ACCESSING THE RBLC WEB

The RACT/BACT/LAER Clearinghouse (RBLC) maintains an on-line data base (RBLC Web) of all control technology determinations that have been submitted to it. The RBLC Web and other related information are available at the Internet address listed below. Detailed instructions about how to access the RBLC are contained in the RBLC User's Manual.

World Wide Web (WWW) <http://www.epa.gov/ttn/catc/>

The RBLC can be reached by clicking the appropriate text or icon on the CATC home page.

The RBLC Web site lets you access all of the information in the Clearinghouse with your Web browser. To access the online data entry portion of the RBLC, you must be an authorized permit agency editor. Contact the Clean Air Technology Center (CATC) Information Line at (919) 541-0800 for information on gaining authorization for online data entry. Data can also be entered off-line by using the RBLC Standalone Editor, a computer program that you can run on your personal computer. The RBLC Standalone Editor can be downloaded from the RBLC Web. It simulates data entry on the RBLC Web and generates a file that can be sent to the RBLC by E-mail or on a floppy disk. Call the CATC Information line for more information.

ACKNOWLEDGMENT

This project would not have been possible without the cooperation of the many State and local air pollution control agencies and EPA Regional Offices who submitted the necessary technical information. A list of all Regional offices and State and local agency RBLC contacts is provided in Appendix B.

(This page intentionally left blank)

INTRODUCTION

This RBLC annual report contains information on the 206 permits entered and the 455 permits modified in the Clearinghouse from January 2006 to December 2006 and provides an overview of data entry activity over the last four years. It summarizes this activity in terms of EPA Regions, States, and industrial processes; discusses trends over the past four years; and presents plans for additions and improvements to the clearinghouse. More detailed information is contained in the appendices.

Appendix A - About the RACT/BACT/LAER Clearinghouse: The regulatory background and history of the programs served by the RBLC, the purpose of RBLC, and a summary of RBLC Web capabilities.

Appendix B - Index of RBLC State and Local Contacts

Appendix C - Index of Control Technology Determinations Entered or Modified in 2006 Sorted by EPA Region and State: A summary listing of the determinations added or updated in 2006. Information includes the name of the company, permit date, process type code, process description, and RBLC ID number as a reference for additional information. A '*' next to the entry indicates that the determination is considered a DRAFT entry and may not be complete.

Previous versions of this annual report have provided extensive tables with detailed information on individual determinations entered in the report year and listings of determinations entered or modified within the past five years. This information is easily available through the RBLC Web and its query and reporting functions. Interested readers can browse the data base on-line for additional details.

A listing of RBLC Process Codes and the RBLC Data Entry Form with instructions are available in the RBLC User's Manual. The RBLC User's Manual and the RBLC Data Entry Form and instructions can be viewed on or downloaded from the RBLC Web.

NATIONAL SUMMARY OF RBLC ACTIVITY

The data entered into the RBLC are provided by State and local agencies. Submittals represent these agencies' permitting and reporting efforts for major new sources and modifications to existing major sources. Submittals to the RBLC are, for the most part, voluntary. Only LAER determinations must be submitted to the RBLC (section 173(d), Clean Air Act).

The year 2006's activity shows a 36 percent decrease from 2005 in the number of new submittals. The yearly totals for determinations entered into the RBLC for the years 2003 through 2006 are shown in Figure 1. Figure 2 shows each region's contribution over the four-year period and for the year 2006. Table 1 breaks down these entries by EPA Region and year for the four-year period.

Region 6 was the highest contributor (29% of the total), entering 59 determinations. Louisiana is responsible for 35 of those entries. This is a 100% increase from the total of the past three years. The other high contributors are Region 5 (20%) and Region 4 (13%). Last year, Region 4 was the highest contributor. A review of the contribution from each individual region is presented in the next section.

The RBLC works with EPA Regional Offices and State and local permitting agencies to identify major New Source Review (NSR) permits that have not been submitted to the Clearinghouse. Many agencies voluntarily entered these missing determinations. Once entered, the agencies may edit their determinations. Modifications to the existing determinations in the RBLC for years 2003 through 2006 are shown in Figure 3.

Figure 1 - Number of Determinations Entered Per Year (2003-2006)

TABLE 1. Determinations Entered by Region 2003 – 2006

Year	EPA Region										Total
	1	2	3	4	5	6	7	8	9	10	
2003	5	0	34	51	72	118	10	5	43	44	382
2004	2	1	32	89	19	69	15	10	5	12	254
2005	2	12	12	61	56	39	7	1	126	8	324
2006	0	3	10	26	41	59	24	11	24	8	206
Total	9	16	88	227	188	285	56	27	198	72	1168

EPA Regions:

Region 1 - Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Region 2 - New Jersey, New York, Puerto Rico and the U.S. Virgin Islands.

Region 3 - Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and the District of Columbia.

Region 4 - Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Region 5 - Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

Region 6 - Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

Region 7 - Iowa, Kansas, Missouri, and Nebraska.

