

## U.S. Environmental Protection Agency Office of Inspector General

# At a Glance

Catalyst for Improving the Environment

#### Why We Did This Review

The U.S. Environmental
Protection Agency Office of
Inspector General conducts site
visits of American Recovery and
Reinvestment Act of 2009
(Recovery Act) clean water and
drinking water projects. The
purpose of the visits is to confirm
compliance with selected
Recovery Act requirements.
We selected a project located in
Perkins, Oklahoma, for review.

#### **Background**

The Perkins Public Works Authority received a \$7,225,000 loan from the State of Oklahoma Water Resources Board through the state's Clean Water State **Revolving Fund Financing** Program. The purpose of the loan was to improve the wastewater treatment facility in order to meet its permitted discharge requirements. The loan included \$2 million in Recovery Act funds for loan forgiveness. The public works authority was required to repay the remaining loan amount of \$5,225,000 over 20 years.

For further information, contact our Office of Congressional, Public Affairs and Management at (202) 566-2391.

### American Recovery and Reinvestment Act Site Visit of the Wastewater Treatment Facility Improvements Project, Perkins, Oklahoma

#### What We Found

We conducted an unannounced visit of the construction site of the Perkins Public Works Authority's wastewater treatment facility improvements project in Perkins, Oklahoma, on April 19–22, 2010. We toured the project site; interviewed public works, engineering, and contractor personnel; and reviewed documentation related to Recovery Act requirements.

Based upon our site visit, we did not identify any issues that would require action by the Perkins Public Works Authority, the State of Oklahoma, or the U.S. Environmental Protection Agency.
