staff?

Probe for items beyond dollars--such as time away from the office, out-of-state travel restrictions, video or computer equipment required, scheduling of available courses, etc.

10. Have any training programs been particularly effective for you or your staff in the past? What made the program(s) so effective?

- 11 Is there anything you would like to tell me about training, training needs, and staff performance that I have not asked?

Conclude the interview by thanking the respondent and outlining the next steps in the project.

**AIR QUALITY MANAGEMENT STAFF
TRAINING NEEDS ASSESSMENT QUESTIONNAIRE**

The Universidad Autonoma Metropolitana is conducting a survey in cooperation with SEDESOL to learn more about the types of training that air quality management staff need to improve their effectiveness in their jobs. Please fill out this form as completely and accurately as you can. If you have any questions about the survey or the questions on this form, please call _____ at _____.

1. Job Title/Position _____
Division/Section/Location _____
2. What are your major job responsibilities? _____

3. How long have you been in this position? _____
If less than 5 years, what was your previous job? _____
4. What problems have you encountered in performing your job?

5. What is your educational background (check highest level attained and indicate major subject)?
_____ High School Graduate
_____ Technical/Vocational School Graduate _____
_____ Junior College/Community College Graduate _____
_____ Undergraduate College/University Graduate _____
_____ Graduate College/University Degree _____
_____ Other (describe) _____

6. What training have you received for your current job (classroom, self-study, video, on-the-job)?

<u>Course or Topic</u>	<u>Training Provider</u>
_____	_____
_____	_____
_____	_____

7. What other training have you received that has been valuable to you in this job (classroom, self-study, video, on-the-job)?

<u>Course or Topic</u>	<u>Training Provider</u>
_____	_____
_____	_____
_____	_____

8. What types of training would help you perform your job better? How important is this need?

<u>Topic</u>	<u>Very Important</u>	<u>Important</u>	<u>Useful</u>
_____	_____	_____	_____
_____	_____	_____	_____
_____	_____	_____	_____

9. For each of the topics listed in question 8, how would you prefer to receive the training (classroom, self-study, video, on-the-job, etc)?

<u>Topic</u>	<u>Classroom</u>	<u>SelfStudy</u>	<u>Video</u>	<u>On-the-Job</u>
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____
_____	_____	_____	_____	_____

10. Are there any other comments you would like to make concerning your interests in training?

Participant Profile

PARTICIPANT PROFILE

Please complete the information below about your experience to help us design the course to better meet your needs. Your individual response will be kept confidential.

Name _____

Current Position (Title, Agency, City) _____

Program Area

☐ Inspections ☐ Permits ☐ Enforcement

Number of Years in This Position

☐ Less than 1 year ☐ 1 to 3 years ☐ More than 3 years

Other Experience (if less than 3 years in current position) _____

Education

☐ High School
☐ Technical/Vocational School
☐ College/University (Degree, specialization _____)
☐ Other _____

Approximately how many inspections have you participated in?

During your lifetime:

☐ None
☐ Fewer than 5
☐ 5 to 20
☐ 20 or more

Last year:

☐ None
☐ Fewer than 5
☐ 5 to 20
☐ 20 or more

Approximately how many inspections have you conducted solo or as team leader?

During your lifetime:

☐ None
☐ Fewer than 5
☐ 5 to 20
☐ 20 or more

Last year:

☐ None
☐ Fewer than 5
☐ 5 to 20
☐ 20 or more

How many of your inspections have led to cases?

☐ None

☐ Fewer than 5

☐ 5 or more

How many of your inspections have gone to court?

☐ None

☐ Fewer than 5

☐ 5 or more

What training courses have you attended to prepare you for conducting inspections, preparing reports, and performing related duties? (Check all that you have attended, specify provider of course and approximate length.)

Course

Provider/Length

☐ Orientation

☐ Basic Health and Safety

☐ Basic Inspection Techniques

☐ Report Writing

☐ Basic Sampling, Monitoring, Control Equipment

☐ Complaint Response Procedures

☐ Case Development

☐ Advanced Inspection

☐

☐

☐

Please describe any self-study or on-the-job training you have received. _____

What types of training are you most interested in receiving in the future? _____

What is your main purpose or objective for taking this course? _____

Section B

Staff Development Plans

Table of Contents

Staff Development Plan Resources

Overview of Staff Development Plans Page B1

STAPPA/ALAPCO Training Curriculum Page B5

This plan includes lists of training topics (and providers of this training in some cases) for 8 job categories: program administration/program management, secretarial, administrative enforcement, civil (court) enforcement, management information systems, meteorology, air modeling, ambient monitoring, air toxics, and air permitting.

Training Support to Career Ladders (TNRCC) Page B51

The Texas Natural Resource Conservation Commission has undertaken a major effort to develop career ladders that include skills inventories and training needs analyses, with identification of applicable courses and course providers where available. Gaps are identified as areas in which the Technical Training Academy might need to develop a course. TNRCC has developed 15 career ladders to date.

California Air Resources Board Health, Safety, and Training Checklist Page B263

This concise checklist provides new employees in the Compliance Division with a list of requirements they must fulfill.

Pennsylvania Long-Term Training Plan Page B271

This plan provides guidelines for new employees, technical training, supervisory training, career development, and secretarial training. It includes central office and regional office employees. It lists course requirements for each division, including Compliance and Enforcement, Air Resource Management, Air Quality Monitoring, Source Testing and Monitoring, Permits, and Regional Offices. It then provides training plans for regional office entry level positions (environmental trainee, air pollution control engineer I, and environmental chemist I) and central office entry level positions by division (environmental trainee, air pollution control engineer I, environmental chemist I, air pollution meteorologist I, and air monitoring equipment specialist). These plans include skill and knowledge objectives, on-the-job training, in-service training, and outside training courses.

Hillsborough County (Florida) Training Plan Page B371

This plan lists training required or desired, resources permitting, for 23 functions, including in-house training, informal training, and formal training. The plan includes the following positions: director/air management division, executive secretary, senior secretary, enforcement and operational support supervisor, enforcement specialist,

operational support specialist, assistant director/air engineering department, air toxics engineer, asbestos inspector, air permit specialist, air permit engineer, air compliance specialist, air compliance engineer, assistant director/technical air operations department, field investigation/mobile source control supervisor, mobile source control/transportation specialist, field investigation qualification, data handling/data quality control technician, noise pollution control specialist, chief/air monitoring section, air monitoring field operations supervisor, and continuous monitoring/electronic technician.

Air Pollution Training Institute Curriculum Guide Page B439

APTI's curriculum guide provides a logical progression of specific courses for several functional areas: engineering and enforcement, sampling and analysis, meteorology and modeling, air quality management, mobile sources, hazardous wastes, and air toxics.

Staff Development Plans

Importance of Staff Development Plans

Staff development plans, which we are using as a broad term to encompass training plans and career ladders as well, are an important management tool for state and local agencies. These plans represent a long-term commitment on the part of management and the employee to a program of training and other activities that will assist the employee in obtaining the skills and knowledge needed to perform current duties and will also prepare the individual for a future in the program.

There is a continuing need for staff development in state and local agencies, as new staff are hired, staff are transferred from other programs, regulations change, and new programs are created. Some staff development needs can be predicted, based on the requirements of a position; others arise as changes occur.

Staff development can include formal training, through classroom courses, self-study, satellite courses, and computer-based courses; attending professional meetings; and on-the-job training and mentoring. At each stage of an employee's career, the appropriate mix of staff development resources might be different.

Two Types of Staff Development Plans

There are two broad types of staff development plans: "generic" plans for specific jobs, positions, or duties and individual plans for each employee. These two types of plans are complementary, in that it is much easier to plan for individual employee development if there is a generic plan that can serve as a reference.

Tools for Trainers has gathered generic plans from several state and local agencies. Most of these plans identify specific courses, often identifying the suggested provider as well, that should be completed by employees in specific positions. The approach developed by the Texas Natural Resource Conservation Commission takes the extra step of explicitly defining skills required for each position and then identifying courses that are designed to address these skill areas.

Preparing Staff Development Plans

Staff development and staff development planning are *processes*; staff development plans are living documents. The planning process is a collaboration between the supervisor and the employee that can include the following steps:

- ◆ Assessment of the employee's immediate needs for the job at hand (current skills and knowledge compared to skills and knowledge needed for the position)— if your agency has a generic staff development or training plan for the position, this assessment is much easier since the required skills and knowledge (or required course prerequisites) will be described.

- ◆ Identification of potential resources to meet the needs identified.
- ◆ Development of a continuing plan for updating the employee's skills and knowledge and expanding skills and knowledge in new areas.

Generic staff development plans and individual staff development plans should be updated frequently to reflect the changing environment in which agency staff work. New regulations, new technology, new industry moving into the state, and other factors can indicate the need for changes. Information from needs assessments can be used to update the plan and evaluation of training courses can be used to update provider suggestions in the plan.

**Training Support Process
for
Career Ladders**

Training Support Process for Career Ladders (Continued)

Job Analysis
(Training Needs
Assessment)

Stakeholders

Deputy Executive Director
Deputy Director
Division Director
Section Manager
Subject Matter Experts
Training Academy
Staffing and Classification Section
Compensation and Benefits Section
Budget and Planning Division
Strategic Planning and Appropriations Section

Tasks

Assist with development of Knowledge and Skill Requirements (KSR)
Identify sources for supporting topics for each KSR.
Identify training requirements.
Assist in prioritizing training requirements

Deliverables

Job Specification for each classification level
Training Requirements
 Training Topic Worksheets
 Training Topics Currently Available From Vendors
 Training Topics Currently Available From the Training Academy
 Training Topics To Be Developed By the Training Academy
 Training Requirements Listing
 Prioritized Listing of Training Requirements
 Where Do We Go From Here?

Training Support Process for Career Ladders (Continued)

Stakeholders

Division Director
Section Manager
Subject Matter Experts
Training Academy
External Vendors
Budget and Planning Division
Grants and Contracts Management Division
Financial Administration Division
Legal Division

Tasks

- Obtain consolidated, prioritized training requirements listing from division director.
- Review on-the-shelf training topics.
 - Validate goodness of fit of on-the-shelf training with identified training requirements.
 - Modify on-the-shelf training to meet training requirements.
- Research data regarding topics to be developed:
 - Identify possible external and internal sources for design and development of training materials.
- Conduct make or buy analysis:
 - Technical complexity of subject matter
 - Agency-unique versus generic training content
 - Availability of subject matter experts
 - Anticipated demand for the training
 - Costs (direct and indirect)
 - Budget
 - Time
 - Expertise/Experience/Reputation
 - Quality
 - Target Audience
 - Agency History and Culture

- Work with division directors, program staff, and budgeting staff to identify sources of funding.
- Develop contract package to support outsourcing of design, development, and/or delivery, as appropriate.
- Complete the design phase for training to be completed internally:
 - Construct learning objectives (to include condition, behavior, and standard) for each KSR (coordinate with subject matter experts).
 - Construct evaluation items for each objective.
 - Determine the optimal training strategy.
 - Determine the logical sequence for training.

Deliverables

Listing of courses to be outsourced for design, development, and/or delivery
 Contract packages for the design, development, and/or delivery of courses
 Listing of courses to be developed by agency staff
 Learning objectives for each KSR
 Evaluation items for each objective
 Training strategy for each course module
 Sequence of course modules and topics

Training Support Process for Career Ladders (Continued)

Stakeholders

Division Director
Section Manager
Subject Matter Experts
Training Academy
External Vendors
Budget and Planning Division
Grants and Contracts Management Division
Financial Administration Division
Legal Division

Tasks

- For development of training materials by external vendors:
 - Host a meeting with representatives of the external vendor and the subject matter experts to:
 - Clarify contract issues
 - Review target dates
 - Establish support requirements
 - Validate roles and responsibilities
 - Share information regarding points of contact (such as phone numbers, Internet addresses, and fax numbers)
 - Monitor the vendor's progress in meeting the target timetable
 - Review draft products for overall quality and instructional design soundness
 - Coordinate content review of draft products by subject matter experts.
 - Ensure timely payment of the vendor.
- For development of training materials by agency staff:
 - Select the appropriate delivery method(s).
 - Develop course documentation (in conjunction with subject matter experts):
 - Course Outline
 - Class Schedule
 - Facilitator Guide (to include Lesson Plans and audiovisual aids)

- Participant Manual
- Pre-test/Post-test, as applicable

Deliverables

Course Outline
Class Schedule
Facilitator Guide (to include Lesson Plans and audiovisual aids)
Participant Manual
Pre-test/Post-test, as applicable

Training Support Process for Career Ladders (Continued)

Stakeholders

Division Director
Section Manager
Subject Matter Experts
Training Academy
Field Operations Division (for training deliveries to Regional Offices)
Regional Office Managers, as appropriate
Regional Office Liaisons (TA and Legal, as appropriate)
Class Participants

Tasks

- For all training deliveries
 - Reserve the training room.
 - Construct a course description and a class announcement.
 - Coordinate with TA Registration Team for data entry into software system
 - Reproduce course materials.
 - Coordinate construction of class signs.
 - Set up the classroom
 - Post proctor/instructor data on the whiteboard (Name, Phone#, and Cube#)
 - Circulate the class roster for signature
 - Administer class evaluations.
 - Distribute course completion certificates.
 - Ensure accomplishment of housekeeping activities.
 - Return the room to the "standard configuration."
 - Return equipment to the storage location
 - Lock cabinets and doors.
 - Pass signed class rosters to the Registration Team
 - Construct a project summary and forward copies to the appropriate team leader and the TA Section Manager

- For delivery of training by external vendors or other agency staff:
 - Coordinate requirements for audiovisual equipment.
 - Coordinate reproduction of handouts.
 - Introduce the speaker to class participants.
 - Monitor the delivery of training.
 - Provide the speaker a copy of class evaluations.
 - Ensure the timely payment of the vendor.
- For delivery of training by Training Academy staff:
 - Reserve audiovisual equipment.
 - Reproduce handouts.
 - Deliver training.

Deliverables

Training for agency staff
Completed course evaluations

Training Support Process for Career Ladders (Continued)

Stakeholders

Division Directors
Section Managers
Subject Matter Experts
Training Academy
Field Operations Division (for training deliveries to Regional Offices)
Regional Office Managers, as appropriate
Regional Office Liaisons (TA and Legal, as appropriate)
Class Participants
Participant Supervisors
External Vendor

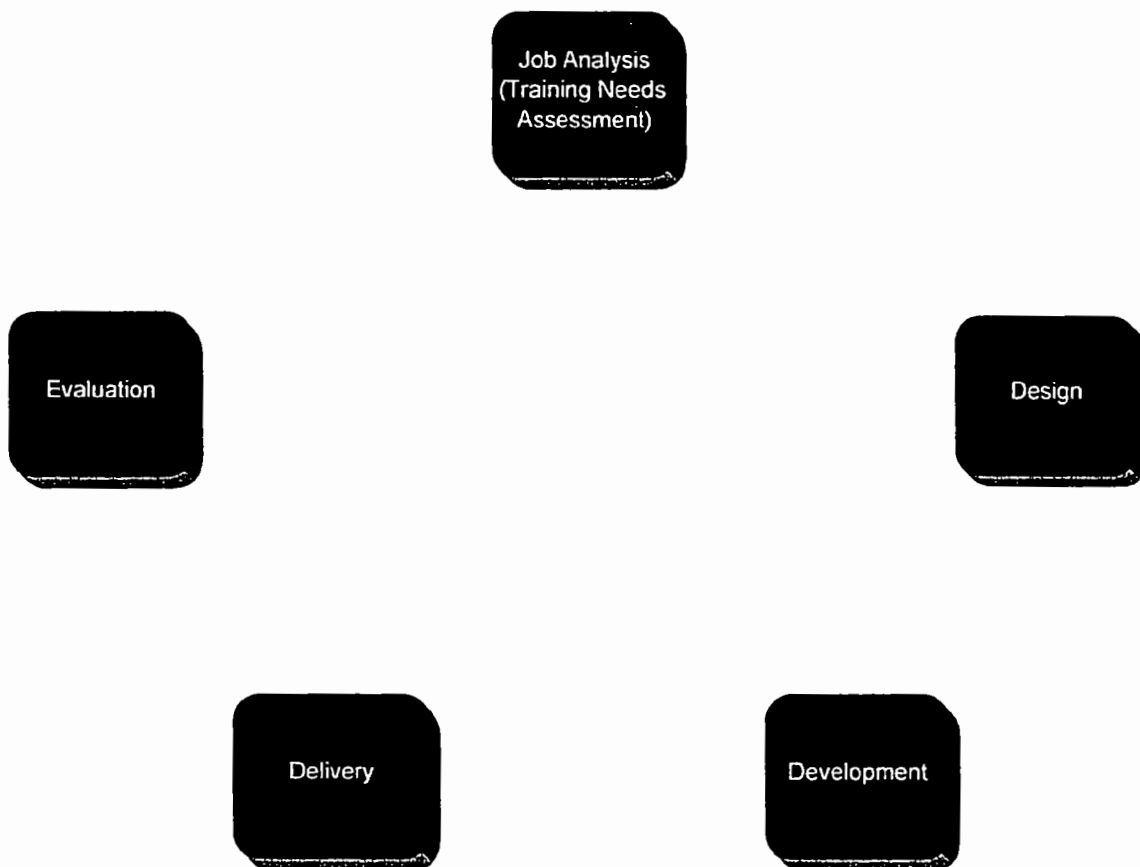

Tasks

- Review class evaluations to identify trends and/or course revisions.
- Provide feedback to external vendors regarding revisions to course materials or presentation skills.
- Revise course materials or presentation skills, as appropriate, for training delivered by agency staff.

Deliverables

Course revisions
Summary of class evaluations for management review

Training Support Process for Career Ladders

Training Academy

Environmental Investigator

ENVIRONMENTAL SPECIALIST II (ENVIRONMENTAL INVESTIGATOR I)

**CLASS NO. 2681A
PAY GROUP B5**

GENERAL DESCRIPTION

Performs work at the trainee level in the fields of air, water, or waste pollution. Work is performed under close supervision with minimal latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Prepares draft correspondence.
Operates technical equipment and various detection instruments.
Makes preliminary evaluations of samples and data obtained during inspections.
Assists in routine inspections, surveys, and complaint investigations, and prepares technical reports and practical recommendations regarding findings.
Assists in collecting samples and conducting field studies.
Assists in the preparation of environmental seminars and educational presentations.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

Ninety semester hours from an accredited college or university.