Region 8 - Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Region 9 - Arizona, California, Hawaii, Nevada, and Pacific Islands and Tribal Nations subject to US law.

Region 10 - Alaska, Idaho, Oregon, and Washington.

Figure 2 - Number of Determinations Entered Per Region (2003-2006)

Figure 3 - Number of Determinations Updated Per Region (2003-2006)

REGIONAL SUMMARY OF RBLC ACTIVITY

The determinations entered by permitting agencies in each EPA Region in the years 2003 through 2006 were presented in Table 1. This section presents the contribution of these agencies, grouped by EPA Region, in more detail. Appendix C, Index of Control Technology Determinations Entered or Modified in 2006 and Ordered by EPA Region and State, provides a detailed list of 2006 entries and updates.

EPA REGION 1

In EPA Region 1, no determinations were added to the RBLC in 2006, this Region was the only one that did not add any determination during 2006. In the three previous years (2003 through 2005), Connecticut, Maine, New Hampshire, Rhode Island and Vermont entered a total of nine determinations. Maine submitted the greatest number of new determinations overall for the four-year period. (NOTE: EPA Region 1 has been responsible for issuing permits in MA since March 2003.) Thirty-five existing RBLC determinations were updated between 2003 and 2005 and 7 were updated in 2006; the only States that did not update determinations were Connecticut and Vermont. Figure 4 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

Figure 4 - Number of Determinations Ordered by State for Region 1 (2003-2006)

EPA REGION 2

Three new determinations were added to the RBLC in 2006 for Region 2. In the three previous years, 2003 through 2005, 13 determinations were entered. During the four-year period from 2003 through 2006, all of the States and Territories in Region 2 entered determinations. New Jersey was the leading State with 12 entries. Twenty-four determinations for Region 2 were updated in 2006. Determinations were updated for New Jersey, New York and Puerto Rico. New Jersey and New York were the leading States for updates in 2003 through 2005. In 2003 through 2005, a total of 33 determinations for Region 2 were updated, including determinations for all States and Territories in the Region. Figure 5 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2005 and 2006. (NOTE: EPA Region 2 issues NSR permits in PR, the VI and, more recently, NY since 2004.)

Figure - 5 Number of Determinations Ordered by State for Region 2 (2003 - 2006)

EPA REGION 3

Ten determinations were added to the RBLC from EPA Region 3 in 2006. In the three previous years, 2003 through 2005, 78 determinations were entered. Delaware (2), Pennsylvania (2), Virginia (5), and West Virginia (1) entered new determinations in 2006; D.C. and Maryland were the only ones that did not enter any new determinations. Pennsylvania and Virginia also had the highest totals over the four-year period. Pennsylvania and Virginia also led the way in updating determinations with 124 out of the 138 determinations updated between 2003 and 2006. Forty-six determinations from Region 3 were updated in 2006 and 92 were updated in 2003 through 2005. Washington DC did not update any entries in 2006. Figure 6 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

Figure 6 - Number of Determinations Ordered by State for Region 3 (2003 - 2006)

EPA REGION 4

Twenty-six determinations were added to the RBLC from EPA Region 4 in 2006, bringing the total over the four-year period to 227. Region 4 has the second-highest number of entries for the past 4 years, after Region 6 (286 entries). In the three previous years, 2003 through 2005, 201 determinations were entered, with Georgia (36 entries) and North Carolina (33 entries) having the largest numbers. Georgia (11 entries) entered the most determinations for 2006. Eighty-two determinations from Region 4 were updated in 2006, while 177 determinations were updated in 2003-2005. Figure 7 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

