River Basin Directories:

- I. Arkansas River
- II. Colorado River
- III. North Platte River
- IV. Republican River
- V. Rio Grande River
- VI. South Platte River

Appendices:

- A. State Standards Stream Classification Codes
- B. List of NPDES Permits sorted by County

INTRODUCTION

PURPOSE

Before any meaningful comprehensive type of water quality analysis can be made it is essential that all relevant data be readily available in an orderly fashion. This is true regardless of whether the analysis involves station to station stream quality comparisons, construction grant reviews, NPDES permit studies, or studies of point or nonpoint source contributions. The Monitoring and Pollution Source (MAPS) Directory organizes monitoring stations and discharge point/areas in sequential upstream order according to the STORET river mile scheme. Basin directories have been prepared for each state in Region VIII. This document has an open ended design to facilitate the addition of other factors or sources which affect water quality.

It is intended also, to serve as a working document for interested users who wish to enter additional sources, mileages, etc. The MAPS computer file can be updated directly from pages containing handwritten additions.

Explanation of Format

The structure or format of the directory is in the form of a dendritic diagram -- that is, the form is analogous to a tree with a trunk and its many branches. The starting point is at the mouth of its main stem and the reference mile points increase going upstream. Mileage stations are assigned to each tributary at the confluence where it enters a lower level tributary and the mileage sequence begins anew for that tributary. Also, STORET Index

numbers are assigned to each stream. Below is an example of a typical printout sheet (also refer to Figure 1):

1	2	3	INDEX NO.
COLORADO	RIVER		1101000
929.90	GREEN RIVER		010130
	243.90	WHITE RIVER	02000
		HUC 14050001	6
		UIC 1010111 R2,C1,WS,AG	7
		EFFLUENT LIMITED/WATER QUALITY LIMITED	
	2.2	09306900/112WRD - F C M S	3
	720.00	HEADWATERS GREEN RIVER	
977.30	UT0000761	FACILITY XYZ	4
	etc..		

This section of the directory describes:

- o The Colorado River Basin (a level 1 stream with STORET Major Basin II, Minor Basin 01, Terminal Stream No. 000).
- o The Green River which enters the Colorado River at Mile 929.90 (a level 2 tributary with STORET Index No. 010130).
- o The White River which enters the Green River at Mile 243.90 (a level 3 tributary with STORET Index No. 02000).
- o The USGS Hydrologic Unit Code (HUC) for this segment of the White River. The HUC may change upstream and will be noted accordingly.
- o The Use Impairment Code (UIC) for this segment of the White River. This code may also change upstream.

- o Effluent or Water Quality Limited Segment Classification.
- o USGS Water Quality Station No. 09206900 on the White River
2.2 miles upstream from the mouth.

Legends and Conventions Used in MAPS Directory

Water Quality Monitoring Stations

Only the monitoring stations that contain water quality data within the past 5 years are listed in the directory. References to other sources are required for the many other stations that were established under various special study programs in the past. Below are some of the Agency Codes used in the directory:

112WRD	U.S. Geological Survey (F=flow, C=chemical, S=sediment, T=temperature, M=microbiological)
21COL001	Colorado State Health Department (PQ=primary quality station)
21CODBWC	Denver Board of Water Commissioners
21COMETR	Denver Metro Sewer District
21CODHDP	Denver City and County Department of Health
21UTAH	Utah State Health, Department of Social Services
21WYDHSS	State of Wyoming, Department of Health and Social Services
21SDAK01	South Dakota Department of Environmental Protection
121MBRCE	U.S. Army Corps of Engineers
111ONET	EPA Headquarters
21NDHDWQ	North Dakota State Health Department
21MINN	Minnesota State Health Department
51MANEPB	Province of Manitoba, Canada, Canada Health Department

Use Impairment Code (UIC)

A seven digit binary code has been established for this directory as a means to utilize for analytical purposes the state beneficial use classifications. The code "1" represents that the use applies to the stream segment and "0" indicates that the use does not apply. This representation allows for a generalized computer scan and comparison of water quality concentrations and applicable use criteria. The seven use categories coded are as follows:

- Column 1 - Aquatic Life - cold water
- Column 2 - Aquatic Life - warm water
- Column 3 - Domestic Water Supply
- Column 4 - Primary Contact Recreation (i.e. - swimming)
- Column 5 - Secondary Contact Recreation (i.e. - boating)
- Column 6 - Irrigation
- Column 7 - Stock Watering

Other Stream Classification Codes

Generally, the code that follows the UIC is the stream classification code designated by the appropriate state agency for water quality standards purpose. The appendix contains the description of the codes used.

The directory also includes the designation of the stream as being either effluent limited or water-quality limited.

Effluent Limited - Segment will meet applicable water quality standards after application of best practicable control technology for industry and secondary treatment for municipalities.

Water Quality Limited - Segment will not meet applicable water quality standards after application of best practicable control technology for industry and secondary treatment for municipalities.

An "AD" after the UIC indicates that the stream segment is an "Anti-degradation segment."

