TOP TEN LIST Water Supply Emergency Preparedness and Security for Law Enforcement

Balancing public health protection, evidence preservation, public alerts, multi-agency coordination, and the safety of first responders will be a difficult task. These are ten ideas to help you achieve that balance:

- Know the water systems in your jurisdiction including the location and function of each water supply source and facility.
- Conduct walk through familiarization exercises regularly with water supply personnel. Discuss areas of system vulnerability.
- 8) Know the chemicals, at each facility. Be familiar with emergency response procedures and routine chemical delivery procedures and schedules.
- Meet water supply personnel face to face. Know official vehicles and identification badge or card type.
- Work with established community watch groups.

 Be sure to include a feedback mechanism for future support.
- Respond, investigate and report each and every incident involving water supply facilities using the appropriate reporting form. Contact the water supplier about any incident if they are not already present.
- Participate in public notification strategies in context with local emergency response plans. Know the clearly established communications responsibilities.
- **Exercise vigilance** during patrols for suspicious activity including those of vehicle movement, fire hydrant incidents or any other unusual incidents near water supply facilities.
- 2 Know the Homeland Security Advisory System response steps for law enforcement personnel.
- Water supply security...for the community and for your safety! All law enforcement personnel must be cognizant that both individual and collective efforts for increased water supply security will enhance community and officer safety.