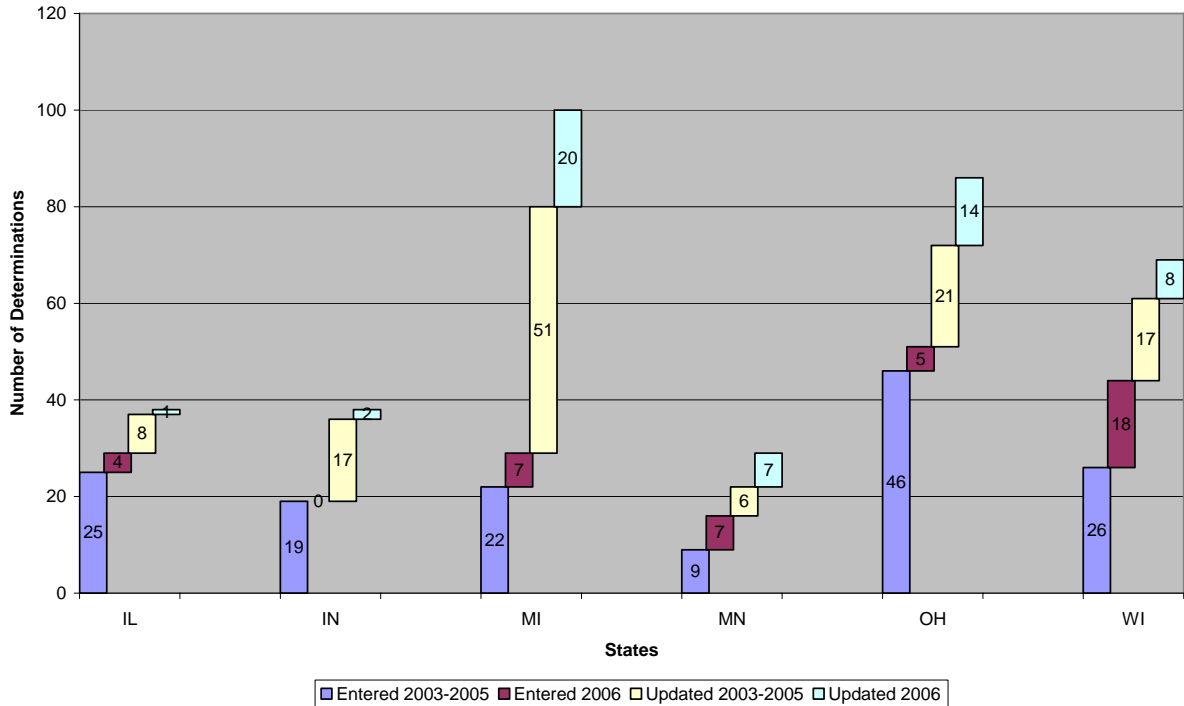

Figure 7 - Number of Determinations Ordered by State for Region 4 (2003-2006)

EPA REGION 5

Forty-one determinations were added to the RBLC from EPA Region 5 in 2006, with 56% of that total added by Wisconsin. In the three previous years, 2003 through 2005, 147 determinations were entered. Wisconsin and Ohio are the highest contributors for the four-year period with totals of 44 and 51 new determinations, respectively. With the exception of Indiana, all of the States updated determinations in 2006. A total of 52 determinations were updated in 2006, with all states updating entries. From 2003 to 2005, 120 determinations were updated, with all of the States also represented. Figure 8 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

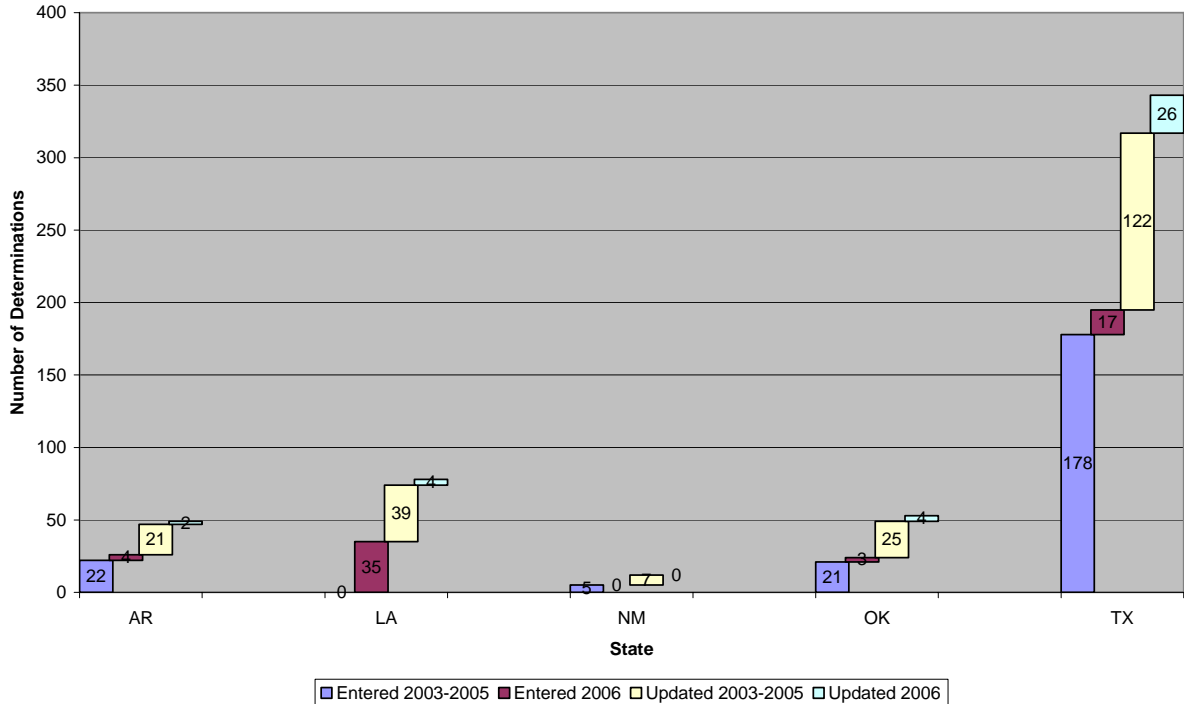

Figure 8 - Number of Determinations Ordered by State for Region 5 (2003 - 2006)

