Active Water-Quality Monitoring Stations

INTRODUCTION

PURPOSE

Before any meaningful comprehensive type of water quality analysis can be made it is essential that all relevant data be readily available in an orderly fashion. This is true regardless of whether the analysis involves station to station stream quality comparisons, construction grant reviews, NPDES permits studies, or studies of point or nonpoint source contributions. The Monitoring and Pollution Source (MAPS) Directory organizes monitoring stations and discharge points/areas in sequential upstream order according to the STORET river mile scheme. Basin directories are being prepared for each state in Region VIII. This document has an open ended design to facilitate the addition of other factors or sources which affect water quality.

It is intended also, to serve as a working document for interested users who wish to enter additional sources, mileages, etc. The MAPS computer file can be updated directly from pages containing handwritten additions.

Explanation of Format

The structure or format of the directory is in the form of a dendritic diagram -- that is, the form is analogous to a tree with a trunk and its many branches. The starting point is at the mouth of its main stem and the reference mile points increase going upstream. Mileage stations are assigned to each tributary at the confluence where it enters a lower level tributary and the mileage sequence begins anew for that tributary. Also, STORET Index numbers are assigned to

each stream. Below is an example of a typical printout sheet (also refer to Figure 1):

1	2	3	INDEX NO.
COLORADO	RIVER		1101000
929.90	GREEN RIVER		010130
	243.90 WHITE RIVER		02000
	2.2 09306900/112WRD - F C M S		
	720.00 HEADWATERS GREEN RIVER		
977.30	UT0000761 FACILITY XYZ		
	etc..		

This section of the directory describes:

- o The Colorado River Basin (a level 1 stream with STORET Major Basin 11, Minor Basin 01, Terminal Stream No. 000).
- o The Green River which enters the Colorado River at Mile 929.90 (a level 2 tributary with STORET Index No. 010130).
- o The White River which enters the Green River at Mile 243.90 (a level 3 tributary with STORET Index No. 02000).
- o USGS Water Quality Station No. 09206900 on the White River 2.2 miles upstream from the mouth.

Figure 1. Map illustrating STORET river mile index conventions.

Legends and Conventions Used in MAPS Directory

Water Quality Monitoring Stations

Only the currently active water-quality monitoring stations are listed in the directory. References to other sources are required for the many other stations that were established under various special study programs in the past. Below are some of the Agency Codes used in the directory:

112WRD	U.S. Geological Survey (F=flow, C=chemical, S=sediment, T=temperature, M=microbiological)
21CØL001	Colorado State Health Department (PQ=primary quality station)
21CØDBWC	Denver Board of Water Commissioners
21CØMETR	Denver Metro Sewer District
21CØDHDP	Denver City and County Department of Health
21UTAH	Utah State Health, Department of Social Services
21WYDHSS	State of Wyoming, Department of Health and Social Services
21SDAK01	South Dakota Department of Environmental Protection
121MBRCE	U.S. Army Corps of Engineers
1110NET	EPA Headquarters
21NDHDWQ	North Dakota State Health Department
21MINN	Minnesota State Health Department
51MANEPB	Province of Manitoba, Canada Canada Health Department

National Pollutant Discharge Elimination System (NPDES)

The permits issued under this program are generally listed in groups

according to County. Where the exact location of a permit holder is known, that permit is listed in the directory according to its proper river-mile sequence. The basic information shown in a permit entry is the NPDES number, facility name, standard industrial classification number (SIC), and a "M" designation if the facility is classified as a major.

Summary List of Water Quality Stations

A summary list of the water-quality stations in the same order as they appear in the MAPS directory is contained in a separate section. This list is primarily for River Mile Index (RMI) retrieval purposes from the STORET system and contains Indices and River mileages. Please note that the leading zeroes are not shown and must be included in the retrieval requests.

Proposed Future Plans

The directory is intended to serve primarily as a reference document. Automated updating programs will be developed to keep the directory current and accurate. As with any data bank the contents of the file is as good as the effort put into it. Cooperation among the users to annotate changes or additions and to notify the Data Analysis Branch at least yearly of any discrepancies would certainly be a step toward the improvement of the future editions.

A few tentative plans concerning the directory are:

- o The directory would be published annually.
- o Water-quality stations and NPDES permits would be updated annually.

- o An attempt to describe characteristics of areas or reaches will be made. Such items could include drainage areas, irrigated acreages, segments affected by mining activities, etc.
