The 1968 INVENTORY OF MUNICIPAL WASTE FACILITIES is published in ten volumes — one for each region as shown below:

- Region I** — EPA Publication No. OWP-1 — Volume 1  
Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
- Region II** — EPA Publication No. OWP-1 — Volume 2  
New Jersey, New York, Puerto Rico, Virgin Islands
- Region III** — EPA Publication No. OWP-1 — Volume 3  
Delaware, Maryland, Pennsylvania, Virginia, West Virginia, Washington, D. C.
- Region IV** — EPA Publication No. OWP-1 — Volume 4  
Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee
- Region V** — EPA Publication No. OWP-1 — Volume 5  
Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin
- Region VI** — EPA Publication No. OWP-1 — Volume 6  
Arkansas, Louisiana, New Mexico, Oklahoma, Texas
- Region VII** — EPA Publication No. OWP-1 — Volume 7  
Iowa, Kansas, Missouri, Nebraska
- Region VIII** — EPA Publication No. OWP-1 — Volume 8  
Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming
- Region IX** — EPA Publication No. OWP-1 — Volume 9  
Arizona, California, Hawaii, Nevada, American Samoa, Guam, Trust Territories of Pacific Islands, Wake Island
- Region X** — EPA Publication No. OWP-1 — Volume 10  
Alaska, Idaho, Oregon, Washington

**Environmental Protection Agency Publication No. OWP-1**

**Volume 9**

**1971**

## INTRODUCTION

The municipal waste facilities described in this publication are those reported by the States and Territories of the United States as being in place on January 1, 1968. The data presented were collected by the various State and Territorial water pollution control agencies and processed through the Regional and Headquarters offices of [at that time] the Federal Water Pollution Control Administration.\* The inventory is the fifth to be taken on a national basis. The previous four, in 1940 (1), 1945 (2), 1957 (3) and 1962 (4), were conducted and published by the U.S. Public Health Service.

A "facility", as referred to in this publication, is defined as a treatment plant, or, where wastewater is discharged raw, the collection system, for disposal of domestic and industrial wastewaters. The facilities reported here are those associated with municipal type operations and do not include those at: (1) institutions such as schools, hospitals, or parks; (2) private installations such as trailer courts, shopping centers, or motels; (3) separate industrial waste disposals; or (4) Federal installations.

Facilities are listed alphabetically within States by community or, where a sanitary district, public utility district, etc., is concerned, by the name of that entity. States are grouped within the ten volumes of this publication according to the Environmental Protection Agency Region in which they are located.

Each community listed has some type of sewer for collection and disposal of domestic and industrial wastewaters. The wastewaters may be discharged raw or they may be treated either by a plant within the community or by one in a neighboring community or district. (See the "Key to Entries in Individual Listings" on Page vii, and the accompanying "Notes Regarding Entries" for conventions and codes used to show the basic characteristics of the facilities and other detailed data including needs for improved treatment.) Following the listing of individual facilities there is for each State a summary of plants serving communities other than their own with the names of the "served" communities.

Data in this and the other nine volumes of this publication have been analyzed on a national basis and results published in Federal Water Quality Administration Publication No. CWT-6, 1970, "Statistical Summary — 1968 Inventory of Municipal Waste Facilities in the United States".

---

\*This publication was originally planned as FWQA Publication No. CWT-7 with nine volumes corresponding to the former FWPCA Regions. For convenience of future reference, it has been restructured into ten volumes corresponding to the existing ten Regions of the Environmental Protection Agency and assigned an EPA publication number.

**ENVIRONMENTAL PROTECTION AGENCY**  
**Regions and Regional Offices**

## REGION IX

## **ACKNOWLEDGEMENT**

This publication includes data collected by the various State water pollution control agencies and processed through the regions and headquarters of the Environmental Protection Agency, Office of Water Programs. Appreciation is expressed to personnel of the State agencies for their data collection efforts and to the staffs of the Regional Offices for their review, evaluation, assembly and submission of the data.