EPA REGION 6

Fifty-nine determinations were added to the RBLC from EPA Region 6 in 2006. Texas was the largest contributor for the four-year period. Louisiana added 35 new determinations in 2006, which represents about 60% of the new determinations added from Region 6 in 2006. In the three previous years, 226 new determinations were entered from Region 6. Arkansas, Louisiana, Oklahoma, and Texas entered new determinations in 2006, and the same States updated determinations. Thirty-six determinations from Region 6 States were updated in 2006. Figure 9 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

**Figure 9 - Number of Determinations Ordered by State for Region 6
(2003 - 2006)**

EPA REGION 7

Twenty-four determinations were added to the RBLC from EPA Region 7 in 2006. In the three previous years, 32 determinations were entered. Determinations were submitted from all States in the Region for the 2003-2006 period. Iowa (22) and Nebraska (24) were the highest contributors for the four-year period. Iowa submitted 3 new determinations, Missouri submitted 7 new determinations, and Nebraska submitted 14 new determinations in 2006. Kansas submitted no determinations in 2006. A total of 10 determinations from Region 7 were updated in 2006, with Iowa having the largest number for both 2006 and the four-year period from 2003 to 2006. A total of 44 determinations from Region 7 were updated between 2003 and 2006. Figure 10 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

**Figure 10 - number of Determinations Ordered by State for Region 7
(2003 - 2006)**

EPA REGION 8

Eleven determinations were added to the RBLC from EPA Region 8 in 2006. Only 3 States entered determinations in 2006; these States were Colorado (6), Utah (4) and North Dakota (1). In the three previous years, 2003 through 2005, 16 determinations were entered. The highest four-year contributor is Colorado, followed by Montana. Four determinations from Region 8 were updated in 2006. That is a decrease from 2003 through 2005, which saw 34 determinations updated. Colorado and Wyoming updated determinations in 2006. Figure 11 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

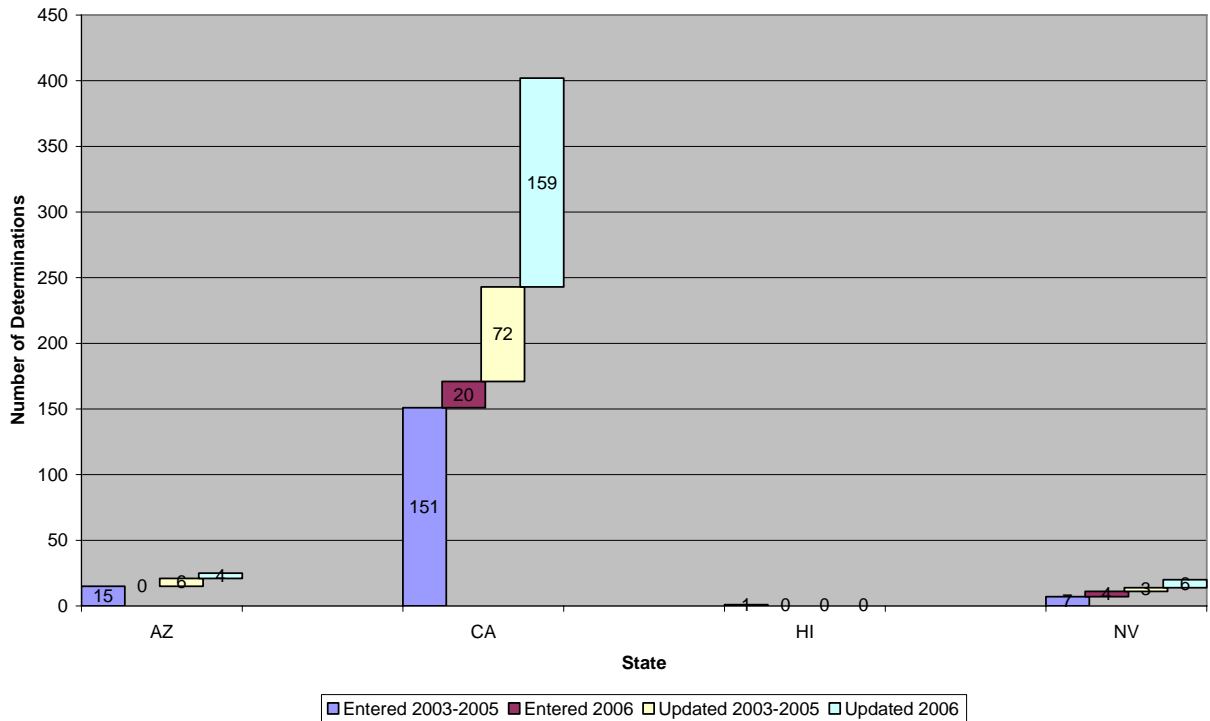

Figure 11 - Number of Determinations Ordered by State for Region 8 (2003 - 2006)