One year of full-time experience in the field of environmental activities which are directly related to the examples of work performed may be substituted for each year (30 semester hours) of the required education.

OR

Three years of full-time TNRCC experience in an administrative capacity* or in clerical work in environmental investigations or similar program area.

*Administrative capacity is work where primary duties consist of performing administrative tasks of an office, excluding work such as clerical, secretarial, sales, equipment operations, and manual labor.

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of the operation and care of scientific equipment and of scientific principles and techniques.

Ability to read and understand state and federal laws and regulations; to communicate effectively; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, spreadsheet, and database computer programs.

**TNRCC
JDM 97-5/SEPTEMBER 1997**

ENVIRONMENTAL QUALITY SPECIALIST III (ENVIRONMENTAL INVESTIGATOR II)

**CLASS NO. 4062A
PAY GROUP 15**

GENERAL DESCRIPTION

This is the entry point of the Environmental Investigator career ladder. Performs routine work in the fields of air, water, or waste pollution. Work is performed under moderate supervision with limited latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Conducts technical inspections and surveys, and evaluate the results.
Conducts routine follow-up inspections.
Prepares technical papers on studies of this type of work.
Prepares technical reports and recommendations regarding findings.
Prepares draft correspondence.
Distributes educational materials concerning the program.
Operates and performs minor maintenance of technical equipment and various detection instruments.
Assists in the collection and analysis of environmental samples.
Assists in the preparation of educational presentations as required.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year (30 semester hours) of the required education.

OR

Two years of full-time TNRCC experience as an Environmental Investigator I.

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of applicable local, state and federal ordinances and laws; of environmental protection practices and techniques; of scientific principles and techniques; and of the operation and care of scientific detection equipment.
Ability to communicate effectively; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, spreadsheet, and database computer programs.

**TNRCC
JDM 96-8/NOVEMBER 1996**

ENVIRONMENTAL QUALITY SPECIALIST IV (ENVIRONMENTAL INVESTIGATOR III)

CLASS NO. 4063A

PAY GROUP 17

GENERAL DESCRIPTION

Performs moderately complex technical work in the fields of air, water or waste pollution. Work is performed under general supervision with moderate latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Conducts and leads technical inspections, surveys, follow-up investigations and studies, and prepares reports.

Conducts environmental monitoring and may lead a team conducting such monitoring; prepares technical papers on studies of this type of work.

Participates in special projects and may direct the efforts of other environmental investigators in such projects.

Reviews routine plans and draft permits.

Operates, maintains, and calibrates technical equipment used in the field of environmental pollution.

Provides limited technical assistance to the public, regulated community and other interested groups.

Provides advice to interested parties regarding the application of appropriate regulations.

Assists in the training of environmental investigators.

May conduct educational presentations on general environmental subjects.

Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university plus one year of full-time experience in environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year (30 semester hours) of the required education.

OR

One year of full-time TNRCC experience as an Environmental Investigator II.

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of applicable local, state and federal ordinances and laws; of environmental principles in the field of industrial and municipal solid waste management, air pollution, water pollution or water resources; and of environmental monitoring techniques and analysis.

Ability to operate and maintain complex technical equipment and various detection instruments; to communicate effectively; to supervise and plan group efforts in environmental activities; to review reports and studies for technical correctness; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, spreadsheet, and database computer programs.

TNRCC
JDM 96-8/NOVEMBER 1996

ENVIRONMENTAL QUALITY SPECIALIST V (ENVIRONMENTAL INVESTIGATOR IV)

CLASS NO. 4064A

PAY GROUP 19

GENERAL DESCRIPTION

This is the top of the Environmental Investigator career ladder. Performs or manages complex technical work in the fields of air, water, or waste pollution. Work involves performing or managing the work of others in complex environmental investigations, inspections, surveys, studies, or other environmental projects; writing and reviewing highly technical reports; providing advice and complex technical assistance; providing scientific or technical public education programs; interpreting rules, regulations, and environmental policies. Reviews complex plans and draft permits, interprets scientific data and makes appropriate recommendations. Work is performed under minimal supervision with considerable latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Performs or manages complex investigations, inspections, surveys, follow-up investigations, studies, and reviews regarding facility compliance or permit activities.

Plans and manages projects and the work of other employees on those projects in air, water, and waste pollution activities.

Prepares technical articles and papers for presentation to professional groups or reviews reports from environmental investigators.

Reviews collected data, maintains appropriate files, prepares reports, and makes recommendations as required.

Reviews complex plans and draft permits.

Interprets statutes, regulations, and policy for applicability to individual situations.

Advises and provides complex technical assistance to representatives of the public, the regulated community, and professional groups.

Analyzes and evaluates special conditions and situations involving environmental problems.

Operates, maintains, and calibrates technical equipment used in the field of environmental pollution.

Assists in, or trains other environmental investigators.

May be responsible for activities relating to the monitoring of environmental contamination and evaluation of data.

May use or supervise the use of various instruments in sampling, collecting, and analyzing information and data.

May interact with federal, state or local governments, media, regulated community, and the general public.

May prepare scientific, technical, or other publications related to environmental topics.

Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university plus three years of full-time experience in the field of environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities which are directly related to the examples of work performed may be substituted for each year (30 semester hours) of the required education.

OR

A master's degree from an accredited college or university with a major in engineering, basic science, math, environmental science, computer science or a related field, plus two years of full-time experience in the field of environmental activities directly related to the examples of work performed.

OR

Two years of full-time TNRCC experience as an Environmental Investigator III.

TNRCC
JDM 96-8/NOVEMBER 1996

ENVIRONMENTAL QUALITY SPECIALIST V (ENVIRONMENTAL INVESTIGATOR IV)

CLASS NO. 4064A

PAY GROUP 19

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of, and ability to, interpret applicable local, state, and federal laws, regulations, and policies.

Knowledge of the organization and structure of environmental protection organizations; of environmental and/or engineering principles in the field of industrial and municipal solid waste management, air pollution, water pollution or water resources; and of environmental monitoring techniques and analysis.

Ability to prepare and present technical papers and studies to professional groups; to manage and plan group efforts in environmental activities; to operate and maintain complex technical equipment and various detection instruments; to communicate effectively under stressful conditions with the public, regulated community, and professional groups; to review reports and studies for technical correctness; to exercise good judgment; to make technically sound decisions; to function as a member of a team; to use word processing, spreadsheet, and database computer programs; and to plan and develop policies and procedures.

ENVIRONMENTAL QUALITY SPECIALIST VI (ENVIRONMENTAL INVESTIGATOR V)

CLASS NO. 4065A

PAY GROUP 21

GENERAL DESCRIPTION

Performs highly complex technical work at a professional level in the fields of air, water, or waste pollution. Work involves conducting, organizing, managing, or coordinating programs and activities in highly complex environmental investigations or projects; initiating special studies; serving as a technical resource; conducting public meetings; reviewing and making recommendations regarding complex permit applications; providing complex technical assistance and information to the public, the regulated community, other governmental agencies, public officials, and the news media; determining compliance with schedules, orders, or permit requirements; planning or assigning work and/or directly supervising other employees. Ensures that all work assignments are carried out in accordance with applicable rules, regulations, policies, and/or standards of good scientific and/or engineering practices. Work is performed under direction with extensive latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Performs or manages highly complex investigations and reviews regarding facility compliance or permit activities.

Organizes, assigns, supervises, and coordinates programs, projects, and activities in the planning and execution of environmental projects.

Serves as a mentor or trainer to other environmental investigators.

Evaluates data for adherence to specified requirements in applicable laws and regulations and reports from environmental investigators.

Interprets statutes, regulations, and policy for applicability to individual situations.

Reviews collected data, maintains appropriate files, prepares reports, and makes recommendations as required.

Reviews and approves staff recommendations regarding highly complex plans and draft permits. Edits reports and special publications; aids in the preparation of program budget requests.

Advises and provides highly complex technical assistance to representatives of the public, the regulated community, and professional groups.

Interacts with federal, state, or local governments, media, regulated community, and the general public.

May aid in the preparation of program budget requests.

May plan, assign, and/or supervise the work of other employees, including the direct supervision of staff through performance evaluations.

May be responsible for or supervise activities relating to the monitoring of environmental contamination and evaluation of data.

May use or supervise use of various instruments in sampling, collecting, and analyzing information and data.

May initiate or recommend special studies, reduce data to specific findings, and recommend resolutions.

May conduct public meetings and group discussions relative to environmental problems.

May prepare educational materials including training and operational manuals used in implementing a specific environmental program.

May prepare scientific, technical, or other publications related to environmental topics.

May review and prepare recommendations regarding applications for complex permits for air, water, or waste projects.

May assist in the formulation of rules, regulations and policies.

Performs related duties as assigned.

MINIMUM QUALIFICATIONS

Two years of full-time TNRCC experience as an Environmental Investigator IV*.

*Progression to the Environmental Investigator V (pay group 21) is strictly tied to the business needs of the agency.

KNOWLEDGE, SKILLS, AND ABILITIES

TNRCC
JDM 96-8/NOVEMBER 1996

ENVIRONMENTAL QUALITY SPECIALIST VI (ENVIRONMENTAL INVESTIGATOR V)

CLASS NO. 4065A

PAY GROUP 21

Knowledge of environmental and/or engineering principles in the fields of industrial and municipal solid waste management, air pollution, water pollution, or water resources and of environmental monitoring techniques and analysis; and in the application of personnel management principles.

Ability to interpret applicable local, state, and federal laws, regulations, and policies to individual situations; to interact with federal, state, or local governments, media, the regulated community, and the general public and provide advice on highly complex technical issues to representatives of the public, the regulated community, and professional groups; to prepare and present technical papers and studies to professional groups; to supervise and plan group efforts in environmental activities; to operate and maintain complex technical equipment and various detection instruments; to communicate effectively under stressful conditions with the public, the regulated community, and professional groups; to review reports and studies for technical correctness; to exercise good judgment; to make technically sound decisions; to function as a member of a team; to use word processing, spreadsheet, and database computer programs; to plan and develop policies and procedures; and to train personnel on highly complex technical aspects of the job.

**Training Topics Worksheet
for
(Environmental Investigator I)**

Knowledge or Skill	Supporting Topic(s)	Source for Satisfying Topic*
1. Knowledge of the operation and care of scientific equipment: a. Calibrate equipment. b. Identify faulty equipment. c. Follow referral procedures for maintenance. d. Use equipment according to established standards.		Exp, OJT, TA
2. Knowledge of scientific principles and techniques: a. Use proper classic scientific methods. b. Perform calculations correctly. c. Perform evidence collection according to standardized procedures (sampling). d. Prepare and maintain field notebook. e. Identify proper equipment or method for given task. f. Make detailed field observations.		Exp, OJT
3. Skill in reading and understanding state and federal laws and regulations: a. Distinguish structure and format of rules and regulations. b. Distinguish between state, federal, and permit applicable rules and regulations.		Exp, OJT

*	Ed	=	Education (Academic)	OJT	=	On-the-Job Training
	Exp	=	Experience (Tenure)	PR	=	Professional Requirement (Continuing)
	MQ	=	Minimum Qualification	TA	=	Training Academy

<p>4. Skill in communicating effectively:</p> <ul style="list-style-type: none"> a. Introduce oneself correctly to inspection site staff. b. Determine when and who to refer information requests made by the: <ul style="list-style-type: none"> i. Regulated community. ii. Public. iii. Staff. c. Attend meetings with regulated community and TNRCC staff and observe interactions. 		Exp, OJT, TA
<p>5. Skill in exercising good judgement:</p> <ul style="list-style-type: none"> a. Follow personal safety and protection guidelines. b. Use state equipment properly. c. Follow basic right of entry procedures including what waivers or other documents not to sign. d. Determine when and who to refer information requests made by the: <ul style="list-style-type: none"> i. Regulated community. ii. Public. iii. Staff. 		Exp, OJT, TA
<p>6. Skill in making technically sound decisions:</p> <ul style="list-style-type: none"> a. Use equipment according to guidance. b. Follow TNRCC policies and procedures. c. Determine when and who to refer issues following established guidelines. d. Follow correct evidence collection procedures. e. Determine applicable regulations. 		Exp, TA

<p>7. Skill in functioning as a member of a team:</p> <p>a. Identify role within all levels of the agency.</p> <p>b. Contribute ideas and solutions when possible.</p>		Exp, TA
<p>8. Skill in using word processing, spreadsheet, and database computer programs:</p> <p>a. Use baselined software.</p>		Exp, TA

Environmental Permit Specialist and Assistant

ENVIRONMENTAL PERMIT ASSISTANT II (Engineering Assistant II)

**Class No. ____
Group 15**

GENERAL DESCRIPTION

Performs basic environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under a high level of supervision with moderate latitude for the use of initiative and independent judgement.

Ability to communicate technical information to a technical audience.
Ability to evaluate or analyze technical data and make recommendations
Knowledge and skill in the use of various scientific instruments and computer software programs.
Ability to effectively communicate in writing.

EXAMPLES OF WORK PERFORMED

Reviews permit applications and prepares draft permit packages to comply with state and federal laws and regulations and good engineering judgement.
Performs engineering calculations
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
Provides basic regulatory and technical information to the regulated community.
Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.
May work with computer models.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience

CAREER LADDER PROGRESSION

This is the entry point to the TNRCC career ladder for Environmental Permit Specialists.

KNOWLEDGE, SKILLS, AND ABILITIES

ENVIRONMENTAL PERMIT ASSISTANT III (Engineering Assistant III)

**Class No. ____
Group 16**

GENERAL DESCRIPTION

Performs basic environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under a high level of supervision with moderate latitude for the use of initiative and independent judgement.

EXAMPLES OF WORK PERFORMED

Reviews permit applications and prepares draft permit packages to comply with state and federal laws and regulations and good engineering judgement.
Performs technical engineering work.
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
May assist in the development of guidance documents.
Provides basic regulatory and technical information to the regulated community.
May provide testimony in contested case hearings.
May assist in policy and rule development activities.
Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.
May work with technical computer models.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field, plus one (1) year of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer

with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of one year.

CAREER LADDER PROGRESSION

One year of full-time TNRCC experience as an Environmental Permit Assistant II.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to basic permitting issues.
Ability to communicate technical information to a technical audience.
Ability to evaluate or analyze technical data and make recommendations.
Knowledge and skill in the use of various scientific instruments and computer software programs.
Ability to effectively communicate in writing.
Knowledge of selected local, state, and federal environmental laws, regulations, and policies.
Ability to provide a basic analysis of permit applications.
Ability to operate routine computer applications used by the permitting division.

ENVIRONMENTAL PERMIT SPECIALIST I (Engineering Specialist I)

**Class No. ____
Group 17**

GENERAL DESCRIPTION

Performs routine environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under general supervision with moderate latitude for the use of initiative and independent judgement.

EXAMPLES OF WORK PERFORMED

Reviews moderately complex permit applications and prepares draft permit packages to comply with state and federal laws and regulations and good engineering judgement.
Performs engineering calculations.
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
Develops guidance documents.
May provide public outreach efforts, representing the Agency at seminars and other public forums.
Provides technical advice to, and interacts with, federal, state, and local governments, industry representatives, the general public, legislature, and other programs of the agency.
May provide testimony in contested case hearings.
May assist in policy and rule development activities.
Reviews data, applications, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.
May work with computer models.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field, plus two (2) years of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of two years.

CAREER LADDER PROGRESSION

One year of full-time TNRCC experience as an Environmental Permit Assistant III.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to moderate to routine permitting issues.
Knowledge of applicable local, state, and federal environmental laws, regulations, and policies.
Ability to provide a thorough analysis of permit applications.
Ability to complete multiple projects within the guidelines of the permitting division.
Knowledge of the agency's operations and organization, and interaction of divisions.
Knowledge and skill in the computer applications used by the permitting division.
Ability to communicate technical information effectively to a variety of audiences.
Knowledge of field and laboratory studies and protocols.
General knowledge of the application of environmental controls.
Ability to prepare concise reports and technical papers.

ENVIRONMENTAL PERMIT SPECIALIST II (Engineering Specialist II)

**Class No. ____
Group 18**

GENERAL DESCRIPTION

Performs routine to moderately complex environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves planning, coordinating, and performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under general to limited supervision with moderate latitude for the use of initiative and independent judgement.

EXAMPLES OF WORK PERFORMED

Reviews moderately complex permit applications and prepares draft permit packages to comply with state and federal laws and regulations and good engineering judgement.
Performs engineering calculations.
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
Develops guidance documents.
May provide public outreach efforts, representing the Agency at seminars and other public forums.
Provides technical advice to, and interacts with, federal, state, and local governments, industry representatives, the general public, legislature, and other programs of the agency.
May provide testimony in contested case hearings.
May assist in policy and rule development activities.
Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.
Uses and evaluates the results of computer models.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field, plus three (3) years of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of two years.

CAREER LADDER PROGRESSION

One year of full-time TNRCC experience as an Environmental Permit Specialist I.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to moderate to complex permitting issues.
Knowledge of applicable local, state, and federal environmental laws, regulations, and policies.
Ability to provide a thorough analysis of permit applications.
Ability to complete multiple projects within the guidelines of the permitting division.
Knowledge of the agency's operations and organization, and interaction of divisions.
Knowledge and skill in the computer applications used by the permitting division.
Ability to communicate technical information effectively to a variety of audiences.
Knowledge of field and laboratory studies and protocols.
Knowledge and skill in the application of environmental controls.
Ability to prepare concise reports and technical papers.

ENVIRONMENTAL PERMIT SPECIALIST III (Engineering Specialist III)

**Class No. ____
Group 19**

GENERAL DESCRIPTION

Performs moderately complex environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves planning, coordinating, leading, and performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under limited supervision with considerable latitude for the use of initiative and independent judgement.