		Reported flow in millions of gallons per day.											
Heading	Entry	Community or district in which the facility is located.		Year the facility was placed into operation.		Name the point of discharge. See Appendix " A ".		Type treatment provided, or, "SKIPPED" if treatment is provided by another facility.		Type sewer in or planned for. See Tabulation notes.		Describes the abatement needs.	
		COMMUNITY NAME AND COUNTY	BASIN YR BG YR RV	DISCHARGE TO	REMARKS	POP SERVED CENSUS	FLO MGD DAILY DESIGN	TYPE TREATMENT DES P.E.	S E W	P.E. BOD UNTREAT DISCH	NEEDS	TREATMENT	
	*TRICKVILLE 19999 BENLARGO 1003	County in which the facility is located.	Year in which modifications were made. Use latest dates.	BRANCH FLAG CREEK	PLANT BEING MODIFIED	10,000	.830	SECONDARY STABILIZATION POND 11,000	S	10,000	2,000	1 ENLARGEMENT	@ SM GA BOA L GOR
		Unique OWP County Identification.			Such remarks as are pertinent to the facility.	18,214	1.000	Plant design population equivalent of BOD removal.	E			P.E. BOD untreated.	
		Number assigned by OWP. When combined with State Code number, is unique to the Location described.			This symbol is used to identify remarks and is clarified in that column where the symbolism is used.			Flow for which the facility was designed.	W			P.E. BOD discharged.	Actual effluent loads.
						Census Population from the latest Decennial Census.							Describes the treatment being provided, or, refers to facility providing treatment.

\* Where an asterisk appears in the listing, it shows that the facility serves other communities.

# **NOTES REGARDING TABULATIONS**

## **Definitions, Conventions and Codes Used in the Inventory Records**

### **General**

The location, type, capacity, point of discharge, degree of treatment (where provided) and additional abatement needs (if any) are shown in the listing for each facility reported in the inventory. Records are arranged alphabetically by the name of the community, sanitary district, or other political or administrative area in which the facility is located.

Definitions of the data elements included in the record of each facility and the conventions and codes used are explained below and illustrated in the chart on the preceding page. Where data were not reported, an "X" will appear in the appropriate place in the record. A hyphen (-) is used to show that a data element does not apply to the facility reported.

### **Data Elements**

#### **COMMUNITY NAME**

This is the name of the community in which the facility is located, or, in the case of an independent facility such as a sewer sanitary district, commission or authority, the name of that entity. The five-digit number directly below the name of the community is one which has been assigned by the Office of Water Programs (OWP).

#### **COUNTY**

This is the county in which the facility is located. The three-digit number directly below the name of the county is the unique number for that county as prescribed in the U.S. Bureau of

Standards publication, Federal Information Processing Standards No. 6-1, "Counties and County Equivalents of the States of the United States."

#### **BASIN**

The hydrological location of the facility is shown as a pair of two-digit numbers separated by a slash (/). The first two digits define the Major River Basin, the last two show the Minor River Basin as defined and coded by OWP. (See Appendix A, Page 3, for code key.)

#### **YEAR BEGAN (YR BG)**

This is the year that the facility was initially placed in operation.

#### **YEAR REVISED (YR RV)**

This is the year that the latest modification, if any, was made to the facility.

#### **DISCHARGE TO**

This entry shows the name of the water course or land area to which the untreated waste or treatment plant effluent is discharged. The following abbreviations are used:

Ar. --Arroyo	N. --North
Br. --Branch, Brook	Pd. --Pond
Ca. --Canal	R. --River
E. --East	S. --South
Fk. --Fork	Str. --Stream
L. --Lake	Trib. --Tributary
Ld. --Land	W. --West
Lt. --Little	Wa. --Wash

## **REMARKS**

This portion of the form is used to enter remarks pertinent to any data element reported. As shown in the illustration of an entry on page 00, the remark "plant being modified" is annotated by the symbol "@"." The symbol also appears under the column (last) headed NEEDS to show that the remark pertains to this particular data entry.

## **POPULATION SERVED (POP SERVED)**

This column entry is the estimated total number of people served by the facility, including those in any adjacent community(ies) the facility may serve.

## **CENSUS**

The population figures are those of the community in which the facility is located and are obtained from the 1960 Decennial Census or from the 1961 edition of the Rand McNally Atlas giving 1960 figures. Places which were created since 1960 have been assigned a population determined by a local census or agreement. Since the population is not normally definable for districts, commissions, or authorities, a dash (—) is entered here for these categories.