EPA REGION 9

Twenty-four determinations were added to the RBLC from EPA Region 9 in 2006. Only California (20) and Nevada (4) entered determinations during 2006. California agencies contributed 86% of the determinations added between 2003 and 2006. Other constituents of Region 9, Guam, American Samoa, and North Mariana Islands did not enter any determinations in the past four years. One hundred and sixty-eight determinations from Region 9 were updated in 2006 (the highest of all Regions), compared to 81 determinations updated in the previous three years. The overwhelming number of updates was made by the California agencies (159). Figure 12 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

Figure 12 - Number of Determinations Ordered by State for Region 9 (2003 - 2006)

EPA REGION 10

Eight new determinations were entered from Region 10 in 2006. Washington was the highest contributor for the four-year period, followed by Alaska and Oregon. All of the States in Region 10 except Idaho entered new determinations in 2006. Fifteen determinations from Region 10 were updated in 2006. Alaska did not update any determinations, on the other hand, Washington updated 11 determinations. Forty-six determinations from Region 10 were updated from 2003 through 2005, and most of them were from Washington and Alaska. Figure 13 shows the proportional entries by State for 2006 and the years 2003 through 2005, respectively, as well as the updates for 2003 through 2006.

Figure 13 - Number of Determinations Ordered by State by Region 10 (2003 - 2006)

INDUSTRY ACTIVITY SUMMARY

Table 2 lists major RBLC process categories, with examples of individual process types within each group. The process type examples presented in Table 2 are not meant to be definitive exhaustive lists of all process types within a process category. Instead, they represent some of the more recognizable types within a given group.

TABLE 2. RBLC Major Process Categories

Process Group Number/Name	Process Type Examples
10.000 COMBUSTION	Fuel Oil Combustion (Boilers) Coal Combustion (Boilers) Wood Waste Combustion (Boilers) Natural Gas Turbines Gasoline Engines Process Gas Turbines
20.000 WASTE DISPOSAL	Municipal Waste Combustors/Incinerators Industrial Wastewater Treatment Contaminated Water Treatment
30.000 WOOD PRODUCTS INDUSTRY	Reconstituted Panelboard Plants (waferboard, particleboard, etc.) Paper Production (Kraft Paper Making Processes) Woodworking Plywood Manufacturing
40.000 ORGANIC EVAPORATIVE LOSSES	Plastic Parts & Products Surface Coating Petroleum Liquid Storage in Floating Roof Tanks Organic Solvent Cleaning & Degreasing Dry Cleaning Printing – Packaging Wood Products/Furniture Surface Coating
50.000 PETROLEUM/NATURAL GAS PRODUCTION AND REFINING	Petroleum Refining Treating Processes Petroleum Refining Wastewater Treatment Petroleum Refining Equipment Leaks/Fugitive Emissions Oil and Gas Field Services

60.000 CHEMICALS MANUFACTURING	Phosphate Fertilizers Production Sulfuric Acid Plants Storage Tanks (SOCMI Chemicals) Rayon Production Processes Vents
70.000 FOOD AND AGRICULTURAL PRODUCTS	Vegetable Oil Production Alcoholic Beverages Production Alcohol Fuel Production Feed and Grain Storage
80.000 METALLURGICAL INDUSTRY	Steel Foundries Lead Acid Battery Manufacturing Electric Arc Furnaces Primary Lead Smelting
90.000 MINERAL PRODUCTS	Portland Cement Manufacturing Coal Handling/Processing Lime/Limestone Handling Brick Production
99.000 MISCELLANEOUS SOURCES	Industrial Process Cooling Towers Paved/Unpaved Roads Ash Storage, Handling Disposal Geothermal Power

Figure 14 (see page 21) illustrates the distribution of process groups specified in the determinations entered for 2006 and for the years 2003 through 2005 at the national level. A determination may report more than one process, so totals in the graph will not exactly match those in Table 1. Instead, they represent the number of determinations containing a particular type of process. The major categories shown in Figure 14 represent multiple processes as shown in Table 2. For instance, Process Category 10, Combustion, includes process groups for both external and internal combustion devices, each containing processes for each type of fuel that can be consumed.

The most frequently entered process group for the four-year period was the combustion processes group, followed distantly by the organic evaporative loss and miscellaneous sources groups. The total number of combustion process entries declined in 2006 from 2005's total (103 process entries in 2006 vs. 180 process entries in 2005).

Natural gas and fuel oil are the major fuel types used by combustion processes. Other fuels such as biomass, digester gas, landfill gas and other renewable fuels only make up 7 % of the process entries for the combustion processes group. This is slightly less than the 2005 totals.