EXAMPLES OF WORK PERFORMED

Reviews moderately complex permit applications and prepares draft permit packages to comply with state and federal laws and regulations and good engineering judgement.
Performs engineering calculations and interprets results as to their impact on the permit and the environment.
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
Develops guidance documents and may prepare scientific, technical, or other publications related to air/water pollution control, which assist the regulated community and/or the general public.
Provides public outreach efforts, representing the Agency at seminars and other public forums.
Provides technical advice to, and interacts with, federal, state, and local governments, industry representatives, the general public, legislature, and other programs of the agency.
May provide testimony in contested case hearings.
Assists in policy and rule development activities.
Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.
Uses and evaluates the results of computer models.
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering,

physical science, environmental science, or related field, plus four (4) years of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of two years.

CAREER LADDER PROGRESSION

One year of full-time TNRCC experience as an Environmental Permit Specialist II.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to complex permitting programs.
Thorough knowledge of applicable local, state, and federal environmental laws, regulations, and policies.
Ability to provide a thorough analysis of permit applications.
Ability to complete multiple projects within the guidelines of the permitting division.
Knowledge of the agency's operations and organization, and interaction of divisions.
Knowledge and skill in the computer applications used by the permitting division.
Ability to communicate technical information effectively to a variety of audiences.
Understanding and the ability to interpret field and laboratory studies and protocols.
Knowledge and skill in the application of environmental controls.
Ability to prepare concise reports and technical papers.

ENVIRONMENTAL PERMIT SPECIALIST IV (Engineering Specialist IV)

**Class No. ____
Group 20**

GENERAL DESCRIPTION

Performs complex environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves planning, coordinating, leading, and performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial and hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under minimal supervision with considerable latitude for the use of initiative and independent judgement.

EXAMPLES OF WORK PERFORMED

Reviews complex permit applications and prepares highly technical draft permit packages to comply with state and federal laws/regulations and good engineering judgement.

Performs engineering calculations and interprets results as to their impact on the permit and the environment.

Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.

Develops guidance documents and may prepare scientific, technical, or other publications related to air/water pollution control, which assists the regulated community and/or the general public.

Provides public outreach efforts, representing the Agency at seminars and other public forums.

Provides technical advice to, and interacts with, federal, state, and local governments, industry representatives, the general public, legislature, and other programs of the agency.

May provide testimony in contested case hearings.

May plan, review, and/or coach the work of other employees.

Provides expertise during policy and rule development activities and may act as lead in development of policy and rules.

Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate.

May initiate special studies, reduce facts to specific findings and recommend resolutions.

Uses and evaluates results of computer models.

Performs related work as assigned

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field, plus six (6) years of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of two years.

CAREER LADDER PROGRESSION

Two years of full-time TNRCC experience as an Environmental Permit Specialist III. This position is the top of the career ladder progression.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to complex permitting programs.

Thorough knowledge of applicable local, state, and federal environmental laws, regulations, and policies.

Ability to provide a thorough analysis of permit applications.

Ability to complete multiple projects within the guidelines of the permitting division.

Thorough knowledge of the agency's operations and organization, and interaction of divisions.

General knowledge of multimedia permitting and other agency environmental programs.

Knowledge and skill in the computer applications used by the permitting division.

Ability to plan, review, and/or coach the technical work of others.

Ability to communicate technical information effectively to a variety of audiences.

Understanding and the ability to interpret field and laboratory studies and protocols.

Knowledge and skill in the application of
environmental controls
Ability to prepare concise reports and technical
papers

ENVIRONMENTAL PERMIT SPECIALIST V
(State Classification Title To Be Determined)

Class No. ____
Group 21

GENERAL DESCRIPTION

Performs highly advanced environmental quality and engineering work in one of the Agency's environmental permitting programs. Work involves planning, coordinating, leading, and performing permitting activities related to pollution control including wastewater/sludge permitting, air quality permitting, industrial & hazardous waste permitting, and municipal solid waste permitting. Ensures that all assignments are performed according to standards of good scientific and engineering practices. Works under direction with extensive latitude for the use of initiative and independent judgement. This position is designed for non-supervisory staff

EXAMPLES OF WORK PERFORMED

Reviews complex permit applications and prepares highly technical draft permit packages to comply with state and federal laws/regulations and good engineering judgement.
Performs engineering calculations and interprets results as to their impact on the permit and the environment
Reviews technical reports associated with permitting activities at the Agency and provides recommendations as appropriate.
Develops guidance documents and may prepare scientific, technical, or other publications related to air/water pollution control, which assists the regulated community and/or the general public
Provides a variety of public outreach efforts, including speeches and other public presentations, requiring thorough knowledge of permitting program.
Provides detailed technical advice to, and interacts with, federal, state, and local governments, industry representatives, the general public, legislature, and other programs of the agency
May provide testimony in highly contested case hearings, may act as backup for less experienced staff.
Provides expertise during policy and rule development activities and may act as lead in development of policy and rules
Plans, develops, and/or leads the activities of an environmental permitting initiative.
May plan, review, and/or coach the work of other

employees
Reviews data, applications, calculations, and reports, maintains appropriate files, prepares reports, and makes recommendations as appropriate
Initiates special studies, reduces facts to specific findings and recommends resolutions.
Uses and evaluates results of computer models
Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from a recognized institution of higher education with a major in engineering, physical science, environmental science, or related field, plus eight (8) years of full-time experience in performing engineering, technical, or related assignment in environmental permitting or control activities.

Passing the Fundamentals of Engineering Examination may be substituted for six months of experience. Registration as a Professional Engineer with a valid Texas License may be substituted for one year of experience. A masters degree or a doctoral degree from a recognized institution of higher education in the specified fields may each be substituted for one year of experience with a maximum substitution of two years

CAREER LADDER PROGRESSION

This position is a competitive position on the career path.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to apply engineering techniques and concepts to complex permitting programs
Thorough knowledge of applicable local, state, and federal environmental laws, regulations, and policies.
Ability to provide a thorough analysis of complex technical permit applications
Ability to complete multiple complex projects within the guidelines of the permitting division
Thorough knowledge of the agency's operations and organization, and interaction of divisions
Good understanding of multimedia permitting and other agency environmental programs
Knowledge and skill in the computer applications used by the permitting division.

Ability to plan, review, and/or coach the technical work of others
Ability to effectively represent the agency regarding complex and difficult technical issues.
Ability to communicate technical information effectively to a variety of audiences.
In-depth understanding and the ability to interpret field and laboratory studies and protocols
Understanding of the application of multimedia environmental controls
Ability to prepare concise reports and technical papers

Engineering Specialist

ENGINEERING SPECIALIST I

CLASS NO. 2158A
PAY GROUP 18

GENERAL DESCRIPTION

Performs engineering work requiring judgment in the evaluation, review, selection, adaptation, and modification of standards, techniques, procedures, and criteria. Any work requiring certification under the provisions of the Texas Engineering Practice Act as amended, Article 3271a, Vernon's Annotated Texas Statutes, must be certified by the supervising registered professional engineer. Work may be performed in an office, laboratory, or field environment.

Work is performed under moderate supervision of a registered professional engineer, with latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Plans, schedules, coordinates or conducts routine engineering work for projects as assigned. Work may include:

- technical review of permit or bond applications
- compilation of point source emissions inventories
- development and assessment of pollution control strategies
- review of site assessments and/or corrective action reports
- performance of compliance determinations
- collection and analysis of data
- development of simulation models
- review or preparation of engineering plans and specifications, evaluations, hardware/software specifications, or reports
- performance of site or construction inspection
- design, development, building, and integration of hardware and software systems
- support of regulations development and contracts management
- preparation of correspondence and technical reports
- interaction with local, state, and federal agencies, regulated community, and general public.

Assist in the training of less experienced employees.
May serve as a technical task or project manager.

MINIMUM QUALIFICATIONS

A bachelor's degree in engineering from an accredited college or university, plus three years of satisfactory full-time engineering experience;

AND

Must have passed the Fundamentals of Engineering Exam (E.I.T. certification), or have had this exam waived by the Board of Registration for Professional Engineers.

A master's degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one year of experience.

A Ph.D. degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one additional year of experience.

One year of satisfactory experience as an Engineering Assistant IV with E.I.T. certification will qualify for promotion to Engineering Specialist I.

KNOWLEDGE, SKILLS, AND ABILITIES

Working knowledge of, and skill in applying: engineering theory, techniques, procedures, and higher mathematics.

Working knowledge of principles and practices of engineering as applied to environmental, health, and safety issues.

Working knowledge of applicable laws, regulations, and policies.

Working knowledge of precedents in the specialty area and related specialties.

Proven ability to: organize and plan workload; deal tactfully with the public; express ideas clearly and concisely; address groups effectively; and train others

Ability to prepare technical reports and other appropriate documentation.

TNRCC DRAFT
06/06/97

ENGINEERING SPECIALIST I

**CLASS NO. 2158A
PAY GROUP 18**

Knowledge of computers and application software.

Demonstrated ability to follow policies and procedures.

Ability to effectively represent the agency as an expert witness on matters not requiring registration as a professional engineer.

**TNRCC DRAFT

ENGINEERING SPECIALIST II

CLASS NO. 2160
PAY GROUP 19

GENERAL DESCRIPTION

Performs complex engineering work at a professional level requiring judgment in the evaluation, review, selection, adaptation, and modification of standards, techniques, procedures, and criteria. Any work requiring certification under the provisions of the Texas Engineering Practice Act as amended, Article 3271a, Vernon's Annotated Texas Statutes, must be certified by the supervising registered professional engineer. Work may be performed in an office, laboratory, or field environment.

Work is performed under general supervision of a registered professional engineer, with considerable latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Plans, schedules, coordinates or conducts routine engineering work for projects as assigned. Work may include:

- technical review of permit or bond applications
- compilation of point source emissions inventories
- development and assessment of pollution control strategies
- review of site assessments and/or corrective action reports
- performance of compliance determinations
- collection and analysis of data
- development of simulation models
- review or preparation of engineering plans and specifications, evaluations, hardware/software specifications, or reports
- performance of site or construction inspection
- design, development, building, and integration of complex multitasking, realtime hardware and software systems
- support of regulations development and contracts management
- preparation of correspondence and technical reports
- interaction with local, state, and federal agencies, regulated community, and general public

May assist in coordinating the work of engineering specialists or assistants, and technicians on specific

assignments. Assist in the training of less experienced employees. May serve as a technical task or project manager.

MINIMUM QUALIFICATIONS

A bachelor's degree in engineering from an accredited college or university, plus four years of satisfactory full-time engineering experience;

AND

Must have passed the Fundamentals of Engineering Exam (E.I.T. certification), or have had this exam waived by the Board of Registration for Professional Engineers.

A master's degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one year of experience.

A Ph.D. degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one additional year of experience.

One year of satisfactory experience as an Engineering Specialist I with E.I.T. certification will qualify for promotion to Engineering Specialist II.

KNOWLEDGE, SKILLS, AND ABILITIES

Working knowledge of, and skill in applying: engineering theory, techniques, procedures, and higher mathematics.

Working knowledge of principles and practices of engineering as applied to environmental, health, and safety issues.

Working knowledge of applicable laws, regulations, and policies.

Working knowledge of precedents in the specialty area and related specialties.

Proven ability to organize and plan workload; deal tactfully with the public; express ideas clearly and concisely; address groups effectively; and train others.

Ability to prepare technical reports and other appropriate documentation

ENGINEERING SPECIALIST III

CLASS NO. 2162

PAY GROUP 20

GENERAL DESCRIPTION

Performs highly complex engineering work at a professional level requiring judgment in the evaluation, review, selection, adaptation, and modification of standards, techniques, procedures, and criteria. Any work requiring certification under the provisions of the Texas Engineering Practice Act as amended, Article 3271a, Vernon's Annotated Texas Statutes, must be certified by the supervising registered professional engineer. Work may be performed in an office, laboratory, or field environment.

Work is performed under broad general supervision of a registered professional engineer, with considerable latitude for the use of initiative and independent judgment.

EXAMPLES OF WORK PERFORMED

Plans, schedules, coordinates or conducts detailed engineering work for projects as assigned. This work may include a variety of complex features. Work may include:

- technical review of permit or bond applications
- compilation of point source emissions inventories
- development and assessment of pollution control strategies
- review of site assessments and/or corrective action reports
- performance of compliance determinations
- collection and analysis of data
- development of simulation models
- review or preparation of engineering plans and specifications, evaluations, hardware/software specifications, or reports
- performance of site or construction inspection
- design, development, building, and integration of complex multitasking, realtime hardware and software systems
- support of regulations development and contracts management
- preparation of correspondence and technical reports
- interaction with local, state, and federal agencies, regulated community, and general public.

May assist in supervising or coordinating the work of

engineering specialists or assistants, and technicians on specific assignments. Assist in the training of less experienced employees. May serve as a technical task or project manager.

MINIMUM QUALIFICATIONS

A bachelor's degree in engineering from an accredited college or university, plus five years of satisfactory full-time engineering experience;

AND

Must have passed the Fundamentals of Engineering Exam (E.I.T. certification), or have had this exam waived by the Board of Registration for Professional Engineers

A master's degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one year of experience.

A Ph.D. degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one additional year of experience.

One year of satisfactory experience as an Engineering Specialist II with E.I.T. certification will qualify for promotion to Engineering Specialist III.

KNOWLEDGE, SKILLS, AND ABILITIES

Thorough knowledge of, and skill in applying: engineering theory, techniques, procedures, and higher mathematics.

Thorough knowledge of principles and practices of engineering as applied to environmental, health, and safety issues.

Considerable knowledge of applicable laws, regulations, and policies.

Broad knowledge of precedents in the specialty area and related specialties.

Proven ability to: organize and plan workload; deal tactfully with the public; express ideas clearly and concisely; address groups effectively; and train others.

Proven ability to prepare technical reports and other appropriate documentation

ENGINEERING SPECIALIST III

**CLASS NO. 2162
PAY GROUP 20**

Knowledge of computers and application software.

Demonstrated ability to follow policies and procedures, and ability to plan and develop new policies and procedures as necessary.

Ability to effectively represent the agency as an expert witness on matters not requiring registration as a professional engineer.

ENGINEERING SPECIALIST IV

CLASS NO. 2164
PAY GROUP 21

GENERAL DESCRIPTION

Performs supervisory or highly complex engineering work at a professional level requiring judgment in the evaluation, review, selection, adaptation, and modification of standards, techniques, procedures, and criteria. Any work requiring certification under the provisions of the Texas Engineering Practice Act as amended, Article 3271a, Vernon's Annotated Texas Statutes, must be certified a registered professional engineer.

May represent the agency in legal proceedings. Plans, organizes, and directs work of subordinate engineering specialists, assistants, or technicians. Receives broad general direction on assignments.

EXAMPLES OF WORK PERFORMED

May supervise, coordinate, and review the work subordinate staff, and may be assisted on projects by engineers, other professionals, or technicians

Typical duties may include one or more of the following:

- 1) In a supervisory capacity:
 - plans, develops, coordinates and directs the activities of engineering or technical staff
 - estimates personnel needs, initiates personnel actions, prepares budgets, and schedules and assigns work to meet completion dates.
- 2) As a project manager or office specialist:
 - develops and evaluates plans and criteria for a variety of projects and activities to be carried out by others
 - assesses the feasibility and soundness of proposed engineering evaluation tests, products, or equipment when necessary data are insufficient or confirmation by testing is advisable
 - usually performs as an office advisor and consultant in technical matters and program functions
 - estimates personnel needs, prepares budgets, and schedules and assigns work to meet completion dates.

Work may result in the development of new

or refined techniques, procedures, equipment, processes, products, and/or scientific methods.

May coordinate the work of division level technical staff. Assist in the training of less experienced employees.

Work may include review of permit or bond applications, compilation of emissions inventories, development and assessment of pollution control strategies, review site assessments and/or corrective action reports, perform compliance determinations, collection and analysis of data, development of simulation models, review or prepare engineering plans and specifications, evaluations, hardware/software, or reports, perform site or construction inspection, design, develop, build, and integrate complex multi-tasking, real-time hardware and software systems, supporting regulations development and contracts management, preparation of correspondence and technical reports, and interaction with local, state, and federal agencies, regulated community, and general public.

MINIMUM QUALIFICATIONS

A bachelor's degree in engineering from an accredited college or university, plus six years of satisfactory full-time engineering experience;

AND

Must have passed the Fundamentals of Engineering Exam (E.I.T. certification), or have had this exam waived by the Board of Registration for Professional Engineers

A master's degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one year of experience.

A Ph.D. degree in engineering, environmental science, or related fields from an accredited college or university may be substituted for one additional year of experience

One year of satisfactory experience as an Engineering Specialist III with E.I.T. certification will qualify for promotion to Engineering Specialist IV.

ENGINEERING SPECIALIST IV

CLASS NO. 2164

PAY GROUP 21

KNOWLEDGE, SKILLS, AND ABILITIES

Extensive knowledge of, and skill in applying: engineering theory, techniques, procedures, and higher mathematics.

Extensive knowledge of principles and practices of engineering as applied to environmental, health, and safety issues.

Thorough knowledge of applicable laws, regulations, and policies.

Extensive knowledge of precedents in the specialty area and related specialties.

Proven ability to: organize and plan workload; deal tactfully with the public; express ideas clearly and concisely; address groups effectively; and train others.

Proven ability to prepare technical reports and other appropriate documentation.

Knowledge of computers and application software.

Demonstrated ability to follow policies and procedures, and ability to plan and develop new policies and procedures as necessary.

Ability to effectively represent the agency as an expert witness on matters not requiring registration as a professional engineer.

Enforcement Coordinator Specialist and Trainee

I

ENGINEERING ASSISTANT I (ENFORCEMENT COORDINATOR TRAINEE I)

CLASS NO. 2151A

PAY GROUP 14

GENERAL DESCRIPTION

Performs trainee entry level* work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs entry level work in the fields of air, water, or waste enforcement. Work involves reviewing technical inspections, surveys, and complaint investigations; preparing enforcement documents and making recommendations; preparing draft correspondence; conducting case follow-ups; and assisting in the preparation of environmental education programs. Work is performed under close supervision.