## **AVERAGE DAILY FLOW (FLO MGD)**

The waste flow to the facility is entered, in MGD, to three decimals, e.g., 1.250. This is the daily average over the period of a year so as to consider seasonal fluctuations. This figure, when it is related to the bottom entry of the column, will measure the relative amount of design capacity used.

## **DESIGNED FOR (DESIGN)**

The average daily flow for which the facility was designed, in MGD, is entered to three decimals, e.g., 2.125. This figure, when related to the top entry of the column, will show whether or not the plant is adequate or overloaded.

## **TREATMENT (TYPE TREATMENT)**

The principal treatment devices and methods are indicated by alphabetic symbols. The first

letter of the group signifies the major treatment method, process, or equipment; subsequent letters in the group describe details. The symbols are arranged in the order in which the treatment processes occur.

Combination units performing more than one function in a single structure are enclosed in parentheses. Enclosures in slashes (/) indicate parallel or alternate operations. Chlorination, where used, is generally noted only once in each plant, regardless of whether application is made at more than one point. (See Appendix B, Page 6, for code key.)

## **DESIGNED POPULATION EQUIVALENT (DES P.E.)**

This entry shows the capacity for removal of biodegradable organic materials for which the facility was designed in terms of the population equivalent (P.E.) of the biochemical oxygen demand (BOD — 5 day 20°C). The P.E. is computed on the basis of 0.17 lbs. per day per capita of BOD.

## **TYPE OF SEWER**

The type of sewer system is coded as follows:  
S--Separate (designed to carry domestic sewage and associated industrial wastes separately from stormwater runoff).

C--Combined (designed to carry domestic sewage, associated industrial wastes, and storm water runoff in the same sewers).

B--The community has both separate and combined sewers.

## **POPULATION EQUIVALENT (P.E. BOD)**

The left entry is the Population Equivalent of the untreated waste as it reaches the treatment plant. Only measured values are used, not estimates. This figure, when related to the Design P.E., will compare the actual biological loading with the biological design loading.

The right entry is the Population Equivalent of the treated waste as it is discharged to the receiving area. In the case of untreated wastes, the side-by-side entries will be the same. Only measured values are used, not estimates. This figure, when related to the untreated entry

should measure the relative efficiency of the treatment plant in reducing BOD.

## POLLUTION ABATEMENT NEEDS

Symbol, Title and Explanation. (Only one symbol should be used, but see "3.")

**0--New Treatment Facilities** This symbol indicates the need for a new plant when "None" appears in the "Treatment" column. Compare the use of this symbol with the use of symbol "4" below.

**1--Enlargement of Existing Facilities** This symbol indicates a need for enlargement of the existing treatment plant shown; for example, addition of another filter to a trickling filter plant. When this symbol is used, it indicates that the degree of treatment in use is considered to be adequate, but that additional capacity is required.

**2--Addition of Other Treatment Methods to Existing Facilities** This symbol indicates a need for addition of other treatment methods to the treatment plant shown; for example, the addition of trickling filters to a primary treatment plant. When this symbol is used, the degree of treatment is not considered to be adequate without modification, and the plant should be "upgraded."

**3--Chlorination** This is a specific requirement coming under symbol "2" above. It may be used either in conjunction with that symbol (as when chlorination plus other additions are needed), or in place of it (as when chlorination only is needed).

**4--Replacement of Existing Plant** This symbol indicates a need for replacement of the existing treatment. "Replacement" means that the plant replaced will no longer be used. It is possible that this replacement may be by a plant providing the same degree of treatment as that which is replaced. The symbol provides for recognition of the fact that pollution reduction has been provided for in the past, but that due to obsolescence, or for any other reason, the existing facilities are no longer capable of producing satisfactory results, are too expensive to operate, or for other reasons are being replaced.

**5--Improved Operation or Utilization of Existing Facilities**

**6--Connection to Adequate Existing Sewer System**

**7--No Project Needed**

## Appendix A

### MAJOR MINOR BASIN CODES

The Major Minor Basin codes designate river basins by means of four digits divided into two two-digit groups separated by a slash in the inventory record. The first two digits (the number pair to the left of the slash and of the heading for each basin area) designate the Major River Basin. The second two digits (to the right of the slash in the inventory — indented to the right in the following listing of codes) designate the Minor River Basin located within the Major River Basin. Thus, the four-digit group 01/05, in the inventory record, defines the Northeast Major River Basin and the Thames River Minor River Basin.