Figure 14 - Distribution of Entries by Process Group (2003 through 2006)

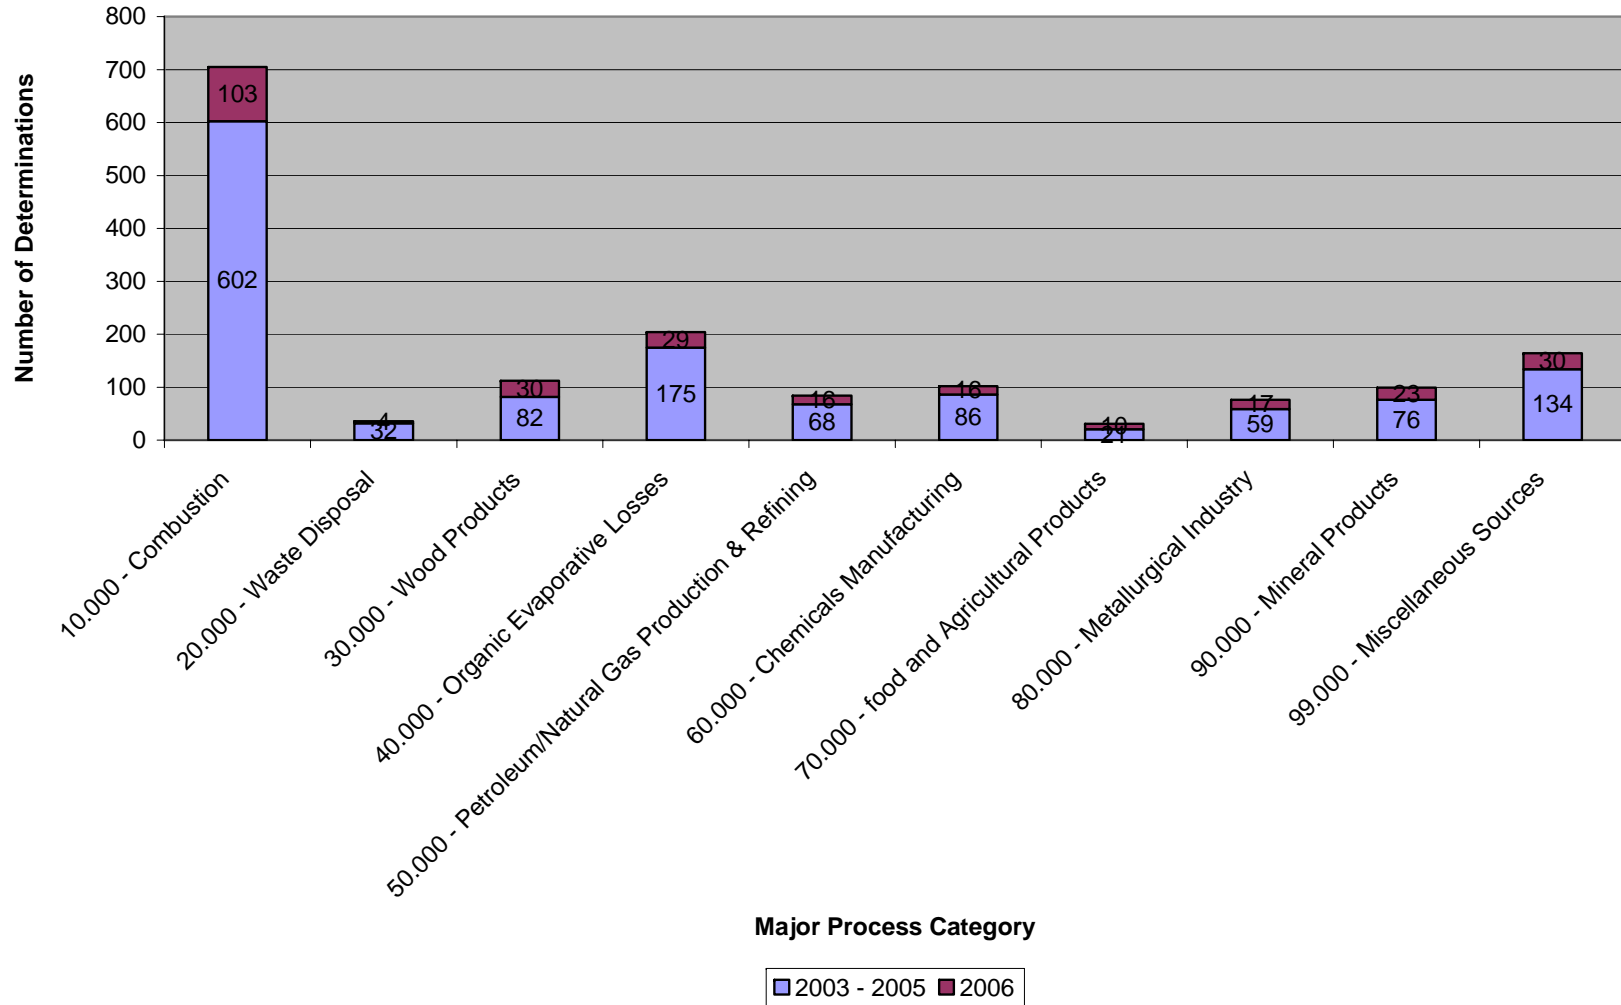

TABLE 3. Process Entries by Region in 2006

Process Group	EPA Region										Totals
	1	2	3	4	5	6	7	8	9	10	
10.000 - Combustion	0	3	4	10	13	36	9	10	12	6	103