* Entry level is the beginning level for acquiring the basic knowledge and skills of the enforcement program.

EXAMPLES OF WORK PERFORMED

Reviews basic technical inspections and surveys; evaluates results and determines compliance with applicable regulations, statutes, and policies.

Prepares concise and accurate enforcement reports, documents, and letters using standardized formats. Schedules, coordinates, and observes enforcement meetings in a professional manner.

Collects and analyzes additional information for further case development.

Inputs and maintains the enforcement tracking systems (i.e. databases).

Participates as a trainee in field investigations and discusses compliance issues with the regulated community.

Provides entry level limited technical assistance to the public, regulated community, other interested groups and public officials.

Attends TNRCC agendas, administrative hearings, and civil trials as an observer of expert testimony.

Assists in the preparation of environmental education programs and observes presentations.

Performs related work as assigned.

MINIMUM QUALIFICATIONS

Ninety semester hours from an accredited college or university.

OR

One year of TNRCC full time experience as an Environmental Investigator I.

OR

Four years of full time experience in an administrative capacity* or in clerical work in environmental investigations or similar program area.

* Administrative capacity is work where primary duties consist of performing administrative tasks of an office, excluding work such as clerical, secretarial, sales, equipment operations, and manual labor.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to read and understand state and federal law and regulations; to effectively plan and organize entry level enforcement work; to communicate effectively; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, database and other computer programs.

ENGINEERING ASSISTANT II (ENFORCEMENT COORDINATOR TRAINEE II)

CLASS NO. 2153A
PAY GROUP 15

GENERAL DESCRIPTION

This is the entry point of the Enforcement Coordinator career ladder. Performs trainee entry level* work to routine work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs entry level work in the fields of air, water, or waste enforcement. Work involves reviewing technical inspections, surveys, and complaint investigations; preparing enforcement documents and making recommendations; preparing draft correspondence; conducting case follow-ups; and assisting in the preparation of environmental education programs. Work is performed under close supervision.

* Entry level is the beginning level for acquiring the basic knowledge and skills of the enforcement program. To perform the job of an Enforcement Coordinator (EC) Trainee II requires more knowledge, skills, techniques, experience, and ability to recognize and resolve technical issues than is required to perform the duties of an Enforcement Coordinator Trainee I position.

EXAMPLES OF WORK PERFORMED

Reviews basic technical inspections and surveys; evaluates results and determines compliance with applicable regulations, statutes, and policies. Prepares concise and accurate enforcement reports, documents, and letters using standardized formats. Schedules, coordinates, and observes enforcement meetings. Collects and analyzes information for further case development. Inputs and maintains the enforcement tracking systems (i.e. databases). Participates as a trainee in field investigations and discusses compliance issues with the regulated community. Provides semi-routine, limited, technical assistance to the public, regulated community, other

interested groups, and public officials. Attends TNRCC agendas, administrative hearings, and civil trials as an observer of expert testimony. Assists in the preparation of environmental education programs and presentations. Performs related work as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university.

OR

One year of TNRCC full-time experience as an Enforcement Coordinator Trainee I.

OR

Two years of full time experience as an Environmental Investigator I.

KNOWLEDGE, SKILLS, AND ABILITIES

Ability to read and understand state and federal law and regulations; to effectively plan and organize entry level enforcement work; to communicate effectively; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, database, and other computer programs.

TNRCC
JDM 96-8/NOVEMBER 1996

ENGINEERING SPECIALIST I (ENFORCEMENT COORDINATOR I)

CLASS NO. 2127G

PAY GROUP 17

GENERAL DESCRIPTION

Performs routine* technical work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs routine work in the fields of air, water, or waste enforcement. Work involves reviewing technical inspections, surveys, complaint investigations, and technical reports; preparing enforcement documents and making recommendations; preparing draft correspondence; conducting case follow-ups; and assisting in the preparation of environmental education programs. Work is performed under general supervision.

* For the purpose of this job description routine means common place or repetitious. To perform the job of an Enforcement Coordinator (EC) I requires more knowledge, skills, technique, experience and ability to recognize and resolve technical issues than is required to perform the duties of an Enforcement Coordinator Trainee position.

EXAMPLES OF WORK PERFORMED

Reviews routine technical inspections, reports, and survey; evaluates results and determines compliance with applicable regulations, statutes, and policies.

Prepares concise and accurate enforcement reports, documents, and letters, including technical recommendations by applying sound scientific principles.

Schedules, coordinates, and conducts enforcement meetings, including preparation of written summaries to the files for the meetings.

Collects and analyzes additional information for further case development.

Maintains enforcement tracking systems (i.e. databases).

Participates in field investigations and discusses compliance issues with the regulated community.

Provides limited technical assistance to the public,

regulated community, other interested groups and public officials.

Provides expert testimony at TNRCC agendas, administrative hearings, and civil trials on routine cases.

Assists in preparation of environmental education programs and presentations.

Performs related duties as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university, plus eighteen months of full time experience in the field of environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year of the required education.

OR

Eighteen months as an Enforcement Coordinator Trainee II.

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of applicable local, state, and federal ordinances and laws; of environmental protection practices and techniques; of scientific principles and techniques.

Ability to plan and organize routine technical work; to communicate effectively with the public, regulated community and professional groups; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing and database computer programs.

TNRCC
JDM 96-8/NOVEMBER 1996

ENGINEERING SPECIALIST II (ENFORCEMENT COORDINATOR II)

CLASS NO. 2128G

PAY GROUP 18

GENERAL DESCRIPTION

Performs moderately complex* technical work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs moderately complex work in the fields of air, water, or waste enforcement. Work involves reviewing technical inspections, surveys, complaint investigations, and technical reports; preparing enforcement documents and making recommendations; preparing draft correspondence; conducting case follow-ups; and preparing environmental education programs. Work is performed under general direction.

* For the purpose of this job description "moderately complex" means medium degree of difficulty. To perform the job of an Enforcement Coordinator (EC) II requires more knowledge, skills, technique, experience and ability to recognize and resolve technical issues than is required to perform the duties of an EC I position.

EXAMPLES OF WORK PERFORMED

Reviews moderately complex technical inspections, reports, and surveys; evaluates results and determines compliance with applicable regulations, statutes, and policies.

Prepares concise and accurate enforcement reports, documents, and letters, including technical recommendations by applying sound scientific principles.

Prepares environmental education programs and presentations.

Schedules, coordinates, and conducts enforcement meetings in a professional manner, including preparation of written summaries for files.

Collects and analyzes additional information for further case development.

Maintains enforcement tracking systems (i.e. databases).

Participates in field investigations and discusses compliance issues with the regulated community.

Provides technical assistance to the public, regulated community, other interested groups and public officials, on moderately complex cases.

Provides expert testimony at TNRCC agendas, administrative hearings, and civil trials.
Performs related duties as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university, plus two and a half years of full-time experience in the field of environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year of the required education.

OR

One year as an Enforcement Coordinator I.

KNOWLEDGE, SKILLS, AND ABILITIES

Knowledge of, and ability to interpret, applicable local, state and federal ordinances, and laws. Knowledge of organization and structure of other state and federal agencies with jurisdiction on environmental protection regulations; of environmental and/or engineering principles in the field of industrial or municipal solid waste, petroleum storage tanks, air pollution, waste pollution, or water resource management; and of environmental monitoring techniques and analysis. Ability to effectively plan, organize, and complete moderately complex technical work; to prepare and present technical papers and studies to professional groups; to assist in managing and planning group efforts on environmental activities; to communicate effectively with the public, regulated community and professional groups; to review reports and studies for technical correctness; to exercise good judgment; to make technically sound decisions; to function as a member of a team; and to use word processing, and database computer programs.

ENGINEERING SPECIALIST III (ENFORCEMENT COORDINATOR III)

CLASS NO. 2129G

PAY GROUP 19

GENERAL DESCRIPTION

Performs complex* technical work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs, or manages, complex work in the fields of air, water, or waste enforcement. Work involves performing complex enforcement investigations or other compliance and enforcement projects; writing and reviewing technical reports and inspections, surveys, and complaint investigations; preparing enforcement documents and providing advice, complex technical assistance, and recommendations; preparing draft correspondence; conducting case follow-ups; providing scientific or technical public education programs; interpreting rules, regulations and environmental policies; and/or coaching (assisting in technical decision making) less experienced staff in technical matters. Work is performed under general direction with some latitude for initiative and independent judgment.

* For the purpose of this job description "complex" means difficulty in scrutinizing, analyzing and resolving. To perform the job of an Enforcement Coordinator (EC) III requires more knowledge, skills, technique, experience and ability to recognize and resolve technical issues than is required to perform the duties of an EC II position.

EXAMPLES OF WORK PERFORMED

Reviews moderately complex technical inspections, reports, and surveys; evaluates results and determines compliance with applicable regulations, statutes and policies.

Prepares, and may minimally coach, less experienced technical staff in preparation of concise and accurate enforcement reports, documents, and letters, including technical recommendations.

Schedules, coordinates, conducts, and may minimally coach staff in conducting enforcement meetings, including preparation of written summaries to the files for meetings.

Collects and analyzes additional information for further case development, including use of advanced investigative techniques.

Maintains enforcement tracking systems (i.e. databases).

Responsible for preparation of environmental education programs and presentations.

Participates in field investigations and discusses compliance issues with the regulated community.

Provides technical assistance to the public, regulated community, other interested groups, and public officials, which may involve sensitive and highly technical enforcement matters.

Provides expert testimony at TNRCC agendas, administrative hearings, and civil trials on complex issues.

Performs related duties as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university, plus three and a half years of full time experience in the field of environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year of the required education.

OR

A master's degree from an accredited college or university with a major in engineering, basic science, math, environmental science, computer science or a related field, plus two and a half years of full-time experience in the field of environmental activities directly related to the examples of work performed which included one year as an enforcement coordinator.

ENGINEERING SPECIALIST IV (ENFORCEMENT COORDINATOR IV)

CLASS NO. 2130G

PAY GROUP 20

GENERAL DESCRIPTION

This is the top of the Enforcement Coordinator Career Ladder. Performs highly complex* technical work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs or manages highly complex work in the fields of air, water, or waste enforcement. Work involves performing highly complex enforcement investigations or other compliance and enforcement projects; writing and reviewing technical reports and inspections, surveys, complaint investigations; preparing and supervising preparation of enforcement documents and providing advice, complex technical assistance and recommendations; preparing draft correspondence; conducting case follow-ups; providing scientific or technical public education programs; interpreting rules, regulations and environmental policies; and/or coaching (assisting in technical decision making) less experienced staff in technical matters. Work involves development of plans for effective enforcement project management in a specific environmental media. Work is performed under general direction with wide latitude for use of initiative and independent judgment.

* For the purpose of this job description "highly complex" means highest degree of difficulty to scrutinize, analyze and resolve. To perform the job of an Enforcement Coordinator (EC) IV requires more knowledge, skills, technique, experience and ability to recognize and resolve technical issues than is required to perform the duties of an EC III position.

EXAMPLES OF WORK PERFORMED

Reviews highly complex technical inspections, reports, and surveys; evaluates results and determines compliance with applicable regulations, statutes, and policies.
Prepares and may coach less experienced technical

staff in preparation of concise and accurate enforcement reports, documents, and letters, including recommendations.

Schedules, coordinates, conducts, and may coach the development of enforcement meetings including preparation of written summaries to the files for the meetings.

Collects and analyzes additional information for further case development, including use of advanced investigative techniques.

Maintains and may review enforcement tracking systems (i.e. databases).

Responsible for preparation of environmental education programs and presentations.

Participates in field investigations and discusses compliance issues with the regulated community.

Provides technical assistance to the public, regulated community, other interested groups, and public officials, which may involve sensitive and highly technical enforcement matters.

Provides expert testimony at commission agendas, administrative hearings, and civil trials on highly complex cases.

May serve as coach for less experienced technical staff providing technical expertise and/or consultation on specific environmental issues and/or technical issues.

Performs related duties as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university, plus five years of full time experience in the field of environmental activities directly related to the examples of work performed.

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year of the required education.

OR

A master's degree from an accredited college or university with a major in engineering, basic

ENVIRONMENTAL QUALITY SPECIALIST VI (ENFORCEMENT COORDINATOR V)

CLASS NO. 4065G

PAY GROUP 21

GENERAL DESCRIPTION

Advises management and staff on highly complex technical issues. Performs highly complex technical work at a professional level in the environmental quality or engineering field not requiring certification under any provisions of the Texas Engineering Practice Act as amended, Article 3271a V.A.C.S. Performs or manages highly complex work in the fields of air, water, or waste enforcement. Work involves performing highly complex enforcement investigations or other compliance and enforcement projects; writing and reviewing technical reports, technical inspections, surveys, and complaint investigations; preparing and supervising preparation of enforcement documents and providing advice, complex technical assistance and recommendations; preparing draft correspondence; conducting case follow-ups; providing scientific or technical public education programs; interpreting rules, regulations and environmental policies; and/or coaching the work of less experienced staff in technical matters. Work involves development of plans for effective enforcement project management in a specific environmental media. Work is performed under minimal direction.

* For the purpose of this job description "highly complex" means highest degree of difficulty to scrutinize, analyze, and resolve. To perform the job of an Enforcement Coordinator (EC) V requires more knowledge, skills, technique, experience and ability to recognize and resolve technical issues than is required to perform the duties of an EC IV position. (This position is designed for non-supervisory staff).

EXAMPLES OF WORK PERFORMED

Advises management and staff on highly complex technical issues.
Reviews highly complex technical inspections, reports, surveys, evaluates results, and determines compliance with applicable regulations, statutes and policies.

Prepares and may coach less experienced technical staff in preparation of concise and accurate enforcement reports, documents, and letters, including recommendations within the specified time frames.

Prepares environmental education programs and presentations.

Provides technical guidance and expertise for staff in compliance and enforcement matters.

Provides technical assistance to the public, regulated community, other interested groups, and public officials, which may involve sensitive and highly technical enforcement matters.

Provides expert testimony at Commission Agendas, Administrative Hearings, and civil trials on highly complex cases.

Collects and analyzes additional information for further case development, including use of advanced investigative techniques.

Maintains and may review enforcement tracking systems (i.e. databases).

Participates in field investigations and discusses compliance issues with the regulated community.

Serves as coach for less experience technical staff providing technical expertise and/or consultation on specific environmental issues and/or technical issues.

Performs related duties as assigned.

MINIMUM QUALIFICATIONS

A bachelor's degree from an accredited college or university, plus six years of full time experience in the field of environmental activities directly related to the examples of work performed

One year of full-time experience in the field of environmental activities directly related to the examples of work performed may be substituted for each year of the required education.

California Air Resources Board Health, Safety, and Training Checklist

***AIR RESOURCES BOARD
COMPLIANCE DIVISION***

***HEALTH, SAFETY & TRAINING
CHECKLIST***

February 1997

HEALTH, SAFETY & TRAINING CHECKLIST

As a new employee of the California Air Resources Board's Compliance Division, there are requirements you must meet and responsibilities you must take to ensure your health and safety while performing various duties.

Below is a new employee orientation checklist. The checklist includes training "action" items you are responsible to complete before participating in an inspection. The checklist also includes additional training which management supports to better your performance as an employee of the Compliance Division. All "action" items are required to have your manager's signature as well as your signature upon completion. Action items are indicated by an "*". All questions, should be directed to your manager. Your manager may also have a section orientation program to assist you in your new position.

Training is a key element in the Compliance Division. The management strongly encourages all employees to take as much training as possible in the betterment of not only the employee, but also as a representative of the Compliance Division. An explanation of the various courses is attached for your information. Any questions, please direct them to your manager.

TRAINING

Fundamentals of Enforcement (FOE)*

This program is designed to train air pollution control professionals on the fundamental air pollution issues and, in particular, on visible emission evaluations. The FOE program is required for Compliance Division personnel.

Fundamentals of Enforcement	_____	_____	_____	_____

Uniform Air Quality Training Program (UAQTP) - 100 Series*

The UAQTP is a week-long series of 15 courses providing a comprehensive introduction to air pollution, air pollution control, and the basics of compliance inspections. The program is intended for entry-level compliance inspectors, regulatory agency staff, and environmental specialists in business and government. As an employee in the Compliance Division, you are required to attend all these courses in addition to FOE and the Enforcement Symposium, before receiving your badge.

	<u>Scheduled</u>	<u>Passed/Failed</u>	<u>Supervisor</u>	<u>Employee</u>
101 - History	_____	_____	_____	_____
102 - Meteorology	_____	_____	_____	_____
103 - Classification of Air Pollutants	_____	_____	_____	_____
104 - Inspector Safety	_____	_____	_____	_____
105 - Regulatory Develop.	_____	_____	_____	_____

112 - Environmental Law	_____	_____	_____	_____
113 - Inspector Conduct	_____	_____	_____	_____
114 - Monitoring Concepts	_____	_____	_____	_____
115 - Interfacing	_____	_____	_____	_____

Uniform Air Quality Training Program (UAQTP) - 200 Series (Optional)

The 200 series courses offer advanced training in a wide variety of source specific industrial processes and air pollution control equipment involving actual on-site “mock” inspections. Each 200 series course covers general process descriptions for the specific industrial category, emissions of concern, applicable air pollution regulations and compliance inspection techniques. These courses are job-related courses designed to assure adequate performance in current assignments.

	<u>Scheduled</u>	<u>Passed/Failed</u>	<u>Supervisor</u>	<u>Employee</u>
202 - Health & Safety	_____	_____	_____	_____
210 - Gasoline Cargo Tanks	_____	_____	_____	_____
211 - Fuel Specification	_____	_____	_____	_____
214 - Ag/Forestry Burn.	_____	_____	_____	_____

Pennsylvania Long-Term Training Plan

DEPARTMENT OF ENVIRONMENTAL PROTECTION

BUREAU OF AIR QUALITY

LONG-TERM
TRAINING PLAN

NOVEMBER 1995

BUREAU OF AIR QUALITY
LONG-TERM TRAINING PLAN

The objective of this program is to provide guidelines for the training of both regional and central office employees of the Bureau of Air Quality. The generic guidelines are divided into the following four areas:

- 1) New Employees
- 2) Technical Training
- 3) Supervisory Training
- 4) Career Development
- 5) Secretarial

New Employees

The majority of candidates for entry level positions are college graduates with degrees in engineering or one of the natural sciences. Other than general environmental education, most have little or no course work or experience with air quality control. This training guide is designed to provide the knowledge and skills necessary to perform those duties and responsibilities fundamental to the Bureau of Air Quality.