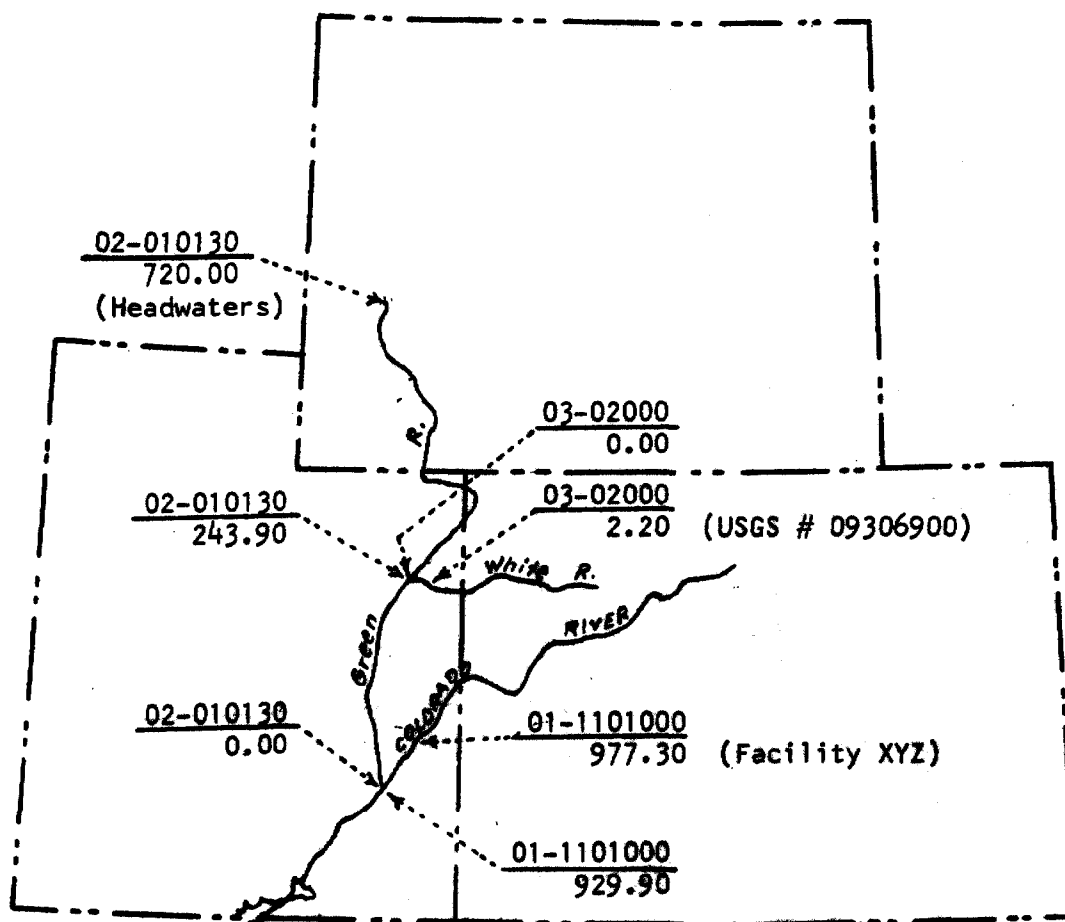

"Drainage" indicates that all tributaries (unless otherwise indicated) have the same UIC classification as the main stem.

Proposed Future Plans

The directory is intended to serve primarily as a reference document. Automated updating programs will be developed to keep the directory current and accurate. As with any data bank the contents of the file is as good as the effort put into it. Cooperation among the users to annotate changes or additions and to notify the Data Analysis Branch of any discrepancies would certainly be a step toward the improvement of the future editions.

A few tentative plans concerning the directory are:

- o The directory would be published bi-annually.
- o Monitoring stations would be reviewed to see if water-quality data are current.
- o An attempt to better describe characteristics of areas or reaches will be made. Such items could include drainage areas, irrigated acreages, segments affected by mining activities, etc.

APPENDICES

- A. State Standards Stream Classification Codes
- B. List of NPDES' Permits Sorted by County

COLORADO STREAM CLASSIFICATION CODES

- C1 - Cold Water Aquatic Life (temperatures not normally exceeding 20°C)
- W1 - Warm Water Aquatic Life (temperatures frequently exceeding 20°C)
- C2 - Cold Water Aquatic Life (limited by flow and stream bed characteristics)
- W2 - Warm Water Aquatic Life (limited by flow and stream bed characteristics)
- WS - Domestic Water Supply
- R1 - Primary Contact Recreation
- R2 - Secondary Contact Recreation
- AG - Agriculture

High Quality Waters Classifications

HQ-1 - Waters which constitute an outstanding state or national resource such as waters in national and state parks and forests, wildlife refuges, and waters of exceptional recreational and ecological significance.

HQ-2 - Other waters which are not classified as outstanding state or national resources.

As it was difficult to determine segment usage by these definitions, the usage code for the directory was replaced by HQ-1 or HQ-2 for these segments.

WYOMING STREAM CLASSIFICATION CODES

Class I - Waters which, due to their beneficial values, shall be maintained at their existing quality.

Class II - Waters capable of or presently supporting game fish.

Class III - Waters capable of or presently supporting non-game fish.

Class IV - Waters not capable of supporting fish.