RBLC PROGRAM DEVELOPMENT

In 2006, the RBLC continued to implement improvements, gather missing information, and process data, however, the RBLC was subject to increasing budget constraints. These budgetary constraints impacted several areas within the RBLC including efforts to gather new determinations. The number of new records inserted into the RBLC was 206 and, the number of modified records was 455. When compared to 2005 levels, these numbers represent a 36% decrease and a 60 % increase in the number of new and modified determinations, respectively.

In 2006, the RBLC saw the fruition of an effort started in 2005 - a Spanish language version of the RBLC program was opened in November 2006. (Please note that this means that the program to access, search, and read the RBLC information is now available in Spanish. The actual data in the RBLC is still available in only English.) The primary goal of this effort was to open the Clearinghouse to Mexican permits, but since the RBLC is accessible from anywhere in the world, any Spanish speaking country, agency, etc. may access this feature of the RBLC. We are also working on a Spanish version of the RBLC Standalone Editor. Once this program is completed – most likely in late 2008 – Mexican pollution control agencies may use it to enter their permit information into the RBLC. (Unfortunately, due to security constraints, on-line data entry and editing of Mexican permit information will not be available.)

The RBLC continued using WebEx © to conduct on-line training to State and Local agencies in 2006. During the year, training was provided to State and local agency staff on: Searching the RBLC Web; RBLC On-line Data Entry; and RBLC Off-line Data Entry using the Standalone Editor (the RBLC's PC-based software program). Participants must have a high speed Internet connection and a separate telephone line for voice communication to participate in the training. The training is offered free of charge (except for the price of a long distance telephone call). Participants can take training at their individual workstations or in a group setting. No travel is required and each session takes less than 2 hours to complete. Special training sessions for agencies or special groups can be arranged upon request.

System Improvements

The RBLC System is now many years old and what started as a mainframe system is now a Web based system. As the RBLC evolved pieces of legacy code remained. The older bits of code are now causing more and more problems and makes maintaining the current code very time consuming and thus, expensive. As a result, the RBLC has decided to update the computer code behind the RBLC system. We hope that creating a unified, structured code set will result in a more stable environment with lower maintenance cost in the long run. During the estimated two to three year period the RBLC update will take, EPA will maintain the current RBLC System, however, no system improvements will be made.

New and Emerging Environmental Technologies (NEET)

The RBLC-sponsored NEET Web site was initiated in 2004. The web site is managed by Research Triangle Institute (RTI) International under a cooperative agreement with EPA. (NOTE: The project was formerly known as the New and Emerging Air Technologies (NEAT) project, but the name was changed to broaden the site's long range potential.) It was opened to other users in December 2004. NEET celebrated its grand opening on February 4, 2005. As indicated by its name, NEET provides a platform for technology developers to list their technologies so that potential users can consider these technologies, especially in making BACT decisions. Direct links to NEET are provided on EPA's RBLC, Clean Air Technology Center (CATC), and Technology Transfer Network (TTN) Web pages. The direct Web address for NEET is <<http://neet.rti.org>>.

On-Going Work

The RBLC has taken steps to expand by providing for the inclusion of entries from Mexico and Canada. To that end, the RBLC opened a Spanish version of the RBLC in November 2006. All RBLC Web screens, including those that are required to search the RBLC permit data base and related help screens, are now available in Spanish. A Spanish version of the RBLC Standalone Editor software for off-line data entry was scheduled to be available in October 2006, however funding problems have delayed the work. Currently, we hope to have the Spanish version of the RBLC Standalone Editor by late October 2008.

Actions Completed in 2006:

- Opened Spanish version of RBLC Web (November 2006)
- Continue to provide regular on-line RBLC training sessions

Under construction:

Unfortunately, all improvements and revisions to the RBLC system have been placed on hold. This is because EPA has funded the first part of a project called the RBLC Efficiency Upgrades and Security Enhancements (REUSE) project. During this project we will be examining all of the RBLC computer code and basically bringing it all up to the same "standard". This will address the RBLC biggest problem – old, outdated computer code mixed in with newer, rewritten computer code. Creating a unified, updated, structured code set will result in a more stable environment with lower maintenance cost in the long run.