During the first year of employment, a work-training plan will be followed in order that the new employee is satisfactorily oriented regarding the Department's policies and procedures, the Bureau's various programs, the requirements of the Pennsylvania Air Pollution Control Act and its Rules and Regulations. It will be the responsibility of management and supervisory staff of the Bureau to insure that this program is completed.

Technical Training

Duty assignment for technical employees will vary depending on the assigned area of responsibility. Training will be necessary to provide the knowledge required to address specific types of pollutants, industries, new technology, etc. The training recommended in Table I (attached) is organized by regional work unit and central office section. This training should be taken as work assignments require, and to keep abreast of emerging technology, usually through professional or industrial conferences.

Supervisory

Most employees are promoted into supervisory positions based on technical merit with only some subjective appraisal of

supervisory/management skills. The training guidelines offered here will focus on the initial supervisory training as well as courses needed to maintain a level of expertise.

- Supervisory Academy
- Performance Evaluations
- Interviewing and Selection Course
- Interaction Management
- Affirmative Action Workshop
- Americans with Disabilities Act
- Project Management

Career Development

The Department should provide employees an opportunity to participate in training to improve their technical and non-technical skills and abilities and/or prepare for possible promotions. Such career development training must be tailored to the individual, course availability and resources. Listed below are areas to be considered for career development training. Training will also be made available (In-House and Out-Service) to staff relative to program areas impacted by Federal/State legislation.

- Communication Skills (verbal & written)
- Negotiation Skills
- Managing in the Public Sector
- Technical/Environmental Studies at Accredited Colleges and Universities
- New Federal/State Regulations
- Inter/Intra Bureau Assignments
- Conflict Management

Secretarial

Secretarial employees must possess the clerical skills (typing, shorthand, etc.) necessary to meet job specifications to be eligible for employment. However, it is important that the Department orient these employees regarding the organization, provide appropriate PC training and in-house training relative to administrative procedures. Additional training should be provided in the other areas listed below to develop skills and abilities appropriate to the individual job assignment.

- DEP Orientation
- Success Skills for Secretaries
- How to Proofread
- Develop your Image as a Successful Woman
- Computer Training
- Time Management
- Priorities Management
- Management Techniques for Secretaries
- DEP Clerical Conference
- Miscellaneous Conferences & Workshops

DEPARTMENT OF ENVIRONMENTAL PROTECTION

BUREAU OF AIR QUALITY

ENTRY LEVEL
TRAINING PLAN

NOVEMBER 1995

INTRODUCTION

The air program training plan for entry level employees was developed from training guidance provided in previous training plans, new training courses (DER Academy, the new air pollution training center in Piscataway, NJ, etc.) currently available, and updated training needs assessments by both regional and central office managers/supervisors.

The plan is structured to provide easily accessible guidance for all new and technical employees based upon classification (regional offices) and work assignment (central office). The regional offices are all similarly organized and, therefore, work assignment differentiation for the regions is not necessary. In central office, employees in the same classification are assigned to Divisions with diverse work assignments. Therefore, the central office portion of the plan is also segmented by work assignment. The plan is designed to be used as a checklist for scheduling training during new employees' first 18 months to two years.

Additional in-house training for implementation of new regulations will be developed in consultation with the regional offices and provided to the degree staff time is available. This type of in-house training may more properly be directed towards supervisors and/or veteran staff as opposed to new employees.

The usual focus life of plans and/or reports is very short. We all tend to file these documents on a shelf or in a drawer pending eventual disposal when space is needed for something else.

Hopefully, all air program managers and supervisors will recognize that this plan can and should be a ready reference for both scheduling training and an ongoing review of training status for all new employees.

REGIONAL OFFICES
ENTRY LEVEL POSITIONS

- 1) **ENVIRONMENTAL TRAINEE**
- 2) **AIR POLLUTION CONTROL ENGINEER I**
- 3) **ENVIRONMENTAL CHEMIST I**

REGIONAL OFFICES

GENERIC TRAINING PLAN FOR ENVIRONMENTAL TRAINEES

General Statement of Purpose

To be able to aid in resolving existing and potential air pollution problems and to take appropriate action to prevent problems from occurring. Such actions shall be accomplished in a manner consistent with the Pennsylvania Air Pollution Control Act, the Rules and Regulations of the Department, the Federal Clean Air Act and Department Policy.

ON-THE-JOB TRAINING:

Through self-study and discussions with supervisor and staff:

1. Gain a working knowledge of:
 - a. Air Pollution Control Act both state and federal
 - b. Air Quality Rules and Regulations
 - c. Air Quality Policy and Procedures (Permit Manual)
 - d. Federal regulations (PSD, NSPS, NSR and NESHAP)
2. Gain understanding of the role of the Air Quality Specialist.
 - a. Become familiar with the goals of Regional Air Quality Program.
 - b. Become familiar with the functions of the Engineering Services Section and the Operations Section.
 - c. Become familiar with the types of air contamination sources, how they work and what air contaminants are emitted.
 - d. Become familiar with the types of air pollution control equipment, how they work and where they are applied.
3. Gain ability to conduct inspections of air contamination sources for reissuance of permits and for determining compliance.
 - a. Become familiar with inspection techniques and documentation methods.
 - b. Become familiar with how to prepare operating permit.
 - c. Become familiar with what plan approvals and plan approval applications are and the information available in them.
 - d. Become familiar with how the permit system is used to maintain compliance.
 - e. Learn to use available equipment in performing inspections.
 - f. Learn to interpret source test results.
 - g. Become familiar with the emission reports generated from continuous emission monitoring systems.
4. Gain ability to be an effective field inspector.
 - a. Become familiar with the compliance tracking system.

- b. Learn how complaint investigations are handled.
 - c. Develop fact finding and observation skills.
 - d. Realize importance of documenting observations.
 - e. Learn techniques to effectively and politely communicate with complainant(s) and source owner(s).
 - f. Become familiar with the procedures contained in the Field Activity Guidelines.
 - g. Learn to write Notice of Violations (NOV).
 - h. Become familiar with the various forms of enforcement that can be used where noncompliance is found.
 - i. Become familiar with the methods, procedures and areas of concern which are addressed in a facility compliance inspection.
 - j. Become familiar with the requirements of the Compliance History Forms.
 - k. Become familiar with inspection report formats. can be used.
5. Gain basic understanding of the emission inventory systems - AIMS.
- a. Learn to identify those sources of air contaminant emissions which should be included in the system.
 - b. Learn to calculate allowable, actual and potential emission rates for sources and understand the importance of these.
 - c. Become familiar with the various methods used to obtain pertinent information and how to input it to the system.
 - d. Learn to conduct desk and onsite audits, utilizing procedural handbook.
 - e. Become familiar with the Air Toxics program and when emissions from these sources should be input to the system.
 - f. Understand how to use Standard Industrial Classification (SIC) Codes.
6. Gain basic understanding of other Air Quality Program functions.
- a. Learn the role of the Engineering Services Section in your region.
 - b. Understand the district office boundaries.
 - c. Be able to take a complaint from the public and be able to refer it to the complaint tracking system.
 - d. Learn what the Department's meteorologist does.
 - e. Learn the role of Technical Services in relation to stack test and CEM reviews.
 - f. Learn enforcement options and role of compliance specialists.
 - g. Become acquainted with new Permit Regulations (Title V).
 - h. Become acquainted with Act 14 regarding municipal notification.
 - i. Become acquainted with the permit and emission fee systems.
7. Gain basic understanding of the Asbestos and Air Toxics programs.
- a. Learn to conduct asbestos inspections to confirm compliance with 40 CFR Part 61, Subpart (M).
 - b. Develop an understanding of the Air Toxics Program which is developing out of the requirements incorporated in Title III and Title V of the 1990 Federal Clean Air Act.
8. Be aware of safety equipment needs and uses during inspections. At all times demonstrate safety awareness — when in doubt, ask!

GENERIC TRAINING PLAN FOR
AIR POLLUTION CONTROL ENGINEERS I

General Statement of Purpose

To be able to complete engineering review of applications for issuance of DER plan approval. Such reviews shall be performed for conformance with regulatory requirements, program policy and sound engineering principles and practices. Also, perform inspections of sources granted plan approval to determine compliance with the conditions of the plan approval.

Through self-study and discussions with supervisor and staff:

ON-THE-JOB TRAINING:

1. Gain a working knowledge of:
 - a. Air Pollution Control Act both state and federal
 - b. Air Quality Rules and Regulations
 - c. Air Quality Policy and Procedures (Permit Manual)
 - d. Federal regulations (PSD, NSPS, NSR and NESHAPS)
2. Gain ability to perform application reviews.
 - a. Become familiar with application forms.
 - b. Become familiar with review memo and formats of plan approval and how to prepare these documents.
 - c. Become familiar with the types of air contamination sources, how they work and what air contaminants are emitted.
 - d. Become familiar with the types of air pollution control equipment, how they work and where they are applied.
3. Gain ability to conduct permit inspections.
 - a. Become familiar with operating permit inspection techniques and documentation methods.
 - b. Become familiar with how to prepare operating permit.
 - c. Learn to use available equipment in performing inspections to determine operation parameter.
4. Gain basic understanding of source tests and their use in completing reviews and determining compliance.
 - a. Become familiar with source testing procedures.
 - b. Become familiar with source test report, pre-test plan and source test observation memo format.
 - c. Learn how to interpret source test results.
 - d. Learn to observe source test.

5. Gain basic understanding of continuous emission monitoring (CEM) systems and their use in determining compliance.
 - a. Become familiar with various types of CEM systems.
 - b. Become familiar with the CEM Manual.
6. Gain basic understanding of other Air Quality Program functions and their use in performing permit reviews.
 - a. Learn what information is available from the PEDS/AIMS systems.
 - b. Understand the district office boundaries.
 - c. Be able to take a complaint from the public and be able to refer it to the appropriate district.
 - d. Learn what the Department's meteorologist role is in permit reviews.
 - e. Learn the role of Technical Services in relation to stack tests and CEM reviews.
 - f. Learn enforcement options and role of compliance specialists.
7. Be aware of safety equipment needs and uses during inspections. At all times demonstrate safety awareness — when in doubt, ask!

GENERIC TRAINING PLAN FOR
AIR POLLUTION METEOROLOGISTS I

DIVISION OF AIR RESOURCE MANAGEMENT,
AIR QUALITY MODELING SECTION:

ON-THE-JOB TRAINING:

The general purpose of this training is to understand the Bureau of Air Quality Control's air resource management program covering mobile sources, stationary sources, and meteorological sections. The training plan for succeeding years varies with specific job title, duties and responsibilities.

Through self-study and discussion with supervisor and staff, gain a working knowledge of:

- a. Air Pollution Control Act
- b. Rules and Regulations
- c. Emission Inventory System (AIMS)
- d. Permit Manual
- e. Federal Regulations including PSD, NSPS and NESHAPS
- f. Textbooks and other background materials available

Become familiar with techniques to estimate emissions from point, area, highway, off-road, and modeling sources.

Become acquainted with regional inspection reports.

Become acquainted with the permit database. Similarly, become familiar with EPA Bulletin Boards and Clearinghouse.

Begin writing simple reports and memos, and answer Bureau correspondence under close supervision to understand proper office procedures and formats.

Become familiar with the role of source tests and continuous emission monitors (CEMS).

As an observer, attend meetings concerning OTC, ROMNET, etc. air quality issues. Attend staff meetings.

As arrangements can be made, spend time with regional and other personnel conducting inspections, witnessing sources tests, auditing the operating of CEMS, and other activities.

CONTINUOUS COMPLIANCE SECTION:

ON-THE-JOB TRAINING:

The Air Pollution Control Engineer I will have routine sessions with the Section Chief of from one to two hours each, one to three times per week, for from one to three months. These sessions will acquaint the trainee with specifics and details of his/her job.

The Air Pollution Control Engineer I will participate in routine Section staff meetings of from one to two hours each week. These meetings acquaint engineer with: what everyone in the Section is currently doing, Section issues and problems, and functions of the Section. These meetings develop communications skills, group problem solving skills, and understanding of coworkers and Section cohesion.

The Air Pollution Control Engineer I will attend Division staff meetings to participate in the dissemination of information and to become familiar with the operations of other sections.

The Air Pollution Control Engineer I will be assigned to a regional office for approximately four weeks to participate in inspections, field sampling, complaint investigations, and other experiences to acquaint him/her to field activities.

DIVISION OF COMPLIANCE & ENFORCEMENT,
ABATEMENT MONITORING SECTION:

ON-THE-JOB TRAINING:

The general purpose of this training is to acquire a general background in air pollution control and some specific experience with one or two long term projects to acquire experience in dealing with coworkers and a basic understanding of coordinating such projects.

1. Specific projects assigned will be discussed in detail to clarify the outcome expected. Procedures to be used will be discussed along with formats to be used. Daily discussion with the supervisor or lead worker will be used to identify and clarify work progress. Written outputs will be reviewed in draft form to mold into standard Bureau formats.

2. Review and become familiar with DEP's Correspondence and Administrative Procedures Handbook.

3. Attend Division staff meetings to participate in the dissemination of information and to become familiar with the operations of other sections.

4. Gain an understanding of the complexity of the field operations through a temporary four week assignment to a District office of the Southcentral Region. The work will include the inspection of facilities which have sources or emissions of the type being considered in the regular work assigned in the long term project(s) discussed above.

DIVISION OF PERMITS,
NEW SOURCE REVIEW SECTION:

ON-THE-JOB TRAINING:

The general purpose of this training is to understand the Bureau of Air Quality Control's permitting program through both the plan approval and operating permit process; and then progress to conducting oversight and assisting in the provision of guidance to the regional permitting program.

1. Through self-study and discussions with supervisor and staff, gain a working knowledge of:

- a. Air Pollution Control Act
- b. Rules and Regulations
- c. Permit Manual
- d. Federal regulations including PSD, NSPS, and NESHAPS
- e. Textbooks and other background materials available in Division reference shelves and files

2. Become familiar with plan approval review activities by reviewing documentation of regional activities to understand conformity with applicable regulations and policies. The documents reviewed include the following:

- a. Plan approval applications and plan approval forms
- b. Plan approval review summaries

3. Become familiar with proper inspection techniques and documentation methods by reviewing regional inspection reports.

4. Become familiar with the permit database through hands-on use of the system to conduct information searches and to produce reports used in the Division's activities. Similarly, become familiar with EPA Bulletin Boards and Clearinghouses.

5. Begin writing simple reports and memos, and answer Bureau correspondence under close supervision to understand proper office procedures and formats.

6. Become familiar with the role of the source tests and continuous emission monitors (CEMs) in the permitting process through the review of regulatory and permitting requirements with Division personnel.

7. As an observer, attend meetings with control equipment vendors and potential applicants. Attend permit staff meetings.

8. As arrangements can be made, spend time with regional and other personnel conducting inspections, witnessing source tests, auditing the operating of CEMs, and other permit review activities.

GENERIC TRAINING PLAN FOR
AIR POLLUTION CONTROL ENGINEER I

DIVISION OF SOURCE TESTING & MONITORING,
SOURCE TESTING SECTION:

ON-THE-JOB TRAINING:

The objective of this segment is to provide the basic knowledge and skills necessary for entry level employees to perform those duties and responsibilities fundamental to the Division of Source Testing & Monitoring and to provide a solid foundation upon which these employees can build a professional career.

These basic skills are generally taught through informal one-on-one meetings with senior staff and through discussions at staff meetings:

- Safety
- Equipment Handling
- Calibration Techniques
- Driving (Stack Test Trucks)
- Filing System
- State/Federal Regulations
- Equipment Maintenance/Repair
- Stack Test Observations
- Stack Test Protocols/Reviews
- Office Procedures

OUT-SERVICE TRAINING:

This segment provides the formal training necessary to perform the technical aspects of the position. This portion is more job specific and is assigned in the area of the employee's responsibility. This training is necessary to provide the knowledge required in the areas of safety as applied to the specific job duties, the various pollutants and the operations of the various control equipment used and the theory and practices of actual stack sampling.

Several of the EPA courses listed below will be taken via the Harrisburg downlinking site as scheduled. Additional courses not listed below may also be assigned as scheduling permits.

CENTRAL OFFICE

GENERIC TRAINING PLAN FOR
AIR POLLUTION CONTROL ENGINEER I

DIVISION OF SOURCE TESTING & MONITORING,
CONTINUOUS EMISSION MONITORING SECTION:

ON-THE-JOB TRAINING:

The purpose of on-the-job training is to provide the employee with an understanding of the procedures used to conduct the routine activities of the Continuous Emission Monitoring Section. Training is accomplished by direct supervision of the employee as he conducts each activity. The areas of on-the-job training include:

Proposal Review:

- Phase I monitoring system proposals
- Phase II test protocols
- Level IV test protocols

Test Observation:

- Phase II performance specification testing
- Level IV system performance audit testing

Report Review:

- Phase III performance specification test report
- Level IV system performance audit report

CEMS Inspections:

- Level II system audit inspection

Audit Testing:

- Level III analyzer audit testing
- Level IV system performance audit testing

Data Entry:

- Hard copy CEMS quarterly reports
- Floppy disk CEMS quarterly reports

Safety

Equipment Handling

Calibration Techniques

Driving (Stack Test Trucks)

Filing System

State/Federal Regulations

Equipment Maintenance/Repair

Stack Test Observations

Stack Test Protocols/Reviews

Office Procedures

OUT-SERVICE TRAINING:

This segment provides the formal training necessary to perform the technical aspects of the position. This portion is more job specific and is assigned in the area of the employee's responsibility. This training is necessary to provide the knowledge required in the areas of safety as applied to the specific job duties, the various pollutants and the operations of the various control equipment used and the theory and practices of actual stack sampling.

Several of the EPA courses listed below will be taken via the Harrisburg downlinking site as scheduled. Additional courses not listed below may also be assigned as scheduling permits.