#### 01 NE — Northeast

- 01 Quinnipiac River & Western Connecticut Coastal
- 02 Housatonic River
- 03 Pawcatuck River & Eastern Connecticut Coastal
- 04 Connecticut River
- 05 Thames River
- 06 Narragansett Bay
- 07
- 08 Massachusetts Coastal
- 09 Merrimack River
- 10 Piscataqua River & New Hampshire Coastal

## Appendix B

### KEY TO SYMBOLS — WASTE TREATMENT PROCESS

A	—	Aeration
AA	—	activated sludge, diffused air aeration
AC	—	contact aerators
AE	—	extended aeration (in conjunction with AA or AM)
AM	—	activated sludge, mechanical aeration
AP	—	aeration, plain, without sludge return

B	Sludge beds	GW	separate grit washing device
BO	open	H	Sludge storage tanks (not second stage digestion units)
BC	glass covered	HC	covered
C	Settling Tanks	HM	with stirring or concentrating mechanism
CI	two story (Imhoff)	HO	open
CM	mechanically equipped	I	Sewage application to land
CP	plain, hopper bottom or intermittently drained for cleaning	IC	with cropping
CS	septic tank	IP	percolation beds
CT	multiple tray, mechanically equipped	IS	sub-surface application
D	Digester, separate sludge	IU	land underdrained
DA	digester, aerobic	K	Chemical treatment — Flocculation. Chemical treatment-type units or equipment not necessarily complete or operated as chemical treatment
DC	with cover (fixed if not otherwise specified)	KA	flocculation tank, air agitation
D (CG)	gasometer in fixed cover	KC	chemicals used
DE	gas used in engines (heat usually recovered)	KM	flocculation tank, mechanical agitation
DF	with floating cover	KX	no chemicals used
DG	with gasometer cover	L	Lagoons
DH	gas used in heating	LE	evaporation lagoons
DM	stirring mechanism	LO	oxidation lagoons or ponds
DO	open top	LP	lagoon for settling of sewage
DP	unheated	LS	sludge lagoons — not for treatment of sewage
DR	heated	O	Grease removal or skimming tanks — not incidental to settling tanks
DS	gas storage in separate holder	OA	aerated tank (diffused air)
DT	stage digestion	OM	mechanically equipped tank
E	Chlorination	S	Screens
EC	with contact tank	SC	comminutor (screenings ground in sewage stream)
EG	by chlorine gas	SF	fine screen (less than $\frac{1}{8}$ " openings)
EH	by hypochlorite	SG	screenings ground in separate grinder and returned to sewage flow
F	Filters	SH	bar rack ( $\frac{1}{2}$ " to 2" openings) hand cleaned
FC	contact beds	SI	intermediate screens ( $\frac{1}{8}$ " to $\frac{1}{2}$ " openings)
FM	magnetite (straining)	SM	bar rack ( $\frac{1}{2}$ " to 2" openings) mechanically cleaned
FO	roughing filters	SR	coarse rack (openings over 2")
FR	rapid sand or other sand straining	ST	garbage ground at plant and added to sewage flow
FS	intermittent sand	T	Sludge thickener
FT	trickling (no further details)		
FTH	high capacity		
FTN	fixed nozzle, standard capacity		
FTR	rotary distributor, standard capacity		
FTT	traveling distributor, standard capacity		
G	Grit chambers		
GA	aerated grit chambers		
GH	without continuous removal mechanism		
GM	with continuous removal mechanism		
GP	grit pocket or screen chamber		

TC ----- covered  
TM ----- stirring mechanism  
TO ----- open top  
**V** ----- Mechanical sludge dewatering  
VC ----- sludge centrifuge  
VV ----- rotary vacuum filter  
VO ----- other  
**X** ----- Sludge disposal  
XB ----- barged to sea  
XD ----- used for fertilizer  
XF ----- burned for fuel  
XN ----- incinerated  
XP ----- used for fill  
**Z** ----- Sludge conditioning  
ZA ----- chemicals used, alum  
ZC ----- chemicals used (unidentified)  
ZI ----- chemicals used, iron salt  
ZL ----- chemicals used, lime  
ZX ----- no chemicals used  
ZY ----- elutriation