All inquiries concerning RBLC and information contained in the RBLC Web data base should be directed to:

APPENDIX A
ABOUT THE RACT/BACT/LAER CLEARINGHOUSE

(This page intentionally left blank)

BACKGROUND

The Clean Air Act prescribes several technology-based limitations affecting new or modified air pollution sources: 1) new source performance standards (NSPS); 2) best available control technology (BACT); and 3) lowest achievable emission rate (LAER). New Source Performance Standards are uniform national emission standards set by EPA for specific categories of new or modified stationary sources. In addition to meeting NSPS when applicable, major new or modified sources must also install either BACT or LAER, both of which are determined on a case-by-case basis. In all cases, BACT or LAER must be at least as stringent as any applicable NSPS. The BACT requirement, which is a part of the Prevention of Significant Air Quality Deterioration program (Sections 165 and 169 of the Clean Air Act), applies to emissions in areas that are in attainment with National Ambient Air Quality Standards (NAAQS). The LAER requirement, which is a part of the Nonattainment Program (Sections 171 and 172 of the Clean Air Act), applies to emissions that affect areas that are not in attainment with the NAAQS. While the specific criteria governing a BACT, LAER, or NSPS emission limit vary, the general underlying approach for all such determinations is to require "best control" on all major new or modified sources. Since 1977, State and local air pollution control agencies have gradually assumed primary responsibility for making BACT and LAER determinations. As this authority was decentralized from the Federal government, it became important that information be made available to control agencies to assist them in making control technology determinations in a nationally consistent manner. As a result, the BACT/LAER Clearinghouse was established in 1979.

The 1990 Clean Air Act Amendments (CAAA) mandated several minor changes to the BACT/LAER Clearinghouse. Although the changes were minor, State and local agencies should note them for future consideration. The first change involved the name and an addition to the type of data contained in the Clearinghouse. The name changed to the RACT/BACT/LAER Clearinghouse (RBLC) and now includes Reasonably Available Control Technology (RACT) determinations. RACT is defined as the lowest emission limitation that a particular source is capable of meeting by application of control technology that is reasonably available considering technological and economic feasibility. RACT is the minimum requirement EPA can accept for existing major sources in State non-attainment plans. Control Technique Guideline (CTG) documents were assembled by the EPA to assist State and local air pollution control agencies in determining the level of control that should be required within each area. The RBLC accepts case-by-case RACT decisions, as well as general RACT requirements, to assist State and local agencies in determining what level of control other areas of the country are requiring and, in turn, what level of control should be required within their jurisdiction.

The second change mandated by the 1990 CAAA involves LAER determinations. Prior to the 1990 CAAA, all submittals to the Clearinghouse were voluntary. However, Section 173(d) of the 1990 CAAA now mandates that State and local agencies submit any and all LAER determinations that they issue.

The basic purposes of the RBLC are to: 1) provide State and local air pollution control agencies, industry, and the public with current information on case-by-case control technology determinations that are made nationwide, and 2) promote communication, cooperation, and sharing of control technology information among the permitting agencies.

THE RBLC WEB

The RBLC's primary vehicle for sharing control technology information is the RBLC Web. The Clearinghouse provides on-line querying of its data base and makes the results available for viewing on-screen or downloading to a PC. This information system also supports direct submittals of control technology determinations by permitting agencies. Routine access to the data base is available to anyone who has a personal computer with access to the World Wide Web.

The RBLC Web is part of the Office of Air Quality Planning and Standards Technology Transfer Network (TTN) World Wide Web (Web) site. It can be accessed through the Clean Air Technology Web on the TTN. Users of the RBLC Web can search on any number of different items. Searchable items have been designated as "required" fields for new determinations.

The graphical environment of the Web supports a simplified search procedure. Users select a data base of interest (see below) and one or more searchable fields from drop-down lists displayed in their web browser and/or fill in text boxes with the value they are trying to match to execute the query. The query finds all determinations in the RBLC data base that match the specified criteria and displays the results for viewing in the browser. In addition, several output formats are provided for downloading or printing.

The permit data base in the Clearinghouse has been segmented into three searchable parts. Any one or combination of these segments can be searched at the same time. The current data segment contains completed RBLC determinations for permits issued within the past 10 years. The historical segment contains completed RBLC determinations for permits issued more than 10 years ago. Determinations in the current and historic segments of the RBLC data base are referred to as final determinations. The draft segment of the RBLC data base provides a work space for users to enter new and update existing determinations. Determinations in the draft segment are referred to as draft determinations. The RBLC staff regularly review draft determinations and promote accurate and complete determinations to final determinations (i.e., they become part of the current or historical segments based on their permit dates).

The RBLC also maintains a data base of federal regulations, that includes summaries of federal regulations enacted in response to the Clean Air Act. These rules include Maximum Achievable Control Technology (MACT) standards, National Emission Standards for Hazardous Air Pollutants (NESHAP), New Source Performance Standards (NSPS), and Control Techniques Guideline (CTG) documents that specify requirements for Reasonably Available Control Technology (RACT). The regulation data base offers options that allow you to scan or query the regulation data. The query option brings the power of user-defined queries to the complex

details of air pollutant emissions regulations. Using the same user-friendly browser interface as the RBLC's permit data base, users can build a query to locate pertinent regulations for a particular pollutant or process or for a broad array of other criteria. You can also bypass the query step and go directly to viewing a list of all the federal regulations.