	<u>Currently Provided</u>	<u>Provided By</u>	<u>Method</u>
Level I: Fundamentals of Environ. Comp. Inspections Basic Health & Safety for Field Activities Respiratory Protection & Use of Safety Equip. Principles & Practice of Air Poll. Control	Yes	EPA	Classroom
Level II: Basic Source Inspection Techniques Visible Emission Enforcement Training Evaluation of Stationary Source Emission Capture, Transport & Testing Systems Continuous Emissions Monitoring Systems VOC Sampling & Analysis	Yes	EPA	Classroom
Level III: Combustion Source Inspection Asbestos NESHAP Demolition & Renovation Inspection Procedures Workshop General VOC Source Regulation & Inspection VOC Fugitive Emissions	Yes	EPA	Classroom

ASSISTANT DIRECTOR'S OFFICE,
INFORMATION MANAGEMENT & ANALYSIS SECTION:

ON-THE-JOB TRAINING:

Gain a working knowledge of the following through self-study and through discussions with supervisor and with staff:

1. Become familiar with the enabling legislation of air pollution control including the Pennsylvania Air Pollution Control Act and the federal Clean Air Act.
2. Become familiar with the Rules and Regulations of air pollution control including 25 Pa. Code, primarily Chapters 121 - 143 and the relevant subparts of 40 CFR.
3. Become familiar with the repositories for air data including our Air Information Management System (AIMS) and EPA's Aerometric Information Retrieval System (AIRS).
4. Become familiar with our handbooks and background documents including AP-42 and the AIMS Strategy and Analysis reports.
5. Become familiar with the administrative workings of the program and both its usefulness including time sheets, ordering supplies, travel rules, clerical support, answering/using the telephone, etc.
6. Become familiar with the functional structure of the air program and of the Department.

C. Complete 2 weeks escorted field investigation operations	_____	_____	_____
D. Use, preparation, and completion of enforcement forms (Complaint Report, Warning Notice, NOI, and Citation)	_____	_____	_____
E. Sample-gathering and procedures on sample collection	_____	_____	_____
F. Continuous Analyzers, Operation, Calibration	_____	_____	_____
G. Particulate Sampling	_____	_____	_____
H. Network Design and Probe Siting	_____	_____	_____
I. Air Quality Index/Episode Monitoring	_____	_____	_____
J. Quality Assurance/Quality Control	_____	_____	_____
K. Data Handling/IBM PC computer	_____	_____	_____
L. Preparation of Technical Specifications for Air Monitoring Equipment	_____	_____	_____
M. Calibration, operation, checks and services on all Noise Analyzers	_____	_____	_____

6. Formal Training

<u>Desirable (Resources Permitting)</u>	TRAINING COORDINATOR	DATE
A. CSU or equivalent course, or OJT period of training on automobile emissions control technology, vehicle maintenance, and mobile A/C operations	_____	_____
B. Hands-on introductory training in basic MOBILE series, CAL3AHC, and VMT or related inputs systems such as FSUTHS	_____	_____

On-The-Job-Training
Assistant Director-Technical Air Operations Department (Continued)

	TRAINING COORDINATOR	DATE
C. EPA Courses:		
(1) 400 Introduction to Air Toxics	_____	_____
(2) 411 Air Pollution Dispersion Models	_____	_____
(3) 413 Control of Particulate Emissions	_____	_____
(4) 415 Control of Gaseous Emissions	_____	_____
(5) 435 Atmospheric Sampling	_____	_____
(6) 452 Principles and Practice of Air Pollution Control	_____	_____
(7) 463 Ambient Air Quality Monitoring Systems	_____	_____
(8) 464 Analytical Methods for Air Quality Standards	_____	_____
D. Fully comprehend Chapter 62-256, FAC	_____	_____
E. Fully comprehend Chapter 51-2, FAC	_____	_____
F. Fully comprehend Interagency Agreements between EPC/DOF/DEP/HCFD	_____	_____
G. Complete refresher review of Chapter 1-4, Rules of EPC/HC	_____	_____
H. Complete noise training manual	_____	_____
I. Fully comprehend Part II, <u>Handbook of Environmental Engineering</u>	_____	_____
J. CARB 100 Level Series	_____	_____

Elective

	TRAINING COORDINATOR	DATE
A. Personnel Management	_____	_____
B. Budgeting	_____	_____

_____ has satisfactorily completed all training requirements.

LISTING OF AVAILABLE TRAINING COURSES

Titles of Training Courses

The APTI conducts about 10 different courses each year from a total of 38 titles available through the Air Pollution Centers. The following is a list of all courses. If you are interested in having one of these courses presented, please contact the closest Air Training Center or Academy.

Compliance Training

- 345 Emission Capture and Gas Handling Systems Inspection
- 350 Asbestos NESHAP Inspection and Safety
- 380 VOC Emission Source Inspection

Technical Air Quality Training

- 400 Introduction to Hazardous Air Pollutants
- 401 Monitoring and Evaluation of Hazardous Air Pollutants
- 403 Statistical Analysis and Interpretation of Data for Toxic Air Pollutants
- 411 Air Pollution Dispersion Models - Fundamental Concepts
- 413 Control of Particulate Emissions
- 415 Control of Gaseous Emissions
- 419 Preparation of Emission Inventories
- 420 Air Pollution Microscopy
- 421 Environmental Management and Urban Systems Workshop
- 423 Air Pollution Dispersion Models - Applications
- 424 Source Receptor Modeling
- 426 Statistical Evaluation Methods for Air Pollution Data
- 427 Combustion Evaluation
- 435 Atmospheric Sampling
- 444 Air Pollution Field Enforcement
- 445 Baseline Source Inspection Techniques
- 446 Inspection Procedures and Safety
- 450 Source Sampling for Pollutants
- 452 Principles and Practices of Air Pollution Control
- 454 Effective Permit Writing
- 455 Advanced Inspection Techniques
- 456 Fugitive VOC Leak Detection
- 457 Advanced Source Sampling Workshop
- 458 Hazardous Waste Calculations Workshop
- 460 Introduction to Permits
- 461 Intermediate Permitting
- 464 Analytical Methods for Air Quality Standards
- 468 Source Sampling and Analysis of Gaseous Pollutants

470	Quality Assurance for Air Pollution Measurement Systems
474	Continuous Emission Monitoring
480	Control Measures for CO, O ₃ and NO _x
482	Sources and Control of Volatile Organic Air Pollutants
502	Hazardous Waste Incineration
503	Accident and Emergency Management
539	Visible Emission Instructors Workshop

Section C

Training Providers

Table of Contents Training Providers

<u>Overview of Training Providers</u>	Page C1
<u>Air Pollution Training Institute</u>	Page C3
APTI is part of the U.S. EPA, Office of Air Quality Planning and Standards, Education and Outreach Group. APTI offers courses via satellite as well as classroom courses at several universities and self-study courses.	
<u>California Air Resources Board (CARB)</u>	Page C5
CARB offers basic and intermediate training as well as an advanced enforcement symposium. CARB's training outside of the State of California is provided through the National Air Compliance Training Delivery Project with support from EPA. This project enables CARB to offer the basic 100 series and the intermediate 200 series in states throughout the nation.	
<u>MARAMA</u>	Page C13
The Mid-Atlantic Regional Air Management Association offers workshops designed for air directors and staff of state and local agencies in the mid-Atlantic region. MARAMA also provides funding for individuals to attend other training courses.	
<u>METRO 4</u>	Page C17
Metro 4 provides training for state and local agencies in EPA Region 4. It also provides support for individuals to attend other courses.	
<u>National Enforcement Training Institute (NETI)</u>	Page C19
NETI offers training for compliance and enforcement personnel at the federal, state, local, and tribal levels. NETI manages three training sites, in Washington, DC; Lakewood, CO; and Glyncro, GA.	
<u>Rutgers/EOHHS Air Pollution Training Center</u>	Page C21
The Rutgers/EOHHS Training Center offers a curriculum designed to meet the requirements of EPA Order 3500.1 for compliance inspection personnel. The curriculum includes basic, intermediate, and advanced levels and is supported by EPA.	
<u>WESTAR</u>	Page C25
The Western States Air Resources Council (WESTAR) offers training courses and workshops, primarily for member states, although events have been opened to others. The focus of the workshops is emerging EPA regulations and programs; WESTAR does not provide compliance and enforcement training.	

Training Providers

This section of *Tools for Trainers* presents brief overviews of some of the major providers of air quality-related training. Each description includes information on how to contact the provider as well as the provider's mission, target audience, training courses offered, training methods, and other pertinent information. Many of the providers have Web sites on the Internet where you can find the most up-to-date course schedules.

USEPA, Education & Outreach Group Information Sheet

Agency: US Env. Protection Agency, OAR, OAQPS,
Information Transfer and Program Integration Division
Education & Outreach Group

Ag.Contact: Howard Wright, Group Leader Or Ron Townsend, Coordinator
Education & Outreach Group Air Pollution Training Institute

Telephone: (919) 541-5584 (919) 541-2498

E-mail add: wright.howard@epamail.epa.gov townsend,ron@epamail.epa.gov

EOGWebPg: www.epa.gov/oar/oaqps/eog

Mission: EOG manages the Air Pollution Training Institute (APTI) whose mission is to provide technical air pollution training, principally to State and local Air agencies to enhance skills necessary to understand and implement air programs and policies. In addition, the Env. Education program mission is to increase K-12 students' environmental literacy, encourage youth to pursue env. careers and enhance students' env. stewardship. Finally the Outreach Program strives to build new partnerships and strengthen existing ones in air areas by reaching out to non-traditional audiences with relevant information in a way that they can understand.

Students: 18,000 -approx. no. of students trained in FY 1997. N.B.: This represents about 26,000 student days of training.

Trg Mthds: Classroom
Satellite Downlink
Self-study- including written materials, audio and video materials.

Grth Area: Our biggest growth area is in satellite training. Over the past four and one half years, the air pollution distance learning network (APDLN) has grown to about 110 down-link sites across the US and simultaneously the popularity of the telecasts has grown.

Networks: Other networks with which we are involved include: EPA Regional Offices, University-based Area Training Centers across the US, the Air and Waste Management Association, ACS, National Technological University and Univ. Of Tennessee System (for Small Business broadcasts).

Mkt Niche: Our niche in the training market is as follows: Geographically-we are a national training resource dedicated to the training needs of State and local air agencies. Subject- first-hand info. On emerging rules and regulations Delivery-Only National network of Downlink sites at S/L air agencies

Funding: Technical Training: 105 Grant funds; Env. Ed. & Outreach: EPA dollars. Personnel to support all of the above are provided by EPA funds.

Needs: We financially support and provide assistance in the Annual Needs Assessment conducted by STAPPA/ALAPCO

Info: Training information is available by e-mail, on diskette, via Internet and in catalog form.

NATIONAL AIR COMPLIANCE TRAINING DELIVERY PROJECT: CARB V

I. Agency, agency contact, phone number, e-mail address, www site.

California Air Resources Board
Mary M. Boyer
(916) 322-6037
e-mail: mboyer@arb.ca.gov
<http://arbis.arb.ca.gov/cd/training.htm>

2. Audience of your training.

State/local/federal/tribal, as well as industry and environmental organization attendees; students predominantly compliance inspectors with engineers and planners in somewhat smaller numbers.

3 Mission statement.

The National Air Compliance Training Delivery Project is a multi-year, federal, state and locally funded program to demonstrate and deliver onsite California Air Resources Board 100 Basic Compliance Inspector training and to demonstrate, develop and deliver Series 200 specific source category training.

4. Number of students trained in last fiscal year 96/97.

A total of 108 class days were presented during fiscal year 96/97. This translates into a total of 2,626 student days of training.

5. Method of training, i.e. classroom, downlink.

All CARB 5 courses are conducted onsite by an ARB staff specialist and/or retired seniors that are hired as instructor/trainers through the National Council on Aging. The courses include classroom discussions, lectures, video/slide presentations with manuals. The Series 200 courses include a site visit as part of the course.

6. What is the biggest growth area for your courses/training?

The largest demand is the Series 200 courses, specifically the CEMs and observing source testing courses. We have scheduled the 200 courses already for 1999.

7. What "networks" are you involved with that are not represented by this group?

CARB works with all of the training coordinators for most of the 50 states and all of the ten EPA regions. CARB also works with the NETI, APTI and WESTAR.

8. What is your niche in the training market: geographically, subject and delivery?

Our courses have been taught to students from the entire United States, including Alaska and Hawaii. CARB 5 "niche" has been that the training has been onsite to maximize convenience and minimize travel costs for the state and local agencies that participate in the courses. Also the focus of the courses is compliance.

9. Source of funding?

All of the CARB 5 courses are funded through 105 funds.

10. Do you (1) do an annual needs assessment and (2) did you participate in EPA needs assessment?

The Air Resources Board does an annual needs assessment for the staff within the State of California. ARB also participated in EPA's assessment. ARB staff have been involved with the EPA needs assessment and have used the results to plan for future training courses for the National CARB 6 program.

11. Is your training information available electronically, by e-mail or on disk?

The training schedule for CARB 5 is located on the STAPPA/ALAPCO training web page. Attached is a hard copy of that schedule. Also ARB's training schedule is on the web page indicated at the top of this paper.

100 SERIES -- 1997-1998 CARB-6 SCHEDULE AND STATE CONTACT

<u>DATE</u>	<u>PROGRAM</u>	<u>LOCATION</u>	<u>REGION</u>	<u>STATE CONTACT</u>
October 20-24	100 Series	Hartford, Connecticut	1	Dennis Demchak (860) 424-3446

MARAMA 1997 Accomplishments

MARAMA Workshops and supported training sharpened member's skills:

- October 1996 Air Monitoring Workshop
- December 1996 support for attending NARSTO-NE Symposium
 - January 1997 Workshop on New Ambient Standards
 - February 1997 Title V Permits Workshop
- April 1997 Support for attending EPA PAMS Ozone Monitoring Workshop
 - May 1997 Ozone Map Workshops with NESCAUM and OTC
 - June 1997 Eastern States PM_{2.5} Monitoring Workshop
- July 1997 Workshop on Communicating the new Air Quality Standards
- August 1997 support for attending EPA-STAPPA-ALAPCO Air Toxics Workshop
- September 1997 support for attending NCVECS Mobile Sources Conference

MARAMA contracts helped share information and accomplish regional goals:

- Developed the *1995 Ozone Atlas for the Mid-Atlantic Region*
- Helped fund the NESCAUM-MARAMA-OTC regional ozone mapping project, producing the first daily ozone maps for the entire Mid-Atlantic-Northeast regions
 - Upgraded Mid-Atlantic air monitoring software to help create the ozone map
- Provided ongoing support for ozone modeling in the Baltimore-Washington areas
 - Contributed to a NARSTO-NE project developing 1995 MM5 wind fields
 - Met emergency needs at PAMS monitoring sites in Baltimore and DC
 - Supported public education and technician training for advanced vehicle emissions inspection and maintenance programs

MARAMA encouraged cooperation and coordination among its members:

- Published a directory of key staff at member agencies and EPA
 - Issued weekly regional ozone reports during the summer
 - Initiated the region's first air quality data analysis plan
 - Sponsored quarterly meetings of the MARAMA Air Directors
- Held numerous conference calls among technical committees and working groups

Strengthening the skills and capabilities of member agencies, and helping them work together to prevent and reduce air pollution in the Mid-Atlantic Region

Plans for 1998

MARAMA will continue to emphasize workshops and sponsored training. Plans include:

- Monitoring and Air Quality Data Analysis Workshop in October 1997
- Ozone Map End of Season Workshop in November 1997
- Vehicle Emissions Testing Workshop in December 1997
- PM_{2.5} Monitoring Training in January and June 1998
- Air Toxics workshop in February 1998
- Dispersion Modeling for Permit Writers in March 1998
- Enforcement Meeting
- Title V Permit Workshop & CAM Rule
- VOC Sampling and Controls

MARAMA contracts will be developed to meet the needs of member agencies. Projects are expected to include an air quality data analysis report, further development of the ozone map, assistance with workshops, as needed support for PAMS monitoring, regional ozone modeling work, and support for high enhanced vehicle emissions inspection programs.

Coordination activities will continue to be an important MARAMA function, including quarterly Air Director's meetings, periodic technical conference calls, an updated MARAMA Directory, and the regional air quality data analysis plan.

MARAMA gratefully acknowledges the financial and technical support of the US Environmental Protection Agency, with particular assistance from EPA Region III, the Office of Mobile Sources, and the Office of Air Quality Planning and Standards.

Mid-Atlantic Regional Air Management Association
711 W. 40th St., Ste. 318, Baltimore, MD 21211-2109

MARAMA 1997-1998

MARAMA FY 98 WORKSHOP PLANNING SCHEDULE

Updated
December 9, 1997

<u>Month</u>	<u>Workshop</u>	<u>Location</u>
October	Monitoring and Data Analysis Workshop Oct. 15-16	Rehoboth Beach
	Chromatography Data Handling Users Meeting (travel assistance) October 22-24	San Jose, CA
	MARAMA Executive Board Meeting Oct. 25	At STAPPA/ALAPCO in Michigan
November	Ozone Map Workshop (with NESCAUM & OTC) November 5-7	Baltimore
	MARAMA Data Analysis Conference Call Nov. 12	Conference Call
	NARSTO Continental Critical Review (travel assistance) November 16-19	West Palm Beach, FL
December	MARAMA Mobile Sources meeting plus "Understanding ASM Testing" Workshop by CSU December 16-18	Philadelphia
January	MARAMA Executive Board Annual Meeting Jan. 26	Williamsburg
	PM _{2.5} Network Design Workshop Jan. 26-27	Williamsburg
February	MARAMA Toxics Workshop Feb. 18-19	Baltimore
March	Dispersion modeling for point sources workshop (tentatively scheduled for Mar. 24-26)	Philadelphia
April	MARAMA Executive Board Meeting April 4	At STAPPA/ALAPCO in Alabama
April/May	VOC Sampling & VOC Control Technologies? schedule with Rutgers & ICAC (possibly switch timing w/ Title V in Sept?)	DC suburbs
May/June	PM _{2.5} Monitoring Operation Workshop? Maybe have data analysis training concurrently?	(TBD—Phily lab?)

July MARAMA Executive Board Meeting (TBD) (TBD)

Workshop with Board Meeting? (TBD)

September Title V & CAM Rule? (TBD)
(possibly switch timing w/ VOC in spring?)

*** * * * ***

Requested workshops to be scheduled:

Nitrogen emissions forum (Delaware request)

Statistics Training for Air Quality Analysis—probably S+

VOC sampling and analysis—bring Rutgers class to Baltimore area

VOC control technologies—to be presented by the Institute of Clean Air Companies

PM_{2.5} training

Late summer or fall 1998—Hands-on Equipment Operation Training

Title V Permitting—Board has requested annual workshop

Training session on creating overhead slides

Health effects of ozone and fine particulates—maybe in Baltimore or RTP (with EPA and local health experts)

Workshop on new CAM rule

Sept/Oct—MARAMA Executive Board Meeting with STAPPA/ALAPCO meeting—likely to be late October

2 Audience of your training

Staff and management of the eight states and sixteen local air pollution control agencies
in EPA Region 4

3 Mission Statement The objectives of METRO 4, INC , are

- (a) To be a forum for communicating common local concerns to EPA Region 4,
- (b) To function as a coordinating body with ALAPCO, Inc , and Headquarters EPA,
- (c) To develop and improve cooperative relationships between local, federal and state governmental regulatory agencies,
- (d) To function as a focal point for exchanging technical and regulatory information on air pollution control, and
- (e) To serve as a recipient of funds and disbursing agent for the furtherance of education, training and related travel for persons engaged in air pollution control activities within the area comprising US EPA Region 4

4 No Of students trained in fiscal year 95/96

Three training courses were conducted in fiscal year 1996, 75 students attending
In addition, 200 students were assisted with training/travel expenses

5 Method of Training, i.e. classroom, downlink

Classroom is the primary method of training

6 What is the biggest growth area for your courses/training?

Increasing demand for courses

7 What networks are you involved with that are not represented by this group?

In addition to Group, other air pollution training consortia

8 What is your niche in the training market geographically, subject and delivery?

Geographically METRO 4, Inc , covers the eight states in EPA Region 4
Subjects Any training of benefit to air pollution control agencies in Region 4
Delivery Presently classroom training

9 Source of funding

A Section 103 grant from Region 4

10 Do you (1) do an annual needs assessment and (2) did you participate in EPA needs assessment?

(1) The first one was part of the recent Training Coordinators' Meeting (September 1997)
(2) Member agencies did participate in the FY 1997 survey (15 agencies)

11 Is your training information available electronically, by e-mail or on disk?

A Web Page is in the final testing phase and will shortly contain the schedule
www.metro4.org

Current course list There are three sessions of a CEM Auditing course and of a Stack Sampling for HAPS course scheduled

**leadership for
enforcing
environmental laws**

Purpose and History of NETI

NETI is responsible for training Federal, State, Local and Tribal lawyers, inspectors, civil and criminal investigators and technical experts in the enforcement of the nation's environmental laws. Congress created the National Enforcement Training Institute as a part of the Pollution Prosecution Act of 1990 (P.L. 101-592, 42 USC 4321) and is the only Congressionally mandated training entity within the U.S. Environmental Protection Agency. As of September 30, 1995, NETI is a division in the Office of Criminal Enforcement, Forensics and Training within the Office of Enforcement and Compliance Assurance.

In fiscal year 1996, NETI and its partners trained almost 4700 environmental enforcement professionals in approximately 50 civil and criminal environmental enforcement training courses.

Facilities and Training Available

NETI's strategy is to promote a **balanced training approach** using traditional classroom training, distance learning, and cooperative agreements with other organizations. NETI and its partners offer quality training courses for enforcement personnel in a number of areas, such as:

- **case support:** courses for attorneys, inspectors and technical staff that cover things such as basic and multimedia inspections, case development, negotiation skills, and administrative hearings and trial experience.
- **specific statute enforcement:** courses for inspectors, investigators and attorneys that cover inspection techniques, regulations and specific issues for a statute.
- **compliance assistance:** courses for personnel that provide compliance assistance to the regulated community.
- **environmental criminal enforcement:** courses for criminal investigators, local law enforcement, and attorneys that cover techniques in recognizing and investigating environmental crime.

Besides providing training in EPA's Regional offices around the country and at other state locations, NETI manages three training sites:

- **NETI-HQ** in Washington, DC, includes state-of-the-art training space such as a computer development laboratory, a video conferencing room and a mock courtroom;
- **NETI-West** in Lakewood, CO, a suburb of Denver, offers a convenient training location for much of the western half of the U.S.; and
- **FI ETC**, or the Federal Law Enforcement Training Center, in Glynco, GA provides training for EPA's criminal enforcement personnel.

Newest Course Offerings

NETI piloted a new course in a nationwide satellite broadcast in November 1996: **"Environmental Enforcement Negotiations Skills -- The Basics."** This new course teaches a variety of tools and tactics used to reach settlement, how to plan and prepare for a successful negotiation, and how to manage time wisely. The course materials, including video tapes, reference materials and facilitated simulations, will allow this course to be taught in a variety of settings.

NETI staff are developing a new computer-based course, **"Environmental Statute Review,"** that will provide an overview of seven major environmental statutes for which EPA is responsible. The course will be distributed on CD-ROM and will use graphics, animation, video, and narration to examine the background, major provisions, and enforcement authorities associated with each statute. NETI expects this course to be available in the spring of 1997.

For More Information...

Many NETI documents, such as the Catalogue and Schedule of Courses, can be faxed to you -- just call our NETI Hotline at **1-800-EPA-NETI**. Visit our **NETI World Wide Web Home Page** at <http://es.inel.gov/neti>, or contact us on the **EnviroSense Bulletin Board System** by setting your modem to call 703-908-2092.

U.S. EPA - National Enforcement Training Institute

December 1996

Rutgers/EOHSI Air Pollution Training Center

1. Agency: Environmental and Occupational Health Sciences Institute
Public Education and Risk Communication Division
681 Frelinghuysen Road, P.O. Box 1179, Piscataway, NJ 08855
Contact: Dr. Robert Hague (732) 235-5443 e-mail haguero@umdnj.edu
2. Audience: Federal, state and local air pollution personnel and private industry
3. Mission Statement: The Air Pollution Compliance Training Center uses a curriculum-based approach to training; rather than as individual short courses. Our goal is to provide quality training to the air pollution regulatory community using a stepwise graded curriculum. The curriculum was originally designed in collaboration with USEPA for the purpose of providing the federal air pollution inspector with the minimum training necessary to conduct inspections under EPA Order 3500.1, however the program has found broad acceptance with state and local air pollution control agencies. The curriculum is six weeks in length and is broken down into two-week blocks of training known as Levels I, II, and III. These Levels were designed as a progression with each succeeding level being more technical in nature, with separate topics covered in one to four-day modules. By following the progression of training levels, the student avoids overlapping courses and is presented with the necessary skills to conduct effective field inspections.
4. Number of students trained in the last year: 620
5. Method of training: combination of classroom, site visit, hands-on laboratory, and (new this year) Internet-based distance education.
6. The largest growth area remains state and local enforcement agencies. The Center has had considerable success in the past year in conducting both the basic and advanced training levels at sites away from our base in New Jersey. It is our intention to continue to make our courses available throughout the U.S.
7. The Center is also affiliated with the University Network for Environmental Training (UNET), the Universities Occupational Safety and Health Educational Resource Center (UOSHERC), the Mid-Atlantic Asbestos Training Center (MAATC), USEPA Air Pollution Training Institute (APTI) and is a NIOSH training site.
8. Niche: Eastern U.S., Subjects: Air Pollution, Safety and Health, Compliance Inspection Procedures, Advanced Monitoring and Compliance Evaluation
9. Funding Source: EPA training contract, student tuition
10. Annual needs assessment: Yes
11. Training information available at www.eohsi.rutgers.edu/cet

**Rutgers/EOHSI Air Pollution Training Center
1997-1998 EOHSI Air Pollution Training Schedule**

Level I

Overview of the Clean Air Act Amendments of 1990	Jan.26, 1998 Oct. 12, 1998
Principles and Practice of Air Pollution Control	Jan. 27-30, 1998 Oct. 13-16, 1998

WESTAR Council Western Regional Air Quality Training Center Information Sheet

1. Western States Air Resources (WESTAR) Council Information:

Principal Contact Jeffrey P. Gabler, Training Programs Manager
Phone (503) 220-1660
FAX (503) 220-1651
email jgabler@westar.org
web site <http://www.westar.org>

2. Audience

WESTAR's training courses and workshops are designed for air regulatory agency staff (only) and range from introductory materials to advanced, policy-oriented workshops intended for experience staff

3. Mission Statement

"It is the Mission of the Western States Air Resources (WESTAR) Council to provide a forum to address air quality issues of common concern, to promote the exchange of information among the member states and to provide a foundation for effective air resource management."

4. Number of Student Trained During 1995, 1996 & 1997

1995 participants totaled 450, 1996 participants totaled 430, 1997 participants totaled 511

5. Method of Training Delivery

WESTAR courses and workshops are all conducted by onsite instructors at convenient hotels within the western states. Personal interaction between the participants and the instructors is a very important element of WESTAR courses. Workshops often include panels consisting of staff from state/local air agencies sharing information on how they have solved common problems.

6. Area of Largest Growth in WESTAR's Training Program

Prior to 1997 the largest demand for WESTAR training has been in the area of Title V Operating Permit writing and policy. In 1997, as expected, demand for WESTAR's PM_{2.5} Monitoring workshops was enormous and replaced Title V as our most popular workshop among member states. During the upcoming year WESTAR expects continued large demand for particulate matter courses and additional courses are planned in this area.

7. Other Networks

WESTAR works with the member states that sponsor our training courses to identify program and course priorities.

8. WESTAR Niche in the Training Market

Our courses and workshops address emerging EPA programs and regulations that impact state/local air agencies and in areas where member states have indicated a high demand for training. Courses are offered within the western United States and are exclusively face-to-face.

9. Funding

All WESTAR courses are funded through 105 funds from the member states, EPA Regions 8, 9 or 10 and/or EPA OAQPS Education and Outreach Group (EOG).

10. Training Assessments

WESTAR's member states participate in STAPPA/ALAPCO needs assessment survey and conduct an annual WESTAR member states needs assessment, if needed. The Air Directors and WESTAR's Western Regional Air Quality Training Advisory Committee members determine future training topics.

11. Training Information

More information on course scheduling, agendas and locations are available on WESTAR's web page (www.westar.org).

12. 1998 Training Schedule

As of December 11, 1997, courses for CY 1998 are tentative. Please check WESTAR's web page (www.westar.org) for updated current information.

WESTAR Council Western Regional Air Quality Training Center CY 1998 Training Schedule

Tentative as of January 15, 1998

The following training courses, conferences and meetings are scheduled to be offered by WESTAR during the CY 1998. The information contained in WESTAR's CY 1998 Training Schedule is tentative and subject to change, please check WESTAR's web site at WWW.WESTAR.ORG for up-to-date information. These training courses, conferences and meetings are sponsored by WESTAR, EPA OAQPS's Education and Outreach Group, and EPA Region VIII, IX and X states. For more information please contact Jeff Gabler at (503) 220-1660 or jgabler@westar.org

Training Course Schedule for CY 1998

- | | | |
|--|--|-------------------------|
| Feb. 9 - 11th | Permitting Processes for Stationary Sources: PSD/Permitting | Honolulu, Hawaii |
| <p>This workshop, sponsored by WESTAR, the State of Hawaii and EPA Region IX, is being conducted for state, regional and local air staff to provide practical information and updates on Prevention of Significant Deterioration and Permitting. Discussions will include PSD Permit Review (definitions, applicability for New Sources and Modifications, significant emissions), New Source Review, and Operating Permits (introduction, applicability, permit contents, revisions and modifications)</p> | | |
| April 1998 | Compliance Assurance Monitoring Rule and Credible Evidence | Phoenix, Arizona |
| <p>The central focus of the Compliance Assurance Monitoring workshop is to examine the various aspects of the final CAM Rule promulgated October 1997. The workshop will address the CAM Rule's implementation schedule and requirements, and explore the relationship between the CAM and Credible Evidence Rules. This workshop will include potential revisions or guideline changes to the regulation(s). WESTAR's Western Regional Air Quality Training Center, EPA's OAQPS EOG and the State of Arizona will sponsor this workshop.</p> | | |
| April 1998 | Review of the Tribal Authority Rule for Regulatory Agencies | Phoenix, Arizona |
| <p>WESTAR's Western Regional Air Quality Training Center, in cooperation with EPA OAQPS EOG, will host this workshop to bring together federal, state and local air agency staff responsible for working with tribes as they implement the Tribal Authority Rule (TAR) through new tribal air programs. This workshop facilitated by Northern Arizona University's Institute for Tribal Environmental Professionals will provide an overview of the soon-to-be-promulgated TAR. The goals of the workshop are primarily to provide training for the states by informing the participants of key elements, exploring the legal structure and program requirements, discussing perspectives on tribal sovereignty issues and air program developments, and discussing working options for effective and cooperative implementation of the TAR.</p> | | |
| May 1998 | Transportation Conformity Rule | Reno, Nevada |
| <p>WESTAR's Western Regional Air Quality Training Center, in cooperation with EPA OAQPS EOG, will host this workshop to bring together federal, state and local air agency staff responsible for working with the Transportation Conformity Rule. This workshop will address the amendments to the Transportation Conformity Rule and include discussions on the Rule's provisions such as build/no build tests, areas not required to submit SIPs, mismatch in SIP/plan time frame, non-federal projects, and modeling requirements. Potential revisions to this rule will be included in this workshop.</p> | | |

May 1998	Smoke Management/Prescribed Fire/Wildland Fire Policy	Boise, Idaho
<p>This workshop will bring together federal, state and local air staff. The purpose of this workshop is to inform federal, state and local air agency staff on the policy and resource impacts to their respective organizations from issues associated with the FACA Wildland Fire Policy as it relates to wildland and prescribed fire impacts to the NAAQS and Regional Haze programs, and the role of the federal land managers. Sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.</p>		
June 2- 4th	Stationary Source	Salt Lake City, Utah
<p>WESTAR's Western Regional Air Quality Training Center, in cooperation with EPA's OAQPS EOG, will host this workshop to bring together federal, state and local air agency staff. This annual workshop will focus on updating air staff members on recent changes and new applicable federal air quality rules.</p>		
Summer 1998	PM2.5 Monitoring: Quality Assurance/Quality Control (Field and Laboratory)	TBA: Regions 8, 9 and 10
<p>The PM2.5 Monitoring workshop, sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG, will be developed for state and local FRM field and laboratory technicians. This workshop is intended to provide hands-on experience for staff. The training will provide field technicians the opportunity to explore FRM operation, calibration, data handling and auditing, and laboratory technicians the opportunity to experience filter handling and weighing techniques. Due to the scope of the workshop the number of participants will be limited.</p>		
July 1998	Meteorological Model Version 5 (MM5)	Seattle, Washington
<p>The focus of this workshop is for federal, state and local air agency staff members to gain an understanding of prognostic modeling capabilities with specific emphasis on those products generated by MM5. The workshop will provide a conceptual understanding of the physics, scales-of-motion, limitations, advantages and input options associated with MM5. The goal of this workshop is to educate participants on the potential uses of MM5 modeled meteorological fields as they relate to regulatory applications (e.g., PSD, SIP and NSR). This workshop is geared toward air quality modeling personnel with extensive modeling experience. This workshop is lecture-based. Sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.</p>		
July 1998	Regional Strategies Centers and Regional Air Management Partnerships (RAMPs)	Portland, Oregon
<p>This session will bring together state and local air Directors and staff to review concepts of Regional Strategy Center and RAMPs. Topics to be discussed include scope and direction of Strategy Centers, emission and meteorological inventory development, resource and time requirements. This session is sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.</p>		
August 1998	Emissions Inventory for PM2.5 and Implications	Reno, Nevada
<p>This workshop will bring together federal, state and local air agency staff members responsible for PM2.5 planning and modeling. The focus of this workshop will be to review emission inventory needs for SIP planning and modeling requirements. Sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.</p>		

August 1998 Regional Haze & Visibility Salt Lake City, Utah

The purpose of this workshop is to explore the revisions to the existing visibility regulations and review the impacts that these revisions will have on state and local air agencies. Topics include: initial SIP and subsequent SIP revision requirements; progress targets; emission control strategies; and stakeholder relationships. Sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG, and possibly FLMs.

September 1998 Woodstove Curtailment Program Portland, Oregon

This workshop will examine the effectiveness of residential wood combustion episodic control strategies instituted to control PM10 emissions in the West and look at the applicability of these programs under the PM2.5 NAAQS revisions. WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG will sponsor this workshop.

October 1998 Open-Market Trading Albuquerque, New Mexico

This workshop, sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG, will bring together federal, state and local air staff members involved in Open-Market Trading. This course will review EPA's policy on Open-Market Trading and the impacts on state and local air agencies including OM trading requirements and accountability.

October 1998 Basic Permitting Coeur d' Alene, Idaho

This workshop offers the basic skills necessary to write preconstruction permits. The course will cover calculations of emissions and regulatory evaluations. Title V will not be covered in this course. The workshop is sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.

November 1998 Small Business Assistance Program/Air Toxics Denver, Colorado

This workshop will bring together federal, state and local air agency staff members responsible for working with Small Business Assistance Programs (SBAP)/Air Toxics. This second annual workshop will provide training and updates on new applicable federal air quality rules. This workshop will be sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG.

Tentative WESTAR Workshops for CY 1998

December 1998 New Source Review Reform/PSD Reno, Nevada

This workshop, sponsored by WESTAR's Western Regional Air Quality Training Center and EPA's OAQPS EOG, will review the soon-to-be promulgated New Source Review (NSR) Reform. The goal of the workshop is to familiarize federal, state and local air agency staff on the changes to the NSR program. Execution of this workshop is reliant on promulgation of the NSR Reform program (anticipated promulgation late CY 1998).

Other WESTAR Meetings & Conferences for CY 1998

Feb. 4 - 5th	Pollution Prevention in Permitting Pilot Project (P4 Project)	Seattle, Washington
	This workshop is designed to familiarize senior state permitting staff with the practice of incorporating pollution prevention and operational flexibility into Title V Permits. The workshop will include examples from successful P4 pilot projects, criteria for selecting candidate P4 sources and case study exercises. This workshop is sponsored by WESTAR, and Ross & Associates.	
March 9 - 11th	WESTAR's Spring Business Meeting	San Diego, California
	WESTAR Director's Spring Business Meeting	
TBA	Training Center Advisory Committee Meeting	TBA
TBA	Fall Technical Conference	TBA
TBA	Fall Business Meeting	TBA

Evaluation

Table of Contents

Training Evaluation Resources

<u>Overview of Evaluation</u>	Page D1
--	---------

<u>MARAMA Workshop Evaluation</u>	Page D5
--	---------

This is a one-page form to evaluate the workshop as a whole, including things participants liked, suggestions for improvement.

<u>CARB Course Evaluation</u>	Page D9
--	---------

This is a one-page form that is used to gather feedback on participant satisfaction.

<u>CARB Evaluation by Trainees On-Site</u>	Page D13
---	----------

This is an in-depth form used in evaluating the CARB 100 series program. It includes a profile of the respondent, as well as assessment of course content, materials, and instructors.

<u>Daily Evaluation Form-Air 211/How to Investigate and Prepare a PSD/NSR Case</u>	Page D19
---	----------

This is a one-page form that was completed at the end of each day of a three-day course during the pilot test of the course. Participants were asked to rate each session from excellent to poor and to provide comments and suggestions.

<u>In-Depth Evaluation Form-AIR 211</u>	Page D27
--	----------

This in-depth form was completed by participants at the end of the training course. It was used in conjunction with the daily evaluation form.

<u>Session Evaluation Form</u>	Page D33
---	----------

This in-depth form was designed to be completed at the end of the training program. It includes questions on course design and content, materials, instructors, and facilities.

<u>National AIRS Conference</u>	Page D39
--	----------

This one-page form asks participants to rate each session as excellent, good, or poor, and to provide comments on the reverse side of the page.

<u>Participant Evaluation Form-Ecological Risk and Decisionmaking Workshop</u> ...	Page D43
---	----------

This form used a combination of check-off questions and open-ended questions. It was used in evaluating the pilot test of the course.

Operating Permit Program Training-Workshop I & II Evaluation Page D49

This form was used in evaluating workshops presented by the Minnesota Pollution Control Agency. It includes questions designed to obtain feedback on how well the participants think they understand the material presented as well as feedback on facilitators, materials, facilities, etc.

Evaluation Form for Videoconference Training Page D59

This form was used to evaluate a satellite video broadcast training program. In addition to standard questions on course content and materials, it includes questions concerning the videoconference process and effectiveness.

Observation Sheet Page D65

This form was used by a participant-observer to evaluate a presentation of the CARB 100 series. The results were used in conjunction with participant feedback on the course.

Evaluation

Why Conduct Evaluations?

Training involves a considerable investment of staff time and, generally, agency funds. It is important to determine whether the training met its objectives and was effective. It is also important to determine whether additional training needs remain. Evaluation can provide the answers to these questions and can also help an agency decide which courses to select in the future, based on their past effectiveness.

Approaches to Evaluation

Evaluation of training programs can use several different approaches. These include:

- ◆ **Participant Feedback.** This feedback can ascertain whether participants found the course useful, understandable, too short or long, too difficult or easy, and other factors. However, this type of evaluation often reflects whether the participants liked the instructors, were comfortable in the room, and other “satisfaction” measures—not necessarily whether the course met their needs or was effective. This form of feedback is generally obtained through a written feedback form, designed to be easy to complete.
- ◆ **Tests or Quizzes.** Tests can be administered at the end of the course only (post-tests) to determine knowledge or skill level at the completion of the course. A better approach is to administer a pre-test before the course in addition to the post-test to enable the evaluator to determine the improvement that was due to the course. Post-test results can also indicate needs for further training.
- ◆ **Instructor Feedback.** Feedback from instructors is particularly useful when pilot testing new courses. The instructors can provide valuable insights into participant reactions as well as whether they thought the flow of their session was appropriate, the logic was solid, the content was complete, etc.—factors they could only know by actually delivering the course. This feedback can be obtained through informal discussions following each day or the entire course or through more formal interviews.
- ◆ **Participant-Observation.** For a new course, it is useful to have an evaluator sit through the course as a “participant-observer” taking notes and observing the instructor and participants. The participant-observer can see if participants are paying attention and if the instructors are speaking effectively. They can also document the actual content of the course, beyond what is contained in the instructor manual or promised in a provider catalog. This technique is also useful if your agency is considering a course for your staff, if you can observe the course as it is delivered to another agency.
- ◆ **Follow-up Interviews or Questionnaires.** Follow-up interviews and questionnaires can be used to supplement the immediate reactions to the course obtained through the methods listed above. These interviews can involve the participants as well as their

supervisors and should address whether the course provided useful information, whether items should be added to the course or emphasized, or whether items should be deleted from the course or de-emphasized. The follow-up can also obtain examples of how the training assisted the participant in improving his or her job performance.

Tips on Designing and Conducting Evaluations

The materials in this section of *Tools for Trainers* provide examples of the various types of evaluations you might conduct. The key element in designing an evaluation is defining the objectives of the evaluation — what questions should it answer or what decisions will it affect? Examples, and the implications for the design include:

- ◆ **Course improvement.** If a course is offered more than once, it is useful to obtain feedback from participants so that the course can be improved for its future delivery. To meet this objective, the evaluation should address the course content and materials that could be changed in the future, such as topics that should be added or deleted; level of the course (basic to advanced); usefulness of materials; relevance of small group exercises; and quality of visual aids. Participant feedback, participant-observation, and instructor feedback are particularly useful.
- ◆ **Selection of instructors.** Some instructors are more effective than others. Evaluation can help you select the best instructors and to provide assistance or training-of-trainers to those whose delivery skills need improvement. Participant feedback and participant-observation are most useful.
- ◆ **Selection of courses from various alternatives.** There might be several providers who offer courses on a given topic. Evaluation can assist you in selecting the best course for your agency staff. In these cases, it is useful to establish some criteria, such as length of the course, method of delivery, and level of the course, and then to evaluate the various alternatives that meet the criteria. Participant-observation is the best approach, if you or another representative of your agency can attend the course in another location.
- ◆ **Documentation of results.** You might be asked to document the results of training — the return on the training investment. In this case, participant satisfaction is less important than changes in knowledge and skill that led to improvement in job performance. Test results are useful to provide quantitative documentation. Follow-up interviews with trainees and their supervisors are useful in providing anecdotes and examples. If the training was intended to resolve a specific problem, follow-up measurement or examination of the problem will be needed.
- ◆ **Promotion of training or specific courses.** In competing for scarce resources, you might find it necessary to promote the value of training in general or specific courses. In this case, it is most important to determine what types of information will have the most effect with the target audience. Documented results are generally effective, with some participant feedback such as quotes on course quality and usefulness. A combination of quantifiable results, such as an increase in number and proportion of successful

enforcement cases, with anecdotes that illustrate improved performance is often the most effective.

Post-tests can also be used to determine whether trainees should receive some form of credit or a certificate for the course.

Evaluation results feed back into needs assessment. Areas that were not covered adequately in the course, based on trainee feedback, may constitute continuing training needs. Trainees might recognize additional training needs as a result of their participation in a related course or, as trainees improve their skills in one area, supervisors might recognize needs in another area.

It is helpful to work with the training provider on the course evaluation and to share the results. In some cases, the provider will have their own participant feedback forms that are tailored to the course and its individual sessions. The provider might also administer pre-tests and/or post-tests.

Whenever possible, your evaluation should include some form of follow-up with trainees, their supervisors, or even the regulated community. This follow-up is very useful in documenting changes in knowledge or skill that can be attributed to the training program, problems that have been overcome, and issues that have been resolved. It also provides feedback on what proved to be more useful and less useful to the trainees in their jobs. After they have had an opportunity to apply their new knowledge and/or skills, the trainees can identify strengths or weaknesses in the training that might not have been apparent during the course. Comments such as "I found that I didn't really understand this process (method, rule, etc.) as well as I thought I did" or "the course didn't address this aspect of the process (method, rule, etc.)" can identify continuing training needs and can also assist training providers in improving their courses.

SURVEY PROFILE

In order to make future training more effective, it is necessary to understand the needs of participants. To that end, please provide the following information:

1. Your affiliation:

_____ Federal agency

_____ State agency

_____ Local agency

_____ Other (please specify) _____

2. Your profession/position/title: _____

3. Approximate number of years in this type of position: _____

4. Brief description of your responsibilities/interests:

5. Are the courses appropriately designed for someone with your background?

too advanced 1 2 3 4 5 too elementary

5a. Why or why not?

6. Were the course objectives clearly stated for each course? yes no

7. If they were stated, were they met? yes no

8. If they were not met, which ones were not?

9. Was the amount of time allotted each course appropriate? yes no

10. Was the time allowed for questions/discussions adequate? yes no

11. Were the topics/materials well organized? yes no

COURSE CONTENT

12. Perceived applicability of course to current work
right on target 1 2 3 4 5 missed the mark

13. Perceived usefulness of course to current work
critical 1 2 3 4 5 not useful

14. Did you find the courses to be stimulating?
fascinating 1 2 3 4 5 deadly!

15. How challenging are the courses?
too challenging 1 2 3 4 5 not challenging at all

16. Did examinations reflect course content? yes no

COURSE MATERIALS

17. How would you rate the videos and/or slides?
clarified topics 1 2 3 4 5 confusing or unclear
and ideas

18. How would you rate the quality of the printed material?
useful 1 2 3 4 5 worthless

19. How would you rate the quantity of the printed material?
too much just right inadequate

20. Was the distribution of printed materials timely and relevant?
too early just in time too late

21. How was the reproduction quality of the handouts?
readable 1 2 3 4 5 unreadable

22. Was there sufficient opportunity for interaction/
discussion? yes no
23. Were the instructors' presentations well coordinated? yes no
24. Were the training materials consistent? yes no
25. Were the instructors able to hold your attention?
always sometimes rarely
26. Were the instructors knowledgeable about their subjects?
very knowledgeable knowledgeable limited knowledge
27. Were the instructors sufficiently experienced in their subject areas?
very experienced experienced limited experience
28. Were the instructors well prepared for their sessions?
always usually seldom
29. Were the instructors able to answer your questions satisfactorily?
always usually seldom
30. Were the instructors readily understood?
always usually seldom
31. Did the instructors begin and end on time?
always usually seldom
32. Was the training site setting (e.g., room size, temperature,
brightness) suitable? yes no
33. Was the audio/visual reception satisfactory? yes no
34. How did these courses compare to all others that you have taken?
one of the best 1 2 3 4 5 one of the worst
35. Did the courses meet your expectations? yes no
- 35a. If not, why not?

36. Were the courses efficiently managed?
well managed 1 2 3 4 5 needs improvement
37. Which courses were especially beneficial and why?

38. Which courses were least beneficial and why?

39. How would you improve on any of the courses?

Please use the bottom of this page for any additional comments.
Please include any comments about this form as well.

Thank you for taking the time to complete this form. We hope you enjoyed this course.

Which aspects of the workshop were most beneficial and why? _____

Were any parts of the course or course materials confusing or difficult to understand? _____

After participating in this workshop, do you feel you have a better understanding of ecological risk assessment and the decision making process? ☐ Yes ☐ No

Do you have any suggestions on how information could be presented more effectively?

Are there aspects of the workshop that you think need more/less emphasis?

Did the workshop meet your expectations? ☐ Yes ☐ No

Please provide any other comments or suggestions in the space below

Thank you for your assistance!

Operating Permit Program Training Workshop I and II Evaluation

Operating Permit Program Training

WORKSHOP I EVALUATION

Directions: Please complete the form below to let us know what you liked and what you would like to see improved in Operating Permit Program Training, Workshop I. We will do our best to incorporate changes into future workshops. Thank you for your cooperation.

Please circle your answer	Strongly Disagree	Agree	Strongly Agree
---------------------------	----------------------	-------	-------------------

1. As a result of this Workshop, I can now apply the necessary skills to effectively:

a. understand the new Air Quality Operating Permit Program as administered by MPCA

1 2 3 4 5

b. identify pollutants regulated by the CAAA and State Air Quality Rules

1 2 3 4 5

c. identify my responsibilities as an air quality permit applicant.

1 2 3 4 5

d. understand the basic flow of the permit application:

- describe my facility 1 2 3 4 5
- locate and describe emission units 1 2 3 4 5
- determine potential to emit 1 2 3 4 5
- identify the best type of permit for my facility. 1 2 3 4 5

e. identify additional resources for completing my permit application.

1 2 3 4 5

g. understand the complaint system

1 2 3 4 5

Comments:

	Strongly Disagree		Agree		Strongly Agree
--	----------------------	--	-------	--	-------------------

2. There was agreement between the announced Workshop I objectives and what was presented.

1 2 3 4 5

3. How do you rate the facilitators' performance?

a. The facilitators were knowledgeable about contents of the modules

1 2 3 4 5

b. The facilitators' presentations were well organized

1 2 3 4 5

c. The facilitators were approachable and responsive.

1 2 3 4 5

Comments:

4. How do you rate the balance of facilitator's remarks, presentation materials, classroom tools and handouts?

a. Good balance 1 2 3 4 5

b. sufficient facilitator remarks
5 1 2 3 4

c. adequate reading materials 1 2 3 4 5

d. appropriate and enough examples 1 2 3 4 5

e. appropriate tools for classroom discussion.
5 1 2 3 4

Comments:

6. What was your reaction to the workshop? Please circle your answer.

Excellent	Very Good	Good	Fair	Poor
1	2	3	4	5

Please explain your reaction:

6. How do you feel about the pacing of the program?

- a. Too fast
- b. Appropriate
- c. Too slow

7. What are your on-going training needs? In what way did the program meet or not meet your need? Please explain your answer.

8. How could Air Quality Division best meet your need? Please explain your possible need for additional activities and specific training topics:

9. What did you enjoy most about this workshop?

10. What did you like least about this workshop?

11. How can Workshop I be improved?

12. Please add any additional comments that will help us to improve our future workshops (e.g. additional activities, specific training topics, geographical region preferences, cost of workshop, and size of class)

Evaluation Form for Videoconference Training

Evaluation Form for Videoconference Training

I. OVERALL RATING

1. Overall, I think this course was:
 - a. excellent
 - b. very good
 - c. good
 - d. fair
 - e. poor
2. Were the overall objectives of the course met?
 - a. yes
 - b. no
 - c. more than expected
 - d. less than expected
3. The amount of time allotted for course was:
 - a. sufficient
 - b. too long
 - c. too short

II. TECHNICAL CONTENT

1. Course content was:
 - a. beneficial for improving current inspection techniques
 - b. too general to apply to specific job requirements
 - c. too complex
 - d. not applicable
2. Course content was presented in an interesting manner.
 - a. agree
 - b. disagree
 - c. no opinion
3. Panel members were quite knowledgeable about their subject areas.
 - a. agree
 - b. disagree
 - c. no opinion

III. INSTRUCTIONAL MATERIALS

1. Were the handouts appropriate for the course content?
 - a. yes
 - b. no
 - c. more than I expected
 - d. less than I expected

2. Were the handouts helpful in understanding the presentation of the workshop?
 - a. yes
 - b. no
 - c. no opinion
3. The audio-visual materials (i.e., slides, view graphs) aided my understanding of the topics presented.
 - a. agree
 - b. disagree
 - c. no opinion

IV. VIDEOCONFERENCE EVALUATION

1. Was the video presentation clear and easy to view?
 - a. yes
 - b. no
 - c. no opinion
2. Were you able to hear the instructor?
 - a. yes
 - b. no
 - c. no opinion
3. Did the telephone interaction by the viewing audience contribute to the program?
 - a. excellent
 - b. good
 - c. fair
 - d. poor
4. Was the onsite coordinator helpful?
 - a. yes
 - b. no
 - c. no opinion
5. How would you rate the audience's ability to get their questions answered using videoconference training?
 - a. excellent
 - b. good
 - c. fair
 - d. poor
6. Was the time allotted for questions sufficient?
 - a. yes
 - b. no
 - c. no opinion

7. Rate how the overall objective of the course was met using video-conference training?

- a. excellent
- b. good
- c. fair
- d. poor

8. Classroom environment and facilities were:

- a. excellent
- b. good
- c. fair
- d. poor

V. GENERAL COMMENTS

1. I consider the most needed improvements in the course are:

2. The "best" parts of this course were:

3. Additional comments:

Observation Sheet

OBSERVATION SHEET

Observer: _____

Session Name: _____

Time/Date: _____

Instructor(s): _____

1. Approximately how much time was devoted to each of the following (record actual times, e.g., 2:00-2:30, or estimate total time for each category):

Lecture _____

Questions and Answers _____

Video _____

Exercises _____

Break, Other _____

2. Did the instructor(s)

	Yes	Somewhat	No
Know the subject matter	_____	_____	_____
Speak clearly	_____	_____	_____
Use visual aids well	_____	_____	_____
Answer questions well	_____	_____	_____
Use good, relevant examples/stories	_____	_____	_____

Comments _____

3. Did the participants

	Yes	Somewhat	No
Listen attentively	_____	_____	_____
Lose interest at times, seem bored	_____	_____	_____
Ask questions that indicated interest	_____	_____	_____
Ask questions that indicated they were lost	_____	_____	_____
Participate enthusiastically in exercises	_____	_____	_____

Comments _____

4. Content

	Yes	Somewhat	No
Did the material seem too easy?	_____	_____	_____
Did the material seem too difficult?	_____	_____	_____
Was the material complete >	_____	_____	_____
Was the "state twist" adequate	_____	_____	_____
Was the material too "California-oriented"?	_____	_____	_____

Note as many examples of "state twist" as possible _____

Note material that seemed too "California-oriented" _____

General Comments
